- * Variable rate demand notes are payable on demand. The maturity dates shown are the next interest rate reset dates. The interest rates shown are the current rates as of June 30, 2006.
- # Interest rate shown reflects yield to maturity at purchase date for zero coupon bonds.
 Partial amount pledged as collateral for futures transactions.
 Security subject to Alternative Minimum Tax.
 Floating rate security. The interest rate shown is the current rate as of June 30, 2006.
- (1) Cost of investments shown approximates cost for federal income tax purposes. Gross unrealized appreciation of investments and gross unrealized depreciation of investments at June 30, 2006 were \$1,666,676 and \$7,788,853, respectively, resulting in net unrealized depreciation of investments of \$6,122,177.
- (2) The Fund calculates its net asset value based on the current market value, where available, for its portfolio securities. The Fund normally obtains market values for its securities from independent pricing sources and broker-dealers. Independent pricing sources may use last reported sale prices, current market quotations or valuations from computerized matrix systems that derive values based on comparable securities. A matrix system incorporates parameters such as security quality, maturity and coupon, and/or research and evaluations by its staff, including review of broker-dealer market price quotations, if available, in determining the valuation of the portfolio securities. If a market value is not available from an independent pricing source for a particular security, that security is valued at fair value as determined in good faith by or under the direction of the Fund's Board of Directors (the Board). Various factors may be reviewed in order to make a good faith determination of a security's fair value. These factors may include, but are not limited to, the type and cost of the security; contractual or legal restrictions on resale of the security; relevant financial or business developments of the issuer; actively traded similar or related securities; conversion or exchange rights on the security; related corporate actions; and changes in overall market conditions. If events occur that materially affect the value of securities (particularly non-US securities) between the close of trading in those securities and the close of regular trading on the New York Stock Exchange, the securities are fair valued. The amortized cost method of valuation, which approximates market value, generally is used to value short-term debt instruments with sixty days or less remaining to maturity, unless the Board or its delegate determines that this does not represent fair value. Securities traded in the over-the-counter (OTC) market are valued at the last bid price available on the valuation date prior to valuation.
