Letter from the Chairman of the Board & President

Dear Shareholder:

The financial markets experienced periods of volatility during each Fund s reporting period. Investor sentiment was challenged at times given mixed economic data, uncertainties surrounding future global monetary policy, geopolitical issues and, most recently, the debt crisis in Greece.

For the periods ended July 31, 2015

After expanding in the third and fourth quarters of 2014, economic growth in the U.S. moderated during the first quarter of 2015. Looking back, U.S. gross domestic product (GDP), which represents the value of goods and services produced in the country, the broadest measure of economic activity and the principal indicator of economic performance, expanded at a 4.3% and 2.2% annual pace during the third and fourth quarters of 2014, respectively. According to the Commerce Department, GDP grew at a tepid annual pace of 0.6% for the first quarter of 2015. This was attributed to contractions in net exports, nonresidential fixed investment (i.e. spending on plants and equipment) and state and local government spending. In addition, consumer spending decelerated, as it grew a modest 1.8% during the first quarter of 2015 versus 4.4% for the fourth quarter of 2014. However, this appeared to be a temporary setback due to colder than usual weather and labor disputes at West Coast ports, as the Commerce Department s second estimate released after the reporting periods had ended showed that GDP grew at an annual pace of 3.7% for the second quarter of 2015.

Federal Reserve (Fed) monetary policy remained accommodative. However, the central bank appeared to be moving closer to raising interest rates for the first time since 2006. As expected, following its meeting in October 2014, the Fed announced that it had concluded its asset purchase program. Then, at its March 2015 meeting, the Fed eliminated the word patient from its official statement regarding when it may start raising rates. Finally, at its meeting in July, the Fed said that it currently anticipates that, even after employment and inflation are near mandate-consistent levels, economic conditions may, for some time, warrant keeping the target federal funds rate below levels the Committee views as normal in the longer run.

Economic growth outside the U.S. was mixed over the past few quarters. Anemic growth and concerns of deflation in the eurozone caused the European Central Bank (ECB) to announce that beginning in March 2015, it would start 60 billion-a-month bond-buying program that is expected to run until September 2016, or longer if needed to achieve an inflation rate consistent with the ECB s longer-term target. The ECB announcement and a still-benign U.S. rates environment were supportive for emerging market asset prices initially, although toward the end of the reporting period, riskier asset classes succumbed to pressures from slower economic growth, volatility in Chinese equities, increased uncertainty over the resolution of the Greek crisis and higher volatility in commodity markets.

Outlook

PIMCO continues to see a multi-speed world of economies converging to modest trend growth rates, a view now shared by the International Monetary Fund, which, in its most recent world economic outlook, materially marked down its estimates of potential growth in both developed and emerging economies. PIMCO also sees a global economy that is no longer restrained by private sector delevering but, instead, is learning to live with record levels of public and private debt, without a cushion that would be provided by more rapid growth or higher inflation.

While the threat of deflation in Japan and the eurozone has diminished due to quantitative easing programs put in place by the ECB and the Bank of Japan, PIMCO s baseline forecast does not foresee an imminent rise in prices toward the 2% inflation targets these central banks aim to achieve. Regarding financial markets, PIMCO believes that we participate in a global financial system that is better capitalized than before the financial crisis of 2008 2009 and perhaps less vulnerable to a systemic run. That being said, PIMCO understands that this environment potentially offers less liquidity to investors as the global balance sheet available for market-making shrinks.

2 PIMCO CLOSED-END FUNDS

¹ Please note that several of the Fund s fiscal year ends were recently changed to July 31, 2015; therefore, the length of each Fund s reporting period will differ depending on its former fiscal year end. Please see Notes to Financial Statements for further detail.

Table of Contents

For all these reasons, PIMCO continues to believe that we are now, and will be for some time, operating in a new neutral world in which central banks will be constrained to set policy rates at levels well below those that prevailed before the financial crisis of 2008 2009.

In the following pages of this PIMCO Closed-End Funds Annual Report, please find specific details regarding investment performance and a discussion of factors that most affected the Funds performance over the periods ended July 31, 2015.

Thank you for investing with us. We value your trust and will continue to work diligently to meet your investment needs. If you have questions regarding any of your PIMCO Closed-End Funds investments, please contact your financial advisor or call the Funds shareholder servicing agent at (844) 33-PIMCO or (844) 337-4626. We also invite you to visit our website at www.pimco.com to learn more about our views.

We remain dedicated to serving your investment needs.

