novo nordisk ANNUAL REPORT 2017 A STRATEGY TO DRIVE CHANGE FOR PATIENTS' LIVES RAISING THE INNOVATION  
HEIGHT GOOD DIABETES CARE REQUIRES MORE THAN BLOOD GLUCOSE CONTROL WHY SOME PEOPLE WITH OBESITY  
NEED MEDICAL TREATMENT

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

"I'M VERY FOCUSED ON IMPROVING MY HEALTH WITH DIET CONTROL, EXERCISE, FOLLOWING MY MEDICATION DIRECTIONS FROM MY DOCTOR AND THINKING POSITIVE THOUGHTS. MY MATERNAL GREAT- GRANDMOTHER LIVED UNTIL SHE WAS 103 YEARS OLD AND SHE WAS VERY HEALTHY – I WANT TO BE HER!" SHIRLEY ADELIA STEWART Shirley Adelia Stewart lives in New Orleans, Louisiana, US, and was diagnosed with type 2 diabetes when she was 40 years old. Both of her parents died from complications with diabetes, and all her seven brothers and sisters have also been identified as having type 2 diabetes. Shirley is 68 years old, is an arts and music teacher of elementary school children, a member of the New Orleans Opera House Chorus and a diligent soloist in her neighborhood churches. The patients portrayed in this Annual Report have participated of their own accord and solely to express their personal opinions on topics referred to in the articles in which they appear, which do not necessarily reflect the views and opinions of Novo Nordisk. Use of their pictures as illustrations is in no way intended to associate them with the promotion of any Novo Nordisk products.

**ADDITIONAL INFORMATION** 112 Product overview 113 More information and references All references can be found on p 113. The Management review, as defined by the Danish Financial Statements Act, is found on pp 1–56 and 97. This Annual Report is a printed extract of the Novo Nordisk statutory Annual Report pursuant to section 149 of the Danish Financial Statements Act (FSA). The full statutory Annual Report, including the financial statements of the parent company, will be submitted to the Danish Business Authority, and is available at [novonordisk.com/annualreport](http://novonordisk.com/annualreport). The full statutory Annual Report is published in English only. A shortened printed version, consisting of the Management review and excerpts from the consolidated statements, is available in Danish upon request. In the event of any discrepancies, the full statutory Annual Report shall prevail. The Annual Report has been prepared in accordance with the Danish Financial Statements Act (FSA), sections 99a and 99b. Section 99a requires Novo Nordisk to account for the company's activities relating to social responsibility, reporting on business model, significant risks, business strategies, and activities in the areas of human rights, labour standards, environment, anti-corruption and climate. Section 99b requires Novo Nordisk to account for the gender diversity at Board level by reporting on targets and policies ensuring increased gender diversity over time. A more elaborate discussion of risks, policies and performance is available in Novo Nordisk's annual Communication on Progress to the UN Global Compact at [novonordisk.com/annualreport](http://novonordisk.com/annualreport) and on the UN Global Compact's website at [unglobalcompact.org/COP](http://unglobalcompact.org/COP). For formal compliance with sections 99a and b of the Danish Financial Statements Act, Novo Nordisk refers to its Communication on Progress 2017.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

A YEAR OF CHANGE AND PROGRESS LETTER FROM THE CHAIRMAN For Novo Nordisk, 2017 ended much better than it started. Following the revision of our long-term financial target for operating profit growth in the autumn of 2016, we have been focusing on rebuilding confidence with our external stakeholders as well as with our employees. I believe that we are on the right track. Two factors in particular have been important for our shareholders: quarter by quarter, we delivered on our promises in terms of financial performance, and we made significant progress in terms of new, positive clinical data and regulatory milestones passed for some of our key products. Lars Fruergaard Jørgensen assumed the role of president & CEO on Q1 January 2017. He will give you more details in his letter on the following pages. What is important for me to say is that the Board of Directors is very pleased with how he, his leadership team and the organisation at large have responded to the challenges that gradually surfaced during 2016. The challenges, especially as they relate to the pricing environment in the long-acting insulin market in the US, have materialised in 2017 and are expected to persist. What we experienced in the US in 2016 was the interplay of several related developments. With the large and increasing number of people with diabetes in the US, diabetes care has become a major cost driver for insurers and health plans which, in turn, are pushing hard for better deals with healthcare providers and pharmaceutical companies in order to curb costs. This is still a fact, and so is the increasing negotiating power of the pharmaceutical benefit managers (PBMs), the large purchasing organisations with which Novo Nordisk negotiates rebates and access for its products in the US. At the same time, competition among the pharmaceutical companies within diabetes care is continuing to intensify in an already crowded marketplace. Under Lars Fruergaard Jørgensen's leadership, Novo Nordisk has started a change process that will make the company more competitive in the new business reality. Resources have been directed towards the key growth drivers, an updated R&D strategy is being implemented, focused on delivering more breakthrough innovation from both in-house labs and external partners, and costs have been managed tightly, all while maintaining a high level of employee engagement. Already in his first year at the helm, Lars has shown that he can lead an organisation in challenging times. During 2017, three new members joined his executive management team: Doug Langa assumed responsibility for North America Operations. Prior to his promotion, he was senior vice president, Market Access, and a member of Novo Nordisk's US leadership team, and he brings more than 25 years' experience in the US pharmaceutical and medical device industries into this role. Doug took over from Jakob Riis, who decided to leave for a CEO job outside of the pharma industry. We wish him all the best. Lars Green was appointed head of Business Services and Compliance, responsible for IT, quality, HR and business assurance. Lars Green, who has been with Novo Nordisk for more than 25 years, was previously senior vice president, Finance and Operations, in North America. Camilla Sylvest was appointed head of Commercial Strategy & Corporate Affairs. She joined Novo Nordisk in 1996 and most recently held the position of senior vice president in charge of Novo Nordisk's operations in Region China. With these changes, and the appointment in 2016 of Maziar Mike Doustdar as head of an expanded International Operations area, we have strengthened the commercial capabilities of what is now a renewed and yet very experienced executive leadership team. Based on Novo Nordisk's performance in 2017, at the Annual General Meeting the Board will propose a total dividend of 7.85 Danish kroner per share. Furthermore, the Board has decided to initiate a new share repurchase programme of up to 14 billion kroner, which will commence in February 2018. For me personally, 2017 was my last full year on the Board of Directors, as I have decided not to seek re-election at the Annual General Meeting in 2018. As a member of the Board since 2005 and its chairman since 2013, it has been my privilege to be part of Novo Nordisk's exciting journey. At the Annual General Meeting, the Board will propose the election of Helge Lund as the new chairman. Helge has a successful record in managing complex global companies in highly regulated industries, and I wish him all the best in his new role. On behalf of the Board, I would like to express my appreciation for the leadership shown by Novo Nordisk's management, the hard work and dedication of the entire Novo Nordisk organisation and the support of our shareholders. Göran Ando Chairman of the Board of Directors

## Edgar Filing: NOVO NORDISK A S - Form 6-K

CREATING A PLATFORM FOR SUSTAINABLE GROWTH LETTER FROM THE CEO 2017 was my first year as CEO of Novo Nordisk, and what an experience it has been. I have spent a lot of time travelling the world to meet employees, patients, healthcare professionals, payers, investors, politicians, NGOs and other stakeholders who are all important for Novo Nordisk. And it has been worth every minute. It is very clear to me from all these exchanges that Novo Nordisk, despite the growing competitive pressure we are experiencing these days, has a very strong platform for future success – and a very important purpose. Our employees want the company to do well and are deeply engaged in helping patients live better lives. Our portfolio of pharmaceutical products, both on the market and in our pipeline, provide important clinical benefits compared with other medications. And there are millions of people with diabetes and other serious chronic diseases who need better treatment. That is a strong foundation to build on and a huge responsibility for Novo Nordisk to live up to. I will revert to what we are doing to live up to expectations, but allow me first to recap some highlights from R017. Novo Nordisk grew sales by 2% and operating profit by 5%, both in local currencies. Sales were within and operating profit was above the range we had announced at the beginning of the year, when we predicted that sales would grow between -1% and 4% and operating profit between -2% and 3%, both in local currencies. Sales growth was primarily driven by Tresiba®, Victoza® and Saxenda®. These are all strategic products which we expect to be major growth drivers in the coming years together with Ozempic®, our new once-weekly, injectable GLP-1 treatment for adults with type 2 diabetes. Looking at the sales development from a regional perspective, it is encouraging to note that our two operational units, North America Operations and International Operations, both performed according to our plans. Despite strong pressure on prices, North America managed to keep sales at the same level as 2016, while International Operations grew by 5%. 2017 was a year characterised by a high flow of new clinical data, which led to regulatory approvals and label updates for several key products. Most important of all was the approval in the US of Ozempic®, followed by a recommendation for approval by the European Medicines Agency’s expert committee, both in December R017. Other highlights were:

- Approvals in the EU and the US of Fiasp®, a new fast-acting mealtime insulin, for the treatment of adults with diabetes.
- A label update for Tresiba® in the EU, based on data from trials demonstrating a clinically relevant reduction in hypoglycaemia compared with insulin glargine U100.
- Label updates for Victoza® in the EU and the US, reflecting the product’s ability to reduce the risk of cardiovascular events in adults with type 2 diabetes and at high risk of cardiovascular disease.

Additional milestones include important label updates for Saxenda®, the approval of our long-acting factor IX product for haemophilia B (Refixia®/Rebinyn®) in both the EU and the US, and the submission of applications in the EU and the US for including data from the DEVOTE trial in the Tresiba® label. Moreover, to increase the likelihood of making ground-breaking innovations in the years to come, we have updated our R&D strategy. You will find more on this topic on pp 20–21, where you can also read about the exciting possibilities we see for semaglutide, the molecule on which Ozempic® is based. Based on the strong clinical data and approvals obtained over the past year, we have an important task ahead of us in making sure that as many patients as possible benefit from them. This means ensuring optimal market access for our products and making sure that prescribers and patients understand the benefits our products provide. As you will see from the article about our US business on pp 32–35, during 2017 we implemented many changes to ensure that we can operate effectively in the world’s largest pharmaceutical market. International Operations, which covers more than 190 countries, is taking a ‘market fit’ approach to grow its business. This means tailoring the portfolio, market access strategy and sales strategy to the needs of each individual country. You can read more about what it takes in the article on pp 36–39. Allowing our affiliates around the world the autonomy to decide which approach is best for their markets, requires a shared understanding of what we want to achieve as a company, our overall strategic priorities and ‘how we do business’ at Novo Nordisk. The starting point is having a clear purpose. Ours is to drive change to defeat diabetes and other serious chronic diseases. This is what makes us relevant to patients, healthcare professionals and society at large. You can read more about how we do business (we call it the Novo Nordisk Way) on pp 16–17 and about our overall strategic priorities on pp 18–19.

2 NOVO NORDISK ANNUAL REPORT 2017  
ACCOMPLISHMENTS AND RESULTS 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

There are huge unmet medical needs in all disease areas in which Novo Nordisk is active. Take diabetes and obesity as examples: despite many advances in medical treatment over the past decades, only few people with diabetes are achieving the desired blood sugar levels, and many still have a higher risk of cardiovascular disease despite being treated with drugs that lower cholesterol and blood pressure. When it comes to obesity, there have not been many advances in medical treatment. And the sad fact is that obesity is not even recognised as a disease for which some people require medical help. In both these areas, Novo Nordisk has products on the market and in the pipeline that can help address this poor state of affairs. However, we also recognise that it takes more than medicine to achieve the desired results. In diabetes, it requires more public-private partnerships to contain the rise of diabetes before it becomes unmanageable, and giving more people access to diagnosis and treatment where it does not currently exist. On pp 26-27, you can learn more about what Novo Nordisk does in this regard. With the decisions we have made in 2017, I believe that we have created a solid platform for sustainable, long-term growth for Novo Nordisk. In 2018, our focus will be on implementing the strategies we have developed and started executing on in 2017. Prices will still be under pressure, especially in the US. The increase in the number of people with chronic diseases such as diabetes and the cost of treating them put healthcare budgets under pressure, and this especially affects the prices of our insulin products. We therefore expect modest sales growth in 2018, despite our ambition to gain market share. At Novo Nordisk, we have a big responsibility for the more than 425 million people in the world with diabetes, the millions more who have obesity and the thousands who live with haemophilia or growth disorders. They are our reason for being. My vision is that, during my tenure as CEO, Novo Nordisk will solidify its position as the world's leading diabetes care company, be the world's leading company in the medical treatment of obesity, be among the leading companies in haemophilia, and be recognised by our employees, the patients we serve, our shareholders and other stakeholders as an outstanding company, both for what we do and how we do it. I would like to thank everyone in the Novo Nordisk organisation for their contribution to our results in 2017, the people who use our products for their confidence in us, our stakeholders and partners for their collaboration and our shareholders for their continued support. Lars Fruergaard Jørgensen President & CEO NOVO NORDISK

More information can be found at [novonordisk.com/sustainable-business](http://novonordisk.com/sustainable-business). FINANCIALLY RESPONSIBLE SOCIALLY RESPONSIBLE ENVIRONMENTALLY RESPONSIBLE PATIENTS For more information, visit us on [novonordisk.com](http://novonordisk.com) or THE VALUE WE CREATE EXAMPLES OF VALUE CREATED NOVO NORDISK ANNUAL REPORT 2017 Improved health and quality of life for people with diabetes and other serious chronic diseases 27.7 MILLION people use Novo Nordisk diabetes care products Return to shareholders DKK 7.85 total dividend per share in 2017 Tax contributions DKK 10.6 BILLION expensed on company income taxes Contributions to communities Production based on 79% renewable power Job creation and productivity 60,000 (approx) direct and indirect jobs created in Denmark Capacity and competence building 4,800 (approx) investigator sites active in Novo Nordisk- sponsored clinical trials The Triple Bottom Line principle is anchored in the company’s Articles of Association and the Novo Nordisk Way as the way we do business. It is applied to ensure that business decisions balance financial, social and environmental considerations, always keeping in mind the best interests of the patients we serve. BUSINESS APPROACH NOVO NORDISK’S AMBITION IS TO BE A SUSTAINABLE BUSINESS. BY THIS WE MEAN: • creating long-term value for patients, employees, partners and shareholders by developing innovative and competitive solutions to patients’ unmet needs • doing business in a financially, environmentally and socially responsible way • anticipating, adapting to and creating new business opportunities from changes in our business environment.

SACCOMPLISHMENTS AND RESULTS 2017

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2017 PERFORMANCE AND 2018 OUTLOOK FINANCIAL PERFORMANCE 7% measured in local currencies was 9 percentage points positively impacted by inflationary price effects in countries with high inflation. Sales in North America Operations were negatively impacted by approximately 4 percentage points due to the negative effect from the launch of a generic version of Vagifem® and the non-recurring adjustments to rebates in the Medicaid patient segment in the first quarter of 2016 predominantly related to Norditropin®, both in the USA. In the following sections, unless otherwise noted, market data are based on moving annual total (MAT) from November 2017 and November 2016 provided by the independent data provider IQVIA (formerly IMS Health).

DIABETES CARE AND OBESITY, SALES DEVELOPMENT Sales of diabetes care and obesity products increased by 4% measured in Danish kroner and by 7% in local currencies to DKK 92,877 million. Novo Nordisk is the world leader in diabetes care with a global value market share of 27%. INSULIN Sales of insulin remained unchanged measured in Danish kroner and increased by 3% in local currencies to DKK 63,119 million. Measured in local currencies, sales growth was driven by International Operations where Region AAMEO, Region China, Region Europe and Region Latin America contributed to growth. Novo Nordisk is the global leader with 47% of the total insulin market and 45% of the market for modern insulin and new-generation insulin, both measured in volume. Sales of new-generation insulin (Tresiba®, Xultophy®, Ryzodeg® and Fiasp®) reached DKK 8,647 million compared with DKK 7,459 million in 2016. Sales of Tresiba® (insulin degludec), the once-daily new-generation insulin, reached DKK 7,327 million compared with DKK 7,056 million in 2016. The roll-out of Tresiba® continues and the product has now been launched in 62 countries. In the USA where Tresiba® was launched broadly in January 2016, the product maintains wide commercial and Medicare Part D formulary coverage. Generally, Tresiba® has shown solid penetration in markets with reimbursement at a similar level to insulin glargine U100, whereas penetration remains modest in markets with restricted market access. In September 2017, Novo Nordisk obtained the approval of Tresiba® in China. Novo Nordisk expects to launch Tresiba® in China without reimbursement and with limited market access in the first quarter of 2018.

2013	2014	2015	2016	2017	0	5	10	15	20	25	SALES GROWTH	In local currencies	In DKK as reported	%

\* In 2014, Japan & Korea contributed -1% to the total growth. In 2017, North America contributed -5% to the total growth. 2013 2014 2015 2016 2017 0 25 50 75 100 125

SALES BY SEGMENT Biopharmaceuticals Diabetes care and obesity DKK billion Novo Nordisk's 2017 performance for sales growth measured in local currencies was in line with the outlook provided in February R017, while operating profit growth measured in local currencies exceeded the outlook provided in February 2017 reflecting overall cost containment. The free cash flow and effective tax rate were in line with the outlook provided in February 2017, while Capital expenditure was moderately lower than the outlook provided in February R017.

SALES DEVELOPMENT Sales remained broadly unchanged measured in Danish kroner and increased by 2% in local currencies. Sales growth was realised within diabetes care and obesity with the majority of growth originating from Tresiba®, Victoza®, Saxenda® and NovoRapid®, partly offset by declining sales of Levemir®. Sales within biopharmaceuticals declined, predominantly reflecting lower sales of growth disorder products and Vagifem®. Sales growth in local currencies was driven by International Operations while sales in North America Operations were broadly unchanged. Within International Operations, the main growth contributors were Region AAMEO (Africa, Asia, Middle East and Oceania), Region Europe, Region China and Region Latin America. Sales growth in Region Latin America of V

NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

Sales of Xultophy®, a once-daily combination of insulin degludec (Tresiba®) and liraglutide (Victoza®), reached DKK 207 million compared with DKK 100/3.6 million in 2016. Sales growth was driven by both International Operations, where predominantly Region Europe contributed to growth, and North America Operations. Xultophy® has now been launched in 18 countries; in the USA, it was launched in May 2017 under the brand name Xultophy® 100/3.6. Sales of Ryzodeg®, a soluble formulation of insulin degludec and insulin aspart, reached DKK 492 million compared with DKK 196 million in 2016. Sales growth was driven by International Operations, where Region Japan & Korea and Region AAMEO contributed to growth. Ryzodeg® has now been marketed in 18 countries, and feedback from patients and prescribers remains encouraging. The novel mealtime insulin Fiasp®, fast-acting insulin aspart, received marketing authorisation from the European Commission in the first quarter of 2017 and approvals were also received in Norway, Iceland and Canada. In September 2017, Novo Nordisk received the approval of Fiasp® in the USA. Fiasp® is expected to launch in the USA imminently and has now been launched in 17 countries including recent launches in France and the Netherlands. Sales of modern insulin decreased by 7% in Danish kroner and by 4% in local currencies to DKK 44,400 million. The decline reflects lower sales in North America Operations of Levemir® due to price pressure in the basal insulin segment as well as the impact following the introduction of the new-generation insulin Tresiba® and lower NovoMix® sales, as the pre-mix insulin market continues to decline. The decline was partly offset by sales growth within International Operations, where Region AAMEO, Region China and Region Latin America were the main contributors to growth. Sales of modern insulin and new-generation insulin in total constitute 84% of Novo Nordisk's global sales of insulin measured in value. VICTOZA® (GLP-1 THERAPY FOR TYPE 2 DIABETES) Victoza® sales increased by 16% in Danish kroner and by 18% in local currencies to DKK 23,173 million. Sales growth is predominantly driven by North America Operations comprising 90% share of growth. The GLP-1 segment's value share of the total diabetes care market has increased to 11.8% compared with 9.7% 12 months ago. Victoza® is the market leader in the GLP-1 segment with a 50% value market share. OTHER DIABETES CARE Sales of other diabetes care products, which predominantly consist of oral antidiabetic products and needles, declined by 6% in Danish kroner and by 3% in local currencies to DKK 4,023 million. Declining sales were seen in International Operations, where all regions apart from Region AAMEO and Region Latin America experienced lower sales, partly offset by higher sales in North America Operations. SAXENDA® (OBESITY) Sales of Saxenda®, liraglutide 3 mg for weight management, increased by 62% in Danish kroner and by 64% in local currencies to DKK 2,562 million. Sales growth was driven by both North America Operations and International Operations, where Region Latin America, especially Brazil, Region AAMEO and Region Europe contributed to growth. Saxenda® was launched in May 2015 in the USA and has obtained broad commercial formulary market access, but generally with prior authorisation requirements. Saxenda® has now been launched in 25 countries. BIOPHARMACEUTICALS SALES DEVELOPMENT Sales of biopharmaceutical products declined by 18% measured in Danish kroner and by 16% in local currencies to DKK 8,819 million. Sales of DKK 8,155 million in North America Operations declined by 50% measured in local currencies reflecting a negative impact of 21 percentage points from a generic version of the hormone replacement therapy product Vagifem® and from rebate adjustments for growth hormone in Q1 2016, both in the USA. Sales in International Operations declined by 2% in Danish kroner and remained unchanged in local currencies. HAEMOPHILIA Sales of haemophilia products remained unchanged in Danish kroner and increased by 2% in local currencies to DKK 10,469 million. The sales increase in local currencies was primarily driven by NovoSeven® and the roll-out of NovoEight® in Region Europe and North America Operations. This was partly offset by lower NovoSeven® sales in Region Latin America and Region Japan & Korea. GROWTH DISORDERS Sales of growth disorder products decreased by 24% measured in Danish kroner and by 22% in local currencies to DKK 6,655 million. The sales decline reflects the significant positive non-recurring adjustment in the USA in the first quarter of 2016, related to rebates in the Medicaid patient segment for the period 2010-2015, as well as an impact from intensified competition impacting realised prices and to some extent volumes in the USA. Sales in International Operations were broadly unchanged in local currencies reflecting lower sales in Region AAMEO and Region Europe offset by sales growth in Region Japan & Korea and Region Latin America. Novo Nordisk is the leading company in the R013 2014 2015 2016 2017 0 10 20 30 40 0 10 20 30 40 DKK billion NET PROFIT • Net profit margin (right) Net profit (left) 2013 2014 2015 2016 2017 0 10 20 30 40 DEVELOPMENT IN COSTS Costs in % of sales • Sales and distribution • Cost of goods sold • Research and development • Administration % 2013 2014 2015 2016 2017 0 10 20 30 40 50 OPERATING PROFIT Operating profit DKK billion % CONTINUED 7 NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

global growth disorder market with a 27% market share measured in volume. OTHER BIOPHARMACEUTICALS Sales of other products within biopharmaceuticals, which predominantly consist of hormone replacement therapy-related (HRT) products, declined by 53% measured in Danish kroner and by 52% in local currencies to DKK 1,695 million. The sales decline reflects a negative impact from the launch of a generic version of Vagifem® in the USA in the fourth quarter of 2016. DEVELOPMENT IN COSTS AND OPERATING PROFIT The cost of goods sold increased by 3% in both Danish kroner and local currencies to DKK 17,632 million, resulting in a gross margin of 84.2% measured in Danish kroner compared with 84.6% in 2016. The decline in gross margin reflects a negative currency impact of 0.3 percentage point. In addition, the gross margin was negatively impacted by lower prices primarily reflecting intensified competition in the insulin segment and the non-recurring Medicaid rebate adjustments in 2016, both in the USA. The negative gross margin impact was partly offset by a positive contribution from product mix due to higher Victoza® and Tresiba® sales, countered by lower sales of Vagifem® following the launch of a generic version in the USA. Sales and distribution costs remained broadly unchanged in Danish kroner and increased by 2% in local currencies to DKK 28,340 million. The increase in sales and distribution costs measured in local currencies reflects increased sales force and promotional costs in Region AAMEO and Region Latin America as well as increased costs related to legal cases partly offset by reduced manning in the US and broad cost control initiatives. Research and development costs decreased by 4% in Danish kroner and by 3% in local currencies to DKK 14,014 million. The decline reflects the discontinuation of a number of research projects following the updated R&D strategy announced in October 2016 leading to lower research costs. This development was partially offset by an increase in development costs due to the PIONEER programme for oral semaglutide, where all 10 planned trials have now been fully recruited, partly countered by an impact related to the completion of the cardiovascular outcomes trial DEVOTE and by lower biopharmaceuticals development costs following the completion of the regulatory process for N9-GP. Administration costs decreased by 4% in Danish kroner and by 3% in local currencies to DKK 3,784 million. The lower administrative costs are mainly related to general cost control initiatives. Other operating income (net) was DKK Q,041 million compared with DKK 737 million in 2016. The increase in Other operating income reflects the positive contribution from the divestment of the C5aR inflammation asset to Innate Pharma in the third quarter of 2017. Operating profit increased by 1% in Danish kroner and by 5% in local currencies to DKK 48,967 million. FINANCIAL ITEMS (NET) AND TAX Financial items (net) showed a loss of DKK R87 million compared with a loss of DKK V34 million in 2016. In line with Novo Nordisk's treasury policy, Novo Nordisk hedges the most significant foreign exchange risks for the Group mainly through foreign exchange forward contracts. The foreign exchange (net) result was a loss of DKK 187 million compared with a loss of DKK 576 million in 2016. The financial items (net) for 2017 is after a positive market value of financial contracts as per the end of December 2017 of approximately DKK 2 billion has been deferred for income recognition in 2018. The effective tax rate for 2017 was 21.7%. CAPITAL EXPENDITURE AND FREE CASH FLOW Net capital expenditure for property, plant and equipment was DKK 8.7 billion compared with DKK 7.1 billion in 2016. Net capital expenditure was primarily related to investments in a new production facility for a range of diabetes active pharmaceutical ingredients in Clayton, North Carolina, USA, a new diabetes care filling capacity in Hillerød, Denmark and an expansion of the manufacturing capacity for biopharmaceutical products in Kalundborg, Denmark. Free cash flow was DKK 32.6 billion compared with DKK 40.0 billion in 2016. The decrease of 19% compared to 2016 primarily reflects a negative impact from lower income taxes paid in 2016 due to one-offs as well as increased capital expenditure in 2017. OUTLOOK 2018 For 2018, sales growth is expected to be in the range of 2% to 5% growth, measured in local currencies. This reflects expectations for robust performance for the portfolio of new-generation insulin and the GLP-1 portfolio, now comprising both Victoza® and Ozempic® as well as a solid contribution from Saxenda®. Sales growth is expected to be partly countered by intensifying global competition both within diabetes care and biopharmaceuticals, especially within the haemophilia inhibitor OUTLOOK 2018 The current expectations for 2018 are summarised in the table below: EXPECTATIONS ARE AS REPORTED, IF NOT OTHERWISE STATED

