

US CONCRETE INC
Form 10-K
March 13, 2008

UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

**ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF
1934**

For the fiscal year ended December 31, 2007

Commission file number 000-26025

U.S. CONCRETE, INC.
(Exact name of registrant as specified in its charter)

Delaware
**(State or other jurisdiction of
Incorporation or organization)**

76-0586680
**(I.R.S. Employer
Identification Number)**

2925 Briarpark, Suite 1050, Houston, Texas 77042
(Address of principal executive offices) (Zip code)
Registrant's telephone number, including area code: (713) 499-6200

Securities registered pursuant to Section 12(b) of the Act:

Common Stock, par value \$.001
(Title of class)

Nasdaq Global Select Market
(Name of exchange on which registered)

**Rights to Purchase Series A Junior
Participating Preferred Stock**
(Title of class)

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Edgar Filing: US CONCRETE INC - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or non-accelerated filer, or a smaller reporting company. See the definition of "large accelerated filer", "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act.) Yes No

Aggregate market value of the voting stock held by nonaffiliates of the registrant computed by reference to the last reported sale price of \$8.69 of the registrant's common stock on the Nasdaq National Market as of June 29, 2007, the last business day of the registrant's most recently completed second quarter: \$297,219,667.

There were 39,910,877 shares of common stock, par value \$.001 per share, of the registrant outstanding as of March 3, 2008.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Proxy Statement related to the registrant's 2008 Annual Meeting of Stockholders are incorporated by reference into Part III of this report.

U.S. CONCRETE, INC.

Cautionary Statement Concerning Forward-Looking Statements

From time to time, our management or persons acting on our behalf make forward-looking statements to inform existing and potential security holders about our company. These statements may include projections and estimates concerning our business strategies, revenues, income, cash flows and capital requirements. Forward-looking statements generally use words such as “estimate,” “project,” “predict,” “believe,” “expect,” “anticipate,” “plan,” “forecast,” “budget,” “goal” or other words that convey the uncertainty of future events or outcomes. In addition, sometimes we will specifically describe a statement as being a forward-looking statement and refer to this cautionary statement.

This report contains various statements, including those that express a belief, expectation or intention and those that are not statements of historical fact, are forward-looking statements under the Private Securities Litigation Reform Act of 1995. Those forward-looking statements appear in Item 1—“Business,” Item 2— “Properties,” Item 3—“Legal Proceedings,” Item 7—“Management’s Discussion and Analysis of Financial Condition and Results of Operations,” Item 7A—“Quantitative and Qualitative Disclosures About Market Risk,” Item 9A—“Controls and Procedures” and elsewhere in this report, including in the notes to our Consolidated Financial Statements in Item 8 of this report. Those forward-looking statements speak only as of the date of this report. We disclaim any obligation to update those statements, and we caution you not to rely unduly on them. We have based those forward-looking statements on our current expectations and assumptions about future events, which may prove to be inaccurate. While our management considers those expectations and assumptions to be reasonable, they are inherently subject to significant business, economic, competitive, regulatory and other risks, contingencies and uncertainties, most of which are difficult to predict and many of which are beyond our control. Therefore, actual results may differ materially and adversely from those expressed in any forward-looking statements. Factors that might cause or contribute to such differences include, but are not limited to, those we discuss in this report under the section entitled “Risk Factors” in Item 1A and the section entitled “Risks and Uncertainties” in Item 7— “Management’s Discussion and Analysis of Financial Condition and Results of Operations,” and in other reports we file with the Securities and Exchange Commission (the “SEC”). The factors we discuss in this report are not necessarily all the important factors that could affect us. Unpredictable or unknown factors we have not discussed in this report also could have material adverse effects on actual results of matters that are the subject of our forward-looking statements. We do not intend to update our description of important factors each time a potential important factor arises. We advise our existing and potential security holders that they should (1) be aware that important factors to which we do not refer in this report could affect the accuracy of our forward-looking statements and (2) use caution and common sense when considering our forward-looking statements.

PART I

Item 1. Business

General

We are a major producer of ready-mixed concrete, precast concrete products and concrete-related products in select markets in the United States. We operate our business through our ready-mixed concrete and concrete-related products segment; and our precast products concrete segment. We are a leading ready-mixed concrete or precast concrete producer products in substantially all the markets in which we have operations. Ready-mixed and precast concrete products are important building materials that are used in a vast majority of commercial, residential and public works construction projects.

All of our operations are in (and all of our sales are made within) the United States. We operate principally in Texas, California, New Jersey and Michigan, with those states representing 35%, 32%, 14% and 11%, respectively, of our net

sales from continuing operations for the year ended December 31, 2007. According to publicly available industry information, those states represented an aggregate of 27.5% of the consumption of ready-mixed concrete in the United States in 2007 (Texas, 13.0%, California, 10.9%, New Jersey, 1.6% and Michigan, 2.0%). We believe the geographic scope of our operations enables us to achieve cost savings through consolidated purchasing, reduction of our administrative costs on both a national and regional level, and aids in moderating the impact of regional economic cycles and weather conditions. Our consolidated revenues from continuing operations for the year ended December 31, 2007 were \$803.8 million, of which we derived approximately 90.9% from our ready-mixed concrete and concrete-related products segment and 9.1% from our precast concrete products segment. For information on our consolidated revenues and income from operations for the years ended December 31, 2007, 2006 and 2005 and our consolidated total assets as of December 31, 2007 and 2006, see our Consolidated Financial Statements included in this report.

As of March 3, 2008, we had 124 fixed and eight portable ready-mixed concrete plants, eight precast concrete plants, one concrete block plant and seven producing aggregates facilities (including 27 fixed ready-mixed concrete plants and one masonry block plant operated by our 60%-owned Michigan subsidiary). During 2007, these plants and facilities produced approximately 7.2 million cubic yards of ready-mixed concrete, 2.7 million eight-inch equivalent block units and 3.8 million tons of aggregates. We also own two aggregates facilities that we lease to third parties and retain a royalty on production from those facilities.

Our ready-mixed concrete and concrete-related products segment engages principally in the formulation, preparation and delivery of ready-mixed concrete to the job sites of our customers. We also provide services intended to reduce our customers' overall construction costs by lowering the installed, or "in-place," cost of concrete. These services include the formulation of mixtures for specific design uses, on-site and lab-based product quality control, and customized delivery programs to meet our customers' needs. Our marketing efforts primarily target concrete sub-contractors, general contractors, property owners and developers and home builders whose focus extends beyond the price of ready-mixed concrete to product quality, on-time delivery and reduction of in-place costs. To a lesser extent, this segment is also engaged in the mining and sale of aggregates and the resale of building materials, primarily to our ready-mixed concrete customers. These businesses are generally complementary to our ready-mixed concrete operations and provide us opportunities to cross-sell various products in markets in where we sell both ready-mixed concrete and concrete-related products. We provide our ready-mixed concrete and concrete-related products from our continuing operations in north and west Texas, northern California, New Jersey, Washington, D.C., Michigan and Oklahoma.

Our precast concrete products segment produces precast concrete products at eight plants in three states, with five plants in California, two in Arizona and one in Pennsylvania. Our customers choose precast technology for a variety of architectural applications, including free-standing walls used for landscaping, soundproofing and security walls, panels used to clad a building façade, storm water drainage as well as water and sewage pipes and tunnels. Our operations also specialize in a variety of finished products, among which are manholes, catch basins, highway barriers and curb inlets.

For financial information regarding our reporting segments, including sales and operating income for the years ended December 31, 2007, 2006 and 2005, see Note 12 to our Consolidated Financial Statements included in this report.

U.S. Concrete, Inc. is a Delaware corporation which was incorporated in 1997. We began operations in 1999, which is the year we completed our initial public offering. In this report, we refer to U.S. Concrete, Inc. and its subsidiaries as "we," "us" or "U.S. Concrete" unless we specifically state otherwise or the context indicates otherwise.

Industry Overview

General

Ready-mixed concrete is a highly versatile construction material that results from combining coarse and fine aggregates, such as gravel, crushed stone and sand, with water, various admixtures and cement. We manufacture ready-mixed concrete in thousands of variations, which in each instance may reflect a specific design use. We generally maintain only a few days' inventory of raw materials and coordinate our daily materials purchases with the time-sensitive delivery requirements of our customers.

The quality of ready-mixed concrete is time-sensitive as it becomes difficult to place within 90 minutes after mixing. Consequently, the market for a permanently installed ready-mixed concrete plant is usually limited to an area within a 25-mile radius of its plant location. We produce ready-mixed concrete in batches at our plants and use mixer and other trucks to distribute and deliver the concrete to the job sites of our customers. We generally do not provide paving or other finishing services, which construction contractors or subcontractors typically perform.

Ready-mixed concrete is poured-in-place in forms at a construction site and cured on site. In contrast, our precast concrete products are made with ready-mixed concrete (its primary raw material), but are cast in reusable molds or "forms" and cured in a controlled environment at our plant, then either placed in inventory or transported to the construction site. The advantages of using precast concrete products include the higher quality of the material, when formed in controlled conditions, and the reduced cost of reusable forms as compared to the cost of constructing large forms used with ready-mixed concrete placed at the construction site.

We generally obtain contracts through local sales and marketing efforts directed at concrete sub-contractors, general contractors, property owners and developers, and home builders. As a result, local relationships are very important.

Based on information from the National Ready-Mixed Concrete Association (“NRMCA”) and the National Precast Concrete Association (“NPCA”), we estimate that, in addition to vertically integrated manufacturers of cements and aggregates, over 2,300 independent ready-mixed concrete producers currently operate approximately 6,000 plants in the United States and 3,600 precast concrete products manufacturers operate in the United States and Canada. Larger markets generally have several producers competing for business on the basis of product quality, service, on-time delivery and price.

4

Annual usage of ready-mixed concrete in the United States dropped slightly in 2007 from its “near record” 2006 level. According to information available from the NRMCA and F.W. Dodge, total sales from the production and delivery of ready-mixed concrete in the United States over the past three years were as follows (in millions):

2007	\$	36,131
2006	\$	37,684
2005	\$	33,219

Ready-mixed concrete and precast concrete products have historically benefited from relatively stable demand and pricing. However, pricing of our products is primarily driven by the cost of raw materials (cement, aggregates, etc.), cost of labor and competition in our local markets. In 2007, raw materials cost and ready-mixed concrete and precast concrete products average selling prices increased. Under these economic conditions, we were able to maintain or slightly improve our operating margins. In the preceding two years, raw materials costs generally increased at a higher rate than our ready-mixed or precast concrete products prices and we experienced a reduction in our operating margins.

According to recently published F.W. Dodge data, the four major segments of the construction industry accounted for the following approximate percentages of the total volume of ready-mixed concrete produced in the United States in 2007:

Commercial and industrial construction	24%
Residential construction	23%
Street and highway construction and paving	20%
Other public works and infrastructure construction	33%

Barriers to the start-up of new ready-mixed concrete and precast concrete products manufacturing operations have been increasing. During the past decade, public concerns about dust, process water runoff, noise and heavy mixer and other truck traffic associated with the operation of these types of plants and their general appearance have made obtaining the permits and licenses required for new plants more difficult. Delays in the regulatory process, coupled with the substantial capital investment that start-up operations entail, have raised the barriers to entry for those operations.

For a discussion of the seasonality of the construction industry generally, see Item 1A - “Risk Factors - Our operating results may vary significantly from one reporting period to another and may be adversely affected by the seasonal and cyclical nature of the markets we serve” and Item 7 - “Management’s Discussion and Analysis of Financial Condition and Results of Operations” of this report.

Significant Factors Impacting the Market for Ready-Mixed Concrete and Precast Concrete Products

On the basis of available industry information, we believe that ready-mixed concrete revenue as a percentage of total construction expenditures in the United States has increased over the last five years.

Industry-wide Promotional and Marketing Activities. Since the 1990s, we believe industry participants have increased their focus on and benefited from promotional activities to increase the industry’s share of street and highway construction, commercial and industrial construction and residential construction expenditures. Many of these promotional efforts result from initiatives put forth by industry trade organizations such as the NRMCA, the Portland Cement Association and the NPCA. We believe these types of programs have been a catalyst for increased investment in the promotion of concrete as a construction material of choice.

Development of Concrete Products. Concrete has many attributes that make it a highly versatile construction material. In recent years, industry participants have developed various uses for concrete products, including:

- § high-strength engineered concrete to compete with steel-frame construction;
- § concrete housing;
- § precast modular paving stones;
- § flowable fill for backfill applications;
- § continuous-slab rail-support systems for rapid transit and heavy-traffic rail lines; and
- § concrete bridges, tunnels and other structures for rapid transit systems.

Other examples of successful innovations that have opened new markets for concrete include:

§ overlaying asphalt pavement with concrete, or “white topping”;

§ highway median barriers;

§ highway sound barriers;

§ paved shoulders to replace less permanent and increasingly costly asphalt shoulders;

§ pervious concrete parking lots for water drainage management, as well as providing a long-lasting and aesthetically pleasing urban environment; and

§ colored pavements to mark entrance and exit ramps and lanes of expressways.

Federal Highway Funding Legislation. In August 2005, President Bush signed a six-year, \$244.1 billion transportation reauthorization act known as the Safe, Accountable, Flexible and Efficient Transportation Equity Act: A Legacy for Users. This law funds, among other things, federal bridge and highway construction programs. We began to see the effects of this law in 2007, and we remain cautiously optimistic regarding continued state and federal spending on infrastructure projects in light of the current economic concerns driven by the downturn in residential housing and sub-prime lending markets.

Our Business Strategy

Our objectives are to become the leading provider of ready-mixed concrete, precast concrete and concrete-related products in each of our existing markets, on a select basis, to integrate our operations vertically through acquisition of aggregates supply sources that support our ready-mixed concrete operations, and to further expand the geographic scope of our business. We plan to achieve these objectives by continuing to implement our business strategy, which includes the primary elements we discuss below.

Improving Marketing and Sales Initiatives

Our marketing and sales strategy emphasizes the sale of value-added products to customers more focused on reducing their in-place building material costs than on the price per cubic yard of ready-mixed concrete or unit price of the concrete-related product they purchase. Key elements of our customer-focused approach include:

§ corporate-level marketing and sales expertise;

§ technical service expertise to develop innovative new branded products; and

§ training programs that emphasize successful marketing and sales techniques that focus on the sale of high-margin concrete mix designs and specialty-engineered precast concrete products.

We have also formed strategic alliances with several national companies to provide alternative solutions for designers and contractors by using value-added concrete products. Through these alliances, we offer color-conditioned, fiber-reinforced and high-performance concrete and utilize software technology that can be used to design buildings constructed of reinforced concrete.

Promoting a Green Environment

We recognize the value in advocating green building and construction as part of our strategy. We recently initiated Environmentally Friendly Concrete, *EF Technology*, our commitment to environmentally friendly concrete technologies that significantly reduces potential carbon dioxide (CO₂) emissions. Our *EF Technology* ready-mixed concrete product replaces a portion of traditional Portland cement with reclaimed fly ash, slag and other materials. This results in an environmentally superior and sustainable alternative to traditional Portland cement concrete. We believe *EF Technology* reduces greenhouse gases and landfill space consumption and produces a highly durable product. Customers can also receive LEED credits. During 2007, our promotion and use of *EF Technology* resulted in a reduction of over 400,000 tons of potential CO₂ emissions in our operations, an 18% reduction in CO₂ emissions as compared to 2006.

Promoting Operational Excellence and Achieving Cost Efficiencies

We strive to be an operationally excellent organization by:

- § investing in safety training solutions and technologies which enhance the safety of our work environments;
- § implementing and enhancing standard operating procedures;
- § standardizing plants and equipment;

- § investing in software and communications technology;
- § implementing company-wide quality-control initiatives;
- § providing technical expertise to optimize ready-mixed concrete mix designs; and
- § developing strategic alliances with key suppliers of goods and services for new product development.

