Notes to Condensed Consolidated Financial Statements (Unaudited)

Note 1 - Principles of presentation

Village Bank and Trust Financial Corp. (the Company) is the holding company of Village Bank (the Bank). The consolidated financial statements include the accounts of the Company, the Bank and the Bank's three wholly-owned subsidiaries, Village Bank Mortgage Corporation, Village Insurance Agency, Inc., and Village Financial Services Corporation. All material intercompany balances and transactions have been eliminated in consolidation.

On April 26, 2005, the Company's shareholders approved the change of the Company's name to Village Bank and Trust Financial Corp. The name change became effective upon the issuance by the Virginia State Corporation Commission of a certificate of amendment to the Company's articles of incorporation on May 18, 2005.

In the opinion of management, the accompanying condensed consolidated financial statements of the Company have been prepared on the accrual basis in accordance with generally accepted accounting principles for interim financial information. Accordingly, they do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements. However, all adjustments that are, in the opinion of management, necessary for a fair presentation have been included. The results of operations for the three month and nine month periods ended September 30, 2005 is not necessarily indicative of the results to be expected for the full year ending December 31, 2005. The unaudited interim financial statements should be read in conjunction with the audited financial statements and notes to financial statements that are presented in the Company's Annual Report on Form 10-KSB for the year ended December 31, 2004 as filed with the Securities and Exchange Commission.

Note 2 - Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the statements of financial condition and operations for the period. Actual results could differ significantly from those estimates.

Note 3 - Earnings per common share

Basic earnings per common share is computed by dividing the net income by the weighted-average number of common shares outstanding during the period. For the three month periods ended September 30, 2005 and 2004, the weighted-average number of common shares totaled 1,812,922 and 1,729,336, respectively. For the nine month periods ended September 30, 2005 and 2004, the weighted-average number of common shares totaled 1,786,931 and 1,717,732, respectively. Diluted earnings per share reflects the potential dilution of securities that could share in the net income of the Company. Outstanding options and warrants to purchase common stock were considered in the computation of diluted earnings per share for the periods presented. For the three month periods ended September 30, 2005 and 2004, the weighted-average number of common shares on a fully diluted basis totaled 2,056,264 and 1,914,763, respectively. For the nine month periods ended September 30, 2005 and 2004, the weighted-average number of common shares on a fully diluted basis totaled 1,987,378 and 1,929,242, respectively. There were options to acquire 17,000 and 42,800 shares of common stock that were anti-dilutive for the three and nine month

periods ended September 30, 2005, respectively, and options to acquire 25,000 shares of common stock that were anti-dilutive for the three and nine month periods ended September 30, 2004.

Note 4 Stock incentive and stock warrant plans

The Organizational Investors Warrant Plan made available 140,000 warrants for grant to the Company's initial (organizational) investors for certain risks associated with the establishment of the Bank. The warrants have an exercise price of \$10 per share (which approximated the fair value per share of common stock at issuance date) and expire in April 2008. At September 30, 2005, 137,500 warrants had been issued and none had been exercised.

The Company has an Incentive Plan which authorizes the issuance of up to 255,000 shares of Common Stock to assist the Company in recruiting and retaining key personnel. The following table summarizes options outstanding under this plan:

	Nine Months Ended September 30,			
	2005		2004	
	Options	Weighted Average Exercise Price	Options	Weighted Average Exercise Price
Options outstanding at beginning of period	197,410	\$ 9.14	160,900	\$ 8.44
Granted	28,300	12.59	37,000	12.17
Forfeited	-	-	(840)	8.80
Exercised	-	-	-	-
Options outstanding at end of period	225,710	\$ 9.57	197,060	\$ 9.14

Fair value per share of options

Dividend yield	0%	0%
Expected weighted average term	7years	7years
Volatility	25%	25%

Note 5 Trust preferred securities

During the first quarter of 2005, Southern Community Financial Capital Trust I, a wholly-owned subsidiary of the Company, was formed for the purpose of issuing redeemable securities. On February 24, 2005, \$5.2 million of Trust Preferred Capital Notes were issued through a pooled underwriting. The securities have a LIBOR-indexed floating rate of interest (three-month LIBOR plus 2.15%) which adjusts, and is payable, quarterly. The interest rate at September 30, 2005 was 6.02%. The securities may be redeemed at par beginning on March 15, 2010 and each quarter after such date until the securities mature on March 15, 2035. The principal asset of the Trust is \$5.2 million of the Company's junior subordinated debt securities with like maturities and like interest rates to the Trust Preferred Capital Notes.

