EXPLANATORY NOTE

The Company is amending its Form 10-K filed on March 15, 2006, so that the disclosure regarding expected 2006 production volume in the fourth paragraph under the Exploration and Production heading on page 1 conforms to the expected 2006 production volume disclosure which was previously included elsewhere in the Form 10-K filed on March 15, 2006, and which continues to be included in this Form 10-K/A.

PART I

Item 1. BUSINESS

Summary

Murphy Oil Corporation is a worldwide oil and gas exploration and production company with refining and marketing operations in North America and the United Kingdom. As used in this report, the terms Murphy, Murphy Oil, we, our, its and Company may refer to Murphy Oil Corporation or any one or more of its consolidated subsidiaries.

The Company was originally incorporated in Louisiana in 1950 as Murphy Corporation. It was reincorporated in Delaware in 1964, at which time it adopted the name Murphy Oil Corporation, and was reorganized in 1983 to operate primarily as a holding company of its various businesses. Its operations are classified into two business activities: (1) Exploration and Production and (2) Refining and Marketing. For reporting purposes, Murphy's exploration and production activities are subdivided into six geographic segments, including the United States, Canada, the United Kingdom, Ecuador, Malaysia and all other countries. Murphy's refining and marketing activities are subdivided into geographic segments for North America and United Kingdom. Additionally, Corporate and Other Activities include interest income, interest expense, foreign exchange effects and overhead not allocated to the segments.

The information appearing in the 2005 Annual Report to Security Holders (2005 Annual Report) is incorporated in this Form 10-K report as Exhibit 13 and is deemed to be filed as part of this Form 10-K report as indicated under Items 1, 2 and 7.

In addition to the following information about each business activity, data about Murphy's operations, properties and business segments, including revenues by class of products and financial information by geographic area, are provided on pages 11 through 21, F-12 and F-13, F-29 through F-37, and F-39 of this Form 10-K report and on pages 6 and 7 of the 2005 Annual Report.

At December 31, 2005, Murphy had 6,248 employees, including 2,261 full-time and 3,987 part-time.

Interested parties may access the Company's public disclosures filed with the Securities and Exchange Commission, including Form 10-K, Form 10-Q, Form 8-K and other documents, by accessing the Investor Relations section of Murphy Oil Corporation's website at www.murphyoilcorp.com.

Exploration and Production

The Company's exploration and production business explores for and produces crude oil, natural gas and natural gas liquids worldwide.

During 2005, Murphy's principal exploration and production activities were conducted in the United States by wholly owned Murphy Exploration & Production Company USA (Murphy Expro USA), in Ecuador, Malaysia and the Republic of the Congo by wholly owned Murphy Exploration & Production Company International (Murphy Expro International) and its subsidiaries, in western Canada and offshore eastern Canada by wholly owned Murphy Oil Company Ltd. (MOCL) and its subsidiaries, and in the U.K. North Sea and the Atlantic Margin by wholly owned Murphy Petroleum Limited. Murphy's crude oil and natural gas liquids production in 2005 was in the United States, Canada, the United Kingdom, Malaysia and Ecuador; its natural gas was produced and sold in the United States, Canada and the United Kingdom. MOCL owns a 5% undivided interest in Syncrude Canada Ltd. in northern Alberta, the world's largest producer of synthetic crude oil.

Murphy's worldwide crude oil, condensate and natural gas liquids production in 2005 averaged 101,349 barrels per day, an increase of 8% compared to 2004. The increase was primarily due to a full year of production in 2005 at the Front Runner deepwater field in the Gulf of Mexico and higher production of heavy oil in western Canada due to an ongoing development drilling program in the Seal area in Alberta. The Company's worldwide sales volume of natural gas averaged 90 million cubic feet (MMCF) per day in 2005, down 18% from 2004 levels. The

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

lower natural gas sales were due to a disposal of most oil and natural gas properties on the continental shelf of the Gulf of Mexico in mid-2005 and natural gas production temporarily lost in the Gulf of Mexico following Hurricanes Katrina and Rita in the third quarter of 2005.

Total production in 2006 is currently expected to be about 110,000 barrels of oil equivalent per day. Higher synthetic oil production due to the start-up of a new coker unit at Syncrude and higher anticipated production of heavy oil in the Seal area of western Canada due to an ongoing development drilling program are expected to be more than offset by lower production at Terra Nova due to more downtime for repairs, lower volumes allocable to Murphy at the West Patricia field in Malaysia under the production sharing contract, and decline at Front Runner in the deepwater Gulf of Mexico. Natural gas production will be favorably impacted by start-up of the Seventeen Hands field in the deepwater Gulf of Mexico, but other volumes in the deepwater Gulf of Mexico are likely to be lower prior to workovers and volumes in the U.K. are expected to be lower at the Amethyst field.

In the United States, Murphy has production of oil and/or natural gas from six fields operated by the Company and three fields operated by others. Of the total producing fields at December 31, 2005, four are in the deepwater Gulf of Mexico, one is in more shallow waters on the Gulf of Mexico continental shelf, three are onshore in Louisiana and one is the Northstar field in Alaska. The Company's primary focus in the

Table of Contents**Index to Financial Statements**

U.S. is in the deepwater Gulf of Mexico, which is generally defined as water depths of 1,000 feet or more. The Company operates and owns a 60% interest in the Medusa field, in Mississippi Canyon Blocks 538/582. Medusa produced about 12,400 barrels of oil per day and 12.5 MMCF of gas per day net to the Company in 2005, but was offline for more than three months following Hurricane Katrina. Peak annual net production from Medusa is expected to be about 17,000 barrels of oil equivalent per day and should be achieved in 2006. Murphy operates and holds a 37.5% interest in the Front Runner field in Green Canyon Blocks 338/339 which came on stream in December 2004. Total net daily production at Front Runner in 2005 was 7,500 barrels of oil and 6.4 MMCF of gas. Production in 2006 is expected to decline from 2005 levels as well intervention work is performed. The Company owns a 33.75% interest in the Habanero field in Garden Banks Block 341. Habanero, which is operated by Shell, produced about 4,000 barrels of oil per day and 6 MMCF of gas per day net to the Company in 2005 and was adversely affected by hurricanes for approximately three months. Habanero production is expected to be lower in 2006 due to production decline on existing wells. The Company has a 37.5% interest in the Seventeen Hands field in Mississippi Canyon Block 299. This field, operated by Dominion, is projected to begin production in early 2006 following a delay in start-up caused by Hurricane Katrina. Daily net production should average 13 MMCF of gas per day for the second half of 2006, but the field is expected to begin decline in 2007. The other deepwater producing field is at Tahoe in Viosca Knoll Block 783, in which the Company has a 30% interest. Tahoe is operated by Shell and in 2005 produced about 8 MMCF of natural gas per day and 200 barrels of oil per day net to the Company. Tahoe production will be lower in 2006 than in 2005 due to two wells remaining off production after the 2005 hurricane. Hurricane Katrina and other storms caused temporary shut-in of wells and damaged facilities mostly owned by others, which ultimately reduced the Company's 2005 net production in the U.S. by about 6,800 barrels of oil per day and 15 MMCF of natural gas per day. At year-end 2005, virtually all producing fields affected by Hurricane Katrina and other storms were back onstream. In 2004, Murphy announced a discovery at the Thunderhawk wildcat well in Mississippi Canyon Block 734 and in early 2005 announced a discovery at South Dachshund in Lloyd Ridge Blocks 1 and 2. Murphy has appraised the Thunderhawk discovery and expects to sanction a development plan during 2006. First production at Thunderhawk, where Murphy has a 37.5% interest, could occur in 2008. Natural gas production from the Lloyd Ridge discovery, now known as Mondo N.W., is expected in mid-2007 and Murphy has a 50% working interest in this property. Murphy holds an interest in 214 blocks in the deepwater Gulf of Mexico, and expects to drill two-to-four deepwater prospects per year over the next several years. Murphy sold most of its interests on the more shallow continental shelf in the Gulf of Mexico in mid-2005 for an after-tax profit of \$104.5 million. Total production from these properties averaged about 4,400 barrels of net oil equivalent per day in 2005 prior to the sale. Total net proved reserves for these sold properties were 7.6 million barrels equivalent at the end of 2004. Onshore production, which is mostly natural gas, is primarily located on several leases in Vermilion Parish, Louisiana. Murphy's net production in 2005 from onshore fields was 25 MMCF per day. The Company owns approximately a 1.4% working interest in the Northstar oil field in Alaska operated by BP. Total net oil production for this field was approximately 700 barrels per day in 2005. Murphy is in the early stages of an onshore U.S. exploration program searching for unconventional shale gas. The Company has drilled three unsuccessful wells through year-end 2005.

In Canada, the Company owns an interest in three legacy assets, the Hibernia and Terra Nova fields offshore Newfoundland and Syncrude Canada Ltd. in northern Alberta. In addition, the Company owns interests in two heavy oil areas and one natural gas area in the Western Canada Sedimentary Basin (WCSB) in 2005. Murphy holds a 6.5% interest in Hibernia and a 12% interest in Terra Nova, with these being the first two fields on production in the Jeanne d'Arc Basin, offshore Newfoundland. Total net production in 2005 was 12,300 barrels of oil per day from Hibernia, which is operated by Hibernia Management and Development Company, while net production from Terra Nova, which is operated by PetroCanada, was 10,800 barrels of oil per day. Terra Nova production suffered from equipment reliability issues in 2005, and the current plan calls for a three-month shutdown for major equipment maintenance in the second half of 2006. Total 2006 net production at Hibernia and Terra Nova is anticipated to be approximately 11,500 and 6,500 barrels per day, respectively. Murphy owns a 5% undivided interest in Syncrude Canada Ltd., a joint venture located about 25 miles north of Fort McMurray, Alberta. Syncrude utilizes its assets to extract bitumen from oil sand deposits and to upgrade this bitumen into a high-value synthetic crude oil. Syncrude is nearing completion of the expansion of its facilities by adding a third coker that will allow for increased production beginning in the second quarter of 2006. Total net production in 2005 was 10,600 barrels of crude oil per day, but with the expansion net production is expected to be about 13,500 barrels per day in the second half of 2006. Although Syncrude produces a very high quality synthetic crude oil from bitumen, the U.S. Securities and Exchange Commission (SEC) does not allow the Company to include Syncrude's reserves in its proved oil reserves, which are reported on page F-33. The SEC considers Syncrude to be a mining operation, and not a conventional oil operation. Production in 2005 in the WCSB averaged 12,300 barrels per day of mostly heavy oil and 10 MMCF of natural gas per day. An ongoing heavy oil development drilling program in the Seal area of Alberta is expected to increase WCSB oil production in 2006 by about 3,000 barrels per day. Natural gas production levels in 2006 should be similar to 2005.

Murphy produces oil and natural gas in the United Kingdom sector of the North Sea. The Company's primary oil production in the U.K. is now derived from two areas, Schiehallion and Mungo/Monan. Murphy owns 5.88% of the BP operated Schiehallion field, which is located in an area known as the Atlantic Margin west of the Shetland Islands. Schiehallion produces oil into a Floating Production Storage and Offloading vessel (FPSO). The oil is transported via dedicated tanker to Sullom Voe terminal, where the oil is sold to third parties. Schiehallion produced approximately 3,700 net barrels of oil per day in 2005, with production being adversely affected by a fire and equipment reliability issues during the year. Schiehallion development will continue with further infield drilling planned in 2006 onwards. Murphy owns a 4.84% interest in the

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

FPSO, which also handles production from a nearby field owned by others. Mungo/Monan is also operated by BP and is 12.65% owned by Murphy. The Mungo field produces through an unmanned platform, while Monan is produced through subsea facilities. Both the platform and subsea facilities are tied to a central processing facility that is linked to the Forties pipeline system. In 2005, the Mungo and Monan fields produced approximately 4,200 barrels of oil per day, net to Murphy's interest. Total U.K. natural gas sales averaged about 9.4 MMCF per day in

Table of Contents**Index to Financial Statements**

2005 from production primarily at the Amethyst and Mungo/Monan fields. Oil production in the U.K. in 2006 should be similar to 2005, but natural gas sales are expected to be about 3 MMCF per day lower due to less sales volumes at the Amethyst field as 2005 volumes included about 2 MMCF per day of make-up gas associated with a prior year contract.

In Ecuador, Murphy owns a 20% working interest in Block 16, which is operated by Repsol YPF under a participation contract. The Company's net production was about 7,900 barrels of oil per day in 2005. Between June and December 2004, Murphy did not receive its equity share of oil sales from Block 16 due to a dispute with the operator involving the Company's new transportation and marketing arrangements. Murphy settled this matter with Repsol YPF in late 2005 and recouped about 663,000 barrels of oil of the 2004 shortfall. The Company is still owed about 853,000 barrels from other Block 16 working interest owners as of December 31, 2005. Murphy expects to resolve the matter with the other owners in 2006.

As of January 31, 2006, the Company has majority interests in nine separate production sharing contracts (PSCs) in Malaysia. The Company serves as the operator of all these areas, which cover approximately 12.3 million acres. Murphy has an 85% interest in two shallow water blocks, SK 309 and SK 311. The West Patricia and Congkak fields in Block SK 309 produced about 13,500 net barrels of oil per day in 2005. Net production in 2006 is anticipated to decline at these fields by 10%-15% due to a lower percentage of production allocable to the Company under the production sharing contract due to sustained high oil prices. The Company has also added discoveries in these shallow water blocks at Endau, Rompin, Belum, Golok and Serampang. The Company made a major discovery at the Kikeh field in deepwater Block K in 2002 and added another important discovery at Kakap in 2004. Further discoveries have been made in Block K at Senangin and Kerisi. In 2004, Murphy's Board of Directors and Malaysian authorities sanctioned the Kikeh field development plan, and in early 2005 engineering and construction contracts for major equipment were awarded. The Company has booked proved oil reserves of 38.9 million barrels related to the Kikeh field at year-end 2005. These proved reserves do not include any volumes attributable to pressure maintenance programs that the Company intends to utilize at the Kikeh field when production begins, which is currently projected to be in the second half of 2007. In early 2006, the Company relinquished a portion of Block K, offshore Sabah, and it was granted a 60% interest in an extension of a portion of Block K covering 1.02 million acres. The Company retained its 80% interest in the Kikeh and Kakap discoveries in Block K. The Company also added a new PSC in early 2006, now known as Block P, covering 1.05 million acres of the previously relinquished Block K area. Murphy holds a 60% interest in Block P. Murphy also owns 75% interests in Blocks PM 311 and PM 312, located offshore peninsular Malaysia. Murphy announced discoveries at Kenarong and Pertang in Block PM 311 in 2004, but was unsuccessful with additional exploration drilling in the PM blocks in 2005. The Company has an 80% interest in deepwater Block H offshore Sabah, and it expects to drill two wildcat wells on this block in 2006. The Company was awarded interests in two PSCs covering deepwater Blocks L (60%) and M (70%) in 2003. The Sultanate of Brunei also claims this acreage. Murphy drilled a wildcat well in Block L in mid-2003. Well results have been kept confidential and well costs of \$12 million are held in suspension pending the resolution of the ownership issue. The Company is unable to predict when or how ownership of Blocks L and M will be resolved. A total of 2.9 million gross acres associated with Blocks L and M have been included in the acreage table on page 4.

The Company has 85% interests in Production Sharing Agreements (PSAs) covering two offshore blocks in the Republic of the Congo. These blocks are named Mer Profonde Sud (MPS) and Mer Profonde Nord (MPN), and together, cover approximately 1.8 million acres with water depths ranging from 490 to 6,900 feet. Murphy drilled its first exploration well in late 2004 and in early 2005 announced an oil discovery at Azurite Marine #1 in MPS. In 2005, the Company successfully appraised this discovery and tested an appraisal well at 8,000 barrels of oil per day from one zone. The Company drilled four unsuccessful exploratory wells on other parts of the MPS block in 2005. Further exploration drilling will occur in the area in 2006 prior to deciding upon a development plan for the Azurite Marine area.

Murphy's estimated net quantities of proved oil and gas reserves and proved developed oil and gas reserves at December 31, 2002, 2003, 2004 and 2005 by geographic area are reported on pages F-33 and F-34 of this Form 10-K report. Murphy has not filed and is not required to file any estimates of its total net proved oil or gas reserves on a recurring basis with any federal or foreign governmental regulatory authority or agency other than the U.S. Securities and Exchange Commission. Annually, Murphy reports gross reserves of properties operated in the United States to the U.S. Department of Energy; such reserves are derived from the same data from which estimated net proved reserves of such properties are determined.

Net crude oil, condensate, and gas liquids production and sales, and net natural gas sales by geographic area with weighted average sales prices for each of the six years ended December 31, 2005 are shown on page 6 of the 2005 Annual Report. In 2005, the Company's production of oil and natural gas represented approximately 0.1% of the respective worldwide totals.

Production expenses for the last three years in U.S. dollars per equivalent barrel are discussed on page 17 of this Form 10-K report. For purposes of these computations, natural gas sales volumes are converted to equivalent barrels of crude oil using a ratio of six thousand cubic feet (MCF) of natural gas to one barrel of crude oil.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Supplemental disclosures relating to oil and gas producing activities are reported on pages F-32 through F-39 of this Form 10-K report.

Table of Contents**Index to Financial Statements**

At December 31, 2005, Murphy held leases, concessions, contracts or permits on developed and undeveloped acreage as shown by geographic area in the following table. Gross acres are those in which all or part of the working interest is owned by Murphy. Net acres are the portions of the gross acres attributable to Murphy's working interest.

Area (Thousands of acres)	Developed		Undeveloped		Total	
	Gross	Net	Gross	Net	Gross	Net
United States Onshore	5	3	329	155	334	158
Gulf of Mexico	16	6	1,304	866	1,320	872
Alaska	3	1	4		7	1
Total United States	24	10	1,637	1,021	1,661	1,031
Canada Onshore	69	46	236	201	305	247
Offshore	88	7	8,444	2,631	8,532	2,638
Total Canada	157	53	8,680	2,832	8,837	2,885
United Kingdom	33	4	69	20	102	24
Ecuador	7	1	524	105	531	106
Malaysia	2	2	14,431*	11,100*	14,433*	11,102*
Republic of Congo			1,773	1,507	1,773	1,507
Spain			36	6	36	6
Totals	223	70	27,150	16,591	27,373	16,661
Oil sands Syncrude	96	5	159	8	255	13

* Includes 2,146 thousand gross acres and 1,717 thousand net acres in original Block K that were relinquished in January 2006 when new production sharing contracts for Blocks K and P were signed. The acreage also includes 2,935 thousand gross acres and 1,910 thousand net acres in Blocks L and M, which were awarded to the Company by Malaysia, but also have been claimed by the Sultanate of Brunei.

Excluding Block K acreage relinquished in early 2006 as discussed in the footnote to the preceding table, the only significant undeveloped acreage that expires in the next three years are approximately 5.8 million net acres in Malaysia and 1.5 million net acres offshore the east coast of Canada.

As used in the three tables that follow, gross wells are the total wells in which all or part of the working interest is owned by Murphy, and net wells are the total of the Company's fractional working interests in gross wells expressed as the equivalent number of wholly owned wells.

The following table shows the number of oil and gas wells producing or capable of producing at December 31, 2005.

Country	Oil Wells		Gas Wells	
	Gross	Net	Gross	Net
United States	32	7	15	7
Canada	423	309	60	43
United Kingdom	31	3	22	2
Malaysia	18	15		
Ecuador	124	25		
Totals	628	359	97	52

Table of Contents**Index to Financial Statements**

Murphy's net wells drilled in the last three years are shown in the following table.

	United States		Canada		United Kingdom		Malaysia		Ecuador and Other		Totals	
	Productive	Dry	Productive	Dry	Productive	Dry	Productive	Dry	Productive	Dry	Productive	Dry
2005												
Exploratory	1.5	2.2			0.5		10.2	5.0	2.0	4.2	13.7	11.9
Development	0.9		87.0	8.0	0.1				4.0		92.0	8.0
2004												
Exploratory	1.3	2.0	4.6	1.4	0.1		6.0	5.8			11.9	9.3
Development	1.0		84.1	25.0			7.7		2.8		95.6	25.0
2003												
Exploratory	2.5	2.4	10.4	9.4			0.8	2.7	0.1		13.7	14.6
Development	2.4		108.2	3.9	0.2	0.3	4.1		2.4		117.3	4.2

The increase in the number of development dry hole wells in Canada in 2004 was caused by 23 nonproducing stratigraphic wells drilled in the Seal area for the purpose of placement of horizontal development wells for the field.

Murphy's drilling wells in progress at December 31, 2005 are shown below.

Country	Exploratory		Development		Total	
	Gross	Net	Gross	Net	Gross	Net
Canada			8.0	3.4	8.0	3.4
United Kingdom			2.0	0.1	2.0	0.1
Malaysia	1.0	0.8			1.0	0.8
Ecuador			2.0	0.4	2.0	0.4
Totals	1.0	0.8	12.0	3.9	13.0	4.7

Refining and Marketing

The Company's refining and marketing businesses are located in North America and the United Kingdom, and primarily consist of operations that refine crude oil and other feedstocks into petroleum products such as gasoline and distillates, buy and sell crude oil and refined products, and transport and market petroleum products.

Murphy Oil USA, Inc. (MOUSA), a wholly owned subsidiary of Murphy Oil Corporation, owns and operates two refineries in the United States. The Meraux, Louisiana refinery is located on fee land and on two leases that expire in 2010 and 2021, at which times the Company has options to purchase the leased acreage at fixed prices. The refinery at Superior, Wisconsin is located on fee land. Murco Petroleum Limited (Murco), a wholly owned U.K. subsidiary serviced by Murphy Eastern Oil Company, has an effective 30% interest in a refinery at Milford Haven, Wales that can process 108,000 barrels of crude oil per day.

Table of Contents**Index to Financial Statements**

Refinery capacities at December 31, 2005 are shown in the following table.

	Meraux, Louisiana ²	Superior, Wisconsin	Milford Haven, Wales (Murco's 30%)	Total
Crude capacity b/sd	125,000	35,000	32,400	192,400
Process capacity b/sd				
Vacuum distillation	50,000	20,500	16,500	87,000
Catalytic cracking fresh feed	37,000	11,000	9,960	57,960
Naphtha hydrotreating	35,000	9,000	5,490	49,490
Catalytic reforming	32,000	8,000	5,490	45,490
Gasoline hydrotreating		7,500		7,500
Distillate hydrotreating	52,000	7,800	20,250	80,050
Hydrocracking	32,000			32,000
Gas oil hydrotreating	12,000			12,000
Solvent deasphalting	18,000			18,000
Isomerization		2,000	3,400	5,400
Production capacity b/sd				
Alkylation	8,500	1,500	1,680	11,680
Asphalt		7,500		7,500
Crude oil and product storage capacity barrels	4,336,000	3,085,000	2,638,000	10,059,000

¹ Barrels per stream day.

² The Meraux refinery is temporarily shut down for repairs following Hurricane Katrina. See further details in the following paragraph. In late August 2005, the Meraux, Louisiana refinery was severely damaged by flooding and high winds caused by Hurricane Katrina. The plant has been down for repairs since the hurricane and restart of the plant is expected early in the second quarter of 2006. The costs to repair the Meraux refinery are expected to be mostly covered by insurance. Oil Insurance Limited (O.I.L.), the Company's primary property insurance coverage, has informed insureds that recoveries for Hurricane Katrina damages will likely be no more than 50% of claimants' eligible losses. Murphy has other commercial insurance coverage for repair costs not covered by O.I.L., but the coverage limits recoveries from flood damage to \$50 million. Costs to repair the refinery have been estimated at \$200 million. If the insurance recoveries and repair costs are as described, the Company has estimated that uninsured repair costs could range up to \$50 million in the first half of 2006.

Murphy has expanded the Meraux refinery allowing the refinery to meet low-sulfur gasoline specifications which become effective in 2008. The expansion included a new hydrocracker unit, central control room and two new utility boilers; expansion of the crude oil processing capacity to 125,000 barrels per stream day (b/sd); expansion of naphtha hydrotreating capacity to 35,000 b/sd; expansion of the catalytic reforming capacity to 32,000 b/sd; and construction of a new sulfur recovery complex, including amine regeneration, sour water stripping and high efficiency sulfur recovery. The Meraux plant had no solvent deasphalting processing capability during 2004 and early 2005 because of the fire in June 2003 that destroyed the Residual Oil Supercritical Extractor (ROSE) unit. The ROSE unit has been rebuilt, primarily using proceeds of property insurance, and was restarted in early 2005. While the ROSE unit was being rebuilt, the refinery produced a larger volume of heavy fuel oil. During 2004 the Company also completed an FCC gasoline hydrotreater unit at its Superior, Wisconsin refinery, that allows the refinery to meet low-sulfur gasoline specifications.

MOUSA markets refined products through a network of retail gasoline stations and branded and unbranded wholesale customers in a 23-state area of the southern and midwestern United States. Murphy's retail stations are primarily located in the parking areas of Wal-Mart Supercenters in 21 states and use the brand name Murphy USA[®]. Branded wholesale customers use the brand name SPUR[®]. Refined products are supplied from 11 terminals that are wholly owned and operated by MOUSA, one terminal that is jointly owned and operated by others, and numerous terminals owned by others. Of the wholly owned terminals, three are supplied by marine transportation, three are supplied by truck, three are supplied by pipeline and two are adjacent to MOUSA's refineries. MOUSA receives products at the terminals owned by others either in exchange for deliveries from the Company's terminals or by outright purchase. The Company sold all but one of its jointly owned terminals in early 2004. At December 31, 2005, the Company marketed products through 864 Murphy USA stations and 329 branded wholesale SPUR stations. MOUSA plans to add about 130 new Murphy USA stations at Wal-Mart Supercenters in the southern and midwestern United States in 2006. The

Company's Canadian subsidiary operates eight Murphy CanadaTM stations at Wal-Mart sites in Canada.