Sincerely,

Hans W. Kertess Chairman of the Board of Trustees Peter G. Strelow President

ANNUAL REPORT JULY 31, 2015

3

Important Information About the Funds

We believe that bond funds have an important role to play in a well-diversified investment portfolio. It is important to note, however, that in an environment where interest rates trend upward, rising rates would negatively impact the performance of most bond funds, and fixed-income securities held by a Fund are likely to decrease in value. A number of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). Accordingly, changes in interest rates can be sudden, and there is no guarantee that Fund Management will anticipate such movement.

As of the date of this report, interest rates in the U.S. are at or near historically low levels. As such, bond funds may currently face an increased exposure to the risks associated with rising interest rates. This is especially true since the Federal Reserve Board has concluded its quantitative easing program. Further, while the U.S. bond market has steadily grown over the past three decades, dealer inventories of corporate bonds have remained relatively stagnant. As a result, there has been a significant reduction in the ability of dealers to make markets in corporate bonds. All of the factors mentioned above, individually or collectively, could lead to increased volatility and/or lower liquidity in the fixed income markets, which could result in increased losses to a Fund. Bond funds and individual bonds with a longer duration (a measure of the sensitivity of a security s price to changes in interest rates) tend to be more sensitive to changes in interest rates, usually making them more volatile than securities or funds with shorter durations. In addition, in the current low interest rate environment, the market price of the Funds common shares may be particularly sensitive to changes in interest rates or the perception that there will be a change in interest rates.

The use of derivatives may subject the Funds to greater volatility than investments in traditional securities. The Funds may use derivative instruments for hedging purposes or as part of an investment strategy. Use of these instruments may involve certain costs and risks such as liquidity risk, interest rate risk, market risk, call risk, credit risk, management risk and the risk that a Fund could not close out a position when it would be most advantageous to do so. Certain derivative transactions may have a leveraging effect on a Fund. For example, a small investment in a derivative instrument may have a significant impact on a Fund s exposure to interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in a derivative instrument may cause an immediate and substantial loss or gain, which translates into heightened volatility in a Fund s net asset value NAV. A Fund may engage in such transactions regardless of whether the Fund owns the asset, instrument or components of the index underlying a derivative instrument. A Fund may invest a significant portion of its assets in these types of instruments. If it does, a Fund s investment exposure could far exceed

the value of its portfolio securities and its investment performance could be primarily dependent upon securities it does not directly own.

For purposes of applying a Fund s investment policies and restrictions, swap agreements are generally valued by the Fund at market value. In the case of a credit default swap, however, in applying certain of a Fund s investment policies and restrictions, the Fund will value the credit default swap at its notional value or its full exposure value (i.e., the sum of the notional amount for the contract plus the market value), but may value the credit default swap at market value for purposes of applying certain of the Fund s other investment policies and restrictions. For example, a Fund may value credit default swaps at full exposure value for purposes of the Fund s credit quality guidelines (if any) because such value reflects the Fund s actual economic exposure during the term of the credit default swap agreement. In this context, both the notional amount and the market value may be positive or negative depending on whether a Fund is selling or buying protection through the credit default swap. The manner in which certain securities or other instruments are valued by a Fund for purposes of applying investment policies and restrictions may differ from the manner in which those investments are valued by other types of investors.

A Fund s use of leverage creates the opportunity for increased income for the Fund s common shareholders, but also creates special risks. Leverage is a speculative technique that may expose a Fund to greater risk and increased costs. If shorter-term interest rates rise relative to the rate of return on a Fund s portfolio, the interest and other costs to the Fund of leverage could exceed the rate of return on the debt obligations and other investments held by the Fund, thereby reducing return to the Fund s common shareholders. In addition, fees and expenses of any form of leverage used by a Fund will be borne entirely by its common shareholders (and not by preferred shareholders, if any) and will reduce the investment return of the Fund s common shares. There can be no assurance that a Fund s use of leverage will result in a higher yield on its

common shares, and it may result in losses. Leverage creates several major types of risks for a Funds common shareholders, including: (1) the likelihood of greater volatility of net asset value and market price of the Funds common shares, and of the investment return to the Funds common shareholders, than a comparable portfolio without leverage; (2) the possibility either that the Funds common share dividends will fall if the interest and other costs of leverage rise, or that dividends paid on the Funds common shares will fluctuate because such costs vary over time; and (3) the effects of leverage in a declining market or a rising interest rate environment, as leverage is likely to cause a greater decline in the net asset value of the Funds common shares than if the Funds were not leveraged and may result in a greater decline in the market value of the Funds common shares.