The Trust Preferred Capital Notes may be included in Tier 1 capital for regulatory capital adequacy determination purposes up to 25% of Tier 1 capital after its inclusion. The portion of the Trust Preferred Capital Notes not considered as Tier 1 capital may be included in Tier 2 capital.

The obligations of the Company with respect to the issuance of the Trust Preferred Capital Notes constitute a full and unconditional guarantee by the Company of the Trust's obligations with respect to the Trust Preferred Capital Notes. Subject to certain exceptions and limitations, the Company may elect from time to time to defer interest payments on the junior subordinated debt securities, which would result in a deferral of distribution payments on the related Trust Preferred Capital Notes and require a deferral of common dividends.

ITEM 2 - MANAGEMENT'S DISCUSSION AND ANALYSIS OR PLAN OF OPERATION

Forward-Looking Statements

Certain information contained in this discussion may include forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. These forward-looking statements are generally identified by phrases such as we expect, we believe or words of similar import. Such forward-looking statements involve known and unknown risks including, but not limited to, the following factors:

- .
interest rate fluctuations;
- .
risk inherent in making loans such as repayment risks and fluctuating collateral values;
- .
the ability to continue to attract low cost core deposits to fund asset growth;
- .
changes in general economic and business conditions;
- .
changes in laws and regulations applicable to us;
- .
competition within and from outside the banking industry;
- .
the ability to successfully manage the Company's growth or implement its growth strategies if it is unable to identify attractive markets, locations or opportunities to expand in the future;
- .

maintaining capital levels adequate to support the Company's growth;

.

reliance on the Company's management team, including its ability to attract and retain key personnel;

.

new products and services in the banking industry;

.

problems with our technology, and

.

changing trends in customer profiles and behavior.

Although we believe that our expectations with respect to the forward-looking statements are based upon reliable assumptions within the bounds of our knowledge of our business and operations, there can be no assurance that actual results, performance or achievements of the Company will not differ materially from any future results, performance or achievements expressed or implied by such forward-looking statements.

General

The Company was organized under the laws of the Commonwealth of Virginia as a bank holding company whose activities consist of investment in its wholly-owned subsidiary, the Bank. The Bank is engaged in commercial and retail banking. We opened to the public on December 13, 1999. We place special emphasis on serving the financial needs of individuals, small and medium sized businesses, entrepreneurs, and professional concerns.

The Bank has three subsidiaries: Village Bank Mortgage Company, Village Insurance Agency, Inc., and Village Financial Services Corporation. Through our combined companies, we offer a wide range of banking and related financial services, including checking, savings, certificates of deposit and other depository services, and commercial, real estate and consumer loans. We are a community-oriented and locally owned and managed financial institution focusing on providing a high level of responsive and personalized services to our customers, delivered in the context of a strong direct relationship with the customer. We conduct our operations from our main office/corporate headquarters location and four branch offices.

Our total assets increased to \$205,294,000 at September 30, 2005 from \$160,305,000 at December 31, 2004. The 28.1% increase in total assets during the first nine months of 2005 resulted from the

growth of our business and customer base. Of the \$45.0 million of growth in 2005, \$35.5 million occurred in the third quarter. The third quarter growth is attributable to growth in deposits of \$34.4 million. This increase in deposits was due to the efforts of our two newest branches which were opened in late 2004 and new deposit products that were well received by our customers. One deposit product generated a significant amount of this growth and was offered only during the month of August. Accordingly, we may not experience the same growth in deposits in the fourth quarter.

The following presents management's discussion and analysis of the financial condition of the Company at September 30, 2005 and December 31, 2004, and results of operations for the Company for the three and nine month periods ended September 30, 2005 and 2004. This discussion should be read in conjunction with the Company's Annual Report on Form 10-KSB for the year ended December 31, 2004 as filed with the Securities and Exchange Commission.

Results of operations

We recorded net income of \$259,000, or \$0.13 per share on a fully diluted basis, in the third quarter of 2005 compared to net income of \$139,000, or \$0.07 per share on a fully diluted basis, in the third quarter of 2004. For the first nine months of 2005, net income amounted to \$864,000, or \$0.43 per share on a fully diluted basis, as compared to \$400,000, or \$0.21 per share on a fully diluted basis, for the same period in 2004.