EXPECTATIONS Q FEBRUARY 2018	Sales growth	• in local currencies	2% to 5%	• as reported	Around 7 percentage points lower than in local currencies					
Operating profit growth	• in local currencies	1% to 5%	• as reported	Around 10 percentage points lower than in local currencies						
Financial items (net)	Gain of around DKK	2.5 billion	Effective tax rate	20% to 22%	Capital expenditure	Around DKK 9.5 billion	Depreciation, amortisation and impairment losses	Around DKK 3 billion	Free cash flow	DKK 27-32 billion

KEY INVOICING CURRENCIES IMPACT ON NOVO NORDISK'S OPERATING PROFIT IN THE NEXT 12 MONTHS OF A 5% IMMEDIATE MOVEMENT IN CURRENCY HEDGING PERIOD (MONTHS)

USD	DKK 1,900 million	12
CNY	DKK 325 million	6*
JPY	DKK 170 million	12
GBP	DKK 90 million	13
CAD	DKK 80 million	11

\* Chinese yuan traded offshore (CNH) used as proxy when hedging Novo Nordisk's CNY currency exposure. 8 NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

segment, as well as continued pricing pressure within diabetes care especially in the USA. Overall, the expectations are based on an assumption of a broadly unchanged global macroeconomic environment. Given the current exchange rates versus the Danish krone, growth reported in DKK is expected to be around W percentage points lower than the local currency level. For 2018, operating profit growth is expected to be in the range of 1% to 5% growth, measured in local currencies. The expectation for operating profit growth primarily reflects the outlook for sales growth and an impact from continued cost control. The outlook also reflects a planned increase in the sales and distribution costs to support the commercialisation efforts for the launch of Ozempic®. Given the current exchange rates versus the Danish krone, growth reported in DKK is expected to be around 10 percentage points lower than the local currency level. For 2018, Novo Nordisk expects financial items (net) to amount to a gain of around DKK 2.5 billion, partly offsetting the negative currency impact on operating profit. The current expectation for 2018 reflects gains associated with foreign exchange hedging contracts, mainly related to the US dollar and Japanese yen versus the Danish krone, partly offset by losses on non-hedged currencies. The expectation for financial items (net) reflects that net gains of DKK 2.7 billion in relation to foreign exchange hedging contracts as per R6 January 2018 is expected to be income recognised later in 2018. The effective tax rate for 2018 is expected to be in the range of 20-22%. The range for effective tax rate is positively impacted by the reduced federal corporate tax rate in R018 in the USA. Capital expenditure is expected to be around DKK 9.5 billion in 2018, primarily related to investments in additional capacity for active pharmaceutical ingredient production within diabetes care and an expansion of the diabetes care filling capacity. Depreciation, amortisation and impairment losses are expected to be around DKK 3 billion. Free cash flow is expected to be DKK 27-32 billion. All of the above expectations are based on assumptions that the global economic and political environment will not significantly change business conditions for Novo Nordisk during 2018, and that currency exchange rates, especially the US dollar, will remain at the current level versus the Danish krone. Novo Nordisk has hedged expected net cash flows in a number of invoicing currencies and, all other things being equal, movements in key invoicing currencies will impact Novo Nordisk's operating profit as outlined in the table on the opposite side.

**FORWARD-LOOKING STATEMENTS** Novo Nordisk's reports filed with or furnished to the US Securities and Exchange Commission (SEC), including this statutory Annual Report 2017 and Form 20-F, both expected to be filed with the SEC in February R018, in continuation of the publication of this Annual Report 2017, and written information released, or oral statements made, to the public in the future by or on behalf of Novo Nordisk, may contain forward-looking statements. Words such as 'believe', 'expect', 'may', 'will', 'plan', 'strategy', 'prospect', 'foresee', 'estimate', 'project', 'anticipate', 'intend', 'target' and other words and terms of similar meaning in connection with any discussion of future operating or financial performance identify forward-looking statements. Examples of such forward-looking statements include, but are not limited to:

- statements of targets, plans, objectives or goals for future operations, including those related to Novo Nordisk's products, product research, product development, product introductions and product approvals as well as cooperation in relation thereto
- statements containing projections of or targets for revenues, costs, income (or loss), earnings per share, capital expenditures, dividends, capital structure, net financials and other financial measures
- statements regarding future economic performance, future actions and outcome of contingencies such as legal proceedings, and
- statements regarding the assumptions underlying or relating to such statements.

In this Annual Report 2017, examples of forward-looking statements can be found under the headings '2017 performance and R018 outlook' and elsewhere. These statements are based on current plans, estimates and projections. By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific. Novo Nordisk cautions that a number of important factors, including those described in this Annual Report 2017, could cause actual results to differ materially from those contemplated in any forward-looking statements. Factors that may affect future results include, but are not limited to, global as well as local political and economic conditions, including interest rate and currency exchange rate fluctuations, delay or failure of projects related to research and/or development, unplanned loss of patents, interruptions of supplies and production, product recalls, unexpected contract breaches or terminations, government-mandated or market-driven price decreases for Novo Nordisk's products, introduction of competing products, reliance on information technology, Novo Nordisk's ability to successfully market current and new products, exposure to product liability and legal proceedings and investigations, changes in governmental laws and related interpretation thereof, including on reimbursement, intellectual property protection and regulatory controls on testing, approval, manufacturing and marketing, perceived or actual failure to adhere to ethical marketing practices, investments in and divestitures of domestic and foreign companies, unexpected growth in costs and expenses, failure to recruit and retain the right employees, and failure to maintain a culture of compliance. For an overview of some, but not all, of the risks that could adversely affect Novo Nordisk's results or the accuracy of forward-looking statements in this Annual Report R017, reference is made to the overview of risk factors in 'The risks of doing business' on pp 40-43 of this Annual Report 2017. Unless required by law, Novo Nordisk is under no duty and undertakes no obligation to update or revise any forward-looking statement after the distribution of this Annual Report 2017, whether as a result of new information, future events or otherwise.

**PERFORMANCE AGAINST LONG-TERM FINANCIAL TARGETS 2017 TARGET**

4.8%	Operating profit after tax to net operating assets	143.2%	125%	Cash to earnings	85.5%	Cash to earnings (three-year average)	96.4%	90%	9

NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**RESEARCH AND DEVELOPMENT** 2017 was a year during which Novo Nordisk made significant progress in its research and development pipeline and reached several regulatory milestones. Below are the highlights from the key development projects. On pp 22–23, the pipeline overview shows all the compounds in clinical development, and further details on clinical trials can be found in the company announcements and press releases published by Novo Nordisk during R017, which are available on [novonordisk.com](http://novonordisk.com).

**R&D STRATEGY** Novo Nordisk's R&D strategy was updated in 2016 and focuses on raising the innovation level within the core therapy areas: diabetes, obesity, haemophilia and growth disorders. In addition, Novo Nordisk is expanding its R&D efforts into other serious chronic diseases with high unmet medical needs and market attractiveness. The other serious chronic diseases are cardiovascular disease (CV), non-alcoholic steatohepatitis (NASH) and chronic kidney disease (CKD). Novo Nordisk plans to expand into these areas with semaglutide.

**DIABETES** During 2017, the EU label for Tresiba® (insulin degludec) was updated to include results from the DEVOTE and SWITCH trials reflecting the reduced risk of hypoglycaemia with Tresiba® compared with insulin glargine U100. In the US, the FDA is currently reviewing the DEVOTE and SWITCH trials for an update of the Tresiba® label, with feedback expected in the first quarter of 2018. Fiasp® (fast-acting insulin aspart), a new fast-acting mealtime insulin, obtained approval in the US and the EU for the treatment of adults with diabetes. Fiasp® is an innovative formulation of insulin aspart (NovoLog®) developed with the aim of obtaining pharmacokinetic and pharmacodynamic properties that more closely match the natural physiological insulin mealtime response of a person without diabetes. The label for Victoza® (liraglutide) was updated in the US and the EU to reflect the reduced risk of major adverse cardiovascular (CV) events in adults with type 2 diabetes and established CV disease. The decision was based on the results of the landmark LEADER trial, which demonstrated that Victoza® statistically significantly reduced the risk of cardiovascular death, non-fatal heart attack or non-fatal stroke by 13% vs placebo, when added to standard of care. In August 2017, the results of the SUSTAIN W trial were announced, demonstrating that people with type 2 diabetes treated with Ozempic® (once-weekly semaglutide) experienced superior reduction in HbA1c and body weight compared with treatment with dulaglutide. SUSTAIN 7 was a 40-week trial investigating the efficacy and safety of 1.5 mg semaglutide compared with 0.75 mg dulaglutide, and of 1.0 mg semaglutide compared with 1.5 mg dulaglutide, when added to metformin. In December 2017, Novo Nordisk obtained approval of Ozempic® in the US and subsequent endorsement in the EU from the Committee for Medical Products for Human Use (CHMP). Ozempic® is a once-weekly glucagon-like peptide-1 (GLP-1 analogue), and the approvals were based on the results of the SUSTAIN clinical trial programme. In people with type 2 diabetes, Ozempic® produced clinically meaningful and statistically significant reductions in HbA1c compared with placebo, sitagliptin, exenatide extended-release and insulin glargine U100. Furthermore, in the trials, treatment with Ozempic® resulted in statistically significant reductions in body weight. Ozempic® demonstrated a safe and well-tolerated profile across the SUSTAIN programme, with the most common adverse event being mild-to-moderate nausea, which diminished over time.

**OBSIDITY** The EU label for Saxenda® was updated to reflect the primary outcome from the LEADER trial, which investigated the long-term effects of Victoza® in people with type 2 diabetes and established cardiovascular disease. Although the Saxenda® dosing of liraglutide 3.0 mg was not investigated in the LEADER trial, the results were considered supportive for the assessment of Saxenda® for any potential cardiovascular risk. Novo Nordisk completed a phase 2 trial with once-daily subcutaneous semaglutide in people with obesity. The headline results from the 52-week double-blind phase 2 clinical trial with once-daily subcutaneous semaglutide showed that people from a mean baseline weight of around 111 kg and a body mass index (BMI) of approximately 39, experienced a weight loss of up to 17.8 kg after 52 weeks of treatment with semaglutide. The results corresponded to an estimated 13.8% weight loss compared with the weight loss of 2.3% achieved by diet, exercise and placebo alone, with all treatment arms adjusted for people discontinuing treatment in the study. Novo Nordisk plans to initiate a large phase 3a trial with once-weekly subcutaneous semaglutide in people with obesity during 2018.

**HAEMOPHILIA** Novo Nordisk obtained approval of its extended half-life factor IX molecule Refixia®/Rebinyn® for replacement therapy in people with haemophilia B (congenital factor IX deficiency) in both the EU and the US. In the US, Rebinyn® is indicated for on-demand treatment and control of bleeding episodes and the perioperative management of bleeding in adults and children with haemophilia B. In the EU, Refixia® is indicated for prophylaxis, on-demand treatment of bleeding and surgical procedures in adolescents (> 12 years of age) and adults with haemophilia B. In August 2017, Novo Nordisk initiated two phase 2 trials for concizumab, a monoclonal antibody against Tissue Factor Pathway Inhibitor (TFPI) intended for bleeding prevention after subcutaneous administration in people with haemophilia. The two trials, named explorer 4 and explorer 5, are expected to enrol more than 50 people in total, with the objective of demonstrating that concizumab is efficacious in preventing bleeding episodes in people with haemophilia A or B with inhibitors as well as in people with haemophilia A.

**GROWTH DISORDERS** Novo Nordisk completed the main phase of REAL 1, the pivotal phase 3 trial with the long-acting recombinant growth hormone somapacitan. REAL 1 was a 34-week trial that enrolled 301 treatment-naïve adults with growth hormone deficiency. At the end of the trial, there was a statistically significant difference between somapacitan and placebo, with the somapacitan-treated patients showing a greater reduction in truncal fat percentage. The safety profile observed in this study was consistent with that known for Norditropin®.

10 NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**SOCIAL PERFORMANCE** Novo Nordisk accounts for social performance on three dimensions: patients, people and assurance. The number of people reached with Novo Nordisk diabetes care products decreased slightly, while employee turnover was higher than in previous years, following a workforce reduction implemented in late 2016 and 2017. Company reputation remains high. **PATIENTS** Novo Nordisk's business is built on the promise to help patients with serious chronic diseases live better, healthier lives and the determination to enhance access to medical treatment and quality of care for patients. In 2017, Novo Nordisk provided medical treatment to an estimated 27.7 million people with diabetes worldwide, a decrease of 1% compared to 28.0 million in 2016. The decline was caused by lower sales of human insulin mainly due to an impact from lower tender volumes of human insulin in some large tender markets in 2017, partly offset by growth in sales of modern and new-generation insulin as well as Victoza® (see note 2.2 to the Consolidated financial statements). Through Novo Nordisk's Access to Insulin Commitment, the company guarantees to provide low-priced human insulin to the poorest parts of the world. The guarantee applies to Least Developed Countries (LDCs) as defined by the UN and other low-income countries as defined by the World Bank as well as selected organisations providing relief in humanitarian situations. Moreover, Novo Nordisk sells human insulin at similar prices in other low- and middle-income countries. In 2017, the ceiling price was USD 4 per vial with an average selling price of USD 3 per vial. As a result, an estimated 0.3 million patients were treated with insulin for 12 cents per day or less. Through the company's Changing Diabetes® programmes particular focus is given to vulnerable populations. The Changing Diabetes® in Children programme operates in 13 countries and reaches more than 16,000 children with type 1 diabetes, who receive insulin treatment free of charge (see p 37). The Changing Diabetes® in Pregnancy programme has screened more than 68,000 women for gestational diabetes, and more than 6,700 women have been diagnosed and subsequently treated. The Base of the Pyramid programme has been expanded in Nigeria and Ghana and started up in Senegal. Cities Changing Diabetes is a partnership programme with University College London and Steno Diabetes Center Copenhagen as well as a range of local partners, including diabetes and health communities, city governments, academic institutions, city experts and civil society organisations. It is a response to the dramatic rise in type 2 diabetes in cities, also referred to as 'urban diabetes', and the aim is to map the problem, share solutions and drive concrete action to address the diabetes challenge in cities around the world. The coalition of cities, which comprises Beijing, Copenhagen, Hangzhou, Houston, Johannesburg, Mexico City, Rome, Shanghai, Tianjin, Vancouver and Xiamen, representing more than 100 million citizens, has called for an ambitious global goal to prevent more than 100 million new cases of diabetes by 2045. Achieving the goal requires cutting rates of obesity by 25%, which would prevent more than 100 million people globally developing diabetes and could lead to savings of USD 200 billion annually by 2045. Donations to the World Diabetes Foundation (WDF) amounted to 85 million Danish kroner in 2017. Created by Novo Nordisk in 2002, WDF is an independent trust dedicated to the prevention and treatment of diabetes in the developing world. WDF supports sustainable partnerships and acts as a catalyst to help others do more. In 2017, WDF provided funding to 77 partnership projects in 32 countries; 116 countries have been supported to date since 2002. The projects focus on awareness, education and capacity building at local, regional and global levels. For every dollar donated by WDF, local partners are able to raise approximately USD 2 in cash or as in-kind donations from other sources for the projects. Read more on [worlddiabetesfoundation.org](http://worlddiabetesfoundation.org). Novo Nordisk also provides financial support to improve global access to haemophilia care. In 2017, the company donated 18 million kroner to the Novo Nordisk Haemophilia Foundation (NNHF), established in 2005. NNHF supports programmes in developing and emerging countries. Initiatives focus on capacity building, diagnosis and registry, education and empowerment. Since 2005, NNHF has provided funding for 230 programmes in 99 countries. Read more on [nnhf.org](http://nnhf.org). **EMPLOYEES** Novo Nordisk aims to be an attractive employer and offers a safe and healthy, inclusive and engaging working environment. At the end of 2017, the total number of employees was 42,682, corresponding to 42,076 full-time positions, which is a 1% increase compared with 2016. The growth in employees was mainly driven by the global service centre in Bangalore, India. Employee turnover increased from 9.7% in 2016 to 11.0% in 2017. The increased employee turnover in 2017 was mainly due to the workforce reduction at the end of 2016; as a part of this workforce was still employed at the end of 2016 it affects the 2017 employee turnover. The level of engagement and commitment to the company's values remains high. In the annual employee survey, conducted in the second quarter of 2017, 90% of employees responded positively to a set of questions to measure the level of sustainable engagement. By the end of 2017, the gender distribution among managers was 60% men and 40% women. Of the newly promoted managers, 33% were women, which is the same level as in 2016. All management teams, from entry level and upwards, are encouraged to focus on enhanced diversity, with the aim of ensuring a robust pipeline of talent for management positions. The average frequency rate of occupational accidents with absence was 2.7 per million working hours in 2017 compared with 3.0 in 2016. There were no work-related fatalities in 2017, compared with one fatality in 2016. Novo Nordisk works with a zero-injury mindset and remains committed to continuously improving safety performance. The link between company values and safety behaviour is emphasised to ensure that employees always make the safe choice. **ASSURANCE** Measures are taken to provide assurance that Novo Nordisk conducts its business in a responsible way. Training in business ethics is mandatory and a high priority. Annual business ethics training is required for all employees, including new hires. Business ethics training is therefore a key element of the onboarding programmes. In 2017, as in 2016, 99% of all relevant employees completed and documented their training and passed the related tests. This high level is attributed to the constant focus on and communication by senior management of the importance of business ethics compliance. CONTINUED 11 NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2013\* 2014 2015 2016 2017 0 20 40 60 80 100 COMPANY REPUTATION Mean score among key external stakeholders • Realised Target Scale \* Data for people with diabetes not included due to lack of availability. A total of 34 business ethics reviews were completed in 2017 with 130 findings, compared with 52 reviews in 2016 with R34 findings. It is Group Internal Audit's assessment that the level of compliance is sound. Closure of findings progressed as planned, and there were no overdue findings as of 31 December 2017. The global facilitator team conducted 65 audits of units' adherence to the Novo Nordisk Way. These facilitations covered approximately 21,000 employees, of whom almost 3,000 were interviewed, while feedback was collected from almost 700 stakeholders. The facilitations in 2017, as in 2016, showed a high level of compliance with the Novo Nordisk Way. Corrective actions and corresponding deadlines were agreed with local management for all actions (see pp 16–17 and novonordisk.com/about-novo-nordisk/novo-nordisk-way.html for additional information). A total of 246 supplier audits, compared with 223 in 2016, were conducted in 2017 to assess suppliers' level of compliance with the company's standards for suppliers. These relate to quality as well as to Novo Nordisk's responsible sourcing policy to ensure respect for human and labour rights, environmental management and business ethics. These audits are undertaken by Novo Nordisk's Corporate Quality organisation. Of the audits carried out in 2017, 28 concerned responsible sourcing criteria, on par with 2016. Only high-risk suppliers, identified through a robust risk assessment, are selected for responsible sourcing audits. There were no critical findings in 2017. Novo Nordisk had six product recalls from the market in 2017, which is the same level as in 2016. None of these recalls were critical. Local health authorities were informed in all instances to ensure that distributors, pharmacies, doctors and patients received appropriate information. In 2017, as in 2016, there were no failed inspections by regulatory authorities among those resolved at year-end. A total of 83 inspections were conducted in 2017 at Novo Nordisk's sites, at clinics conducting investigations for Novo Nordisk or for voluntary ISO 9001 certification, compared with 74 inspections in 2016. At year-end, U4 inspections had been passed and 29 were unresolved. HUMAN RIGHTS Novo Nordisk acts on its responsibility to respect human rights as set out in the UN Guiding Principles on Business and Human Rights, and conducts ongoing due diligence. Novo Nordisk recognises that the company has a number of potential impacts with regard to human rights in its operations and business relationships. Actions are taken focusing on salient issues beyond those already addressed by existing programmes such as global labour standards and employee health and safety, bioethics, responsible sourcing and business ethics. In 2017, the focus was on human biosamples for research use, patient safety and local production projects. Novo Nordisk has also strengthened consultations with patients. Reporting on respect of human rights, using the UN Guiding Principles Reporting Framework, is available in the Communication on Progress at novonordisk.com/annualreport. REPUTATION Novo Nordisk's reputation among key stakeholders – people with diabetes, general practitioners and diabetes specialists – is an indicator of the extent to which the company lives up to stakeholders' expectations and the likelihood that they will trust, support and engage with the company. The company reputation score, measured on a scale of 0–100, increased to 79.3, from 77.8 in 2016. Data were collected between June and September R017; a score between 70 and 80 is considered strong. RESPONSIBLE TAX APPROACH Novo Nordisk's tax approach is to pursue a competitive tax level in a responsible way. As a general rule, Novo Nordisk subsidiaries pay corporate taxes in the countries in which they operate and where business activity generates profits, earned in accordance with international transfer pricing rules. A competitive tax level implies achieving a tax level around the peer-group average. The company has a balanced tax risk profile and does not engage in tax avoidance activities. For further information about Novo Nordisk taxes, see note 2.6 Income taxes and deferred income taxes on p 72. To create certainty regarding tax payments, Novo Nordisk has applied for advance pricing agreements (APAs) in key countries. The ambition is to have APAs covering more than two-thirds of total sales. An APA is an up-front agreement between the tax authorities in two or more countries, covering the pricing methodologies for relevant intercompany transactions, thereby determining the level of taxable income for the countries in question. An APA typically covers a future period of five tax years. Novo Nordisk currently has APAs in place covering intercompany transactions with the US, Canada and Japan, corresponding to more than half of total sales. The finance policy and the tax strategy are endorsed by the Board of Directors of Novo Nordisk. LONG-TERM SOCIAL TARGETS Long-term social targets support long-term financial performance, balancing responsibility with profitability, with the aim of creating sustainable value for shareholders and other stakeholders. These targets reflect Novo Nordisk's ambition to be a sustainable business: fostering well-being by helping people live better lives, working the Novo Nordisk Way and safeguarding the reputation of the company. Novo Nordisk has three long-term social targets related to patient reach, employee engagement and reputation, two of which are in the process of being changed. The target set in 2013 to reach 40 million people with the company's diabetes care products by 2020 has been abandoned. As communicated in the Annual Report R016, current projections show that it will not be possible to reach the target due to a more challenging market environment than anticipated when the target was set. Work is ongoing to deliver on the commitment to improve access to quality care. Until 2016, the company measured employee engagement through a custom-made annual survey (eVoice). While providing relevant data on year-on-year trends within the company, the study did not allow for external benchmarking with other companies. In 2017, a new methodology for measuring employee engagement was introduced that allows for external benchmarking. Once a robust baseline has been established, long-term targets will be set. Reputation is measured among key external stakeholders, and the target is unchanged. The scope of the calculation has been updated. For more information see Changes to accounting policies and disclosures on p 100. For further information about social performance, see the social statement on pp 98–103 and the Communication on Progress at novonordisk.com/annualreport. 12 NOVO NORDISK ANNUAL REPORT 2017 ACCOMPLISHMENTS AND RESULTS 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2013 2014 2015 2016 2017 0 20 40 60 80 100 % SHARE OF RENEWABLE POWER FOR PRODUCTION • Realised Target

**ENVIRONMENTAL PERFORMANCE** Novo Nordisk accounts for environmental performance on three dimensions: use of resources, emissions and waste. All of Novo Nordisk's production facilities are certified according to ISO 14001. The production of active pharmaceutical ingredients (API) in Kalundborg, Denmark, is also certified according to ISO 50001. In 2017, use of resources decreased slightly. CO2 emissions from production sites decreased as a result of the decreased energy use while CO2 emissions from product distribution and waste increased slightly.

**RESOURCES** Novo Nordisk's environmental strategy prioritises minimising the use of non-depletable or scarce natural resources. In 2017, energy and water consumption decreased slightly. 79% of the power (electricity) used at production sites came from renewable sources such as biomass, wind and hydropower. Two facilities are located in regions subject to high water stress, ie high seasonal variations in water availability, and account for 7% of the total water used at Novo Nordisk, up from V% in 2016 due to increased production to meet market demands. There were no incidents of water shortage. Novo Nordisk continued to focus on energy efficiency and water savings. Energy and water projects implemented in 2017 are expected to lead to estimated annual savings of 18,000 GJ energy and more than 100,000 m3 water from 2018.

