FNX Mining Company Inc.
2004 First Quarter Report

COMMERCIAL PRODUCTION DECLARED AT McCREEDY WEST

Highlights:

- Earnings of \$1.3 million or \$0.03 per share
- Provisions for non-cash taxes of \$0.9 million reduced quarterly earnings by \$0.02 per share
- Closing cash of \$47.7 million with no debt
- Revenue during the period was \$9.5 million with average revenue of \$240 per ton of ore shipped to the custom mill
- Cash operating costs, a non-GAAP measure explained below, totaled \$4.5 million and averaged \$114 per ton of ore
- Cash operating costs, a non-GAAP measure explained below, were US\$2.69 per pound of nickel net of by-product credits
- Cash operating margin, a non-GAAP measure explained below, totaled \$5.0 million and averaged \$126 per ton of ore
- Declared commercial production January 1, 2004 at the McCreedy West Mine for mining commencing November 1, 2003
- Feasibility studies initiated at Levack Mine (Phase 2 Production) and at the McCreedy West PM Deposit (Phase 3 Production)
- Continued exploration success at Norman 2000 Deposit - planning underground advanced exploration program

Cash costs represent the economic marginal cost to produce a given unit of output. For McCreedy West, all cash operating costs (operating cost of \$5.3 million, less \$0.8 million mine depreciation, or \$4.5 million) are reduced for by-product revenue receipts (\$1.1 million). This result is divided by the recovered nickel for the period (952,342 pounds) and converted to US dollars (US \$2.69/lb nickel). This number can be compared to the average revenue received per pound nickel (US \$6.65) in the period as a measure of cash generated by the mine.

Management Discussion and Analysis

Mining

Commercial production was declared at the Sudbury Joint Venture ("SJV") commencing with November 1, 2003 production. Revenue for nickel, copper and gold is recognized two months after the month in which ore is shipped to the mill, e.g. revenue from November 2003 shipments is recognized in January 2004.

Costs for ore shipped to the mill and not yet recognized in the income statement are included in Ore in Process in the balance sheet. Production costs related to unshipped ore are included in Inventory in the balance sheet.

Ore produced over the November 1, 2003 to January 31, 2004 period was 42,098 tons. Ore shipped to Inco amounted to 39,539 tons. Nickel ore shipped was 36,725 tons

grading 1.9% nickel, 0.3% copper and 0.06% cobalt. Copper ore shipped was 2,814 tons grading 6.8% copper, 0.8% nickel and 0.14 ounces per ton TPM (platinum, palladium and gold). The average grades are higher than forecast as the mining sequence provided less development ore than forecast. Ore shipped in February and March 2004, totaling 47,000 tons, represented 119% of the first quarter's shipments of 39,539 tons.

Exploration

During the first quarter of 2004, a total of 46,530 feet of drilling was completed in 74 holes on the McCreedy West, Levack and Norman properties. During the quarter, 56 underground holes were completed at McCreedy West for a total of 21,490 ft, including 20 holes (13,215ft.) designated as exploration and 36 holes (8,275ft.) drilled for development purposes. Underground access to the Levack mine was achieved via the 1600 Level drift from McCreedy West and three holes (2,830 ft.) were drilled from underground locations with an additional two holes (4,231 ft.) from surface locations for exploration purposes.

During the reporting period, 4,112 core samples were submitted for assay.

The current drilling program at McCreedy West is focused on expanding the Inter Main Deposit, upgrading the inferred resources and also carrying out infill drilling to assist in mine planning. The Inter Main footwall ramp from the 950 Level to the 1450 Level was completed and the 1150 Level development within the Deposit is accessing more work faces to support increased production. Continuing exploration and definition of the PM Deposit will continue in order to support a feasibility study for this Deposit. Increasing access to more underground platforms at Levack will accelerate the rate of underground drilling on this property, while surface drilling continues on other Levack targets. Infill drilling of the 2000 Deposit at Norman is scheduled to be completed in the second quarter of 2004. Drilling will continue on the North Range Footwall targets below the McCreedy West and Levack Mines in the search for copper and precious metal deposits.

Financial Review

The Company accounts for the SJV on a 100% consolidated basis, although its ownership interest is 75% of the SJV. The remaining 25% ownership interest is accounted for as a minority interest in the revenue and expenses of the SJV.

First quarter revenue from ore shipments November 1, 2003 to January 31, 2004 was \$9.5 million. Average nickel (US\$6.65 per pound) and copper (US\$1.20 per pound) prices received in the quarter were well above planned prices of US\$5.00 per pound for nickel and US\$1.00 per pound for copper. These price improvements generated \$2.2 million more revenue than the SJV planned in the first quarter.