We also strive to increase operating efficiencies. We believe that, if we continue to increase in size on both a local and national level, we should continue to experience future productivity and cost improvements in such areas as:

- § purchase of raw materials, through procurement and optimized ready-mixed concrete mix designs;
- § purchases of mixer trucks and other equipment, supplies, spare parts and tools;
- § vehicle and equipment maintenance; and
- § insurance and other risk management programs.

Pursuing Disciplined Growth

Our growth strategy targets a balance between internal growth opportunities and the acquisition of existing businesses. We believe this balanced approach provides us the opportunity to achieve above average growth rates.

Internal Growth. We seek to grow in our existing markets by expanding existing plants, green-fielding new plants, and identifying complementary products or services we can provide to our customers on a cost-effective basis. The benefits and challenges of expansion by internal growth include:

- § the initial capital investment for most internal growth projects is typically less than the capital required to purchase a similar situated existing business;
- § internal growth projects are designed and constructed with state-of-the-art equipment which usually results in greater productivity and lower operating costs than existing businesses that have been in operation for many years;
- § internal growth projects often take more time to begin generating revenue and profits due to the upfront permitting and design process; and
- § generally, internal growth projects eliminate the integration risks associated with the acquisition of an existing business.

Acquisition of Existing Businesses. We also seek growth by targeting opportunities to acquire businesses in our existing markets and entering new geographic markets on a select basis in the United States. We typically pursue acquisitions that we believe represent attractive opportunities to strengthen local management teams, implement cost-saving initiatives, achieve market-leading positions and establish best practices. We adhere to a disciplined pricing methodology when acquiring businesses. Based on our methodology for valuing, acquiring and integrating target businesses, we expect our future acquisitions to be accretive to our earnings per share after a reasonable period of integration. We cannot provide any assurance, however, regarding the impact any future acquisition we may complete could have on our future earnings per share.

Our acquisition growth program targets the following:

- § vertical integration of our existing ready-mixed concrete markets with the acquisition of aggregate quarries;
- § acquisition of high margin precast concrete products manufacturing businesses with similar operating strategies, product mix, and markets as we have; and
- § selectively acquire ready-mixed concrete operations, primarily in existing markets, as well as evaluate potential new markets.

Products and Services

Ready-Mixed Concrete and Concrete-Related Products Segment

Ready-Mixed Concrete. Our ready-mixed concrete products consist of proportioned mixes we prepare and deliver in an unhardened plastic state for placement and shaping into designed forms at the job site. Selecting the optimum mix for a job entails determining not only the ingredients that will produce the desired permeability, strength, appearance and other properties of the concrete after it has hardened and cured, but also the ingredients necessary to achieve a workable consistency considering the weather and other conditions at the job site. We believe we can achieve product differentiation for the mixes we offer because of the variety of mixes we can produce, our volume production capacity and our scheduling, delivery and placement reliability. Additionally, we believe our *EF Technology* initiative, which utilizes alternative materials and mix designs that result in lower CO₂ emissions, helps differentiate us from our competitors. We also believe we distinguish ourselves with our value-added service approach that emphasizes reducing our customers' overall construction costs by reducing the in-place cost of concrete and the time required for construction.

From a contractor's perspective, the in-place cost of concrete includes both the amount paid to the ready-mixed concrete manufacturer and the internal costs associated with the labor and equipment the contractor provides. A contractor's unit cost of concrete is often only a small component of the total in-place cost that takes into account all the labor and equipment costs required to build the forms for the ready-mixed concrete and place and finish the ready-mixed concrete, including the cost of additional labor and time lost as a result of substandard products or delivery delays not covered by warranty or insurance. By carefully designing proper mixes and using advances in mixing technology, we can assist our customers in reducing the amount of reinforcing steel, time and labor they will require in various applications.

We provide a variety of services in connection with our sale of ready-mixed concrete that can help reduce our customers' in-place cost of concrete. These services include:

- § production of formulations and alternative product recommendations that reduce labor and materials costs;
- § quality control, through automated production and laboratory testing, that ensures consistent results and minimizes the need to correct completed work; and
- § automated scheduling and tracking systems that ensure timely delivery and reduce the downtime incurred by the customer's placing and finishing crews.

We produce ready-mixed concrete by combining the desired type of cement, other cementitious materials (described below), sand, gravel and crushed stone with water and, typically, one or more admixtures. These admixtures, such as chemicals, minerals and fibers, determine the usefulness of the product for particular applications.

We use a variety of chemical admixtures to achieve one or more of five basic purposes:

- § relieve internal pressure and increase resistance to cracking in subfreezing weather;
- § retard the hardening process to make concrete more workable in hot weather;
- § strengthen concrete by reducing its water content;
- § accelerate the hardening process and reduce the time required for curing; and
- § facilitate the placement of concrete having low water content.

We frequently use various mineral admixtures as supplements to cement we refer to as cementitious materials, to alter the permeability, strength and other properties of concrete. These materials include fly ash, ground granulated blast-furnace slag and silica fume. These materials also reduce the amount of cement content used which results in a reduction in CO₂ emissions.

We also use fibers, such as steel, glass and synthetic and carbon filaments, as additives in various formulations of concrete. Fibers help to control shrinkage cracking, thus reducing permeability and improving abrasion resistance. In many applications, fibers replace welded steel wire and reinforcing bars. Relative to the other components of ready-mixed concrete, these additives generate comparatively high margins.

Aggregates. We produce crushed stone aggregates, sand and gravel from seven aggregates facilities located in New Jersey and Texas. We sell these aggregates for use in commercial, industrial and public works projects in the markets they serve, as well as consume them internally in the production of ready-mixed concrete in those markets. We produced approximately 3.8 million tons of aggregates in 2007 from these facilities with Texas producing 44% and New Jersey 56% of total production. In April 2007, we entered into an agreement to lease our sand pit operations in Michigan to the Edward C. Levy Co. as a component of a ready-mixed concrete business combination, which we refer to as the 60%-owned Michigan subsidiary. We now receive a royalty based on the volume of product produced and sold from the Michigan quarry during the term of the lease.

At December 31, 2007, our total estimated aggregate reserves were 80 million tons, assuming loss factors of between 10% and 20% for unusable material. We believe these aggregates reserves provide us with additional raw materials sourcing flexibility and supply availability, although they will provide us with supply for less than 5% of our annual consumption of aggregates.

Building Materials. Our building materials operations supply concrete masonry, various resale materials, products and tools contractors use in the concrete construction industry. These materials include rebar concrete block, wire mesh, color additives, curing compounds, grouts, wooden forms and numerous other items. Our building materials operations are located near several of our ready-mixed concrete operations in northern California, Michigan and Texas.

Precast Concrete Products Segment

We produce precast concrete products at eight plants in three states, with five in California, two in Arizona and one in Pennsylvania. Our precast concrete products consist of ready-mixed concrete we either produce on-site or purchase from third parties, which is then poured into reusable molds at our plant sites. After the concrete sets, we strip the molds from the finished products and either place them into inventory or ship them to our customers. Our precast technology produces a wide variety of finished products, including a variety of architectural applications, such as, soundproofing and security walls, signage, manholes, panels to clad a building façade, highway barriers and curb inlets and other precast products.

Because precast concrete products are not perishable, we can place these products into inventory and stage them at plants or other distribution sites to serve a larger geographic market area. The cost of transportation and storage usually limits the market area for these types of products to within approximately 150 miles of our plant sites and, therefore, sales are generally driven by the level of construction activity within the market area served by our plants. Our precast concrete products are marketed by our local sales organizations and are sold to numerous customers.

Operations

Ready-Mixed Concrete

Our ready-mixed concrete plants consist of fixed and portable facilities that produce ready-mixed concrete in wet or dry batches. Our fixed-plant facilities produce ready-mixed concrete that we transport to job sites by mixer trucks. Our portable plant operations deploy our eight portable plant facilities to produce ready-mixed concrete at the job site that we direct into place using a series of conveyor belts or a mixer truck. We use our portable plants to service high-volume projects or projects in remote locations. Several factors govern the choice of plant type, including:

- § production consistency requirements;
- § daily production capacity requirements; and
- § job site proximity to fixed plants.

Generally, we will construct wet batch plants to serve markets that we expect will have consistently high demand, as opposed to dry batch plants that will serve those markets that we expect will have a less consistent demand. A wet batch plant generally has a higher initial cost and daily operating expenses, but yields greater consistency with less time required for quality control in the concrete produced and generally have greater daily production capacity than a dry batch plant. We believe that construction of a wet batch plant having an hourly capacity of 250 cubic yards currently would cost approximately \$1.5 million, while a dry batch plant having the same capacity currently would cost approximately \$0.7 million. As of March 3, 2008, our fixed and portable batch plants included 23 wet batch

plants and 109 dry batch plants.

Our batch operator at a dry batch plant simultaneously loads the dry components of stone, sand and cement with water and admixtures in a mixer truck that begins the mixing process during loading and completes that process while driving to the job site. In a wet batch plant, the batch operator blends the dry components and water in a plant mixer from which an operator loads the already mixed concrete into a mixer truck, which leaves for the job site promptly after loading.

Any future decisions we make regarding the construction of additional plants will be impacted by market factors, including:

§ the expected production demand for the plant;

§ the expected types of projects the plant will service; and

§ the desired location of the plant.

9

Mixer trucks slowly rotate their loads en route to job sites in order to maintain product consistency. Our mixer trucks typically have load capacities of 10 cubic yards, or approximately 20 tons, and an estimated useful life of 12 years. A new truck of this size currently costs approximately \$160,000. Depending on the type of batch plant from which the mixer trucks generally are loaded, some components of the mixer trucks usually require refurbishment after three to five years. As of December 31, 2007, we operated a fleet of approximately 1,300 mixer trucks, which had an average age of approximately 6.5 years.

In our ready-mixed concrete operations, we emphasize quality control, pre-job planning, customer service and coordination of supplies and delivery. We often obtain purchase orders for ready-mixed concrete months in advance of actual delivery. A typical order contains specifications the contractor requires the concrete to meet. After receiving the specifications for a particular job, we use computer modeling, industry information and information from previous similar jobs to formulate a variety of mixtures of cement, aggregates, water and admixtures which meet or exceed the contractor's specifications. We perform testing to determine which mix design is most appropriate to meet the required specifications. The test results enable us to select the mixture that has the lowest cost and meets or exceeds the job specifications. The testing center creates and maintains a project file that details the mixture we will use when we produce the concrete for the job. For quality control purposes, the testing center also is responsible for maintaining batch samples of concrete we have delivered to a job site.

We use computer modeling to prepare bids for particular jobs based on the size of the job, location, desired margin, cost of raw materials and the design mixture identified in our testing process. If the job is large enough and has a projected duration beyond the supply arrangement in place at that time, we obtain quotes from our suppliers as to the cost of raw materials we use in preparing the bid. Once we obtain a quotation from our suppliers, the price of the raw materials for the specified job is informally established. Several months may elapse from the time a contractor has accepted our bid until actual delivery of the ready-mixed concrete begins. During this time, we maintain regular communication with the contractor concerning the status of the job and any changes in the job's specifications in order to coordinate the multisourced purchases of cement and other materials we will need to fill the job order and meet the contractor's delivery requirements. We confirm that our customers are ready to take delivery of manufactured products throughout the placement process. On any given day, one of our plants may have production orders for dozens of customers at various locations throughout its area of operation. To fill an order:

§ the customer service office coordinates the timing and delivery of the concrete to the job site;

§ a load operator supervises and coordinates the receipt of the necessary raw materials and operates the hopper that dispenses those materials into the appropriate storage bins;

§ a batch operator, using a computerized batch panel, prepares the specified mixture from the order and oversees the loading of the mixer truck with either dry ingredients and water in a dry batch plant or the premixed concrete in a wet batch plant; and

§ the driver of the mixer truck delivers the load to the job site, discharges the load and, after washing the truck, departs at the direction of the dispatch office.

Our central dispatch system tracks the status of each mixer truck as to whether a particular truck is:

§ loading concrete;

§ en route to a particular job site;

§ on the job site;

We generally operate each of our plants on an extended single shift, with some overtime operation during the year. On occasion, however, we may have projects that require deliveries around the clock.

Precast Concrete Products

Our precast concrete products operations consist of eight fixed plant sites where precast products are produced, staged and shipped to our customers and distribution yards. We stage precast products at distribution facilities to serve markets beyond the normal reach of our existing manufacturing sites. Each of our precast manufacturing sites has as its primary components:

- § either a ready-mixed batch plant or local ready-mixed concrete provider for the concrete utilized in production;
- § precast molds or “forms” for the array of products and product sizes we offer or a custom design center to create precast forms; and
- § a crane-way or other method to facilitate moving forms, finished product or pouring ready-mixed concrete.

Some of the products we produce are designed by the customer for use in their own systems, while other products are designed by our in-house engineers to meet the needs of our customers through a more standardized product. Each of our precast manufacturing sites produces a range of precast products.

Generally, precast structures are manufactured by placing pre-engineered ready-mixed concrete into molds, which are then vibrated to facilitate consolidation of the concrete within the mold and remove any voids created by air that may be trapped during the pouring process. These molds generally utilize some form of reinforcing which can include products ranging from (1) welded steel wire or re-bar placed inside the mold in a pre-engineered design to support the integrity of the finished precast product, to (2) steel fibers or other similar additives which are blended into the ready-mixed concrete during mixing to serve a similar purpose, or a combination of both. Once the pouring is complete, any exposed surfaces are finished and the product is allowed to cure in a controlled environment for a minimum of two to four hours and as long as 24 hours, depending on the product and design specification. After the product has cured, the mold is stripped and prepared for re-use in the manufacturing process.

Precast concrete structures are not perishable products. This contributes to our ability to maintain some level of standardized products in inventory at all times, as well as service a larger market area from a plant location than a ready-mixed concrete plant site. Our precast concrete products can be shipped across the country, but due to the weight of the products, shipping is generally limited to within a 150-mile radius of a plant site. Depending on our overall costs, shipments occur either through our existing fleet of crane-equipped trucks or through contract haulers. In some markets, we also install our precast products and provide our customers with the added benefit of eliminating coordination with a third party.

Bidding and order fulfillment processes for our precast business are similar to our ready-mixed concrete operations, as previously described above. Cement and aggregates are the two primary raw materials used in precast concrete manufacturing, similar to our ready-mixed concrete operations, while labor costs are second only to our materials cost.

Cement and Other Raw Materials

We obtain most of the materials necessary to manufacture ready-mixed concrete and precast concrete products on a daily basis. These materials include cement, other cementitious materials (fly ash, blast furnace slag) and aggregates (stone, gravel and sand), in addition to certain chemical admixtures. With the exception of chemical admixtures, each plant typically maintains an inventory level of these materials sufficient to satisfy its operating needs for a few days. Typically, cement represents the highest cost material used in manufacturing a cubic yard of ready-mixed concrete,

while the cost of aggregates used is slightly less than the cement cost. Historically, we have purchased cement from several suppliers in each of our major markets. Due to certain industry consolidations and our decision to have a primary and secondary supplier, in certain of our markets, we are now purchasing cement from fewer suppliers than in past years. Chemical admixtures are generally purchased from suppliers under national purchasing agreements.