Table of Contents

Index to Financial Statements

Murphy has master agreements that allow the Company to rent space in the parking lots of Wal-Mart Supercenters in 21 states and in Canada for the purpose of building retail gasoline stations. The master agreements contain general terms applicable to all sites in the United States and Canada. As each individual station is constructed, an addendum to the master agreement is executed, which contains the terms specific to that location. The terms of the agreements range from 10-15 years at each station, with Murphy holding two successive five-year extension options at each site. The agreements permit Wal-Mart to terminate the agreements in their entirety, or only as to affected sites, at its option for the following reasons: Murphy vacates or abandons the property; Murphy improperly transfers the rights under this agreement to another party; an agreement or a premises is taken upon execution or by process of law; Murphy files a petition in bankruptcy or becomes insolvent; Murphy fails to pay its debts as they become due; Murphy fails to pay rent or other sums required to be paid within 90 days after written notice; or Murphy fails to perform in any material way as required by the agreements. Sales from these stations amounted to 44.6% of total Company revenues in 2005, 38.6% in 2004 and 35.8% in 2003. As the Company continues to expand the number of gasoline stations at Wal-Mart Supercenters, total revenue generated by this business is expected to grow.

At the end of 2005, Murco distributed refined products in the United Kingdom from the Milford Haven refinery, three wholly owned terminals supplied by rail, six terminals owned by others where products are received in exchange for deliveries from the Company's terminals, and 412 branded stations primarily under the brand name MURCO. During 2005, Murco purchased 68 existing retail fueling stations.

Murphy owns a 20% interest in a 120-mile refined products pipeline, with a capacity of 165,000 barrels per day, that transports products from the Meraux refinery to two common carrier pipelines serving the southeastern United States. The Company also owns a 3.2% interest in the Louisiana Offshore Oil Port LLC (LOOP), which provides deepwater unloading accommodations off the Louisiana coast for oil tankers and onshore facilities for storage of crude oil. A crude oil pipeline with a diameter of 24 inches connects LOOP storage at Clovelly, Louisiana to the Meraux refinery. Murphy owns 29.4% of the first 22 miles of this pipeline from Clovelly to Alliance, Louisiana and 100% of the remaining 24 miles from Alliance to Meraux. The pipeline is connected to another company's pipeline system, allowing crude oil transported by that system to also be shipped to the Meraux refinery.

In 2005, Murphy owned approximately 1.0% of the crude oil refining capacity in the United States and its market share of U.S. retail gasoline sales was approximately 1.8%.

A statistical summary of key operating and financial indicators for each of the six years ended December 31, 2005 are reported on page 7 of the 2005 Annual Report.

Item 1A. RISK FACTORS

Competition

Murphy operates in the oil and gas industry and experiences intense competition from other oil and gas companies, which include state-owned foreign oil companies, major integrated oil companies, independent producers of oil and natural gas and independent refining companies. Virtually all of the state-owned and major integrated oil companies and many of the independent producers and refiners that compete with the Company have substantially greater resources than Murphy. In addition, the oil industry as a whole competes with other industries in supplying energy requirements around the world. Murphy competes, among other things, for valuable acreage positions, exploration licenses, drilling equipment and human resources.

Reserve Replacement

Murphy continually depletes its reserves as production occurs. In order to sustain and grow its business, the Company must successfully replace the crude oil and natural gas it produces with additional reserves. Therefore, it must create and maintain a portfolio of good prospects for future reserve additions and production by obtaining rights to explore, develop and produce hydrocarbons in promising areas. In addition, it must drill, develop and produce reserves found at a competitive cost structure to be successful in the long-term. Murphy's ability to operate profitably in the exploration and production segments of its business, therefore, is dependent on its ability to find, develop and produce and/or purchase oil and natural gas reserves at costs that are less than the realized sales price for these products and at costs competitive with competing companies in the industry.

Price Volatility

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

The most significant variables affecting the Company's results of operations are the sales prices for crude oil, natural gas and refined products that it produces. The Company's income in 2005 was favorably affected by higher oil and natural gas prices; if these prices decline significantly in 2006 or future years, the Company's results of operations would be negatively impacted. Except in limited cases, the Company typically does not seek to hedge any significant portion of its exposure to the effects of changing prices of crude oil, natural gas and refined products. Certain of the Company's crude oil production is heavy and more sour than West Texas Intermediate (WTI) quality crude; therefore, this crude oil usually sells at a discount to WTI and other light and sweet crude oils. In addition, the sales prices for heavy and sour crude oils do not always move in relation to price changes for WTI and lighter/sweeter crude oils.

Table of Contents

Index to Financial Statements

Dry Hole Exposure

The Company drills numerous wildcat wells each year which subjects its operating results to significant exposure to dry holes expense, which have adverse effects on, and create volatility for, the Company's net income. In 2005, these wildcat wells were primarily drilled offshore Malaysia, the Republic of Congo and in the U.S. Gulf of Mexico.

Capital Financing

Murphy usually must spend and risk a significant amount of capital to find and develop reserves prior to the time revenue is generated from production. Although most capital needs are funded from operating cash flow, the timing of cash flows from operations and capital funding needs may not always coincide. Therefore, the Company maintains financing arrangements with lending institutions to meet certain funding needs. The Company must periodically renew these financing arrangements, and therefore, these arrangements may not always be available at sufficient levels required to fund the Company's development activities.

Limited Control

The ability of the Company to successfully manage operating costs is important because virtually all of the products it sells are energy commodities such as crude oil, natural gas and refined products, for which the Company often has little or no influence on the sales prices for these products. Murphy is a net purchaser of crude oil and other refinery feedstocks, and also purchases refined products, particularly gasoline, needed to supply its retail marketing stations located at Wal-Mart Supercenters. Therefore, its most significant costs are subject to volatility of prices for these commodities. The Company also often experiences pressure on its operating and capital expenditures in periods of strong oil, natural gas and refined product prices such as those experienced in 2005 because an increase in exploration and production activities due to higher oil and gas sales prices generally leads to higher demand for, and consequently higher costs for, goods and services in the oil and gas industry.

Most of the Company's major producing properties are operated by others. In addition, Murphy derives a significant portion of its U.S. revenue at Company-owned and operated gasoline stations located on properties leased from Wal-Mart. Therefore, Murphy does not fully control all activities at certain of its significant, revenue generating properties.

Credit Exposure

Although Murphy limits its credit risk by selling its products to numerous entities worldwide, it still, at times, carries substantial credit risk from its customers. For certain oil and gas properties operated by the Company, other companies which own partial interests may not be able to meet their financial obligation to pay for their share of capital and operating costs as they come due.

Outside Forces

The operations and earnings of Murphy have been and will continue to be affected by worldwide political developments. Many governments, including those that are members of the Organization of Petroleum Exporting Countries (OPEC), unilaterally intervene at times in the orderly market of crude oil and natural gas produced in their countries through such actions as setting prices, determining rates of production, and controlling who may buy and sell the production. As of December 31, 2005, approximately 35% of proved oil reserves, as defined by the U.S. Securities and Exchange Commission, were located in countries other than the U.S., Canada and U.K. Certain of the reserves held outside these three countries could be considered to have more political risk. In addition, prices and availability of crude oil, natural gas and refined products could be influenced by political unrest and by various governmental policies to restrict or increase petroleum usage and supply. Other governmental actions that could affect Murphy's operations and earnings include tax changes and regulations concerning: currency fluctuations, protection and remediation of the environment (See the caption "Environmental" beginning on page 22 of this Form 10-K report), preferential and discriminatory awarding of oil and gas leases, restrictions on drilling and/or production, restraints and controls on imports and exports, safety, and relationships between employers and employees. Because these and other factors too numerous to list are subject to changes caused by governmental and political considerations and are often made in response to changing internal and worldwide economic conditions and to actions of other governments or specific events, it is not practical to attempt to predict the effects of such factors on Murphy's future operations and earnings.

Industry Risks

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Murphy's business is subject to operational hazards and risks normally associated with the exploration for and production of oil and natural gas and the refining and marketing of crude oil and petroleum products. The Company operates in urban and remote, and often inhospitable, areas around the world. The occurrence of an event, including but not limited to acts of nature such as hurricanes, floods, earthquakes and other forms of severe weather, and mechanical equipment failures, industrial accidents, fires, explosions, and intentional attacks could result in the loss of hydrocarbons and associated revenues, environmental pollution or contamination, and personal injury, including death, for which the Company could be deemed to be liable, and which could subject the Company to substantial fines and/or claims for punitive damages.

Insurance

Murphy maintains insurance against certain, but not all, hazards that could arise from its operations, and such insurance is believed to be reasonable for the hazards and risks faced by the Company. As of December 31, 2005, the Company maintained total excess liability insurance with limits of \$750 million per occurrence covering certain general liability and certain sudden and accidental environmental risks. The

Table of Contents

Index to Financial Statements

Company also maintained insurance coverage with an additional limit of \$250 million per occurrence, all or part of which could be applicable to certain sudden and accidental pollution events. There can be no assurance that such insurance will be adequate to offset costs associated with certain events or that insurance coverage will continue to be available in the future on terms that justify its purchase. The occurrence of an event that is not fully insured could have a material adverse effect on the Company's financial condition and results of operations in the future. During 2005, damages from hurricanes caused shut-down of certain U.S. oil and gas production operations as well as the Meraux, Louisiana refinery. At year-end 2005, the Company was in the process of repairing the Meraux refinery. The Company does not expect to fully recover repair costs incurred at Meraux in 2006 under its insurance policies. See Note O in the consolidated financial statements for further discussion.

Litigation

The Company is involved in lawsuits seeking cash settlements for alleged personal injuries, property damages and other business-related matters. These matters are addressed in more detail in Item 3 on page 10 of this Form 10-K report.

Retirement Plans

A number of actuarial assumptions significantly impact funding requirements for the Company's retirement plans. Such assumptions include return on assets, mortality, long-term interest rates, etc. If the actual results for the plans vary significantly from the actuarial assumptions used, Murphy could be required to make large funding payments to one or more of its retirement plans in the future.

Item 1B. UNRESOLVED STAFF COMMENTS

The Company had no unresolved comments from the staff of the U.S. Securities and Exchange Commission as of December 31, 2005.

Item 2. PROPERTIES

Descriptions of the Company's oil and natural gas and refining and marketing properties are included in Item 1 of this Form 10-K report beginning on page 1. Information required by the Securities Exchange Act Industry Guide No. 2 can be found in the Supplemental Oil and Gas Information section of this Annual Report on Form 10-K on pages F-32 to F-39 and in Note D Property, Plant and Equipment on page F-12.

Executive Officers of the Registrant

The age at January 1, 2006, present corporate office and length of service in office of each of the Company's executive officers are reported in the following listing. Executive officers are elected annually but may be removed from office at any time by the Board of Directors.

Claiborne P. Deming Age 51; President and Chief Executive Officer since October 1994 and Director and Member of the Executive Committee since 1993.

Steven A. Cossé Age 58; Executive Vice President since February 2005 and General Counsel since August 1991. Mr. Cossé was elected Senior Vice President in 1994 and Vice President in 1993.

W. Michael Hulse Age 52; Executive Vice President Worldwide Downstream Operations effective April 2003. Mr. Hulse has been President of Murphy Oil USA, Inc. from November 2001 to present. He served as President of Murphy Eastern Oil Company from April 1996 to November 2001.

Bill H. Stobaugh Age 54; Senior Vice President since February 2005. Mr. Stobaugh joined the Company as Vice President in 1995.

Kevin G. Fitzgerald Age 50; Treasurer since July 2001. Mr. Fitzgerald was Director of Investor Relations from 1996 to June 2001.

John W. Eckart Age 47; Controller since March 2000.

Walter K. Compton Age 43; Secretary since December 1996.

Table of Contents**Index to Financial Statements****Item 3. LEGAL PROCEEDINGS**

On September 9, 2005, a class action lawsuit was filed in federal court in the Eastern District of Louisiana seeking unspecified damages to the class comprised of residents of St. Bernard Parish caused by a release of crude oil at Murphy Oil USA, Inc.'s (a wholly-owned subsidiary of Murphy Oil Corporation) Meraux, Louisiana, refinery as a result of flooding damage to a crude oil storage tank following Hurricane Katrina. Since then additional class action lawsuits have been filed in the same court against Murphy Oil USA, Inc. and/or Murphy Oil Corporation also seeking unspecified damages related to the crude oil release. The suits have been consolidated into a single action in the U.S. District Court for the Eastern District of Louisiana, which held a class certification hearing on January 12-13, 2006. The Court certified the class on January 30, 2006. The Company believes that insurance coverage exists for this release and it does not expect to incur significant costs associated with the class action lawsuits. Accordingly, the Company believes that the ultimate resolution of these class action lawsuits will not have a material adverse effect on its net income, financial condition or liquidity in a future period.

On June 10, 2003, a fire severely damaged the Residual Oil Supercritical Extraction (ROSE) unit at the Company's Meraux, Louisiana refinery. The ROSE unit recovers feedstock from the heavy fuel oil stream for conversion into gasoline and diesel. Subsequent to the fire, numerous class action lawsuits have been filed seeking damages for area residents. All the lawsuits have been administratively consolidated into a single legal action in St. Bernard Parish, Louisiana, except for one such action which was filed in federal court. Additionally, individual residents of Orleans Parish, Louisiana, have filed an action in that venue. On May 5, 2004, plaintiffs in the consolidated action in St. Bernard Parish amended their petition to include a direct action against certain of the Company's liability insurers. In responding to this direct action, one of the Company's insurers, AEGIS, has raised lack of coverage as a defense. The Company believes that this contention lacks merit and has been advised by counsel that the applicable policy does provide coverage for the underlying incident. Because the Company believes that insurance coverage exists for this matter, it does not expect to incur any significant costs associated with the class action lawsuits. Accordingly, the Company continues to believe that the ultimate resolution of the June 2003 ROSE fire litigation will not have a material adverse effect on its net income, financial condition or liquidity in a future period.

In December 2000, two of the Company's Canadian subsidiaries, Murphy Oil Company Ltd. (MOCL) and Murphy Canada Exploration Company (MCEC) as plaintiffs filed an action in the Court of Queen's Bench of Alberta seeking a constructive trust over oil and gas leasehold rights to Crown lands in British Columbia. The suit alleges that the defendants, The Predator Corporation Ltd. and Predator Energies Partnership (collectively Predator) and Ricks Nova Scotia Co. (Ricks), acquired the lands after first inappropriately obtaining confidential and proprietary data belonging to the Company and its partner. In January 2001, Ricks, representing an undivided 75% interest in the lands in question, settled its portion of the litigation by conveying its interest to the Company and its partner at cost. In 2001, Predator, representing the remaining undivided 25% of the lands in question, filed a counterclaim against MOCL and MCEC and MOCL's President individually seeking compensatory damages of C\$3.61 billion. In September 2004 the court summarily dismissed all claims against MOCL's president and all but C\$356 million of the counterclaim against the Company. On February 28, 2006, the Court of Appeals ruled in favor of the Company and affirmed the dismissal order. The Company believes that the counterclaim is without merit, that the amount of damages sought is frivolous and the likelihood of a material loss to the Company is remote. It is anticipated that a trial concerning the 25% disputed interest and any remaining issues will commence in 2006. While no assurance can be given about the outcome, the Company does not believe that the ultimate resolution of this suit will have a material adverse effect on its net income, financial condition or liquidity in a future period. In the unlikely event that Predator were to prevail in its counterclaim for an amount approaching the damages sought, Murphy would incur a material expense in its consolidated statement of income, and would have a material effect on its financial condition and liquidity.

Murphy and its subsidiaries are engaged in a number of other legal proceedings, all of which Murphy considers routine and incidental to its business. Based on information currently available to the Company, the ultimate resolution of matters referred to in this item is not expected to have a material adverse effect on the Company's net income, financial condition or liquidity in a future period.

Item 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matters were submitted to a vote of security holders during the fourth quarter of 2005.

PART II**Item 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES**

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

The Company's Common Stock is traded on the New York Stock Exchange using MUR as the trading symbol. There were 2,847 stockholders of record as of December 31, 2005. Information as to high and low market prices per share and dividends per share by quarter for 2005 and 2004 are reported on page F-40 of this Form 10-K report.

Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

Murphy Oil Corporation is a worldwide oil and gas exploration and production company with refining and marketing operations in North America and the United Kingdom. A more detailed description of the Company's significant assets can be found in Item 1 of this Form 10-K report.

Murphy generates revenue primarily by selling its oil and natural gas production and its refined petroleum products to customers at hundreds of locations in the United States, Canada, the United Kingdom, Malaysia and other countries. The Company's revenue is highly affected by the prices of oil, natural gas and refined petroleum products that it sells. Also, because crude oil is purchased by the Company for refinery feedstocks, natural gas is purchased for fuel at its refineries and oil fields, and gasoline is purchased to supply its retail gasoline stations in North America that are primarily located at Wal-Mart Supercenters, the purchase prices for these commodities also have a significant effect on the Company's costs. In order to make a profit and generate cash in its exploration and production business, revenue generated from the sales of oil and natural gas produced must exceed the combined costs of producing these products, amortization of capital expenditures and expenses related to exploration and administration. Profits and generation of cash in the Company's downstream operations are dependent upon achieving adequate refining and marketing margins, which are determined by the sales prices for refined petroleum products less the costs of purchased refinery feedstocks and gasoline and expenses associated with manufacturing, transporting and marketing these products. Murphy also incurs certain costs for general company administration and for capital borrowed from lending institutions.

Worldwide oil prices and North American natural gas prices were stronger in 2005 than in 2004. The average price for a barrel of West Texas Intermediate crude oil in 2005 was \$56.70, an increase of 37% compared to 2004. The NYMEX natural gas price in 2005 averaged \$8.97 per million British Thermal Units (MMBTU), up 45% over 2004. These price improvements, particularly for crude oil, were a significant factor leading to higher profits in the Company's exploration and production business in 2005 compared to 2004. If the prices for crude oil and natural gas decline significantly in 2006 or beyond, the Company would expect this to have an unfavorable impact on operating profits for its exploration and production business. Such lower oil and gas prices could, but may not, have a favorable impact on the Company's refining and marketing operating profits.

Results of Operations

The Company had net income in 2005 of \$846.5 million, \$4.51 per diluted share, compared to net income in 2004 of \$701.3 million, \$3.75 per diluted share. In 2003 the Company's net income was \$294.2 million, \$1.59 per diluted share. The higher net income in 2005 compared to 2004 was caused by a combination of better earnings in the Company's exploration and production and refining and marketing operations and lower net costs for corporate functions. The larger net income in 2004 compared to 2003 was also caused by better earnings in the exploration and production and refining and marketing businesses, but was unfavorably affected by higher net costs of corporate activities. Further explanations of each of these variances are found in the following sections.

Income from continuing operations was \$837.9 million, \$4.46 per diluted share, in 2005, \$496.4 million, \$2.65 per diluted share, in 2004, and \$278.4 million, \$1.50 per diluted share, in 2003.

Each of the three years ended December 31, 2005 included income from discontinued operations. In the second quarter 2004 the Company sold most of its conventional oil and natural gas properties in western Canada for cash proceeds of \$583 million, which generated an after-tax gain on the sale of \$171.1 million in 2004. In accordance with Statement of Financial Accounting Standards No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets, the gain on sale of these assets and operating results for the fields prior to their sale have been presented, net of income tax expense, as Discontinued Operations in the consolidated statements of income for the three-year period ended December 31, 2005. Income from discontinued operations was \$8.6 million, \$.05 per diluted share, in 2005, \$204.9 million, \$1.10 per diluted share, in 2004, and \$22.8 million, \$.12 per diluted share, in 2003. Income from discontinued operations in 2005 related to a favorable adjustment of income taxes associated with the gain on sale of the western Canada properties in 2004.

On January 1, 2003, the Company adopted Statement of Financial Accounting Standards (SFAS) No. 143, Accounting for Asset Retirement Obligations, which requires the Company to record a liability equal to the fair value of the estimated cost to retire an asset. Upon adoption of SFAS No. 143, the Company recorded an expense of \$7 million, net of \$1.4 million in income taxes, as the cumulative effect of a change in accounting principle. Further explanation of this accounting change is included in Note G to the consolidated financial statements. Income before the cumulative effect of a change in accounting principle was \$301.2 million, \$1.62 per diluted share, in 2003.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

2005 vs. 2004 Net income in 2005 was \$846.5 million, \$4.51 per share, compared to \$701.3 million, \$3.75 per share, in 2004. Income from continuing operations amounted to \$837.9 million, \$4.46 per share, in 2005 compared to \$496.4 million, \$2.65 per share, in 2004. The \$341.5 million improvement in income from continuing operations in 2005 was caused by more favorable results in each of the Company's exploration and production (E&P), refining and marketing (R&M) and corporate activities. Higher sales prices in 2005 for the Company's oil and natural gas production was the primary driver for improved earnings of \$235.8 million in the E&P business. The other favorable factors in this business in 2005 were higher oil

Table of Contents**Index to Financial Statements**

sales volumes and a larger gain on sale of oil and natural gas properties. The Company's E&P earnings were unfavorably affected in 2005 by several factors, including higher insurance costs mostly caused by Hurricanes Katrina and Rita, lower sales volumes for natural gas due to both the sale of properties in the Gulf of Mexico and downtime caused by the hurricanes, higher exploration expenses, lower income tax benefits and rising costs of supplies and services. R&M earnings were \$125.3 million in 2005, up \$43.4 million compared to 2004 due to stronger realized margins for petroleum products sold in the U.S. and U.K. The Company expanded its retail fuel operations in each of these countries in 2005 by adding 112 retail fuel outlets at Wal-Mart Supercenters in the U.S. and by purchasing 68 existing retail fuel stations in the U.K. The net costs of corporate activities were \$62.3 million lower in 2005 than in 2004, with the favorable variance in 2005 mostly due to a combination of higher tax benefits associated with refund and settlement of prior year U.S. taxes, lower Canadian withholding taxes on dividends to Murphy Oil Corporation from its Canadian subsidiary, favorable effects from foreign currency exchange, and less net interest costs due to lower average borrowings and the capitalization of more interest costs on development projects in the E&P business. These were partially offset by higher selling and general expenses in 2005, with the majority of this increase caused by larger employee compensation and benefit costs.

The Company sold most of its conventional oil and natural gas assets in western Canada in 2004, and net income in 2005 and 2004 included income from these discontinued operations of \$8.6 million and \$204.9 million, respectively, which represented per share earnings of \$.05 in 2005 and \$1.10 in 2004. Discontinued operations income in 2005 arose from a favorable adjustment of income taxes associated with the gain on sale in 2004. In 2004, cash proceeds of \$583 million from the sale led to an after-tax gain of \$171.1 million, which is included in the 2004 amount above.

Sales and other operating revenues in 2005 were \$3.4 billion higher than in 2004 primarily due to higher sales prices for oil, natural gas and refined petroleum products, higher sales volumes of crude oil and refined petroleum products, and higher merchandise sales revenue at retail gasoline stations. Sales were unfavorably affected in 2005 by lower volumes of natural gas sold. The gain on sale of assets was \$105.5 million higher in 2005, mostly due to a pretax gain of \$165 million on the sale of oil and gas properties on the Gulf of Mexico continental shelf in 2005, partially offset by pretax profits in 2004 on sale of various properties. Interest and other income was favorable by \$30.8 million in 2005 compared to 2004 mostly due to unfavorable foreign currency exchange losses in 2004 that did not repeat in 2005 and higher interest income on a U.S. income tax refund in 2005. Crude oil and product purchases expense increased by \$2.6 billion in 2005 due to higher prices for crude oil and other purchased refinery feedstocks and higher prices for refined petroleum products purchased for sale at retail gasoline stations. Operating expenses increased \$112.6 million in 2005 due mostly to costs associated with more crude oil production and more retail service stations in operations in the U.S. and U.K. Exploration expenses in the E&P business were \$68.2 million higher in 2005 than in 2004 mostly due to more dry holes in Malaysia and the Republic of Congo, plus more spending on 3-D seismic acquisition and processing in Malaysia in 2005. Costs associated with hurricanes in 2005 of \$66.8 million related to additional insurance, repairs and other costs that arose due to hurricanes in the Gulf of Mexico during the year. These storms, which damaged and led to temporary shut-down of certain offshore U.S. oil and gas facilities and the Meraux, Louisiana refinery, led to uninsured repair costs of about \$15.5 million in 2005 and caused insurance costs for the year to rise by approximately \$23.0 million. Also included in this cost category is \$19.5 million of ongoing Meraux refinery salaries, benefits, depreciation and maintenance costs while the refinery is shut-down for repairs, and also donations and additional employee compensation totaling \$8.8 million. In accordance with the Company's accounting policies, the increase in certain insurance costs related to the storm losses incurred by insurance companies has been allocated to all segments of the Company's business as all assets are covered by this property insurance. Costs associated with hurricanes were \$3.4 million in 2004, and were previously included in operating expenses in the 2004 consolidated statement of income in the 2004 Form 10-K. Selling and general expenses were \$26.6 million more in 2005 mostly due to higher employee compensation and benefit costs. Depreciation, depletion and amortization expense was \$75.4 million higher in 2005 due to more volumes of crude oil sold and more fueling stations operating in the U.S. and U.K. The Company is experiencing higher drilling and other capital costs, which appear to be caused by added demand for such services due to the higher level of oil and natural gas sales prices. Accretion of asset retirement obligations was down \$.3 million in 2005 due to sales of oil and natural gas properties on the continental shelf of the Gulf of Mexico in 2005. Interest expense was down by \$8.9 million in 2005 compared to 2004 due to lower average outstanding debt in 2005. The portion of interest expense capitalized to development projects rose by \$16.4 million in 2005 primarily due to higher interest allocated to the Kikeh development in Malaysia and the Syncrude expansion in western Canada. Income tax expense was up \$225.6 million in 2005 mostly due to higher pretax earnings. The effective income tax rate as a percentage of pretax income in 2005 of 38.9% was unfavorably impacted by no tax benefits recognized on exploration expenses incurred in the Republic of Congo and Blocks PM 311/312 and H in Malaysia, but was favorably affected by income tax benefits of \$21.8 million mostly related to refund and settlement of prior year U.S. income tax matters.