4 PIMCO CLOSED-END FUNDS

A Fund s investments in and exposure to foreign securities involve special risks. For example, the value of these investments may decline in response to unfavorable political and legal developments, unreliable or untimely information or economic and financial instability. Foreign securities may experience more rapid and extreme changes in value than investments in securities of U.S. issuers. The securities markets of certain foreign countries are relatively small, with a limited number of companies representing a small number of industries. Issuers of foreign securities are usually not subject to the same degree of regulation as U.S. issuers. Reporting, accounting, auditing and custody standards of foreign countries differ, in some cases significantly, from U.S. standards. Also, nationalization, expropriation or other confiscation, currency blockage, political changes or diplomatic developments could adversely affect a Fund s investments in foreign securities. In the event of nationalization, expropriation or other confiscation, a Fund could lose its entire investment in foreign securities. Risks associated with investing in foreign securities may be increased when a Fund invests in emerging markets. For example, if a Fund invests in emerging market debt, it may face increased exposure to interest rate, liquidity, volatility, and redemption risk due to the specific economic, political, geographical, or legal background of the emerging market.

Investments in loans are generally subject to risks similar to those of investments in other types of debt obligations, including, among others, credit risk, interest rate risk, variable and floating rate securities risk, and, as applicable, risks associated with mortgage-related securities. In addition, in many cases loans are subject to the risks associated with below-investment grade securities. In the case of a loan participation or assignment, a Fund generally has no right to enforce compliance with the terms of the loan agreement with the borrower. As a result, a Fund may be subject to the credit risk of both the borrower and the lender that is selling the loan agreement. In the event of the insolvency of the lender selling a loan participation, a Fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower. The Funds may be subject to heightened or additional risks and potential liabilities and costs by investing in mezzanine and other subordinated loans or acting as an originator of loans, including those arising under bankruptcy, fraudulent conveyance, equitable subordination, lender liability, environmental and other laws and regulations, and risks and costs associated with debt servicing and taking foreclosure actions associated with the loans. To the extent that a Fund originates a loan, it may be responsible for all or a substantial portion of the expenses associated with initiating the loan, irrespective of whether the loan transaction is ultimately consummated or closed. This may include significant legal and due diligence expenses, which will be indirectly borne by a Fund and its shareholders.

Mortgage-related and other asset-backed securities often involve risks that are different from or more acute than risks associated with other types of debt instruments. Generally, rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if a Fund holds mortgage-related securities, it may experience additional volatility since individual mortgage holders are less likely to exercise prepayment options, thereby putting additional downward pressure on the value of these securities and potentially causing the Fund to lose money. This is known as extension risk. Mortgage-backed securities can be highly sensitive to rising interest rates, such that even small movements can cause an investing Fund to lose value. Mortgage-backed securities, and in particular those not backed by a government guarantee, are subject to credit risk. In addition, adjustable and fixed rate mortgage-related securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Funds because the Funds may have to reinvest that money at the lower prevailing interest rates. The Funds investments in other asset-backed securities are subject to risks similar to those associated with mortgage-related securities, as well as additional risks associated with the nature of the assets and the servicing of those assets. Payment of principal and interest on asset-backed securities may be largely dependent upon the cash flows generated by the assets backing the securities, and asset-backed securities may not have the benefit of any security interest in the related assets.

High-yield bonds (commonly referred to as junk bonds) typically have a lower credit rating than other bonds. Lower-rated bonds generally involve a greater risk to principal than higher-rated bonds. Further, markets for lower-rated bonds are typically less liquid than for higher-rated bonds, and public information is usually less abundant in such markets. Thus, high yield investments increase the chance that a Fund will lose money on its investment. The Funds may also invest in bonds and other instruments that are not rated, but which PIMCO considers to be equivalent to high-yield investments. The Funds may hold defaulted securities that may involve special considerations including bankruptcy proceedings, other regulatory and legal restrictions affecting the Funds—ability to trade, and the availability of prices from independent pricing services or dealer quotations. Defaulted securities are often illiquid and may not be actively traded. Sale of securities in bankrupt companies at an acceptable price may be difficult and differences compared to the value of the securities used by the Funds could be material.

Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely floating rate

ANNUAL REPORT JULY 31, 2015

5

Important Information About the Funds (Cont.)

securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When a Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the NAV of the Funds—shares.