**EMISSIONS AND WASTE** Novo Nordisk's climate action programme aims to reduce CO2 emissions throughout the value chain. The current focus includes energy used in production, purchased goods and services and transportation such as company cars, business flights and product distribution. The overall CO2 emissions from energy consumption at production sites decreased by 2% to 90,000 tons, due to decreased energy use in areas that use fossil-based energy. Novo Nordisk continues to engage with energy suppliers to explore possible renewable power solutions for facilities in the USA and Europe, in order to meet the long-term target for all power used by the company's production sites to be based on renewable sources by 2020. Novo Nordisk's largest production site – located in Kalundborg, Denmark – is supplied with steam and heat from the local Asnæs power plant. As a result of a partnership between Novo Nordisk, other local businesses and energy provider Ørsted, construction started in October 2017 to convert Asnæs from being coal-fired to burning wood chips. With this change, it is expected that all Novo Nordisk production in Denmark by 2020 will be based on renewable energy delivered as power, heating and steam. With the use of bio-natural gas and steam based on wood chips in Denmark, as well as power from renewable sources at Novo Nordisk production sites globally, it is expected that more than 75% of the total energy use will be based on renewable sources by 2020. As part of Novo Nordisk's supply chain programme, focused on reducing emissions from suppliers of raw materials, more than R0 key suppliers were engaged in 2017 to work on energy efficiency and use of renewable energy. CO2 emissions from business flights are estimated to be 44,000 tons in 2017, the same as in 2016. Novo Nordisk encourages employees to use virtual meetings instead of travelling, and in 2017 virtual meetings increased by 25%. CO2 emissions from company cars, mainly used by the sales force, showed a decrease of 7% from V8,000 tons to 63,000 tons in 2017, due to a reduction in the number of cars and a shift to more fuel efficient cars. In November 2017, Novo Nordisk adopted new global guidelines for company cars, which is guiding the shift towards electric and hybrid cars. Based on these guidelines, local car policies will be implemented in R018. Emissions from product distribution increased by 3% compared with 2016. Emissions from air and ground transport remained stable. More products were distributed by sea. Distributing as many products as possible by sea remains a priority for Novo Nordisk, as sea transport reduces both CO2 emissions and costs relative to product volume. Waste increased by 3% compared with R016, primarily due to increased amounts of organic residues from fermentation processes. The energy from these residues is recovered in biogas plants, and the digested slurry is used as fertiliser on local farmland. Overall, 96% of all the waste is recycled, used for biogas production or incinerated in plants where the energy is used for producing heat or power.

**LONG-TERM ENVIRONMENTAL TARGETS** Novo Nordisk has three long-term environmental targets related to share of power from renewable sources, energy use and water use. In 2015, Novo Nordisk set a target for all production sites to run solely on power from renewable sources by 2020. The company has signed up to the RE100 initiative, led by The Climate Group in partnership with CDP, a not-for-profit organisation responsible for managing the global disclosure system for environmental impacts. Novo Nordisk is well on track to meet the target. With the decrease in energy and water use in 2017, the long-term targets for reducing consumption of energy and water were met and will be discontinued. Experience has shown that a target correlated with sales does not drive performance towards becoming a sustainable business. New long-term targets will be developed as a result of a strategy process in 2018. Long-term environmental targets support long-term financial performance, balancing responsibility with profitability, with the aim of creating sustainable value for shareholders and other stakeholders. These targets reflect strategic priorities to be a sustainable business: aiming to manage the use of natural resources with respect to ecosystems and not encroach on ecosystems or communities. For further information about environmental performance, see the Consolidated environmental statement on pp 104–106 and the Communication on Progress at [novonordisk.com/annual-report](http://novonordisk.com/annual-report). 13

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**LEADING THE NOVO NORDISK WAY** The Novo Nordisk Way is the foundation for ‘how we do business’. It sets the direction for all employees at Novo Nordisk and underpins the company’s vision, strategy and actions. “The Novo Nordisk Way is the foundation for everything we do,” says President and Chief Executive Officer Lars Fruergaard Jørgensen. “It describes why we’re here, our ambitions and how we do things. And it spells out what’s expected of every single employee, regardless of where they work,” he elaborates. The 10 Essentials that are part of the Novo Nordisk Way describe the behaviours that characterise working the Novo Nordisk Way. In every aspect, the patient perspective comes first. Patients rely on Novo Nordisk products every day and should have confidence in the company behind these medicines. But earning the trust of other stakeholders matters too, and the company therefore stays attuned to the interests of all key stakeholders and seeks to build and maintain good relationships. “The actions we take will inevitably impact people, communities and the environment. That’s why we use the Triple Bottom Line principle to guide decisions and always strive to achieve a good balance between financial, social and environmental dimensions of performance. We want to maximise our positive impacts and minimise any adverse impacts of our business. This is what doing business responsibly means to us,” explains Lars Fruergaard Jørgensen. Novo Nordisk’s purpose is ‘driving change to defeat diabetes and other serious chronic diseases’. This is a promise to patients, and the company holds itself accountable for delivering on it. “Since the very beginning, Novo Nordisk has been focused on finding new and better ways of treating diabetes. But the way we do this matters, and the values of the company’s founders are values we’re guided by today, even if the wording may have been updated.”

NOVO NORDISK ANNUAL REPORT 2017 OUR BUSINESS

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**REAFFIRMING ‘HOW WE DO BUSINESS’** When he took office as CEO, Lars Fruergaard Jørgensen took the opportunity to reaffirm the Novo Nordisk Way. He and his leadership team wanted to convey a strong message that not only will Novo Nordisk continue to do business the Novo Nordisk Way – but also that the Novo Nordisk Way will be defining for the company’s future success. “At Novo Nordisk, we aim to be a leader in all the areas in which we’re active, and this ambition is now explicitly stated in the Novo Nordisk Way. We must have self-confidence, but we must also be mindful of the obligation that follows. To deliver on our promises, we must take responsibility for developing even better products and making sure that more patients get access to our products. This is the mindset we need to have for Novo Nordisk to be successful in the future. “I’m amazed by how strongly the Novo Nordisk Way is present around the world. It really resonates. Our facilitations – an internal audit process conducted by senior employees interviewing employees to measure how well we operate in line with our values – tell us that we have a solid level of compliance with the Novo Nordisk Way,” says Lars Fruergaard Jørgensen. “But we can’t take this for granted. Across the organisation, we must focus on the ability to anticipate and adapt to changing conditions in a timely and agile way, tackling challenges, prioritising resources and seizing opportunities to shape our business environment. In a world and industry of increasing complexity, we must encourage employees at all levels to practise simplicity – focusing on making things simple, and to question what they don’t understand, eliminating processes and steps that don’t add value. That, in turn, will allow us to operate with greater agility.”

**NO BUSINESS WITHOUT ETHICS** One other statement stands out. Even though competition may be tough, quality and business ethics must never be compromised. “We acknowledge that it can be difficult to understand and interpret all applicable rules correctly and that there can be challenging situations – cultural norms, industry practices or even, sometimes, conflicting demands. We also acknowledge that breaches may, and occasionally do, happen. We do our utmost to identify any violations, either through internal audits or through reports to the Compliance Hotline, and we take appropriate action, depending on the severity of the violation,” explains Lars Fruergaard Jørgensen. “There’s zero tolerance for unethical business behaviour. If we don’t get this right, we risk losing our licence to operate and the respect of those who trust us each and every day – jeopardising the whole company. Therefore, we make great efforts to ensure that employees know what is and what is not acceptable behaviour. Requirements are spelled out in our Business Ethics Code of Conduct, and all employees must undergo training and tests yearly. The dos and don’ts are conveyed consistently and in plain language by senior management, and through dedicated communication and education – where we share with employees what can go wrong and the associated consequences. Everyone has access to simple and practical guidance they can consult when encountering potential ethical issues. As with all of the Essentials in the Novo Nordisk Way, it’s a mindset we share – and we hold ourselves accountable for living by it.”

**WALKING THE TALK** Facilitation is a systematic and unique approach to follow up on how the Novo Nordisk Way is lived across the organisation. The facilitations are conducted by a team of in-house experts with deep and broad knowledge of the business. They assess how the Novo Nordisk Way is practised at unit level, specifically by measuring how the Essentials are expressed in the actions of leaders and their employees. Simply put, facilitations ensure that people in the company are walking the talk. A unit’s overall compliance rating describes to what extent the unit lives up to the Novo Nordisk Way. A 1–5 rating scale is applied, ranging from ‘Not meeting standards’ to ‘Outstanding’, and best practice examples are shared internally, while action is taken by local management to remedy below-standard performance findings. A consolidated report is presented to Executive Management and the Board of Directors. See facilitation findings in 2017 on p 103. “**THE NOVO NORDISK WAY AND THE TRIPLE BOTTOM LINE PRINCIPLE PROVIDE THE FOUNDATION FOR OUR SUCCESS IN THE LONG TERM.**” Lars Fruergaard Jørgensen, president and chief executive officer

In 1923, our Danish founders began a journey to change diabetes. Today, we are thousands of employees across the world with the passion, skills and commitment to drive change to defeat diabetes and other serious chronic diseases.

- We aim to lead in all disease areas in which we are active.
- Our key contribution is to discover and develop innovative biological medicines and make them accessible to patients throughout the world.
- Growing our business and delivering competitive financial results is what allows us to help patients live better lives, offer an attractive return to our shareholders and contribute to our communities.
- Our business philosophy is one of balancing financial, social and environmental considerations – we call it ‘The Triple Bottom Line’.
- We are open and honest, ambitious and accountable, and treat everyone with respect.
- We offer opportunities for our people to realise their potential.
- We never compromise on quality and business ethics. Every day, we must make difficult choices, always keeping in mind what is best for patients, our employees and our shareholders in the long run. It’s the Novo Nordisk Way.

**THE ESSENTIALS**

1. We create value by having a patient-centred business approach.
2. We set ambitious goals and strive for excellence.
3. We are accountable for our financial, environmental and social performance.
4. We provide innovation to the benefit of our stakeholders.
5. We build and maintain good relations with our key stakeholders.
6. We treat everyone with respect.
7. We focus on personal performance and development.
8. We have a healthy and engaging working environment.
9. We strive for agility and simplicity in everything we do.
10. We never compromise on quality and business ethics. [novonordisk.com/NNWay](http://novonordisk.com/NNWay)

## Edgar Filing: NOVO NORDISK A S - Form 6-K

Strengthen leadership in GROWTH DISORDERS Strengthen leadership in OBESITY Expand into OTHER SERIOUS CHRONIC DISEASES  
Strengthen leadership in DIABETES CARE Pursue leadership in HAEMOPHILIA DRIVING CHANGE TO DEFEAT DIABETES AND  
OTHER SERIOUS CHRONIC DISEASES NOVO NORDISK WAY STRATEGIC PRIORITIES CORE CAPABILITIES Engineering,  
formulating, developing and delivering protein-based treatments Deep disease under- standing Efficient large-scale  
production of proteins Global commercial reach and leader in chronic disease care A STRATEGY TO IMPROVE PATIENTS'  
LIVES Novo Nordisk is dedicated to driving change to defeat diabetes and other serious chronic diseases. The ambition is to lead in all disease areas where  
the company is active. Currently, Novo Nordisk offers and develops innovative treatments for diabetes, obesity, haemophilia and growth disorders. A new  
strategic priority is to expand into other serious chronic diseases, such as liver, heart and kidney diseases related to diabetes and obesity. "Our strategic  
foundation is strong. We have five clear priorities, our core capabilities which enable us to execute these priorities well, and the Novo Nordisk Way  
which guides how we do business to be a successful, sustainable business," explains Camilla Sylvest, executive vice president, Commercial Strategy &  
Corporate Affairs, Novo Nordisk. The company operates in a dynamic business environment that presents several challenges. On the one hand, there  
are large and growing unmet medical needs in all the areas in which Novo Nordisk is active, and the company has very competitive products to  
improve patients' lives. On the other hand, competition is more intense than ever, not least in what is by far Novo Nordisk's largest business area:  
diabetes. The launch of biosimilar products in the insulin segment, combined with stronger buyers' power and lower willingness to pay for innovation,  
makes for a challenging business environment. "We must ramp up our efforts to drive commercial innovation and gain market access, if we are to grow  
our business sustainably. We can't rely on product innovation alone. We know it takes more than medicine to defeat diabetes and other chronic  
diseases. That's why we work to strengthen digital and commercial innovation in healthcare by offering supporting tools, services and programmes,"  
says Camilla Sylvest. "Digital health is another innovation that can lead to better treatment outcomes, thanks to the generation of actionable insights  
from real-world usage of our products. Our connected pens can be applied with multiple partnership solutions for use by patients and healthcare pro-  
viders. They can provide patient benefits such as better dosing, easier adherence and coaching on the use of our products. This may also allow for  
innovative contracting, where payers and patients can link financial investments to the proven, real-world clinical value of our products."

STRENGTHEN LEADERSHIP IN DIABETES CARE There are significant unmet needs within diabetes care. Today, the International Diabetes  
Federation (IDF) estimates that more than 425 million people are living with diabetes, and this number is likely to grow to 629 million by 2045.<sup>1</sup> Only  
6% are currently treated with Novo Nordisk products.<sup>1</sup> The intention is to strengthen the differentiation of the company's newest insulins – Tresiba®,  
Xultophy®, Ryzodeg® and Fiasp® – by focusing on their potential for improved treatment outcomes. In markets where there is not yet competitive  
access to these products, the focus will be on one or more of the modern insulin products – Levemir®, NovoRapid® and NovoMix® – depending on the  
local market situation. In countries where a buyer

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

wants insulin at the lowest possible price, Novo Nordisk offers a range of human insulin products. See Product overview on p 112. Across the world, the majority of people with diabetes are not achieving the optimal blood glucose level. This is linked to the fear of hypoglycaemia (low blood sugar). After experiencing episodes of hypoglycaemia, some patients tend to reduce their insulin dose, which in turn leads to poor blood glucose control and long-term diabetes complications.<sup>1</sup> Severe hypoglycaemic episodes are associated with increased risk of death and high healthcare costs of up to Q4,500 dollars per episode.<sup>2</sup> "Tresiba® sets a new standard for basal insulin initiation by lowering the risk of hypoglycaemia, offering healthcare professionals and patients the ability to control diabetes with fewer concerns," Camilla Sylvest explains. Read more on pp 24–25. Novo Nordisk's GLP-1 products – Victoza® and the new once-weekly Ozempic® (semaglutide) – may transform the treatment of people with type 2 diabetes. They are the only GLP-1 products to have recently demonstrated in large phase 3 trials that patients can cut the risk of cardiovascular disease and death significantly, while also achieving unsurpassed blood glucose lowering and weight loss. This is important because adults with diabetes still have a 2–4-fold higher risk of cardiovascular disease, despite the advances in the treatment of cardiovascular disease that have been made. Read more on pp 24–25. In 2017, Victoza® was relaunched with the new cardiovascular data in the label in EU countries, and a cardiovascular indication in the US. The launch of Ozempic® as a once-weekly injection is expected to begin in the first countries in 2018. A once-daily tablet version of semaglutide is under development and may provide Novo Nordisk with a very promising product in the oral diabetes segment. Read more on pp 24–25. **STRENGTHEN LEADERSHIP IN OBESITY** "Obesity is a chronic disease that, for some people, requires medical treatment. It's possibly the largest risk to global health and may have severe comorbidities, such as type 2 diabetes and cardiovascular diseases. It's also a significant cost burden for society, expected to increase if firm action is not taken. Today, more than 650 million adults worldwide are living with obesity, of whom only 2% receive medical treatment.<sup>3</sup> This number is forecast to grow to 1 billion by 2025.<sup>3</sup> In the same period, the costs of treating diseases linked to obesity are expected to increase by 50% to around 1.2 trillion dollars globally, assuming no action is taken to bend the rise in obesity.<sup>4</sup> With Saxenda® (liraglutide 3 mg), we have a strong position in the small, but growing, market for medical treatment of obesity. We have the potential and the ambition to build the global obesity market," says Camilla Sylvest. Novo Nordisk's ambition is to improve patients' access to medication, support the education of healthcare professionals in medical obesity treatment, support new clinics, and build awareness and recognition that obesity is a chronic disease. Meanwhile, Novo Nordisk's research and development teams are working relentlessly to develop new biologic medicines that either alone or in combination can achieve a weight loss of more than 15% by reducing appetite and increasing energy expenditure. In a recent phase 2 study, a 0.4 mg dose of semaglutide as a once-daily injection led to weight loss of up to 16.2% after one year's treatment. The company plans to initiate a phase 3 clinical trial programme with semaglutide in the first half of 2018. Read more on pp 28–29. **PURSUE LEADERSHIP IN HAEMOPHILIA** Within the haemophilia business, approximately half of historic NovoSeven® sales could be exposed due to the launch of a new competing product, but the product still has opportunities in some markets. NovoEight® sales measured in volume continue to grow, despite increasing competition from long-acting factor VIII products. To solidify its position in the market for haemophilia products, Novo Nordisk is pursuing opportunities for in-licensing or acquisitions. Read more on pp 32–33. **STRENGTHEN LEADERSHIP IN GROWTH DISORDERS** Lack of growth hormone treatment may significantly impact a person physically and psychologically. "Novo Nordisk is the global market leader in growth disorder treatment, and we'll strengthen this position through effective life cycle management of existing products and innovation," explains Camilla Sylvest. "A new-generation, long-acting human growth hormone, somapacitan, could be the first once-weekly treatment for growth disorders, and this could improve treatment options for patients." **EXPAND INTO OTHER SERIOUS CHRONIC DISEASES** As part of an update of its R&D strategy, Novo Nordisk has decided to expand into other serious chronic diseases associated with diabetes and obesity. The areas currently being explored are the liver disease NASH (non-alcoholic steatohepatitis), cardiovascular diseases and chronic kidney disease – which all have patient populations with high unmet medical needs. The expansion will be spearheaded by semaglutide, which may have positive effects on these diseases. Novo Nordisk will also explore the utility of other compounds in its pipeline within these areas and intensify its search for external innovation. Read more on pp 20–21. **"IT ALL STARTS WITH THE PATIENT. WE WILL IMPROVE PATIENTS' ACCESS TO OUR PRODUCTS AND THEIR ABILITY TO REACH TREATMENT TARGETS, BECAUSE THIS IS WHAT LEADS TO BETTER HEALTH OUTCOMES."** Camilla Sylvest, executive vice president, Commercial Strategy & Corporate Affairs

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**RAISING THE INNOVATION HEIGHT** The healthcare agenda is changing, and business competition is increasing. To meet these challenges, Novo Nordisk's future drug development ambitions call for a higher innovation threshold, expansion into other therapy areas and more external partnerships. For many serious chronic diseases such as obesity, treatment options are limited, and the need for innovative research is great. In 2017, Novo Nordisk implemented a set of new strategic priorities in research and development that raise its drug development innovation ambitions, as the company aims to develop breakthrough treatments within its existing areas and expand into other serious chronic disease areas. "It's all about providing better treatments for people with diabetes, obesity, haemophilia and growth disorders, but also focusing on other serious chronic diseases with high unmet needs. These are areas where we don't yet have a presence, but which are the natural next step for us as there are overlapping patient populations and we have the relevant capabilities and molecules that we believe can be developed into treatments for these diseases," explains Mads Krosggaard Thomsen, executive vice president and chief science officer, Novo Nordisk.

**TRANSFORMING EXPECTATIONS** With the launch of liraglutide (Victoza®) in 2009, Novo Nordisk moved into a new category of diabetes medications: GLP-1 analogues. This would later prove to be the company's entry into a new disease area, obesity, and potentially other areas in the future, such as cardiovascular disease. Beyond lowering blood glucose – which all diabetes medications do – liraglutide also helps people with type 2 diabetes to lose weight and reduce their risk of major cardiovascular events. According to Mads Krosggaard Thomsen, semaglutide (Ozempic®), Novo Nordisk's new once-weekly GLP-1 analogue, which is expected to be launched in 2018, will take diabetes treatment to the next level. "Semaglutide, or Ozempic®, was conceived as the longer-acting version of human GLP-1, but this molecule has proven far more efficacious than expected in terms of blood glucose lowering, weight loss and reduction of cardiovascular events. We continue to explore the impact of semaglutide when it comes to weight loss and cardiovascular events, and we're also beginning to look at how semaglutide may reduce the risk of kidney and, potentially, fatty liver disease in people with diabetes. "We're transforming expectations of what a diabetes medication should do, from only being able to lower blood glucose, to being able to treat comorbidities," he continues. Read more about diabetes treatment moving beyond blood glucose control on pp 24–25.

**TREATING OBESITY** Novo Nordisk is already leveraging the insights from its GLP-1 research in other serious chronic disease areas. Liraglutide 3 mg (Saxenda®) was launched in 2015 as a treatment for obesity, and semaglutide is approaching phase 3 development for obesity. Obesity is a complex disease (see pp 28– 29). GLP-1 analogues such as liraglutide are effective in reducing calorie consumption by reducing appetite and increasing the feeling of satiety. Striving to develop obesity treatments which can deliver more than 15% weight loss, Novo Nordisk PARVANEH works in Research and Development at Novo Nordisk in Denmark 20 OUR BUSINESS

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

is investigating a number of innovative approaches to address the causes of obesity in its early research pipeline. “We’re working on molecules with new modes of action, which have the potential to provide innovative and effective treatment options for obesity,” says Mads Krogsgaard Thomsen. “Furthermore, some of these molecules may have potential for treating other serious chronic diseases new to Novo Nordisk.”

**MOVING INTO OTHER THERAPY AREAS** Besides diabetes and obesity, semaglutide is being investigated as a potential treatment for NASH, a progressed stage of non-alcoholic fatty liver disease for which there is currently no approved treatment. NASH may progress to liver failure and is projected to be the leading cause of liver transplantation.<sup>5</sup> Semaglutide as a once-daily treatment for NASH is currently under development in phase 2. Novo Nordisk is also investigating the effect of semaglutide on cardiovascular and kidney disease. “Within cardiovascular disease, we have opportunities to reduce the risk of heart attacks and stroke,” says Mads Krogsgaard Thomsen. “I believe that cardiovascular disease and chronic kidney disease are areas that constitute a significant unmet medical need where semaglutide could make a real difference.”

**BIOLOGICAL MEDICINE IN A TABLET** Insulin and GLP-1 analogues are biological medicines – proteins – that if taken orally as a tablet will be destroyed by digestive enzymes in the gastrointestinal tract before having any effect in the body – hence the need to inject such medicines. This may change within the next few years, as Novo Nordisk scientists have found a way to formulate semaglutide in a tablet that offers the GLP-1 product protection against digestive enzymes as well as increasing absorption into the bloodstream. Oral semaglutide is currently in phase 3 development for the treatment of type 2 diabetes. In order for oral insulin to be viable, the technology to ensure that the insulin molecule is absorbed by the body in sufficient quantities still needs to be discovered. Novo Nordisk is working with external scientific partners to discover such a drug delivery technology. “We’re very conscious that oral insulin, like oral GLP-1 products, remains a ‘Holy Grail’ for many people living with diabetes, and it’s the needs of patients that guide our company,” Mads Krogsgaard Thomsen points out.

**STEM CELL THERAPY FOR TYPE 1 DIABETES** The ultimate treatment innovation within diabetes is finding a cure. Type 1 diabetes is caused by a malfunction in the immune system whereby the body attacks its own insulin-producing beta cells. If it were possible to transplant new beta cells into the body and keep them alive, type 1 diabetes could be cured. Professor Jacob Sten Petersen, corporate vice president of Global Research, Novo Nordisk, says that the company has recently moved several steps closer to developing beta cells that can be transplanted into the bodies of people with type 1 diabetes. “Recent progress in our research means that today we have a protocol for developing stem cells into beta cells that is reproducible, scalable and robust. We’ve achieved this by leveraging decades of experience of working with mammalian cells in research, development and production. We now have the infrastructure and quality to make large-scale production of beta cells,” he explains. At the same time, Novo Nordisk has made significant progress in developing an encapsulation device that will protect the newly transplanted beta cells from attack by the body. “I hope that we’ll be in a position to start clinical trials in the next few years,” adds Jacob Sten Petersen.

**JOINING FORCES AND TAKING RISKS** Novo Nordisk’s new strategic priorities to raise the innovation threshold and move into other serious chronic disease areas are ambitious, and the company realises that it cannot achieve its goals without access to external innovation and competences. “We have a long history of collaboration with world-leading institutions and academia. We plan to intensify research collaborations and utilise external expertise to fuel our internal innovation,” explains Mads Krogsgaard Thomsen. Expanding and entering other chronic disease areas comes at the price of higher risk, he acknowledges. “Our future drug development ambitions and higher innovation threshold require a change in mindset. We need to embrace taking risks and not be discouraged by potential failures, as high-risk research innovation is necessary if we are to bring breakthrough products within our existing therapy areas to the market and successfully enter other chronic disease areas.”

2018 KEY EXPECTED MILESTONES

Tresiba® Label extension with DEVOTE and SWITCH data in the US  
Ozempic® (semaglutide) Feedback from regulatory authorities in the EU and Japan  
oral semaglutide Results from phase 3a trial programme (PIONEER)  
semaglutide obesity Initiation of phase 3  
N8-GP Submission in the US, the EU and Japan  
concizumab Results from phase 2 trial programme (explorer 4 and 5)  
somapacitan Results from phase 3a trial programme (REAL 1) for adults  
somapacitan Results from phase 2 trial programme (REAL 3) for children  
BIOPHARMACEUTICALS Phase 1  
Phase 2  
Phase 3  
Filed/ regulatory approval

Compound	Indication	Description
HAEMOPHILIA N8-GP NN7088	Haemophilia A	A glycopegylated long-acting recombinant coagulation factor VIII intended to offer prophylaxis and treatment of breakthrough bleeds.
concizumab NN7415	Haemophilia A and B	A monoclonal antibody against Tissue Factor Pathway Inhibitor (TFPI) intended to offer subcutaneous prophylaxis.
SC N8-GP NN7170	Haemophilia A	Product to enable subcutaneous (SC) administration of N8-GP.
GROWTH DISORDERS somapacitan NN8640	Growth disorders	A long-acting human growth hormone intended for once-weekly subcutaneous (SC) administration. Projects in phase 3 for adults (AGHD) and in phase 2 for children (GHD).
OTHER SERIOUS CHRONIC DISEASES semaglutide NASH NN9931	NASH A	long-acting GLP-1 analogue intended as a once-daily treatment for non-alcoholic steatohepatitis (NASH). Phase 3 Studies in large groups of patients (usually 1,000–3,000) comparing a new medication with a commonly used drug or placebo for both safety and efficacy. Phase 3a covers trials conducted after efficacy is demonstrated and prior to regulatory submission. Phase 3b covers clinical trials completed during and after regulatory submission. In small therapeutic areas such as haemophilia, regulatory guidelines may allow the design of single-arm therapeutic confirmatory trials or trials that compare against historical control, for example, instead of existing treatment or placebo. Read more at <a href="http://novonordisk.com/investors">novonordisk.com/investors</a> and <a href="http://clinicaltrials.gov">clinicaltrials.gov</a> . Overview as of 31 December 2017

Filed/regulatory approval The phase in which a product undergoes regulatory authority review. Products listed under this phase are currently under regulatory review in at least two of the triad markets: the US, the EU and Japan.

