- Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c)).

Item 8.01 Other Events.

On May 26, 2009, Senesco Technologies, Inc. (the "Company") announced results of H1N1 mouse influenza survival studies that were conducted in Dr. William Scheld's lab at the University of Virginia School of Medicine. Mice treated with an siRNA against Senesco's Factor 5A gene had a 52% survival rate as opposed to a 14% survival rate for mice that received no treatment or a control siRNA.

A total of 73 mice were infected with a lethal dose of nasally administered H1N1 mouse influenza. The treated mice (n=31 mice) were administered Senesco's siRNA against Factor 5A approximately 24 hours after infection and then every other day for 11 days. Treated mice reversed the weight loss typically seen in infected mice at around day 8 of the study, which coincides with the reduced mortality. The treated mice had other reduced indicators of disease severity as measured by blood glucose and liver enzymes.

On May 26, 2009, the Company issued a press release announcing the initiation of preclinical studies. A copy of this press release is furnished as Exhibit 99.1.

Item 9.01. Financial Statements and Exhibits.

(d) Exhibits.

Exhibit No.	Description