The improvement in our results of operations for the third quarter of 2005 of \$124,000 over the results in 2004 was attributable primarily to our growth in loans and an improved net interest margin, as well as improved performance by Village Bank Mortgage. The Company's primary source of income, net interest income, increased by \$485,000, or 39.8%, from \$1,220,000 in the third quarter of 2004 to \$1,705,000 in the third quarter of 2005. Noninterest income increased by \$408,000, or 80.8%, from \$506,000 in the third quarter of 2004 to \$914,000 in the third quarter of 2005. This increase in noninterest income is primarily due to improved operations of Village Bank Mortgage. We expected the better operating results from Village Bank Mortgage in 2005 because Village Bank Mortgage has been successful in attracting additional loan officers to generate higher loan volume.

Noninterest expense increased by \$690,000, or 50.0%, from \$1,380,000 in the third quarter of 2004 to \$2,070,000 in the third quarter of 2005. This increase in noninterest expense is attributable to our growth and expansion, with the majority of the increase in salaries and benefits of \$357,000.

The improvement in our results of operations for the nine months ended September 30, 2005 of \$463,000 over the results for the same period in 2004 was also attributable primarily to our growth in loans and an improved net interest margin, as well as improved performance by Village Bank Mortgage. The Company's primary source of income, net interest income, increased by \$1,360,000, or 39.2%, from \$3,468,000 for the first nine months of 2004 to \$4,828,000

for the first nine months of 2005. Noninterest income increased by \$837,000, or 63.6%, from \$1,315,000 for the first nine months of 2004 to \$2,152,000 for the first nine months of 2005. This increase in noninterest income is primarily due to improved operations of Village Bank Mortgage. As discussed previously, we expected the better operating results from Village Bank Mortgage in 2005.

Noninterest expense increased by \$1,373,000, or 34.2%, from \$4,016,000 for the first nine months of 2004 to \$5,389,000 for the first nine months of 2005. This increase in noninterest expense is attributable to our growth and expansion, with the majority of the increase in salaries and benefits of approximately \$677,000, and a \$166,000 increase in professional and outside services resulting from costs associated with compliance with the Sarbanes-Oxley Act of 2002.

Net interest income

Net interest income is our primary source of earnings and represents the difference between interest and fees earned on interest-earning assets and the interest paid on interest-bearing liabilities. The level of net interest income is affected primarily by variations in the volume and mix of those assets and liabilities, as well as changes in interest rates when compared to previous periods of operation.

Net interest income for the nine months ended September 30, 2005 and 2004 was \$4,828,000 and \$3,468,000, respectively. This increase of \$1,360,000, or 39.2%, in net interest income was due to growth in loans and an improved net interest margin. Net loans increased by \$38,267,000, or 31.8%, from \$120,353,000 at September 30, 2004 to \$158,620,000 at September 30, 2005. In addition, our net interest margin for the nine months ended September 30, 2005 was 4.01% compared to 3.85% for the first nine months of 2004. This improvement in our net interest margin is due to the recent increases in the prime interest rate resulting from the increases in short-term interest rates by the Federal Reserve.

Average interest-earning assets for the first nine months of 2005 increased by \$40,714,000, or 33.8%, compared to the first nine months of 2004. The increase in interest-earning assets was due to the growth of our loan portfolio. The average yield on interest-earning assets increased to 6.74% for the first nine months of 2005 compared to 6.02% for the first nine months of 2004. The increase in the average yields from 2004 to 2005 was due primarily to an improvement in the yield on loans.

Our average interest-bearing liabilities increased by \$35,292,000, or 32.5%, for the first nine months of 2005 compared to the first nine months of 2004. The growth in interest-bearing liabilities was primarily due to strong growth in deposits. The average cost of interest-bearing liabilities increased to 3.05% for the first nine months of 2005 from 2.40% for the first nine months of 2004. The principal reasons for the increase in the liability costs was the rise in short-term rates by the Federal Reserve discussed previously and an increase in our borrowing costs associated with the issuance of trust preferred securities. See our discussion of interest rate sensitivity below for more information.

The following table illustrates average balances of total interest-earning assets and total interest-bearing liabilities for the periods indicated, showing the average distribution of assets, liabilities, shareholders' equity and related income, expense and corresponding weighted-average yields and rates. The average balances used in these tables and other statistical data were calculated using daily average balances. We have no tax exempt assets for the periods presented.