The global economic crisis brought several small economies in Europe to the brink of bankruptcy and many other economies into recession and weakened the banking and financial sectors of many European countries. For example, the governments of Greece, Spain, Portugal, and the Republic of Ireland have all experienced large public budget deficits, the effects of which are still yet unknown and may slow the overall recovery of the European economies from the global economic crisis. In addition, due to large public deficits, some European countries may be dependent on assistance from other European governments and institutions or other central banks or supranational agencies such as the International Monetary Fund. Assistance may be dependent on a country s implementation of reforms or reaching a certain level of performance. Failure to reach those objectives or an insufficient level of assistance could result in a deep economic downturn which could significantly affect the value of a Fund s European investments. It is possible that one or more Economic and Monetary Union of the European Union (EMU) member countries could abandon the euro and return to a national currency and/or that the euro will cease to exist as a single currency in its current form. The exit of any country out of the euro may have an extremely destabilizing effect on other eurozone countries and their economies and a negative effect on the global economy as a whole. Such an exit by one country may also increase the possibility that additional countries may exit the euro should they face similar financial difficulties.

The Funds may invest in securities and instruments that are economically tied to Russia. Investments in Russia are subject to various risks such as political, economic, legal, market and currency risks. The risks include uncertain political and economic policies, short-term market volatility, poor accounting standards, corruption and crime, an inadequate regulatory system, and unpredictable taxation. Investments in Russia are particularly subject to the risk that economic sanctions may be imposed by the United States and/or other countries. Such sanctions which may impact companies in many sectors, including energy, financial services and defense, among others may negatively impact the Funds performance and/or ability to achieve their investment objectives. The Russian securities market is characterized by limited volume of trading, resulting in difficulty in obtaining accurate prices. The Russian securities market, as compared to U.S. markets, has

significant price volatility, less liquidity, a smaller market capitalization and a smaller number of traded securities. There may be little publicly available information about issuers. Settlement, clearing and registration of securities transactions are subject to risks because of registration systems that may not be subject to effective government supervision. This may result in significant delays or problems in registering the transfer of securities. Russian securities laws may not recognize foreign nominee accounts held with a custodian bank, and therefore the custodian may be considered the ultimate owner of securities they hold for their clients. Ownership of securities issued by Russian companies is recorded by companies themselves and by registrars instead of through a central registration system. It is possible that the ownership rights of the Funds could be lost through fraud or negligence. While applicable Russian regulations impose liability on registrars for losses resulting from their errors, it may be difficult for the Funds to enforce any rights it may have against the registrar or issuer of the securities in the event of loss of share registration. Adverse currency exchange rates are a risk and there may be a lack of available currency hedging instruments. Investments in Russia may be subject to the risk of nationalization or expropriation of assets. Oil, natural gas, metals, and timber account for a significant portion of Russia s exports, leaving the country vulnerable to swings in world prices.

The common shares of the Funds trade on the New York Stock Exchange. As with any stock, the price of a Fund s common shares will fluctuate with market conditions and other factors. If you sell your common shares of a Fund, the price received may be more or less than your original investment. Shares of closed-end management investment companies frequently trade at a discount from their net asset value. The common shares of a Fund may trade at a price that is less than the initial offering price and/or the net asset value of such shares. Further, if a Fund s shares trade at a price that is more than the initial offering price and/or the net asset value of such shares, including at a substantial premium and/or for an extended period of time, there is no assurance that any such premium will be sustained for any period of time and will not decrease, or that the shares will not trade at a discount to net asset value thereafter.

Income distributions and capital gain distributions are determined in accordance with income tax regulations which may differ from U.S. GAAP. Differences between tax regulations and U.S. GAAP may cause timing differences between income and capital gain recognition. Further, the character of investment income and capital gains may be different for certain transactions under the two methods of accounting. As a result, income distributions and capital gain distributions declared during a fiscal period may differ significantly from the net investment income (loss) and realized gains (losses) reported on each Fund s annual financial statements presented under U.S. GAAP.