2004 vs. 2003 Net income in 2004 was \$701.3 million, \$3.75 per share, compared to \$294.2 million, \$1.59 per share, in 2003. Both periods included income from discontinued operations associated with conventional oil and natural gas properties in western Canada that were sold in the second quarter 2004. Income from discontinued operations amounted to \$204.9 million in 2004 and \$22.8 million in 2003, \$1.10 and \$.12 per share, respectively. The 2004 amount included a \$171.1 million gain net of taxes associated with the sale. The Company received proceeds of \$583 million from the sale. The 2003 period included an after-tax expense of \$7 million, \$.03 per share, for the cumulative effect of a change in accounting principle associated with adoption of SFAS No. 143, Accounting for Asset Retirement Obligations. Income from continuing operations totaled \$496.4 million, \$2.65 per share, in 2004 compared to \$278.4 million, \$1.50 per share, in 2003. The \$218 million improvement

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

in income from continuing operations in 2004 was due to a combination of higher earnings from the Company's exploration and production and refining and marketing operating businesses. Higher net costs of corporate activities partially offset the better results from these operating businesses. E&P operating results improved \$208.9 million mostly due to higher oil and natural gas sales prices, higher oil sales volumes, and a \$31.9 million deferred income tax benefit in Malaysia due to the expectation that temporary differences associated with exploration and other

Table of Contents**Index to Financial Statements**

costs incurred to-date in Block K will be utilized to reduce future taxable income. The E&P results were unfavorably affected in 2004 by higher exploration expenses and lower natural gas sales volumes compared to 2003. R&M operating results improved by \$93.1 million in 2004 compared to 2003 primarily due to much stronger realized margins on refined petroleum products sold by the U.S. and U.K. businesses. The net costs of corporate activities were \$84 million higher in 2004 because of a 5% withholding tax on a \$550 million dividend to Murphy Oil Corporation from the Company's Canadian subsidiary, unfavorable foreign exchange variances in 2004, a \$20.1 million tax benefit in 2003 related to settlement of U.S. tax matters, lower capitalized interest costs in 2004 due to the completion of significant E&P development projects, and higher administrative expenses in 2004 related mostly to Sarbanes-Oxley compliance and retirement plans. The Canadian withholding tax in 2004 amounted to \$27.5 million of costs. Foreign exchange losses were \$18.6 million after taxes in 2004 compared to an after-tax benefit of \$5.4 million in 2003. These 2004 losses were primarily associated with U.S. dollar balances of cash and other net assets held by the Company's Canadian and U.K. subsidiaries, which generally use local currency as their functional currency for accounting purposes.

Sales and other operating revenues in 2004 increased \$3.2 billion compared to 2003 mostly due to higher prices for oil, natural gas and refined petroleum products sold, higher sales volumes of crude oil and refined petroleum products, and higher merchandise sales revenue at retail gasoline stations. Gain on sale of assets increased by \$8.1 million in 2004 due to a higher profit on sales of E&P properties in the year compared to 2003. Interest and other income was unfavorable by \$17.5 million in 2004 versus 2003 mostly because of pretax foreign exchange losses of \$26.6 million in 2004 compared to gains of \$5.6 million in 2003; the foreign exchange effects were partially offset by higher interest income earned on invested cash balances during 2004. Crude oil and product purchases expense increased by \$2.5 billion in 2004 due to the higher prices for crude oil purchased as refinery feedstocks and refined petroleum products purchased for sale at retail gasoline stations, and higher purchased volumes of crude oil, refined petroleum products and merchandise for resale compared to 2003. Operating expenses increased \$153.9 million in 2004 with the change due to higher lifting costs caused by crude oil production growth and higher unit rates, higher refining and gasoline station expenses, and higher insurance and repair costs caused mostly by storms in the Gulf of Mexico. Exploration expenses rose by \$51.6 million in 2004 mostly due to higher dry hole costs offshore eastern Canada and in Malaysia. Selling and general expenses were \$12.8 million higher in the current year and increased due to consulting fees associated with Sarbanes-Oxley compliance, plus increases for salaries, retirement and other benefits, and incentive compensation. Depreciation, depletion and amortization rose by \$62.6 million mostly due to higher production of crude oil and higher depreciation of refining and marketing assets. Property impairments of \$8.3 million in 2003 related to write-down of a refined products terminal closed by the company, write-off of certain property costs that were rendered obsolete at the Meraux refinery and the write-down of a natural gas field in the Gulf of Mexico due to downward revisions in reserves caused by poor well performance. Accretion of asset retirement obligations increased by \$3 million, mostly due to drilling wells and facilities added during 2004. Interest expense was \$1.5 million less than in 2003 mostly due to lower average debt outstanding during 2004. Capitalized interest credited to income and included in capital expenditures decreased by \$15.1 million due to completion of the Medusa development project in the Gulf of Mexico and the expansion project at the Meraux refinery. Income tax expense was \$212.7 million higher in 2004 than 2003 mostly due to higher pretax income, but also because of a \$20.1 million benefit in 2003 from settlement of prior year U.S. tax audits. Income tax expense in 2004 included a \$31.9 million benefit in Malaysia related to expected future tax deductions for life-to-date exploration and other expenses in Block K, but this was mostly offset by a \$27.5 million charge for a 5% withholding tax on a dividend from a Canadian subsidiary.

In the following table, the Company's results of operations for the three years ended December 31, 2005 are presented by segment. More detailed reviews of operating results for the Company's exploration and production and refining and marketing activities follow the table.

<i>(Millions of dollars)</i>	2005	2004	2003

Table of Contents**Index to Financial Statements**

Exploration and Production Earnings from exploration and production operations were \$748.1 million in 2005, \$512.3 million in 2004 and \$303.4 million in 2003. The higher earnings in 2005 versus 2004 were due to a 26% higher average realized oil sales price, a 33% higher average realized sales price for natural gas in North America, a 16% increase in worldwide oil sales volumes from continuing operations, and higher gains on sale of mature properties. The favorable variances were somewhat offset by an 18% lower volume of natural gas sales from continuing operations, higher exploration expenses, higher production and depreciation expenses, higher insurance and repair costs after Hurricanes Katrina and Rita and lower income tax benefits in Malaysia. The 2005 period included a \$104.5 million after-tax gain on sale of most oil and gas properties on the continental shelf of the Gulf of Mexico. Higher oil production in 2005 was primarily caused by a full year of production at the Front Runner field in the deepwater Gulf of Mexico and higher heavy oil production from the Seal area in western Canada in response to an ongoing development drilling program. Natural gas sales volume declined in 2005 versus 2004 mostly due to the sale of properties on the Gulf of Mexico continental shelf and more downtime in the Gulf of Mexico caused by hurricane shut-in and repairs.

The increase in 2004 earnings compared to 2003 was due to a 37% higher average realized oil sales price, a 24% higher realized sales price for North American natural gas, a 17% higher sales volume of crude oil, condensate and natural gas liquids, a \$31.9 million deferred income tax benefit on inception-to-date Block K exploration and other expenses, and lower impairment charges. These favorable variances more than offset lower volumes of natural gas production, higher production and depreciation expenses associated with increased oil production, higher exploration expenses caused by more dry hole costs offshore eastern Canada and in Malaysia, higher insurance costs related to a retrospective premium adjustment on property insurance coverage and higher costs to repair damages to facilities caused by Hurricane Ivan. Higher oil production in 2004 was attributable to a full year of production in 2004 at Medusa and Habanero in the deepwater Gulf of Mexico and at West Patricia in Block SK 309 in Malaysia. The decline in natural gas production in 2004 was due to field decline at Amethyst in the U.K. North Sea and downtime in the Gulf of Mexico for repairs after Hurricane Ivan.

The results of operations for oil and gas producing activities for each of the last three years are shown by major operating areas on pages F-36 and F-37 of this Form 10-K report. Average daily production and sales rates and weighted average sales prices are shown on page 6 of the 2005 Annual Report.

A summary of oil and gas revenues from continuing operations, including intersegment sales that are eliminated in the consolidated financial statements, is presented in the following table.

<i>(Millions of dollars)</i>	2005	2004	2003
United States			
Oil and gas liquids	\$ 448.8	248.4	39.2
Natural gas	216.6	207.6	158.3
Canada			
Conventional oil and gas liquids	519.7	403.3	314.8
Natural gas	29.7	28.7	34.9
Synthetic oil	224.7	174.2	95.7
United Kingdom			
Oil and gas liquids	159.8	146.8	158.6
Natural gas	19.9	11.4	12.2
Malaysia crude oil	232.9	167.2	77.7
Ecuador crude oil	116.6	30.8	41.9
Total oil and gas revenues	\$ 1,968.7	1,418.4	933.3

The Company's crude oil, condensate and natural gas liquids production from continuing operations averaged 101,349 barrels per day in 2005, 93,634 barrels per day in 2004 and 76,620 barrels in 2003. Oil production in 2005 was a new annual record for Murphy Oil. The 8% increase in worldwide oil production in 2005 was primarily due to higher volumes in the United States, Malaysia and Canada. U.S. oil production was 34% higher in 2005 and totaled 25,897 barrels per day, with the increase mostly due to a full year of production from the Front Runner field in the deepwater Gulf of Mexico at Green Canyon Blocks 338/339. The first well at Front Runner came on stream in December 2004 and additional wells were completed and started up during 2005 and into early 2006. Production in the U.S. was hampered during 2005 by the effects of hurricanes as minor damages to the Company's Medusa and Habanero facilities and damages to product evacuation lines and other facilities downstream caused shut-in of production for up to three months. Production offshore Sarawak, Malaysia at the West Patricia and Congkak fields increased 14% in 2005 to 13,503 barrels per day. The increase was mostly due to a 31% increase in gross production from these fields, but this

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

was partially offset by a lower revenue sharing percentage for the Company under the terms of the production sharing contract. The West Patricia field generated approximately 94% of Malaysian production in 2005. Heavy oil production in Canada essentially doubled to 11,806 barrels per day in 2005 due to an ongoing development drilling program in the Seal area and a full year of production from wells acquired in late 2004 in this area. Production at the Hibernia field off the east coast of Canada was down 4% to 12,278 barrels per day and production at the Terra Nova field in this area was off 14% in 2005 and amounted to 10,846 barrels per day. Lower production at Terra Nova was primarily caused by more downtime for equipment maintenance and repairs and a higher royalty rate. Production of synthetic oil at Syncrude netted the Company 10,593 barrels per day in 2005, down 10% from 2004 due to more downtime for equipment repairs. Total oil production offshore the United Kingdom was 7,992 barrels per day in 2005, down 27%. About 1,200 barrels per day of this decline was

Table of Contents**Index to Financial Statements**

attributable to the sale of the T Block field in 2004. The majority of the remaining decline was at the Schiehallion field where a fire and other operational issues reduced average net production volumes by about 1,600 barrels per day. Production in Ecuador was 7,871 barrels per day in 2005, up 2% from 2004. Oil sales volumes in Ecuador in 2005 were significantly higher than production volumes due to receiving 663,000 barrels of oil for sale in settlement of a 2004 dispute with the operator of Block 16. Murphy expects to make up the remainder of the sales volume shortfall of about 853,000 barrels owed to the Company by other Block 16 owners in 2006.

Comparing 2004 to 2003, worldwide oil production from continuing operations increased 22%, primarily attributable to production growth in the U.S. and Malaysia. Oil production in Canada and the U.K. declined in 2004 compared to 2003. U.S. oil production increased more than 300% to 19,314 barrels per day due to a full year of production in 2004 from the Medusa and Habanero fields. Both these deepwater Gulf of Mexico fields came on stream in November 2003. Heavy oil production in Canada increased 24% to 5,838 barrels per day due to a heavy oil drilling program in the Seal area during 2004, plus additional producing wells acquired in this area during the fourth quarter of 2004. Production at the Hibernia field off the east coast of Canada was essentially flat with 2003 at 12,736 barrels per day, but the Terra Nova field saw production decrease 19% to 12,671 barrels per day, with the decline mostly due to mechanical problems and an oil spill that occurred during the year. Net synthetic oil production from the Syncrude project was 11,794 barrels per day, a 13% increase from 2003. The increase at Syncrude was in line with higher gross production, which was caused by better operational efficiency and less downtime in 2004 compared to 2003. Oil production in the U.K. was lower by 25% and averaged 11,011 barrels per day. The Company sold its interest in the T Block field in 2004 and the Ninian and Columba fields in 2003. Also, production from the Schiehallion and Mungo/Monan fields was down in 2004 due to normal decline. Production in Ecuador rose almost 50% in 2004 due to a full year of operation for the new heavy oil pipeline. In prior years, production restrictions were in effect due to limitations caused by inadequate pipeline capacity between the primary oil producing region in the country's interior to the sales point on the Pacific coast. In spite of the higher Ecuadorian production in 2004, total sales volumes in this country in 2004 were lower than 2003 because no sales occurred from Block 16 for the Company's account during the second half of the year due to a dispute with the operator of the field over Murphy's new transportation and marketing arrangements. The Company settled this issue with the operator in 2005 as described in the preceding paragraph. Malaysian oil production rose 63% in 2004 and averaged 11,885 barrels per day, caused by a full year of production in the current year from the West Patricia field in Block SK 309 versus a partial year in 2003.

Worldwide sales of natural gas from continuing operations were 90.2 million cubic feet per day in 2005, 109.5 million in 2004 and 111.8 million in 2003. Sales of natural gas in the United States were 70.5 million cubic feet per day in 2005, 88.6 million in 2004 and 82.3 million in 2003. Sales volume declined by 21% in the U.S. in 2005 due to the sale of most properties on the continental shelf of the Gulf of Mexico in mid-2005, which caused a decrease of 14 million cubic feet per day, and the effects of Hurricane Katrina and other Gulf storms that caused shut-ins that reduced production by an average of about 15 million cubic feet per day for the year. These were partially offset by higher volumes due to ramp up of production at the Front Runner field throughout 2005. Sales in the U.S. were higher in 2004 than 2003 as more volumes produced during the full production year at the Medusa and Habanero fields in the deepwater Gulf of Mexico more than offset declines at other more mature fields. Sales volumes in 2004 were unfavorably affected by Hurricane Ivan which temporarily shut-in most production in the Central Gulf of Mexico and severely damaged certain facilities, such as at the Tahoe field in Viosca Knoll Block 783, which was shut in for the entire fourth quarter 2004 following the storm. Natural gas sales volumes in Canada were 10.3 million cubic feet per day in 2005, 14 million in 2004 and 19.9 million in 2003. These were annual decreases of 26% in 2005 and 30% in 2004 and were mostly due to normal field decline at Rimbey area wells. Natural gas sales volumes in the United Kingdom in 2005 of 9.4 million cubic feet per day were up 37% with most of the increase due to higher sales volumes at the Amethyst field primarily caused by make-up gas sold in 2005 that related to a prior year's contract. Natural gas sales in the U.K. were down from 9.6 million cubic feet per day in 2003 to 6.9 million cubic feet in 2004. The 28% decrease in 2004 was due to normal declines at the Amethyst field in the U.K. North Sea.

Worldwide crude oil sales prices have risen in each of the last two years due to the combination of a strong world economy, real and perceived instability in worldwide crude oil production levels, and effective production output controls by OPEC producers. Murphy realized an average worldwide crude oil and condensate sales price of \$45.25 per barrel in 2005, a 26% increase from the 2004 realized average price of \$35.92 per barrel. The 2004 average sales price was 37% higher than the 2003 average price of \$26.15 per barrel. The worldwide average price in 2003 was reduced \$2.00 per barrel by the effects of the Company's hedging program. The Company had hedged the sales price in 2003 for most of its heavy oil production in Canada and light oil production in the U.S., as well as a portion of its offshore and synthetic crude production in Canada. The average realized price in 2005 for crude oil and condensate sold in the U.S. was \$47.48 per barrel, an increase of 34% over 2004. The average price for 2005 Canadian heavy oil sales was \$21.30 per barrel, up 5% from 2004, and was adversely affected by higher costs of diluent and a wider heavy oil discount in the year. The average selling price for Hibernia and Terra Nova production offshore eastern Canada was \$51.37 per barrel, an increase of 40%. Synthetic oil production sales price rose 44% in 2005 and averaged \$58.12 per barrel. Sales prices for U.K. North Sea oil was up 43% to \$52.83 per barrel. Ecuador sales prices averaged \$32.54 per barrel in 2005 and Malaysia prices were \$46.16 per barrel; these prices increased 31% and 12%, respectively. Malaysian prices were unfavorably affected by price sharing payments required in periods of high oil prices in accordance with the terms of the production sharing contract for Block SK 309.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

The average oil sales price in 2004 in the U.S. was \$35.35 per barrel, up 46% from 2003. Canadian heavy oil prices increased 64% in 2004 and averaged \$20.26 per barrel. The Company's sales price for production from the Hibernia and Terra Nova fields averaged \$36.60 per barrel in 2004, up 35% versus 2003. Synthetic oil production at Syncrude averaged \$40.35 per barrel in 2004, 62% higher than in 2003. Murphy's U.K. North Sea oil production was sold at an average of \$36.82 per barrel in 2004, 24% higher than 2003. Oil production in 2004 sold for \$24.78 per barrel in Ecuador and \$41.35 per barrel in Malaysia, increases of 8% and 41%, respectively. No sales occurred from Block 16 in Ecuador during

Table of Contents**Index to Financial Statements**

the second half of 2004 due to a dispute with the field's operator over Murphy's new transportation and marketing arrangements. Because of the lack of sales, the Company's Ecuador operations did not benefit from higher average oil prices during the last six months of 2004.

In association with the higher oil prices, the sales prices for natural gas also strengthened in the Company's gas producing markets during each of the past two years. In 2005, the Company's sales price of North American natural gas averaged \$8.44 per thousand cubic feet (MCF), an increase of 33% from 2004. In the U.K., the average sales price for natural gas was \$5.80 per MCF, up 28% from 2004.

The average 2004 realized sales price for North American natural gas was \$6.34 per MCF, 24% higher than the previous year. The 2003 price was reduced by \$.21 per MCF because of the Company's hedging program in the U.S. and Canada. Natural gas sales prices in the U.K. were up 29% in 2004 to \$4.52 per MCF.

Based on 2005 sales volumes and deducting taxes at marginal rates, each \$1 per barrel and \$.10 per MCF fluctuation in prices would have affected earnings from exploration and production operations by \$24.3 million and \$2.1 million, respectively. The effect of these price fluctuations on consolidated net income cannot be measured precisely because operating results of the Company's refining and marketing segments could be affected differently.

Production expenses were \$305.4 million in 2005, \$249 million in 2004 and \$189.6 million in 2003. These amounts are shown by major operating area on pages F-36 and F-37 of this Form 10-K report. Costs per equivalent barrel excluding discontinued operations during the last three years are shown in the following table.

<i>(Dollars per equivalent barrel)</i>	2005	2004	2003
United States	\$ 5.17	6.14	5.58
Canada			
Excluding synthetic oil	4.40	3.06	2.64
Synthetic oil	25.09	18.05	16.43
United Kingdom	5.10	4.25	4.69
Malaysia	6.98	5.63	3.44
Ecuador	7.07	11.18	9.05
Worldwide excluding synthetic oil	5.31	4.89	4.11

The lower cost per equivalent barrel in the United States in 2005 was primarily due to start-up of the Front Runner field in late 2004 and sale of higher-cost properties in the Gulf of Mexico in mid-2005. The higher costs in the United States in 2004 were due primarily to lower production and higher costs for properties on the continental shelf of the Gulf of Mexico. The increase in costs in Canada excluding synthetic oil in 2005 was due to a growing heavy oil production profile, lower production volume at the Terra Nova field and a higher foreign exchange rate. Higher average Canadian costs excluding synthetic oil in 2004 were caused by lower natural gas production and a higher average foreign exchange rate. The higher rate per barrel for Canadian synthetic oil operations in 2005 was due to higher maintenance, energy and compensation costs coupled with lower production and a higher foreign exchange rate, while the increase in unit costs for synthetic oil operations in 2004 was attributable to a combination of higher maintenance and energy costs and a higher foreign exchange rate. The higher average U.K. cost in 2005 was mostly due to higher maintenance costs and lower production at the Schiehallion and Mungo/Monan fields. Lower average cost in the U.K. in 2004 was mainly due to sale of the high-cost T Block property during the year. The increase in the unit rate in Malaysia in 2005 was due to higher fuel and export duty costs, while the rate increase in 2004 was primarily due to higher manpower, fuel and export duty costs. Lower average costs per barrel in Ecuador in 2005 was due mostly to a new, less expensive arrangement for pipeline transportation that began near year-end 2004. The increase per unit in Ecuador in 2004 was mostly attributable to higher transportation costs associated with the heavy oil pipeline that commenced operations in the second half of 2003.

Exploration expenses for each of the last three years are shown in total in the following table, and amounts are reported by major operating area on pages F-36 and F-37 on this Form 10-K report. Certain of the expenses are included in the capital expenditures total for exploration and production activities.

<i>(Millions of dollars)</i>	2005	2004	2003
Exploration and production			

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Dry holes	\$ 126.0	110.9	60.6
Geological and geophysical	73.4	28.4	31.2
Other	10.2	8.6	6.1
	209.6	147.9	97.9
Undeveloped lease amortization	22.8	16.4	14.7
Total exploration expenses	\$ 232.4	164.3	112.6

Dry holes expense was up \$15.1 million in 2005 compared to 2004 as higher unsuccessful exploratory drilling costs in the latest year offshore the Republic of Congo and Malaysia were only partially offset by lower costs in the deepwater Gulf of Mexico and offshore eastern Canada. Dry

Table of Contents**Index to Financial Statements**

hole costs were \$50.3 million higher in 2004 than 2003 because of more costs for unsuccessful drilling on the Scotian Shelf offshore eastern Canada, and in Block K Malaysia. Geological and geophysical (G&G) expenses were higher by \$45 million in 2005 mostly due to more 3-D seismic acquisition and processing costs in Blocks SK 309/311 and PM 311/312, offshore Malaysia. G&G expenses were \$2.8 million lower in 2004, mostly due to less seismic acquisition and interpretation work offshore eastern Canada, partially offset by seismic costs incurred in Malaysia. Other exploration expenses were \$1.6 million higher in 2005 due mostly to more administrative costs in the Republic of Congo. Other exploration expenses were \$2.5 million higher in 2004 than 2003 mainly due to more costs for Gulf of Mexico annual lease rentals and higher charges for work commitments on leases on the Scotian Shelf offshore eastern Canada. Undeveloped leasehold amortization increased by \$6.4 million in 2005 and \$1.7 million in 2004 because of lease acquisitions in each year in the Gulf of Mexico, a lease relinquishment in the Gulf of Mexico in 2005 and the acquisition in 2004 of two exploration concessions in the deep waters offshore the Republic of Congo.

Costs of \$18.8 million and \$2.6 million were incurred in 2005 and 2004, respectively, in the Company's exploration and production operations for uninsured costs to repair damages and to recognize associated higher insurance costs caused by hurricanes in the Gulf of Mexico. In 2004, the Company also recorded costs of \$12.6 million for retrospective insurance premiums related to past claims experience of an insurance provider.

Depreciation, depletion and amortization expense related to exploration and production operations totaled \$319.1 million in 2005, \$241.5 million in 2004 and \$198.6 million in 2003. The \$77.6 million increase in 2005 versus 2004 was due to more crude oil production and larger per barrel costs in most areas generally caused by incurring higher capital costs to find and develop oil and natural gas reserves. The Company continues to experience higher drilling and related costs caused by a greater demand for such services based on the currently strong prices for oil and natural gas. The \$42.9 million increase in 2004 compared to 2003 was caused primarily by higher production at the Medusa and Habanero fields in the deepwater Gulf of Mexico and the West Patricia field in Block SK 309 Malaysia.

The exploration and production business recorded expenses of \$9.6 million in 2005, \$9.9 million in 2004 and \$9.7 million in 2003 for accretion on discounted abandonment liabilities following the adoption of SFAS No. 143 on January 1, 2003. Because the abandonment liabilities are carried on the balance sheet at a discounted fair value, accretion must be recorded annually so that the liability will be recorded at full value at the projected time of abandonment.

A property impairment charge of \$3 million was recorded in 2003 to writedown the cost of a natural gas field in the Gulf of Mexico due to a reserve reduction caused by poor well performance.

The effective income tax rate for exploration and production operations was 39.1% in 2005, 32.7% in 2004 and 31.2% in 2003. The effective tax rate in 2005 was higher than the average U.S. statutory rate due to unrecognized income tax benefits on certain exploration and other expenses in Malaysia and the Republic of Congo. Each main exploration area in Malaysia is currently ring-fenced and no tax benefits have thus far been recognized for costs incurred for Block H, offshore Sabah, and Blocks PM 311/312, offshore Peninsula Malaysia. The effective tax rates in 2004 and 2003 were lower than the U.S. statutory rate partially due to recognition of deferred income tax benefits in Malaysia in each year. The 2004 deferred tax benefit of \$31.9 million arose due to the expectation that temporary differences associated with exploration and other expenses incurred to-date in Block K Malaysia will be utilized to reduce future taxable income, and a deferred tax benefit of \$11.4 million was recognized in 2003 for similar circumstances in Malaysia Blocks SK 309/311. These benefits had not been recognized in the income statement in previous years because the Company had established a deferred tax valuation allowance until such time that it became probable that these expenses would be utilized as deductions to reduce future taxable income. In 2004, Alberta reduced its tax rate for oil and gas companies, and in 2003, both the Federal and Alberta governments of Canada reduced their tax rates for oil and gas companies. These rate reductions led to recognition of tax benefits of \$4.9 million in 2004 and \$10.1 million in 2003, mostly due to reducing recorded deferred income tax liabilities.

At December 31, 2005, approximately 42% of the Company's U.S. proved oil reserves and 58% of the U.S. proved natural gas reserves are undeveloped. Virtually all of the total U.S. undeveloped reserves (on a barrel of oil equivalent basis) are associated with deepwater Gulf of Mexico fields. About 43% of undeveloped reserves relate to the Front Runner field, which came on stream in December 2004. Further drilling and well workovers will be required to move undeveloped reserves to developed at Front Runner. In addition, all oil reserves for the Kikeh field in Block K Malaysia of 38.9 million barrels at year-end 2005 are undeveloped, pending completion of facilities and development drilling prior to first oil, which is projected to occur in the second half of 2007. On a worldwide basis, the Company has spent approximately \$378 million in 2005, \$272 million in 2004 and \$280 million in 2003 to develop proved reserves. The Company expects to spend about \$660 million in 2006, \$511 million in 2007 and \$243 million in 2008 to move currently undeveloped proved reserves to the developed category.

Refining and Marketing The Company's refining and marketing (R&M) operations generated profits of \$125.3 million in 2005 and \$81.9 million in 2004, after posting a loss of \$11.2 million in 2003. In 2005, stronger R&M margins in both North America and the U.K. contributed to the 53% increase in profits compared to 2004. In North America, income contribution improved 60% mostly due to stronger marketing

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

profits, while in the U.K., income improved 40% due to stronger profits in both refining and marketing.