**GOOD DIABETES CARE REQUIRES MORE THAN BLOOD GLUCOSE CONTROL** The conversation between a person with diabetes and their doctor usually focuses on blood glucose control. But living with diabetes comes with a number of life-threatening risks, including cardiovascular events and severe hypoglycaemic episodes – risks that novel diabetes treatments can now reduce. And so the conversation is changing. Fact: cardiovascular (CV) disease is the leading cause of death in people with type 2 diabetes.<sup>1</sup> People with type 2 diabetes have a higher risk of experiencing or dying from CV events compared with people without diabetes, despite many being treated with blood pressure- and cholesterol-lowering agents in addition to receiving diabetes treatment. “The CV risk associated with type 2 diabetes has long been recognised,” points out Stephen Gough, senior vice president and global chief medical officer, Novo Nordisk. “But treating a person with both type 2 diabetes and CV disease has historically been like treating two unconnected diseases, due to the lack of type 2 diabetes medications that also reduce the risk of major adverse CV events.”

**REDUCING CV RISK** In 2017, Novo Nordisk’s Victoza®, which helps people with type 2 diabetes to lower their blood glucose levels and lose weight, became the first GLP-1 analogue approved in the EU and the US for also reducing the relative risk of major adverse CV events in adults with type 2 diabetes and established CV risk. These label updates were based on data from the LEADER trial, which demonstrated that Victoza® significantly reduced the overall risk of CV events by 13% when added to standard of care.<sup>6</sup> Moreover, Victoza® was shown to significantly reduce death from CV events.<sup>6</sup> “Addressing both blood glucose and CV risks should now be integral parts of type 2 diabetes treatment, so that the number of people dying from CV events associated with diabetes is reduced,” says Stephen Gough.

**A ONCE-WEEKLY TREATMENT OPTION** Since the launch of Victoza®, Novo Nordisk has been working hard on the development of a once-weekly GLP-1 analogue, semaglutide, which in clinical trials has been shown to consistently lower both blood glucose and body weight significantly against all tested comparators, including a DPP-IV inhibitor, a basal insulin and other GLP-1 analogues. The results

**Type 2 diabetes and cardiovascular disease** Type 2 diabetes causes high levels of glucose in the blood (hyperglycaemia) that, if left untreated or not managed effectively, can damage the walls of the arteries and make them more likely to develop fatty deposits, called atheroma. A build-up of atheroma in the arteries that supply oxygen-rich blood to the heart and brain leads to cardiovascular disease, including stroke and coronary heart disease, which can cause angina and heart attack. The symptoms of cardiovascular disease may go undetected for years, and serious cardiovascular disease may develop in people with diabetes before they reach the age of 30. More than half the people with type 2 diabetes will exhibit signs of cardiovascular disease complications at the time of their diabetes diagnosis.

**CARDIOVASCULAR DISEASE AWARENESS SURVEY** In September 2017, the International Diabetes Federation (IDF) partnered with Novo Nordisk to launch the first-ever multi-country online survey investigating the level of cardiovascular disease awareness and knowledge among people with type 2 diabetes. 24

## Edgar Filing: NOVO NORDISK A S - Form 6-K

GOOD DIABETES CARE REQUIRES MORE THAN BLOOD GLUCOSE CONTROL from the SUSTAIN 7 clinical trial, announced in August 2017, showed that people with type 2 diabetes treated with once-weekly semaglutide experienced superior reduction in HbA1c and body weight compared with treatment with dulaglutide – the best-selling once-weekly GLP-1 analogue in the US. "In addition to the superior blood glucose reduction, we were positively surprised by the great weight-reducing effect of semaglutide in the SUSTAIN clinical trial programme. Semaglutide has demonstrated unprecedented effects in that regard," says Stephen Gough. Semaglutide is currently awaiting phase 3 initiation for the treatment of obesity. "In a clinical trial, we saw a 26% decrease in the occurrence of major adverse CV events when semaglutide was added to standard of care.<sup>6</sup>

Based on the SUSTAIN clinical results, semaglutide has the potential to produce better results than Victoza® for blood glucose control, weight management and CV risk reduction, with the convenience of a once-weekly injection," Stephen Gough explains. In 2018, Novo Nordisk plans to initiate a large clinical trial focusing on the CV benefits of semaglutide. In December 2017, Ozempic® (semaglutide) was approved by the FDA, based on the results of the SUSTAIN clinical trial programme. Semaglutide is currently under review by several regulatory agencies, including the European Medicines Agency and the Japanese Pharmaceuticals and Medical Devices Agency. Novo Nordisk plans to launch Ozempic® in the US at the beginning of 2018.

REDUCING THE RISKS ASSOCIATED WITH HYPOGLYCAEMIA Hypoglycaemia (low blood glucose), particularly at night, is a major fear for people with type 1 or type 2 diabetes on insulin treatment. Novo Nordisk's ambition is to help people with diabetes to achieve their treatment goals and at the same time reduce their risk of severe hypoglycaemia. Tresiba® (insulin degludec), Novo Nordisk's once-daily long-acting basal insulin, has demonstrated lower rates of severe hypoglycaemia and severe nocturnal hypoglycaemia compared with insulin glargine U100 in adults with diabetes. In the EU, the Tresiba® label was updated to reflect results from the double-blinded SWITCH 1 and 2 and DEVOTE clinical trials. The trials demonstrated a significant reduction in the risk of severe hypoglycaemia with Tresiba® compared with insulin glargine U100. The DEVOTE trial confirmed the cardiovascular safety of Tresiba® and demonstrated a 53% relative reduction in the rate of severe nocturnal hypoglycaemia in people with type 2 diabetes compared with insulin glargine U100.<sup>7</sup> Reducing the risk of hypoglycaemia is not only good for patient confidence – it may also have a significant impact on long-term health. Further analyses of pooled data from the DEVOTE trial showed that daily fluctuations in blood glucose levels in people with type 2 diabetes are associated with a higher risk of severe hypoglycaemic episodes and death, and that a severe hypoglycaemic episode is associated with an increased risk of death. "The risk of severe hypoglycaemia is a major reason why people with type 2 diabetes aren't reaching their treatment targets," explains Stephen Gough. "The association between hypoglycaemia, CV risk and all-cause mortality is a real cause for concern. Maintaining low variability in blood glucose levels when treating people with type 2 diabetes is therefore crucial."

A POSITIVE IMPACT ON TREATMENT OUTCOMES "Talking about CV risks and weight management – in addition to blood glucose control and the risks associated with hypoglycaemia – should become part of the standard dialogue between doctors and patients at primary care level," stresses Stephen Gough. "We intend to change the conversation so that everyone with diabetes is offered a treatment that addresses the associated risk of death for this serious chronic disease. This could create a positive impact on treatment outcomes and potentially change the course of diabetes." SIMONE LENSBOEL HAS TYPE 2 DIABETES AND CARDIOVASCULAR DISEASE. SIMONE LIVES IN DENMARK Simone Lensbøl is a registered nurse with long experience from working on different hospital wards and is currently working as a clinical safety associate in the Global Safety department of Novo Nordisk. "I'm passionate about sharing my knowledge about type 2 diabetes. It's a complicated disease, and there's a lot of prejudice attached to it. My wish is to eliminate this and give hope, knowledge and understanding to colleagues and other patients. I'm hopeful the mindset towards the disease will change over time."

WHAT IS DIABETES? Diabetes is a chronic disease characterised by raised blood glucose due to defective insulin secretion, resistance to insulin action or a combination of both. Type 1 diabetes is characterised by the autoimmune destruction of the insulin-producing beta cells in the pancreas, leading to absolute insulin deficiency. People with type 1 diabetes are therefore dependent on daily insulin injections to control their blood glucose level. Type 2 diabetes is a progressive disease characterised by increasing insulin resistance and failing beta cell function in the pancreas. Depending on the stage of the disease, people with type 2 diabetes require different treatments. Initially, oral medication is often sufficient, while progressed stages may require GLP-1 products and eventually insulin. The treatment goals for people with diabetes are to achieve normal or near-normal glucose levels, in order to delay or reduce diabetic complications and negative outcomes.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

IT TAKES MORE THAN MEDICINE TO DEFEAT DIABETES The International Diabetes Federation (IDF) estimates that more than 425 million<sup>1</sup> people worldwide have diabetes today. Yet half of them are not diagnosed and even fewer receive care and live a life free of diabetes-related complications.<sup>8</sup> Other estimates published recently show that, without concerted action, up to 750 million people could have diabetes by 2045, with associated costs exceeding 1 trillion dollars a year.<sup>9</sup> Diabetes is a disease that can be treated successfully, even in the poorest countries. With a growing portfolio of medicines and future digital health solutions that increase the benefit of those medicines, Novo Nordisk offers a broad range of medical treatment options for people with diabetes. However, defeating diabetes will not be achieved by medicine alone. It requires containing the rise in diabetes before it becomes unmanageable for healthcare systems and economies and, at the same time, giving more people access to diagnosis and treatment where it does not currently exist. A crucial first step to contain the rise in diabetes is to understand the scale of the challenge and what it will take to bend the curve. That is why Novo Nordisk developed a model in 2017 to plot the trajectory of diabetes prevalence over time and the associated costs to healthcare systems. The model on p 27 illustrates how, if no additional action is taken, one in nine adults will have diabetes by 2045.<sup>9</sup> The model also shows that the burden of type 2 diabetes can be reduced by addressing obesity, the single biggest modifiable risk factor for diabetes. Based on the model research, Novo Nordisk joined city leaders, academics and public health experts in calling for a global goal to limit diabetes growth. The goal is that by 2045 no more than one in 10 adults globally will have diabetes. Achieving this will require ambitious action to reduce obesity by 25%<sup>9</sup> by 2045, thereby preventing more than 100 million people globally from developing diabetes.

LEADING THE FIGHT IN URBAN ENVIRONMENTS Cities are the front line when it comes to containing the rise in type 2 diabetes. A rapidly urbanising world is changing not just where we live but also how we live. The way cities are designed, built and run creates health benefits for citizens – but also health risks. Towns and cities, where half of the world’s population now lives, are home to two-thirds of the people with diabetes. Novo Nordisk put the spotlight on urban diabetes in 2014 with the launch of Cities Changing Diabetes. This initiative has grown into an international coalition of Q1 cities, with a combined population exceeding 100 million people,<sup>10</sup> and more than 100 expert partners united in the fight against diabetes. These cities are taking impactful action to deal with their diabetes challenges, and – together with University College London, Steno Diabetes Center Copenhagen and Novo Nordisk have co-created the methods and tools that work in the cities in an Urban Diabetes Toolbox. This toolbox is now publicly available so that any city can set goals and establish an action plan for diabetes.

IMPROVING ACCESS TO DIABETES CARE The burden of diabetes touches every country in the world. The dynamics of the challenge vary from country to country, and from region to region, but the disease disproportionately affects people in low- and middle-income countries, where four out of five people with diabetes live.<sup>1</sup> Novo Nordisk has long-standing programmes supporting access to diabetes care in these countries. In 2001, the company made a commitment to provide human insulin at a very low price in the world’s least developed countries. See p 38. A renewed Access to Insulin Commitment, which guarantees the provision of low-priced human insulin to low-income countries and humanitarian organisations, was launched in 2016 and benefited 0.3 million people with diabetes in 2017.

11 CITIES WITH A COMBINED POPULATION EXCEEDING 100 MILLION PEOPLE, AND MORE THAN 100 EXPERT PARTNERS, ARE FIGHTING DIABETES AS PART OF CITIES CHANGING DIABETES. 5 MILLION PEOPLE WITH DIABETES GLOBALLY HAD ACCESS TO HUMAN INSULIN AT A MAXIMUM PRICE OF 4 DOLLARS PER VIAL IN 2017. 16,000 CHILDREN WITH TYPE 1 DIABETES RECEIVE LIFE-SAVING CARE THROUGH THE CHANGING DIABETES® IN CHILDREN PROGRAMME (see p 37). 85 MILLION DANISH KRONER WAS DONATED BY NOVO NORDISK TO THE WORLD DIABETES FOUNDATION IN 2017. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

\* The Global Diabetes Projection Model and the IDF Diabetes Atlas 2017 provide slightly differing outlooks for diabetes. The Global Diabetes Projection Model takes into account population, age and obesity, while the IDF projection takes into account population and age, but not explicitly obesity or other diabetes risk factors. \*\* Actual rates of diagnosis, treatment, targets and outcomes vary in different countries. RULE OF HALVES THE RULE OF HALVES8 ILLUSTRATES THE GLOBAL DIABETES SITUATION.\*\* ONLY AROUND 6% OF PEOPLE WITH DIABETES LIVE A LIFE FREE FROM DIABETES-RELATED COMPLICATIONS. OF WHOM ABOUT 50% RECEIVE CARE... OF WHOM ABOUT 50% ACHIEVE TREATMENT TARGETS... OF WHOM ABOUT 50% ACHIEVE DESIRED OUTCOMES. OF THE ESTIMATED 736 MILLION PEOPLE WITH DIABETES... ABOUT 11.7% ARE DIAGNOSED... 13% 12% 11% 10% 9% 8% 9.6% 9.9% 10.0% 11.7% 10.1% 11.0% 20 15 20 17 20 25 20 35 20 45 IF NO ACTION IS TAKEN 11.7% EQUALS 625 MILLION PEOPLE WITH DIABETES\*, AND ASSOCIATED COSTS OF 1,076 BILLION DOLLARS BENDING THE GLOBAL DIABETES CURVE 10.0% EQUALS 625 MILLION PEOPLE WITH DIABETES, AND ASSOCIATED COSTS OF 872 BILLION DOLLARS PROJECTED DIABETES PREVALENCE 2017–20459 (ADULTS AGED 20–79) In 2002, Novo Nordisk established the World Diabetes Foundation (WDF) as an independent trust dedicated to the prevention and treatment of diabetes in the developing world. WDF supports sustainable partnerships and acts as a catalyst to help others do more. Despite these efforts, and those of other organisations in the public and private sectors, further progress is needed to make it possible for more people to get access to diabetes care. Novo Nordisk has initiated partnerships designed to tackle affordability and accessibility in sub-Saharan Africa with the non-governmental organisation PATH and through national Base of the Pyramid programmes with local health authorities and healthcare organisations. An evaluation of the programme in Kenya by University College London found that the project had ensured stable availability of human insulin at a significantly reduced price. This is a great achievement in a region where weak procurement and distribution systems are a major barrier for getting medicine to patients at a reasonable cost. However, it is clear that to remove barriers in more countries and to do so in a sustainable way, new approaches are needed, in which more companies, governments, NGOs and funding agencies join forces to improve the procurement and distribution of medicines, and build healthcare capacity. To this end, Novo Nordisk has decided to explore broader partnerships to remove the barriers to access to diabetes care in the developing world. The ambition is to launch one or more such partnerships in 2018. PARTNERSHIPS FOR IMPACT Novo Nordisk’s work on Cities Changing Diabetes and access to care demonstrates the impact that can be created by building new forms of public–private partnerships which go beyond medicine and align behind a common cause: to defeat diabetes. As a company whose focus has been on diabetes for almost 100 years, Novo Nordisk is uniquely positioned to take a leading role in the fight against this disease. And by so doing, we will help achieve several of the Sustainable Development Goals agreed by world leaders in 2015, including the goals on health and sustainable cities – and the commitment to deliver change through innovative partnerships. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

**WHY SOME PEOPLE WITH OBESITY NEED MEDICAL TREATMENT** The underlying cause of obesity is an energy imbalance between calories consumed and calories expended. But this is only part of the story. The science behind obesity is complex – and maintaining weight loss is not easy. Guilt and shame. That is what many people with obesity feel, as they either struggle to lose weight or struggle even more to maintain their weight loss. They are stigmatised for being weak with no self-control and having a ‘self-inflicted’ condition which is a healthcare burden. A recent paper based on the nationwide Awareness, Care and Treatment in Obesity Management (ACTION) study, which investigated key barriers to effective obesity management in the US, found that 82% of people with obesity believe weight loss to be completely their own responsibility.<sup>11</sup> Lack of support from families, society and even doctors is not unusual, and a series of failed diets can reinforce feelings of personal failure. But the perception that weight loss is easy to achieve, if only you have the willpower, is incorrect. Energy balance is influenced by a number of factors, including physiology, genetics, psychology and the person’s environment. Adding to the complexity is the body’s own response to weight loss – increased feelings of hunger, increased desire to eat and lowered metabolic rate.<sup>12</sup> Put simply, the body works hard to regain lost weight. Maintaining weight loss for more than one year is therefore extremely challenging – which is why, in some cases, diet and exercise alone are not enough. **AN UNDERSERVED NEED FOR MEDICAL TREATMENT** The World Health Organization (WHO) estimates that, of the world’s adult population in 2016, 39% were overweight and 13% had obesity.<sup>3</sup> This is a serious health concern with severe implications for the population’s health and economic development, as obesity has been linked to a staggering 236 different diseases, including cardiovascular disease, high blood pressure, elevated blood lipids, type 2 diabetes and some types of cancer. In fact, obesity is linked to some of the leading causes of death.<sup>13</sup> **“WHEN I WAS AT MY BIGGEST, I FELT THAT THE LITTLE PERSON WAS TRAPPED INSIDE OF ME. I’D LOVE OTHER PEOPLE TO SEE ME AS JUST ME: MY HAIR, EYES, BRAIN – JUST ME.”** Susie Birney has obesity and lives in Ireland 28 **NOVO NORDISK ANNUAL REPORT 2017 OUR BUSINESS**

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

Even though an increasing number of health organisations and professional associations, including the WHO, World Obesity Federation, The Obesity Society and the American Medical Association, recognise obesity as a chronic disease requiring long-term management, few treatment options are available, and many doctors are not prepared to enter into a dialogue with patients about their weight. “I’ve met many people with obesity and heard their emotional stories, and it’s clear that many people with obesity require support from their doctors. However, stigma and lack of awareness can act as significant barriers to constructive dialogue between people with obesity and their doctors,” explains Morten Lammert, vice president of Saxenda® & Obesity, Novo Nordisk. The ACTION study found that few people with obesity seek or receive long-term obesity management.<sup>11</sup> In the study, of the 71% of people with obesity who say they have spoken with a healthcare professional about their weight in the past five years, only 55% report having been given a diagnosis of obesity, and only 14% were offered follow-up care for this disease.<sup>11</sup>

**SIGNIFICANT AND SUSTAINED WEIGHT LOSS** However, when lifestyle changes are not sufficient to maintain weight loss, medical intervention may be necessary. But with limited pharmacological treatments available, and not wanting to undergo bariatric surgery, people with obesity did not have many options in the past. Novo Nordisk’s GLP-1 analogue for weight management, Saxenda® (liraglutide 3 mg), therefore addresses a significant unmet medical need. Treatment with Saxenda®, as an adjunct to a reduced-calorie diet and increased physical activity, for weight management in adults with certain BMI levels, has been shown to result in significantly greater and sustained weight loss over three years compared to placebo. This is important for the many people with obesity who may still struggle to lose weight or are experiencing weight regain following lifestyle changes including increased physical activity and reduced-calorie diet. Furthermore, fewer people on Saxenda® developed type 2 diabetes over three years compared to placebo. In 2017, the EU label for Saxenda® (liraglutide 3 mg) was updated to reflect the results from the LEADER cardiovascular outcomes trial which investigated the long-term cardiovascular safety of Victoza® (liraglutide 1.8 mg) in more than 9,000 people with type 2 diabetes and at high cardiovascular risk, when added to standard of care. Although Saxenda® was not investigated in this trial, the cardiovascular risk reduction observed in LEADER with Victoza® (liraglutide 1.8 mg) in people with type 2 diabetes was used by the regulatory authorities to assess and evaluate the cardiovascular safety profile of Saxenda®. Novo Nordisk is committed to helping people with obesity get the treatment they need. “Obesity is a progressive, serious, chronic disease. We need to change the way people view, treat and care for people with obesity,” explains Morten Lammert. He agrees that this will take time, but points out that the company is in this for the long haul.

**A PROMISING PIPELINE** Novo Nordisk’s research and development pipeline is clear testament to the fact that the company is committed to alleviating obesity. Klaus Langhoff-Roos, corporate vice president, Ozempic® & Oral Semaglutide, Novo Nordisk, believes that semaglutide for weight management, which will soon move into phase 3 development, holds great promise for future treatment options. “In the phase 2 trial for semaglutide for obesity, people treated with semaglutide achieved a weight loss of up to 13.8% after 52 weeks. As this is approaching the efficacy of some surgical procedures for obesity management, I hope it will trigger a greater willingness among doctors to consider pharmacological treatments as part of their overall weight management approach,” he says. Novo Nordisk also has six products for the treatment of obesity in phase 1 development, investigating new targets as well as combination therapies to achieve greater weight loss. See Pipeline overview on pp 22–23. “We want to give people with obesity the opportunity to combine diet and exercise plans with medicine to achieve and maintain successful weight loss and improve their health and well-being. This way, we will improve obesity management and help reduce the burden that obesity and related diseases place on the healthcare system and society,” concludes Klaus Langhoff-Roos.

**SUSIE BIRNEY HAS OBESITY AND LIVES IN IRELAND** Susie Birney is a patient advocate from Ireland. She has been living with obesity and its associated psychological and physical challenges since she was 20 years old. Susie suffers from selective eating disorder as well as type 2 diabetes, diabetic retinopathy and other obesity-related complications. As part of her own journey with obesity, Susie has joined several patient support groups in Ireland, and she is determined to get obesity recognised as a chronic disease in Europe by representing Ireland in the European Association for the Study of Obesity (EASO) patient council.

**WHAT IS OBESITY?** Both overweight and obesity are defined as abnormal or excessive fat accumulation that may impair health. Adults with a body mass index (BMI) equal to or greater than 25 are defined by the WHO as being overweight, and adults with a BMI equal to or greater than 30 are classified as having obesity.<sup>3</sup> BMI provides the most convenient population-level measure of overweight and obesity currently available. However, BMI itself does not define health risk. BMI is a simple weight-for-height index that is commonly used to classify overweight and obesity in adults. It is calculated by dividing a person’s weight in kilograms by the square of their height in metres (kg/m<sup>2</sup>).

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**BUILDING THE BIOPHARM BUSINESS** Biopharm (short for biopharmaceuticals) is the part of Novo Nordisk's product portfolio not related to diabetes and obesity. There are many unmet medical needs for biopharm to address in the coming years – and some growth challenges ahead. For decades, haemophilia and growth disorders have been the main focus of the biopharm business. Novo Nordisk was the first company to develop a treatment – NovoSeven® – for the small community of people with haemophilia who have inhibitors to existing treatment, and the first to develop a liquid growth hormone in a pen device for children with growth disorders. Today, Novo Nordisk has a broad product portfolio and clinical development programme within haemophilia and is the leading company in the global market for growth hormone. Yet it is a business that is under pressure due to new competition and changing market dynamics. In 2017, the company's biopharm business experienced lower sales, due to patent expiry and generic competition relating to the company's hormone replacement therapy Vagifem®. Returning to growth in biopharm is singled out as a key priority in Novo Nordisk's corporate strategy. To set a new course, the company established its new Biopharm Operations unit in October 2017, headed by Senior Vice President Christian Kanstrup. "We see potential for leveraging our core strengths: a strong portfolio of marketed products, an exciting development pipeline and good relationships with key stakeholders," he says.

**ORGANIC BUSINESS GROWTH** While the haemophilia business – and NovoSeven® specifically – is set to be challenged by a new competitor in 2018, with 50% of historic NovoSeven® sales potentially exposed, new products coming through the company's development pipeline will address some of the unmet medical needs within haemophilia and help the business to grow. A key task for Biopharm Operations is to set the overall strategic direction for the biopharm area – which Christian Kanstrup says relies on three key elements: ensuring that more patients have access to Novo Nordisk's current and new products, pursuing complementary acquisitions to expand into other serious chronic disease areas and ensuring the right operational structure. "Our first priority will be to increase our efforts to improve access to the products we already have on the market for the patients who need them," he explains. "In China, for example, I believe we have untapped potential for our haemophilia products. And we haven't yet seen the true global market potential of NovoEight® for the treatment of people with haemophilia A." In 2017, Novo Nordisk's long-acting factor IX (called Refixia® in the EU and Rebinyn® in the US) was approved. "The launch of Refixia® in 2017 and Rebinyn® in 2018 will be an important expansion of the treatment options for people with haemophilia B," says Christian Kanstrup. Novo Nordisk's long-acting factor VIII (N8-GP) for the treatment of haemophilia A is expected to be submitted for regulatory approval in 2018. Moreover, concizumab, a monoclonal antibody being developed for bleeding prevention, entered phase 2 development for haemophilia A and B in August 2017. Within growth disorders, the company will continue to roll out its growth hormone Norditropin® in the FlexPro® injection device, aiming to make treatment as easy and pain-free as possible. Somapacitan, Novo Nordisk's long-acting growth hormone in phase 3 development for adult growth hormone deficiency and in phase 2 development for children, has the potential to improve treatment compliance. Christian Kanstrup points out that early diagnosis and optimal treatment is very important for children with growth disorders, for their future health and well-being. "We intend to invest more to improve early diagnosis rates," he says.

**EXTERNAL INNOVATION AND OPPORTUNITIES** A critical element of Novo Nordisk's strategy to drive change within biopharm is its pursuit of complementary acquisitions. "Identifying external licensing and acquisition opportunities where we can leverage our core biopharm capabilities will allow us to help patients live better lives as well as strengthen our business," continues Christian Kanstrup.