In certain of our markets in 2007, cement and aggregates prices remained relatively flat as compared to 2006. In other of our markets, where we did experience cement and aggregates price increases, our ready-mixed concrete products pricing increased in relative proportion to our raw material price increases. Generally, we negotiate with suppliers on a company-wide basis and at the local market level to obtain the most competitive pricing available for cement, aggregates and chemical admixtures. We anticipate that the residential construction downturn that began in the second half of 2006 will continue through 2008, and, therefore, commercial construction and other building segments will comprise a larger percentage of domestic demand. We do not expect to experience cement shortages in the near term. Today, in most of our markets, we believe there is an adequate supply of aggregates. Should concrete demand increase significantly, we could experience escalating prices or shortages of aggregates.

Marketing and Sales

General contractors typically select their suppliers of ready-mixed concrete and precast concrete. In large, complex projects, an engineering firm or division within a state transportation or public works department may influence the purchasing decision, particularly if the concrete has complicated design specifications. In those projects and in government-funded projects generally, the general contractor or project engineer usually awards supply orders on the basis of either direct negotiation or competitive bidding. We believe the purchasing decision for many jobs ultimately is relationship-based. Our marketing efforts target general contractors, developers, design engineers, architects and homebuilders whose focus extends beyond the price of our product to quality, consistency and reducing the in-place cost.

Customers

Of our 2007 sales, we made approximately 49% to commercial and industrial construction contractors, 35% to residential construction contractors, 9% to street and highway construction contractors and 7% to other public works and infrastructure contractors. In 2007, no single customer or project accounted for more than 3% of our total sales.

We rely heavily on repeat customers. Our management and sales personnel are responsible for developing and maintaining successful long-term relationships with key customers.

Competition

The ready-mixed concrete, precast concrete and concrete-related products industries are highly competitive. Our competitive position in a market depends largely on the location and operating costs of our plants and prevailing prices in that market. Price is the primary competitive factor among suppliers for small or simple jobs, principally in residential construction. However, timeliness of delivery and consistency of quality and service, along with price, are the principal competitive factors among suppliers for large or complex jobs. Our competitors range from small, owner-operated private companies to subsidiaries or operating units of large, vertically integrated manufacturers of cement and aggregates. Our vertically integrated competitors generally have greater manufacturing, financial and marketing resources than we have, providing them with a competitive advantage. Competitors having lower operating costs than we do or having the financial resources to enable them to accept lower margins than we do will have a competitive advantage over us for jobs that are particularly price-sensitive. Competitors having greater financial resources or less financial leverage than we do may be able to invest more in new mixer trucks, ready-mixed concrete plants and other production equipment or pay for acquisitions which could provide them a competitive advantage over us. See Item 1A - "Risk Factors - We may lose business to competitors who underbid us, and we may be otherwise unable to compete favorably in our highly competitive industry."

Employees

As of March 3, 2008, we had approximately 667 salaried employees, including executive officers and management, sales, technical, administrative and clerical personnel, and approximately 2,110 hourly personnel. The number of employees fluctuates depending on the number and size of projects ongoing at any particular time, which may be impacted by variations in weather conditions throughout the year.

As of March 3, 2008, approximately 943 of our employees were represented by labor unions having collective bargaining agreements with us. Generally, these agreements have multi-year terms and expire on a staggered basis between 2008 and 2012. Under these agreements, we pay specified wages to covered employees and make payments to multi-employer pension plans and employee benefit trusts rather than administering the funds on behalf of these employees.

Other than a two-day strike at certain operations within our Atlantic Region in 2004, we have not experienced any strikes or significant work stoppages in the past five years. We believe our relationships with our employees and union representatives are satisfactory.

Training and Safety

Our future success will depend, in part, on the extent to which we can attract, retain and motivate qualified employees. We believe that our ability to do so will depend on the quality of our recruiting, training, compensation and benefits, the opportunities we afford for advancement and our safety record. We support and fund continuing education and training programs for our employees. We intend to continue and expand these programs. We require all field employees to attend periodic safety training meetings and all drivers and other delivery personnel to participate in training seminars. OSHA regulations establish requirements our training programs must meet. We employ a national safety director whose responsibilities include managing and executing a unified, company-wide safety program.

Governmental Regulation and Environmental Matters

A wide range of federal, state and local laws, ordinances and regulations apply to our operations, including the following matters:

§	land usage;
§	street and highway usage;
§	noise levels; and
§	health, safety and environmental matters.

In many instances, we are required to have various certificates, permits or licenses to conduct our business. Our failure to maintain these required authorizations or to comply with applicable laws or other governmental requirements could result in substantial fines or possible revocation of our authority to conduct some of our operations. Delays in obtaining approvals for the transfer or grant of authorizations, or failures to obtain new authorizations, could impede acquisition efforts.

Environmental laws that impact our operations include those relating to air quality, solid waste management and water quality. These laws are complex and subject to frequent change. They impose strict liability in some cases without regard to negligence or fault. Sanctions for noncompliance may include revocation of permits, corrective action orders, administrative or civil penalties and criminal prosecution. Some environmental laws provide for joint and several strict liability for remediation of spills and releases of hazardous substances. In addition, businesses may be subject to claims alleging personal injury or property damage as a result of alleged exposure to hazardous substances, as well as damage to natural resources. These laws also may expose us to liability for the conduct of or conditions caused by others, or for acts that complied with all applicable laws when performed.

We have conducted Phase I environmental site assessments, which are non-intrusive investigations conducted to evaluate the potential for significant on-site environmental impacts, on substantially all the real properties we own or lease and have engaged independent environmental consulting firms to complete those assessments. We have not identified any environmental concerns associated with those properties that we believe are likely to have a material adverse effect on our business, financial position, results of operations or cash flows, but we can provide no assurance material liabilities will not occur. In addition, we can provide no assurance our compliance with amended, new or more stringent laws, stricter interpretations of existing laws or the future discovery of environmental conditions will not require additional, material expenditures.

We believe we have all material permits and licenses we need to conduct our operations and are in substantial compliance with applicable regulatory requirements relating to our operations. Our capital expenditures relating to environmental matters were not material in 2007. We currently do not anticipate any material adverse effect on our business, financial condition, results of operations or cash flows as a result of our future compliance with existing environmental laws controlling the discharge of materials into the environment.

In March 2005, the California Regional Water Quality Control Board for the Central Valley Region (“CRWQCB”) issued a draft order to regulate discharges of concrete wastewater and solid wastes associated with concrete manufacturing at ready-mixed concrete plants located in and near Sacramento, California. This order would affect four sites in which six of our ready-mixed concrete plants operate in northern California. If approved in its current draft form, the order would require all existing ready-mixed concrete plants in the area to retrofit or reconstruct their waste management units to provide impermeable containment of all concrete wastewater and install leak detection systems. It also would require all new ready-mixed concrete plants in the area to be constructed with similar waste

management units. The draft order provides that operators of existing ready-mixed concrete plants would have 180 days to apply for coverage under the order, and then one year after coverage is obtained to complete all required retrofitting. In June 2005, the CRWQCB delayed approval of the order to provide the Construction Materials Association of California and various concrete producers time to provide certain information to the CRWQCB for further consideration. Although our actual capital expenditures may vary significantly and will ultimately depend on final regulations, if the order is approved in its current form, the cost of capital improvements to our plants at the four sites in the affected area may be up to \$1.0 million per site. Also, if the order is considered and adopted by the California Water Quality Control Board for the San Francisco Bay Region, we might incur similar costs to retrofit our existing plants in that area. At December 31, 2007, we operated 25 ready-mixed concrete plants in northern California, which could be impacted by this order should it be enacted.

Product Warranties

Our operations involve providing ready-mixed concrete, precast concrete products and other concrete formulations or products that must meet building code or other regulatory requirements and contractual specifications for durability, stress-level capacity, weight-bearing capacity and other characteristics. If we fail or are unable to provide products meeting these requirements and specifications, material claims may arise against us and our reputation could be damaged. In the past, we have had significant claims of this kind asserted against us that we have resolved. There currently are, and we expect that in the future there will be, additional claims of this kind asserted against us. If a significant product-related claim is resolved against us in the future, that resolution may have a material adverse effect on our business, financial condition, results of operations and cash flows.

Insurance

Our employees perform a significant portion of their work moving and storing large quantities of heavy raw materials, driving large mixer and other trucks in heavy traffic conditions and delivering concrete at construction sites or in other areas that may be hazardous. These operating hazards can cause personal injury and loss of life, damage to or destruction of properties and equipment and environmental damage. We maintain insurance coverage in amounts and against the risks we believe are in accord with industry practice, but this insurance may not be adequate to cover all losses or liabilities we may incur in our operations, and we may be unable to maintain insurance of the types or at levels we deem necessary or adequate or at rates we consider reasonable. For additional discussion of our insurance programs, see Note 14 to our Consolidated Financial Statements included in this report.

Available Information

Our Web site address is www.us-concrete.com. We make available on this Web site under the “investors” section, free of charge, our annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K, and amendments to those reports, as soon as reasonably practicable after we electronically file those materials with, or furnish them to, the SEC. Alternatively, the public may read and copy any materials we file with the SEC at the SEC’s Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. Information on the operation of the Public Reference Room may be obtained by calling the SEC at 1-800-SEC-0330. The SEC also maintains a Web site that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. The SEC’s Web site address is www.sec.gov.

Item 1A. Risk Factors

Set forth below and under “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Risks and Uncertainties” in Item 7 of Part II of this report are various risks and uncertainties that could adversely impact our business, financial condition, results of operations and cash flows.

There are risks related to our internal growth and operating strategy.

Our ability to generate internal growth will be affected by, among other factors, our ability to:

- § attract new customers; and
- § differentiate ourselves in a competitive market by emphasizing new product development and value-added sales and marketing; hire and retain employees; and reduce operating and overhead expenses.

One key component of our operating strategy is to operate our businesses on a decentralized basis, with local or regional management retaining responsibility for day-to-day operations, profitability and the internal growth of the individual business. If we do not implement and maintain proper overall business controls, this decentralized operating strategy could result in inconsistent operating and financial practices and our overall profitability could be adversely affected.

Our resources, including management resources, are limited and may be strained if we engage in a significant number of acquisitions. Also, acquisitions may divert our management’s attention from initiating or carrying out programs to save costs or enhance revenues.

Our inability to achieve internal growth could materially and adversely affect our business, financial condition, results of operations and cash flows.

Our operating results may vary significantly from one reporting period to another and may be adversely affected by the seasonal and cyclical nature of the markets we serve.

The ready-mixed concrete and precast concrete businesses are seasonal. In particular, demand for our products and services during the winter months are typically lower than in other months because of inclement winter weather. In addition, sustained periods of inclement weather or permitting delays could postpone or delay projects over geographic regions of the United States, and consequently, could adversely affect our business, financial condition, results of operations and cash flows. The relative demand for our products is a function of the highly cyclical construction industry. As a result, our revenues may be adversely affected by declines in the construction industry generally and in our local markets. Our results also may be materially affected by:

- § the level of residential and commercial construction in our regional markets, including reductions in the demand for new residential housing construction below current or historical levels;
- § the availability of funds for public or infrastructure construction from local, state and federal sources;
- § unexpected events that delay or adversely affect our ability to deliver concrete according to our customers’ requirements;

§ changes in interest rates and lending standards;

§

the changes in mix of our customers and business, which result in periodic variations in the margins of jobs performed during any particular quarter;

§ the timing and cost of acquisitions and difficulties or costs encountered when integrating acquisitions;

§ the budgetary spending patterns of customers;

§ increases in construction and design costs;

§ power outages and other unexpected delays;

§ our ability to control costs and maintain quality;

§ employment levels; and

§ regional or general economic conditions.

As a result, our operating results in any particular quarter may not be indicative of the results that you can expect for any other quarter or for the entire year. Furthermore, negative trends in the ready-mixed concrete industry or in our geographic markets could have material adverse effects on our business, financial condition, results of operations and cash flows.

We may be unsuccessful in continuing to carry out our strategy of growth through acquisitions.

One of our principal growth strategies is to increase our revenues and the markets we serve and to continue selectively entering new geographic markets through the acquisition of additional ready-mixed concrete, precast concrete products, aggregates products and related businesses. We may not be able to acquire suitable acquisition candidates at reasonable prices and on other reasonable terms for a number of reasons, including the following:

- § the acquisition candidates we identify may be unwilling to sell;
- § we may not have sufficient capital to pay for acquisitions; and
- § competitors in our industry may outbid us.

In addition, there are risks associated with the acquisitions we complete. We may face difficulties integrating the newly acquired businesses into our operations efficiently and on a timely basis. We also may experience unforeseen difficulties managing the increased scope, geographic diversity and complexity of our operations or mitigating contingent or assumed liabilities, potentially including liabilities we do not anticipate.

We may lose business to competitors who underbid us, and we may be otherwise unable to compete favorably in our highly competitive industry.

Our competitive position in a given market depends largely on the location and operating costs of our plants and prevailing prices in that market. Generally, our products are price-sensitive. Our prices are subject to changes in response to relatively minor fluctuations in supply and demand, general economic conditions and market conditions, all of which are beyond our control. Because of the fixed-cost nature of our business, our overall profitability is sensitive to minor variations in sales volumes and small shifts in the balance between supply and demand. Price is the primary competitive factor among suppliers for small or simple jobs, principally in residential construction. However, timeliness of delivery and consistency of quality and service, as well as price, are the principal competitive factors among suppliers for large or complex jobs. Concrete manufacturers like us generally obtain customer contracts through local sales and marketing efforts directed at general contractors, developers and homebuilders. As a result, we depend on local relationships. We generally do not have any long-term sales contracts with our customers.

Our competitors range from small, owner-operated private companies to subsidiaries or operating units of large, vertically integrated manufacturers of cement and aggregates. Our vertically integrated competitors generally have greater manufacturing, financial and marketing resources than we have, providing them with competitive advantages. Competitors having lower operating costs than we do or having the financial resources to enable them to accept lower margins than we do will have competitive advantages over us for jobs that are particularly price-sensitive. Competitors having greater financial resources or less financial leverage than we do to invest in new mixer trucks, build plants in new areas or pay for acquisitions also will have competitive advantages over us.

We depend on third parties for concrete equipment and supplies essential to operate our business.

We rely on third parties to lease properties, plant and equipment to us and to provide supplies, including cement and other raw materials, necessary for our operations. We cannot assure you that our favorable working relationships with our suppliers will continue in the future. Also, there have historically been periods of supply shortages in the concrete

industry, particularly in a strong economy.

If we are unable to lease necessary properties or equipment, our operations could be severely impacted. If we lose our supply contracts and receive insufficient supplies from other third parties to meet our customers' needs or if our suppliers experience price increases or disruptions to their business, such as labor disputes, supply shortages or distribution problems, our business, financial condition, results of operations and cash flows could be materially adversely affected.

In 2006, cement prices continued to rise at rates similar to those experienced in 2005 and 2004, as a result of strong domestic consumption driven largely by historic levels of residential construction that did not abate until the second half of 2006. During 2007, residential construction slowed significantly, which resulted in a decline in the demand for ready-mixed concrete. Cement price increases normalized during 2007, while cement supplies were at levels that indicated a low risk of cement shortages in our markets in the near term. Should demand increase substantially beyond our current expectations, we could experience shortages of cement in future periods, which could adversely affect our operating results, through both decreased sales and higher cost of raw materials.

Throughout 2006 and 2007, our product pricing for ready-mixed concrete continued to increase in most of our markets. These price increases allowed us to absorb the rising cost of raw materials (primarily cement, other cementitious materials and aggregates) in 2007. However, in 2006, the rising cost of raw materials outpaced our ability to increase prices and, as a result, our margins were adversely impacted. Gains on increased prices in 2007 were offset in part by higher labor, freight and delivery costs, including rising diesel fuel costs. With the national average of diesel fuel prices having risen 7% in 2007, 13% in 2006 and 33% in 2005, we experienced both increased freight charges for our raw materials, in the form of fuel surcharges, and increased costs to deliver our products. As these costs have become more significant over the last three years, we have instituted fuel surcharges in most of our markets in an attempt to cover these rising costs. We do not have any long-term fuel supply contracts that would protect us from rising fuel costs. Sustaining or improving our margins in the future will depend on market conditions and our ability to increase our product pricing or realize gains in productivity to offset further increases in raw materials and other costs.