In 2004, R&M operating results improved markedly compared to 2003 because of a higher gross margin from product sales in both the North American and U.K. markets. Although the price of crude oil, the primary refinery feedstock, was much more costly during 2004 than in 2003, the supplies of gasoline and certain other products remained tight during much of the year, resulting in refining margins that were much stronger during 2004 in both the United States and United Kingdom.

Table of Contents**Index to Financial Statements**

Geographically, the North American R&M operations had income of \$85.5 million in 2005 and \$53.4 million in 2004 after incurring a loss of \$21.2 million in 2003. North American operations include refining activities in the United States and marketing activities in the United States and Canada. The operating results for the Company's North American refining business were only slightly better in 2005 compared to 2004 as improved margins in the first eight months of 2005 prior to Hurricane Katrina were mostly offset by uninsured damages and higher insurance and other hurricane-related costs in the last four months of the year. Throughout the industry, refining margins in North America were generally stronger in 2005 versus 2004 due to a robust U.S. economy that fueled demand and the effects of hurricanes in the U.S. that forced closure of several refineries (including the Company's Meraux, Louisiana plant), which temporarily limited supply of refined products. Because the Meraux refinery was damaged by floodwaters caused by Hurricane Katrina and was shut down for the last four months of 2005 for repairs, the Company did not capture refining margins at Meraux during the period of strongest profits in 2005. The refinery is expected to be back in operation early in the second quarter of 2006. In addition, uninsured repair costs and higher insurance costs in the wake of U.S. hurricanes led to incremental costs of about \$26.8 million in North America. The Company anticipates incurring additional uninsured repair costs in the first half of 2006 at the Meraux plant. Operating results for the North American retail gasoline chain were stronger in 2005 compared to 2004 due to a combination of larger per-gallon margins, higher average sales volume at each station for both fuel and non-fuel products and the continued addition of sites. The Company continued to increase the size of its retail fuel operations in North America by adding 112 Murphy USA fueling stations in the parking lots of Wal-Mart Supercenters in a 21-state area. This resulted in a 15% increase in the number of stores at year-end 2005 versus the prior year.

In 2004, the Meraux refinery ran more efficiently than in 2003, and therefore, the costs of operations were spread over a larger number of crude oil barrels, benefiting margins on a per-unit basis. Murphy also enjoyed better profits in 2004 than in 2003 from its Murphy USA retail station chain, essentially due to a combination of higher volumes sold, higher prices and lower operating costs per gallon sold. The Company added 129 stations to its chain during 2004, an increase of 21% over the number of sites at year-end 2003.

Unit margins (sales realizations less costs of crude oil and other feedstocks, refinery operating and depreciation expenses and transportation to point of sale) averaged \$2.96 per barrel in North America in 2005, \$2.25 in 2004 and \$1.60 in 2003. North American refined product sales volumes increased 7% to a record 322,171 barrels per day in 2005, following a 31% increase in 2004. Sales volumes through the Company's retail gasoline chain at Wal-Mart Supercenters grew steadily each year, with the average volume per store increasing 9% in 2005 following a 6% rise in 2004.

Operations in the United Kingdom generated a record profit of \$39.8 million in 2005, compared to \$28.5 million in 2004 and \$10 million in 2003. The U.K. operation experienced its most profitable year in 2005 due to significantly improved refinery margins and slightly stronger marketing margins. The U.K. R&M business also expanded the size of its retail fueling operations by purchasing 68 existing stations during 2005.

Unit margins in the United Kingdom averaged \$6.36 per barrel in 2005, \$4.85 per barrel in 2004 and \$2.86 per barrel in 2003. Sales of refined petroleum products were down 4% in 2005 following a 6% increase in 2004. The decline in 2005 was primarily caused by a turnaround during the year at the Milford Haven, Wales refinery. The 2004 increase was primarily caused by higher volumes sold in both the retail and cargo market.

Based on sales volumes for 2005 and deducting taxes at marginal rates, each \$.42 per barrel (\$.01 per gallon) fluctuation in the unit margins would have affected annual refining and marketing profits by \$34.5 million. The effect of these unit margin fluctuations on consolidated net income cannot be measured precisely because operating results of the Company's exploration and production segments could be affected differently.

Corporate The costs of corporate activities, which include interest income, interest expense, foreign exchange gains and losses, and corporate overhead not allocated to operating functions, were \$35.5 million in 2005, \$97.8 million in 2004 and \$13.8 million in 2003. Net after-tax corporate costs were \$62.3 million lower in 2005 compared to 2004. The improvement in 2005 was attributable to favorable income tax benefits, higher interest income, lower net interest expense and more favorable foreign exchange impacts. These favorable effects were partially offset by higher administrative expenses in 2005. Income taxes were favorable by \$23 million in the corporate area in 2005 due to lower net pretax costs and income tax benefits of \$9.7 million, mostly due to refund and settlement of prior year income tax matters in the United States. In 2004, the Company incurred tax costs of \$27.5 million for a 5% withholding tax on a dividend from a Canadian subsidiary. Interest income was favorable by \$3.8 million in 2005 due mainly to interest received on the 2005 U.S. income tax refunds. Interest expense, net of amounts capitalized to various development projects, was \$25.3 million lower in 2005 than in 2004. Interest expense incurred was \$8.9 million less in 2005 due to lower average borrowing levels, while amounts capitalized to major development projects such as the Syncrude expansion and Kikeh development increased by \$16.4 million. The effects of foreign exchange resulted in an after-tax expense of \$18.6 million in 2004, but these effects were insignificant in 2005. The unfavorable result for foreign exchange in 2004 was caused by a significant weakening of the U.S. dollar

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

against the Canadian dollar, pound sterling and Euro currencies during that year. Administrative expenses in the corporate area were \$15 million higher in 2005 than in 2004. The cost increase in 2005 was mostly attributable to higher executive compensation expense and higher salaries and benefits, with partial offsets due to lower Sarbanes-Oxley compliance consulting costs.

Net after-tax corporate costs in 2004 were \$84 million higher than in 2003, with the increase related to unfavorable foreign exchange losses, higher administrative costs, higher net interest expense and unfavorable income taxes. Higher interest income in 2004 partially offset these unfavorable variances. Due to a much weaker U.S. dollar compared to the Canadian dollar, pound sterling and Euro in 2004, the Company incurred after-tax losses of \$18.6 million for foreign exchange in 2004 compared to a \$5.4 million profit in 2003. The exchange losses were mostly caused by

Table of Contents**Index to Financial Statements**

foreign subsidiaries with non-U.S. dollar functional currencies holding a significant amount of U.S. dollars that weakened against these other currencies during the last half of 2004. Administrative expenses were \$8.5 million higher in 2004 than in 2003, mostly due to higher costs of corporate compliance under the Sarbanes-Oxley Act and higher executive compensation and salaries and benefits. Net interest expense was \$13.5 million higher in 2004 than in 2003, mostly due to lower interest being capitalized on U.S. oil and gas developments and U.S. refinery expansion projects. Income tax expense in 2004 was unfavorable by \$43 million in the corporate area primarily due to a \$27.5 million withholding tax incurred on a \$550 million dividend paid to the Company by its Canadian subsidiary, and a \$20.1 million tax benefit in 2003 from settlement of previous years' income tax audit issues. The Company earned \$13.3 million more interest income in 2004 mostly related to holding larger balances of invested cash for a portion of the year after selling most of its conventional oil and gas properties in western Canada.

Capital Expenditures

As shown in the selected financial data on page 11 of this Form 10-K report, capital expenditures for continuing operations, including exploration expenditures, were \$1,329.8 million in 2005 compared to \$975.4 million in 2004 and \$906.1 million in 2003. These amounts included \$209.6 million, \$147.9 million and \$97.9 million of exploration costs that were expensed. Capital expenditures for exploration and production activities totaled \$1,092 million in 2005, 82% of the Company's total capital expenditures for the year. Exploration and production capital expenditures in 2005 included \$34.5 million for acquisition of undeveloped leases, \$404.5 million for exploration activities, and \$652.9 million for development projects. Development expenditures included \$58.7 million for deepwater discoveries in the Gulf of Mexico; \$264.5 million for the West Patricia and Kikeh fields in Malaysia; \$112.9 million for synthetic oil expansion and other capital at the Syncrude project in Canada; \$111.1 million for western Canada heavy oil and natural gas projects; and \$37 million for the Terra Nova and Hibernia oil fields, offshore Newfoundland. Exploration and production capital expenditures are shown by major operating area on page F-35 of this Form 10-K report.

Refining and marketing capital expenditures totaled \$202.4 million in 2005, compared to \$134.7 million in 2004 and \$215.4 million in 2003. These amounts represented 15%, 14% and 24% of capital expenditures for continuing operations of the Company in 2005, 2004 and 2003, respectively. Refining capital spending was \$34.1 million in 2005 compared to \$46.1 million in 2004 and \$130.8 million in 2003. In 2004, the Company completed the construction of a green gasoline unit at its Superior, Wisconsin refinery. In 2003, the expansion of the Meraux, Louisiana refinery was completed, including building a hydrocracker unit to meet future clean fuel specifications and increasing the crude oil processing capacity of the plant to 125,000 barrels per day. Capital expenditures on the Superior refinery green gasoline unit were \$18 million in 2004 and \$5.5 million in 2003. Capital expenditures related to the Meraux expansion project amounted to \$5.5 million in 2004 and \$69 million in 2003. Marketing expenditures amounted to \$168.2 million in 2005, \$88.6 million in 2004 and \$84.6 million in 2003. The majority of marketing expenditures in each year was related to construction of retail gasoline stations at Wal-Mart Supercenters in 21 states in the U.S. The Company added 112 total stations to this retail station network in 2005, 129 in 2004 and 119 in 2003. In 2005, the Company also purchased 68 retail fueling stations in the U.K., thereby expanding its company-owned retail station count by 70%.

Cash Flows

Cash provided by continuing operations was \$1,216.7 million in 2005, \$1,035.1 million in 2004 and \$501.1 million in 2003. The increase in cash provided in each of the last two years compared to the immediately preceding year was primarily due to higher crude oil and refined product sales volumes, and higher sales prices for crude oil, natural gas and refined products. Cash provided by continuing operations was reduced by expenditures for refinery turnarounds and abandonment of oil and gas properties totaling \$31.9 million in 2005, \$18.6 million in 2004 and \$66.1 million in 2003. A scheduled refinery turnaround occurred at Milford Haven in 2005 and at both U.S. refineries in 2003.

Cash proceeds from property sales other than from discontinued operations were \$172.7 million in 2005, \$60.4 million in 2004 and \$188.6 million in 2003. The 2005 proceeds were mainly attributable to sale of most oil and gas properties on the continental shelf of the Gulf of Mexico; the Company retained its deepwater Gulf of Mexico properties. The 2004 property sales included the disposal of the T Block field in the U.K. North Sea and certain U.S. onshore gas properties and U.S. marketing terminals, while 2003 included disposal of the Ninian and Columba fields in the U.K. and various oil and gas assets in Canada and the Gulf of Mexico. Property sales which have been classified as discontinued operations brought in net cash proceeds of \$583 million in 2004, and included sale of most of the Company's conventional oil and gas properties in western Canada. During 2003, the Company borrowed \$309.7 million under notes payable and other long-term debt arrangements primarily to fund a portion of the Company's development capital expenditures. Maturity of U.S. government securities provided cash of \$17.9 million in 2005. Cash proceeds from stock option exercises and employee stock purchase plans amounted to \$26.5 million in 2005, \$3.2 million in 2004 and \$3.6 million in 2003.

Property additions and dry hole costs used cash of \$1,246.2 million in 2005, \$938.4 million in 2004 and \$868.9 million in 2003. The increase in 2005 was mainly caused by development activities at the Kikeh field offshore Sabah, Malaysia, and acquisition of 68 retail fueling stations in the

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

U.K. In 2004, the increases were primarily due to a heavy oil property acquisition in Canada, plus higher heavy oil development spending and higher exploration drilling in Malaysia. Cash used in other investing activities of \$9.9 million in 2005 primarily related to advances under future equipment rental agreements in Malaysia. The Company repaid debt of \$50.6 million in 2005 using a combination of internal cash flow and proceeds from sale of assets. Total paydown of debt was \$495 million during 2004 and was mostly accomplished using a portion of the proceeds of asset dispositions classified as discontinued operations. Cash outlays for debt repayment during 2003 were \$76.8 million. Cash of

Table of Contents**Index to Financial Statements**

\$17.9 million was invested in 2004 in U.S. government securities with maturities greater than 90 days. Cash used for dividends to stockholders was \$83.2 million in 2005, \$78.2 million in 2004 and \$73.5 million in 2003. The Company raised its annualized dividend rate from \$.40 per share to \$.45 per share beginning in the third quarter of 2004.

Financial Condition

Year-end working capital (total current assets less total current liabilities) totaled \$551.9 million in 2005, \$424.4 million in 2004 and \$228.5 million in 2003. The current level of working capital does not fully reflect the Company's liquidity position as the carrying value for inventories under last-in first-out accounting was \$361.3 million below fair value at December 31, 2005. Cash and cash equivalents at the end of 2005 totaled \$585.3 million compared to \$535.5 million a year ago and \$252.4 million at the end of 2003.

The long-term portion of debt was reduced by \$3.8 million during 2005 and totaled \$609.6 million at the end of 2005, which represented 15% of total capital employed. Long-term debt included \$11.6 million of nonrecourse debt borrowed in connection with the Hibernia oil field development. Long-term debt declined by \$477 million in 2004 as the Company utilized the proceeds of asset dispositions in western Canada to pay down debt. Stockholders' equity was \$3.46 billion at the end of 2005 compared to \$2.65 billion a year ago and \$1.95 billion at the end of 2003. A summary of transactions in stockholders' equity accounts is presented on page F-6 of this Form 10-K report.

Other significant changes in Murphy's year-end 2005 balance sheet compared to 2004 included a \$162.2 million increase in accounts receivable, which was caused by higher sales volumes of crude oil and refined petroleum products at higher average prices near the end of 2005 compared to 2004, and amounts recoverable from insurance companies at year-end 2005. These amounts recoverable from insurance companies mostly related to hurricane-related repair costs at the Meraux refinery. Inventory values were \$19.1 million more at year-end 2005 than in 2004 mostly because of more crude oil barrels in storage at the Meraux refinery and more drilling equipment held in inventory in Malaysia. Prepaid expenses declined \$12.5 million due to refund of prior years' U.S. income taxes due from the IRS. Short-term deferred income tax assets increased \$8.9 million at year-end 2005 due mostly to a deferred tax benefit recorded in 2005 in the Company's U.K. downstream business caused by a higher short-term temporary difference for the LIFO inventory allowance in the current period. Net property, plant and equipment increased by \$688.6 million in 2005 as capital expenditures during the year were larger than the book values of properties sold and the additional depreciation and amortization expensed. Goodwill related to the acquisition of Beau Canada in 2000 increased by \$.6 million in 2005 primarily due to a higher Canadian dollar exchange rate in the current year. Deferred charges and other assets increased \$11.4 million in 2005 due mostly to prepayments on future asset rentals for the Kikeh field in Malaysia. Current maturities of long-term debt declined by \$46.2 million primarily because of paydown of loans used to partially fund the Beau Canada acquisition in 2000. Accounts payable rose by \$277.9 million mostly due to the higher costs of purchased crude oil and gasoline at year-end 2005 compared to 2004 and higher amounts owed on exploration and production capital projects. Income taxes payable decreased \$136.1 million at year-end 2005 due to a combination of paying higher tax installments in 2005 and settlement of a tax liability with the Canadian tax authorities in 2005. Other taxes payable decreased \$33.7 million mostly due to lower sales, use and excise taxes owed at year-end 2005 compared to 2004 primarily caused by the Meraux refinery being down for repairs at the end of the year. Deferred income tax liabilities increased \$37 million in 2005 due mostly to higher accelerated depreciation deductions taken in tax returns based on 2005 capital expenditures. The liability associated with asset retirements dropped by \$25.1 million mostly due to purchasing companies accepting responsibility for the abandonment liabilities associated with oil and gas properties sold by the Company on the continental shelf of the Gulf of Mexico during 2005. Accrued major repair costs increased by \$11.1 million primarily based on accruing additional costs for future turnarounds of the Company's three refineries, which exceeded the amounts expended in 2005 at the Milford Haven refinery turnaround that were charged against this liability.

Murphy had commitments for future capital projects of \$932 million at December 31, 2005, including \$57 million for costs to develop deepwater Gulf of Mexico fields, \$585 million for field development and future work commitments in Malaysia, \$69 million for exploration drilling in the Republic of Congo and \$73 million for future work commitments on the Scotian Shelf offshore eastern Canada.

The primary sources of the Company's liquidity are internally generated funds, access to outside financing and working capital. The Company uses its internally generated funds to finance the major portion of its capital and other expenditures, and maintains lines of credit with banks and borrows as necessary to meet spending requirements. At December 31, 2005, the Company had access to long-term revolving credit facilities in the amount of \$1 billion. No amounts were borrowed under these revolving facilities at year-end 2005. The credit facilities were renewed and increased by \$300 million in mid-2005. The most restrictive covenants under these existing facilities limit the Company's long-term debt to capital ratio (as defined in the agreements) to 60%. At December 31, 2005, the long-term debt to capital ratio was approximately 15%. The Company also has available uncommitted credit lines of approximately \$774 million at December 31, 2005. In addition, the Company has a shelf registration on file with the U.S. Securities and Exchange Commission that permits the offer and sale of up to \$650 million in debt and/or equity securities. Current financing arrangements are set forth more fully in Note E to the consolidated financial statements. The Company anticipates utilizing about \$100 million of its long-term borrowing capacity in 2006 to fund certain development projects, including the Kikeh

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

field in Malaysia. Such borrowing amounts are subject to change based on actual levels of cash flows and capital spending. At March 1, 2006, the Company's long-term debt rating by Standard & Poor's was A- and by Moody's Investors Service was Baa1. On February 21, 2006, Moody's placed its rating of the Company under review for possible downgrade. The Company's ratio of earnings to fixed charges was 24.7 to 1 in 2005, 13.4 to 1 in 2004 and 6.1 to 1 in 2003.

Index to Financial Statements

Environmental

Murphy and other companies in the oil and gas industry are subject to numerous federal, state, local and foreign laws and regulations. The most significant of those laws and the corresponding regulations affecting the Company's operations are:

The U.S. Clean Air Act, which regulates air emissions

The U.S. Clean Water Act, which regulates discharges into U.S. waters

The U.S. Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), which addresses liability for hazardous substance releases

The U.S. Federal Resource Conservation and Recovery Act (RCRA), which regulates the handling and disposal of solid wastes

The U.S. Federal Oil Pollution Act of 1990 (OPA90), which addresses liability for discharges of oil into navigable waters of the United States

The U.S. Safe Drinking Water Act, which regulates disposal of wastewater into underground wells

Regulations of the U.S. Department of the Interior governing offshore oil and gas operations

These laws and their associated regulations establish limits on emissions and standards for quality of water discharges. They also, generally, require permits for new or modified operations. Many states and foreign countries where Murphy operates also have or are developing similar statutes and regulations governing air and water, which in some cases impose or could impose additional and more stringent requirements. Murphy is also subject to certain acts and regulations primarily governing remediation of wastes or oil spills.

CERCLA, commonly referred to as the Superfund Act and comparable state statutes, primarily addresses historic contamination and imposes joint and several liability for cleanup of contaminated sites on owners and operators of the sites. As discussed below, Murphy is involved in a limited number of Superfund sites. CERCLA also requires reporting of releases to the environment of substances defined as hazardous.

RCRA and comparable state statutes govern the management and disposal of wastes, with the most stringent regulations applicable to treatment, storage or disposal of hazardous wastes at the owner's property. Under OPA90, owners and operators of tankers, owners and operators of onshore facilities and pipelines, and lessees or permittees of an area in which an offshore facility is located are liable for removal and cleanup costs of oil discharges into navigable waters of the United States.

The U.S. Environmental Protection Agency (EPA) has issued several standards applicable to the formulation of motor fuels, primarily related to the level of sulfur found in highway diesel and gasoline, which are designed to reduce emissions of certain air pollutants when the fuel enters commerce or is used. Several states have passed similar or more stringent regulations governing the formulation of motor fuels. The EPA's standard for highway diesel fuel sulfur limits becomes effective for the Company in 2006.

World leaders have held numerous discussions about the level of worldwide greenhouse gas emissions. As part of these discussions, a Kyoto agreement was adopted in 1997 that has been ratified by certain countries in which the Company operates or may operate in the future, with the United States being the primary country that has yet to ratify the agreement. The U.S. may ratify all or a portion of the agreement in the future. The agreement became effective for ratifying countries in early 2005 and these countries are in various stages of developing regulations to address its contents. The Company is unable to predict how final regulations associated with the agreement will impact its costs in future years,

but it is reasonable to expect these regulations to increase its compliance costs to some degree.

The Company is also involved in personal injury and property damage claims, allegedly caused by exposure to or by the release or disposal of materials manufactured or used in the Company's operations.

The Company operates or has previously operated certain sites and facilities, including three refineries, five terminals, and approximately 62 service stations, for which known or potential obligations for environmental remediation exist. In addition the Company operates or has operated numerous oil and gas fields that may require some form of remediation.

Under the Company's accounting policies, an environmental liability is recorded when such an obligation is probable and the cost can be reasonably estimated. If there is a range of reasonably estimated costs, the most likely amount will be recorded, or if no amount is most likely, the minimum of the range is used. Recorded liabilities are reviewed quarterly. Actual cash expenditures often occur one or more years after a liability is recognized.

The Company's liability for remedial obligations includes certain amounts that are based on anticipated regulatory approval for proposed remediation of former refinery waste sites. Although regulatory authorities may require more costly alternatives than the proposed processes, the cost of such potential alternative processes is not expected to exceed the accrued liability by a material amount.

The U.S. Environmental Protection Agency (EPA) currently considers the Company to be a Potentially Responsible Party (PRP) at two Superfund sites. The potential total cost to all parties to perform necessary remedial work at these sites may be substantial. Based on currently available information, the Company believes that it is a de minimis party as to ultimate responsibility at both Superfund sites. The Company has not recorded a liability for remedial costs on Superfund sites. The Company could be required to bear a pro rata share of costs

Table of Contents

Index to Financial Statements

attributable to nonparticipating PRPs or could be assigned additional responsibility for remediation at the two sites or other Superfund sites. The Company believes that its share of the ultimate costs to clean-up the two Superfund sites will be immaterial and will not have a material adverse effect on its net income, financial condition or liquidity in a future period.

There is the possibility that environmental expenditures could be required at currently unidentified sites, and new or revised regulations could require additional expenditures at known sites. However, based on information currently available to the Company, the amount of future remediation costs incurred at known or currently unidentified sites is not expected to have a material adverse effect on net income, financial condition or liquidity in a future period.

Certain environmental expenditures are likely to be recovered by the Company from other sources, primarily environmental funds maintained by certain states. Since no assurance can be given that future recoveries from other sources will occur, the Company has not recorded a benefit for likely recoveries at December 31, 2005.

The Company's refineries also incur costs to handle and dispose of hazardous waste and other chemical substances. The types of waste and substances disposed of generally fall into the following categories: spent catalysts (usually hydrotreating catalysts); spent/used filter media; tank bottoms and API separator sludge; contaminated soils; laboratory and maintenance spent solvents; and various industrial debris. The costs of disposing of these substances are expensed as incurred and amounted to \$3.5 million in 2005. In addition to these expenses, Murphy allocates a portion of its capital expenditure program to comply with environmental laws and regulations. Such capital expenditures were approximately \$53.2 million in 2005 and are projected to be \$63.1 million in 2006.

Other Matters

Impact of inflation General inflation was moderate during the last three years in most countries where the Company operates; however, the Company's revenues and capital and operating costs are influenced to a larger extent by specific price changes in the oil and gas and allied industries than by changes in general inflation. Crude oil and petroleum product prices generally reflect the balance between supply and demand, with crude oil prices being particularly sensitive to OPEC production levels and/or attitudes of traders concerning supply and demand in the near future. Natural gas prices are affected by supply and demand, which to a significant extent are affected by the weather and by the fact that delivery of gas is generally restricted to specific geographic areas. Because crude oil and natural gas sales prices have generally strengthened during the last two years, prices for oil field goods and services have risen and could continue to be adversely affected in the future. Due to the volatility of oil and natural gas prices, it is not possible to determine what effect these prices will have on the future cost of oil field goods and services.

Accounting changes and recent accounting pronouncements As described in Note G on page F-14 of this Form 10-K report, Murphy adopted the Financial Accounting Standards Board's (FASB) Statement of Financial Accounting Standards (SFAS) 143, Accounting for Asset Retirement Obligations, effective January 1, 2003. Upon adoption of SFAS No. 143, the Company recorded an after-tax charge of \$7 million, which was reported as the cumulative effect of a change in accounting principle.

The FASB has issued SFAS No. 123 (revised 2005), Share Based Payment, which replaces SFAS No. 123, Accounting for Stock-Based Compensation, and supersedes APB Opinion No. 25, Accounting for Stock Issued to Employees. SFAS No. 123 (revised 2005) requires that the cost resulting from all share-based payment transactions be recognized as an expense in the financial statements using a fair-value-based measurement method over the periods that the awards vest. The statement will be effective for the Company beginning January 1, 2006. Although the Company used the intrinsic-value approach of Accounting Principles Board No. 25 to account for stock options through year-end 2005, it provided pro forma disclosures in Note A as if SFAS No. 123 was currently being applied. The Company expects to use the modified prospective transition method upon adoption of SFAS 123 (revised). Stock option awards are expected to qualify for accounting as equity awards. The adoption of this statement will increase compensation expense in the consolidated statement of income beginning in 2006 by including cost for the Company's stock options and Employee Stock Purchase Plan. The Company has preliminarily estimated this incremental expense to be \$10 million in 2006.

The FASB has issued FASB Staff Position (FSP) 19-1, Accounting for Suspended Well Costs, to provide guidance on the accounting for exploratory well costs and to amend SFAS No. 19, Financial Accounting and Reporting by Oil and Gas Producing Companies. The guidance in FSP 19-1 applies to companies that use the successful efforts method of accounting as described in SFAS No. 19. This FSP clarifies that exploratory well costs should continue to be capitalized when the well has found a sufficient quantity of reserves to justify its completion as a producing well and the company is making sufficient progress assessing the reserves and the economic and operating viability of the project. The guidance in this FSP was applied beginning in April 2005 on a prospective basis to existing and newly-capitalized exploratory wells costs.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

See Note D to the consolidated financial statements. The adoption of this FSP did not have any effect on the Company's net income or financial condition.