**INCREASED FOCUS** "To support the new growth ambition, the operational structure must enhance the level of collaboration and effectiveness around biopharm across the global organisation – which is what Biopharm Operations has already started to do," Christian Kanstrup explains. "We've optimised our structure to ensure stronger alignment in our work and improve development of key organisational capabilities. This will allow us to increase our focus even more on the patient. "We're in biopharm for the long term, and are confident that we'll be able to strengthen our position to grow our business and make an even greater positive difference to the lives of patients going forward." 30

NOVO NORDISK ANNUAL REPORT 2017 OUR BUSINESS

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

EVIE (SIX YEARS OLD) HAS GROWTH HORMONE DEFICIENCY, AND HOLLY (NINE YEARS OLD) HAS CORTISOL AND GROWTH HORMONE DEFICIENCY. THE SISTERS LIVE IN BANBURY IN THE UNITED KINGDOM “Evie has taught me how resilient she can be. She grabs life by two hands and takes it all in her stride. Nothing stops her when she sets her mind to something. It’s not nice having to go to a lot of hospital appointments and put her through blood tests, but she does it all with a smile on her face. I’m in awe of Evie’s ability to keep smiling and tackle life head on.” Lorraine Lloyd-Garwood, Evie & Holly’s mother

### WHAT ARE GROWTH DISORDERS?

Growth disorders are caused by growth hormone deficiency which occurs when the pituitary gland does not produce enough growth hormone for the normal development and maintenance of the body. While some growth-related disorders may be diagnosed at birth, others may not become obvious until later in childhood. Growth hormone deficiency in children impacts the body’s composition, which causes insufficient longitudinal growth and may negatively affect the heart, lungs, bones, brain, quality of life and life expectancy. The standard of care for growth hormone deficiency in children is once-daily growth hormone injections. In some countries, growth hormone is also approved for the treatment of other causes of growth disorders.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**PERFORMING WHILE TRANSFORMING: BUILDING A BOLDER AND MORE COMPETITIVE US BUSINESS** The US market continues to be the largest for Novo Nordisk. It represents approximately half of the company's global sales and is in the midst of a significant transformation. 2017 was another dynamic year for Novo Nordisk in the US. A new leadership team came together and built a new business strategy anchored in prioritising and evolving the company's commercial business model – all designed to modernise the organisation, enable it to deliver on its innovation commitment and position it for growth in the challenging US market. The internal mantra is 'perform while we transform', and the organisation is doing just that. The voices of people such as Donna Kasznel (see sidebar), who are living with a chronic disease, are where Novo Nordisk's US organisation draws its inspiration from. The unmet patient needs give the organisation purpose, not only in obesity, but also in diabetes, haemophilia and growth disorders.

**NEW US LEADERSHIP** In March 2017, Doug Langa took over as head of Novo Nordisk North America Operations, which comprises the US and Canada. He was no stranger to the US organisation, having led the company's Market Access function for the previous six years and also having served on the US Executive Team. "If there's one thing we can count on in the US, it's that things will continue to be dynamic when the competition and the pressure are on. To be successful, we need to have a deep understanding of the market dynamics and the implications for our business, and a willingness to make some bold changes," he says. New products from competitors mean fiercer competition and, in some instances, a crowded market. Customers, especially a handful of very large pharmaceutical benefit managers, have more negotiating power and want greater rebates, fees or other concessions from drug manufacturers to keep their products on formularies, or lists of preferred medications. This has potential implications for sales growth and profitability. At the same time, there is tremendous pressure on the healthcare system to lower costs, including the cost of prescription medications. Novo Nordisk has taken actions to better support patients who cannot afford medication and has proactively engaged in dialogue with advocacy groups, the government and customers to discuss solutions. "We're participating in programmes with customers that are making medications available at a lower cost for patients, which will be a continued area of focus. We're also implementing value-based contracts with customers, which are a way to align payment with realised outcomes. There are a lot of challenges associated with value-based contracts, such as data collection, but we're learning a lot and continuing to optimise," explains Doug Langa.

**UNCERTAIN POLITICAL ENVIRONMENT** Uncertainty in the political environment provides both opportunities and challenges. Congress has expressed interest in addressing drug pricing and reforming Medicare and Medicaid. Meanwhile, several states have proposed laws relating to price controls and greater transparency regarding the costs of prescription medications. Some states have already passed legislation which means, among other things, new reporting requirements for pharmaceutical manufacturers such as Novo Nordisk. For example, in October 2017, the Governor of California signed a bill into law that will require medical companies to notify the state 60 days prior to price increases as well as to comply with a number of other reporting requirements. Activity focused on healthcare costs and access – specifically as it relates to medicines – is expected to continue at both federal and state level in R018.

**HETEROGENEOUS AND COST-CONSCIOUS MARKET** Healthcare delivery in the US is not one-size-fits-all. It is a heterogeneous market, and different geographies have distinct local health systems requiring different approaches. In more traditional markets where there is greater access to healthcare professionals (HCPs), there are greater opportunities for face-to-face interactions between HCPs and Novo Nordisk sales representatives. At the other end of the spectrum, there are more controlled markets with integrated delivery networks (IDNs) – a more complex system of care involving hospitals, providers and employers and requiring an account management approach. Increasingly, stakeholders in the healthcare system are trying to balance cost and quality. For example, some payers are creating exclusive formularies where they may offer only one therapy in each class. While driving price competition among manufacturers by encouraging increased rebates and discounts in order to gain preferred brand status, this potentially limits patient access to other therapeutic options. In the past six years, the rebates and discounts Novo Nordisk has paid have increased substantially. Across all medicines in 2017, rebates and discounts consumed 64.1% of gross sales (59% in 2016 and 56% in 2015). In other words, for every dollar in gross revenue, Novo Nordisk paid 64 cents in rebates and discounts, leaving us with 36 cents to pay for expenses including R&D, manufacturing and sales and marketing.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

CONTINUED PERFORMING WHILE TRANSFORMING: BUILDING A BOLDER AND MORE COMPETITIVE US BUSINESS NEW BUSINESS STRATEGY AND OPERATING MODEL With the new leadership, there was an opportunity to take a fresh look at things in the light of these US market dynamics. “We’d already been working on a longer-term business strategy, but as we looked at the market, where we were and where we wanted to be, we knew that we needed to do more than define the business strategy. If we wanted to position the organisation for optimal success, we needed to change our operating model and how we approach the US market. Without that, we weren’t in the best position to deliver on the strategy,” explains Doug Langa. Evolving the commercial operating model would involve a restructuring and a change of approach. It also brought with it the potential for significant disruption, as the company was simultaneously launching Victoza® as the only GLP-1 product on the market indicated to reduce the risk of major cardiovascular events, and preparing to launch Ozempic® in early 2018. “Of course, we took a pause and debated whether the

DONNA KASZNEL HAS OBESITY AND LIVES IN BOWLING GREEN, KENTUCKY “I’ve been overweight for most of my adult life and have always been ashamed of it. Unlike some other diseases, obesity isn’t something that you can keep a secret. It’s the first thing people see when they meet you, and you’re immediately judged based on your appearance. Obesity is relentless – it affects everything you do all day, every day, and permeates all aspects of your life – from what you wear to where you park, to the seat you choose, or whether you can even participate in certain things. My shame and my perceived failure at being able to control my weight prevented me from moving on in other areas of my life for decades. Today, I’m proud to use my voice to advocate for improved obesity management, as my wish is for others like me to get the medical treatment and support they deserve.” Donna Kasznel is a Novo Nordisk Obesity Patient Ambassador and she advocates to improve health policies that make obesity management more accessible to people in her state. “WE RECOGNISE THE NEED FOR SOLUTIONS BEYOND MEDICINES, AND DIGITAL HEALTH PLAYS AN IMPORTANT ROLE.” Doug Langa, executive vice president, North America Operations 33OUR BUSINESS

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

T2D OBESITY IS LINKED TO OVER DISORDERS<sup>15</sup> OBESITY AFFECTED ABOUT 4 OUT OF 10 ADULTS IN THE US IN 2016<sup>14</sup> 425 BILLION DOLLARS PER YEAR IN DIRECT MEDICAL COSTS<sup>16</sup> MORE THAN timing was right and if we were putting our launches at risk, but the question quickly became, 'how can we not do this now?'" says Doug Langa. "We knew change was necessary to position us for success in the short and long term, so we couldn't wait. We focused on performing while we were transforming. I couldn't be more proud of my leadership team and all of our employees who did just that." The new operating model and organisational design are built on three simple principles: Integrate: create a new business unit structure for each key business: diabetes, obesity and biopharm. This would enable a simple, unified commercial approach by bringing together sales and marketing under one senior business leader and driving stronger collaboration across commercial and non-commercial functions. Localise: understand the market at a local level and tailor the approach to local needs in the heterogeneous US market. For example, in diabetes, there are five new Area Commercial Lead roles, with experienced leaders who have the autonomy to lead the diabetes business locally and decide how to allocate resources based on local insights and actual customer needs. Focus: strong prioritisation of, and resource allocation to, the top three strategic priorities that will drive growth in the US: growing volume share in the basal insulin market with Tresiba®, growing value share in the GLP-1 market with Victoza® and Ozempic®, and creating and leading the US obesity market with Saxenda®.

"We see an unprecedented opportunity in the US. That's why it was so important to evolve our operating model and modernise the organisation now, so we have the right infrastructure, mindset and leadership to deliver on the strategy," says Doug Langa. The new business strategy and plans to evolve the operating model were communicated to all US employees in August 2017. As part of the restructuring, some jobs were eliminated and new positions were created. The goal of the restructuring was not to become smaller, but rather to optimise the structure to ensure the right capabilities were in place to support the strategy.

**FROM STRATEGY TO ACTION** The company's approach to obesity management is a good example of how it is approaching the market and customers differently, based on needs and opportunity. In the US, more than 90 million adults are living with obesity,<sup>14</sup> which is linked to many other disorders and results in direct medical costs of more than T25 billion dollars per year.<sup>16</sup> Despite these staggering statistics, obesity remains largely under-recognised and undertreated in the US. If these trends continue, more than T4% of the US population will be affected by obesity by 2030.<sup>15</sup> "We want to change how the world sees and treats obesity, and we believe we're the company to do it. We understand it, have a long-standing history in metabolic disease, 20 years of obesity medication research, the largest development pipeline in the industry and diverse partnerships that uniquely position us to lead in this area of tremendous unmet needs," comments Doug Langa. "We don't underestimate the barriers as they are multi-faceted and significant, but we have a legacy of commitment to the patients and communities we serve, and obesity is among them so we're in this for the long haul." Novo Nordisk is actively engaged in an ambitious three-part plan to reshape the treatment landscape for people with obesity, focused on changing the mindset, improving access to care and coverage for medications, and building a critical mass of people (patients and physicians) motivated to engage in discussion and manage this disease.

**NEW DATA, NEW PRODUCTS, NEW OPPORTUNITIES** Based on data from the new LEADER study, Novo Nordisk received approval from the US Food & Drug Administration (FDA) in September 2017 for a supplemental New Drug Application (sNDA) for Victoza®, making Victoza® the first GLP-1 analogue indicated to reduce the risk of major cardiovascular events in people with type 2 diabetes. "Although Victoza® has been on the market since 2010, we treated this as a new product launch, with field force training, customer outreach and new promotional materials," notes Doug Langa. In December 2017, Novo Nordisk also received FDA approval for Ozempic®, a once-weekly GLP-1 analogue for the treatment of type 2 diabetes, based on the SUSTAIN clinical development programme, involving eight phase 3a trials with more than 8,000 adults with type 2 diabetes. "It's a welcome dilemma. With Victoza® and Ozempic® we have two exceptional GLP-1 compounds, yet the challenge is how do we effectively launch Ozempic® and what's the right promotional strategy? In the old world, it would've been a one-size-fits-all approach, but that won't work today. Recognising that access won't be immediate and that once-weekly is the preferred GLP-1 dosing regimen, we'll watch the market and make a real-time shift of promotional resources as access is achieved. That way, we continue to promote Victoza® where and when it makes sense, yet we'll be ready to capitalise on the Ozempic® opportunity when the market is ready. That's something we simply couldn't have accommodated in the old operating model," Doug Langa continues. As part of its commitment to improving patient care through digital solutions, Novo Nordisk has partnered with Glooko, a leading diabetes data management platform, to help people manage their diabetes more effectively through an app. The app combines Novo Nordisk's extensive

NOVO NORDISK ANNUAL REPORT 2017

## Edgar Filing: NOVO NORDISK A S - Form 6-K

PLAINSBORO, NJ Established in 1996 Headquarters WEST LEBANON, NH Established in 2015 Manufacturing CLAYTON, NC Operational in 1996 Manufacturing SEATTLE, WA Established in 2009 R&D INDIANAPOLIS, IN Established in 2015 R&D knowledge of diabetes and personalised patient support with Glooko's digital platform and data analytics expertise. "We recognise the need for solutions beyond medicines, and digital health plays an important role in helping patients achieve their goals through technology. It's about building new capabilities, expertise and smart collaborations with a focus on helping people with diabetes better manage their health," notes Doug Langa. LOOKING AHEAD "When I reflect on 2017, I'm immensely proud of how much we accomplished, delivering solid business performance while taking bold steps to modernise and position the organisation for growth. US sales were at a similar level to 2016, despite the impact of the introduction of a generic version of the hormone replacement therapy product Vagifem® and a significant favourable rebate adjustment for human growth hormone at the beginning of 2016. That's thanks to strong growth in our diabetes care and obesity portfolio. We're competing like never before and, although change is never easy, our employees are energised by the empowerment, clear priorities, business strategy and potential to help patients through our differentiated portfolio. In 2018, the US business will continue to build on Novo Nordisk's legacy in diabetes and drive meaningful change with innovative products and ground-breaking science, while also partnering with the obesity community and investing significantly to fundamentally change how obesity management will be delivered in the US. We're energised by the opportunity we have to make the lives of people living with diabetes, obesity, haemophilia and growth disorders better," Doug Langa concludes. INVESTING FOR GROWTH Novo Nordisk has a strong presence and a long history of investment in the US. Nearly 6,000 people are employed across the company's US operations, approximately 200 of whom in research and development positions. The US headquarters is in Plainsboro, New Jersey. The company has R&D sites in Seattle, Washington, and Indianapolis, Indiana, and recently completed a 10-million-dollar laboratory expansion in Seattle. Manufacturing facilities are located in Clayton, North Carolina, and West Lebanon, New Hampshire. The Clayton facility manufactures diabetes products and represents a large investment area for the company. It was purchased in 1991 and became operational in 1996. The approximately 42,000 m2 manufacturing facility currently employs approximately 1,000 employees and also includes office and laboratory space. In 2015, Novo Nordisk announced that it was expanding its presence in Clayton and investing 2 billion dollars to build a new production facility. The plant will produce active pharmaceutical ingredients (API) for the company's diabetes care products, including semaglutide for formulation in a tablet (see p 21). "It's the largest investment ever undertaken by Novo Nordisk, and the expansion will help the company to meet rising US demand for its diabetes and obesity medicines. Clayton will become an even more important site in Novo Nordisk's global manufacturing set-up," says Henrik Wulff, executive vice president, Product Supply. Once complete, the new facility will measure approximately 77,000 m2. It will be the first location outside of Denmark where Novo Nordisk will produce API for diabetes care and obesity products. Once the facility is fully operational, it is expected to create close to 700 new full-time jobs. Novo Nordisk also expects to create a significant employment effect during the construction period, with up to 2,500 people working on the project at peak construction. The new facility is expected to be operational in 2020 and underscores Novo Nordisk's commitment to the US market and patients. "WE'RE PARTICIPATING IN PROGRAMMES WITH CUSTOMERS THAT ARE MAKING MEDICATIONS AVAILABLE AT A LOWER COST FOR PATIENTS." Doug Langa, executive vice president, North America Operations 35OUR BUSINESS

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**OPPORTUNITIES AND CHALLENGES: NOVO NORDISK'S INTERNATIONAL OPERATIONS** Covering 95% of the world's population in more than 190 countries, International Operations is a diverse unit with a myriad of opportunities and challenges underpinned by one principle: to reach ever more people with diabetes and other serious chronic diseases with innovative treatment options. This requires a market-fit business model. "I had no money left to buy insulin," says Affoué Alice Kouffi from Ivory Coast, talking about her son, Trésor, who was diagnosed with type 1 diabetes in 2015. "I took him to the local medicine man, who gave him some natural plants and herbs. But of course it didn't help him – and he went into a coma and almost died." Two years on, Trésor is under good control and enrolled in the Changing Diabetes® in Children programme, through which he has access to free insulin and ongoing medical education. Trésor is one of the 23 million people treated with Novo Nordisk products in International Operations. They live across more than 190 countries and 20 time zones, from highly developed parts of the world, such as Japan and Europe, to least developed countries, such as Kenya and Afghanistan, and developing countries across Latin America, Asia and Africa. Most of the 23 million people have diabetes, but the figure also includes people with obesity, haemophilia and growth disorders. International Operations reflects the diversity of cultures it serves. Covering 95% of the world's population, it is made up of five regions: Europe, AAMEO (Africa, Asia, Middle East & Oceania), Japan & Korea, China and Latin America. "In such a diverse unit, our business model is to take a market-fit approach," says Maziar Mike Doustdar, executive vice president and head of International Operations. "We tailor our portfolio, market access strategy and sales strategy to the needs of each individual market. This is good business sense – and means that we can ensure patients get the best possible treatment, wherever they are in the world." One constant across the markets of International Operations is the competitive landscape. "Regardless of whether we're operating in a mature or emerging market, prescribers now have more treatment options available than ever before," he explains. "In that environment, our commercial execution needs to be flawless, with a sharp focus on the clinical benefits our products offer patients." **CHALLENGES AND OPPORTUNITIES ABOUND** The market-fit approach contributed to the strong performance in 2017. All five regions contributed to growth, despite a range of challenges. Pressures on healthcare expenditures remain in mature markets such as Europe and Japan, with their ageing populations and a rapidly rising number of people with chronic diseases. The same situation is now emerging in many developing countries. At the same time, an increasing number of biosimilar products have given payers and prescribers lower-priced treatment options across the globe. In this challenging environment, Maziar Mike Doustdar sees opportunities for International Operations to get closer to patients, prescribers and payers through increased education and awareness, scientific dialogue and enhanced commercial execution. "I'm incredibly proud that we serve 23 million patients every day," he says, "but that's still a small proportion of the nearly 400 million people with diabetes across International Operations. I believe that in the future more patients will be using Novo Nordisk products because of the strong data we've seen from recent clinical studies with Victoza® and Tresiba®. It's our responsibility to patients to leverage these data and deepen the conversation with payers and doctors about how we can improve patients' lives." In particular, Maziar Mike Doustdar sees the need to make more payers, health policymakers and doctors understand that treating diabetes is about more than 'just' controlling blood glucose levels. "A person with diabetes thinks about and experiences their condition in complex ways," he points out. "They fear situations when their blood glucose becomes dangerously low, called hypoglycaemia, they're concerned about weight gain and may worry about the risk of severe complications, in particular cardiovascular events which could be life-changing or even life-threatening." Maziar Mike Doustdar is confident that International Operations has the right approach to providing solutions to meet patients' needs. "Our market-fit approach means that we can offer a product mix suitable for any type of country," he says. "In less developed countries, we can provide high-quality human insulin at very low prices. In developing countries, we can offer patients modern insulin – or insulin analogues – with enhanced properties, such as shorter or longer duration of action. S6 NOVO NORDISK ANNUAL

REPORT 2017 OUR BUSINESS

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

CONTINUED And in mature markets, we can change patients' lives with the newest, innovative products that can reduce hypoglycaemic events or the risk of cardiovascular events and death." Novo Nordisk is currently the market leader in diabetes in International Operations, supplying half of all insulin and holding a 23% share of the total diabetes value market. But Maziar Mike Doustdar believes that the unit can increase market share: "Our portfolio will become even stronger with Ozempic® – our once-weekly semaglutide – which we expect to launch in the first countries in International Operations in 2018. Combined with our existing market-fit portfolio, I believe that we'll reach and benefit more people with diabetes across the world than ever before in the years to come." Moreover, with obesity posing a growing challenge to individuals and societies around the world, Maziar Mike Doustdar believes there are significant opportunities for International Operations to have a positive impact. "We have a robust pipeline in obesity but already we have a strong footprint with Saxenda® – our once-daily 3 mg formulation of liraglutide," he says. "Over the next couple of years, we'll see obesity become an increasingly important part of our business." TRÉSOR KOUADIO AND HIS MOTHER AFFOUÉ ALICE KOUFFI. TRÉSOR HAS TYPE 2 DIABETES AND LIVES IN IVORY COAST FOCUS ON ACCESS TO CARE: CHANGING DIABETES® IN CHILDREN Producing life-saving medicines is a significant responsibility, but it takes more than medicine to defeat diabetes. Read more on pp 26–27. Novo Nordisk's Changing Diabetes® commitment is part of the company's response to create a future where fewer people develop diabetes, everyone with diabetes is diagnosed earlier, everyone diagnosed receives adequate care and everyone receiving care is able to live a life with as few limitations as possible. One key project is the Changing Diabetes® in Children (CDiC) programme. The programme allows children with type 1 diabetes to live instead of dying due to undiagnosed or untreated diabetes. In the new CDiC programme in Ivory Coast, 44 children were enrolled six months after the programme was launched. Most of these were initially thought to have a common infectious disease. By the time they reached a healthcare provider, they were in severe ketoacidosis. The CDiC programme is designed to address the barriers to access to care for children with type 1 diabetes in developing countries in a sustainable way. The programme is currently running in 14 countries. Providing life-saving insulin is one part of the programme, but this goes hand in hand with building capacity in the local healthcare system and educating children and caregivers. More than 16,000 children have been enrolled in the programme since 2009, and the aim is to reach 20,000 children by 2020. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

MAZIAR MIKE DOUSTDAR, EXECUTIVE VICE PRESIDENT, INTERNATIONAL OPERATIONS HOW ARE NOVO NORDISK'S PRODUCTS PRICED? The way the price and reimbursement of medicines are determined varies greatly between countries. In some countries, price and reimbursement are the result of negotiations between the pharmaceutical manufacturer and the government, and in others, governments make bulk purchases of medicine through tender orders – an auction-like process whereby several companies are invited to submit their best bid. “When we determine how to price our medicines, we consider a number of factors – primarily what medical need the product meets for clinicians and patients, and how the clinical profile of the drug compares with other treatments for the same condition,” Maziar Mike Doustdar explains. “Other factors include the level of development of the local economy, and the pricing and reimbursement systems in the country. “In the world’s poorest countries, we’ve made a special commitment to improving access to quality treatments for patients. We guarantee that we’ll provide low-priced human insulin to least developed countries, as defined by the United Nations, and to other low-income countries, as defined by the World Bank, as well as to selected organisations providing relief in humanitarian situations. This means that we’ll provide the human insulin needed at a guaranteed ceiling price which won’t exceed 20% of the human insulin list price in the Western world.\*” \* The ceiling price for 2017 was set at 4 dollars per vial (16 cents per day).

REGION AAMEO • Total population: 4,326m10 • Adults with diabetes: 187m1 • Adult diabetes prevalence: ~7.5%1 • Employees\*: ~4,600 Region AAMEO is Novo Nordisk’s most geographically and culturally diverse region, spanning four continents and 110 countries. In 2017, sales in Region AAMEO grew by 8% in local currencies, driven by strong diabetes market performance and a growing obesity business through private-market launches of Saxenda®. The region continues to face macroeconomic and geopolitical challenges, with oil-exporting countries acclimating to the ‘new normal’ of sub-100-dollar/barrel oil prices and a number of markets beset by conflict and political unrest, particularly in the Middle East and Africa. In spite of these pressures, Region AAMEO is expected to continue to grow the market through higher volume sales, upgrades from human insulin to modern insulin in less developed countries and launches of new-generation insulin in more mature markets such as Turkey, Saudi Arabia and the Philippines. There will be further opportunities to develop the obesity business following the strong post-launch performance of Saxenda®, particularly in Middle Eastern markets. Investments will also continue to underpin ongoing partnerships in key markets, particularly through local manufacturing facilities in Iran, Algeria and Russia that ensure product supply and strengthen stakeholder relationships in strategic markets across Region AAMEO.

REGION EUROPE • Total population: 593m10 • Adults with diabetes: 39m1 • Adult diabetes prevalence: ~8.8%1 • Employees\*: ~2,900 Region Europe is International Operations’ largest region in terms of sales, but in previous years it has seen very low growth due to pressure on healthcare budgets and difficult market access conditions. In 2017, Region Europe delivered 3% sales growth in local currencies. In particular, new-generation insulin products such as Xultophy®, Fiasp® and Tresiba® have taken significant market shares at launch across several markets. In September 2017, Victoza® received an updated label that now incorporates the cardiovascular benefits shown by the LEADER study data (see pp 24–25). In the coming year, Region Europe will focus efforts on leveraging the strong clinical profile of Victoza® and cementing leadership in the GLP-1 segment, in advance of the expected launch of Ozempic® in late 2018 in selected markets. There are also opportunities to broaden the biopharm business by building on previous launches of the recombinant factor VIII, NovoEight®. \* Employee numbers only cover regional sales organisations. OUR BUSINESS38

## Edgar Filing: NOVO NORDISK A S - Form 6-K

NOVO NORDISK ANNUAL REPORT 2017 REGION CHINA • Total population: 1,410m10 • Adults with diabetes: 117m1 • Adult diabetes prevalence: ~10.9%1 • Employees\*: ~3,100 Region China has shown economic resilience in 2017 and continues to invest in its healthcare infrastructure and capacity, delivering opportunities for continued growth for Novo Nordisk. In 2017, sales in Region China grew by V% in local currencies, driven by the continued strong uptake of modern insulin in a market where the majority of people with diabetes still use human insulin. Following market share declines in 2016, the key focus for Region China in 2017 was to increase share of growth by focusing on major cities and provincial markets alike. The region was able to turn around its market share performance by mid-2017, and continues to be the market leader and growth driver in modern insulin. R017 also brought three milestones: Q) in July, Victoza® became the only reimbursed GLP-1 analogue on China's national reimbursement drug list, 2) also in July, NovoSeven® was admitted to the national reimbursement drug list and 3) in September, Tresiba® received regulatory approval from the China Food and Drug Administration (CFDA). With an enhanced portfolio, particularly in the GLP-1 segment, Region China is now in a position to deliver more treatment options for prescribers and patients alike.