Governmental regulations, including environmental regulations, may result in increases in our operating costs and capital expenditures and decreases in our earnings.

A wide range of federal, state and local laws, ordinances and regulations apply to our operations, including the following matters:

- § land usage;
- § street and highway usage;
- § noise levels; and
- § health, safety and environmental matters.

In many instances, we must have various certificates, permits or licenses in order to conduct our business. Our failure to maintain required certificates, permits or licenses or to comply with applicable governmental requirements could result in substantial fines or possible revocation of our authority to conduct some of our operations. Delays in obtaining approvals for the transfer or grant of certificates, permits or licenses, or failure to obtain new certificates, permits or licenses, could impede the implementation of our acquisition program.

Governmental requirements that impact our operations include those relating to air quality, solid waste management and water quality. These requirements are complex and subject to frequent change. They impose strict liability in some cases without regard to negligence or fault and may expose us to liability for the conduct of or conditions caused by others, or for our acts that complied with all applicable requirements when we performed them. Our compliance with amended, new or more stringent requirements, stricter interpretations of existing requirements, or the future discovery of environmental conditions may require us to make unanticipated material expenditures. In addition, we may fail to identify or obtain indemnification from environmental liabilities of acquired businesses. We generally do not maintain insurance to cover environmental liabilities.

In March 2005, the California Regional Water Quality Control Board for the Central Valley Region (“CRWQCB”) issued a draft order to regulate discharges of concrete wastewater and solid wastes associated with concrete manufacturing at ready-mixed concrete plants located in and near Sacramento, California. This order would affect four sites in which six of our ready-mixed concrete plants operate in northern California. If approved in its current draft form, the order would require all existing ready-mixed concrete plants in the area to retrofit or reconstruct their waste management units to provide impermeable containment of all concrete wastewater and install leak detection systems. It also would require all new ready-mixed concrete plants in the area to be constructed with similar waste management units. The draft order provides that operators of existing ready-mixed concrete plants would have 180

days to apply for coverage under the order, and then one year after coverage is obtained to complete all required retrofitting. In June 2005, the CRWQCB delayed approval of the order to provide the Construction Materials Association of California and various concrete producers time to provide certain information to the CRWQCB for further consideration. Although our actual capital expenditures may vary significantly and will ultimately depend on final regulations, if the order is approved in its current form, the cost of capital improvements to our plants at the four sites in the affected area may be up to \$1.0 million per site. Also, if the order is considered and adopted by the California Water Quality Control Board for the San Francisco Bay Region, we might incur similar costs to retrofit our existing plants in that area. At December 31, 2007, we operated a total of 25 ready-mixed concrete plants in northern California, which could be impacted by this order should it be enacted.

Our operations are subject to various hazards that may cause personal injury or property damage and increase our operating costs.

Operating mixer trucks, particularly when loaded, exposes our drivers and others to traffic hazards. Our drivers are subject to the usual hazards associated with providing services on construction sites, while our plant personnel are subject to the hazards associated with moving and storing large quantities of heavy raw materials. Operating hazards can cause personal injury and loss of life, damage to or destruction of properties, plant and equipment and environmental damage. Although we conduct training programs designed to reduce these risks, we cannot eliminate these risks. We maintain insurance coverage in amounts we believe are in accord with industry practice; however, this insurance may not be adequate to cover all losses or liabilities we may incur in our operations, and we may not be able to maintain insurance of the types or at levels we deem necessary or adequate or at rates we consider reasonable. A partially or completely uninsured claim, if successful and of sufficient magnitude, could have a material adverse effect on us.

The insurance policies we maintain are subject to varying levels of deductibles. Losses up to the deductible amounts are accrued based on our estimates of the ultimate liability for claims incurred and an estimate of claims incurred but not reported. If we were to experience insurance claims or costs above our estimates, our business, financial condition, results of operations and cash flows might be materially and adversely affected.

The departure of key personnel could disrupt our business, and our business growth will necessitate the successful hiring of new senior managers and executive officers.

We depend on the efforts of our executive officers and, in many cases, on senior management of our businesses. Our success will depend on retaining our senior-level managers and officers. If we cannot achieve this, we cannot be assured that we will be able to recruit and retain new senior-level managers and officers. To the extent we are unable to manage our growth effectively or are unable to attract and retain qualified management personnel, our business, financial condition, results of operations and cash flows could be materially and adversely affected. We do not carry key-person life insurance on any of our employees.

We may be unable to attract and retain qualified employees.

Our ability to provide high-quality products and services on a timely basis depends on our success in employing an adequate number of skilled plant managers, technicians and drivers. Like many of our competitors, we experience shortages of qualified personnel from time to time. We may not be able to maintain an adequate skilled labor force necessary to operate efficiently and to support our growth strategy, and our labor expenses may increase as a result of a shortage in the supply of skilled personnel.

Collective bargaining agreements, work stoppages and other labor relations matters may result in increases in our operating costs, disruptions in our business and decreases in our earnings.

As of March 3, 2008, approximately 35% of our employees were covered by collective bargaining agreements, which expire between 2008 and 2012. Of particular note, 512 of our employees are covered by collective bargaining agreements that expire in 2008. Our inability to negotiate acceptable new contracts or extensions of existing contracts with these unions could cause strikes or other work stoppages by the affected employees. In addition, any new contracts or extensions could result in increased operating costs attributable to both union and nonunion employees. If any such strikes or other work stoppages were to occur, or if other of our employees were to become represented by a union, we could experience a significant disruption of our operations and higher ongoing labor costs, which could materially adversely affect our business, financial condition, results of operations and cash flows. In addition, the coexistence of union and nonunion employees may lead to conflicts between union and nonunion employees or impede our ability to integrate our operations efficiently. Also, labor relations matters affecting our suppliers of

cement and aggregates could adversely impact our business from time to time.

We contribute to 14 multiemployer pension plans. If we were to withdraw partially or completely from any plan that is underfunded, we would be liable for a proportionate share of that plan's unfunded vested benefits. Based on the limited information available from plan administrators, which we cannot independently validate, we believe that our portion of the contingent liability in the case of a full or partial withdrawal from or termination of several of these plans would be material to our business financial condition, results of operations and cash flows.

Our overall profitability is sensitive to price changes and minor variations in sales volumes.

Generally, our products are price-sensitive. Prices for our products are subject to changes in response to relatively minor fluctuations in supply and demand, general economic conditions and market conditions, all of which are beyond our control. Because of the fixed-cost nature of our business, our overall profitability is sensitive to price changes and minor variations in sales volumes.

We may incur material costs and losses as a result of claims our products do not meet regulatory requirements or contractual specifications.

Our operations involve providing products that must meet building code or other regulatory requirements and contractual specifications for durability, stress-level capacity, weight-bearing capacity and other characteristics. If we fail or are unable to provide products meeting these requirements and specifications, material claims may arise against us and our reputation could be damaged. In the past, we have had significant claims of this kind asserted against us that we have resolved. There currently are, and we expect that in the future there will be, additional claims of this kind asserted against us. If a significant product-related claim or claims are resolved against us in the future, that resolution may have a material adverse effect on our business financial condition, results of operations and cash flows.

Our net sales attributable to infrastructure projects could be negatively impacted by a decrease or delay in governmental spending.

Our business depends in part on the level of governmental spending on infrastructure projects in our markets. Reduced levels of governmental funding for public works projects or delays in that funding could adversely affect our business, financial condition, results of operations and cash flows.

Some of our plants are susceptible to damage from earthquakes, for which we have a limited amount of insurance.

We maintain only a limited amount of earthquake insurance, and, therefore, we are not fully insured against earthquake risk. Any significant earthquake damage to our plants could materially adversely affect our business, financial condition, results of operations and cash flows.

Our results of operations could be adversely affected as a result of goodwill impairments.

Goodwill represents the amount by which the total purchase price we have paid for acquisitions exceeds our estimated fair value of the net assets acquired. We periodically test our recorded goodwill for impairment and charge expense with any impairment we recognize, but do not otherwise amortize that goodwill. Because our business is cyclical in nature, goodwill could be significantly impaired depending upon when the test for impairment is performed in the business cycle.

During the fourth quarters of 2007 and 2006, we performed our annual test of goodwill which resulted in impairments of \$81.9 million and \$38.8 million, respectively. The 2006 writedown was related to our Michigan reporting unit and was due to increased competition, and a general economic downturn in Michigan, driven by problems in the automotive business in that region, lower operating profits and a downward trend in cash flows. In 2007, our goodwill impairment included a write-off of the remaining Michigan goodwill on our books and also expanded to an impairment of the goodwill in our South Central region and northern California precast business. Our South Central region and northern California precast business have been severely impacted by the downturn trend in residential construction, increased competition and the economic impact of the change in the geographic mix of sales volume.

As of December 31, 2007, goodwill represented approximately 28.6% of our total assets. We can provide no assurance that future goodwill impairments will not occur. If we determine that any of our remaining balance of goodwill is impaired, we will be required to take an immediate noncash charge to earnings.

As a result of capital constraints and other factors, we may not be able to grow as rapidly as we may desire through acquiring additional businesses.

In addition to our existing working capital and cash from operations, our senior secured credit facility provides us with a significant source of liquidity. Effective March 2, 2007, the facility was increased to provide us a borrowing

capacity of up to \$150 million, as compared to \$105 million of borrowing capacity at December 31, 2006. The credit agreement relating to this facility provides that the administrative agent may, on the bases specified, reduce the amount of the available credit from time to time. At December 31, 2007, there were no amounts outstanding under the credit facility and the amount of the available credit was approximately \$112.6 million, net of outstanding letters of credit of \$11.8 million.

We cannot readily predict the timing, size and success of our acquisition efforts or the capital we will need for those efforts. We may use our common stock as a component of the consideration we pay for future acquisitions. Issuances of common stock as acquisition consideration could have a dilutive effect on our stockholders. If our common stock does not maintain a sufficient market value or potential acquisition candidates are unwilling to accept our common stock as part of the consideration for the sale of their businesses, we may be required to use more of our cash resources to pursue our acquisition program.

Using cash for acquisition consideration limits our financial flexibility and increases the likelihood that we will need to seek additional capital through future debt or equity financings. If we seek more debt financing, we may have to agree to financial covenants that limit our operational and financial flexibility. Additional equity financing may dilute the ownership interests of our stockholders. There is no assurance that additional debt or equity financing will be available on terms acceptable to us.

Our substantial debt could adversely affect our financial condition.

We currently have a significant amount of debt. As of December 31, 2007, we had approximately \$298.5 million of outstanding debt. Our substantial debt and other financial obligations could:

§ make it difficult for us to satisfy our financial obligations, including making scheduled principal and interest payments on our indebtedness;

§ require us to dedicate a substantial portion of our cash flow from operations to service payments on our indebtedness, thereby reducing funds available for other purposes;

§ increase our vulnerability to a downturn in general economic conditions or the industry in which we compete;

§ limit our ability to borrow additional funds for working capital, capital expenditures, acquisitions, general corporate and other purposes;

§ place us at a competitive disadvantage to our competitors; and

§ limit our ability to plan for and react to changes in our business and the ready-mixed concrete industry.

Our senior secured credit facility and the indenture governing our outstanding 8 % senior subordinated notes permit us to incur and to guarantee additional indebtedness. We anticipate that any future acquisitions we pursue as part of our strategy may be financed through a combination of cash on hand, operating cash flow, availability under our existing credit facility and new securities offerings. If new debt is added to current debt levels, the related risks described above could increase.

We will require a significant amount of cash to service all our debt.

Our ability to pay or to refinance our indebtedness depends on our future operating performance, which may be affected by general economic, financial, competitive, legislative, regulatory, business and other factors, many of which are beyond our control. Our business may not generate sufficient cash flow from operations and future financings may not be available to us in amounts sufficient to enable us to pay our debt or fund other liquidity needs. If we are unable to generate sufficient cash flow to meet our debt service obligations, we may have to renegotiate the terms of our debt or obtain additional financing, possibly on less favorable terms than our current debt. If we are not able to renegotiate the terms of our debt or obtain additional financing, we could be forced to sell assets under unfavorable circumstances. The terms of our senior secured credit facility and the indenture governing our senior subordinated notes limit our ability to sell assets and generally restrict the use of proceeds from asset sales.

Our existing debt arrangements impose restrictions on us that may adversely affect our ability to operate our business.

The indenture governing our \$285 million aggregate principal amount of senior subordinated notes and our senior secured credit facility contain covenants that restrict, among other things, our ability to:

§ incur additional indebtedness and issue preferred stock;

§ pay dividends;

§ make asset sales;

In addition, our indenture and senior secured credit facility contain financial covenants and other limitations with which we must comply. Our ability to comply with these covenants may be affected by events beyond our control, and our future operating results may not be sufficient to comply with the covenants or, in the event of a default under either our indenture or senior secured credit facility, to remedy such a covenant default.

Our failure to comply with any of our financial or other covenants under our indenture or senior secured credit facility could result in an event of default. On the occurrence of any such event of default, the trustee under the indenture or our lenders could elect to declare all amounts outstanding under the indenture or our senior secured credit facility, as applicable, to be immediately due and payable, and our lenders could terminate all commitments to extend further credit to us and foreclose on any collateral we have granted to secure our obligations under our senior secured credit facility.

Increasing insurance claims and expenses could lower our profitability and increase our business risk.

The nature of our business subjects us to product liability, property damage and personal injury claims. Over the last several years, insurance carriers have raised premiums for many companies operating in our industry, including us. Increased premiums may further increase our insurance expense as coverage expires or otherwise cause us to raise our self-insured retention. If the number or severity of claims within our self-insured retention increases, we could suffer costs in excess of our reserves. An unusually large liability claim or a string of claims based on a failure repeated throughout our mass production process may exceed our insurance coverage or result in direct damages if we were unable or elected not to insure against certain hazards because of high premiums or other reasons. In addition, the availability of, and our ability to collect on, insurance coverage is often subject to factors beyond our control.

Further tightening of mortgage lending or mortgage financing requirements could adversely affect the residential construction market and prolong the downturn in, or further reduce, the demand for new home construction which began in 2006 and has had a negative effect on our sales volumes and revenues.

During 2007, the mortgage lending and mortgage finance industries experienced significant instability due to, among other things, defaults on subprime loans and adjustable-rate mortgages. In light of these developments, lenders, investors, regulators and other third parties have questioned the adequacy of lending standards and other credit requirements for several loan programs made available to borrowers in recent years. This has led to reduced investor demand for mortgage loans and mortgage-backed securities, reduced market values for those securities, tightened credit requirements, reduced liquidity, increased credit risk premiums and regulatory actions. Deterioration in credit quality among subprime and other loans has caused many lenders to eliminate subprime mortgages and other loan products that do not conform to Fannie Mae, Freddie Mac, FHA or VA standards. Fewer loan products and tighter loan qualifications in turn make it more difficult for some categories of borrowers to finance the purchase of new homes. In general, these developments have been a factor in the downturn of, and have delayed any general improvement in, the housing market.

Approximately 35% of our 2007 sales were to residential construction contractors. Further tightening of mortgage lending or mortgage financing requirements could adversely affect the availability to obtain credit for some borrowers and prolong the downturn in, or further reduce the demand for new home construction, which could have a materially adverse effect on our business and results of operations in 2008. A further downturn in new home construction could also adversely affect our customers focused in this industry segment, possibly resulting in slower payments, higher default rates in our accounts receivable, and an overall increase in working capital.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties**Facilities**

The table below lists our concrete plants as of March 3, 2008. We believe these plants are sufficient for our current needs. The ready-mixed concrete volumes shown are the volumes from continuing operations each location produced in 2007, except that production volumes related to plants we acquired during the year reflect production from the date of acquisition through year-end.