6 PIMCO CLOSED-END FUNDS

The Funds may be subject to various risks in addition to those described above. Some of these risks may include, but are not limited to, the following: asset allocation risk, credit risk, stressed securities risk, distressed and defaulted securities risk, corporate bond risk, market risk, issuer risk, liquidity risk, equity securities and related market risk, mortgage-related and other asset-backed securities risk, extension risk, prepayment risk, privately issued mortgage-related securities risk, mortgage market/ subprime risk, foreign (non-U.S.) investment risk, emerging markets risk, currency risk, redenomination risk, non-diversification risk, management risk, municipal bond risk, inflation-indexed security risk, senior debt risk, loans, participations and assignments risk, reinvestment risk, real estate risk, U.S. Government securities risk, foreign (non-U.S.) government securities risk, valuation risk, segregation and cover risk, focused investment risk, credit default swaps risk, event-linked securities risk, counterparty risk, preferred securities risk, confidential information access risk, other investment companies risk, private placements risk, inflation/deflation risk, regulatory risk, tax risk, recent economic conditions risk, market disruptions and geopolitical risk, potential conflicts of interest involving allocation of investment opportunities, repurchase agreements risk, securities lending risk, zero-coupon bond and payment-in-kind securities risk, portfolio turnover risk, smaller company risk, short sale risk and convertible securities risk. A description of certain of these risks is available in the Notes to Financial Statements of this Report.

On each Fund Summary page in this Shareholder Report, the Average Annual Total Return table measures performance assuming that all dividend and capital gain distributions were reinvested. Total return is calculated by determining the percentage change in NAV or market price (as applicable) in the specified period. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions. Total return for a period of more than one year represents the average annual total return. Performance at market price will differ from results at NAV. Although market price returns tend to reflect investment results over time, during shorter periods returns at market price can also be influenced by factors such as changing views about a Fund, market conditions, supply and demand for the Fund s shares, or changes in the Fund s dividends. Performance shown is net of fees and expenses.

The following table discloses the commencement of operations of each Fund:

	Commencement
Fund Name	of Operations
PIMCO Corporate & Income Opportunity Fund	12/27/02
PIMCO Corporate & Income Strategy Fund	12/21/01
PIMCO High Income Fund	04/30/03
PIMCO Income Strategy Fund	08/29/03
PIMCO Income Strategy Fund II	10/29/04

An investment in a Fund is not a deposit of a bank and is not guaranteed or insured by the Federal Deposit Insurance Corporation or any other government agency. It is possible to lose money on investments in the Funds.

PIMCO has adopted written proxy voting policies and procedures (Proxy Policy) as required by Rule 206(4)-6 under the Investment Advisers Act of 1940. The Proxy Policy has been adopted by the Funds as the policies and procedures that PIMCO will use when voting proxies on behalf of the Funds. A description of the policies and procedures that PIMCO uses to vote proxies relating to portfolio securities of each Fund, and information about how each Fund voted proxies relating to portfolio securities held during the most recent twelve-month period ended June 30, are available without charge, upon request, by calling the Funds at (844) 33-PIMCO (844-337-4626), on the Funds website at www.pimco.com, and on the Securities and Exchange Commission s (SEC) website at http://www.sec.gov.

Each Fund files a complete schedule of its portfolio holdings with the SEC for the first and third quarters of its fiscal year on Form N-Q. A copy of each Fund s Form N-Q is available on the SEC s website at http://www.sec.gov and may be reviewed and copied at the SEC s Public Reference Room in Washington, D.C., and is available without charge, upon request by calling the Funds at (844) 33-PIMCO (844-337-4626) and on the Funds website at www.pimco.com.

Updated portfolio holdings information about a Fund will be available at www.pimco.com approximately 15 calendar days after such Fund s most recent fiscal quarter end, and will remain accessible until such Fund files a Form N-Q or a shareholder report for the period which includes the date of the information. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

Fund Information (as of July 31, 2015)(1)

Market Price	\$14.31
NAV	\$14.23
Premium/(Discount) to NAV	0.56%
Market Price Distribution Yield ⁽²⁾	10.90%
NAV Distribution Yield ⁽²⁾	10.96%
Total Effective Leverage ⁽³⁾	37%

Average Annual Total Return⁽¹⁾ for the period ended July 31, 2015

-	1 Year	5 Year	10 Year	Commencement of Operations (12/27/02)
Market Price	-8.63%	10.99%	11.48%	13.14%
NAV	5.28%	15.28%	13.47%	14.49%

All Fund returns are net of fees and expenses.

The average annual total returns shown above have been restated from previous reports to shareholders to align with the Fund s change from a November 30 to a July 31 fiscal year end. For the period December 1, 2014 through July 31, 2015, the Fund s total return was -13.61% and 3.75% on a market price and NAV basis, respectfully.

⁽¹⁾ Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and the principal value of an investment will fluctuate. Total return, market price, NAV, market price distribution yield, and NAV distribution yield will fluctuate with changes in market conditions. For performance current to the most recent month-end, visit www.pimco.com or call (844) 33-PIMCO.