REGION JAPAN & KOREA • Total population: 178m10 • Adults with diabetes: 11m1 • Adult diabetes prevalence: ~8.0%1 • Employees\*: ~1,200 Region Japan & Korea has been resilient in the face of increased competitive pressures and a low-growth environment, particularly in Japan. In R017, sales in the region grew by 2% in local currencies, driven by strong uptake and market share gains of new-generation insulins Tresiba® and Ryzodeg®. Tresiba® has established and cemented Novo Nordisk's basal leadership in both markets. Ryzodeg® has delivered strong growth in the mix segment in Japan. It was also launched in South Korea in November 2017 and is expected to provide further growth in the coming year. The GLP-1 segment has, however, become increasingly competitive. Given the propensity of prescribers to choose once-weekly formulations, Ozempic® is expected to be in a strong position to gain market share in the growing GLP-1 segment in the coming years. There will also be opportunities to continue to advance leadership in the company's biopharm business, with continued focus on growth disorders and expanding use of NovoEight® amongst people with haemophilia A.

REGION LATIN AMERICA • Total population: 648m10 • Adults with diabetes: 40m1 • Adult diabetes prevalence: ~9.3%1 • Employees\*: ~900 Region Latin America was elevated to a separate region in 2016 because of strong sales growth in the previous five years. The region was able to continue its upward trajectory in 2017, growing sales by 7% in local currencies and driven by strong performance in Brazil and Argentina as well as the robust uptake of Saxenda® across the region. This strong sales growth was achieved despite macroeconomic challenges in multiple markets, particularly in Venezuela and Argentina, and it is likely that these challenges will remain in 2018. Despite this, Region Latin America will continue to provide growth opportunities through increased volumes and a market access environment that remains conducive to further penetration with Novo Nordisk's novel portfolio. In particular, Tresiba® and Ryzodeg® will offer alternative treatment options for prescribers in multiple countries, and Saxenda® penetration will build on a strong market entry in countries such as Brazil, Mexico and Chile. \* Employee numbers only cover regional sales organisations.

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**HOW NOVO NORDISK MANAGES MATERIAL RISKS THE RISKS OF DOING BUSINESS** Risk management is a discipline that requires constant vigilance. The risk profile for Novo Nordisk is dynamic, and therefore monitored and reassessed systematically throughout the company. The most significant risks are reviewed quarterly by Executive Management and the Board of Directors. “We have a very structured process for identifying risks throughout the value chain, and also look for cross-functional correlations. On our ‘heat map’ are the risks that could cause significant disruptions to our business on a three-year horizon. For each risk, we assess likelihood and impact and determine what mitigating actions to take,” explains Jesper Brandgaard, chief financial officer and chair of the Risk Management Board of Novo Nordisk. “We also monitor emerging risks, although they are of course more difficult to assess in terms of both likelihood and potential impact. As part of our enterprise risk management system, we conduct risk-thinking exercises with management teams to identify emerging risks and trends and to think the unthinkable. Risks and opportunities arising from trends in our business environment and macro developments are factored into Novo Nordisk’s strategy process. Here we assess the major risk factors to the financial outlook and undertake sensitivity analyses related to the pipeline, competitor advances and market dynamics in a 10-year perspective,” Jesper Brandgaard continues.

**RESEARCH & DEVELOPMENT RISKS** Specific to the pharmaceutical industry are risks associated with the testing of new medicines for safety and efficacy during a rigorous process that often takes more than 10 years. Throughout in the process, there is the risk of studies showing that new product candidates are not sufficiently efficacious or that they have unacceptable side effects. Furthermore, there is always the risk, during the regulatory approval process, that the authorities will request more data before they decide whether or not to approve the product. In 2017, several Novo Nordisk products passed important regulatory milestones, in the form of first-time approval or updated labels, which strengthened the products’ clinical profiles. This significantly reduced Novo Nordisk’s near-term R&D risk profile during the year. Most important were the first regulatory approvals of Ozempic® (semaglutide for once-weekly injection) as a treatment for type 2 diabetes. Ozempic® was approved in the US and was recommended for approval by the European regulatory authorities, both in 2017, paving the way for its launch in the US and in Europe.

**MARKET RISKS** “While the short-term R&D risk profile was overall lower at the end of 2017 than the year before, I can’t say the same about market risks,” says Jesper Brandgaard. “In the US, price pressure in the very competitive market for basal insulin continues, and in International Operations we see the same trend. The market for GLP-1 products isn’t currently under the same pressure, but this may change when new products enter the market.” Within haemophilia, a well-known market risk for Novo Nordisk is the launch of a competitor product for the treatment of haemophilia impacting sales of NovoSeven®. Market risks may also come from new legislation. “Healthcare reforms in the US are a potential risk, but so far attempts to replace and repeal the Affordable Care Act have not been successful, and federal lawmakers currently seem to be focusing on other priorities and the way forward seems highly uncertain,” says Jesper Brandgaard. “This isn’t to say there won’t be reforms at federal level, but it will take longer than we thought a year ago. Meanwhile, several states have developed or are considering their own measures aimed at lowering costs for medicine.”

**SUPPLY, QUALITY AND PRODUCT SAFETY RISKS** In terms of Novo Nordisk’s ability to ensure a steady supply of high-quality products to its customers, no significant risks materialised in 2017. During 2017, 34 audits and 47 inspections by authorities were conducted at the company’s production sites, none of which failed. Further, to mitigate risks Novo Nordisk collaborates with suppliers, for example to avoid production of critical components relying on a single supplier or a single production site. Product safety and quality must never be compromised. Hence, potential safety issues are acted upon immediately. Novo Nordisk did not have any critical product recalls in 2017, but a safety issue was detected with a cartridge holder in some batches of NovoPen Echo® and NovoPen® U injection devices, which could have led to some patients getting a smaller insulin dose than intended. Novo Nordisk recalled affected pens in stock at wholesalers and pharmacies in 40 markets and put in place measures whereby patients could have their cartridge holder exchanged.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**CONTINUED IT SECURITY RISKS** Like any other business, Novo Nordisk is subject to computer virus and malware attacks, and in fact fends off millions of attacks on a daily basis. In light of the severe incidents that other companies have experienced in recent years, attacks on Novo Nordisk's IT systems are now assessed to present a greater risk than previously envisaged. If a virus or malware penetrates the different layers of security, it could have a significant adverse impact on key IT systems throughout the value chain. "In recent years, we've upgraded our IT security capabilities and processes," says Jesper Brandgaard. "But we're not done, and probably never will be. We must continuously strengthen our ability to protect against, detect and respond to cyberattacks, which includes investing in business continuity measures."

**LEGAL AND COMPLIANCE RISKS** At any point in time, a pharmaceutical company of Novo Nordisk's size could face legal and compliance risks, such as lawsuits filed by competitors or customers, or investigations by authorities into certain business practices. Investors do, and should, pay attention to such cases, as they can have significant financial or market impacts. A summary of Novo Nordisk's significant ongoing cases can be found on p 80. Novo Nordisk has a comprehensive Business Ethics Code of Conduct and Framework, and all relevant employees are trained regularly. Unethical behaviour is not tolerated – a message that is consistently reinforced by senior management and underpinned by timely and appropriate action in cases where breaches have occurred (see p 17).

**LONG-TERM RISKS** Novo Nordisk aspires to be a sustainable business, which requires a long-term perspective on value creation. In the context of risk management, it means taking an active role in addressing risks related to global economic development, geopolitics and long-term prosperity. These trends and macro developments are assessed in Novo Nordisk's rolling 10-year strategic planning process. Detailed descriptions of how Novo Nordisk manages environmental and social risks through climate action initiatives, water stewardship, respect for human rights, access to health, diversity and inclusion, business ethics and responsible tax can be reviewed in the Communication on Progress at [novonordisk.com/annualreport](http://novonordisk.com/annualreport).

**NOVO NORDISK'S RISK MANAGEMENT POLICY** At Novo Nordisk, we will proactively manage risk to ensure continued growth of our business and to protect our people, assets and reputation. This means that we will:

- utilise an effective and integrated risk management system while maintaining business flexibility
- identify and assess material risks associated with our business
- monitor, manage and mitigate risks.

Read more about Novo Nordisk's risk management governance at [novonordisk.com/about-novo-nordisk/corporate-governance/risk-management.html](http://novonordisk.com/about-novo-nordisk/corporate-governance/risk-management.html).

**RISK PROFILE AND MITIGATING ACTIONS** As a global business, Novo Nordisk is exposed to risks throughout its value chain – from early discovery of new medicines in the research laboratories to the homes of patients who take its life-saving medicines on a daily basis. The more specific the risk, the more concrete the mitigating action. For example, back-up facilities and inventories can be put in place to anticipate supply disruptions. Delays or failure in the pipeline, which may lead to abandoning a promising product candidate, can also be quantified, and actions can be taken throughout the process from discovery to commercialisation. Other risks may materialise suddenly or from unseen angles, such as a virus attack on data systems, and may cause business disruptions, if mitigating actions are not sufficient. See an overview of Novo Nordisk's key risks in the table on pp 42–43.

**ENTERPRISE RISK MANAGEMENT** Risk management is an enterprise-wide effort. Management teams in all organisational areas are responsible for continuous identification, assessment, mitigation and reporting of current and emerging risks. Risks are assessed in terms of potential financial loss and potential reputational damage. Through this process, risks can be anticipated and addressed proactively in order to protect and enhance the value of assets, people, performance and reputation. The most significant risks are those that would have a material negative impact on the business and a significant adverse impact on people. These key risks are presented to the Board of Directors on a quarterly basis. Read more at [novonordisk.com/about-novo-nordisk/corporate-governance/risk-management.html](http://novonordisk.com/about-novo-nordisk/corporate-governance/risk-management.html).

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**NOVO NORDISK'S KEY RISKS DELAYS OR FAILURE OF PRODUCTS IN PIPELINE SUPPLY DISRUPTIONS COMPETITION AND MARKET DEVELOPMENTS COMPROMISES TO PRODUCT QUALITY AND PATIENT SAFETY WHAT IS THE RISK?** The development of a product candidate can take more than 10 years and may be delayed, or even abandoned, at substantial expense. The process involves non-clinical tests and clinical trials, commercial product planning and regulatory approval, including approval of the production facilities. Failures or delays may occur at production sites or throughout the extensive global supply chain, relating to procurement of ingredients and components as well as distribution of products. This could be due to breakdowns or quality failures at company sites or at key suppliers' production facilities. Governments and private payers take measures to limit spending on medicines by driving down prices, demanding higher rebates and restricting access to and reimbursement of new products. In some markets, political instability, conflict or weak enforcement of the rule of law may affect sales. At any time, established or new competitors may bring new products to market, leading to increased competition. Product quality and patient safety may be compromised if, for example, a production facility is found to be in non-compliance, a product is not within specifications or if side effects that were not detected in clinical trials become apparent when a product is used for a longer period of time.

**WHAT IS THE IMPACT?** Patients would not benefit from innovative treatments and Novo Nordisk's future position as a leader could be jeopardised if the company is unable to bring innovative products to market. Any delays or failures of new products could have an adverse impact on sales, profits and market position. Pharmacies and hospitals could face product shortages, with potential implications for patients' daily treatment needs, if Novo Nordisk is prevented from supplying products to markets. Patients would not have access to the clinical benefits of new products if Novo Nordisk is prevented from launching new products due to reimbursement restrictions. Lower average prices are expected in the US. In other markets, prices are also under pressure, and newer products could be niched for use in narrow sub-populations. Patients' health and lives could be put at risk and Novo Nordisk's reputation and licence to operate could be damaged if regulatory compliance is not ensured.

**WHAT ACTIONS ARE TAKEN?** Insights into patients' unmet needs inform the selection of new product candidates. Clinical trials are run to demonstrate safety and efficacy. Assessments of commercial viability determine progress through stage gates. Consultations are held with regulators to review clinical findings and obtain guidance on clinical programmes. See more on pp 20–23. Annual inspections by regulatory authorities document GMP compliance, and alternative supply sites for critical raw materials and back-up facilities are in place for key production plants and safety inventories, to prevent and respond to accidents or other disruptions to supplies. Global production reduces supply risks. See more on p 12. Clinical trial data demonstrate the added value of new products. Real-world evidence is introduced to show health economic benefits. Negotiations with payers aim to ensure patients' access to the clinical benefits of new products. See more on pp 32–39. A robust quality management system, improvement plans and systematic senior management reviews are in place. Authority inspections and internal quality audits are conducted at production sites. When issues are found with production processes or marketed products, root causes are identified and corrected and, if necessary, products are recalled. See more on p 12.

42 NOVO NORDISK ANNUAL REPORT 2017 OUR BUSINESS

## Edgar Filing: NOVO NORDISK A S - Form 6-K

INFORMATION TECHNOLOGY SECURITY BREACHES CURRENCY IMPACT AND TAX DISPUTES BREACH OF LEGISLATION OR ETHICAL STANDARDS LOSS OF INTELLECTUAL PROPERTY RIGHTS Disruption to IT systems, such as virus attacks, breaches of data security or failure to integrate new systems, may happen across the global value chain, where well-functioning IT systems and infrastructure are critical for the company's ability to operate effectively. Exchange rate fluctuations and transfer pricing disputes with tax authorities are external factors that may occur at any time. Novo Nordisk's foreign exchange risk is most significant in USD, CNY and JPY, while the EUR exchange rate risk is regarded as low due to Denmark's fixed-rate policy vis-à-vis the euro. In a tightly regulated industry, breach of legislation, industry codes or company policies may occur in connection with business interactions, such as with healthcare professionals, business partners or other stakeholders. This could lead to lawsuits against Novo Nordisk or investigations by the authorities. The validity of patents that are critical for protecting Novo Nordisk's commercial products and candidates in the R&D pipeline may be challenged by competitors. Patients' or other individuals' privacy could be compromised if confidential information is disclosed, and breaches of IT security could have a severe impact on Novo Nordisk's ability to maintain operations and hence on its financial situation. In production environments, for example, breaches of IT security could impact Novo Nordisk's ability to produce and safeguard product quality. Novo Nordisk's cash flow and income statement would be negatively impacted if the local currency value in key sales regions depreciated against the Danish krone. Loss of major tax cases could result in significant tax adjustments and fines and could lead to a higher-than-expected tax level for the company. Breaches of legislation or ethical standards could compromise the integrity of the individuals involved and could cause damage to Novo Nordisk's reputation and financial situation. Loss of exclusivity for existing and pipeline products could impact Novo Nordisk's market position, sales and profits. An information security strategy is in place to prevent intruders from causing damage to systems and gaining access to critical data and systems. Continuity plans are being prepared in the event of non-availability of IT systems. Awareness campaigns, access controls and intrusion detection and prevention systems have been implemented. Internal audits of IT security are conducted to detect and mitigate any breaches. Expected future cash flows for selected currencies are hedged to mitigate exposures. An integrated treasury management system is in place. Applicable taxes are paid in jurisdictions where business activity generates profits. Multi-year advance pricing agreements (APAs) with tax authorities have been negotiated with the US, Canada and Japan. Hedging activities and calculation of transfer pricing are subject to internal audit. See more on pp 13, 72–73 and 83–84. Due diligence, standard procedures and training are in place to ensure compliance with laws and regulations and prevent breaches of standards, with legal defence where relevant. Compliance with business ethics standards is subject to internal audit. See more on pp 16–17 and Q02–103. Throughout the process of drafting, filing and prosecuting a patent application, internal controls are in place to minimise vulnerability to invalidity actions. Patents at high risk of invalidity challenge are proactively identified to defend Novo Nordisk's intellectual property rights. See more on pp 74–75 and Q01. 43 NOVO NORDISK ANNUAL REPORT 2017 OUR BUSINESS

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**SHARES AND CAPITAL STRUCTURE** Through open and proactive communication, the company aims to provide the basis for fair and efficient pricing of its shares.

**SHARE CAPITAL AND OWNERSHIP** Novo Nordisk's total share capital of DKK 1,000,000,000 is divided into an A share capital of nominally DKK 107,487,200 and a B share capital of nominally DKK 92,512,800.\* The company's A shares are not listed and are held by Novo Holdings A/S, a Danish public limited liability company wholly owned by the Novo Nordisk Foundation. The Foundation has a dual objective: to provide a stable basis for the commercial and research activities conducted by the companies within the Novo Group (of which Novo Nordisk is the largest), and to support scientific and humanitarian purposes. According to the Articles of Association of the Foundation, the A shares cannot be divested. As of 31 December 2017, Novo Holdings A/S also held a B share capital of nominally DKK 2,762,800. Novo Nordisk's B shares are listed on Nasdaq Copenhagen and on the New York Stock Exchange (NYSE) as American Depositary Receipts (ADRs). Novo Nordisk's A and B shares are calculated in units of DKK 0.20, resulting in 537,436,000 A shares and 1,962,564,000 B shares. Each A share carries 200 votes and each B share carries 20 votes.\*

No complete record of all shareholders exists; however, based on available sources of information about the company's shareholders, as of 31 December 2017 it is estimated that shares were geographically distributed as shown in the chart on the opposite page. As of 31 December 2017, the free float of listed B shares was 88.8% (of which approximately 91.8% are listed as ADRs), excluding the Novo Holdings A/S holding and Novo Nordisk's holding of treasury shares which, as of 31 December 2017, was DKK 13,871,211 nominally. For details about the share capital, see note 4.1 on pp 81–82.

**CAPITAL STRUCTURE AND DIVIDEND POLICY** Novo Nordisk's Board of Directors and Executive Management consider that the current capital and share structure of Novo Nordisk serves the interests of the shareholders and the company well, providing strategic flexibility to pursue Novo Nordisk's vision. Novo Nordisk's capital structure strategy offers a good balance between long-term shareholder value creation and competitive shareholder return in the short term. Novo Nordisk's guiding principle is that any excess capital, after the funding of organic growth opportunities, investments and acquisitions, should be returned to investors. The company's dividend policy applies a pharmaceutical industry benchmark to ensure a competitive payout ratio for dividend payments, which are complemented by share repurchase programmes. As illustrated on the opposite page, Novo Nordisk has continuously increased both the payout ratio and the dividend paid over the last five years. The final dividend for 2016 paid in March 2017 was equal to DKK 4.60 per A and B share of DKK 0.20 as well as for ADRs. The total dividend for 2016 was DKK 7.60 per A and B share of DKK 0.20, corresponding to a payout ratio of 50.2%, which is on par with the 2016 pharma peer group average of 48.7%. In August 2017, an interim dividend was paid equalling DKK 3.00 per A and B share of DKK 0.20 as well as for ADRs. For 2017, the Board of Directors will propose a final dividend of DKK 4.85 to be paid in March 2018, equivalent to a total dividend for 2017 of DKK 7.85 and a payout ratio of 50.4%. The company expects to distribute an interim dividend in August 2018, and further information regarding such interim dividend will be announced in connection with the financial report for the first six months of 2018. Novo Nordisk does not pay a dividend on its holding of treasury shares. Shareholders' enquiries concerning dividend payments and shareholder accounts should be addressed to Investor Service. Read more on the back cover. During the 12-month period beginning 2 February 2017, Novo Nordisk repurchased shares worth DKK 17 billion. The share repurchase programme has primarily been conducted in accordance with the safe harbour rules in the EU Market Abuse Regulation (MAR).

**SHARE REPURCHASE PROGRAMME FOR R017/2018** For the next 12 months, Novo Nordisk has decided to implement a new share repurchase programme. The expected total repurchase value of B shares amounts to a cash value of up to DKK 14 billion. The total programme may be reduced in size if significant product in-licensing or bolt-on acquisition opportunities arise during 2018. Novo Nordisk expects to conduct the majority of the new share repurchase programme according to the safe harbour rules in MAR. At the Annual General Meeting in March 2018, the Board of Directors will propose a further reduction in the company's B share capital, corresponding to approximately 2% of the total share capital, by cancelling 50,000,000 treasury shares. After the implementation of the share capital reduction, Novo Nordisk's share capital will amount to DKK 1,090,000,000, divided into A share capital of DKK 107,487,200 and B share capital of DKK 382,512,800.

**SHARE PRICE DEVELOPMENT** Novo Nordisk's share price increased by 51.3% between its 2016 close of DKK 254.7 and the 29 December 2017 close of DKK 334.5. For comparison, the Danish OMXC20 CAP stock index increased by 12.1% and the pharma peer group increased by 1.3% during 2017. The total market value of Novo Nordisk's B shares, excluding treasury shares, was DKK 638 billion as of 31 December 2017.

**COMMUNICATION WITH SHAREHOLDERS** To keep investors updated about performance and the progress of clinical development programmes, Novo Nordisk hosts conference calls with Executive Management following key events and the release of financial results. Executive Management and Investor Relations also travel extensively to ensure that all investors with a major holding of Novo Nordisk shares can meet with the company on a regular basis and that a number of other investors and potential investors also have access to the company's Executive Management and Investor Relations.

**ANALYST COVERAGE** Novo Nordisk is currently covered by 33 sell-side analysts, including the major global investment banks that regularly produce research reports on Novo Nordisk. A list of analysts covering Novo Nordisk can be found under 'Investors' on novonordisk.com. Other information which can be accessed via this website includes company announcements from 1995 onwards, financial, social and environmental results, a calendar of investor-relevant events, investor presentations and background information. \*

Special rights attached to A shares include pre-emptive subscription rights in the event of an increase in the A share capital and pre-emptive purchase rights in the event of a sale of A shares, while B shares take priority for liquidation proceedings. A shares take priority for dividends below 0.5%, and B shares take priority for dividends between 0.5 and 5%.

ANNUAL REPORT 2017 GOVERNANCE, LEADERSHIP AND SHARES																								

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**CORPORATE GOVERNANCE** The Board of Directors of Novo Nordisk focuses on good governance practices. In 2017, a temporary Research & Development Committee was established to provide oversight of the revised research and development strategy. The Board conducted a self-assessment facilitated by external consultants. Two board members joined the Board, and two members left.

**GOVERNANCE STRUCTURE**

**SHAREHOLDERS** The shareholders of Novo Nordisk have ultimate authority over the company and exercise their right to make decisions at general meetings. At the annual general meeting, shareholders approve the annual report and any amendments to the company's Articles of Association. Shareholders also elect board members and the independent auditor. Resolutions can generally be passed by a simple majority. However, resolutions to amend the Articles of Association require two-thirds of the votes cast and capital represented, unless other adoption requirements are imposed by the Danish Companies Act. Novo Holdings A/S has the voting majority at the annual general meeting. However, all strategic and operational matters are decided solely by the Board of Directors and Executive Management of Novo Nordisk A/S. Read more about shares and capital structure on pp 44–45.

**BOARD OF DIRECTORS** Novo Nordisk has a two-tier management structure consisting of the Board of Directors and Executive Management. The two bodies are separate, and no one serves as a member of both. The Board of Directors determines the company's overall strategy and follows up on its implementation, supervises the performance, ensures adequate management and organisation and, as such, actively contributes to developing the company as a focused, sustainable, global pharmaceutical company. The Board of Directors supervises Executive Management. The Board of Directors may also distribute extraordinary dividends, issue new shares or repurchase shares in accordance with authorisations granted by the Annual General Meeting and recorded in the meeting minutes. For the minutes of annual general meetings, see [novonordisk.com/about\\_us](http://novonordisk.com/about_us). As of 31 December 2017, the Board of Directors had 11 members, seven of whom were elected by shareholders and four by employees in Denmark. The Board of Directors met seven times during 2017. At the Annual General Meeting in March 2017, Bruno Angelici did not seek re-election, and Kasim Kutay and Helge Lund were elected to the Board of Directors. In May 2017, Mary Szela stepped down from the Board of Directors due to a potential future conflict of interest. Shareholder-elected board members serve for a one-year term and may be re-elected. Board members must retire at the first annual general meeting after reaching the age of 70. Two board members are members of the Board of Directors of Novo Holdings A/S, and one board member is chief executive officer of Novo Holdings A/S and may be regarded as representing the interests of the controlling shareholder, while four of the seven shareholder-elected board members are independent as defined by the Danish Corporate Governance Recommendations. Under Danish law, employees in Denmark are entitled to be represented by half of the total number of board members elected at the annual general meeting. In 2014, employees elected four board members amongst themselves – two male and two female. Board members elected by employees serve for a statutory four-year term and have the same rights, duties and responsibilities as shareholder-elected board members. The employee-elected board members are up for election in 2018. Read more about the members of the Board of Directors on pp 54–55.