In October 2004, the Tax Deduction on Qualified Production Activities Provided by the American Jobs Creation Act of 2004 (the Act) became law. The FASB issued FSP 109-1 in December 2004 to provide guidance on the application of SFAS No. 109, Accounting for Income Taxes, to

Table of Contents

Index to Financial Statements

the provision within the Act that provides, beginning in 2005, a tax deduction on qualified production activities. The tax deduction phases in at 3% in 2005 and reaches 9% in 2010. FSP 109-1 concluded that the tax benefits for the deduction should be recognized as realized. This FSP was effective upon issuance and the Company applied it in computing U.S. income tax expense in 2005. The Company recorded a tax benefit of \$3.5 million in 2005 related to the Act.

The Emerging Issues Task Force of the FASB has issued EITF 03-13, Applying the Conditions in Paragraph 42 of SFAS No. 144 in Determining Whether to Report Discontinued Operations. The EITF generally believes that current practice with respect to applying the criteria in paragraph 42 of SFAS No. 144 has not been applied consistently and has not resulted in broadening the reporting of asset dispositions as discontinued operations. EITF 03-13 contains further guidance for evaluating the cash flows of the component sold and what constitutes significant continuing involvement. In certain industries, EITF 03-13 may lead to more asset disposals being reported as discontinued operations in future periods. However, in the oil and gas industry, it may cause more asset disposals to continue to be classified as continuing operations due to clarification of what constitutes continuing involvement. This standard was adopted by the Company for all asset disposal transactions occurring after January 1, 2005.

SFAS No. 151, Inventory Costs, was issued by the FASB in November 2004. This statement amends Accounting Research Bulletin No. 43, to clarify that abnormal amounts of idle facility expense, freight, handling costs, and wasted materials should be recognized as current-period charges, and it also requires that allocation of fixed production overheads be based on the normal capacity of the related production facilities. The provisions of this statement will be effective on a prospective basis beginning January 1, 2006, and the Company does not expect the adoption of this statement to have a significant impact on its results of operations.

The FASB issued SFAS No. 153, Exchanges of Nonmonetary Assets an amendment of APB Opinion No. 29, in December 2004. This statement addressed the measurement of exchanges of nonmonetary assets and eliminated the exception from fair value measurement for nonmonetary exchanges of similar productive assets and replaced it with an exception for exchanges that do not have commercial substance. SFAS No. 153 was adopted by the Company on a prospective basis for nonmonetary asset exchanges occurring after June 30, 2005. The adoption of this statement did not have a significant impact on the Company's results of operations in 2005.

In March 2005, the FASB issued FASB Interpretation No. 47, Accounting for Conditional Asset Retirement Obligations, an interpretation of SFAS No. 143. This interpretation clarifies the term conditional asset retirement obligation as used in SFAS No. 143 and when a company would have sufficient information to reasonably estimate the fair value of an asset retirement obligation. This interpretation was adopted by the Company during the fourth quarter of 2005 and it had no impact on the Company's results of operations for 2005.

In March 2005, the EITF decided in Issue 04-6, Accounting for Stripping Costs Incurred during Production in the Mining Industry, that mining operations should account for post-production stripping costs as a variable production cost that should be considered a component of mineral inventory costs. The Company's synthetic oil operations at Syncrude may be affected by this ruling. The EITF consensus is effective for the Company as of January 1, 2006 and any adjustment required as of the effective application date will be recorded as a cumulative effect of a change in accounting principle. The Company does not currently expect the adoption of this consensus to have a significant impact on its financial statements.

In September 2005, the EITF decided in Issue 04-13, Accounting for Purchases and Sales of Inventory with the Same Counterparty, that two or more exchange transactions involving inventory with the same counterparty that are entered into in contemplation of one another should be combined for purposes of evaluating the effect of APB Opinion 29, Accounting for Nonmonetary Transactions. Additionally, the EITF decided that a nonmonetary exchange where an entity transfers finished goods inventory in exchange for the receipt of raw materials or work-in-progress inventory within the same line of business should generally be recognized by the entity at fair value. This consensus will be applied to new arrangements entered into beginning April 1, 2006, and to all inventory transactions that are completed after December 15, 2006, for arrangements entered into prior to March 15, 2006. The Company does not expect the adoption of this consensus to have a significant impact on its financial statements.

In 2005, the FASB added to its agenda a reconsideration of accounting and disclosures rules related to retirement and postretirement plans. The FASB has stated that it will first consider whether the funded status of benefit plans should be reported as an asset or liability on the plan sponsor's balance sheet. The FASB's reconsideration of all other aspects of the accounting for retirement and postretirement plans will follow thereafter. The FASB's goal is to conclude as to the first matter with any accounting changes required by the end of 2006. The Company is unable to predict the changes to its accounting policies and disclosures, or the applicable timing thereof, that may arise upon completion of this FASB review.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Other Murphy holds a 20% interest in Block 16 Ecuador, where the Company and its partners produce oil for export. In 2001, the local tax authorities announced that Value Added Taxes (VAT) paid on goods and services related to Block 16 and many oil fields held by other companies will no longer be reimbursed. In response to this announcement, oil producers have filed actions in the Ecuador Tax Court seeking determination that the VAT in question is reimbursable. In July 2004, international arbitrators ruled that VAT was recoverable by another oil company, but the State of Ecuador responded that it was not bound by this arbitral decision. As of December 31, 2005, the Company has a

Table of Contents**Index to Financial Statements**

receivable of approximately \$15.3 million related to VAT. Murphy believes that its claim for reimbursement of VAT under applicable Ecuador tax law is valid, and it does not expect that the resolution of this matter will have a material adverse affect on the Company's net income, financial condition or liquidity in future periods.

Significant accounting policies In preparing the Company's consolidated financial statements in accordance with U.S. generally accepted accounting principles, management must make a number of estimates and assumptions related to the reporting of assets, liabilities, revenues and expenses and the disclosure of contingent assets and liabilities. Application of certain of the Company's accounting policies requires significant estimates. The most significant of these accounting policies are described below.

Proved oil and natural gas reserves Proved reserves are defined by the U.S. Securities and Exchange Commission (SEC) as those volumes of crude oil, condensate, natural gas liquids and natural gas that geological and engineering data demonstrate with reasonable certainty are recoverable from known reservoirs under existing economic and operating conditions. Proved developed reserves are volumes expected to be recovered through existing wells with existing equipment and operating methods. Although the Company's engineers are knowledgeable of and follow the guidelines for reserves as established by the SEC, the estimation of reserves requires the engineers to make a significant number of assumptions based on professional judgment. SEC rules require that year-end oil and natural gas prices must be used for determining proved reserve quantities. Year-end prices often do not approximate the average price that the Company expects to receive for its oil and natural gas production. The Company often uses significantly different oil and natural gas price and reserve assumptions when making its own internal economic property evaluations. Estimated reserves are often subject to future revision, certain of which could be substantial, based on the availability of additional information, including: reservoir performance, new geological and geophysical data, additional drilling, technological advancements, price changes and other economic factors. Changes in oil and natural gas prices can lead to a decision to start-up or shut-in production, which can lead to revisions to reserve quantities. Reserve revisions inherently lead to adjustments of the Company's depreciation rates and the timing of settlement of asset retirement obligations. The Company's proved reserves of oil and natural gas are presented on pages F-33 and F-34 of the annual report. The U.S. oil reserve revision in 2005 was mostly due to poor well performance at the deepwater Front Runner field. Oil reserve revisions in 2005 in Canada, the U.K. and Ecuador were due to better field performance, while the Malaysia revision was caused by higher oil prices that reduce volumes allocable to the Company for cost recovery under production sharing contracts. The reserve revision for U.S. oil in 2004 related primarily to loss of royalty relief for the Medusa and Front Runner deepwater fields based on year-end 2004 oil prices. Oil reserve revisions in Canada in 2004 related to a combination of low heavy oil prices at year-end that restricted economic recoverability of certain heavy oil reserves and higher projected royalties at the Terra Nova and Hibernia fields. Oil reserve revisions in Ecuador in 2004 were caused by a higher than previously estimated water cut in the liquid stream produced at Block 16. Natural gas reserve revisions were positive in the U.S. in 2004 due to better well performance. The Company cannot predict the type of reserve revisions that will be required in future periods.

Successful efforts accounting The Company utilizes the successful efforts method to account for exploration and development expenditures. Unsuccessful exploration wells are expensed and can have a significant effect on net income. Successful exploration drilling costs, all development capital expenditures and asset retirement costs are capitalized and systematically charged to expense using the units of production method based on proved developed oil and natural gas reserves as estimated by the Company's engineers. In some cases, a determination of whether a drilled well has found proved reserves can not be made immediately. This is generally due to the need for a major capital expenditure to produce and/or evacuate the hydrocarbon(s) found. The determination of whether to make such a capital expenditure is, in turn, usually dependent on whether additional exploratory wells find a sufficient quantity of additional reserves. Under current accounting rules, the Company holds well costs in Property, Plant and Equipment when the well has found a sufficient quantity of reserves to justify its completion as a producing well and the Company is making sufficient progress assessing the reserves and the economic and operating viability of the project.

Costs for an exploration well in progress at year-end 2005 amounted to \$6 million. Through February 2006, the well was determined to have successfully found hydrocarbon deposits.

Based on the time required to complete further exploration and appraisal drilling in areas where hydrocarbons have been found but proved reserves have not been booked, dry hole expense may be recorded one or more years after the original drilling costs are incurred. Dry hole expenses related to wells drilled in prior years were \$13.2 million in 2004; there were no dry holes in 2005 that were drilled in prior years.

Impairment of long-lived assets The Company continually monitors its long-lived assets recorded in Property, Plant and Equipment and Goodwill in the Consolidated Balance Sheets to make sure that they are fairly presented. The Company must evaluate its properties for potential impairment when circumstances indicate that the carrying value of an asset could exceed its fair value. Goodwill must be evaluated for impairment at least annually. A significant amount of judgment is involved in performing these evaluations since the results are based on estimated future events. Such events include a projection of future oil and natural gas sales prices, an estimate of the amount of oil and natural gas that will be produced from a field, the timing of this future production, future costs to produce the oil

Table of Contents**Index to Financial Statements**

and natural gas, future capital and abandonment costs, and future inflation levels. The need to test a property for impairment can be based on several factors, including but not limited to a significant reduction in sales prices for oil and/or natural gas, unfavorable reserve revisions, or other changes to contracts, environmental regulations or tax laws. All of these same factors must be considered when evaluating a property's carrying value for possible impairment. A description of impairment charges recorded during the last three years is included in Note D in the consolidated financial statements.

In making its impairment assessments involving exploration and production property and equipment, the Company must make a number of projections involving future oil and natural gas sales prices, future production volumes, and future capital and operating costs. Due to the volatility of world oil and gas markets, the actual sales prices for oil and natural gas have often been quite different from the Company's projections. Estimates of future oil and gas production and sales volumes are based on a combination of proved and risked probable and possible reserves. Although the estimation of reserves and future production is uncertain, the Company believes that its estimates are reasonable; however, there have been cases where actual production volumes were higher or lower than projected and the timing was different than the original projection. The Company adjusts reserve and production estimates as new information becomes available. The Company generally projects future costs by using historical costs adjusted for both assumed long-term inflation rates and known or expected changes in future operations. Although the projected future costs are considered to be reasonable, at times, costs have been higher or lower than originally estimated. In making impairment assessments for refining and marketing property and equipment, future margins for the refining and marketing business are generally projected based on historical results adjusted for known or expected changes in future operations. Although the Company is not aware of any property carrying values that are impaired at December 31, 2005, one or a combination of factors such as significantly lower future sales prices, significantly lower future production, significantly higher future costs, or significantly lower future margins for refining and marketing, could lead to impairment expenses in future periods. Based on these unknown future factors as described herein, the Company can not predict the amount or timing of impairment expenses that may be recorded in the future.

Income taxes The Company is subject to income and other similar taxes in all areas in which it operates. When recording income tax expense, certain estimates are required because: (a) income tax returns are generally filed months after the close of its annual accounting period; (b) tax returns are subject to audit by taxing authorities and audits can often take years to complete and settle; and (c) future events often impact the timing of when income tax expenses and benefits are recognized by the Company. The Company has deferred tax assets mostly relating to property basis differences and liabilities for repairs, dismantlements and retirement benefits. The Company routinely evaluates all deferred tax assets to determine the likelihood of their realization. A valuation allowance has been recognized for deferred tax assets related to basis differences for Blocks H and PM 311/312 in Malaysia, exploration licenses in the Republic of Congo and certain basis differences in the U.K. due to management's belief that these assets cannot be deemed to be realizable with any degree of confidence at this time. The Company occasionally is challenged by taxing authorities over the amount and/or timing of recognition of revenues and deductions in its various income tax returns. Although the Company believes that it has adequate accruals for matters not resolved with various taxing authorities, gains or losses could occur in future years from changes in estimates or resolution of outstanding matters.

Accounting for retirement and postretirement benefit plans Murphy Oil and certain of its subsidiaries maintain defined benefit retirement plans covering most of its full-time employees. The Company also sponsors health care and life insurance benefit plans covering most retired U.S. employees. The expense associated with these plans is determined by management based on a number of assumptions and with consultation assistance from qualified third-party actuaries. The most important of these assumptions for the retirement plans involve the discount rate used to measure future plan obligations and the expected long-term rate of return on plan assets. For the retiree medical and insurance plans, the most important assumptions are the discount rate for future plan obligations and the health care cost trend rate. Discount rates are adjusted as necessary, generally based on changes in AA-rated corporate bond rates. Expected plan asset returns are based on long-term expectations for asset portfolios with similar investment mix characteristics. Anticipated health care cost trend rates are determined based on prior experience of the Company and an assessment of near-term and long-term trends for medical and drug costs. Due to a reduction in bond yields during 2005, the Company has reduced the primary plans' discount rate from 6.00% in 2005 to 5.70% in 2006. Although the Company presently assumes a return on plan assets of 7.25% for the primary plan, it periodically reconsiders the appropriateness of this and other key assumptions. The smoothing effect of current accounting regulations tends to buffer the current year's pension expense from wide swings in liabilities and asset returns. The effects of a lower discount rate and a growing employee population are expected to lead to higher pension expense in 2006. The Company's annual retirement plan expense is estimated to increase by about \$2 million in 2006 compared to 2005. In 2005, the Company paid \$26.4 million into various retirement plans, including a \$14.5 million voluntary payment into the U.S. qualified retirement plan, and \$3.5 million into postretirement plans. In 2006, the Company is expecting to fund payments of approximately \$7.5 million into various retirement plans and \$3.5 million for postretirement plans. The Company could be required to make additional and more significant funding payments to retirement plans in future years. As described above, the Company's retirement and postretirement expenses are

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

sensitive to certain assumptions, primarily related to discount rates and assumed return on plan assets. A 0.5% decline in the discount rate would increase 2006 annual retirement and postretirement expenses by \$2.5 million and \$.5 million, respectively, and a 0.5% decline in the assumed rate of return on plan assets would increase 2006 retirement expense by \$1.5 million.

Table of Contents**Index to Financial Statements**

Legal, environmental and other contingent matters A provision for legal, environmental and other contingent matters is charged to expense when the loss is probable and the cost can be reasonably estimated. Judgment is often required to determine when expenses should be recorded for legal, environmental and other contingent matters. In addition, the Company often must estimate the amount of such losses. In many cases, management's judgment is based on interpretation of laws and regulations, which can be interpreted differently by regulators and/or courts of law. The Company's management closely monitors known and potential legal, environmental and other contingent matters, and makes its best estimate of the amount of losses and when they should be recorded based on information available to the Company.

Contractual obligations and guarantees The Company is obligated to make future cash payments under borrowing arrangements, operating leases, purchase obligations primarily associated with existing capital expenditure commitments, and other long-term liabilities. In addition, the Company expects to extend certain operating leases beyond the minimum contractual period. Total payments due after 2005 under such contractual obligations and arrangements are shown below.

(Millions of dollars)	Amount of Obligation				
	Total	2006	2007-2009	2010-2011	After 2011
Total debt including current maturities	\$ 614.1	4.5	11.7		597.9
Operating leases	214.1	19.7	53.7	26.2	114.5
Purchase obligations	1,118.6	954.9	62.7	18.9	82.1
Other long-term liabilities	262.4	20.0	2.3	3.7	236.4
Total	\$ 2,209.2	999.1	130.4	48.8	1,030.9

A floating, production, storage and offloading (FPSO) vessel is currently being built by other companies and it is anticipated to be used in producing the Kikeh field in Block K Malaysia, which is scheduled to start-up production in the second half of 2007. The Company will lease this FPSO subject to satisfactory completion of construction by its owners. Certain amounts to be paid by the Company through completion of the FPSO construction period totaling \$29 million have been included in the contractual obligation table above in 2006 and 2007. If the FPSO is accepted by the Company in 2007, future undiscounted lease commitments will amount to \$631 million; these amounts have not been included in the contractual obligation table above pending successful construction of the FPSO. Accounting treatment for this lease will be determined upon satisfactory delivery of the FPSO.

In the normal course of its business, the Company is required under certain contracts with various governmental authorities and others to provide financial guarantees or letters of credit that may be drawn upon if the Company fails to perform under those contracts. The amount of commitments as of December 31, 2005 that expire in future periods is shown below.

(Millions of dollars)	Amount of Commitment				
	Total	2006	2007-2009	2010-2011	After 2011
Financial guarantees	\$ 8.5		2.6		5.9
Letters of credit	50.2	9.3	40.8	0.1

Material off-balance sheet arrangements The Company occasionally utilizes off-balance sheet arrangements for operational or funding purposes. The most significant of these arrangements at year-end 2005 involve an oil and natural gas processing contract and a hydrogen purchase contract. The processing contract provides crude oil and natural gas processing capacity for oil and natural gas production from the Medusa field in the Gulf of Mexico. Under the contract, the Company pays a specified amount per barrel of oil equivalent for processing its oil and natural gas through the facility. If actual oil and natural gas production processed through the facility through 2009 is less than a specified quantity, the Company must make additional quarterly payments up to an agreed minimum level that varies over time. The Company has a contract to purchase hydrogen for the Meraux refinery through 2019. The contract requires a monthly minimum base facility charge whether or not any hydrogen is purchased. Payments under both these agreements are recorded as operating expenses when paid. Future required minimum annual payments under both of these arrangements are included in the contractual obligation table shown above.

Outlook

Prices for the Company's primary products are often quite volatile. A strong global economy, which fueled demand for oil and natural gas, led to strong prices for these products during most of 2005 and into early 2006. Due to the volatility of worldwide crude oil and North American natural gas prices, routine monitoring of spending plans is required.

The Company's capital expenditure budget for 2006 was prepared during the fall of 2005 and based on this budget capital expenditures are expected to increase over 2005. Capital expenditures in 2006 are projected to total \$1.6 billion. Of this amount, \$1.35 billion or about 85%, is allocated for the exploration and production program. Geographically, E&P capital is spread approximately as follows: 20% for the United States, 55% for Malaysia, 10% for Canada and 15% for all other areas. Spending in the U.S. is dominated by exploration and appraisal

Table of Contents

Index to Financial Statements

drilling in the deepwater Thunderhawk area, plus early spending on an anticipated development of the Thunderhawk field. In Malaysia, over half of the spending is for continued development of the Kikeh field in Block K and the remainder includes exploration and development activities for other areas held by the Company. Spending in the Republic of Congo includes studies for development options for the Azurite Marine discovery offshore. Refining and marketing expenditures in 2006 should be about \$225 million of which almost 90% is allocated to the U.S. The U.S. budget has funds for construction of additional retail gasoline stations at Wal-Mart Supercenters and pipeline and terminal investments needed to support this growing retail marketing system. Capital and other expenditures are routinely reviewed and planned capital expenditures may be adjusted to reflect differences between budgeted and actual cash flow during 2006. Capital expenditures may also be affected by asset purchases, which often are not anticipated at the time the Budget is prepared.

The Company currently expects to fund certain development costs in 2006, primarily at the Kikeh field in Block K Malaysia, using available credit facilities. Most other funding is anticipated to be generated from operating cash flow. The Company forecasts a growth in long-term debt of approximately \$100 million in 2006. This forecast could change based on actual cash flow generated from operations and actual levels of capital spending. For example, a significant reduction in sales prices for crude oil and natural gas, without a corresponding decrease in capital spending, could cause the Company's long-term debt to rise by more than the current forecast. In early 2006, oil prices remained stronger than those forecast in the Company's 2006 budget, but natural gas prices had retreated to below budgeted levels. In early 2006, the Company was experiencing losses in its North American refining and marketing business due to actual margins being well below margin levels forecast in the budget.

The Company currently expects production in 2006 to be about 110,000 barrels of oil equivalent per day. Growth in oil volumes based on start-up of new coker facilities at Syncrude and an anticipated successful heavy oil development drilling program that is ongoing in western Canada is expected to be more than offset by lower volumes at Terra Nova due to more downtime for repairs, lower volumes allocable to Murphy at West Patricia under the production sharing contract, and decline at Front Runner in the deepwater Gulf of Mexico. Natural gas production will be favorably impacted by start-up of the Seventeen Hands field in the deepwater Gulf of Mexico, but other volumes in the deepwater Gulf of Mexico are likely to be lower prior to workovers and volumes in the U.K. are expected to be lower at the Amethyst field.

The repair of flood and wind damages at the Meraux refinery has been estimated to cost up to \$200 million. Because of certain limitations on insurance policies for flooding, the Meraux refinery could have unrecoverable repair costs of up to \$50 million in the first half of 2006. See Item 3 of this Form 10-K report for additional information regarding environmental and other contingencies relating to Hurricane Katrina.

The U.K. government announced in 2005 that the effective income tax rate on E&P earnings will increase from 40% to 50% beginning in 2006. As of December 31, 2005, the Company has not recognized the estimated charge of approximately \$11 million to increase deferred income tax liabilities because the 10% rate increase has not been confirmed by the U.K. Parliament. This action is expected to be approved by Parliament and the unfavorable deferred tax adjustment is expected to be recorded in 2006.

Forward-Looking Statements

This Form 10-K report, including documents incorporated by reference here, contains statements of the Company's expectations, intentions, plans and beliefs that are forward-looking and are dependent on certain events, risks and uncertainties that may be outside of the Company's control. These forward-looking statements are made in reliance upon the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Actual results and developments could differ materially from those expressed or implied by such statements due to a number of factors including those described in the context of such forward-looking statements as well as those contained in the Company's January 15, 1997 Form 8-K report on file with the U.S. Securities and Exchange Commission.

Item 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The Company is exposed to market risks associated with interest rates, prices of crude oil, natural gas and petroleum products, and foreign currency exchange rates. As described in Note A to the consolidated financial statements, Murphy makes limited use of derivative financial and commodity instruments to manage risks associated with existing or anticipated transactions.

Murphy was a party to natural gas price swap agreements at December 31, 2005 for a remaining notional volume of 720,000 MMBTU (1 MMBTU = 1 million British Thermal Units) that are intended to hedge the financial exposure of its Meraux, Louisiana refinery to fluctuations in the future price of a portion of natural gas to be purchased for fuel in 2006. In each month of settlement, the swaps require Murphy to pay an average natural gas price of \$3.35 per MMBTU and to receive the average NYMEX price for the final three trading days of the month. At December 31, 2005, the estimated fair value of these agreements was recorded as an asset of \$5.2 million. A 10% increase in the average

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

NYMEX price of natural gas would have increased this asset by \$.8 million, while a 10% decrease would have reduced the asset by a similar amount.

At December 31, 2005, the Company was a party to forward sale contracts covering 4,000 barrels per day in heavy oil sales during 2006. The contracts are intended to hedge the financial exposure of the Company's heavy oil sales in Canada during the respective contract period and are priced at \$25.23 per barrel in 2006. At December 31, 2005, the estimated fair value of these agreements was recorded as a liability valued at \$24.3 million. A 10% increase in the price of Canadian heavy oil at the Hardisty terminal in Canada would have increased this liability by \$6.1 million, while a 10% decrease would have decreased this liability by a similar amount.

Item 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Information required by this item appears on pages F-1 through F-40, which follow page 33 of this Form 10-K report.

Item 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None

Item 9A. CONTROLS AND PROCEDURES

Under the direction of its principal executive officer and principal financial officer, controls and procedures have been established by Murphy to ensure that material information relating to the Company and its consolidated subsidiaries is made known to the officers who certify the Company's financial reports and to other members of senior management and the Board of Directors.

Based on the Company's evaluation as of the end of the period covered by the filing of this Annual Report on Form 10-K, the principal executive officer and principal financial officer of Murphy Oil Corporation have concluded that the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934) are effective to ensure that the information required to be disclosed by Murphy Oil Corporation in reports that it files or submits under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms.

Murphy's management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f). Management has conducted an evaluation of the effectiveness of our internal control over financial reporting based on the criteria set forth in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation, management has concluded that our internal control over financial reporting was effective as of December 31, 2005. Our report is included on page F-2 of the annual report. Our management's assessment of the effectiveness of our internal control over financial reporting as of December 31, 2005 has been audited by KPMG LLP, an independent registered public accounting firm, and their report is included on page F-2 of this annual report.

There were no significant changes in the Company's internal controls over financial reporting that occurred during the fourth quarter of 2005 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

REPORT OF MANAGEMENT CONSOLIDATED FINANCIAL STATEMENTS

The management of Murphy Oil Corporation is responsible for the preparation and integrity of the accompanying consolidated financial statements and other financial data. The statements were prepared in conformity with U.S. generally accepted accounting principles appropriate in the circumstances and include some amounts based on informed estimates and judgments, with consideration given to materiality.

An independent registered public accounting firm, KPMG LLP, has audited the Company's consolidated financial statements in accordance with the standards of the Public Company Accounting Oversight Board and provides an objective, independent opinion about the fair presentation of the consolidated financial statements. The Audit Committee of the Board of Directors appoints the independent registered public accounting firm; ratification of the appointment is solicited annually from the shareholders.