Milling and treatment charges were within expectations on a per ton basis. Mining costs were lower than forecast as the workforce productivity increased at a greater rate than forecast. Total cash operating costs per ton were \$114 in the quarter, slightly better than those planned. This non-GAAP measure is calculated by dividing cash operating costs of material shipped (\$4.5 million) by tons shipped (39,539). By-product credits were better than expected due to strong commodity prices. Cash operating margin of \$126 per ton is the difference between revenue (\$240 per ton) and cash operating cost (\$114 per ton).

Non-cash mining costs of \$0.8 million amounted to US\$0.65 per pound of nickel produced in the quarter. This cost could change with mining rate, asset additions, or changes in reserves. The per pound cost could change with ore grade and the US:Canadian dollar exchange rate.

Administration costs of \$0.8 million increased with additional employees added to the corporate staff and increased investor relations efforts in the US, Europe and Canada. Exploration administration costs of \$0.4 million increased as new hires late in 2003 were recognized in the first quarter of 2004.

Stock options are a non-cash charge and decreased in the quarter to a nominal amount from \$1.2 million in the first quarter of 2003. Many of the options were granted by early in 2003 and had been expensed by the end of 2003. Some stock options granted in late 2004 were cancelled and the associated expense of these options was reversed in the first quarter of 2004.

Interest income of \$0.3 million in the first quarter of 2004 increased from \$0.2 million in the first quarter of 2003 as a result of increased cash balances.

The minority interest expense of \$1.0 million in the first quarter of 2004 increased from a nominal amount in the first quarter of 2003. This expense related to the 25% interest in the revenue and operating expenses of the SJV not owned by the Company. Most of this expense item relates to mine operations, with less than \$0.1 million in the first quarter of 2004 related to exploration administration.

Provision for a non-cash tax expense of \$0.9 million (\$0.02 per share) was recognized in the quarter. The Company does not expect to pay cash taxes for several years, and not until previous tax losses are used. This expense item represents different recognition periods of profits for tax and accounting.

Financial Condition

Cash of \$47.7 million at March 31, 2004 decreased by \$4.9 million in the quarter from \$52.5 million at December 31, 2003. The Company's share of cash receipts from production was \$4.6 million. This balance represents 60% of the cash receipts from production. The first \$14 million of cash receipts from production will be distributed 60% to the Company and 40% to Dynatec. After the first \$14 million is distributed, future SJV cash will be distributed 75% to the Company and 25% to Dynatec. The Company expects the initial \$14 million of SJV cash distribution to be completed in the second quarter of 2004.

The Company funded \$7.6 million of SJV expenses, its 75% share of all SJV work in the quarter. The funding was distributed \$2.8 million to production-related items (Inventory, Ore in Process, Operating Cost), \$2.1 million to mine capital, \$2.4 million to exploration and \$0.3 million to exploration administration.

Administration spending was \$0.8 million in the quarter. Interest income was \$0.3 million and receipts from stock options exercised were \$0.1 million. Corporate working capital increased by \$1.5 million as payables were reduced by \$1.1 million while receivables and pre-pays were increased by \$0.4 million.

The Company has no debt.

Outlook

The SJV is making good progress toward its planned target of 1,000 tons per day production by mid-2004. Payable metal from 2004 mining is expected to be about 7.0 million pounds of nickel and 3.7 million pounds of copper. The expected cash cost per pound nickel is planned at US\$2.98 and the Company anticipates this number should be achieved. Higher by-product prices and slightly lower mining costs would lead to a longer term decrease in this cost number.

Nickel and copper prices were strong during the first quarter of 2004, but nickel prices recently declined to approximately US\$5.00. Market sentiment regarding fears of a US interest rate increase, Chinese comments about cooling off a hot economy, and switching to substitute products were cited as concerns. However, fundamental strength in the price is anticipated as continued strength in the Asian and US economies should generate demand for metal while inventories remain low.

Recent weakness in the Canadian dollar against the US dollar is seen as continuing in the near term. However, market concerns of Canadian economic under-performance relative to the US indicates that at present, little scope is expected for a weaker US dollar against the Canadian dollar.

The Company's first quarter as a commercial mining company has been successful on all levels. Good commodity prices, favourable operating results and a strong growth profile provide the basis for continuing strong performance.

These financial statements have been prepared by Management of FNX Mining Company Inc. and have not been reviewed by the auditor of FNX Mining Company Inc.