Provision for loan losses

The provision for loan losses for the nine months ended September 30, 2005 was \$283,000, compared to \$367,000 for the nine months ended September 30, 2004. The 23.0% decrease in 2005 was due to a smaller increase in loans in 2005 than in 2004. The amount of the loan loss provision is determined by an evaluation of the level of loans outstanding, the level of non-performing loans, historical loan loss experience, delinquency trends, the amount of actual losses charged to the reserve in a given period and assessment of present and anticipated economic conditions.

See our discussion of the allowance for loan losses under *Allowance for loan losses* and *Critical accounting policies* below.

Noninterest income

Noninterest income increased significantly from \$1,315,000 for the first nine months of 2004 to \$2,152,000 for the first nine months of 2005, an \$837,000, or 63.6%, increase. This increase was directly attributable to improvement in the operations of the Bank's mortgage banking and insurance subsidiaries. Gains on loan sales increased from \$826,000 for the first nine months of 2004 to \$1,446,000 for the first nine months of 2005, a \$620,000, or 75.1%, increase. Other noninterest income increased from \$130,000 for the first nine months of 2004 to \$367,000 for the first nine months of 2005, a \$237,000, or 183.0%, increase.

Noninterest expense

Noninterest expense for the nine months ended September 30, 2005 totaled \$5,388,000, an increase of \$1,374,000, or 34.2%, from the \$4,016,000 recorded for the nine months ended September 30, 2004. Salaries and benefits represented the largest increase, increasing by \$678,000, or 29.5%, for the first nine months of 2005 to \$2,973,000, compared to \$2,295,000 for the first nine months of 2004. This increase as well as other increases in noninterest expense were primarily attributable to the growth of the Bank. Professional and outside services increased by \$166,000, or 33.2%, for the nine months ended September 30, 2005 compared to the same period in 2004 due to costs associated with compliance with the Sarbanes-Oxley Act of 2002.

Income taxes

The provision for income taxes for the nine months ended September 30, 2005 is based upon the results of operations. Certain items of income and expense are reported in different periods for financial reporting and tax return purposes. The tax effects of these temporary differences are recognized currently in the deferred income tax provision or benefit.

Deferred tax assets or liabilities are computed based on the difference between the financial statement and income tax bases of assets and liabilities using the applicable enacted marginal tax rate.

The Company must also evaluate the likelihood that deferred tax assets will be recovered from future taxable income. If any such assets are not likely to be recovered, a valuation allowance must be recognized. We have determined that a valuation allowance is not required for deferred tax assets as of September 30, 2005. The assessment of the carrying value of deferred tax assets is based on certain assumptions, changes in which could have a material impact on the Company's financial statements.

We did not record an income tax provision for the nine months ended September 30, 2004 as we had a federal net operating loss carry forward of \$914,000 which offset taxable income. Also at September 30, 2004, we recorded a valuation allowance for the entire amount of the deferred tax

asset as the timing and level of future earnings necessary to realize the deferred tax asset was uncertain at that time.

Commercial banking organizations conducting business in Virginia are not subject to Virginia income taxes. Instead, they are subject to a franchise tax based on bank capital. The Company recorded a franchise tax expense of \$90,000 and \$86,500 for the nine months ended September 30, 2005 and 2004, respectively.

Loan portfolio

The following table presents the composition of our loan portfolio (excluding mortgage loans held for sale) at the dates indicated.

Loan Portfolio, Net (In thousands)

	September 30, 2005		December 31, 2004	
	Amount	%	Amount	%
Commercial	\$ 14,932	9.3%	\$ 40,491	29.8%

Less: Allowance for loan losses	(1,786)		(1,514)	
Total loans, net	\$ 158,620		\$ 134,162	

Allowance for loan losses

The allowance for loan losses at September 30, 2005 was \$1,786,000, compared to \$1,514,000 at December 31, 2004. The ratio of the allowance for loan losses to gross portfolio loans (net of unearned income and excluding mortgage loans held for sale) was 1.11% at September 30, 2005 and 1.12% at December 31, 2004. The amount of the loan loss provision is determined by an evaluation of the level of loans outstanding, the level of non-performing loans, historical loan loss experience, delinquency trends, the amount of actual losses charged to the reserve in a given period and assessment of present and anticipated economic conditions. See our discussion of the allowance for loan losses under *Critical accounting policies* below.