The Board of Directors appoints an Audit Committee annually to implement and to support the Board's oversight function of the Company's financial reporting, accounting policies, internal controls and independent registered public accounting firm. This Committee is composed solely of directors who are not employees of the Company. The Committee meets routinely with representatives of management, the Company's audit staff and the independent registered public accounting firm to review and discuss the adequacy and effectiveness of the Company's internal controls, the quality and clarity of its financial reporting, the scope and results of independent and internal audits, and to fulfill other responsibilities included in the Committee's Charter. The independent registered public accounting firm and the Company's audit staff have unrestricted access to the Committee, without management presence, to discuss audit findings and other financial matters.

Our report of management covering internal control over financial reporting and the associated report of the independent registered public accounting firm can be found at page F-2.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of Murphy Oil Corporation:

We have audited the accompanying consolidated balance sheets of Murphy Oil Corporation and subsidiaries as of December 31, 2005 and 2004, and the related consolidated statements of income, comprehensive income, stockholders' equity and cash flows for each of the years in the three-year period ended December 31, 2005. In connection with our audits of the consolidated financial statements we also have audited financial statement Schedule II. These consolidated financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the Standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Murphy Oil Corporation and subsidiaries as of December 31, 2005 and 2004, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2005, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

As discussed in Note G to the consolidated financial statements, effective January 1, 2003, the Company changed its method of accounting for asset retirement obligations.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of Murphy Oil Corporation's internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated March 9, 2006 expressed an unqualified opinion on management's assessment of, and the effective operation of, internal control over financial reporting.

Houston, Texas

REPORT OF MANAGEMENT INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f). The Company's internal controls have been designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements in accordance with U.S. generally accepted accounting principles. All internal control systems have inherent limitations, and therefore, can provide only reasonable assurance with respect to the reliability of financial reporting and preparation of consolidated financial statements.

Management has conducted an evaluation of the effectiveness of our internal control over financial reporting based on the criteria set forth in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation management concluded that our internal control over financial reporting was effective as of December 31, 2005.

Our management's assessment of the effectiveness of our internal control over financial reporting as of December 31, 2005 has been audited by KPMG LLP, an independent registered public accounting firm, and their report is included below.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of Murphy Oil Corporation:

We have audited management's assessment, included in the accompanying Report of Management Internal Control Over Financial Reporting, that Murphy Oil Corporation maintained effective internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Murphy Oil Corporation's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, management's assessment that Murphy Oil Corporation maintained effective internal control over financial reporting as of December 31, 2005, is fairly stated, in all material respects, based on criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Also, in our opinion, Murphy Oil Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Murphy Oil Corporation and subsidiaries as of December 31, 2005 and 2004, and the related consolidated statements of income, comprehensive income, stockholders' equity, and cash flows for each of the years in the three-year period ended December 31, 2005,

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

and our report dated March 9, 2006, expressed an unqualified opinion on those consolidated financial statements.

Houston, Texas

MURPHY OIL CORPORATION AND CONSOLIDATED SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note A Significant Accounting Policies

NATURE OF BUSINESS Murphy Oil Corporation is an international oil and gas company that conducts its business through various operating subsidiaries. The Company produces oil and/or natural gas in the United States, Canada, the United Kingdom, Malaysia and Ecuador and conducts oil and natural gas exploration activities worldwide. The Company has an interest in a Canadian synthetic oil operation, owns two petroleum refineries in the United States and has an interest in a refinery in the United Kingdom. Murphy markets petroleum products under various brand names and to unbranded wholesale customers in North America and the United Kingdom.

PRINCIPLES OF CONSOLIDATION The consolidated financial statements include the accounts of Murphy Oil Corporation and all majority-owned subsidiaries. Undivided interests in oil and gas joint ventures and certain other assets are consolidated on a proportionate basis. Investments in affiliates in which the Company owns from 20% to 50% are accounted for by the equity method. Other investments are generally carried at cost. All significant intercompany accounts and transactions have been eliminated.

REVENUE RECOGNITION Revenues from sales of crude oil, natural gas and refined petroleum products are recorded when deliveries have occurred and legal ownership of the commodity transfers to the customer. Title transfers for crude oil, natural gas and bulk refined products generally occur at pipeline custody points or when a tanker lifting has occurred. Refined products sold at retail are recorded when the customer takes delivery at the pump. Revenues from the production of oil and natural gas properties in which Murphy shares an undivided interest with other producers are recognized based on the actual volumes sold by the Company during the period. Gas imbalances occur when the Company's actual sales differ from its entitlement under existing working interests. The Company records a liability for gas imbalances when it has sold more than its working interest of gas production and the estimated remaining reserves make it doubtful that partners can recoup their share of production from the field. At December 31, 2005 and 2004, the liabilities for natural gas balancing were immaterial. Excise taxes collected on sales of refined products and remitted to governmental agencies are not included in revenues or in costs and expenses.

The Company enters into buy/sell and similar arrangements when crude oil and other petroleum products are held at one location but are needed at a different location. The Company often pays or receives funds related to the buy/sell arrangement based on location or quality differences. The Company accounts for such transactions on a net basis in its consolidated statement of income.

CASH EQUIVALENTS Short-term investments, which include government securities and other instruments with government securities as collateral, that have a maturity of three months or less from the date of purchase are classified as cash equivalents.

MARKETABLE SECURITIES The Company classifies its investments in marketable securities as available-for-sale or held-to-maturity in accordance with the provisions of SFAS No. 115, Accounting for Certain Investments in Debt and Equity Securities. The Company does not have any investments classified as trading. Available-for-sale securities are carried at fair value with the unrealized gain or loss, net of tax, reported in other comprehensive income. Held-to-maturity securities are recorded at amortized cost. Premiums and discounts are amortized or accreted into earnings over the life of the related available-for-sale or held-to-maturity security. Dividend and interest income is recognized when earned. Unrealized losses considered to be other than temporary are recognized currently in earnings. The cost of securities sold is based on the specific identification method. The fair value of investment securities is determined by available market prices.

PROPERTY, PLANT AND EQUIPMENT The Company uses the successful efforts method to account for exploration and development expenditures. Leasehold acquisition costs are capitalized. If proved reserves are found on an undeveloped property, leasehold cost is transferred to proved properties. Costs of undeveloped leases are generally expensed over the life of the leases. In certain cases, a determination of whether a drilled exploration well has found proved reserves can not be made immediately. This is generally due to the need for a major capital expenditure to produce and/or evacuate the hydrocarbon(s) found. The determination of whether to make such a capital expenditure is usually dependent on whether further exploratory wells find a sufficient quantity of additional reserves. Using guidance issued in FASB Position 19-1, Accounting for Suspended Well Costs, which became effective in April 2005, the Company capitalizes well costs in Property, Plant and Equipment when the well has found a sufficient quantity of reserves to justify its completion as a producing well and the Company is making sufficient progress assessing the reserves and the economic and operating viability of the project. The Company reevaluates its capitalized drilling costs at least annually to ascertain whether drilling costs continue to qualify for ongoing capitalization. Other exploratory costs are charged to expense as incurred. Development costs, including unsuccessful development wells, are capitalized.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Oil and gas properties are evaluated by field for potential impairment. Other properties are evaluated for impairment on a specific asset basis or in groups of similar assets as applicable. An impairment is recognized when the estimated undiscounted future net cash flows of an evaluated asset are less than its carrying value.

F-8

Table of Contents**Index to Financial Statements**

As described in Note G, the Company adopted Statement of Financial Accounting Standards (SFAS) No. 143, Accounting for Asset Retirement Obligations, on January 1, 2003. Under SFAS No. 143, estimated asset retirement costs are generally recognized when the asset is placed in service. Asset retirement costs are estimated by the Company's engineers using existing regulatory requirements and anticipated future inflation rates. Actual costs of asset retirements such as dismantling oil and gas production facilities and site restoration are charged against the related liability.

Depreciation and depletion of producing oil and gas properties is recorded based on units of production. Unit rates are computed for unamortized exploration drilling and development costs using proved developed reserves and for unamortized leasehold costs using all proved reserves. As more fully described on page F-32 of this Form 10-K report, proved reserves are estimated by the Company's engineers and are subject to future revisions based on availability of additional information. Asset retirement costs are amortized over proved reserves using the units of production method. Refineries and certain marketing facilities are depreciated primarily using the composite straight-line method with depreciable lives ranging from 16 to 25 years. Gasoline stations and other properties are depreciated over 3 to 20 years by individual unit on the straight-line method. Gains and losses on asset disposals or retirements are included in income as a separate component of revenues.

Full plant turnarounds for major processing units are scheduled at 4 1/2 year intervals at the Meraux, Louisiana refinery and five year intervals at the Superior, Wisconsin refinery. Turnarounds at the Milford Haven, Wales refinery are scheduled on a four year cycle. Turnarounds for coking units at Syncrude Canada Ltd. are scheduled at intervals of two to three years. Turnaround work associated with various other less significant units at the Company's refineries and Syncrude will occur during the interim period and will vary depending on operating requirements and events. Murphy accrues in advance for estimated costs of these turnarounds by recording monthly expense provisions. Future major repair costs are estimated by the Company's engineers. Actual costs incurred are charged against the accrued liability. Once the turnaround is completed and actual costs are reasonably known, variances between accrued and actual costs are recorded in Operating Expenses in the income statement in the current period. All other maintenance and repairs are expensed. Renewals and betterments are capitalized.

INVENTORIES Unsold crude oil production is carried in inventory at the lower of cost, generally applied on a first-in first-out (FIFO) basis, or market. Refinery inventories of crude oil and other feedstocks and finished product inventories are valued at the lower of cost, generally applied on a last-in first-out (LIFO) basis, or market. Materials and supplies are valued at the lower of average cost or estimated value.

GOODWILL The excess of the purchase price over the fair value of net assets acquired with the purchase of Beau Canada Exploration Ltd. (Beau Canada) in 2000 was recorded as goodwill. All goodwill recorded at December 31, 2005 and 2004 arose from the purchase of Beau Canada by the Company's wholly owned Canadian subsidiary. In accordance with SFAS No. 142, Goodwill and Other Intangible Assets, goodwill is not amortized. SFAS No. 142 requires an annual assessment of recoverability of the carrying value of goodwill. The Company assesses goodwill recoverability at each year-end by comparing the fair value of net assets for conventional oil and natural gas properties in Canada with the carrying value of these net assets including goodwill. The fair value of the conventional oil and natural gas reporting unit is determined using the expected present value of future cash flows. The carrying amount of goodwill at December 31, 2005 and 2004 was \$44,206,000 and \$43,582,000, respectively. The change in the carrying amount of goodwill during 2005 was primarily caused by a change in the foreign currency translation rate between years. Based on its assessment of the fair value of its Canadian conventional oil and natural gas operations, the Company believes the recorded value of goodwill is not impaired at December 31, 2005. Should a future assessment indicate that goodwill is not fully recoverable, an impairment charge to write down the carrying value of goodwill would be required.

ENVIRONMENTAL LIABILITIES A liability for environmental matters is established when it is probable that an environmental obligation exists and the cost can be reasonably estimated. If there is a range of reasonably estimated costs, the most likely amount will be recorded, or if no amount is most likely, the minimum of the range is used. Related expenditures are charged against the liability. Environmental remediation liabilities have not been discounted for the time value of future expected payments. Environmental expenditures that have future economic benefit are capitalized.

INCOME TAXES The Company accounts for income taxes using the asset and liability method. Under this method, income taxes are provided for amounts currently payable and for amounts deferred as tax assets and liabilities based on differences between the financial statement carrying amounts and the tax bases of existing assets and liabilities. Deferred income taxes are measured using the enacted tax rates that are assumed will be in effect when the differences reverse. Petroleum revenue taxes are provided using the estimated effective tax rate over the life of applicable U.K. properties. The Company uses the deferral method to account for Canadian investment tax credits associated with the Hibernia and Terra Nova oil fields.

FOREIGN CURRENCY Local currency is the functional currency used for recording operations in Canada and Spain and for refining and marketing activities in the United Kingdom. The U.S. dollar is the functional currency used to record all other operations. Exchange gains or losses from transactions in a currency other than the functional currency are included in earnings in the Consolidated Statement of Income.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Gains or losses from translating foreign functional currency into U.S. dollars are included in Accumulated Other Comprehensive Income on the Consolidated Balance Sheet.

F-9

Table of Contents**Index to Financial Statements**

DERIVATIVE INSTRUMENTS AND HEDGING ACTIVITIES The Company accounts for derivative instruments and hedging activity under SFAS No. 133, as amended by SFAS No. 138 and No. 149. The fair value of a derivative instrument is recognized as an asset or liability in the Company's Consolidated Balance Sheet. Upon entering into a derivative contract, the Company may designate the derivative as either a fair value hedge or a cash flow hedge, or decide that the contract is not a hedge, and thenceforth, recognize changes in the fair value of the contract in earnings. The Company documents the relationship between the derivative instrument designated as a hedge and the hedged items as well as its objective for risk management and strategy for use of the hedging instrument to manage the risk. Derivative instruments designated as fair value or cash flow hedges are linked to specific assets and liabilities or to specific firm commitments or forecasted transactions. The Company assesses at inception and on an ongoing basis whether a derivative instrument used as a hedge is highly effective in offsetting changes in the fair value or cash flows of the hedged item. A derivative that is not a highly effective hedge does not qualify for hedge accounting. Changes in the fair value of a qualifying fair value hedge are recorded in earnings along with the gain or loss on the hedged item. Changes in the fair value of a qualifying cash flow hedge are recorded in other comprehensive income until the hedged item is recognized in earnings. When the income effect of the underlying cash flow hedged item is recognized in the Statement of Income, the fair value of the associated cash flow hedge is reclassified from other comprehensive income into earnings. Ineffective portions of a cash flow hedged derivative's change in fair value are recognized currently in earnings. If a derivative instrument no longer qualifies as a cash flow hedge and the underlying forecasted transaction is no longer probable of occurring, hedge accounting is discontinued and the gain or loss recorded in other comprehensive income is recognized immediately in earnings.

NET INCOME PER COMMON SHARE Basic income per Common share is computed by dividing net income for each reporting period by the weighted average number of Common shares outstanding during the period. Diluted income per Common share is computed by dividing net income for each reporting period by the weighted average number of Common shares outstanding during the period plus the effects of potentially dilutive Common shares. Per share amounts for 2004 and 2003 have been restated to reflect the Company's two-for-one stock split effective June 3, 2005.

STOCK OPTIONS Through 2005, the Company accounted for stock options using the intrinsic-value based method of accounting as prescribed by Accounting Principles Board (APB) Opinion No. 25, Accounting for Stock Issued to Employees and related interpretations. Under APB 25, the Company accrued costs of restricted stock and any stock option deemed to be variable in nature over the vesting/performance period and adjusted such costs for changes in the fair market value of Common Stock. No compensation expense was recorded for fixed stock options since all option prices have been equal to or greater than the fair market value of the Company's stock on the date of grant. As more fully described in Note B, SFAS No. 123 (revised 2004), Share-Based Payment, will require the Company to expense the fair value of stock-based compensation, including stock options, beginning on January 1, 2006.

Had the Company recorded compensation expense for stock options as prescribed by the previously issued SFAS No. 123, Accounting for Stock-Based Compensation, net income and earnings per share would be the pro forma amounts shown in the following table.

<i>(Thousands of dollars except per share data)</i>		2005	2004	2003
Net income	As reported	\$ 846,452	701,315	294,197
	Restricted stock compensation expense included in income, net of tax	5,829	1,353	197
	Total stock-based compensation expense using fair value method for all awards, net of tax	(10,309)	(6,199)	(5,442)
Net income	Pro forma	\$ 841,972	696,469	288,952
Net income per share	As reported, basic	\$ 4.59	3.81	1.60
	Pro forma, basic	4.57	3.78	1.57
	As reported, diluted	4.51	3.75	1.59
	Pro forma, diluted	4.48	3.72	1.55

The pro forma net income calculations reflect the following fair values of stock options granted in 2005, 2004 and 2003; fair values of options have been estimated using the Black-Scholes pricing model and the weighted-average assumptions as shown.

	2005	2004	2003
Fair value per option at grant date	\$ 11.79*	7.46*	\$ 5.16*

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

Assumptions			
Dividend yield	1.25%	1.86%	2.12%
Expected volatility	26.00%	27.81%	28.77%
Risk-free interest rate	3.74%	3.24%	3.01%
Expected life	5 yrs.	5 yrs.	5 yrs.

* Fair values have been adjusted to reflect the two-for-one stock split effective June 3, 2005.

USE OF ESTIMATES In preparing the financial statements of the Company in conformity with U.S. generally accepted accounting principles, management has made a number of estimates and assumptions related to the reporting of assets, liabilities, revenues, and expenses and the disclosure of contingent assets and liabilities. Actual results may differ from the estimates.

Note B New Accounting Principles and Recent Accounting Pronouncements

The Financial Accounting Standards Board (FASB) has issued SFAS No. 123 (revised 2004), Share Based Payment, which replaces SFAS No. 123, Accounting for Stock-Based Compensation, and supersedes APB Opinion No. 25, Accounting for Stock Issued to Employees. SFAS No. 123 (revised 2004) requires that the cost resulting from all share-based payment transactions be recognized as an expense in the financial statements using a fair-value-based measurement method over the periods that the awards vest. The adoption of this statement will increase compensation expense by including a cost in future periods for the Company's stock options and Employee Stock Purchase Plan. The statement will be effective for the Company beginning January 1, 2006. The Company provides pro forma disclosures in Note A as if SFAS No. 123 was currently being applied. The Company expects to use the modified prospective transition method upon adoption of SFAS 123 (revised). Stock option awards are expected to qualify for accounting as equity awards. The adoption of this statement will increase compensation expense in the consolidated statement of income beginning in 2006 by including cost for the Company's stock options and Employee Stock Purchase Plan. The Company has preliminarily estimated this incremental expense to be \$10 million in 2006.

The Emerging Issues Task Force (EITF) of the FASB has issued EITF 03-13, Applying the Conditions in Paragraph 42 of SFAS No. 144 in Determining Whether to Report Discontinued Operations. The EITF generally believes that current practice with respect to applying the criteria in paragraph 42 of SFAS No. 144 has not been applied consistently and has not resulted in broadening the reporting of asset dispositions as discontinued operations. EITF 03-13 contains further guidance for evaluating the cash flows of the component sold and what constitutes significant continuing involvement. In certain industries, EITF 03-13 may lead to more asset disposals being reported as discontinued operations in future periods. However, in the oil and gas industry, it may cause more asset disposals to continue to be classified as continuing operations due to clarification of what constitutes continuing involvement. This standard was adopted by the Company for all asset disposal transactions occurring after January 1, 2005.

In October 2004 the Tax Deduction on Qualified Production Activities Provided by the American Jobs Creation Act of 2004 (the Act) became law. The FASB issued FASB Staff Position (FSP) 109-1 in December 2004 to provide guidance on the application of SFAS No. 109, Accounting for Income Taxes, to the provision within the Act that provides, beginning in 2005, a tax deduction on qualified production activities. The tax deduction phases in at 3% in 2005 and reaches 9% in 2010. FSP 109-1 concluded that the tax benefit for the deduction should be recognized as realized. This FSP was effective upon issuance and the Company applied it in computing U.S. income tax expense in 2005. The Company recorded a tax benefit of \$3,500,000 in 2005 related to the Act.

The FASB issued SFAS No. 153, Exchanges of Nonmonetary Assets an amendment of APB Opinion No. 29, in December 2004. This statement addressed the measurement of exchanges of nonmonetary assets and eliminated the exception from fair value measurement for nonmonetary exchanges of similar productive assets and replaced it with an exception for exchanges that do not have commercial substance. SFAS No. 153 was adopted by the Company on a prospective basis for nonmonetary asset exchanges occurring after June 30, 2005. The adoption of this statement did not have a significant impact on the Company's results of operations in 2005.

In March 2005, the FASB issued FASB Interpretation No. 47, Accounting for Conditional Asset Retirement Obligations, an interpretation of SFAS No. 143. This interpretation clarifies the term conditional asset retirement obligation as used in SFAS No. 143 and when a company would have sufficient information to reasonably estimate the fair value of an asset retirement obligation. This interpretation was adopted by the Company during the fourth quarter 2005 and it had no impact on the Company's results of operations for 2005.

SFAS No. 151, Inventory Costs, was issued by the FASB in November 2004. This statement amends Accounting Research Bulletin No. 43, to clarify that abnormal amounts of idle facility expense, freight, handling costs and wasted materials should be recognized as current-period charges, and it also requires that allocation of fixed production overheads be based on the normal capacity of the related production facilities. The provisions of this statement will be effective on a prospective basis beginning January 1, 2006, and the Company does not expect the adoption of this statement to have a significant impact on its results of operations.

In March 2005, the EITF decided in Issue 04-6, Accounting for Stripping Costs Incurred during Production in the Mining Industry, that mining operations should account for post-production stripping costs as a variable production cost that should be considered a component of mineral inventory costs. The Company's synthetic oil operations at Syncrude may be affected by this ruling. The EITF consensus is effective for the Company as of January 1, 2006 and any adjustment required upon adoption will be recorded as the cumulative effect of a change in accounting

principle. The Company does not currently expect the adoption of this consensus to have a significant impact on its financial statements.

F-11

Table of Contents**Index to Financial Statements**

In September 2005, the EITF decided in Issue 04-13, Accounting for Purchases and Sales of Inventory with the Same Counterparty, that two or more exchange transactions involving inventory with the same counterparty that are entered into in contemplation of one another should be combined for purposes of evaluating the effect of APB Opinion 29, Accounting for Nonmonetary Transactions. Additionally, the EITF decided that a nonmonetary exchange where an entity transfers finished goods inventory in exchange for the receipt of raw materials or work-in-progress inventory within the same line of business should generally be recognized by the entity at fair value. This consensus will be applied to new arrangements entered into beginning April 1, 2006, and to all inventory transactions that are completed after December 15, 2006 for arrangements entered into prior to March 15, 2006. The Company does not expect the adoption of this consensus to have a significant impact on its financial statements.

Note C Discontinued Operations

The Company sold most of its western Canadian conventional oil and gas assets (sale properties) in the second quarter of 2004 for net proceeds of \$582,973,000. The Company recorded a gain of \$171,095,000, net of \$23,486,000 in income taxes, from sale of the properties in 2004. In 2005, the Company recognized additional income on the sale of \$8,549,000 due to a favorable adjustment of previously recorded income tax expense. The operating results for the sale properties and the gain on sale have been reported as discontinued operations for all periods presented. The Company primarily utilized the proceeds of the sale to repay debt under revolving credit agreements. At the time of sale, the sale properties produced about 20,000 barrels of oil equivalent per day and had total proved reserves of approximately 43 million barrels equivalent from heavy oil, light oil, and natural gas properties.

The major assets and liabilities associated with the sale properties at the time of the sale were as follows:

(Thousands of dollars)

Inventory	\$ 1,741
Prepaid expense	907
Property, plant and equipment, net of accumulated depreciation, depletion and amortization	407,982
Goodwill, net	23,091
Other noncurrent assets	4,214
Assets sold	\$ 437,935
Deferred income taxes	\$ 25,092
Asset retirement obligations	49,543
Liabilities associated with assets sold	\$ 74,635

The following table reflects the results of operations from the properties disposed of including gains on sale.

<i>(Thousands of dollars)</i>	Year Ended December 31,		
	2005	2004	2003
Revenues, including a pretax gain on sale of assets of \$194,581 in 2004	\$	274,568	207,387
Income before income tax expense		244,676	44,962
Income tax expense (benefit)	(8,549)	39,756	22,182

Note D Property, Plant and Equipment

<i>(Thousands of dollars)</i>	December 31, 2005		December 31, 2004

² Includes \$36,138 in 2005 and \$21,527 in 2004 related to administrative assets and support equipment.

Table of Contents**Index to Financial Statements**

In the Consolidated Statement of Income for 2003, the Company recorded noncash charges of \$8,314,000 for impairment of certain properties. After related income tax benefits, these write-downs reduced net income by \$5,404,000 in 2003. The charge included \$5,314,000 to write-down the cost of a refined product terminal to be closed and certain components of the Meraux refinery that were rendered obsolete upon completion of the refinery upgrade, and \$3,000,000 to write-down the cost of a natural gas field in the Gulf of Mexico due to downward revisions in reserves caused by poor well performance. The carrying value of the natural gas field was reduced to its fair value based on projected future discounted net cash flows using the Company's estimate of future commodity prices.

During the three years ended December 31, 2005, the Company sold certain oil and gas properties and other assets and recorded before tax gains of \$175,140,000 in 2005, \$69,594,000 in 2004 and \$61,524,000 in 2003. The primary assets sold in 2005 were mature oil and gas properties on the continental shelf of the Gulf of Mexico. In 2004, the Company sold the T Block field in the U.K. North Sea and in 2003 it sold the Ninian and Columba fields in the U.K. North Sea.

The FASB has issued FSP 19-1 to provide guidance on the accounting for exploratory well costs and to amend SFAS No. 19, Financial Accounting and Reporting by Oil and Gas Producing Companies. The guidance in FSP 19-1 applies to companies that use the successful efforts method of accounting as described in SFAS No. 19. This FSP clarifies that exploratory well costs should continue to be capitalized when the well has found a sufficient quantity of reserves to justify its completion as a producing well and the company is making sufficient progress assessing the reserves and the economic and operating viability of the project. The guidance in this FSP was applied on a prospective basis beginning in April 2005 to existing and newly-capitalized exploratory well costs. The adoption of this FSP did not have any effect on the Company's net income or financial condition.

At December 31, 2005, 2004 and 2003, the Company had total capitalized drilling costs pending the determination of proved reserves of \$275,256,000, \$106,105,000 and \$158,034,000, respectively. The following table reflects the net changes in capitalized exploratory well costs during the three-year period ended December 31, 2005.

<i>(Thousands of dollars)</i>	2005	2004	2003
Beginning balance at January 1	\$ 106,105	158,034	72,556
Additions to capitalized exploratory well costs pending the determination of proved reserves	169,151	94,048	85,478
Reclassifications to proved properties based on the determination of proved reserves		(125,211)	
Capitalized exploratory well costs charged to expense or sold		(20,766)	
Ending balance at December 31	\$ 275,256	106,105	158,034

The following table provides an aging of capitalized exploratory well costs based on the date the drilling was completed and the number of projects for which exploratory well costs have been capitalized since the completion of drilling.