FNX Mining Reports \$1.3 Million Earnings in Q1-2004

TORONTO: May 5, 2004 - **FNX Mining Company Inc. (FNX-TSX/AMEX)** reports earnings after tax of \$1.3 million or \$0.03 per share for the first quarter of 2004 compared to a loss of \$1.6 million or \$0.04 per share in the same period of 2003.

The Q1-2004 results represent the Company's initial reporting period of commercial production from operations at its 75%-owned McCreedy West Mine located in the Sudbury mining camp, northern Ontario, Canada. The Company accounts for the Sudbury operations on a 100% consolidated basis, with the remaining 25% ownership interest accounted for as a minority interest.

HIGHLIGHTS:

- Earnings after tax of \$1.3 million or \$0.03 per share
- Provisions for non-cash taxes of \$0.9 million reduced quarterly earnings by \$0.02 per share
- Closing cash of \$47.7 million with no debt
- Revenue during the period was \$9.5 million with average revenue of \$240 per ton of ore shipped to the custom mill
- Cash operating costs totaled \$4.5 million and averaged \$114 per ton of ore
- Cash operating costs were US\$2.69 per pound of nickel net of by-product credits
- Cash operating margin totaled \$5.0 million and averaged \$126 per ton of ore
- Declared commercial production January 1, 2004 at the McCreedy West Mine for mining commencing November 1, 2003
- On schedule to achieve 1,000 tons per day Phase 1 Production target at McCreedy West Mine
- Feasibility studies initiated at Levack Mine (Phase 2 Production) and at the McCreedy West PM Deposit (Phase 3 Production)
- Continued exploration success at Norman 2000 Deposit - planning underground advanced exploration program

Note: Currencies are in Canadian dollars unless indicated otherwise. All production numbers are for 100% of operations. Cash operating costs, cash operating margins and cash costs per pound are non-GAPP measures. Cash operating costs represent the economic marginal cost to produce a given unit of output and cash operating margin is the difference between revenue and cash operating costs.

Provisions for a non-cash tax expense of \$0.9 million was recognized in Q1-2004, reducing the after tax earnings by \$0.02 per share. The Company does not expect to pay taxes this year and not until all previous tax losses have been exhausted.

Revenues from operations during the first quarter of 2004 totaled \$9.5 million with a cash operating margin of \$5.0 million, compared to nil revenues in the first quarter of 2003. Revenue per ton of ore was \$240, while cash mining, processing and treatment costs were \$4.5 million or \$114 per ton for a cash operating margin of \$126 per ton of ore.

The Company had cash of \$47.7 million at March 31, 2004, a decrease of \$4.9 million in the quarter from \$52.5 million at December 31, 2003. The Company had no debt and working capital was \$54.8 million at the end of the period.

The first \$14 million of cash receipts from the Sudbury operations will be distributed 60% to the Company and 40% to its joint venture partner, Dynatec Corporation. This threshold is expected to be reached in Q2-2004, after which, cash receipts will be distributed 75% to the Company and 25% to Dynatec.

Ore mined during the reporting period was 42,098 tons, while 39,539 tons were shipped to the mill for processing. The 36,725 tons of nickel ore shipped graded 1.9% Ni, 0.3% Cu and 0.06% Co. Copper ore shipped totaled 2,814 tons averaging 6.8% Cu, 0.8% Ni and 0.14 oz/ton platinum + palladium + gold. During the first quarter, payable nickel production was 952,342 pounds and payable copper was 509,893 pounds. The cash cost per pound of nickel net of by-product credits was US\$2.69. An average nickel price during the quarter of US\$6.65 per pound provided a cash operating margin of US\$3.96 per pound of nickel.

The Phase 1 Production target of 1,000 tons per day at the McCreedy West Mine will be achieved ahead of schedule and Q-2 2004 production is expected to nearly double that of Q-1 2004. The Company expects to achieve its fiscal 2004 production forecast of 300,000 tons of ore yielding 7.0 million pounds of nickel and 3.7 million pounds of copper and to meet or better its forecast average cash cost per pound nickel of US\$2.98.

FNX Mining will be hosting a Q1-2004 conference call at 4:00pm Eastern Time on Wednesday, May 5th, 2004. The number to call is 416-405-8532 for local calls and 877-295-2825 for North American toll free calls; ask for the FNX Mining conference call. For the conference call replay dial 416-695-5800 or 800-408-3053. The access code is 3047770. The replay will be available until midnight April 14th. Slides will be available at the commencement of the conference call at: www.fnxmining.com.

The complete Q1-2004 financial statements and accompanying notes can be accessed at: www.fnxmining.com.