The following table presents an analysis of the changes in the allowance for loan losses for the periods indicated.

Goodwill

Goodwill, which represents the excess of purchase price over fair value of net assets acquired, is evaluated at least annually for impairment by comparing its fair value with its recorded amount and is written down when appropriate.

Projected net operating cash flows are compared to the carrying amount of the goodwill recorded and if the estimated net operating cash flows are less than the carrying amount, a loss is recognized to reduce the carrying amount to fair value.

Goodwill of \$689,000 at September 30, 2005 was related to the Bank's acquisition of Village Bank Mortgage in 2003. There was no impairment of goodwill at September 30, 2005.

Deposits

Total deposits increased by \$37,696,000, or 26.9%, during the first nine months of 2005 as compared to an increase of \$25,927,000, or 26.9%, during the first nine months of 2004. In 2005, the increase in deposits resulted primarily from an increase of \$6,118,000, or 61.0%, in noninterest demand accounts and an increase of \$28,313,000, or 29.8%, in time deposits. The net increase in deposits was due to the efforts of our two newest branches which were opened in late 2004 and new deposit products that have been well received by our customers. One deposit product generated a significant amount of this growth and was offered only during the month of August. Accordingly, we may not experience the same growth in deposits in the fourth quarter. In 2004, the increase in deposits occurred primarily in noninterest demand accounts which increased by \$3,309,000, or 44.0%, and time deposits which increased by \$20,202,000, or 33.5%.

The mix of our deposits continues to be weighted toward time deposits which represent 69.4% of our total deposits at September 30, 2005 as compared to 67.9% at December 31, 2004. As a result, our cost of funds is higher than we would like and we are striving to change this mix more toward lower cost checking accounts. As our branch network increases and becomes more convenient to a larger segment of our targeted customer base, we believe that a move to a higher percentage of our deposits in checking accounts will occur. Additionally, we are emphasizing checking account deposit growth at our existing branches.

The average cost of interest-bearing deposits for the nine months ended September 30, 2005 and 2004 was 2.93% and 2.33%, respectively. This increase in our average cost of interest-bearing deposits has mirrored the overall increase in interest rates resulting from the actions by the Federal Reserve to increase short-term interest rates.

The variety of deposit accounts that we offer has allowed us to be competitive in obtaining funds and has allowed us to respond with flexibility to, although not to eliminate, the threat of disintermediation (the flow of funds away from depository institutions such as banking institutions into direct investment vehicles such as government and corporate securities). Our ability to attract and retain deposits, and our cost of funds, has been, and is expected to continue to be, significantly affected by money market conditions.

Borrowings

We use borrowings to supplement deposits when they are available at a lower overall cost to us or they can be invested at a positive rate of return.

As a member of the Federal Home Loan Bank of Atlanta (FHLB), the Bank is required to own capital stock in the FHLB and is authorized to apply for borrowings from the FHLB. Each FHLB

credit program has its own interest rate, which may be fixed or variable, and range of maturities. The FHLB may prescribe the acceptable uses to which the advances may be put, as well as on the size of the advances and repayment provisions. Borrowings from the FHLB were \$4,000,000 at September 30, 2005 and December 31, 2004. The FHLB advances are secured by the pledge of first mortgage loans and the pledge of our FHLB stock.

Federal funds purchased represent unsecured borrowings from other banks and generally mature daily. We did not have any purchased federal funds at September 30, 2005 or December 31, 2004.

Contractual obligations and other commitments

The following summarizes our contractual cash obligations and commitments, including maturing certificates of deposit, at September 30, 2005 and the effect such obligations may have on liquidity and cash flows in future periods.

Contractual Obligations (Dollars in thousands)

	Less Than One Year	1-3 Years	3-5 Years	Over 5 Years	Total
Leased property	\$ 293	\$ 552	\$ 170	\$ 308	\$ 1,323

	\$158,703	\$ 29,151	\$ 19,460	\$ 5,463	\$212,777

(1) We expect to retain maturing deposits or replace maturing amounts with comparable time deposits based on current market rates.

Capital resources

Stockholders' equity at September 30, 2005 was \$16,521,000, compared to \$14,985,000 at December 31, 2004. The \$1,536,000 increase in equity during the first nine months of 2005 was due to proceeds from the issuance of common stock of \$643,000 and net income of \$864,000. The \$799,000 increase in equity during the first nine months of 2004 was due to proceeds from the issuance of common stock of \$352,000, a \$47,000 decrease in net unrealized losses on securities available-for-sale, and net income of \$400,000.