Locations	Ready-Mixed Concrete Plants			Precast Plants	Block Plants	Ready-Mixed Concrete Volume (in thousands of cubic yards)
	Fixed	Portable	Total			
Ready-Mixed Concrete and Concrete-Related Products Segment:						
Northern California	21	4	25	—	—	1,612
Atlantic Region	19	2	21	—	—	1,050
Texas / Southwest Oklahoma	57	2	59	—	—	3,443
Michigan	27	—	27	—	1	1,071
Precast Concrete Products Segment:						
Northern California	—	—	—	4	—	—
Southern California/Arizona	—	—	—	3	—	—
Pennsylvania	—	—	—	1	—	—
Total Company	124	8	132	8	1	7,176

The fixed plants listed above are located on approximately 41 sites we own and 48 sites we lease. The lease terms extend to dates that vary from 2008 to 2019. We intend to renew most of the leases expiring in the near term. Of those leases we do not renew, we expect to relocate most of the related plant facilities to future leased or owned sites.

We produce crushed stone aggregates, sand and gravel, from seven aggregates facilities located in Texas and New Jersey. We sell these aggregates for use in commercial, industrial and public works projects in the markets they serve, as well as consume them internally in the production of ready-mixed concrete in those markets. We produced approximately 3.8 million tons of aggregates in 2007, with Texas producing 44% and New Jersey 56% of that total production. In April 2007, we entered into an agreement to lease our sand pit operations in Michigan to the Edward C. Levy Co. as a part of the formation of our 60%-owned Michigan subsidiary. We now receive a royalty based on the volume of product produced and sold from the quarry during the term of the lease.

At December 31, 2007, total estimated reserves are 80 million tons, assuming loss factors of between 10% and 20% for unusable material. We believe these aggregates reserves provide us with additional raw materials sourcing flexibility and supply availability, although they will provide us with supply for less than 5% of our annual consumption of aggregates.

Equipment

As of March 3, 2008, we operated a fleet of approximately 1,300 owned and leased mixer trucks and 1,588 other vehicles. Our own mechanics service most of the fleet. We believe these vehicles generally are well maintained and are adequate for our operations. The average age of our mixer trucks is approximately 6.5 years.

For additional information related to our properties, see Item 1 of this report.

Item 3. *Legal Proceedings*

From time to time, and currently, we are subject to various claims and litigation brought by employees, customers and other third parties for, among other matters, employee grievances, personal injuries, property damages, product defects and delay damages that have, or allegedly have, resulted from the conduct of our operations.

We believe that the resolution of all litigation currently pending or threatened against us or any of our subsidiaries should not have a material adverse effect on our business, financial condition, results of operations or cash flows; however, because of the inherent uncertainty of litigation, we can provide no assurance that the resolution of any particular claim or proceeding to which we are a party will not have a material adverse effect on our consolidated financial condition, results of operations or liquidity for the fiscal period in which that resolution occurs. See Note 14 to our Consolidated Financial Statements included in this report for a discussion of an accrual we recorded in 2007 in connection with certain ongoing litigation.

Item 4. Submission of Matters to a Vote of Security Holders

No matter was submitted to a vote of our security holders during the fourth quarter of 2007.

PART II**Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

Our common stock is traded on the Nasdaq Global Select Stock Market under the symbol "RMIX." As of March 3, 2008, shares of our common stock were held by approximately 542 stockholders of record. The number of record holders does not necessarily bear any relationship to the number of beneficial owners of our common stock.

The closing price for our common stock on the Nasdaq Global Select Market on March 3, 2008 was \$3.98 per share. The following table sets forth, for the periods indicated, the range of high and low sales prices for our common stock:

	2007		2006	
	High	Low	High	Low
First Quarter	\$ 9.25	\$ 6.35	\$ 14.95	\$ 9.21
Second Quarter	\$ 9.48	\$ 7.79	\$ 15.98	\$ 9.95
Third Quarter	\$ 9.05	\$ 6.50	\$ 12.33	\$ 5.22
Fourth Quarter	\$ 6.99	\$ 3.21	\$ 7.30	\$ 5.69

We have not paid or declared any dividends since our formation and currently intend to retain any earnings to fund our working capital and growth initiatives. Additional information concerning restrictions on our payment of cash dividends may be found in "Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources" in Item 7 of this report and Note 9 to our Consolidated Financial Statements in this report.

PERFORMANCE GRAPH

The following graph compares, for the period from December 31, 2002 to December 31, 2007, the cumulative stockholder return on our common stock with the cumulative total return on the Standard & Poor's 500 Index and a peer group index we selected that includes four public companies within our industry. The comparison assumes that (1) \$100 was invested on December 31, 2002 in our common stock, the S&P 500 Index and the peer group index and (2) all dividends were reinvested.

The peer group companies at December 31, 2007 for this performance graph are Texas Industries, Inc., Eagle Materials Inc., Martin Marietta Materials, Inc. and Vulcan Materials Company. LaFarge North America, Inc. and Florida Rock Industries, Inc. were included in the peer group used in the performance graph contained in our Proxy Statement for our 2006 Annual Meeting of Stockholders, after which these companies were acquired by third parties. In addition to ready-mixed concrete and concrete-related products, the members of the peer group also have operations in other segments of the building products industry in which we either do not currently operate, or do not operate at a comparable level, such as cement, aggregates and other building products. These other business segments of peer group members have an affect on cumulative stockholder return over the covered period.

*\$100 invested on 12/31/02 in stock or index-including reinvestment of dividends.
Fiscal year ending December 31.

Equity Compensation Plan Information

The following table summarizes, as of December 31, 2007, the indicated information regarding equity compensation to our employees, officers, directors and other persons under our equity compensation plans. These plans use or are based on shares of our common stock.

Plan Category	Number of Securities to Be Issued Upon Exercise of Outstanding Stock Options	Weighted Average Exercise Price of Outstanding Stock Options	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Securities Reflected in first column)
Equity compensation plans approved by security holders	1,628,683	\$ 7.36	845,780
Equity compensation plans not approved by security holders ⁽¹⁾	349,248	\$ 6.48	364,714
Total	1,977,931		

(1) Our board adopted the U.S. Concrete, Inc. 2001 Employee Incentive Plan in February 2001. The purpose of this plan is to attract, retain and motivate our employees and consultants, to encourage a sense of propriety of those persons in our company and to stimulate an active interest of those persons in the development and financial success of our company. Awards may be made to any of our employees or consultants. The plan provides for grants of incentive stock options, nonqualified stock options, stock appreciation rights, restricted stock and other long-term incentive awards. None of our officers or directors is eligible to participate in the plan.

Issuer Purchases of Equity Securities

In the fourth quarter of 2007, we purchased 7,468 shares of our common stock in private transactions from employees who elected for us to make their required tax payments upon vesting of certain restricted shares by withholding a number of those vested shares having a value on the date of vesting equal to their tax obligations. The following table provides information regarding those repurchases:

Calendar Month	Total Number of Shares Purchased	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number (or Approximate Dollar Value) of Shares That May Yet Be Purchased Under the Plans or Programs
October 2007	2,525	\$ 6.59	None	None
November 2007	4,585	\$ 8.54	None	None
December 2007	358	\$ 3.54	None	None

Item 6. Selected Financial Data

The information below was derived from the audited Consolidated Financial Statements included in this report and in other reports we have previously filed with the SEC, and this information should be read together with those financial statements and the notes to those financial statements. The adoption of new accounting pronouncements, changes in accounting policies and reclassifications impact the comparability of the financial information presented below. These historical results are not necessarily indicative of the results to be expected in the future.

	Year Ended December 31⁽⁴⁾				
	2007⁽¹⁾	2006⁽²⁾	2005	2004⁽³⁾	2003
Statement of Operations Data:					
Sales	\$ 803,803	\$ 728,510	\$ 525,637	\$ 455,876	\$ 430,175

Ready-mixed Concrete Data					
Average selling price per cubic yard	\$ 91.70	\$ 88.23	\$ 86.42	\$ 77.43	\$ 77.20
Sales volume in cubic yards from continuing operations	7,176	6,679	4,734	4,519	4,504

(1)

The 2007 results include an impairment charge of \$76.4 million, net of tax, in the fourth quarter pursuant to our annual review of goodwill in accordance with Statement of Financial Accounting Standards (“SFAS”) No. 142, “Goodwill and Other Intangible Assets”. Also in 2007, we discontinued the operations of three business units in certain markets. The financial data for years prior to 2007 have been restated to segregate the effects of the operations of those discontinued units.

- (2) The 2006 results include an impairment charge of \$26.8 million, net of tax, primarily to reduce the carrying value of goodwill associated with our Michigan assets pursuant to our annual review of goodwill in accordance with SFAS No. 142.
- (3) The 2004 results include a loss on early extinguishment of debt of \$28.8 million (\$18.0 million, net of tax), which consisted of \$25.9 million in premium payments to holders of our prior subordinated notes and a write-off of \$2.9 million of debt issuance costs associated with our debt repayments.
- (4) All data presented in each year has been restated to reflect the effect of our fourth quarter of 2007 decision to dispose of certain of our operations.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Statements we make in the following discussion that express a belief, expectation or intention, as well as those that are not historical facts, are forward-looking statements that are subject to various risks, uncertainties and assumptions. Our actual results, performance or achievements, or industry results, could differ materially from those we express in the following discussion as a result of a variety of factors, including the risks and uncertainties to which we refer under the headings “Cautionary Statement Concerning Forward-Looking Statements” preceding Item 1 of this report, “Risk Factors” in Item 1A of this report and “—Risks and Uncertainties” below.

Our Business

We operate our business in two business segments: ready-mixed concrete and concrete-related products; and precast concrete products.

Ready-Mixed Concrete and Concrete-Related Products. Our ready-mixed concrete and concrete-related products segment is engaged primarily in the production, sale and delivery of ready-mixed concrete to our customer’s job sites. To a lesser extent, this segment is engaged in the mining and sale of aggregates; and the resale of building materials, primarily to our ready-mixed concrete customers. We provide these products and services from our operations in north and west Texas, northern California, New Jersey, Washington, D.C., Michigan and Oklahoma.

Precast Concrete Products. Our precast concrete products segment engages principally in the production, distribution and sale of precast concrete products from its eight plants located in California, Arizona and Pennsylvania. From these facilities, we produce precast concrete structures such as utility vaults, manholes and other wastewater management products, specialty engineered structures, curb-inlets, catch basins, retaining and other wall systems, custom designed architectural products and other precast concrete products.

Our Markets

We derive substantially all our revenues from the sale of ready-mixed concrete, precast concrete and concrete-related products to the construction industry in the United States. We typically sell our products under purchase orders that require us to formulate, prepare and deliver the product to our customers’ job sites. We recognize sales from these orders when we deliver the ordered products. The principal states in which we operate are Texas (35% of 2007 sales and 28% of 2006 sales), California (32% of 2007 sales and 36% of 2006 sales), New Jersey (14% of 2007 sales and 17% of 2006 sales) and Michigan (11% of 2007 sales and 10% of 2006 sales). We serve substantially all segments of the construction industry in our markets, and our customers include contractors for commercial and industrial, residential, street and highway and public works construction. The approximate percentages of our concrete product sales by construction type activity were as follows in 2007 and 2006:

	2007	2006
Commercial and industrial	49%	47%
Residential	35%	39%
Street and highway	9%	7%
Other public works	7%	7%

The markets for our products are generally local, and our operating results are subject to fluctuations in the level and mix of construction activity that occur in our markets. The level of activity affects the demand for our products, while the product mix of activity among the various segments of the construction industry affects both our relative competitive strengths and our operating margins. Commercial and industrial projects generally provide more opportunities to sell value-added products which are designed to meet the high-performance requirements of these

types of projects.

Our customers are generally involved in the construction industry, which is a cyclical business and is subject to general and more localized economic conditions. In addition, our business is impacted by seasonal variations in weather conditions which vary by regional market. Accordingly, demand for our products and services during the winter months are typically lower than other months of the year because of inclement weather. Also, sustained periods of inclement weather and other weather conditions could postpone or delay projects in our markets during other times of the year.

On average, during 2007 we experienced improved pricing trends in ready-mixed concrete in all of our major markets, as compared to 2006. Sustaining or improving our margins in the future will depend on market conditions, including the continued potential for further softening in the residential sector and our ability to increase or maintain our product pricing or realize gains in productivity to offset further potential increases in raw materials and other costs.

Ready-mixed concrete sales volumes have generally declined in 2007 as compared to 2006 on a same-plant-sales basis, reflecting a sustained downward trend in residential construction activity in all of our markets and the impact of adverse weather conditions, primarily in our north and west Texas markets early in the summer months. We expect the construction downturn to continue in 2008, in both residential and commercial end-use markets, resulting in ready-mixed concrete sales volumes being down on a same-plant-sales basis in 2008 in most of our markets as compared to 2007 volumes.

Our Michigan market remains subject to a prolonged economic downturn, which is projected to continue throughout 2008. As a result, our 60%-owned Michigan subsidiary, which was formed in April 2007 has experienced same-plant-sales volume declines. At the same time, pricing has improved in 2007, as compared to the corresponding period in 2006 (including the results of the operations contributed to the subsidiary by the Edw. C. Levy Co.). We have made substantial modifications to our operating structure in Michigan in 2006 and 2007, which we believe will bring our operations more in line with the market demand we anticipate for 2008. We maintain a strong competitive position in Michigan and believe we are well positioned for growth when the Michigan economy begins to recover.

Demand for our products in our precast concrete products segment decreased in 2007, as compared to 2006. This decline is reflective of the decline in residential construction starts in our northern California and Phoenix, Arizona markets, where our precast business has been heavily weighted toward products used in new residential construction projects. We are in the process of refocusing our product lines and streamlining our operations in these markets to better serve the existing demand and penetrate additional end-use markets.

Cement and Other Raw Materials

We obtain most of the raw materials necessary to manufacture ready-mixed concrete and precast concrete products on a daily basis. These materials include cement, and aggregates (stone, gravel and sand), in addition to certain chemical admixtures. With the exception of chemical admixtures, each plant typically maintains an inventory level of these materials sufficient to satisfy its operating needs for a few days. Typically, cement represents the highest cost material used in manufacturing a cubic yard of ready-mixed concrete, while the cost of aggregates used is slightly less than the cement cost. In each of our markets, we purchase each of these materials from several suppliers. Chemical admixtures are generally purchased from single suppliers under national purchasing agreements.

In 2007, cement and aggregates pricing moderated as compared to the price increases we experienced in raw materials in 2005 and 2006. We negotiate with suppliers both on a company-wide basis and at the local market level to obtain the most competitive pricing available for cement and aggregates. We anticipate that the residential construction downturn that began in the second half of 2006 will continue through 2008, and, therefore commercial construction and other building segments will comprise a larger percentage of overall product demand. We do not expect to experience cement shortages during 2008. Today, in most of our markets, we believe there is an adequate supply of aggregates. Should demand for aggregates increase significantly, we could experience escalating prices or shortages of aggregates.

Acquisitions

Since our inception in 1999, our growth strategy has contemplated acquisitions. We purchased three businesses in 2005, six businesses in 2006 and two businesses in 2007. We also formed a jointly owned limited liability company with another company in Michigan in 2007. (Please read “— Liquidity and Capital Resources — Acquisitions” for further information regarding our recent acquisitions.) The rate and extent to which appropriate further acquisition opportunities are available, and the extent to which acquired businesses are integrated and anticipated synergies and cost savings are achieved can affect our operations and results.