<i>(Thousands of dollars)</i>	2005	2004	2003
Exploratory well costs capitalized for one year or less	\$ 172,596	93,956	82,262
Exploratory well costs capitalized for more than one year	102,660	12,149	75,772
Balance at December 31	\$ 275,256	106,105	158,034

Number of projects with exploratory well costs that have been capitalized for more than one year 8 1 7
Of the \$102,660,000 of exploratory well costs capitalized more than one year, \$23,181,000 is in the U.S. and \$79,479,000 is in Malaysia. For the U.S. amounts, further drilling is ongoing or planned. In Malaysia, plans call for further drilling associated with suspended well costs of \$25,038,000 and development studies are in various stages of completion for suspended well costs of \$54,441,000.

Note E Financing Arrangements

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

At December 31, 2005, the Company had an unused \$1 billion committed credit facility with a major banking consortium that matures in June 2010. Borrowings under this facility bear interest at prime or varying cost of fund options. Facility fees are due at varying rates on the commitment. The Company also had uncommitted lines of credit with banks at December 31, 2005 totaling an equivalent US \$774 million for a combination of U.S. dollar and Canadian dollar borrowings. The Company has a shelf registration statement on file with the U.S. Securities and Exchange Commission that permits the offer and sale of up to \$650 million in debt and/or equity securities.

Table of Contents**Index to Financial Statements****Note F Long-term Debt**

<i>(Thousands of dollars)</i>	December 31	
	2005	2004
Notes payable		
6.375% notes, due 2012, net of unamortized discount of \$728 at December 31, 2005	\$ 349,272	349,157
7.05% notes, due 2029, net of unamortized discount of \$2,171 at December 31, 2005	247,829	247,737
6.23% structured loan		46,277
Other, 6% to 8%, due 2006-2021	840	956
Total notes payable	597,941	644,127
Nonrecourse debt of a subsidiary		
Loans payable to Canadian government, interest free, payable in Canadian dollars, due 2006-2009	16,123	19,955
Total debt including current maturities	614,064	664,082
Current maturities	(4,490)	(50,727)
Total long-term debt	\$ 609,574	613,355

Maturities for the four years after 2006 are: \$4,482,000 in 2007, \$4,481,000 in 2008, \$2,707,000 in 2009 and \$1,000 in 2010.

With the support of a major bank consortium, the 6.23% structured loan was borrowed by a Canadian subsidiary in December 2000 to replace temporary financing of the Beau Canada acquisition. The loan was repaid in December 2005 in accordance with its original terms.

The interest-free loans from the Canadian government were used to finance expenditures for the Hibernia field. The outstanding balance is primarily to be repaid in equal annual installments through 2009.

Note G Asset Retirement Obligations

On January 1, 2003, the Company adopted SFAS No. 143, Accounting for Asset Retirement Obligations, which requires the Company to record a liability equal to the fair value of the estimated cost to retire an asset. The asset retirement obligation (ARO) liability is recorded in the period in which the obligation meets the definition of a liability, which is generally when the asset is placed in service. When the liability is initially recorded, the Company increases the carrying amount of the related long-lived asset by an amount equal to the original liability. The liability is accreted to its present value each period, and the capitalized cost is depreciated over the useful life of the related long-lived asset. Any difference between costs incurred upon settlement of an asset retirement obligation and the recorded liability is recognized as a gain or loss in the Company's earnings. The estimation of the future asset retirement obligation is based on a number of assumptions requiring professional judgment. The Company cannot predict the type of revisions to these assumptions that may be required in future periods due to the availability of additional information such as: prices for oil field services, technological changes, governmental requirements and other factors. Upon adoption of SFAS No. 143, the Company recorded a charge of \$6,993,000, net of \$1,400,000 in income taxes, as the cumulative effect of a change in accounting principle.

The majority of the ARO recognized by the Company at December 31, 2005 and 2004 relates to the estimated costs to dismantle and abandon its producing oil and gas properties and related equipment. A portion of the ARO relates to retail gasoline stations. The Company did not record an ARO for its refining and certain of its marketing assets because sufficient information is presently not available to estimate a range of potential settlement dates for the obligation. These assets are consistently being upgraded and are expected to be operational into the foreseeable future. In these cases, the obligation will be initially recognized in the period in which sufficient information exists to estimate the obligation.

A reconciliation of the beginning and ending aggregate carrying amount of the asset retirement obligation is shown in the following table.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

<i>(Thousands of dollars)</i>	2005	2004
Balance at beginning of year	\$ 201,932	252,397
Accretion expense	9,704	11,226
Liabilities incurred	13,438	20,340
Revision of previous estimates	6,936	2,602
Liabilities settled	(56,066)	(87,453)
Changes due to translation of foreign currencies	879	2,820
Balance at end of year	\$ 176,823	201,932

Accretion expense of \$1,209,000 included in the above table for 2004 was included in discontinued operations. Liabilities settled in 2005 and 2004 included approximately \$47,554,000 and \$76,932,000, respectively, for reductions of ARO associated with the sales of oil and gas producing properties.

F-14

Table of Contents**Index to Financial Statements****Note H Income Taxes**

The components of income from continuing operations before income taxes for each of the three years ended December 31, 2005 and income tax expense (benefit) attributable thereto were as follows.

<i>(Thousands of dollars)</i>	2005	2004	2003
Income (loss) from continuing operations before income taxes			
United States	\$ 628,691	244,758	(50,296)
Foreign	743,368	560,178	424,501

Federal Current	\$ 165,019	22,446	(5,321)
Deferred	43,693	78,446	(11,911)
Noncurrent		(1,339)	(18,217)
	208,712	99,553	(35,449)
State	10,229	2,154	84
Foreign Current	319,976	194,405	96,795
Deferred*	(5,333)	13,759	24,715
Noncurrent	572	(1,330)	9,650
	315,215	206,834	131,160
Total	\$ 534,156	308,541	95,795

* Includes benefits of \$4,923 in 2004 and \$10,101 in 2003 for enacted reductions in federal and provincial tax rates in Canada. Income tax benefits attributable to employee stock option transactions of \$15,567,000 in 2005, \$553,000 in 2004 and \$467,000 in 2003 were included in Capital in Excess of Par Value in the Consolidated Balance Sheets. Income tax benefits of \$7,795,000 in 2005, \$2,712,000 in 2004 and \$11,549,000 in 2003 relating to derivatives were included in Accumulated Other Comprehensive Income (AOCI).

Total income tax expense in 2005, 2004 and 2003, including taxes associated with discontinued operations and the cumulative effect of a change in accounting principle, was \$525,607,000, \$348,297,000, and \$116,577,000, respectively.

Noncurrent taxes, classified in the Consolidated Balance Sheets as a component of Deferred Credits and Other Liabilities, relate primarily to matters not resolved with various taxing authorities.

The following table reconciles income taxes based on the U.S. statutory tax rate to the Company's income tax expense from continuing operations and before cumulative effect of accounting change.

<i>(Thousands of dollars)</i>	2005	2004	2003
Income tax expense based on the U.S. statutory tax rate	\$ 480,221	281,727	130,971

F-15

Table of Contents**Index to Financial Statements**

An analysis of the Company's deferred tax assets and deferred tax liabilities at December 31, 2005 and 2004 showing the tax effects of significant temporary differences follows.

<i>(Thousands of dollars)</i>	2005	2004
Deferred tax assets		
Property and leasehold costs	\$ 151,808	118,179
Liabilities for dismantlements and major repairs	82,765	88,580
Postretirement and other employee benefits	61,325	58,770
Foreign tax credit carryforwards	39,869	22,625
Other deferred tax assets	70,305	72,057
Total gross deferred tax assets	406,072	360,211
Less valuation allowance	(151,057)	(83,962)
Net deferred tax assets*	255,015	276,249
Deferred tax liabilities		
Property, plant and equipment	(73,509)	(82,048)
Accumulated depreciation, depletion and amortization	(541,564)	(521,311)
Foreign currency translation gains	(97,726)	(91,019)
Other deferred tax liabilities	(87,716)	(96,740)
Total gross deferred tax liabilities	(800,515)	(791,118)
Net deferred tax liabilities	\$ (545,500)	(514,869)

* Includes deferred tax assets in Malaysia of \$28,314,000 and \$30,777,000 as of December 31, 2005 and 2004, respectively, that are reported in Deferred Charges and Other Assets in the Consolidated Balance Sheet.

In management's judgment, the net deferred tax assets in the preceding table will more likely than not be realized as reductions of future taxable income or by utilizing available tax planning strategies. The valuation allowance for deferred tax assets relates primarily to tax assets arising in foreign tax jurisdictions and foreign tax credit carryforwards, and in the judgment of management, these tax assets are not likely to be realized. The foreign tax credit carryforwards expire in 2011, 2014 and 2015. The Company recorded deferred tax benefits of \$31,858,000 in 2004 and \$11,410,000 in 2003 to recognize anticipated future tax benefits on exploration and other expenses related to Blocks K, SK 309 and SK 311 in Malaysia. The valuation allowance increased \$67,095,000 in 2005, with these changes primarily offsetting the change in certain deferred tax assets. Any subsequent reductions of the valuation allowance will be reported as reductions of tax expense assuming no offsetting change in the deferred tax asset.

During 2005 and 2004, the Company recorded income tax expense of \$8,520,000 and \$45,863,000, respectively, related to repatriation of U.K. and Canadian earnings to the U.S. The most significant portion of the expense in both years related to a 5% withholding tax on funds repatriated from Canada. This tax was not recorded in prior years because, until the sale of most western Canadian assets occurred in 2004, these funds were considered permanently invested, and therefore, met the criteria for not recording income tax expense. The Company has not recognized a deferred tax liability for undistributed earnings of certain international subsidiaries because such earnings are considered permanently invested in foreign countries. As of December 31, 2005, undistributed earnings of international subsidiaries considered permanently invested were approximately \$922,000,000. The unrecognized deferred tax liability is dependent of many factors including withholding taxes under current tax treaties and foreign tax credits and is estimated to be \$46,100,000. The Company does not consider undistributed earnings from certain other international operations to be permanently invested; however, any estimated tax liabilities upon repatriation of earnings from these international operations are expected to be offset with foreign tax credits.

Tax returns are subject to audit by various taxing authorities. In 2005, 2004 and 2003, the Company recorded benefits to income of \$21,849,000, \$5,545,000 and \$20,146,000, respectively, from settlements of U.S. and foreign tax issues primarily related to prior years. Although the Company believes that adequate accruals have been made for unsettled issues, additional gains or losses could occur in future years from

resolution of outstanding matters.

F-16

Table of Contents**Index to Financial Statements****Note I Incentive Plans**

The Company's 1992 Stock Incentive Plan (1992 Plan) authorized the Executive Compensation Committee (the Committee) to make annual grants of the Company's Common Stock to executives and other key employees as follows: (1) stock options (nonqualified or incentive), (2) stock appreciation rights (SAR), and/or (3) restricted stock. Annual grants may not exceed 1% of shares outstanding at the end of the preceding year; allowed shares not granted may be granted in future years. In addition, shareholders approved the Stock Plan for Non-Employee Directors (2003 Director Plan) in 2003. This plan permits the issuance of restricted stock, stock options or a combination thereof to the Company's Directors. Through the end of 2005, the Company has used APB Opinion No. 25 to account for stock-based compensation, accruing costs of restricted stock and any stock options deemed to be variable in nature over the vesting/performance periods and adjusting these costs for changes in the fair market value of the Company's Common Stock. Compensation cost charged against income for stock-based plans was \$15,181,000 in 2005, \$3,122,000 in 2004 and \$303,000 in 2003. Outstanding awards were not modified in the last three years.

STOCK OPTIONS The Committee fixes the option price of each option granted at no less than fair market value (FMV) on the date of the grant and fixes the option term at no more than 10 years from such date. Each option granted to date under the Plan has had a term of 7 to 10 years, has been nonqualified, and has had an option price equal to or higher than FMV at date of grant. Under the 1992 Plan, one-half of each grant may be exercised after two years and the remainder after three years. Under the 2003 Director Plan, one-third of each grant may be exercised after each of the first three years.

Changes in options outstanding during the last three years are presented in the following table. All shares and average exercise prices presented have been adjusted for the two-for-one stock split effective June 3, 2005.

	Number	Average Exercise Price
	of Shares	Price
Outstanding at December 31, 2002	6,593,680	\$ 15.54
Granted at FMV	1,691,000	21.54
Exercised	(173,000)	13.01
Forfeited	(42,560)	17.65
Outstanding at December 31, 2003	8,069,120	16.80
Granted at FMV	1,088,460	30.31

SAR SAR may be granted in conjunction with or independent of stock options; if granted, the Committee would determine when SAR may be exercised and the price. No SAR have been granted.

RESTRICTED STOCK Shares of restricted stock were granted under the Plan in certain years. Each grant will vest if the Company achieves specific financial objectives at the end of the performance period. Such performance periods have ranged from three to five years in length. Additional shares may be awarded if objectives are exceeded, but some or all shares may be forfeited if objectives are not met. During the performance period, a grantee receives dividends and may vote these shares, but shares are subject to transfer restrictions and are all or partially forfeited if a grantee terminates. The Company shall reimburse a grantee up to 50% of the award value for personal income tax liability on stock awarded. In 2003, additional shares related to the 1998 grant were awarded based on financial objectives achieved. Changes in restricted stock outstanding for each of the last three years are presented in the following table.

<i>(Number of shares)*</i>	2005	2004	2003
Balance at beginning of year	169,624		
Granted	358,950	170,900	128,168
Awarded			(128,168)
Forfeited	(14,555)	(1,276)	
Balance at end of year	514,019	169,624	

* All periods have been adjusted for the two-for-one stock split effective June 3, 2005.

CASH AWARDS The Committee also administers the Company's incentive compensation plans, which provide for annual or periodic cash awards to officers, directors and key employees. These cash awards are generally determinable based on the Company achieving specific financial objectives. Compensation expense of \$17,634,000, \$13,663,000 and \$14,931,000 was recorded in 2005, 2004 and 2003, respectively, for these plans.

EMPLOYEE STOCK PURCHASE PLAN (ESPP) The Company has an ESPP under which 600,000 shares of the Company's Common Stock can be purchased by eligible U.S. and Canadian employees. Each quarter, an eligible employee may elect to withhold up to 10% of his or her salary to purchase shares of the Company's stock at a price equal to 90% of the fair value of the stock as of the first day of the quarter. The ESPP will terminate on the earlier of the date that employees have purchased all 600,000 shares or June 30, 2007. Employee stock purchases under the ESPP were 33,425 shares at an average price of \$43.30 per share in 2005, 40,660 shares at \$31.92 in 2004, and 60,256 shares at \$22.40 in 2003. At December 31, 2005, 149,485 shares remained available for sale under the ESPP. Compensation costs related to the ESPP were immaterial. The number of shares and average prices shown above have been adjusted to reflect the two-for-one stock split effective June 3, 2005.

Note J Employee and Retiree Benefit Plans

PENSION AND POSTRETIREMENT PLANS The Company has defined benefit pension plans that are principally noncontributory and cover most full-time employees. All pension plans are funded except for the U.S. and Canadian nonqualified supplemental plans and the U.S. directors plan. All U.S. tax qualified plans meet the funding requirements of federal laws and regulations. Contributions to foreign plans are based on local laws and tax regulations. The Company also sponsors health care and life insurance benefit plans, which are not funded, that cover most retired U.S. employees. The health care benefits are contributory; the life insurance benefits are noncontributory.

Table of Contents**Index to Financial Statements**

The tables that follow provide a reconciliation of the changes in the plans' benefit obligations and fair value of assets for the years ended December 31, 2005 and 2004 and a statement of the funded status as of December 31, 2005 and 2004.

* Before reduction for associated deferred taxes of \$21,189 at December 31, 2005 and \$19,461 at December 31, 2004.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

A minimum pension liability adjustment was required for certain of the Company's plans. For these plans, accumulated benefit obligations exceeded the fair value of plan assets by \$67,250,000. After reductions for amounts charged to intangible assets, net of associated deferred income taxes, charges that reduced accumulated other comprehensive income of \$3,204,000, \$4,934,000 and \$31,449,000 were recorded in 2005, 2004 and 2003, respectively.

The Company's contributions shown in the table above for 2005 include \$14,500,000 of voluntary amounts in excess of U.S. statutorily required contributions.

F-19

Table of Contents**Index to Financial Statements**

The table that follows includes projected benefit obligations (PBO), accumulated benefit obligations and fair value of plan assets for plans where the PBO exceeded the fair value of plan assets.

	Projected		Accumulated		Fair Value	
	Benefit Obligations		Benefit Obligations		of Plan Assets	
	2005	2004	2005	2004	2005	2004
<i>(Thousands of dollars)</i>						
Funded qualified plans where PBO exceeds fair value of plan assets	\$ 341,125	316,271	299,582	278,632	252,632	239,067
Unfunded nonqualified and directors' plans where PBO exceeds fair value of plan assets	30,715	25,578	23,049	20,562		
Unfunded postretirement plans	71,224	58,516	42,915	39,531		

The table that follows provides the components of net periodic benefit expense for each of the three years ended December 31, 2005.

	Pension Benefits			Postretirement Benefits		
	2005	2004	2003	2005	2004	2003
<i>(Thousands of dollars)</i>						
Service cost	\$ 9,099	8,332	7,347	1,906	1,707	1,236
Interest cost	20,478	19,478	18,753	3,749	3,507	3,687
Expected return on plan assets	(19,092)	(18,620)	(17,275)			
Amortization of prior service cost	820	785	764	(277)	(277)	(95)
Amortization of transitional asset	(624)	(636)	(2,052)			
Recognized actuarial loss	5,916	4,554	3,664	1,595	1,347	1,334
	16,597	13,893	11,201	6,973	6,284	6,162
Curtailed expense			338			
Settlement gain		(1,069)				
Net periodic benefit expense	\$ 16,597	12,824	11,539	6,973	6,284	6,162

Settlement gains in 2004 related to employee reductions associated with the sale of western Canadian conventional oil and gas properties.
Curtailed expense in 2003 recorded unrecognized prior service costs related to the freezing of benefits under the Directors' retirement plan.

The preceding tables in this note include the following amounts related to foreign benefit plans.

	Pension		Postretirement	
	Benefits		Benefits	
	2005	2004	2005	2004
<i>(Thousands of dollars)</i>				
Benefit obligation at December 31	\$ 92,500	85,752		
Fair value of plan assets at December 31	85,300	74,596		
Net plan liability recognized	5,289	(408)		
Net periodic benefit expense	1,594	613		

Table of Contents**Index to Financial Statements**

The following table provides the weighted-average assumptions used in the measurement of the Company's benefit obligations at December 31, 2005 and 2004 and net periodic benefit expense for the years 2005 and 2004.

	Benefit Obligations				Net Periodic Benefit Expense			
	Pension Benefits		Postretirement Benefits		Pension Benefits		Postretirement Benefits	
	December 31,		December 31,		Year		Year	
	2005	2004	2005	2004	2005	2004	2005	2004
Discount rate	5.58%	5.89%	5.70%	6.00%	5.81%	6.08%	6.00%	6.25%
Expected return on plan assets	7.08%	7.42%			7.24%	7.42%		
Rate of compensation increase	4.06%	4.07%			4.06%	4.07%		

Discount rates are adjusted as necessary, generally based on changes in AA-rated corporate bond rates. Expected plan asset returns are based on long-term expectations for asset portfolios with similar investment mix characteristics. Expected compensation increases are based on historical averages for the Company.

The weighted average asset allocation for the Company's benefit plans at the annual measurement dates of September 30, 2005 and 2004 are presented in the following table.

	September 30,	
	2005	2004
Equity securities	56.3%	53.5%
Debt securities	38.6	42.4
Cash	5.1	4.1
	100.0%	100.0%

The Company has directed the asset investment advisors of its benefit plans to maintain a portfolio nearly balanced between equity and debt securities. The investment advisors may vary the asset mix within the range of 40% to 60% for both equity and debt securities. The Company believes that a nearly balanced portfolio of equity and debt securities represents the most appropriate long-term mix for future investment return on domestic plans' assets. Investment advisors are not permitted to invest benefit plan assets in Murphy Oil's Common Stock.

The Company's expected return on plan assets was 7.08% in 2005 and the return was determined based on an assessment of actual long-term historical returns and expected future returns for a balanced portfolio similar to that maintained by the plans. The 7.08% expected return was based on an expected average future equity securities return of 9.06% and a debt securities return of 5.45% and is net of average expected investment expenses of .33%. Over the last 10 years, the return on funded retirement plan assets has averaged 8.41%.

The Company currently expects during 2006 to make contributions of \$5,880,000 to its domestic defined benefit pension plans, \$1,589,000 to its foreign defined pension plans and \$3,556,000 to its domestic postretirement benefits plan.

Table of Contents**Index to Financial Statements**

The following benefit payments, which reflect expected future service, as appropriate, are expected to be paid from the assets of the plans or by the Company:

	Pension	Postretirement
<i>(Thousands of dollars)</i>	Benefits	Benefits
2006	\$ 18,715	3,556
2007	19,279	3,778
2008	19,776	3,964
2009	20,356	4,234
2010	21,109	4,489
2011-2015	121,767	26,426

For purposes of measuring postretirement benefit obligations at December 31, 2005, the future annual rates of increase in the cost of health care were assumed to be 8.0% for 2006 decreasing each year to an ultimate rate of 5.0% in 2010 and thereafter.

Assumed health care cost trend rates have a significant effect on the expense and obligation reported for the postretirement benefit plan. A 1% change in assumed health care cost trend rates would have the following effects.

<i>(Thousands of dollars)</i>	1% Increase	1% Decrease
Effect on total service and interest cost components of net periodic postretirement benefit expense for the year ended December 31, 2005	\$ 994	(786)
Effect on the health care component of the accumulated postretirement benefit obligation at December 31, 2005	10,883	(8,801)

During 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the Act) became law. Among other provisions, the Act changed prescription drug coverage under Medicare beginning in 2006. Generally, companies that provide qualifying prescription drug coverage that is deemed actuarially equivalent to Medicare coverage for retirees aged 65 and above will be eligible to receive a federal subsidy equal to 28% of drug costs between \$250 and \$5,000 per annum for each covered individual that does not elect to receive coverage under the new Medicare Part D. The Company currently provides prescription drug coverage to qualifying retirees under its retiree medical plan. As a result of provisions in the Act, the Company's accumulated postretirement benefit obligation was reduced by \$6,715,000 at December 31, 2004, and its postretirement benefit expense was \$1,410,000 and \$1,000,000 lower during 2005 and 2004, respectively.

THRIFT PLANS Most full-time employees of the Company may participate in thrift or savings plans by allotting up to a specified percentage of their base pay. The Company matches contributions at a stated percentage of each employee's allotment based on years of participation in the plans. A U.K. savings plan allows eligible employees to allot a portion of their base pay to purchase Company Common Stock at market value. Such employee allotments are matched by the Company. Common Stock issued from the Company's treasury under this U.K. savings plan was 16,571 shares in 2005, 6,604 shares in 2004 and 864 shares in 2003. Amounts charged to expense for these U.S. and U.K. plans were \$7,886,000 in 2005, \$4,895,000 in 2004 and \$5,377,000 in 2003.

Note K Financial Instruments and Risk Management

DERIVATIVE INSTRUMENTS Murphy makes limited use of derivative instruments to manage certain risks related to commodity prices, interest rates and foreign currency exchange rates. The use of derivative instruments for risk management is covered by operating policies and is closely monitored by the Company's senior management. The Company does not hold any derivatives for speculative purposes and it does not use derivatives with leveraged or complex features. Derivative instruments are traded primarily with creditworthy major financial institutions or over national exchanges such as the New York Mercantile Exchange. To qualify for hedge accounting, the changes in the market value of a derivative instrument must historically have been, and would be expected to continue to be, highly effective at offsetting

Table of Contents**Index to Financial Statements**

changes in the prices of the hedged item. To the extent that the change in fair value of a derivative instrument has less than perfect correlation with the change in the fair value of the hedged item, a portion of the change in fair value of the derivative instrument is considered ineffective and would normally be recorded in earnings during the affected period.

Natural Gas Fuel Price Risks The Company purchases natural gas as fuel at its Meraux, Louisiana and Superior, Wisconsin refineries, and as such, is subject to commodity price risk related to the purchase price of this gas. Murphy has hedged the cash flow risk associated with the cost of a portion of the natural gas it will purchase in 2006 by entering into financial contracts known as natural gas swaps with a remaining notional volume as of December 31, 2005 of 720,000 MMBTU (1 MMBTU = 1 million British Thermal Units). Other similar contracts covered a portion of 2005 and 2004 purchases. Under the natural gas swaps, the Company pays a fixed rate averaging \$3.35 per MMBTU and receives a floating rate in each month of settlement based on the average NYMEX price for the final three trading days of the month. Murphy has a risk management control system to monitor natural gas price risk attributable both to forecasted natural gas requirements and to Murphy's natural gas swaps. The control system involves using analytical techniques, including various correlations of natural gas purchase prices to future prices, to estimate the impact of changes in natural gas fuel prices on Murphy's cash flows. The fair value of the effective portions of the natural gas swaps and changes thereto is deferred in AOCI and is subsequently reclassified into Operating Expenses in the income statements in the periods in which the hedged natural gas fuel purchases occurred. During 2003, the Company determined that natural gas swap contract notional volumes with 2004 maturity dates exceeded forecasted 2004 natural gas purchases at its Meraux, Louisiana refinery while the ROSE unit was out of service. Accordingly, natural gas swap contracts with a notional volume of 3.4 million MMBTU at December 31, 2003 no longer qualified as a cash flow hedge. Therefore, 1.3 million MMBTU of these contracts were redesignated as a cash flow hedge of natural gas the Company expected to purchase at its Superior refinery during 2004, and the remaining 2.1 million MMBTU not qualifying as a hedge were marked to fair value through earnings during 2004. Gains of \$6,700,000 were recognized in earnings in 2003 as a result of the contracts no longer qualifying as a cash flow hedge. During 2004 the Company entered into natural gas price swap agreements with notional volumes of 2.5 million MMBTU that effectively fixed the settlement price of the previously acquired contracts that matured in July through October 2004. The critical terms of all the 2004 contracts were nearly identical. Murphy was required to pay the average NYMEX price for the final three trading days of the month and receive an average natural gas price of \$5.235 per MMBTU. For the three years ended December 31, 2005, the income effect from cash flow hedging ineffectiveness for these contracts was \$1,021,000, \$472,000 and \$4,377,000, respectively, net of income taxes of \$550,000, \$254,000 and \$2,357,000. During the years ended December 31, 2005 and 2004, the Company received approximately \$7,635,000 and \$21,798,000, respectively, in cash proceeds from maturing swap agreements.