During the first quarter of 2005, the Company issued \$5.2 million in Trust Preferred Capital Notes to increase its regulatory capital and to help fund its expected growth in 2005. The Trust Preferred Capital Notes may be included in Tier 1 capital for regulatory capital adequacy determination purposes up to 25% of Tier 1 capital after its inclusion.

The following table presents the composition of regulatory capital and the capital ratios at the dates indicated.

Analysis of Capital
(In thousands)

	September 30, 2005	December 31, 2004

Equity to total assets	9.4%	9.3%

Liquidity

Liquidity provides us with the ability to meet normal deposit withdrawals, while also providing for the credit needs of customers. We are committed to maintaining liquidity at a level sufficient to protect depositors, provide for

reasonable growth, and fully comply with all regulatory requirements.

At September 30, 2005, cash, cash equivalents and investment securities available for sale totaled \$30,733,000, or 15.0% of total assets, which we believe is adequate to meet short-term liquidity needs.

At September 30, 2005, we had commitments to originate \$75,077,000 of loans. Fixed commitments to incur capital expenditures were less than \$25,000 at September 30, 2005. Time deposits scheduled to mature in the 12-month period ending September 30, 2006 totaled \$79,528,000 at September 30, 2005. We believe that a significant portion of such deposits will remain with us. We further believe that loan repayments and other sources of funds will be adequate to meet our foreseeable short- and long-term liquidity needs.

Interest rate sensitivity

An important element of asset/liability management is the monitoring of our sensitivity to interest rate movements. In order to measure the effects of interest rates on our net interest income, management takes into consideration the expected cash flows from the securities and loan portfolios and the expected magnitude of the repricing of specific asset and liability categories. We evaluate interest sensitivity risk and then formulate guidelines to manage this risk based on management's outlook regarding the economy, forecasted interest rate movements and other business factors. Our goal is to maximize and stabilize the net interest margin by limiting exposure to interest rate changes.

Contractual principal repayments of loans do not necessarily reflect the actual term of our loan portfolio. The average lives of mortgage loans are substantially less than their contractual terms because of loan prepayments and because of enforcement of due-on-sale clauses, which gives us the right to declare a loan immediately due and payable in the event, among other things, the borrower sells the real property subject to the mortgage and the loan is not repaid. In addition, certain borrowers increase their equity in the security property by making payments in excess of those required under the terms of the mortgage.

The sale of fixed rate loans is intended to protect us from precipitous changes in the general level of interest rates. The valuation of adjustable rate mortgage loans is not as directly dependent on the level of interest rates as is the value of fixed rate loans. As with other investments, we regularly monitor the appropriateness of the level of adjustable rate mortgage loans in our portfolio and may decide from time to time to sell such loans and reinvest the proceeds in other adjustable rate investments.

The data in the following table reflects repricing or expected maturities of various assets and liabilities at September 30, 2005. The gap analysis represents the difference between interest-sensitive assets and liabilities in a specific time interval. Interest sensitivity gap analysis presents a position that existed at one particular point in time, and assumes that assets and liabilities with similar repricing characteristics will reprice at the same time and to the same degree.

(1) Includes nonaccrual loans of \$4,548,000, which are spread throughout the categories.

(2) Management believes that interest checking and savings accounts are generally not sensitive to changes in interest rates and therefore has placed such deposits in the "13 to 36 months" category.

At September 30, 2005, our assets that reprice within one year exceeded liabilities that reprice within one year by \$40,510,000 and therefore we were in an asset sensitive position. A positive gap can adversely affect earnings in periods of falling interest rates, but can improve earnings in periods of rising interest rates. This positive position is due primarily to our adjustable rate loan portfolio.

Critical accounting policies

The financial condition and results of operations presented in the financial statements, accompanying notes to the financial statements and management's discussion and analysis are, to a large degree, dependent upon our accounting policies. The selection and application of these accounting policies involve judgments, estimates, and uncertainties that are susceptible to change.