Divestitures

In the fourth quarter of 2007, we began to implement our strategy of exiting markets that do not meet our performance and return criteria nor fit our long-term strategic objectives. We sold our Knoxville, Tennessee and Wyoming, Delaware operations in November of 2007 for \$16.5 million, plus certain adjustments to working capital. Also in the fourth quarter, we made a decision to sell our Memphis, Tennessee operations. We subsequently completed the sale of our Memphis, Tennessee operations for \$7.2 million plus the payment for certain inventory-on-hand at closing in February of 2008 (See Notes 3 and 19 to our consolidated financial statements included in this report). Each of these

operations have been aggregated and presented in our accompanying Consolidated Financial Statements as “discontinued operations”.

Risks and Uncertainties

Numerous factors could affect our future operating results, including the factors discussed under the heading “Risk Factors” in Item 1A of this report and the following factors.

28

Internal Computer Network and Applications. We rely on our network infrastructure, enterprise applications and internal technology systems for our operational, support and sales activities. The hardware and software systems related to such activities are subject to damage from earthquakes, floods, fires, power loss, telecommunication failures and other similar events. They are also subject to computer viruses, physical or electronic vandalism or other similar disruptions that could cause system interruptions, delays and loss of critical data and could prevent us from fulfilling our customers' orders. We have developed disaster recovery plans and backup systems to reduce the potentially adverse effects of such events. Any event that causes failures or interruption in our hardware or software systems could result in disruption in our business operations, loss of revenues or damage to our reputation.

During the second half of 2007, we began a process to select a new enterprise resource planning solution to provide for enhanced control, business efficiency and effectiveness, more timely and consistent reporting of both operational and financial data, and provide a platform to more adequately support our long-term growth plans. In the fourth quarter, a plan of implementation was approved which anticipates a phased implementation across our regions during the course of 2008 and into early 2009.

Accounting Rules and Regulations. We prepare our consolidated financial statements in conformity with accounting principles generally accepted in the United States of America ("GAAP"). A change in these policies can have a significant effect on our reported results and may even retroactively affect previously reported transactions. Our accounting policies that recently have been or may be affected by changes in the accounting rules are as follows:

- accounting for income taxes; and
- accounting for business combinations and related goodwill.

In July 2007, the Financial Accounting Standards Board issued FIN 48, "Accounting for Uncertainty in Income Taxes," which was effective for us as of the interim reporting period beginning January 1, 2007. Under FIN 48, the impact of an uncertain income tax position on the income tax provision must be recognized at the largest amount that is more likely than not to be sustained upon audit by the relevant taxing authority. An uncertain income tax position will not be recognized if it has less than a 50% likelihood of being sustained. See Note 1 to our Consolidated Financial Statements included in this report.

Tax Liabilities. We are subject to federal, state and local income taxes, applicable to corporations generally, as well as nonincome-based taxes. Significant judgment is required in determining our provision for income taxes and other tax liabilities. In the ordinary course of business, we make calculations in which the ultimate tax determination is uncertain. We are also from time to time under audit by state and local tax authorities. Although we can provide no assurance that the final determination of our tax liabilities will not differ from what our historical income tax provisions and accruals reflect, we believe our tax estimates are reasonable.

Critical Accounting Policies and Estimates

Preparation of our financial statements requires us to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses. Note 1 to our Consolidated Financial Statements included in this report describes the significant accounting policies we use in preparing those statements. We believe the most complex and sensitive judgments, because of their significance to our financial statements, result primarily from the need to make estimates about the effects of matters that are inherently uncertain. The most significant areas involving our management's judgments and estimates are described below. Actual results in these areas could differ from our estimates.

Allowance for Doubtful Accounts

We extend credit to customers and other parties in the normal course of business. We regularly review outstanding receivables and provide for estimated losses on accounts receivable we believe we may not collect in full. A provision for bad debt expense recorded to selling, general and administrative expenses increases the allowance, and accounts receivable that we write off our books decrease the allowance. We determine the amount of bad debt expense we record each period and assess the resulting adequacy of the allowance at the end of each period by using a combination of our historical loss experience, customer-by-customer analyses of our accounts receivable balances each period and subjective assessments of our bad debt exposure. Our allowance for doubtful accounts was \$3.1 million as of December 31, 2007 and \$2.6 million as of December 31, 2006.

Goodwill

We record as goodwill the amount by which the total purchase price we pay for our acquisitions exceeds our estimated fair value of the net assets we acquire. We test our recorded goodwill annually for impairment and charge income with any impairment we recognize, but we do not otherwise amortize that goodwill. Because our business is cyclical in nature, goodwill could be significantly impaired depending upon when the test for impairment is performed in the business cycle. The impairment test we use consists of comparing our estimates of the current fair values of our reporting units with their carrying amounts. We use a variety of valuation approaches, primarily the discounted future cash flow approach, to arrive at these estimates. These approaches entail making numerous assumptions respecting future circumstances, such as general or local industry or market conditions, and, therefore, are uncertain. We did not record a goodwill impairment in 2005. In 2006, we recorded a \$38.8 million goodwill impairment associated with our Michigan operations. In 2007, we recorded goodwill impairments of \$81.9 million relating to our Michigan and South Central regions and our northern California precast business. We can provide no assurance that future goodwill impairments will not occur. Our goodwill balance was \$185.0 million as of December 31, 2007 and \$251.5 million at December 31, 2006. See Note 2 to our Consolidated Financial Statements included in this report for additional information about our goodwill.

Insurance Programs

We maintain third-party insurance coverage in amounts and against the risks we believe are reasonable. We share the risk of loss with our insurance underwriters by maintaining high deductibles subject to aggregate annual loss limitations. For 2007, 2006, and 2005, we believe our workers' compensation, automobile and general liability per occurrence retentions were consistent with industry practices, although there are variations among our business units. We fund these deductibles and record an expense for losses we expect under the programs. We determine the expected losses using a combination of our historical loss experience and subjective assessments of our future loss exposure. The estimated losses are subject to uncertainty from various sources, including changes in claims reporting and settlement patterns, judicial decisions, new legislation and economic conditions. Although we believe the estimated losses are reasonable, significant differences related to the items we have noted above could materially affect our insurance obligations and future expense. The amount accrued for self-insurance claims was \$12.3 million as of December 31, 2007 (compared to \$11.1 million as of December 31, 2006), which is currently classified in accrued liabilities.

Income Taxes

We use the liability method of accounting for income taxes. Under this method, we record deferred income taxes based on temporary differences between the financial reporting and tax bases of assets and liabilities and use enacted tax rates and laws that we expect will be in effect when we recover those assets or settle those liabilities, as the case may be, to measure those taxes. We believe our earnings during the periods when the temporary differences become deductible will be sufficient to realize the related future income tax benefits. In cases where the expiration date of tax carryforwards or the projected operating results indicate that realization is not likely, we would provide for a valuation allowance.

We have deferred tax assets, resulting from deductible temporary differences that may reduce taxable income in future periods. A valuation allowance is required when it is more likely than not that all or a portion of a deferred tax asset will not be realized. In assessing the need for a valuation allowance, we estimate future taxable income, considering the feasibility of ongoing tax-planning strategies and the realizability of tax loss carryforwards. Valuation allowances related to deferred tax assets can be impacted by changes in tax laws, changes in statutory tax rates and future taxable income levels. If we were to determine that we would not be able to realize all or a portion of our deferred tax assets in the future, we would reduce such amounts through a charge to income in the period in which that determination is made. Conversely, if we were to determine that we would be able to realize our deferred tax assets in the future in excess of the net carrying amounts, we would decrease the recorded valuation allowance through an increase to income in the period in which that determination is made. Subsequently recognized tax benefits associated with valuation allowances, recorded in connection with a business combination, will be recorded as an adjustment to goodwill. We recorded no valuation allowance at December 31, 2007 or December 31, 2006.

In the ordinary course of business there is inherent uncertainty in quantifying our income tax positions. We assess our income tax positions and record tax benefits for all years subject to examination based upon management's evaluation of the facts, circumstances and information available at the reporting date. For those tax positions where it is more likely than not that a tax benefit will be sustained, we have recorded the highest amount of tax benefit with a greater than 50% likelihood of being realized upon ultimate settlement with a taxing authority that has full knowledge of all relevant information. For those income tax positions where it is not more likely than not that a tax benefit will be sustained, no tax benefit has been recognized in the financial statements. See Notes 1 and 11 to the Consolidated Financial Statements for further discussion.

Inventory Obsolescence

We provide reserves for estimated obsolescence or unmarketable inventory equal to the difference between the cost of inventory and the estimated net realizable values using assumptions about future demand for those products and market conditions. If actual market conditions are less favorable than those projected by management, additional inventory reserves may be required.

Properties, Plant and Equipment, Net

We state our properties, plant and equipment at cost and use the straight-line method to compute depreciation of these assets over their estimated remaining useful lives. Our estimates of those lives may be affected by such factors as changing market conditions, technological advances in our industry or changes in applicable regulations. In addition, we use estimates of salvage values for certain plant and equipment to reduce the cost which is subject to depreciation.

We evaluate the recoverability of our properties, plant and equipment when changes in circumstances indicate that the carrying amount of the asset may not be recoverable in accordance with SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets." We compare the carrying values of long-lived assets to our projection of future undiscounted cash flows attributable to those assets. If the carrying value of a long-lived asset exceeds the future undiscounted cash flows we project to be derived from that asset, we record an impairment loss equal to the excess of the carrying value over the fair value. Actual useful lives and future cash flows could be different from those we estimate. These differences could have a material effect on our future operating results.

Other

We record accruals for legal and other contingencies when estimated future expenditures associated with those contingencies become probable and the amounts can be reasonably estimated. However, new information may become available, or circumstances (such as applicable laws and regulations) may change, thereby resulting in an increase or decrease in the amount required to be accrued for such matters (and, therefore, a decrease or increase in reported net income in the period of such change).

Recent Accounting Pronouncements

For a discussion of recently adopted accounting standards, see Note 1 to our Consolidated Financial Statements included in this report.

Results of Operations

The following table sets forth selected historical statement of operations information and that information as a percentage of total sales for the years indicated.

	Year Ended December 31					
	2007		2006		2005	
	(amounts in thousands, except selling prices)					
Sales:						
Ready-mixed concrete and concrete-related products	\$ 745,384	92.7	\$ 655,724	90.0	\$ 455,808	86.7
Precast concrete products	73,300	9.1	80,915	11.1	71,900	13.7
Inter-segment sales	(14,881)	(1.8)	(8,129)	(1.1)	(2,071)	(0.4)
Total sales	\$ 803,803	100%	\$ 728,510	100%	\$ 525,637	100%

Cost of goods sold before depreciation, depletion and amortization:

Ready-mixed concrete and concrete-related Products	\$ 608,043	75.6	\$ 534,571	73.4	\$ 372,603	70.9
Precast concrete products	55,589	6.9	59,589	8.2	51,766	9.8
Goodwill and other asset impairments	82,242	10.2	38,948	5.3	—	—
Selling, general and administrative expenses	69,669	8.7	61,397	8.4	49,960	9.5
Depreciation, depletion and amortization	28,882	3.6	20,141	2.8	12,102	2.3
Income (loss) from operations	(40,622)	(5.1)	13,864	1.9	39,206	7.5

Average selling price per cubic
yard of concrete used in
production

Ready-mixed concrete used in production in cubic yards	121	136	121
---	-----	-----	-----

Year Ended December 31, 2007 Compared to Year Ended December 31, 2006

Sales.

Ready-mixed concrete and concrete-related products. Sales of ready-mixed concrete and concrete-related products increased \$89.7 million, or 13.7%, from \$655.7 million in 2006 to \$745.4 million in 2007. Our ready-mixed sales volume for 2007 was approximately 7.2 million cubic yards, up 7.4% from the 6.7 million cubic yards of concrete we sold in 2006. Excluding the volumes associated with acquired operations, on a same-plant-sales basis our 2007 ready-mixed volumes were down approximately 14.9% from 2006. The decline reflects the continuing downturn in residential home construction activity that began in the second half of 2006 in all of our markets and the impact of adverse weather conditions during the spring and summer seasons, especially in our north and west Texas markets. Offsetting the effects of lower sales volumes was the approximate 3.9% rise in the average sales price per cubic yard of ready-mixed concrete during 2007, as compared to 2006, and increased sales of aggregates (including those from the aggregate operations we acquired in the fourth quarter of 2006).

Precast concrete products. Sales in our precast concrete products segment were down \$7.6 million, or 9.4%, from \$80.9 million in 2006 to \$73.3 million in 2007. This decrease reflects an \$11.6 million, or 14.4%, drop in revenue resulting from the downturn in residential construction in our California and Phoenix, Arizona markets. The overall lower performance of our precast segment was tempered by sales of \$4.0 million generated by the acquisition made in October 2007 in our Atlantic region.

Cost of goods sold before depreciation, depletion and amortization.

Ready-mixed concrete and concrete-related products. Cost of goods sold before depreciation, depletion and amortization for our ready-mixed concrete and concrete-related products segment increased \$73.4 million, or 13.7%, from \$534.6 million in 2006 to \$608.0 million in 2007. The increase was primarily associated with higher sales volume, higher delivery costs and moderately higher raw materials costs in 2007. Cost of goods sold before depreciation, depletion and amortization, as a percentage of ready-mixed concrete and concrete-related product sales of 81.6% for 2007 was flat as compared to the 2006 periods, reflecting our ability in 2007 to maintain our margins in a period of rising raw materials, labor and fuel costs.

Precast concrete products. The reduction in cost of goods sold before depreciation, depletion and amortization for our precast concrete products segment of \$4.0 million, or 6.7%, from \$59.6 million in 2006 to \$55.6 million in 2007, was primarily related to the 12.0% reduction in the volume of ready-mixed concrete used in production, which is reflective of the declining residential construction market that has been impacting our California and Phoenix, Arizona precast markets since the second half of 2006. As a percentage of precast concrete sales, cost of goods sold before depreciation, depletion and amortization for precast concrete products rose from 73.6% in 2006 to 75.8% in 2007 reflecting decreased efficiency in our plant operations in California and Phoenix, Arizona, resulting from lower demand for our primarily residential product offerings in these markets.

Goodwill and other asset impairments. In the fourth quarter of each year, we test our recorded goodwill for impairment and charge expense with any impairment we recognize. During the fourth quarter of 2007, we performed our annual test, which resulted in an impairment of \$81.9 million primarily triggered by the downturn in most of our markets in 2007 brought about by the deterioration in the residential housing sector and the resultant impact that had on the market value of certain of our businesses. Our 2007 goodwill impairment related to our Michigan and South Central regions and our northern California precast business. During the fourth quarter of 2006, we performed our annual test, which resulted in an impairment of \$38.8 million associated with our Michigan operations.

Selling, general and administrative expenses. Selling, general and administrative expenses increased \$8.3 million, or 13.5%, from \$61.4 million in 2006 to \$69.7 million in 2007. As a percentage of sales, selling, general and administrative expenses increased from 8.4% in 2006 to 8.7% in 2007. Selling, general and administrative expenses were higher in 2007, as compared to 2006, primarily due to higher compensation costs, including personnel costs and other administrative expenses from acquired businesses, professional fees and the effect of an initiative in the fourth quarter to implement an enterprise resource planning system.

Depreciation, depletion and amortization. Depreciation, depletion and amortization expense increased \$8.8 million, or 43.4%, from \$20.1 million in 2006 to \$28.9 million in 2007. The increase was attributable primarily to the two acquisitions, and the formation of our 60%-owned Michigan subsidiary completed in 2007 and higher capital expenditures in 2006. Also contributing to this increase has been the decision we made in late 2005 to discontinue our practice of leasing a portion of our annual rolling stock requirements. See “- Liquidity and Capital Resources - Future Capital Requirements” for additional discussion of this leasing activity.

