UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16 UNDER
THE SECURITIES EXCHANGE ACT OF 1934

For the month of NOVEMBER, 2004.

Commission File Number: 0-30464

IMA EXPLORATION INC.

(Translation of registrant's name into English)

#709 - 837 West Hastings Street, Vancouver, British Columbia, V6C 3N6, Canada

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports
under cover of Form 20-F or Form 40-F: FORM 20-F FORM 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(1): _____

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(7): _____

Indicate by check mark whether the registrant by furnishing the information
contained in this Form, is also thereby furnishing the information to the
Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.
YES NO

If "Yes" is marked, indicate below the file number assigned to the registrant in
connection with Rule 12g3-2(b): 82-_____

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the
registrant has duly caused this report to be signed on its behalf of the
undersigned, thereunto duly authorized.

NEWS RELEASE

November 02, 2004

IMA DISCOVERS NEW ZONE AT NAVIDAD WITH SILVER VALUES UP TO 6.5 KG/T (6,510 G/T)

IMA EXPLORATION INC. (IMR-TSX.V, IMXPF - OTC.BB) is pleased to announce the discovery of a new zone of silver mineralization at its 100% owned Navidad Project in central Patagonia, Argentina. The new zone, named "Loma de la Plata", is located approximately 4 kilometres west of the Galena Hill deposit and significantly expands the boundaries of known silver mineralization at the Navidad Project. The Loma de la Plata zone is defined by high silver values in rock samples and a silver in soil anomaly that is similar in magnitude to those that cover both the Galena Hill Deposit and Navidad Hill Zone (see attached map).

The Loma de la Plata zone was found as a result of the ongoing program of expanded grid soil sampling which has outlined a 350 x 400 metre zone of greater than 10 g/t silver within a 500 x 1,100 metre zone of predominantly greater than 2 ppm silver in soil samples. Values from 5.8 to 6,510 g/t silver have been obtained from 12 rock chip and float samples with 5 of the 12 samples returning greater than 1,000 g/t silver (see table below).

Table 1: Preliminary Rock samples from the Loma de la Plata Zone

SAMPLE	SAMPLE TYPE	SILVER (G/T)	% COPPER	% LEAD
M66526	float	2,800	0.68	0.01
M66527	grab	6,510	0.88	0.22
M66551	grab	20	0.02	0.54
M66552	grab	8	0.01	1.33
M66553	0.4m chip	162	0.01	2.22
M66554	0.6m chip	21	0.01	1.62
M66556	0.5m chip	337	0.02	2.24
M66557	0.4m chip	816	0.07	4.09
M66558	Float	4,790	0.36	0.06
M66559	0.3m chip	1,130	0.13	0.01
M66649	float	2,790	0.25	0.92
M66650	1m chip	77	0.01	2.87

Native silver has not previously been recognized by IMA geologists anywhere on surface at the Navidad Property - until follow-up of the Loma de la Plata soil anomaly. Preliminary geological assessment indicates that silver mineralization is hosted by a similar sequence of volcanic and sedimentary rocks, and in a similar stratigraphic position, to those that host the Galena Hill deposit. Mineralization consists of breccias and zones of calcite-barite veinlets with minor amounts of lead and copper sulphides and occasional native silver within andesitic volcanic rocks. Crews are currently on site mapping and sampling this new zone in greater detail.

Within the zone of highly anomalous silver in soil values at Loma de la Plata, 19 soil samples returned values of greater than 10 ppm silver and three samples returned greater than 100 ppm silver (up to 193 g/t). For comparative purposes,

Edgar Filing: IMA EXPLORATION INC - Form 6-K

the silver in soil anomaly over the Navidad Hill zone is defined by a 400 x 130 metre area of greater than 10 ppm silver and includes one sample with greater than 100 ppm silver (298ppm).

NEWS RELEASE

PAGE 2

In addition to work on the Loma de la Plata zone, IMA's geological team is currently undertaking a significantly expanded grid soil sampling program and conducting detailed mapping and sampling on several of the newer zones at the Navidad project. Concurrently, Snowden Mining Industry Consultants is preparing a resource estimate for the Navidad Hill and Connector zones that will likely be complete in early December.

Dr. Paul Lhotka, P.Geo. has overseen all aspects of this work and is IMA's "Qualified Person" for the Navidad Project under National Instrument 43-101. Soil samples collected from the Navidad Project are subject to a rigorous quality assurance and quality-control (QA/QC) program that is designed to meet or exceed industry standards.

IMA Exploration Inc. has over 10 years experience in Argentina and is focused on the exploration and development of its 100% owned Navidad silver discovery and its property portfolio in the region.

ON BEHALF OF THE BOARD