Crude Oil Sales Price Risks The sales price of crude oil produced by the Company is subject to commodity price risk. Murphy hedged the cash flow risk associated with the sales price for a portion of its 2005 and 2006 Canadian heavy oil production by entering into forward sale contracts covering a notional volume of approximately 2,000 barrels per day in 2005 and 4,000 barrels per day in 2006. In 2006, the Company will pay the average of the posted price at the Hardisty terminal in Canada for each month and receive a fixed price of \$25.23 per barrel. In 2005, the Company paid the average Hardisty posted price and received \$29.00 per barrel. In 2003, Murphy hedged the cash flow risk associated with the sales price for the crude oil it produced in the United States and a portion of the oil produced in Canada by entering into crude oil swap contracts. The 2003 swaps covered a notional volume of 22,000 barrels per day of light oil and required Murphy to pay the average of the closing settlement price on the NYMEX for the Nearby Light Crude Futures Contract for each month and receive an average price of \$25.30 per barrel. Additionally, in 2003, there were heavy oil swaps with a notional volume of 10,000 barrels per day that required Murphy to pay the arithmetic average of the posted price at terminals at Kerrobert and Hardisty, Canada for each month and receive an average price of \$16.74 per barrel. Murphy has a risk management control system to monitor crude oil price risk attributable both to forecasted crude oil sales prices and to Murphy's hedging instruments. The control system involves using analytical techniques, including various correlations of crude oil sales prices to futures prices, to estimate the impact of changes in crude oil prices on Murphy's cash flows from the sale of light and heavy crude oil.

The fair values of the effective portions of the crude oil sales price hedges and changes thereto were deferred in AOCI and subsequently reclassified into Sales and Other Operating Revenues in the income statement in the periods in which the hedged crude oil sales occurred. During 2005, 2004 and 2003, earnings were increased by \$65,000, \$225,000 and \$1,507,000, respectively, for cash flow hedging ineffectiveness on crude oil sales price hedges. During 2005 and 2003 the Company paid approximately \$5,254,000 and \$66,950,000, respectively, for settlement of maturing crude oil sales swaps.

Table of Contents**Index to Financial Statements**

Natural Gas Sales Price Risks The sales price of natural gas produced by the Company is subject to commodity price risk. During the first ten months of 2004 Murphy had natural gas put options covering a combined United States natural gas sales volume averaging 25,000 MMBTU per day. The strike price provided the Company with a floor price of \$4.00 per MMBTU and these contracts settled monthly through October 2004. During 2003 Murphy hedged the cash flow risk associated with the sales price for a portion of the natural gas it produced in the United States and Canada by entering into natural gas swap and collar contracts. The swaps covered a combined notional volume averaging 24,200 MMBTU equivalents per day and required Murphy to pay the average relevant index (NYMEX or AECO C) price for each month and receive an average price of \$3.76 per MMBTU equivalent. The natural gas collars were for a combined notional volume averaging 26,700 MMBTU equivalents per day and provided Murphy with an average floor price of \$3.24 per MMBTU and an average ceiling price of \$4.64 per MMBTU. Murphy has a risk management control system to monitor natural gas price risk attributable both to forecasted natural gas sales prices and to Murphy's hedging instruments. The control system involves using analytical techniques, including various correlations of natural gas sales prices to futures prices, to estimate the impact of changes in natural gas prices on Murphy's cash flows from the sale of natural gas.

The fair values of the effective portions of the natural gas swaps collars and puts and changes thereto were deferred in AOCI and were subsequently reclassified into Sales and Other Operating Revenue in the income statement in the periods in which the hedged natural gas sales occurred. During 2004 and 2003, Murphy's earnings were not significantly affected by cash flow hedging ineffectiveness on natural gas sales price hedges. There were no settlement payments received in 2004 relating to the natural gas put options. During 2003, the Company paid \$13,107,000 for settlement of natural gas swap and collar agreements.

Based on fair value of contracts as of December 31, 2005, the Company expects to reclassify approximately \$13,459,000 in net after-tax losses from AOCI into earnings in 2006 as the forecasted transactions covered by hedging instruments actually occur. All forecasted transactions currently being hedged are expected to occur by December 2006.

FAIR VALUE The following table presents the carrying amounts and estimated fair values of financial instruments held by the Company at December 31, 2005 and 2004. The fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties. The table excludes cash and cash equivalents, trade accounts receivable, trade accounts payable and accrued expenses, all of which had fair values approximating carrying amounts. The fair value of investment in marketable securities in 2004 was estimated based on quotes offered by major financial institutions. The fair value of current and long-term debt was estimated based on rates offered to the Company at that time for debt of the same maturities. The Company has off-balance sheet exposures relating to certain financial guarantees and letters of credit. The fair value of these, which represents fees associated with obtaining the instruments, was nominal.

<i>(Thousands of dollars)</i>	2005		2004	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Financial assets (liabilities):				
Investment in marketable securities	\$		17,892	17,892
Natural gas fuel swaps	5,225	5,225	6,099	6,099
Crude oil sales swaps	(24,268)	(24,268)	594	594
Current and long-term debt	(614,064)	(664,231)	(664,082)	(791,200)

The carrying amounts of crude oil swaps and natural gas swaps in the preceding table are included in the Consolidated Balance Sheets in Accounts Receivable or Other Accrued Liabilities. Current and long-term debts are included under Current Maturities of Long-Term Debt, Notes Payable and Nonrecourse Debt of a Subsidiary.

CREDIT RISKS The Company's primary credit risks are associated with trade accounts receivable, cash equivalents and derivative instruments. Trade receivables arise mainly from sales of crude oil, natural gas and petroleum products to a large number of customers in the United States, Canada and the United Kingdom. The Company also has credit risk for sales of crude oil to various customers in Malaysia and Ecuador. The credit history and financial condition of potential customers are reviewed before credit is extended, security is obtained when deemed appropriate based on a potential customer's financial condition, and routine follow-up evaluations are made. The combination of these evaluations and the large number of customers tends to limit the risk of credit concentration to an acceptable level. Cash equivalents are placed with several major financial institutions, which limits the Company's exposure to credit risk. The Company controls credit risk on derivatives through credit approvals and monitoring procedures and believes that such risks are minimal because counterparties to the majority of transactions are major financial institutions.

Table of Contents**Index to Financial Statements****Note L Stockholder Rights Plan**

The Company's Stockholder Rights Plan provides for each Common stockholder to receive a dividend of one Right for each share of the Company's Common Stock held. The Rights will expire on April 6, 2008 unless earlier redeemed or exchanged. The Rights will detach from the Common Stock and become exercisable following a specified period of time after the first public announcement that a person or group of affiliated or associated persons (other than certain persons) has become the beneficial owner of 15% or more of the Company's Common Stock. The Rights have certain antitakeover effects and will cause substantial dilution to a person or group that attempts to acquire the Company without conditioning the offer on a substantial number of Rights being acquired. The Rights are not intended to prevent a takeover, but rather are designed to enhance the ability of the Board of Directors to negotiate with an acquiror on behalf of all shareholders. Other terms of the Rights are set forth in, and the foregoing description is qualified in its entirety by, the Rights Agreement, as amended, between the Company and Harris Trust Company of New York as Rights Agent.

Note M Earnings per Share

The following table reconciles the weighted-average shares outstanding for computation of basic and diluted income per Common share for each of the three years ended December 31, 2005. No difference existed between net income used in computing basic and diluted income per Common share for these years. There were no antidilutive options for the periods presented.

<i>(Weighted-average shares outstanding)</i>	2005	2004	2003
Basic method	184,354,552	183,972,642	183,629,642
Dilutive stock options	3,534,826	2,914,380	1,855,890
Diluted method	187,889,378	186,887,022	185,485,532

Note N Other Financial Information

INVENTORIES Inventories accounted for under the LIFO method totaled \$157,255,000 and \$139,489,000 at December 31, 2005 and 2004, respectively, and these amounts were \$361,345,000 and \$219,075,000 less than such inventories would have been valued using the FIFO method.

ACCUMULATED OTHER COMPREHENSIVE INCOME At December 31, 2005 and 2004, the components of Accumulated Other Comprehensive Income were as follows.

<i>(Thousands of dollars)</i>	2005	2004
Foreign currency translation gain, net of tax	\$ 185,722	167,662
Cash flow hedge (losses) gains, net of tax	(13,459)	4,582
Minimum pension liability, net of tax	(40,939)	(37,735)
Balance at end of year	\$ 131,324	134,509

At December 31, 2005, components of the net foreign currency translation gain of \$185,722,000 were gains of \$43,805,000 for pounds sterling, \$140,906,000 for Canadian dollars and \$1,011,000 for other currencies. Foreign currency translation gains shown in the table are net of income taxes of \$97,726,000 and \$91,019,000 at year-end 2005 and 2004, respectively. Net gains (losses) from foreign currency transactions included in the Consolidated Statements of Income were \$102,000 in 2005, \$(26,613,000) in 2004 and \$4,087,000 in 2003.

The effect of SFAS Nos. 133/138, Accounting for Derivative Instruments and Hedging Activities, decreased AOCI for the year ended December 31, 2005 by \$18,041,000, net of \$7,795,000 in income taxes, and income increased by \$1,086,000 for the same period. For the year ended December 31, 2004, AOCI decreased by \$4,876,000, net of \$2,712,000 in income taxes, and income increased by \$340,000. For the year ended December 31, 2003, AOCI increased by \$17,912,000, net of \$11,549,000 in income taxes, and income increased by \$5,988,000.

Edgar Filing: MURPHY OIL CORP /DE - Form 10-K/A

CASH FLOW DISCLOSURES Cash income taxes paid were \$586,544,000, \$184,950,000 and \$86,750,000 in 2005, 2004 and 2003, respectively. Interest paid, net of amounts capitalized, was \$6,095,000, \$32,141,000 and \$17,501,000 in 2005, 2004 and 2003, respectively.

F-25

Table of Contents**Index to Financial Statements**

Noncash operating working capital increased during each of the three years ended December 31, 2005 as follows.

<i>(Thousands of dollars)</i>	2005	2004	2003
Accounts receivable	\$ (162,222)	(252,732)	(41,419)
Inventories	(19,110)	(25,335)	(69,166)
Prepaid expenses	12,532	(992)	15,183
Deferred income tax assets	(8,867)	(10,457)	(1,825)
Accounts payable and accrued liabilities	264,305	252,720	60,380
Current income tax liabilities	(136,051)	16,743	(438)
Net increase in noncash operating working capital from continuing operations	\$ (49,413)	(20,053)	(37,285)

Note O Hurricane and Insurance Related Matters

In 2005, the Company recorded pretax expenses, net of anticipated insurance recoveries, of \$66,770,000 associated with hurricanes that occurred in the United States. The components of these costs included \$22,945,000 for incremental insurance expenses; \$15,493,000 for uninsured losses within the Company's insurance deductibles and other incremental expenses incurred that are not covered by insurance policies; \$8,844,000 for voluntary costs for charitable donations related to hurricane relief efforts and additional employee salaries; and \$19,488,000 for depreciation and salaries for the temporarily idled Meraux, Louisiana, refinery. The Company anticipates that additional costs related to Hurricane Katrina will be recorded in future periods. The repair of flood and wind damages at the Meraux refinery has been estimated to cost \$200,000,000. Because of certain limitations on insurance policies, the Company could have unrecoverable repair costs of \$50,000,000 in the first half of 2006 related to the Meraux refinery repairs. In 2004 the Company reported pretax costs of \$3,350,000 for uninsured losses within the Company's insurance deductibles. The costs are reported in Net Costs Associated with Hurricanes in the Consolidated Statements of Income. See Note Q for additional information regarding environmental and other contingencies relating to Hurricane Katrina. Total accounts receivable from insurers for hurricane-related matters was \$77,293,000 at December 31, 2005.

The Company maintains insurance coverage related to losses of production and profits for occurrences such as storms, fires and other issues. During 2005, the Company received insurance proceeds of \$11,258,000 related to loss of production in the Gulf of Mexico associated with Hurricane Ivan in 2004 and Hurricane Lili in 2002. During 2004, the Company received insurance proceeds of \$8,300,000 for lost profits at the Meraux refinery due to the ROSE unit fire in 2003, and \$2,000,000 related to loss of production in the Gulf of Mexico associated with Hurricane Lili in 2002. These amounts were recorded in Sales and Other Operating Revenues in the respective Consolidated Statement of Income. The Company expects to collect further insurance receipts for loss of production related to Hurricanes Katrina and Rita in future periods.

Note P Commitments

The Company leases land, gasoline stations and other facilities under operating leases. During the next five years, expected future rental payments under operating leases are approximately \$19,707,000 in 2006; \$18,417,000 in 2007; \$18,235,000 in 2008; \$17,071,000 in 2009; and \$15,981,000 in 2010. Rental expense for noncancellable operating leases, including contingent payments when applicable, was \$33,379,000 in 2005, \$27,943,000 in 2004, and \$32,859,000 in 2003.

To assure long-term supply of hydrogen at its Meraux, Louisiana refinery, the Company has contracted to purchase up to 35 million standard cubic feet of hydrogen per day at market prices through 2019. The contract requires the payment of a base facility charge for use of the facility. Future required minimum annual payments for base facility charges are \$5,471,000 in 2006; \$6,828,000 in 2007; \$7,101,000 in 2008; \$7,385,000 in 2009; and \$7,680,000 in 2010. Base facility charges and hydrogen costs incurred in the three-year period ended December 31, 2005 totaled \$21,595,000, \$27,141,000, and \$1,128,000, respectively. As a result of the refinery being shut down for several months following Hurricane Katrina, the Company has notified the hydrogen supplier of a force majeure event. The hydrogen supply agreement permits the base facility charge to be suspended for the period under force majeure and the contract supply period to be extended for the same period, but in no event shall the extension of the supply period exceed 1,375 days. The Company currently expects to complete repairs to its refinery and begin purchasing hydrogen under this agreement within the period permitted in the contract. There were no base facility charges or hydrogen costs incurred for the last four months of 2005.

Table of Contents

Index to Financial Statements

The Company has an Operating and Production Handling Agreement providing for processing and production handling services for hydrocarbon production from certain fields in the Gulf of Mexico. This agreement requires minimum annual payments for processing charges for the periods from 2006 through 2009. Under the agreement, the Company must make specified minimum payments quarterly. Future required minimum payments are \$15,340,000 in 2006; \$12,596,000 in 2007; \$9,508,000 in 2008; and \$13,272,000 in 2009. In addition, the Company is required to pay additional amounts depending on the actual hydrocarbon quantities processed under the agreement. Processing and handling costs incurred in 2005 and 2004 were \$24,297,000 and \$23,430,000, respectively.

Additionally, the Company has a Reserved Capacity Service Agreement providing for the availability of needed crude oil storage capacity for certain oil fields through 2020. Under the agreement, the Company must make specified minimum payments monthly. Future required minimum annual payments are \$2,006,000 in 2006 through 2010. In addition, the Company is required to pay additional amounts depending on actual crude oil quantities under the agreement. Total payments under the agreement were \$2,521,000 in 2005, \$2,390,000 in 2004 and \$1,965,000 in 2003.

Commitments for capital expenditures were approximately \$932,000,000 at December 31, 2005, including \$57,000,000 for costs to develop deepwater Gulf of Mexico fields, \$585,000,000 for field development and future work commitments in Malaysia, \$69,000,000 for exploration drilling in the Republic of Congo and \$73,000,000 for future work commitments on the Scotian Shelf offshore eastern Canada.

Note Q Contingencies

The Company's operations and earnings have been and may be affected by various forms of governmental action both in the United States and throughout the world. Examples of such governmental action include, but are by no means limited to: tax increases and retroactive tax claims; import and export controls; price controls; currency controls; allocation of supplies of crude oil and petroleum products and other goods; expropriation of property; restrictions and preferences affecting the issuance of oil and gas or mineral leases; restrictions on drilling and/or production; laws and regulations intended for the promotion of safety and the protection and/or remediation of the environment; governmental support for other forms of energy; and laws and regulations affecting the Company's relationships with employees, suppliers, customers, stockholders and others. Because governmental actions are often motivated by political considerations, may be taken without full consideration of their consequences, and may be taken in response to actions of other governments, it is not practical to attempt to predict the likelihood of such actions, the form the actions may take or the effect such actions may have on the Company.

ENVIRONMENTAL MATTERS AND LEGAL MATTERS In addition to being subject to numerous laws and regulations intended to protect the environment and/or impose remedial obligations, the Company is also involved in personal injury and property damage claims, allegedly caused by exposure to or by the release or disposal of materials manufactured or used in the Company's operations. The Company operates or has previously operated certain sites and facilities, including three refineries, five terminals, and approximately 62 service stations for which known or potential obligations for environmental remediation exist. In addition the Company operates or has operated numerous oil and gas fields that may require some form of remediation, which is generally provided for by the Company's abandonment liability. Environmental laws and regulations are described more fully in Management's Discussion and Analysis beginning on page 22 of this Form 10-K report.

The Company's liability for remedial obligations includes certain amounts that are based on anticipated regulatory approval for proposed remediation of former refinery waste sites. Although regulatory authorities may require more costly alternatives than the proposed processes, the cost of such potential alternative processes is not expected to exceed the accrued liability by a material amount.

The U.S. Environmental Protection Agency (EPA) currently considers the Company a Potentially Responsible Party (PRP) at two Superfund sites. The potential total cost to all parties to perform necessary remedial work at these sites may be substantial. Based on currently available information, the Company believes that it is a de minimis party as to ultimate responsibility at both Superfund sites. The Company has not recorded a liability for remedial costs on Superfund sites. The Company could be required to bear a pro rata share of costs attributable to nonparticipating PRPs or could be assigned additional responsibility for remediation at the two sites or other Superfund sites. The Company believes that its share of the ultimate costs to clean-up the two Superfund sites will be immaterial and will not have a material adverse effect on its net income, financial condition or liquidity in a future period.

Table of Contents

Index to Financial Statements

There is the possibility that environmental expenditures could be required at currently unidentified sites, and new or revised regulations could require additional expenditures at known sites. However, based on information currently available to the Company, the amount of future remediation costs incurred at known or currently unidentified sites is not expected to have a material adverse effect on the Company's future net income, cash flows or liquidity.

On September 9, 2005, a class action lawsuit was filed in federal court in the Eastern District of Louisiana seeking unspecified damages to the class comprised of residents of St. Bernard Parish caused by a release of crude oil at Murphy Oil USA, Inc.'s (a wholly-owned subsidiary of Murphy Oil Corporation) Meraux, Louisiana, refinery as a result of flooding damage to a crude oil storage tank following Hurricane Katrina. Since then additional class action lawsuits have been filed in the same court against Murphy Oil USA, Inc. and/or Murphy Oil Corporation also seeking unspecified damages related to the crude oil release. The suits have been consolidated into a single action in the U.S. District Court for the Eastern District of Louisiana, which held a class certification hearing on January 12-13, 2006. The Court certified the class on January 30, 2006. The Company believes that insurance coverage exists for this release and it does not expect to incur significant costs associated with the class action lawsuits. Accordingly, the Company believes that the ultimate resolution of these class action lawsuits will not have a material adverse effect on its net income, financial condition or liquidity in a future period.

On June 10, 2003, a fire severely damaged the Residual Oil Supercritical Extraction (ROSE) unit at the Company's Meraux, Louisiana refinery. The ROSE unit recovers feedstock from the heavy fuel oil stream for conversion into gasoline and diesel. Subsequent to the fire, numerous class action lawsuits have been filed seeking damages for area residents. All the lawsuits have been administratively consolidated into a single legal action in St. Bernard Parish, Louisiana, except for one such action which was filed in federal court. Additionally, individual residents of Orleans Parish, Louisiana, have filed an action in that venue. On May 5, 2004, plaintiffs in the consolidated action in St. Bernard Parish amended their petition to include a direct action against certain of the Company's liability insurers. In responding to this direct action, one of the Company's insurers, AEGIS, has raised lack of coverage as a defense. The Company believes that this contention lacks merit and has been advised by counsel that the applicable policy does provide coverage for the underlying incident. Because the Company believes that insurance coverage exists for this matter, it does not expect to incur any significant costs associated with the class action lawsuits. Accordingly, the Company continues to believe that the ultimate resolution of the June 2003 ROSE fire litigation will not have a material adverse effect on its net income, financial condition or liquidity in a future period.

In December 2000, two of the Company's Canadian subsidiaries, Murphy Oil Company Ltd. (MOCL) and Murphy Canada Exploration Company (MCEC) as plaintiffs filed an action in the Court of Queen's Bench of Alberta seeking a constructive trust over oil and gas leasehold rights to Crown lands in British Columbia. The suit alleges that the defendants, The Predator Corporation Ltd. and Predator Energies Partnership (collectively Predator) and Ricks Nova Scotia Co. (Ricks), acquired the lands after first inappropriately obtaining confidential and proprietary data belonging to the Company and its partner. In January 2001, Ricks, representing an undivided 75% interest in the lands in question, settled its portion of the litigation by conveying its interest to the Company and its partner at cost. In 2001, Predator, representing the remaining undivided 25% of the lands in question, filed a counterclaim against MOCL and MCEC and MOCL's President individually seeking compensatory damages of C\$3.61 billion. In September 2004 the court summarily dismissed all claims against MOCL's president and all but C\$356 million of the counterclaim against the Company. On February 28, 2006, the Court of Appeals ruled in favor of the Company and affirmed the dismissal order. The Company believes that the counterclaim is without merit, that the amount of damages sought is frivolous and the likelihood of a material loss to the Company is remote. It is anticipated that a trial concerning the 25% disputed interest and any remaining issues will commence in 2006. While no assurance can be given about the outcome, the Company does not believe that the ultimate resolution of this suit will have a material adverse effect on its net income, financial condition or liquidity in a future period. In the unlikely event that Predator were to prevail in its counterclaim in an amount approaching the damages sought, Murphy would incur a material expense in its consolidated statement of income, and would have a material effect on its financial condition and liquidity.

Murphy and its subsidiaries are engaged in a number of other legal proceedings, all of which Murphy considers routine and incidental to its business. Based on information currently available to the Company, the ultimate resolution of environmental and legal matters referred to in this note is not expected to have a material adverse effect on the Company's net income, financial condition or liquidity in a future period.

OTHER MATTERS In the normal course of its business, the Company is required under certain contracts with various governmental authorities and others to provide financial guarantees or letters of credit that may be drawn upon if the Company fails to perform under those contracts. At December 31, 2005, the Company had contingent liabilities of \$8,519,000 under a financial guarantee described in the following paragraph and \$50,212,000 on outstanding letters of credit. The Company has not accrued a liability in its balance sheet related to these letters of credit because it is believed that the likelihood of having these drawn is remote.

Table of Contents**Index to Financial Statements**

The Company owns a 3.2% interest in the Louisiana Offshore Oil Port (LOOP) that it accounts for at cost. LOOP has issued \$266,210,000 in bonds, which mature in varying amounts between 2006 and 2021. The Company is obligated to ship crude oil in quantities sufficient for LOOP to pay certain of its expenses and obligations, including long-term debt secured by a Throughput and Deficiency agreement (T&D), or to make cash payments for which the Company will receive credit for future throughput. No other collateral secures the investee's obligation or the Company's guarantee. As of December 31, 2005, it is not probable that the Company will be required to make payments under the guarantee; therefore, no liability has been recorded for the Company's obligation under the T&D agreement. The Company continues to monitor conditions that are subject to guarantees to identify whether it is probable that a loss has occurred, and it would recognize any such losses under the guarantees should losses become probable.

Note R Common Stock Issued and Outstanding

Activity in the number of shares of Common Stock issued and outstanding for the three years ended December 31, 2005 is shown below.

<i>(Number of shares outstanding)</i>	2005	2004	2003
At beginning of year	92,035,377	91,870,598	91,689,454
Stock options exercised	1,488,063	60,000	86,500
Employee stock purchase and thrift plans	45,344	23,632	30,560
Restricted stock awards, net of forfeitures	165,920	84,812	64,084
Two-for-one stock split effective June 3, 2005	92,215,239		
All other	(3,265)	(3,665)	
At end of year	185,946,678	92,035,377	91,870,598

On May 11, 2005, the Company's Board of Directors approved a two-for-one stock split effective as of June 3, 2005 by way of a dividend of one share of stock for each share held to all shareholders of record at the close of business on May 20, 2005. The total number of authorized Common shares and shares held in the treasury, and the par value thereof, was unchanged by the split. Per share amounts shown in the consolidated financial statements for all periods reflect the two-for-one stock split. Further information regarding the split is presented in the Consolidated Statement of Stockholders' Equity.

Note S Business Segments

Murphy's reportable segments are organized into two major types of business activities, each subdivided into geographic areas of operations. The Company's exploration and production activity is subdivided into segments for the United States, Canada, the United Kingdom, Ecuador, Malaysia and all other countries; each of these segments derives revenues primarily from the sale of crude oil and natural gas. The refining and marketing segments in North America and the United Kingdom derive revenues mainly from the sale of petroleum products. The Company sells gasoline in the United States and Canada at retail stations built at Wal-Mart Supercenters. The total U.S. and Canadian refining and marketing business is considered by the Company to be an integrated operation, and therefore, considers it appropriate to combine these businesses into one North American segment. The Company's management evaluates segment performance based on income from operations, excluding interest income and interest expense. Intersegment transfers of crude oil, natural gas and petroleum products are at market prices and intersegment services are recorded at cost.

Information about business segments and geographic operations is reported in the following tables. For geographic purposes, revenues are attributed to the country in which the sale occurs. The Company had no single customer from which it derived more than 10% of its revenues. Corporate and other activities, including interest income, miscellaneous gains and losses, interest expense and unallocated overhead, are shown in the tables to reconcile the business segments to consolidated totals. As used in the table on page F-30, Certain Long-Lived Assets at December 31 exclude investments, noncurrent receivables, deferred tax assets and goodwill and other intangible assets.

Excise taxes on petroleum products of \$1,459,713,000, \$1,477,873,000, and \$1,336,600,000 for the years 2005, 2004 and 2003, respectively, that were collected by the Company and remitted to various government entities were excluded from revenues and costs and expenses.