Interest income. Interest income decreased \$1.5 million from \$1.6 million in 2006 to \$0.1 million in 2007, due to a higher average cash balances in 2006 as compared to 2007, primarily in the first half of the year, resulting from our common stock issuance in February 2006.

Interest expense. Interest expense increased \$4.9 million, or 21.1%, from \$23.2 million in 2006 to \$28.1 million in 2007. The increase in interest expense in 2007, as compared to 2006, was attributable primarily to our additional senior subordinated notes offering in July 2006, and additional borrowings during 2007 under our senior secured credit facility to fund our acquisition program.

Income tax provision. We recorded a provision for income taxes of less than \$0.1 million in 2007 and a provision for income taxes of \$1.3 million in 2006. Our estimated annualized effective tax rate was nil for the full year ended December 31, 2007 and a negative rate of 22.6% for the full year ended December 31, 2006. The effective income tax rate for 2007 was lower than the federal statutory rate primarily due to nondeductible goodwill associated with our goodwill impairment in the fourth quarter of 2007, state income taxes and settlement of certain tax contingencies.

In the fourth quarter of 2007, we decided to dispose of three operations. We sold two of these operations prior to December 31, 2007. The results of operations, gain/loss on disposal and impairment of fair value of the remaining unit, along with the two operations which were sold prior to year-end have been reflected as discontinued operations in accordance with SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets". The discontinued operations generated a pretax loss of approximately \$9.1 million and a corresponding tax benefit of \$3.9 million in the fourth quarter of 2007.

Year Ended December 31, 2006 Compared to Year Ended December 31, 2005

Sales.

Ready-mixed concrete and concrete-related products. Sales of ready-mixed concrete and concrete-related products increased \$199.9 million, or 43.9%, from \$455.8 million in 2005 to \$655.7 million in 2006. This increase was primarily attributable to a 43.9% increase in ready-mixed concrete sales volumes and a 2.0% increase in the average sales price of ready-mixed concrete. The increase in ready-mixed concrete sales volumes in 2006 was largely associated with the acquisitions made during 2006 and at the end of 2005. During 2006, the increase in ready-mixed concrete volumes associated with acquisitions was partially offset by the slowdown in residential construction, primarily of single-family homes in the majority of our markets. We realized price improvements in all of our markets during the year, primarily tracking increases in our raw materials costs. Our overall average ready-mixed concrete price improvement in 2006, as compared to 2005, was tempered by the acquisition we made in July 2006 in our Texas market, where prices are generally lower than our other markets.

Precast concrete products. Sales in our precast concrete products segment were up \$9.0 million, or 12.5%, from \$71.9 million in 2005 to \$80.9 million in 2006. This increase reflected a 12.5% increase in the volume of ready-mixed concrete used in production in 2006, as compared to 2005, which was mostly attributable to the two acquisitions made in our precast concrete products segment during 2006. Those acquisitions significantly increased our production capacity and diversified our product line. Our two acquisitions included product lines that had lower average selling prices per cubic yard of concrete used in production than the historical product mix of this segment, which resulted in the average selling price per cubic yard of concrete used in production in 2006 being only slightly higher than in 2005.

Cost of goods sold before depreciation, depletion and amortization.

Ready-mixed concrete and concrete-related products. Cost of goods sold before depreciation, depletion and amortization for our ready-mixed concrete and concrete-related products segment increased \$162.0 million, or 43.5%, from \$372.6 million in 2005 to \$534.6 million in 2006. Cost of goods sold before depreciation, depletion and amortization for this segment as a percentage of sales decreased slightly from 81.7% in 2005 to 81.5% in 2006. The overall increase in cost of goods sold before depreciation, depletion and amortization was attributable primarily to the 41.1% increase in ready-mixed concrete sales volumes in 2006, as compared to 2005, resulting from the acquisitions we made in this segment in the fourth quarter of 2005 and in 2006, along with raw materials cost increases (primarily cement and aggregates). The decrease in cost of goods sold before depreciation, depletion and amortization as a percentage of sales in this segment in 2006, as compared to 2005, reflects operational cost efficiency maintained within our plants, while raw materials costs (primarily cement and aggregates) increased substantially in 2006.

Precast concrete products. Cost of goods sold before depreciation, depletion and amortization for our precast concrete products segment increased \$7.8 million, or 15.1%, from \$51.8 million in 2005 to \$59.6 million in 2006. Cost of goods sold before depreciation, depletion and amortization as a percentage of segment sales increased from 72.0% in 2005 to 73.6% in 2006. The increase in cost of goods sold before depreciation, depletion and amortization for the precast concrete products segment is associated primarily with the 12.3% increase in the volume of ready-mixed concrete used in production arising from the two acquisitions made in this segment during 2006, along with higher raw materials costs (primarily ready-mixed concrete). The increase in cost of goods sold as a percentage of segment

sales was largely attributable to an increase in sales of higher volume and lower margin precast products, such as manholes and certain wall systems sold in 2006, as compared to 2005, and production delays and a resulting reduction in efficiency at our Pleasanton location as a result of the consolidation of our Santa Rosa production capacity to Pleasanton in early 2006. Price increases in 2005 generally tracked the increased cost of ready-mixed concrete, steel and labor.

Goodwill and other asset impairments. In the fourth quarter of each year, we test our recorded goodwill for impairment and charge expense with any impairment we recognize. During the fourth quarter of 2006, we performed our annual test, which resulted in an impairment of \$38.8 million associated with our Michigan operations. No such impairments were required in 2005.

Selling, general and administrative expenses. Selling, general and administrative expenses increased \$11.4 million, or 22.9%, from \$50.0 million in 2005 to \$61.4 million in 2006. As a percentage of sales, selling, general and administrative expenses decreased from 9.5% in 2005 to 8.4% in 2006. Selling, general and administrative expenses were higher in 2006, as compared to 2005, primarily due to higher compensation costs, including personnel costs and other administrative expenses from acquired businesses.

Depreciation, depletion and amortization. Depreciation, depletion and amortization expense increased \$8.0 million, or 66.4%, from \$12.1 million in 2005 to \$20.1 million in 2006. The increase was attributable primarily to the six acquisitions made during 2006, the two acquisitions made in the fourth quarter of 2005, and higher capital expenditures in 2006.

Interest income. Interest income increased \$0.7 million, from \$0.9 million in 2005 to \$1.6 million in 2006, primarily as a result of a higher average cash balance in 2006, as compared to 2005, primarily in the first half of the year, resulting from our common stock issuance in February 2006.

Interest expense. Interest expense increased \$5.0 million, or 27.6%, from \$18.2 million in 2005 to \$23.2 million in 2006. The increase in interest expense in 2006, as compared to 2005, was attributable primarily to our additional senior subordinated debt offering in July 2006, additional borrowings under our senior secured credit facility and the assumption of certain indebtedness in connection with our acquisition in the third quarter of 2006.

Income tax provision. We recorded a provision for income taxes of \$1.3 million in 2006, compared to a provision for income taxes of \$9.4 million in 2005. Our estimated annualized effective tax rate was negative 22.6% for the full year ended December 31, 2006 and 39% for the full year ended December 31, 2005. The effective income tax rate for 2006 was lower than the federal statutory rate, primarily due to nondeductible goodwill associated with our goodwill impairment in the fourth quarter of 2006 and state income taxes.

Liquidity and Capital Resources

Our primary short-term liquidity needs consist of financing seasonal working capital requirements, purchasing properties and equipment, acquiring new businesses under our acquisition program and paying cash interest expense under our 8 % senior subordinated notes due in April 2014 and cash interest expense on borrowings if any under our senior secured revolving credit facility that is scheduled to expire in March 2011. In addition to cash and cash equivalents of \$14.9 million at December 31, 2007 and cash from operations, our senior secured revolving credit facility provides us with a significant source of liquidity. At December 31, 2007, we had \$112.6 million of available credit, net of outstanding letters of credit of \$11.8 million. Our working capital needs are typically at their lowest level in the first quarter and increase in the second and third quarters to fund the increases in accounts receivable and inventories during those periods and the cash interest payment on our senior subordinated notes on April 1 and October 1 of each year. Generally, in the fourth quarter of each year, our working capital borrowings decline and are at their lowest annual levels in the first quarter of the following year.

The principal factors that could adversely affect the amount of our internally generated funds include:

§ any deterioration of sales because of weakness in the markets in which we operate;

§ any decline in gross margins due to shifts in our project mix;

§ any deterioration in our ability to collect our accounts receivable from customers as a result of further weakening in residential and other construction demand; and

§ the extent to which we are unable to generate internal growth through integration of additional businesses or capital expansions of our existing business.

The principal factors that could adversely affect our ability to obtain cash from external sources include:

§ covenants contained in the Credit Agreement governing our senior revolving credit facility and the indenture governing our 8 % senior subordinated notes;

§ volatility in the markets for corporate debt and any additional market instability which may result from the effect of subprime loan default rates; and

§ fluctuations in the market price of our common stock or 8 % senior subordinated notes.

The following key financial measurements reflect our financial position and capital resources as of December 31, 2007, 2006 and 2005 (dollars in thousands):

	2007	2006	2005
Cash and cash equivalents	\$ 14,850	\$ 8,804	\$ 23,654
Working capital	\$ 88,129	\$ 82,897	\$ 62,801
Total debt	\$ 298,500	\$ 303,292	\$ 201,571
Available credit ¹	\$ 112,600	\$ 82,400	\$ 86,400
Debt as a percent of capital employed	59.3%	53.0%	52.2%

¹) Based on eligible borrowing base, net of outstanding letters of credit and borrowings outstanding under our senior secured revolving credit facility.

Our cash and cash equivalents consist of highly liquid investments in deposits and money market funds we hold at major financial institutions.

Senior Secured Credit Facility

On June 30, 2006, we entered into the Credit Agreement, which amended and restated our senior secured credit agreement dated as of March 12, 2004. The Credit Agreement, as amended to date, provides us with a revolving credit facility of up to \$150 million, with borrowings limited based on a portion of the net amounts of eligible accounts receivable, inventory and mixer trucks. The facility is scheduled to mature in March 2011. At December 31, 2007, there were no borrowings under this facility and new borrowings under the facility would have borne annual interest at the Eurodollar-based rate ("LIBOR") plus 1.75% or the domestic rate of 7.25% plus 0.25%. Commitment fees at an annual rate of 0.25% are payable on the unused portion of the facility. The Credit Agreement provides that the administrative agent may, on the bases specified, reduce the amount of the available credit from time to time. At December 31, 2007, the amount of the available credit was approximately \$112.6 million, net of outstanding letters of credit of approximately \$11.8 million.

Our subsidiaries, excluding our recently formed 60%-owned Michigan subsidiary and minor subsidiaries without operations or material assets, have guaranteed the repayment of all amounts owing under the Credit Agreement. In addition, we collateralized the facility with the capital stock of our subsidiaries, excluding our 60%-owned Michigan subsidiary and minor subsidiaries without operations or material assets, and substantially all the assets of those subsidiaries, excluding our 60%-owned Michigan subsidiary, most of the assets of the aggregates quarry in northern New Jersey and other real estate owned by us or our subsidiaries. The Credit Agreement contains covenants restricting, among other things, prepayment or redemption of subordinated notes, distributions, dividends and repurchases of capital stock and other equity interests, acquisitions and investments, mergers, asset sales other than in the ordinary course of business, indebtedness, liens, changes in business, changes to charter documents and affiliate transactions. It also limits capital expenditures (excluding permitted acquisitions) to the greater of \$45 million, or 5%, of consolidated revenues in the prior 12 months, and will require us to maintain a minimum fixed-charge coverage ratio of 1.0 to 1.0 on a rolling 12-month basis if the available credit under the facility falls below \$25 million. The Credit Agreement provides that specified change of control events would constitute events of default.

Senior Subordinated Notes

On March 31, 2004, we issued \$200 million of 8 % senior subordinated notes due April 1, 2014. Interest on these notes is payable semi-annually on April 1 and October 1 of each year. We used the net proceeds of this financing to redeem our prior 12% senior subordinated notes and prepay the outstanding debt under our credit facility. In July 2006, we issued \$85 million of additional 8 % senior subordinated notes due April 1, 2014 to fund a portion of the purchase price for the acquisition of Alberta Investments and Alliance Haulers.

All of our subsidiaries, excluding our recently formed 60%-owned Michigan subsidiary and minor subsidiaries, have jointly and severally and fully and unconditionally guaranteed the repayment of the 8 % senior subordinated notes.

The indenture governing the notes limits our ability and the ability of our subsidiaries to pay dividends or repurchase common stock, make certain investments, incur additional debt or sell preferred stock, create liens, merge or transfer assets. After March 31, 2009, we may redeem all or a part of the notes at a redemption price of 104.188% in 2009, 102.792% in 2010, 101.396% in 2011 and 100% in 2012 and thereafter. The indenture requires us to offer to repurchase (1) an aggregate principal amount of the subordinated notes equal to the proceeds of certain asset sales that are not reinvested in the business or used to pay senior debt and (2) all the notes following the occurrence of a change of control. The Credit Agreement prohibits these repurchases.

As a result of restrictions contained in the indenture relating to the 8 % senior subordinated notes, our ability to incur additional debt is primarily limited to the greater of (1) borrowings available under the Credit Agreement, plus the greater of \$15 million or 7.5% of our tangible assets, or (2) additional debt if, after giving effect to the incurrence of such additional debt, our earnings before interest, taxes, depreciation, amortization and certain noncash items equal or

exceed two times our total interest expense.

We made interest payments of approximately \$26.7 million in 2007 and \$19.6 million in 2006, primarily associated with our senior subordinated notes.

Superior Materials Holdings, LLC Credit Facility

Superior Materials Holdings, LLC, our 60%-owned Michigan subsidiary, has a separate credit agreement which provides for a revolving credit facility. The credit agreement was amended on February 29, 2008 and allows for borrowings of up to \$20 million. Borrowings under this credit facility are collateralized by substantially all the assets of Superior Materials Holdings, LLC and are scheduled to mature on April 1, 2010. Availability of borrowings is subject to a borrowing base that is determined based on the values of net receivables and inventory and \$5 million plus \$1.5 million for the period January 1 and ending May 31 of each year. The credit agreement provides that the administrative agent may, on the bases specified, reduce the amount of the available credit from time to time. As of December 31, 2007, there were \$7.8 million in outstanding borrowings under the revolving credit facility, and the remaining amount of the available credit was approximately \$8.6 million.

Currently, borrowings under the facility are subject to an interest pricing grid ranging from LIBOR plus 125 basis points to LIBOR plus 250 basis points. The interest rate margins vary inversely with a ratio of funded debt to EBITDA. Commitment fees at an annual rate of 25 basis points are payable on the unused portion of the facility.

The credit agreement contains covenants restricting, among other things, Superior Materials Holdings' distributions, dividends and repurchases of capital stock and other equity interests, acquisitions and investments, mergers, asset sales other than in the ordinary course of business, indebtedness, liens, changes in business, changes to charter documents and affiliate transactions. It also generally limits Superior Materials Holdings LLC's capital expenditures and requires the subsidiary to maintain compliance with specified financial covenants, including an affirmative covenant which requires earnings before income taxes, interest and depreciation ("EBITDA") to be at least \$6.0 million for the nine months ended December 31, 2007. Superior Materials Holdings, LLC was not in compliance with the quarterly EBITDA financial covenant for the quarters ended September 30, 2007 and December 31, 2007. However, the lender has waived its default rights under the credit facility with respect to this noncompliance and amended its financial covenants for 2008.

