- On Monday, March 31, CBOE began disseminating **CBOE Volatility Index (VIX) Term Structure data**. Analogous to calculating an implied volatility for S&P 500 Index (SPX) options by expiration, the VIX Term Structure is created by using the VIX methodology to calculate an index level for each SPX expiration currently traded. This new data service will provide useful comparisons between SPX options prices and the prices of options and futures based on the VIX Index. The information will be disseminated through CBOE's website, with the data set updated daily after the close of trading. In addition, daily historical values for the VIX Term Structure dating back to 1992 will also be available.
- During March, eight CBOE memberships, or seats, were traded. For the month, the highest seat price was \$2,850,000 on March 3, 2008. For the year, a total of 22 CBOE seats have been traded, with the high being \$3,125,000 on January 2, 2008.