- (2) Distribution yields are not performance and are calculated by annualizing the most recent distribution per share and dividing by the NAV or Market Price, as applicable, as of the reported date. Distributions may be comprised of ordinary income, net capital gains, and/or a return of capital (ROC) of your investment in the Fund. Because the distribution rate may include a ROC, it should not be confused with yield or income. If the Fund estimates that a portion of its distribution may be comprised of amounts from sources other than net investment income, the Fund will notify shareholders of the estimated composition of such distribution through a Section 19 Notice. Please refer to the most recent Section 19 Notice, if applicable, for additional information regarding the composition of distributions. Please visit www.pimco.com for most recent Section 19 Notice, if applicable. Final determination of a distribution s tax character will be made on Form 1099 DIV sent to shareholders each January.
- (3) Represents total effective leverage outstanding, as a percentage of total managed assets. Total effective leverage consists of preferred shares, reverse repurchase agreements and other borrowings, credit default swaps and floating rate notes issued in tender option bond transactions, as applicable (collectively Total Effective Leverage). The Fund may engage in other transactions not included in Total Effective Leverage disclosed above that may give rise to a form of leverage, including certain derivative transactions. Total managed assets refer to total assets (including assets attributable to Total Effective Leverage that may be outstanding) minus accrued liabilities (other than liabilities representing Total Effective Leverage).

Investment Objective and Strategy Overview

» PIMCO Corporate & Income Opportunity Fund s primary investment objective is to seek high current income, with capital preservation and capital appreciation as secondary objectives.

Fund Insights

- » For the period from December 1, 2014 through July 31, 2015, an allocation to non-agency mortgage-backed securities was a major contributor to performance, as the sector continued to benefit from the improving U.S. housing market.
- » The Fund s partial redemption of auction rate preferred shares (ARPS) had a significant, one-time positive impact on returns, as redemption was done below face value. This was accretive to the Fund s returns for common shareholders.
- » The Fund s exposure to select high yield corporate bonds significantly contributed to performance. In particular, an allocation to bank capital securities at the junior parts of capital structure was beneficial. In addition, security selection in the entertainment sector was also positive for performance.
- » The Fund s emerging market holdings contributed modestly to performance, as Russian hard-currency denominated bonds posted solid performance given stabilizing oil prices later in the reporting period and normalization in Russia s external geopolitical position.
- » The Fund s exposure to U.S. interest rate duration was positive for performance. Nevertheless, short interest rate exposure at the long end of the yield curve detracted from returns, as long-term rates declined during the period. The overall impact to the portfolio from U.S. interest rate exposure and yield curve positioning was neutral.
- » The Fund s exposure to Brazilian hard-currency denominated assets detracted from performance. Investor sentiment for these securities was weighed down by the country s weaker economic condition, higher inflation and rating downgrades with a negative outlook.
- » The Fund s exposure to select taxable municipal bonds detracted from returns.

Investment Objective and Strategy Overview

» PIMCO High Income Fund s primary investment objective is to seek high current income, with capital appreciation as a secondary objective.

Fund Insights

- » For the period from April 1, 2015 through July 31, 2015, an allocation to non-agency mortgage-backed securities was a primary contributor to performance, as the sector continued to benefit from the improving U.S. housing market.
- » The Fund s U.S. short interest rate exposure at the long end of the U.S. Treasury yield curve contributed significantly to returns. This position helped to offset the negative impact of higher U.S. interest rates elsewhere in the portfolio, resulting in an overall positive impact to the portfolio from U.S. interest rates exposure.
- » The Fund s emerging market holdings contributed substantially to performance, as Russian quasi-sovereign corporate bond holdings posted positive results given stabilizing oil prices and normalization in Russia s external geopolitical position.
- » Despite widening spreads, the Fund s exposure to select high yield corporate bonds contributed to performance as these holdings generated an attractive coupon return. In addition, security selection in the entertainment sector was positive for performance.
- » The Fund s exposure to select taxable municipal bonds detracted from returns.
- » The Fund s exposure to Brazilian hard-currency denominated assets detracted from returns. Investor sentiment for these securities was weighed down by the country s weaker economic conditions, higher inflation and rating downgrades with a negative outlook.
- » The Fund s tactical interest rate exposure in the United Kingdom was modestly negative for performance, as rates rose across the yield curve in the country given the strength of its economy.

Investment Objective and Strategy Overview

» PIMCO Income Strategy Fund s primary investment objective is to seek high current income, consistent with the preservation of capital.