**NOMINATION, SELF-ASSESSMENT AND DIVERSITY** A proposal for nomination of board members is presented by the Nomination Committee to the Board of Directors, taking into account required competences as defined by the competence profile and reflecting the results of a self-assessment process. In order to support continued fulfilment of the Novo Nordisk Way, the criteria for board members described in the competence profile include integrity, accountability, fairness, financial literacy, commitment and desire for innovation. Board members are also expected to have experience of managing major companies that develop, manufacture and market products and services globally. The competence profile, which includes the nomination criteria, is available at [novonordisk.com/about\\_us](http://novonordisk.com/about_us). The Board of Directors conducts a self-assessment every year. The self-assessment includes all members of the Board of Directors and Executive Management. The chairman has overall responsibility for conducting the self-assessment. The self-assessment is facilitated every third year by external consultants, who interview all members of the Board of Directors and Executive Management as well as the secretaries to the Board and the board committees. For the subsequent two years, the self-assessment is facilitated by the secretary of the Nomination Committee and is based on written questionnaires to all members of the Board of Directors and Executive Management. The process, whether it is facilitated internally or

## Edgar Filing: NOVO NORDISK A S - Form 6-K

external consultants, evaluates topics such as board dynamics, board agenda and discussions, strategy, culture, executive succession, board composition, succession and training. In addition, each individual member of the Board of Directors and Executive Management is provided with feedback from all other board members and executives on their individual performance. The self-assessment is conducted on an anonymous basis. Ratings and comments to individuals are only shared with that individual and the chairman in an anonymised version, while the remaining ratings and comments are consolidated and shared with the board members and executives in an anonymised version. In 2017, the self-assessment was facilitated by external consultants and, in general, revealed a good performance by the Board of Directors as well as good collaboration between the Board of Directors and Executive Management. The process also resulted in increased focus on the process for strategy development, development of the company culture, executive succession and future board competences. To ensure that discussions include multiple perspectives representing the complex, global pharmaceutical environment, the Board of Directors aspires to be diverse in gender and nationality. In 2016, the Board of Directors adjusted its diversity ambition and set out new targets with the aim of consisting, by 2020, of at least two shareholder-elected board members with Nordic nationality and at least two shareholder-elected board members with a nationality other than Nordic – and at least three shareholder-elected board members of each gender. As of 31 December 2017, two shareholder-elected board members were female and five were male, while four of the seven shareholder-elected board members were non-Nordic and three were Nordic. Thus, the company did not fulfil the ambition of having at least three shareholder-elected board members of each gender on the Board by the end of 2017, given that Mary Szela stepped down from the Board of Directors in May 2017 due to a potential future conflict of interest. The company will strive to fulfil this ambition by 2020. In accordance with section 99b of the Danish Financial Statements Act, Novo Nordisk discloses its diversity policy, targets and current performance in the UN Global Compact Communication on Progress, which is available at [novonordisk.com/annualreport](http://novonordisk.com/annualreport).

**BOARD COMMITTEES CHAIRMANSHIP** The annual general meeting elects the chairman and the vice chairman of the Board of Directors directly. The Chairmanship carries out administrative tasks, such as planning board meetings to ensure a balance between overall strategy setting and financial and managerial supervision of the company. Other tasks include reviewing the fixed asset investment portfolio. In 2017, the Chairmanship particularly discussed the sales performance in the US and projections for 2018, the pipeline progress, the implementation of the revised research and development strategy, the establishment of the Research & Development Committee and the composition of and succession plan for Executive Management.

**AUDIT COMMITTEE** The Audit Committee consists of four members. One member is an employee representative. Three members qualify as independent, including the chairman, and one member, the employee representative, qualifies as non-independent. In addition, two members have competences in accounting and auditing, and the members of the Audit Committee collectively have competences relevant to the healthcare industry, as required by the Danish Act on Approved Auditors and Audit Firms. Pursuant to the US Securities Exchange Act, the three shareholder-elected members qualify as independent, including the chairman, while the employee representative member relies on an exemption from the independence requirements. In addition, two members have been designated as financial experts as defined by the US Securities and Exchange Commission (SEC). The Audit Committee assists the Board of Directors with oversight of the external auditors, the internal audit function, handling hotline complaints, financial, social and environmental reporting, business ethics compliance, significant investment projects (post-completion review), long-term incentive programmes, information security and other tasks. In 2017, the Audit Committee particularly discussed accounting policies and estimates, including the treatment and impact of the revised IFRS standards as well as the risk and provisions for ongoing tax and legal cases. Furthermore, the Audit Committee discussed key internal financial controls as well as business ethics compliance and information security.

**NOMINATION COMMITTEE** The Nomination Committee consists of five members. Two members qualify as independent and three members qualify as non-independent, including the chairman. One member is an employee representative. The Nomination Committee assists the Board with oversight of the competence profile and composition of the Board, nomination of members and committees, and other tasks on an ad hoc basis, as specifically decided by the Board. In 2017, the Nomination Committee particularly focused on supervising the process for chairman succession and on identifying and interviewing candidates with experience and competences within research and development, the US pharma market and general management.

**REMUNERATION COMMITTEE** The Remuneration Committee consists of three members. All three members qualify as non-independent. One member is an employee representative. The Remuneration Committee assists the Board with oversight of the remuneration policy as well as the actual remuneration of board

CONTINUED NOVO NORDISK ANNUAL REPORT 2017 47

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

members, board committees and Executive Management. In 2017, the Remuneration Committee particularly focused on supplementing the executive remuneration benchmarks with additional benchmark data presented by an external remuneration consultant and, based on that, recommending an adjustment to the short-term cash-based incentive programme for 2018 for executive vice presidents and a modernisation of the maximum of the long-term share-based incentive programme to ensure that it is competitive. In addition, the Remuneration Committee focused on remuneration levels for executives being promoted.

**RESEARCH & DEVELOPMENT COMMITTEE** The Research & Development Committee was established in March 2017 in light of the updated research and development strategy and priorities. The new Research & Development Committee is temporary and is expected to exist for 18–24 months while the company is implementing the new research and development strategy. The Research & Development Committee consists of four members. Two members qualify as independent and two members qualify as non-independent, including the chairman. One member is an employee representative. The Research & Development Committee assists the Board with oversight of the research and development strategy, the pipeline and other tasks on an ad hoc basis, as specifically decided by the Board. In 2017, the Research & Development Committee particularly focused on the revised research and development strategy, and discussed how to raise the research innovation level within core Novo Nordisk therapy areas, how to expand into new therapy areas by exploring current assets, and progress of the intensified external innovation activities. See [novonordisk.com/about\\_us](http://novonordisk.com/about_us) for a more detailed description of the board committees, their charters, their members and full reports on the board committees' activities in 2017.

**EXECUTIVE MANAGEMENT** Executive Management is responsible for the overall day-to-day management, the organisation of the company, allocation of resources, determination and implementation of strategies and policies, direction setting, and ensuring timely reporting and provision of information to the Board of Directors and Novo Nordisk's stakeholders. Executive Management meets at least once a month, and often more frequently. The Board of Directors appoints members of Executive Management and determines their remuneration. The Chairmanship reviews the performance of the executives. To ensure the organisational implementation of the strategy, Executive Management has established a Management Board consisting of the chief executive officer, executive vice presidents and senior vice presidents. On 1 January 2017, Lars Fruergaard Jørgensen became chief executive officer (CEO), succeeding Lars Rebién Sørensen, who retired from the company at the end of 2016. Jakob Riis left the company in March 2017 and was succeeded by Doug Langa as a member of Executive Management. Lars Green was appointed executive vice president in July 2017, and Camilla Sylvest was appointed executive vice president in October 2017. The two executives who are based outside of Denmark and who have responsibility for International Operations and North America Operations respectively are not registered as executives with the Danish Business Authority.

**ASSURANCE** The company's financial reporting and the internal controls of financial reporting processes are audited by an independent audit firm elected at the annual general meeting. As part of Novo Nordisk's commitment to its social and environmental responsibility, the company voluntarily includes an assurance report for social and environmental reporting in the annual report. The assurance provider reviews whether the social and environmental performance information covers aspects deemed to be material, and verifies the internal control processes for the information reported. Novo Nordisk's internal audit function provides independent and objective assurance, primarily within internal control of financial processes, IT security and business ethics. To ensure that the internal financial audit function operates independently of Executive Management, its charter, audit plan and budget are approved by the Audit Committee. The Audit Committee must approve the appointment, remuneration and dismissal of the head of the internal audit function. Three other types of assurance activity – quality audits, organisational audits and values audits, called facilitations – help ensure that the company adheres to high quality standards and operates in accordance with the Novo Nordisk Way. Read more about the Novo Nordisk Way on pp 16–17.

**COMPLIANCE WITH CORPORATE GOVERNANCE CODES** Novo Nordisk's B shares are listed on Nasdaq Copenhagen and on the New York Stock Exchange (NYSE) as American Depositary Receipts (ADRs). The applicable corporate governance codes for each stock exchange and a review of Novo Nordisk's compliance are available at [novonordisk.com/about\\_us](http://novonordisk.com/about_us). In accordance with section 107b of the Danish Financial Statements Act, Novo Nordisk discloses its Statutory Corporate Governance Report at [novonordisk.com/about-novo-nordisk/corporate-governance/Recommendations-and-practices.html](http://novonordisk.com/about-novo-nordisk/corporate-governance/Recommendations-and-practices.html). **NOVO NORDISK ANNUAL REPORT 2017**

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

Today, Novo Nordisk adheres to all but the following three recommendations: • 3.4.2 – Independence of board committees: the majority of the members of the Nomination Committee, the Remuneration Committee and the Research & Development Committee respectively are not independent. • 3.4.7 – Tasks of the Remuneration Committee: responsibility for the remuneration policy applicable to employees in general resides with Executive Management and not with the Remuneration Committee. • 4.1.5 – Termination payments: two executive employment contracts entered into before 2008 allow for severance payments of more than 24 months' fixed base salary plus pension contribution. For more information, please refer to the Statutory Corporate Governance Report R017. Novo Nordisk complies with the corporate governance standards of NYSE applicable to foreign listed private issuers. As a controlled company, Novo Nordisk is not obliged to comply with all the standards established by NYSE. Furthermore, Novo Nordisk, as a foreign private issuer, is permitted to follow home country practice, which is the case in relation to independence requirements, audit committee, equity compensation plans, code of business conduct and ethics, and CEO certification. A summary of the significant ways in which Novo Nordisk's corporate governance practices differ from the NYSE corporate governance listing standards can be found in the Statutory Corporate Governance Report at [novonordisk.com/about-novo-nordisk/corporate-governance/Recommendations-and-practices.html](http://novonordisk.com/about-novo-nordisk/corporate-governance/Recommendations-and-practices.html). Novo Nordisk also adheres to the charter for companies in the Novo Group, as it is partially owned by Novo Holdings A/S. The charter is available on [novoholdings.dk](http://novoholdings.dk).

**DISCLOSURE REGARDING CHANGE OF CONTROL** The EU Takeover Bids Directive, as partially implemented by the Danish Financial Statements Act, requires listed companies to disclose information that may be of interest to the market and potential takeover bidders, in particular in relation to disclosure of change-of-control provisions. Novo Nordisk discloses that the Group does not have any significant agreements to which the Group is a party and that take effect, alter or terminate upon a change of control of the Group following implementation of a takeover bid. In relation to Executive Management, the current employment contracts allow severance payments of up to 36 months' fixed base salary plus pension contribution in the event of a merger, acquisition or takeover of Novo Nordisk. For information about the ownership structure of Novo Nordisk, please refer to Shares and capital structure on pp 44–45.

**CORPORATE GOVERNANCE CODES AND PRACTICES COMPLIANCE ASSURANCE** GOVERNANCE STRUCTURE Danish and foreign laws and regulations Audit of financial data and review of social and environmental data (internal and external) Corporate governance standards Facilitation and organisational audit (internal) Novo Nordisk Way Quality audit and inspections (internal and external) Shareholders Executive Management Organisation Board of Directors Chairmanship\* Nomination Committee Remuneration Committee Audit Committee R&D Committee \* The Chairmanship is directly elected by the annual general meeting. Brian Daniels was first elected in March 2016. Kasim Kutay and Helge Lund were first elected in March 2017. 2. Bruno Angelici resigned as of March 2017, and Mary Szela resigned as of May 2017. Former members also includes fees to Thomas Paul Koestler and Eivind Kolding, who resigned as of March 2016. 3. Novo Nordisk provides secretarial assistance to the chairman in Denmark and the UK. T. Excluding social security taxes paid by Novo Nordisk amounting to less than DKK 1 million (less than DKK 1 million in 2016).					

REMUNERATION: BOARD OF DIRECTORS At the Annual General Meeting in March 2017, it was decided to leave all components of the remuneration of Novo Nordisk's Board of Directors unchanged.

REMUNERATION COMPOSITION The remuneration of Novo Nordisk's Board of Directors comprises a fixed base fee, a multiplier of the fixed base fee for the Chairmanship and members of the board committees, fees for ad hoc tasks and a travel allowance. In March 2017, the Annual General Meeting approved that the level for the fixed base fee for 2017 should be DKK 600,000. The fee for ad hoc tasks depends on the nature of the task.

Further information on the remuneration of the Board of Directors is available at [novonordisk.com/about\\_us](http://novonordisk.com/about_us).

TRAVEL AND EXPENSES All Board members are paid a fixed travel allowance per board meeting and per board committee meeting of 5,000 euros per meeting in the member's home country involving travel of 5 hours or more, 5,000 euros per meeting outside the member's home country but on home country continent and 10,000 euros per meeting in a country outside the member's home continent. Expenses such as travel and accommodation in relation to board meetings as well as those associated with continuing education are reimbursed and paid in addition to the travel allowance. Novo Nordisk also pays social security taxes imposed by foreign authorities. Further information on travel and expenses is available at [novonordisk.com/about\\_us](http://novonordisk.com/about_us).

INCENTIVE PROGRAMMES Board members are not offered stock options, warrants or participation in other incentive schemes. The company's remuneration principles provide guidance for the remuneration of the Board of Directors and Executive Management. These principles are available at [novonordisk.com/about-novo-nordisk/corporate-governance/remuneration.html](http://novonordisk.com/about-novo-nordisk/corporate-governance/remuneration.html).

NOVO NORDISK ANNUAL REPORT 2017 GOVERNANCE, LEADERSHIP AND SHARES

## Edgar Filing: NOVO NORDISK A S - Form 6-K

TOTAL REMUNERATION COMPOSITION AND PERFORMANCE OVERVIEW FOR CEO AND EVPs – 2017

LTIP performance	DKK million	1. Includes executives who have been registered with the Danish Business Authority in 2017 full year.	0	5	10
15	20	25	30	35	40
Chief executive officer	91% of maximum	87% of maximum	Other registered members of Executive Management <sup>1</sup> (average)		

ActualMaximum ActualMaximum CONTINUED REMUNERATION: EXECUTIVE MANAGEMENT In 2017, the cash bonus for the members of Executive Management under the short-term cash-based incentive programme was 100% of the maximum cash bonus, while it was adjusted for executives being promoted to Executive Management in second half of 2017. The members of Executive Management received 69% of their respective maximum share allocation under the long-term share-based incentive programme.

2017 PERFORMANCE In March 2017, the Annual General Meeting approved a change in the structure of the long-term share-based incentive programme by increasing the importance of sales growth. The specific targets for 2017 were established by the Board of Directors in February 2017. The targets and structure of the programme have not been changed subsequently. In 2017, Novo Nordisk exceeded the planned incentive target for economic value creation, with 4.8%, primarily due to higher operating profit, lower than planned net operating assets and a lower than planned effective tax rate and partly offset by an unfavourable net impact from currencies. Sales were 0.8% above the target level in local currencies. Two of the non-financial targets were not met: Novo Nordisk did not receive a label update in R017 in the US for Tresiba® based on the SWITCH data and obtained a lower than targeted reputation score amongst key stakeholders. This will, however, not result in any deduction of the share allocation since at least 85% of non-financial targets have been met. On this basis, 69% of the maximum share allocation will be granted to the participants in the long-term share-based incentive programme. Thus, the chief executive officer will receive shares equalling 8.2 months' fixed base salary plus pension contribution, whereas executive vice presidents will receive shares equalling 5.2 months' fixed base salary plus pension contribution. The two executives being promoted to executive vice president after Q July 2017 will receive shares equalling 5.5 months' fixed base salary plus pension contribution based on their previous status as senior vice president. In 2017, the achievement of the predefined functional and individual business targets for the short-term cash-based incentive programme by each executive has been assessed. Consequently, the cash bonus for the chief executive officer for 2017 was 100% of the maximum cash bonus equalling 8.2 months' fixed base salary plus pension contribution. The cash bonus for the executive vice presidents was 100% of their maximum cash bonus equalling 8.5 and 8 months' fixed base salary plus pension contribution respectively, while it was adjusted for executives being promoted to Executive Management in second half of 2017.

LONG-TERM INCENTIVE – PERFORMANCE 2017

Months of base salary equivalent	Performance	Incentive impact	CEO	EVPs	Long-term

			Performance as percentage of target	137%	137%
			1. ±10% incentive impact for each percentage point performance above/below 100% until max 110% and min 90%.		
			2. ±33% incentive impact for each percentage point performance above/below 100% until max 103% and min 97%.		
			3. Shortfall, if performance is below 85%, deducted from incentive performance.		

51 NOVO NORDISK ANNUAL REPORT 2017 GOVERNANCE, LEADERSHIP AND SHARES

## Edgar Filing: NOVO NORDISK A S - Form 6-K

for the remaining executive vice presidents based in Denmark. **SHARE-BASED INCENTIVE** The long-term share-based incentive programme is designed to promote the collective performance of Executive Management and align the interests of executives and shareholders. Share-based incentives are linked to both financial and non-financial targets. The allocation of shares is based on the degree of achievement of the planned economic value creation and on the degree of achievement of the planned level of sales growth. The allocation of shares may be reduced (but not increased) if certain non-financial targets are not met. Non-financial targets are determined on the basis of an assessment of the objectives regarded as particularly important for the fulfilment of the company's long-term performance. The non-financial targets are linked to the company's Balanced Scorecard within the categories of research and development, quality/compliance, people and sustainability. Targets within research and development related to specific milestones, such as submission of product files to the regulatory authorities in the US and Europe within a certain time frame, achievement of marketing authorisations, execution of trials and a defined number of product candidates to enter development from discovery. Targets within quality and compliance related to number of actual recalls, to quality compliance and to customer complaint rate. Targets within people related to certain activities to build capabilities for future growth and targets within sustainability related to the emissions of CO2 from energy consumption for production and company reputation. In February 2017, the Board determined that the 2017 maximum share allocation would be up to 12 months' fixed base salary plus pension contribution for the chief executive officer and up to 9 months' fixed base salary plus pension contribution for the executive vice presidents. If the targets for economic value creation and sales growth are met, and at least 85% performance is reached for non-financial targets, the allocation of shares will correspond to 6 months' base salary plus pension contribution for the chief executive officer and 4.5 months' base salary plus pension contribution for the executive vice presidents. **PENSION** The pension contribution is up to 25% of the fixed base salary including bonus. **SEVERANCE PAYMENT** Novo Nordisk may terminate employment by giving executives 12 months' notice. Executives may terminate their employment by giving Novo Nordisk 6 months' notice. In addition to the notice period, executives are entitled to a severance payment as described in the overview of the executive remuneration package components. **SHAREHOLDING REQUIREMENT** To further align the interests of the shareholders and Executive Management, the chief executive officer should hold Novo Nordisk B shares corresponding to two times the annual gross salary, and the executives should hold shares corresponding to one time the annual gross salary. For executives being promoted or employed from outside Novo Nordisk, the shareholding requirement is built up over a period of 5 years after promotion and employment respectively. All executives met the shareholding requirement as of 31 December 2017. Further information on the remuneration of Executive Management is available at [novonordisk.com/about\\_us](http://novonordisk.com/about_us). **REMUNERATION PACKAGE COMPONENTS** Remuneration Board of Directors Executive Management Comments relating to Executive Management Fixed fee/base salary Accounts for approximately 25–50% of the total value of the remuneration package.\* Fee for committee work Fee for ad hoc tasks Cash-based incentive Up to 12 months' fixed base salary + pension contribution per year. Share-based incentive Up to 12 months' fixed base salary + pension contribution per year typically based on base salary at the end of the year. Pension Up to 25% of fixed base salary and cash-based incentive. Travel allowance and other expenses Other benefits Executive Management receives non-monetary benefits such as company cars, phones etc. Executives on international assignments may receive relocation benefits. Severance payment Up to 24 months' fixed base salary + pension contribution. Executive Management contracts entered into before 2008 exceed the 24-month limit, though will not exceed 36 months' fixed base salary plus pension contribution. \* The interval 25–50% states the span between 'maximum performance' and 'on-target performance'. **REMUNERATION COMPOSITION** Novo Nordisk's Remuneration Principles provide the framework for the remuneration of the Executive Management. Remuneration has been designed to align the interests of the executives with those of the shareholders. Based on benchmark data, the Board of Directors decided to maintain the structure of the remuneration packages for Executive Management in 2017. Remuneration packages for executives comprise a fixed base salary, a cash-based incentive, a long-term share-based incentive, a pension contribution and other benefits. The split between fixed and variable remuneration is intended to result in a reasonable part of the salary being linked to performance, while promoting sound business decisions to meet the company's objectives. All incentives are subject to claw-back if it is subsequently determined that payment was based on information that was manifestly misstated. The remuneration principles are available at [novonordisk.com/about-novo-nordisk/corporate-governance/remuneration.html](http://novonordisk.com/about-novo-nordisk/corporate-governance/remuneration.html). **FIXED BASE SALARY** The fixed base salary is intended to attract and retain executives with the professional and personal competences required to drive the company's performance. Based on a review of benchmark data from European pharmaceutical companies which are similar in size and complexity to Novo Nordisk, the Board decided to increase the fixed base salary for Danish based members of Executive Management effective as of November 2017. Furthermore, the Board decided that the fixed base salary for Danish based members of Executive Management promoted in 2017 is to be phased in over a period of time and that the phase-in period for the chief executive officer is two years. **CASH-BASED INCENTIVE** The short-term cash-based incentive is designed to incentivise individual performance. The incentive is dependent on the achievement of predefined short-term financial, process, people and customer targets relating to the executive's functional area and linked to the company's Balanced Scorecard and the achievement of personal targets relating to the individual executive. The Chairmanship evaluates the degree of achievement for each member of Executive Management, based on input from the chief executive officer. In February 2017, the Board of Directors determined that the 2017 maximum bonus would be a maximum of 12 months' fixed base salary plus pension contribution for the chief executive officer, a maximum of 8.5 months' fixed base salary plus pension contribution for executives on international assignments and a maximum of 8 months' fixed base salary plus pension contribution

---

1. In 2017, Novo Nordisk's Executive Management was expanded to include three new members, Doug Langa (effective 1 March 2017), Lars Green (effective 1 July 2017) and Camilla Sylvest (effective 1 October 2017), of whom Lars Green and Camilla Sylvest are registered with the Danish Business Authority as members of Executive Management of Novo Nordisk A/S. Respective amounts in the table include remuneration from the effective dates in 2017. Remuneration for Doug Langa is included within Non-registered members of Executive Management. 2. Includes remuneration for Maziar Mike Doustdar and for the period March to December 2017 for Doug Langa. Amounts include taxes paid by Novo Nordisk to Maziar Mike Doustdar due to his international employment terms. In addition, Maziar Mike Doustdar received benefits in accordance with Novo Nordisk's International Assignment Guidelines, such as accommodation, children's school fees, international health insurance and other types of insurance, spouse allowance and tax-filing support, all offered net of tax to the assignees. Including tax paid by Novo Nordisk, the benefits received in 2017 not included in the above table amount to DKK 2.6 million (DKK 2.6 million in 2016). 3. As of 31 December 2016, President and CEO Lars Rebieen Sørensen retired from Novo Nordisk. The remuneration of Lars Rebieen Sørensen for 2016 is included in the table above, whereas the severance payment of DKK 65.7 million, including participation in the share-based incentive programme for 2017, is not included. 4. Effective 1 September 2016, Jakob Riis was appointed executive vice president and head of North America Operations. Amounts in the table for 2016 include remuneration from January to August 2016, whereas remuneration for September to December 2016 is included within Former non-registered members of Executive Management. 5. Effective 1 March 2017, Jakob Riis decided to leave Novo Nordisk. Remuneration for Jakob Riis is included in the table above. In 2016, Jerzy Gruhn and Jesper Høiland stepped down from the Executive Management of Novo Nordisk A/S. Respective amounts in the table include remuneration for January to August 2016. Remuneration for September to December 2016 is included as part of Other members of the Management Board. In addition, Jakob Riis, Jerzy Gruhn and Jesper Høiland received benefits in accordance with Novo Nordisk's International Assignment Guidelines, such as accommodation, children's school fees, international health insurance and other types of insurance, spouse allowance and tax-filing support, all offered net of tax to the assignees. Including tax paid by Novo Nordisk, the benefits received in 2017 not included in the above table amount to DKK 1.2 million (DKK 5.0 million in 2016). 6. The total remuneration for 2017 includes remuneration of 33 senior vice presidents (33 in 2016), 2 of whom have retired or left the company (four in 2016). The 2017 remuneration for the retired senior vice presidents is included in the table above, whereas severance payments of DKK 13.0 million (DKK 69.0 million in 2016) are not included. 7. Excluding social security taxes paid amounting to DKK 0.3 million (DKK 1.9 million in 2016) for Executive Management and DKK 2.6 million (DKK 2.2 million in 2016) for other members of the Management Board. 8. The shares are locked up for three years before they are transferred to the participants employed at the end of the three-year period. The value is the cash amount of the share bonus granted in the year using the grant-date market value of Novo Nordisk B shares. During the lock-up period, the amount of shares may potentially be reduced in the event of lower-than-planned value creation in subsequent years.

MANAGEMENT'S LONG-TERM INCENTIVE PROGRAMME The shares allocated to the members of Executive Management were released to the individual participants subsequent to approval of the Annual Report 2017 by the Board of Directors and the announcement of the full-year financial result for 2017 on 1 February 2018. Based on the share price at the end of 2017, the value of the released shares is as follows:

Value as of 31 December 2017 of shares released on 1 February 2018	Number of shares	Market value (DKK million)	Executive Management
Lars Fruergaard Jørgensen	11,866	4.0	Jesper Brandgaard
16,054	5.4	Lars Green	6,429
2.2	Camilla Sylvest	1,938	0.6
Mads Krogsgaard Thomsen	16,054	5.4	Henrik Wulff
8,659	2.9	Non-registered members of Executive Management	4
8,429	2.8	Executive Management in total	3
69,429	23.3	Other members of the Management Board in total	3
100,196	33.5	1. Includes	293,542
shares released from the joint pool for 2014 to the individual participants for the Management Board and	3,938	shares released to members of Executive Management who was not included in the joint pool for 2014 for the Management Board. 2. The market value of the shares released in 2018 is based on the Novo Nordisk B share price of DKK 334.50 at the end of 2017. 3. In addition, 127,855 shares (market value: DKK 42.8 million) were released to retired Executive Management and Management Board members. 4. Not registered with the Danish Business Authority as members of the Executive Management of Novo Nordisk A/S. External board remuneration: Jesper Brandgaard serves as chairman of the board of SimCorp A/S, from which he received remuneration of DKK 1,092,305 in 2017 (DKK 1,035,257 in 2016); as chairman of the board of NNIT A/S until March 2017, from which he received remuneration of DKK 137,671 in 2017 (DKK 750,000 in 2016) and as board member of Chr. Hansen A/S (no remuneration received in 2017). The NNIT remuneration is included in the remuneration of Executive Management presented above. Lars Green serves as board member of Novozymes A/S, from which he received remuneration of DKK 1,000,000 in 2017. Camilla Sylvest serves as board member of Danish Crown A/S (no remuneration received in 2017). Mads Krogsgaard Thomsen serves as chairman of the board of the University of Copenhagen, from which he received remuneration of DKK 209,902 in 2017 (DKK 82,215 in 2016). Henrik Wulff serves as board member of AMBU A/S, from which he received remuneration of DKK 300,000 in 2017 (DKK 300,000 in 2016).

