#### Item 2

##### FIRST EUROPEAN LAUNCH FOR CRESTOR(R) IN THE NETHERLANDS

AstraZeneca announced today it has launched CRESTOR(R) (rosuvastatin) 10-40 mg for the management of primary hypercholesterolaemia and mixed dyslipidaemia in the Netherlands, the first European market to launch CRESTOR.

Dr Gunnar Olsson, Head of the Cardiovascular Therapy Area at AstraZeneca, said: "An estimated 1.6 million people in the Netherlands have elevated cholesterol levels, putting them at risk of cardiovascular disease. With the efficacy we've seen in clinical studies, CRESTOR has the potential to make a real difference to these patients' lives."

The company plans to launch in the remaining EU markets over the coming months, following the conclusion of the Mutual Recognition Procedure (MRP) and the local Marketing Authorisations and subsequent pricing and reimbursement discussions. The Netherlands acted as the reference member state for the MRP.

The Dutch statin market is valued at 240 million Euros (\$220 million), and is growing at 15 per cent a year. The global statin market is currently worth approximately US \$19 billion annually and is also growing at about 15 per cent a year.

The clinical development programme for CRESTOR now involves over 16,000 patients and includes a number of head-to-head comparative studies. In multiple clinical studies, CRESTOR has been shown to be more effective in lowering LDL-cholesterol (LDL-C or 'bad cholesterol') than currently prescribed statins. CRESTOR 10mg gets significantly more patients to their European LDL-C goal than atorvastatin 10mg (82% v 51% respectively), simvastatin 20mg (80% v 48%) and pravastatin 20mg (80% v 16%). In addition to the dramatic reductions seen in LDL-C, CRESTOR produces a significant increase in HDL-C ('good cholesterol'), as well as reducing total cholesterol and triglycerides.

CRESTOR is a trade mark of the AstraZeneca group of companies.

Item 6

### SUCCESSFUL OUTCOME OF THE MUTUAL RECOGNITION PROCEDURE FOR CRESTOR(R) IN EUROPE

AstraZeneca announced today that it has successfully completed the Mutual Recognition Procedure (MRP) in Europe for CRESTOR(R) (rosuvastatin) 10-40 mg for the management of primary hypercholesterolaemia and mixed dyslipidaemia. The Netherlands acted as the reference member state for the MR procedure, and CRESTOR has been launched in that market. National marketing authorisations in an additional 13 countries will be issued in the coming months.

Germany, Spain and Norway have been withdrawn from the MR process, and discussions will be held with their agencies to progress further regulatory options.

The global statin market is estimated to be worth approximately \$19 billion and growing at a rate of around 15 per cent annually.

The clinical development programme for CRESTOR now involves over 16,000 patients and includes a number of head-to-head comparative studies. In multiple clinical studies, CRESTOR has been shown to be more effective in lowering LDL-cholesterol (LDL-C or 'bad cholesterol') than currently prescribed statins. CRESTOR 10mg gets significantly more patients to their European LDL-C goal than atorvastatin 10mg (82% v 51% respectively), simvastatin 20mg (80% v 48%) and pravastatin 20mg (80% v 16%). In addition to the dramatic reductions seen in LDL-C, CRESTOR produces a significant increase in HDL-C ('good cholesterol'), as well as reducing total cholesterol and triglycerides.

CRESTOR has been approved in Singapore and in Canada, where it was recently launched. It is awaiting approval in the USA, Japan and in other markets.

Cardiovascular disease is the leading cause of death worldwide, responsible for up to 17 million deaths per year. CRESTOR, a member of the statin class, is a once daily treatment for dyslipidaemia, a key risk factor in the development of cardiovascular disease, providing important benefits for both patients and health care professionals.

CRESTOR is a Trade Mark of the AstraZeneca group of companies.