Fund Insights

- » For the period from August 1, 2014 through July 31, 2015, an allocation to certain agency mortgage derivatives was a major contributor to performance given positive security selection and attractive income.
- » The Fund s partial redemption of auction rate preferred shares (ARPS) had a significant, one-time positive impact on returns, as redemption was done below face value. This was accretive to the Fund s returns for common shareholders.
- » An allocation to non-agency mortgage-backed securities was a significant contributor to performance, as the sector continued to benefit from the improving U.S. housing market.
- » The Fund s exposure to U.S. interest rate duration contributed significantly to returns. Nevertheless, short interest rate exposure at the long end of the yield curve offset some of the gains, as long-term rates declined during the reporting period.
- » The Fund s exposure to select high yield corporate bonds contributed to performance. In particular, an allocation to bank capital securities (especially at junior parts of the capital structure), as well as security selection in the utilities and entertainment sectors, was positive for performance. In contrast, security selection in the manufacturing sector was negative for performance.
- » The Fund s exposure to hard-currency denominated Russian bonds posted positive performance as an attractive coupon return helped offset wider spreads.
- » The Fund s exposure to Brazilian local and hard-currency denominated bonds detracted from performance. Investor sentiment for these securities was weighed down by the country s weaker economic condition, higher inflation and rating downgrades with a negative outlook.
- » The Fund s exposure to investment grade corporate bonds detracted from performance as their spreads widened during the reporting period.
- » The Fund s exposure to select taxable municipal bonds detracted from returns.

Investment Objective and Strategy Overview

» PIMCO Income Strategy Fund II s primary investment objective is to seek high current income, consistent with the preservation of capital.

Fund Insights

- » For the period from August 1, 2014 through July 31, 2015, an allocation to non-agency mortgage-backed securities was a major contributor to performance, as the sector continued to benefit from the improving U.S. housing market.
- » The Fund s partial redemption of auction rate preferred shares (ARP\$) had a significant, one-time positive impact on returns, as redemption was done below face value. This was accretive to the Fund s returns for common shareholders.
- » The Fund s exposure to U.S. interest rate duration was significantly positive for performance. However, short interest rate exposure at the long end of the yield curve detracted from performance, as long-term rates declined during the reporting period. The overall impact to the portfolio from U.S. interest rate exposure and yield curve positioning plus an attractive carry, or the rate of interest earned by holding the respective securities, was positive.
- » The Fund s exposure to select high yield corporate bonds contributed to performance. In particular, an allocation to bank capital securities (especially at junior parts of the capital structure), as well as security selection in the utilities and entertainment sectors, was positive for performance. In contrast, security selection in the manufacturing sector was negative for performance.
- » The Fund s exposure to hard-currency denominated Russian corporate and quasi-sovereign bonds was positive for performance as an attractive coupon return helped offset wider spreads.
- » The Fund s exposure to Brazilian local and hard-currency denominated bonds detracted significantly from performance. Investor sentiment for these securities was weighed down by the country s weaker economic condition, higher inflation and rating downgrades with a negative outlook.
- » The Fund s exposure to select taxable municipal bonds was a detractor from performance given wider spreads, as the market overall was impacted by negative news flow out of Puerto Rico, as well as a supply/demand imbalance. In addition, security selection within this sector detracted from performance, as a specific very long-dated bond sold off due to issue-specific factors.
- ± See Note 12 in the Notes to Financial Statements for more information.

^{*} Annualized

[^] Reflects an amount rounding to less than one cent.

⁽a) Per share amounts based on average number of shares outstanding during the year or period.

⁽b) Determined in accordance with federal income tax regulations, see Note 2(c) in the Notes to Financial Statements for more information.

⁽c) Total investment return is calculated assuming a purchase of a common share at the market price on the first day and a sale of a common share at the market price on the last day of each year or period reported. Dividends and distributions, if any, are assumed, for purposes of this calculation, to be reinvested at prices obtained under the Funds dividend reinvestment plan. Total investment return does not reflect brokerage commissions in connection with the purchase or sale of Fund shares.

⁽d) Calculated on the basis of income and expenses applicable to both common and preferred shares relative to the average net assets of common shareholders.

⁽e) Interest expense primarily relates to participation in borrowing and financing transactions, see Note 5 in the Notes to Financial Statements for more information.