Presented below is a discussion of those accounting policies that management believes are the most important accounting policies to the portrayal and understanding of our financial condition and results of operations. These critical accounting policies require management's most difficult, subjective and complex judgments about matters that are inherently uncertain. In the event that different assumptions or conditions were to prevail, and depending upon the severity of such changes, the possibility of materially different financial condition or results of operations is a reasonable likelihood. See also Note 1 of the *Notes to Consolidated Financial Statements* filed with the Company's Annual Report on Form 10-KSB for the year ended December 31, 2004.

We monitor and maintain an allowance for loan losses to absorb an estimate of probable losses inherent in the loan portfolio. We maintain policies and procedures that address the systems of controls over the following areas of maintenance of the allowance: the systematic methodology used to determine the appropriate level of the allowance to provide assurance they are maintained in accordance with accounting principles generally accepted in the United States of America; the accounting policies for loan charge-offs and recoveries; the assessment and measurement of impairment in the loan portfolio; and the loan grading system.

We evaluate various loans individually for impairment as required by Statement of Financial Accounting Standards (SFAS) 114, *Accounting by Creditors for Impairment of a Loan*, and SFAS 118, *Accounting by Creditors for Impairment of a Loan - Income Recognition and Disclosures*. Loans evaluated individually for impairment include non-performing loans, such as loans on non-accrual, loans past due by 90 days or more, restructured loans and other loans selected by management. The evaluations are based upon discounted expected cash flows or collateral valuations. If the evaluation shows that a loan is individually impaired, then a specific reserve is established for the amount of impairment. If a loan evaluated individually is not impaired, then the loan is assessed for impairment under SFAS 5, *Accounting for Contingencies*, with a group of loans that have similar characteristics.

For loans without individual measures of impairment, we make estimates of losses for groups of loans as required by SFAS 5. Loans are grouped by similar characteristics, including the type of loan, the assigned loan classification and the general collateral type. A loss rate reflecting the expected loss inherent in a group of loans is derived based upon estimates of default rates for a given loan grade, the predominant collateral type for the group and the terms of the loan. The resulting estimate of losses for groups of loans is adjusted for relevant environmental factors and other conditions of the portfolio of loans and leases, including: borrower and industry concentrations; levels and trends in delinquencies, charge-offs and recoveries; changes in underwriting standards and risk selection; level of experience,

ability and depth of lending management; and national and local economic conditions .

The amounts of estimated impairment for individually evaluated loans and groups of loans are added together for a total estimate of loan losses. This estimate of losses is compared to our allowance for loan losses as of the evaluation date and, if the estimate of losses is greater than the allowance, an additional provision to the allowance would be made. If the estimate of losses is less than the allowance, the degree to which the allowance exceeds the estimate is evaluated to determine whether the allowance falls outside a range of estimates. If the estimate of losses is

below the range of reasonable estimates, the allowance would be reduced by way of a credit to the provision for loan losses. We recognize the inherent imprecision in estimates of losses due to various uncertainties and variability related to the factors used, and therefore a reasonable range around the estimate of losses is derived and used to ascertain whether the allowance is too high. If different assumptions or conditions were to prevail and it is determined that the allowance is not adequate to absorb the new estimate of probable losses, an additional provision for loan losses would be made, which amount may be material to the financial statements.

Impact of inflation and changing prices and seasonality

The financial statements in this document have been prepared in accordance with generally accepted accounting principles which require the measurement of financial position and operating results in terms of historical dollars, without consideration of changes in the relative purchasing power of money over time due to inflation.

Unlike industrial companies, most of the assets and liabilities of a financial institution are monetary in nature. As a result, interest rates have a more significant impact on a financial institution's performance than the effects of general levels of inflation. Interest rates do not necessarily move in the same direction or in the same magnitude as the price of goods and services, since such prices are affected by inflation.

ITEM 3 CONTROLS AND PROCEDURES

Based upon an evaluation as of September 30, 2005 under the supervision and with the participation of the Company's Chief Executive Officer and Chief Financial Officer of the effectiveness of the design and operation of the Company's disclosure controls and procedures, they have concluded that our disclosure controls and procedures, as defined in Rule 13a-15 under the Securities Exchange Act of 1934, as amended, are effective in ensuring that all material information required to be disclosed in reports that it files or submits under such Act are made known to them in a timely fashion.

Our management is also responsible for establishing and maintaining adequate internal control over financial reporting. There were no changes in our internal control over financial reporting identified in connection with the evaluation of it that occurred during the Company's last fiscal quarter that materially affected, or are reasonably likely to materially affect, internal control over financial reporting.