U.S. Concrete and its 100%-owned subsidiaries are not obligors or guarantors pursuant to the terms of Superior Materials Holdings LLC debt facility.

Fair Value of Financial Instruments

The carrying amounts of cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities approximate fair value because of their short-term maturity and variable rates of interest. The estimated aggregate fair value of our 8 % senior subordinated notes at year-end was approximately \$248.8 million in 2007 and \$278.6 million in 2006.

Debt Ratings

Our ability to obtain external financing and the related cost of borrowing is affected by our debt ratings, which are periodically reviewed by the major credit rating agencies. Debt ratings and outlooks as of March 3, 2008 were as follows:

	Rating	Outlook
Moody's		
Senior subordinated notes	B2	
LT corporate family rating	B1	Rating under review
Standard & Poor's		
Senior subordinated notes	B-	
Corporate credit	B+	Stable

These debt ratings are not recommendations to buy, sell or hold our securities, and they may be subject to revision or withdrawal at any time by the assigning rating agency. Each rating should be evaluated independently of any other rating. On March 3, 2008, Moody's Investor Service placed our rating and outlook under review for possible downgrade.

Future Capital Requirements

For 2008, our capital expenditures are expected to be in the range of \$25 million to \$30 million, including maintenance capital, developmental capital, rolling stock replacement, costs associated with our enterprise resource

planning systems implementation and certain plant relocation costs. In prior years, we leased a higher percentage of our mixer trucks and other rolling stock under operating leases due to lower long-term interest rates and our inability to recover the associated tax benefits in those years. In 2007, we purchased a greater percentage of this equipment, primarily as a result of our ability to recover the associated tax benefits, and expect to purchase versus lease equipment in 2008.

Our management believes, on the basis of current expectations, that our cash on hand, internally generated cash flow and borrowings under our existing credit facilities will be sufficient to provide the liquidity necessary to fund our operations and meet our planned capital expenditure and debt-service requirements for at least the next 12 months.

Cash Flow

Our consolidated cash flows for each of the past three years are presented below (in thousands):

	Year Ended December 31		
	2007	2006	2005
Operating activities	\$ 44,338	\$ 39,537	\$ 41,229
Investing activities	(34,084)	(230,679)	(58,563)
Financing activities	(4,208)	176,292	1,281
Net cash provided by (used in) operating, investing and financing activities	\$ 6,046	\$ (14,850)	\$ (16,053)

Our net cash provided by operating activities generally reflects the cash effects of transactions and other events used in the determination of net income or loss. Net cash provided by operating activities of \$44.3 million in the year ended December 31, 2007 increased \$4.8 million from the net cash provided in the year ended December 31, 2006. The increase was principally due to higher receivable collections in 2007 and certain liability payments associated with acquired businesses in 2006, which did not occur in 2007. Net cash provided by operating activities of \$39.5 million in the year ended December 31, 2006 decreased \$1.7 million from the net cash provided in the year ended December 31, 2005. This decrease was principally a result of higher use of working capital and an increase in cash income taxes, partially offset by higher operating income before noncash impairments of goodwill and other assets.

Our net cash used in investing activities of \$34.1 million in the year ended December 31, 2007 decreased \$196.6 million from the net cash used in investing activities in the year ended December 31, 2006, primarily due to fewer acquisitions and \$11.2 million lower capital expenditures, net of proceeds, in 2007, offset slightly by the proceeds we received from our disposition of two business units near the end of 2007. Net cash used in investing activities of \$230.7 million in the year ended December 31, 2006 increased \$172.1 million from the net cash used in the year ended December 31, 2005, primarily because of acquisitions we made in 2006. Capital expenditures increased by \$24.0 million during the year ended December 31, 2006, primarily as a result of our decision to buy rather than lease the mixer trucks and other rolling stock included in our capital plan for 2006.

Our net cash used in financing activities of \$4.2 million decreased \$180.5 million from the net cash provided by financing activities of \$176.3 million in 2006. The change was primarily attributable to our 2006 issuances of common stock and senior subordinated notes. Our cash and cash equivalents, which totaled \$8.8 million at December 31, 2006, increased to \$14.9 million at December 31, 2007. Our net cash provided by financing activities of \$176.3 million in the year ended December 31, 2006 increased \$175.0 million from the net cash provided in the year ended December 31, 2005. This increase was primarily attributable to our February 2006 common stock issuance, our July 2006 senior subordinated notes issuance and proceeds from the issuance of common stock under our incentive compensation plans. Our cash and cash equivalents, which totaled \$8.8 million at December 31, 2006, decreased \$14.9 million from December 31, 2005.

We define free cash flow as net cash provided by operating activities less purchases of properties, plant and equipment (net of disposals). Free cash flow is a liquidity measure not prepared in accordance with GAAP. Our management uses free cash flow in managing our business because we consider it to be an important indicator of our ability to service our debt and generate cash for acquisitions and other strategic investments. We believe free cash flow may provide users of our financial information additional meaningful comparisons between current results and results in prior operating periods. As a non-GAAP financial measure, free cash flow should be viewed in addition to, and not as an alternative for, our reported operating results or cash flow from operations or any other measure of performance prepared in accordance with GAAP.

Our historical net cash provided by operating activities and free cash flow is as follows (in thousands):

	Year Ended December 31		
	2007	2006	2005
Net cash provided by operating activities	\$ 44,338	\$ 39,537	\$ 41,229
Less: Purchases of properties and equipment, net of disposals of \$2,574, \$3,699 and \$713	(27,145)	(38,232)	(17,253)
Free cash flow	\$ 17,193	\$ 1,305	\$ 23,976

Acquisitions

In October 2007, we acquired the operating assets, including working capital and real property, of Architectural Precast, LLC (“API”), a leading designer and manufacturer of premium quality architectural and structural precast concrete products serving the Atlantic region, for \$14.5 million plus a \$1.5 million contingency based on the future earnings of API.

In June 2007, we acquired two ready-mix concrete plants, including real property and certain raw material inventories, in our west Texas market for approximately \$3.6 million.

In April 2007, we formed a joint venture (Superior Materials Holdings, LLC), with the Edw. C. Levy Co., which operates in Michigan. Under the contribution agreement, we contributed substantially all of our ready-mixed concrete and concrete-related products assets, except our quarry assets and working capital, in Michigan in exchange for a 60% ownership interest, while the Edw. C. Levy Co. contributed all of its Michigan ready-mixed concrete and related concrete products assets, its 24,000 ton cement terminal and \$1.0 million for a 40% ownership interest. The 60%-owned Michigan subsidiary currently owns and operates 26 ready-mixed concrete plants, one portable plant, one concrete block plant, a 24,000-ton cement terminal and approximately 303 ready-mixed concrete trucks.

In November 2006, we acquired a small ready-mixed concrete operation and sand and gravel quarry in Breckenridge, Texas. We paid \$3.0 million in cash and effectively assumed approximately \$0.4 million in interest-bearing debt.

In October 2006, we acquired certain aggregates assets located in New Jersey from Pinnacle Materials, Inc. for \$12.5 million in cash. The assets consist of a granite quarry with approximately 15.6 million tons of reserves and an estimated useful life of 20 years, and a natural sand pit with approximately 9.1 million tons of reserves and an estimated 10-year life.

In July 2006, we acquired all of the outstanding equity interests in Alberta Investments, Inc. and Alliance Haulers, Inc. for \$165.0 million, subject to specified adjustments. At the time of the acquisition, Alberta Investments conducted the substantial majority of its business through two subsidiaries: Redi-Mix, L.P. and Ingram Enterprises, L.P. Redi-Mix operated 13 ready-mixed concrete plants in the Dallas/Fort Worth Metroplex and in areas north of the Metroplex. Ingram Enterprises operated 17 ready-mixed concrete plants and three sand and gravel plants in west Texas. Alliance Haulers provided cement and aggregates hauling services with a fleet of approximately 260 hauling trucks owned by Redi-Mix and third-party haulers in the markets covered by Redi-Mix and Ingram.

In June 2006, we acquired the operating assets, including real property, of Olson Precast Company used in the production of precast concrete products in northern California for approximately \$4.8 million in cash.

In April 2006, we acquired the operating assets of Pre-Cast Mfg., Inc. in our existing Phoenix market area for approximately \$5.0 million in cash.

In April 2006, we acquired Kurtz Gravel Company, which produced ready-mixed concrete from six plants and mined aggregates from a quarry, all located in or near our existing metropolitan Detroit market area, for approximately \$13.0 million in cash. We also assumed certain capital lease liabilities with a net present value of \$1.5 million.

In December 2005, we acquired substantially all the operating assets of Go-Crete and South Loop Development Corporation, which produced and delivered ready-mixed concrete from six plants and mined sand and gravel from a quarry in the greater Dallas/Fort Worth, Texas market. We purchased the assets for approximately \$27.5 million in cash and assumed certain capital lease liabilities with a net present value of about \$2.0 million.

In November 2005, we acquired substantially all the operating assets, including real property, of City Concrete Company, City Concrete Products, Inc. and City Transports, Inc., which produced and delivered ready-mixed concrete from five plants in the greater Memphis, Tennessee and northern Mississippi area, for approximately \$14.3 million in cash.

In January 2005, we acquired a small ready-mixed concrete operation in Knoxville, Tennessee. The purchase price was approximately \$1.0 million in cash.

Since our inception, cash has been the primary component in the consideration we have paid to acquire businesses. We expect that cash will be a significant, if not the principal, element in acquisitions we might make in the foreseeable future.

Off-Balance Sheet Arrangements

We do not currently have any off-balance sheet arrangements that have or are reasonably likely to have a material current or future effect on our financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources. From time to time, we may enter into noncancelable operating leases that would not be reflected on our balance sheet. For additional discussion on our operating leases, see Note 14 to our Consolidated Financial Statements in this report.

Commitments

The following are our contractual commitments associated with our indebtedness and our lease obligations as of December 31, 2007 (in millions).

Contractual obligations	Total	Less Than 1 year	1-3 years	4-5 years	After 5 years
Principal on debt	\$ 297.8	\$ 2.8	\$ 11.2	\$ —	\$ 283.8
Interest on debt ⁽¹⁾	155.1	23.9	47.7	47.7	35.8
Capital leases	0.7	0.3	0.2	0.2	—
Operating leases	41.9	14.1	16.4	5.7	5.7
Total	\$ 495.5	\$ 41.1	\$ 75.5	\$ 53.6	\$ 325.3

(1) Interest payments due under our 8 % senior subordinated notes.

The following are our commercial commitment expirations as of December 31, 2007 (in millions):

Other commercial commitments	Total	Less Than 1 year	1-3 years	4-5 years	After 5 years
Standby letters of credit	\$ 11.8	\$ 6.1	\$ 5.7	\$ —	\$ —
Purchase obligations	4.5	4.5	—	—	—
Performance bonds	26.7	25.0	1.7	—	—
Total	\$ 43.0	\$ 35.6	\$ 7.4	\$ —	\$ —

The following long-term liabilities included on the consolidated balance sheet are excluded from the table above: accrued employment costs, income tax contingencies, minority interest, insurance accruals and other accruals. Due to the nature of these accruals, the estimated timing of such payments (or contributions in the case of certain accrued employment costs) for these items is not predictable. As of December 31, 2007, the total unrecognized tax benefit related to uncertain tax positions was \$6.4 million. We estimate that none of this will be paid within the next twelve months.

Share Repurchase Plan

On January 7, 2008 our Board of Directors approved a plan to repurchase an aggregate three million shares of our own common stock. Based on the \$2.87 closing market price at the time of the announcement, this represents the use of approximately \$9.0 million of available cash on hand as of December 31, 2007. The plan permits the stock repurchases to be made on the open market or in privately negotiated transactions in compliance with securities and other applicable laws, subject to market and business conditions, levels of cash generated from operations, and other relevant factors. We intend to retire the shares as soon as practicable following repurchase. Our stock repurchase plan

does not obligate us to purchase any particular number of shares and we may suspend or discontinue the program at any time. As of March 3, 2008, we had not begun to repurchase shares of our own stock under this plan.

Other

We periodically evaluate our liquidity requirements, alternative uses of capital, capital needs and availability of resources in view of, among other things, our dividend policy, our debt service and capital expenditure requirements and estimated future operating cash flows. As a result of this process, in the past we have sought, and in the future we may seek, to reduce, refinance, repurchase or restructure indebtedness; raise additional capital; issue additional securities; repurchase shares of our common stock; modify our dividend policy; restructure ownership interests; sell interests in subsidiaries or other assets; or take a combination of such steps or other steps to manage our liquidity and capital resources. In the normal course of our business, we may review opportunities for the acquisition, divestiture, joint venture or other business combinations in the ready-mixed concrete or related businesses. In the event of any acquisition or joint venture transaction, we may consider using available cash, issuing equity securities or increasing our indebtedness to the extent permitted by the agreements governing our existing debt. See Note 9 to our Consolidated Financial Statements included in Item 8 of this report.

Inflation

Inflation did not significantly affect our results of operations in any of the past three years. However, cement prices and certain other raw material prices, including aggregates and diesel fuel prices have generally risen faster than regional inflationary rates. The impact of these price increases was partially mitigated by price increases we have obtained for our products in 2006 and 2005. In 2007, prices for our products increased at a rate similar to, or greater than, the rate of increase in our raw materials costs and fuel.

Item 7A. *Quantitative and Qualitative Disclosures About Market Risk*

We do not enter into derivatives or other financial instruments for trading or speculative purposes, but we may utilize them to manage our fixed-to-variable-rate debt ratio. All derivatives, whether designated as hedging relationships or not, are required to be recorded on the balance sheet at fair value. Because of the short duration of our investments, changes in market interest rates would not have a significant impact on their fair values. At December 31, 2007 and 2006, we were not a party to any derivative financial instruments.

The indebtedness evidenced by our 8 % senior subordinated notes is fixed-rate debt, so we are not exposed to cash-flow risk from market interest rate changes on these notes. The fair value of that debt will vary as interest rates change.

Borrowings under our Credit Agreement and our Superior Materials Holdings, LLC separate credit agreement expose us to certain market risks. Interest on amounts drawn under the credit facilities varies based on either the prime rate or one-, two-, three- or six-month Eurodollar rates. Based on the \$7.8 million outstanding under these facilities as of December 31, 2007, a one percent change in the applicable rate would not materially change the amount of interest expense for 2007.

We purchase commodities, such as cement, aggregates and diesel fuel, at market prices and do not currently use financial instruments to hedge commodity prices.

Our operations are subject to factors affecting the level of general construction activity, including the level of interest rates and availability of funds for construction. A significant decrease in the level of general construction activity in any of our market areas may have a material adverse effect on our sales and earnings.

Item 8. *Financial Statements and Supplementary Data*

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Stockholders of U.S. Concrete, Inc.:

In our opinion, the accompanying financial statements listed in the accompanying index present fairly, in all material respects, the financial position of U.S. Concrete, Inc. and its subsidiaries at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in "Management's Report on Internal Control Over Financial Reporting" appearing under Item 9A of this Form 10-K. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audits (which were integrated audits in 2007 and 2006). We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As discussed in Note 1 to the consolidated financial statements, the Company changed the manner in which it accounts for uncertainty in income taxes in 2007 and stripping costs and share-based compensation in 2006.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As described in "Management's Report on Internal Control over Financial Reporting," management has excluded Architectural Precast, L.L.C. from its assessment of internal control over financial reporting as of December 31, 2007 because it was acquired by the Company in a purchase business combination during 2007. We have also excluded Architectural Precast, L.L.C. from our audit of internal control over financial reporting. Architectural Precast, L.L.C.

is a wholly-owned subsidiary whose total assets and total revenues represent approximately 2% and 1%, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 2007.