- (f) Fiscal year end changed from November 30th to July 31st.
- (g) Fiscal year end changed from October 31st to July 31st.
- (h) Fiscal year end changed from March 31st to July 31st.
- (i) Total distributions for the period ended July 31, 2015 may be lower than prior fiscal years due to fiscal year end changes resulting in a reduction of the amount of days in the period ended July 31, 2015.
- (j) See Note 12 in the Notes to Financial Statements.

Total Borrowings and Other Financing Transactions	\$	30,732	\$	(13,551)	\$	0	\$	0						

⁽³⁾ Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

(h) FINANCIAL DERIVATIVE INSTRUMENTS: EXCHANGE-TRADED OR CENTRALLY CLEARED

SWAP AGREEMENTS:

CREDIT DEFAULT SWAPS ON CREDIT INDICES - SELL PROTECTION (1)

	Fixed Deal	Maturity	Notional	Market	Unrealized	Variatio	n Margin

24 PIMCO CLOSED-END FUNDS See Accompanying Notes

⁽²⁾ The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

⁽³⁾ The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices—credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

July 31, 2015

FINANCIAL DERIVATIVE INSTRUMENTS: EXCHANGE-TRADED OR CENTRALLY CLEARED SUMMARY

The following is a summary of the market value and variation margin of Exchange-Traded or Centrally Cleared Financial Derivative Instruments as of July 31, 2015:

(i) Securities with an aggregate market value of \$2,269 and cash of \$24,587 have been pledged as collateral for exchange-traded and centrally cleared financial derivative instruments as of July 31, 2015. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

⁽¹⁾ If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

Table of Contents 57

(3)

⁽²⁾ Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity s credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

(4) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

⁽⁵⁾ Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from OTC financial derivative instruments can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

FAIR VALUE OF FINANCIAL DERIVATIVE INSTRUMENTS

The following is a summary of the fair valuation of the Fund s derivative instruments categorized by risk exposure. See Note 7, Principal Risks, in the Notes to Financial Statements on risks of the Fund.

⁽²⁾ Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

(g) FINANCIAL DERIVATIVE INSTRUMENTS: EXCHANGE-TRADED OR CENTRALLY CLEARED

SWAP AGREEMENTS:

CREDIT DEFAULT SWAPS ON CREDIT INDICES - SELL PROTECTION $^{(1)}$

		Maturity								
	Fixed Deal		Notional	Market	Unrealized					
Index/Tranches	Receive Rate	Date	Amount (2)	Value (3)	(Depreciation)	Asset	Liability			
CDX.HY-24 5-Year Index	5.000%	06/20/2020	\$ 24,948	\$ 1,697	\$ (224)	\$ 30	\$ 0			

- (1) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.
- (2) The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.
- (3) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices—credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

⁽¹⁾ If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

34 PIMCO CLOSED-END FUNDS

See Accompanying Notes

⁽²⁾ Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity s credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

⁽³⁾ The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

BORROWINGS AND OTHER FINANCING TRANSACTIONS SUMMARY

The following is a summary by counterparty of the market value of Borrowings and Other Financing Transactions and collateral (received)/pledged as of July 31, 2015:

(g) Securities with an aggregate market value of \$39,412 have been pledged as collateral under the terms of the following master agreements as of July 31, 2015.

Counterparty	Agre Pro to	eement ceeds be beived	Rej	yable for Reverse purchase reements	r yback		Borrov Other	_	ollateral ved)/Pledged	Exposure
Global/Master Repurchase Agreement										
BCY	\$	0	\$	(10,014)	\$ 0	\$ 0	\$	(10,014)	\$ 10,153	\$ 139

Total Borrowings and Other Financing Transactions	\$	8,584	\$	(37,237)	\$ 0	\$ 0				

(3) Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

(h) FINANCIAL DERIVATIVE INSTRUMENTS: EXCHANGE-TRADED OR CENTRALLY CLEARED

SWAP AGREEMENTS:

CREDIT DEFAULT SWAPS ON CREDIT INDICES - SELL PROTECTION $^{(1)}$

	Fixed Deal	Maturity	Notional	Market	Unrealized	Variatio	n Margin
Index/Tranches	Receive Rate	Date	Amount (2)	Value (3)	(Depreciation)	Asset	Liability
CDX.HY-24 5-Year Index	5.000%	06/20/2020	\$ 21,186	\$ 1,441	\$ (193)	\$ 76	\$ 0

⁽¹⁾ If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

See Accompanying Notes

ANNUAL REPORT JULY 31, 2015 41

⁽²⁾ The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

⁽³⁾ The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.