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**SECTION 1 BASIS OF PREPARATION** Basis of preparation Results for the year Operating assets and liabilities Capital structure and financing items  
Other disclosures 1.1 **PRINCIPAL ACCOUNTING POLICIES AND KEY ACCOUNTING ESTIMATES** The Consolidated financial statements included in this Annual Report have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and endorsed by the EU as well as further Danish disclosure requirements for annual reports of listed companies.

**Measurement basis** The Consolidated financial statements have been prepared on the historical cost basis except for derivative financial instruments, equity investments and marketable securities, which are measured at fair value. The principal accounting policies set out below have been applied consistently in the preparation of the Consolidated financial statements for all the years presented. Principal accounting policies Novo Nordisk's accounting policies are described in each of the individual notes to the Consolidated financial statements. Management regards the ones listed in the table below as the most significant accounting policies for the recognition and measurement of reported amounts. All entities in the Novo Nordisk Group follow the same Group accounting policies. This section gives a summary of the significant accounting policies, Management's key accounting estimates, new International Financial Reporting Standards (IFRS) requirements and other accounting policies in general. A detailed description of accounting policies and key accounting estimates related to specific reported amounts is presented in each note to the relevant financial item. Key accounting estimates and judgements The use of reasonable estimates and judgements is an essential part of the preparation of the Consolidated financial statements. Given the uncertainties inherent in Novo Nordisk's business activities, Management must make certain estimates regarding valuation and judgements. Those affect the application of accounting policies and reported amounts of assets, liabilities, sales, costs, cash flows and related disclosures. The key accounting estimates identified are those that have a significant risk of resulting in a material adjustment. Management bases its estimates on historical experience and various other assumptions that are held to be reasonable under the circumstances. The estimates and underlying assumptions are reviewed on an ongoing basis and, if necessary, changes are recognised in the period in which the estimate is revised. Management considers the key accounting estimates to be reasonable and appropriate based on currently available information. However, the actual amounts may differ from the amounts estimated as more detailed information becomes available. In addition, Management makes judgements in the process of applying the entity's accounting policies, for example regarding recognition of deferred income tax assets or the classification of transactions. Management regards those listed below as the key accounting estimates and judgements used in the preparation of the Consolidated financial statements. Please refer to the specific notes for further information on the key accounting estimates and judgements as well as assumptions applied. Principal accounting policies Key accounting estimates and judgements Note

Net sales and rebates Estimate of sales deductions and provisions for sales rebates 2.1 Research and development – 2.3, 3.1 and 3.2 Derivative financial instruments – 4.3 Income taxes and deferred income taxes Judgement regarding deferred income tax assets and provision for uncertain tax positions 2.6 Property, plant and equipment including impairment – 3.2 Inventories Estimate of indirect production costs capitalised 3.3 Trade receivables Estimate of allowance for doubtful trade receivables 3.4 Provisions and contingent liabilities Estimate of ongoing legal disputes, litigations and investigations 3.6

**Applying materiality** The Consolidated financial statements are a result of processing large numbers of transactions and aggregating those transactions into classes according to their nature or function. When aggregated, the transactions are presented in classes of similar items in the Consolidated financial statements. If a line item is not individually material, it is aggregated with other items of a similar nature in the Consolidated financial statements or in the notes. There are substantial disclosure requirements throughout IFRS. Management provides specific disclosures required by IFRS unless the information is considered immaterial to the economic decision-making of the users of these financial statements or not applicable. NOVO NORDISK ANNUAL REPORT 2017 63 CONSOLIDATED FINANCIAL STATEMENTS BASIS OF PREPARATION

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

1.2 CHANGES IN ACCOUNTING POLICIES AND DISCLOSURES 1.3 GENERAL ACCOUNTING POLICIES Principles of consolidation The Consolidated financial statements incorporate the financial statements of the parent company Novo Nordisk A/S and entities controlled by Novo Nordisk A/S. Control exists when Novo Nordisk has effective power over the entity and has the right to variable returns from the entity. Where necessary, adjustments are made to bring the financial statements of subsidiaries in line with the Novo Nordisk Group's accounting policies. All intra-Group transactions, balances, income and expenses are eliminated in full when consolidated. The results of subsidiaries acquired or disposed of during the year are included in the Consolidated income statement from the effective date of acquisition and up to the effective date of disposal. Translation of foreign currencies Functional and presentation currency Items included in the financial statements of Novo Nordisk's entities are measured using the currency of the primary economic environment in which the entity operates (functional currency). The Consolidated financial statements are presented in Danish kroner (DKK), which is also the functional and presentation currency of the parent company. Translation of transactions and balances Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the transaction dates. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities are recognised in the Income statement. Translation differences on non-monetary items are recognised in Other comprehensive income. Translation of Group companies Financial statements of foreign subsidiaries are translated into Danish kroner at the exchange rates prevailing at the end of the reporting period for balance sheet items, and at average exchange rates for income statement items. All effects of exchange rate adjustments are recognised in the Income statement, except for the following, which are recognised in Other comprehensive income: • The translation of foreign subsidiaries' net assets at the beginning of the year to the exchange rates at the end of the reporting period. • The translation of foreign subsidiaries' statements of comprehensive income at average to year-end exchange rates. Adoption of new or amended IFRSs Management assesses the impact of new or amended and revised accounting standards and interpretations (IFRSs) issued by the (IASB), and IFRSs endorsed by the European Union. It is assessed that application of new IFRSs effective on 1 January 2017 has not had a material impact on the Consolidated financial statements in 2017. Further, Management does not anticipate any significant impact on future periods from the adoption of these new IFRSs. New or amended IFRSs that have been issued but have not yet come into effect and have not been early adopted In addition to the above, IASB has issued a number of new or amended and revised accounting standards and interpretations that have not yet come into effect. In general, the following standards are expected to have the most significant impact on current accounting regulation: Standard Description Implementation Impact IFRS 9 Financial Instruments (endorsed by the EU) IFRS 9 is part of IASB's project to replace IAS 39, and the new standard will substantially change the classification and measurement of financial instruments. Further, the standard introduces a new hedge-accounting model that enables companies to better reflect their risk management activities in the financial statements. Novo Nordisk will adopt the standard on the effective date, being 1 January 2018. The standard will be implemented following the specific transitional requirements listed in the standard related to classification and measurement, impairments and hedge accounting. This results in prospective application. Novo Nordisk has assessed the impact of the standard and determined that it will not have any significant impact on the Consolidated financial statements. IFRS 15 Revenue from contracts with customers (endorsed by the EU) IFRS 15 is part of the convergence project with FASB to replace IAS 18 and other standards, and the new standard will establish a single, comprehensive framework for revenue recognition. The standard provides details on recognising revenue to reflect the transfer of control of goods to customers at a value that the entity expects to be entitled to. Novo Nordisk will adopt the standard on the effective date, being 1 January 2018. The standard will be implemented using the modified retrospective approach. Novo Nordisk has performed an analysis of the impact, including areas such as variable considerations, right of return, licensing arrangements and agent relationships. Based on the analysis, it is assessed that the standard will not have any significant impact on revenue recognition or measurement compared to current practice. Implementation might result in extended disclosures regarding disaggregation of revenue and accounting policies. IFRS 16 Leases (endorsed by the EU) IFRS 16 replaces IAS 17, and will change the accounting treatment of leases that are currently treated as operating leases. The standard requires all leases, regardless of type and with few exceptions, to be recognised in the balance sheet as an asset with a related liability. The Income statement will also be affected, as the annual lease costs will consist of both depreciation and interest expenses going forward. Currently, the annual costs relating to operating leases are recognised as a single expense amount in the Income statement. Novo Nordisk will adopt the standard on the effective date, being 1 January 2019. The standard will be implemented using the modified retrospective approach, meaning that comparative information is not restated. The cumulative effect of initially applying IFRS 16 is presented as an adjustment to opening retained earnings under equity. The changes require capitalisation of the majority of the Group's operating lease contracts, representing approximately 4-6% of the total assets. This will have an impact on the Group's assets and an equivalent impact on liabilities. Hence, it will affect the financial ratios related to the balance sheet. The lease payments will be split between a depreciation charge included in operating costs and an interest expense on lease liabilities included in financial expenses. The impact on operating profit will be insignificant. NOVO NORDISK ANNUAL REPORT 2017 64 CONSOLIDATED FINANCIAL STATEMENTS BASIS OF PREPARATION

## Edgar Filing: NOVO NORDISK A S - Form 6-K

SECTION 2 RESULTS FOR THE YEAR Basis of preparation Results for the year Operating assets and liabilities Capital structure and financing items Other disclosures 2.1 NET SALES AND REBATES Accounting policies Revenue is recognised when Novo Nordisk has transferred the significant risks and rewards from products sold to the buyer, the Group no longer has managerial involvement, and the amount of revenue can be measured reliably. Sales are measured at the fair value of the consideration received or receivable. When sales are recognised, Novo Nordisk also records estimates for a variety of sales deductions, including product returns as well as rebates and discounts to government agencies, wholesalers, health insurance companies, managed healthcare organisations and retail customers. Sales deductions are recognised as a reduction of gross sales to arrive at net sales. Where contracts contain customer acceptance provisions, Novo Nordisk recognises sales when the acceptance criteria are satisfied. Revenue recognition for new product launches is based on specific facts and circumstances relating to those products, including estimated demand and acceptance rates for well-established products with similar market characteristics. Where shipments of new products are made on a sale-or-return basis, without sufficient historical experience for estimating sales returns, revenue is only recorded when there is evidence of consumption or when the right of return has expired. This section comprises notes related to the results for the year and hence provides information related to Novo Nordisk's long-term financial target for growth in operating profit in local currencies. Operating profit increased by Q.1% in 2017 (decrease of 2.0% in 2016). The article '2017 performance and 2018 outlook' on p 6 includes Management's review of the results for the year and the articles 'Performing while transforming: building a bolder and more competitive US business' and 'Opportunities and challenges: Novo Nordisk's international Operations' on pp 32-39 includes Management's perspective on the various markets, which is not part of the audited financial statements (unaudited). Pricing mechanisms in the US market In the US, sales rebates are paid in connection with public healthcare insurance programmes, namely Medicare and Medicaid, as well as rebates to pharmacy benefit managers (PBMs) and managed healthcare plans. Key customers in the US include private payers, PBMs and government payers. PBMs and managed healthcare plans play a role in negotiating price concessions with drug manufacturers on behalf of private payers for both the commercial and government channels, and determine which drugs are covered on their formularies (or 'preferred drug lists'). Specifically, Management views the rising healthcare cost trend and highly competitive environment as the primary drivers of payer pressure to reduce overall drug costs. This has resulted in greater focus on negotiating higher rebates from drug manufacturers. As new products enter the market, private payers are increasingly likely to adopt narrow formularies that exclude certain drugs, while securing higher rebates from the preferred brand(s). From Management's perspective, in 2017 payers have continued to leverage their size and influence to negotiate higher rebates. Moreover, intense competition in the diabetes space limits the impact of price increases, as much of it is given back to payers in the form of higher rebates and price protection, leading to continued downward pressure on prices. Key accounting estimate of sales deductions and provisions for sales rebates Sales deductions are estimated and provided for at the time the related sales are recorded. These estimates of unsettled obligations require use of judgement, as not all conditions are known at the time of sale, for example total sales volume to a given customer. The estimates are based on analyses of existing contractual obligations and historical experience. Provisions are calculated on the basis of a percentage of sales for each product as defined by the contracts with the various customer groups. Provisions for sales rebates are adjusted to actual amounts as rebates, discounts and returns are processed. Novo Nordisk considers the provisions established for sales rebates to be reasonable and appropriate based on currently available information. However, the actual amount of rebates and discounts may differ from the amounts estimated by Management as more detailed information becomes available. NOVO NORDISK ANNUAL REPORT 2017 65 CONSOLIDATED FINANCIAL STATEMENTS RESULTS FOR THE YEAR

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.1 NET SALES AND REBATES (CONTINUED) GROSS-TO-NET SALES RECONCILIATION DKK million 2017 2016 2015 Gross sales 216,174 198,924 182,779 US Managed Care and Medicare (53,077) (40,874) (33,235) US wholesaler charge-backs (28,324) (25,416) (22,030) US Medicaid rebates (12,491) (10,862) (9,838) Other US discounts and sales returns (5,771) (5,147) (4,685) Non-US rebates, discounts and sales returns (4,815) (4,845) (5,064) Total gross-to-net sales adjustments (104,478) (87,144) (74,852) Net sales 111,696 111,780 107,927 Sales discounts and sales rebates are predominantly issued in the US. As such, rebates amount to 64% of gross sales in the US (59% in 2016 and 46% in 2015). Novo Nordisk sales are impacted by exchange rate changes. For development in key currencies refer to note 4.2 on p 83. US Managed Care and Medicare For Managed Care and Medicare, rebates are offered to a number of PBMs and managed healthcare plans. These rebate programmes allow the customer to receive a rebate after attaining certain performance parameters relating to formulary status or pre-established market shares relative to competitors. Rebates are estimated according to the specific terms in each agreement, historical experience, anticipated channel mix, growth rates and market share information. Novo Nordisk adjusts the provision periodically to reflect actual sales performance. US wholesaler charge-backs Wholesaler charge-backs relate to contractual arrangements between Novo Nordisk and indirect customers in the US whereby products are sold at contract prices lower than the list price originally charged to wholesalers. A wholesaler charge-back represents the difference between the invoice price to the wholesaler and the indirect customer's contract price. Accruals are calculated for estimated charge-backs using a combination of factors such as historical experience, current wholesaler inventory levels, contract terms and the value of claims received but not yet processed. Wholesaler charge-backs are generally settled within 30 days of the liability being incurred. US Medicaid rebates Medicaid is a government insurance programme. Medicaid rebates have been calculated using a combination of historical experience, product and population growth, price increases, and the impact of contracting strategies. Further, the calculation involves interpretation of relevant regulations that are subject to changes in interpretative guidance from government authorities. Although provisions are made for Medicaid rebates at the time sales are recorded, the actual rebates related to the specific sale will typically be invoiced to Novo Nordisk 6-9 months later. Due to the time lag, the rebate adjustments to sales in any particular period may incorporate adjustments of provisions from prior periods. Other US discounts and sales returns Other discounts are provided to wholesalers, hospitals, pharmacies etc. They are usually linked to sales volume or provided as cash discounts. Accruals are calculated based on historical data and recorded as a reduction in gross sales at the time the related sales are recorded. Sales returns are related to damaged or expired products. Arrangements with certain healthcare providers may require Novo Nordisk to make refunds to the healthcare providers if anticipated treatment outcomes do not meet predefined targets. PROVISIONS FOR SALES REBATES DKK million 2017 2016 2015 At the beginning of the year 19,971 16,508 11,002 Additional provisions, including increases to existing provisions 63,772 56,954 45,190 Amount used during the year (61,017) (53,217) (40,958) Adjustments, including unused amounts reversed during the year (117) (822) — Effect of exchange rate adjustment (2,393) 548 1,274 At the end of the year 20,216 19,971 16,508 Unsettled rebates are recognised as Provisions when the timing or amount is uncertain (note 3.6). Where absolute amounts are known, the rebates are recognised as Other liabilities. Wholesaler charge-backs are netted against trade receivable balances. Hence, provisions for sales rebates include US Managed Care, Medicare, Medicaid and other minor US rebate types, as well as rebates in Canada. 0 2,000 4,000 6,000 8,000 10,000 2015 2016 2017 US Managed Care US Medicare US Medicaid Other sales rebates in the US and Canada

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.2 SEGMENT INFORMATION Accounting policies Operating segments are reported in a manner consistent with the internal reporting provided to Executive Management and the Board of Directors. We consider Executive Management to be the operating decision-making body, as all significant decisions regarding business development and direction are taken in that forum. Business segments Novo Nordisk operates in two business segments based on therapies: Diabetes care and obesity and Biopharmaceuticals. The Diabetes care and obesity business segment includes research, development, manufacturing and marketing of products within the areas of insulin, GLP-1 and related delivery systems, oral antidiabetic products (OAD), obesity and other chronic diseases. The Biopharmaceuticals business segment includes research, development, manufacturing and marketing of products within the areas of haemophilia, growth disorders and hormone replacement therapy. Segment performance is evaluated on the basis of operating profit consistent with the Consolidated financial statements. Financial income and expenses and income taxes are managed at Group level and are not allocated to business segments. Further, non-recurring income from the partial divestment of NNIT A/S in 2015 was not allocated to segments. There are no sales or other transactions between the business segments. Costs have been split between business segments according to a specific allocation. In addition, a minor number of corporate overhead costs are allocated systematically between the segments. Other operating income has been allocated to the two segments based on the same principle. Segment assets comprise the assets that are applied directly to the activities of the segment, including intangible assets, property, plant and equipment, inventories, trade receivables, and other receivables and prepayments. No operating segments have been aggregated to form the reported business segments.

NOVO NORDISK ANNUAL REPORT 2017 67 CONSOLIDATED FINANCIAL STATEMENTS RESULTS FOR THE YEAR

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.2 SEGMENT INFORMATION (CONTINUED) GEOGRAPHICAL AREAS Novo Nordisk operates in two main commercial units: • North America Operations (US and Canada) • International Operations • Region Europe: the EU, EFTA, Albania, Bosnia-Herzegovina, Macedonia, Serbia, Montenegro and Kosovo • Region AAMEO (Africa, Asia, Middle East & Oceania) • Region China: China, Hong Kong and Taiwan • Region Japan & Korea: Japan and South Korea • Region Latin America: countries in South America, Central America and Mexico As of 1 January 2017, the geographical regions were changed to align with management structure as listed above. Comparative figures have been updated to reflect the new regional structure. Please refer to note 5.5 for an overview of subsidiaries. Sales are attributed to geographical regions according to the location of the customer. Allocation of property, plant and equipment, trade receivables, allowance for trade receivables and total assets is based on the location of the assets. The country of domicile is Denmark, which is part of Region Europe. Denmark is immaterial to Novo Nordisk's activities in terms of geographical size and the operational business segments. 99.6% of total sales are realised outside Denmark. Sales to external customers attributed to the US are collectively the most material to the Group. The US is the only country where sales contribute more than 10% of total sales. In 2017, Novo Nordisk had three major wholesalers distributing products, representing 21%, 13% and 12% respectively of total net sales (21%, Q3% and 12% in 2016 and 21%, 12% and 11% in 2015). Sales to these three wholesalers are within both Diabetes care and obesity and Biopharmaceuticals. Net sales will be impacted by exchange rate fluctuations. Conversely, Financial income and Financial expenses will be impacted by the corresponding results of hedging activities. Please refer to notes 4.2, 4.3 and T.8 for more details on hedging. For patent expiry in key markets by product, please refer to note 2.4 of the Consolidated social statement. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.3 RESEARCH AND DEVELOPMENT COSTS Accounting policies Novo Nordisk's research and development is mainly focused on: • Insulins, GLP-1s and other therapeutic new anti-diabetic drugs for diabetes treatment • GLP-1s, combinations and new modes of action for weight management • Blood-clotting factors and new modes of action for haemophilia treatment • Human growth hormone for treatment of growth disorders • New modes of action including GLP-1 for treatment of NASH, cardiovascular- and chronic kidney disease The research activities utilise biotechnological methods based on advanced protein chemistry and protein engineering. These methods have played a key role in the development of the production technology used to manufacture insulin, GLP-1, recombinant blood-clotting factors and human growth hormone. In line with industry practice, Novo Nordisk expenses all internal research costs. Internal development costs are also expensed as incurred, due to regulatory and other uncertainties inherent in the development of new products. Hence, these do not qualify for capitalisation as intangible assets until marketing approval by a regulatory authority is obtained or highly probable. Research and development activities are carried out by Novo Nordisk's research and development centres, mainly in Denmark, the US and China. Research and development trials are carried out all over the world. Novo Nordisk also enters into partnerships and licence agreements. Research and development costs primarily comprise employee costs, and internal and external costs related to execution of studies, including manufacturing costs and facility costs of the research centres. Further, the costs comprise amortisation, depreciation and impairment losses related to intangible assets and property, plant and equipment used in the research and development activities. A very limited part of the research and development activities is recognised outside Research and development costs: • Up-front payments and milestone payments paid to partnerships prior to or upon regulatory approval are capitalised as intangible assets and amortised as Cost of goods sold over the useful life. • Royalty expenses paid to partnerships after regulatory approval are expensed as Cost of goods sold. • Royalty income received from partnerships is recognised as part of Other operating income, net. • Contractual research and development obligations to be paid in the future are disclosed separately as Commitments in note 5.2.

For a review of the development in Research and development costs, refer to p 7 and p 10, '2017 performance and 2018 outlook', which is not part of the audited financial statements. Research costs comprise the very early stages of the drug development cycle from the initial drug discovery until the drug is ready for administration to humans. The activities initially focus on identifying a single drug candidate with a profile that will support a decision to initiate development activities. Before selection of the final drug candidate, it is tested in animals to gather efficacy, toxicity and pharmacokinetic information. Development costs are incurred from the start of phase 1, when the drug is administered to humans for the first time; these are the projects captured in the pipeline overview on pp 22-23 (unaudited). The final product is developed, and subsequent clinical trials (phase 2 and 3) are conducted to further test the drug in humans, using the results from these trials to attempt to obtain marketing authorisation, permitting Novo Nordisk to market and sell the developed products.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.4 EMPLOYEE COSTS Accounting policies Wages, salaries, social security contributions, annual leave and sick leave, bonuses and non-monetary benefits are recognised in the year in which the associated services are rendered by employees of Novo Nordisk. Where Novo Nordisk provides long-term employee benefits, the costs are accrued to match the rendering of the services by the employees concerned. EMPLOYEE COSTS DKK million 2017 2016 2015 Wages and salaries 23,869 24,651 23,289 Share-based payment costs (note 5.1) 292 368 442 Pensions – defined contribution plans 1,800 1,829 1,715 Pensions – defined benefit plans 165 145 154 Other social security contributions 1,910 1,853 1,783 Other employee costs 2,102 2,110 2,117 Total employee costs for the year 30,138 30,956 29,500 Employee costs capitalised as intangible assets and property, plant and equipment (1,435) (1,258) (957) Change in employee costs capitalised as inventories (91) (127) (191) Total employee costs in the Income statement 28,612 29,571 28,352 Included in the Income statement: Cost of goods sold 7,854 7,841 7,239 Sales and distribution costs 11,994 12,447 12,231 Research and development costs 5,848 6,149 5,584 Administrative costs 2,505 2,721 2,658 Other operating income, net 411 413 640 Total employee costs in the Income statement 28,612 29,571 28,352 Average number of full-time employees 41,665 41,993 40,342 Year-end number of full-time employees 42,076 41,971 40,638

2.5 OTHER OPERATING INCOME, NET Accounting policies Other operating income, net, comprises licence income and income of a secondary nature in relation to the main activities of Novo Nordisk. Licence income is recognised on an accrual basis in accordance with the terms and substance of the relevant agreement. Operating profit from the wholly owned subsidiary NNE A/S, not related to Novo Nordisk's main activities, is recognised as Other operating income. Other operating income also includes income from sale of intellectual property rights. Divested subsidiaries are recognised in the Consolidated income statement until control is lost. Net gain or loss on divestments is determined as the difference between the sales proceeds and the carrying amount of net assets. In March 2015, Novo Nordisk A/S disposed of 74.5% of its 100% interest in NNIT A/S. In total, DKK 2,376 million of non-recurring income from the partial divestment after costs of DKK 150 million was recorded as Other operating income in 2015. A total consideration of DKK 2,303 million was received and recorded in the cash flow statement.

REMUNERATION TO EXECUTIVE MANAGEMENT AND BOARD OF DIRECTORS DKK million 2017 2016 2015 Salary and cash bonus 74 77 89 Pension 18 20 22 Benefits 4 6 10 7 Share-based incentive 5 7 11 44 Severance payments 1,4 0 66 73 Executive Management in total 1,2,3 105 184 235 Fee to Board of Directors 16 14 12 Total 121 198 247

1. Please refer to note 5.1 and 'Remuneration', pp 50-53 (unaudited), for further information. 2. President and CEO Lars Rebién Sørensen retired from Novo Nordisk on 31 December 2016. The 2016 remuneration for Lars Rebién Sørensen is included in the above table together with a severance payment of DKK 65.7 million. EVPs Jerzy Gruhn and Jesper Højland stepped down from Novo Nordisk's Executive Management in 2016. The 2016 remuneration for Jerzy Gruhn and Jesper Højland is included in the above table. EVP Kåre Schultz left Novo Nordisk on 30 April 2015. The 2015 remuneration for Kåre Schultz is included in the above table together with a severance payment of DKK 72.7 million. 3. Total remuneration for registered members of Executive Management and the Board of Directors amounts to DKK 90 million (DKK 152 million in 2016 and DKK 120 million in 2015). 4. Benefits are included in Other employee costs, and severance payments are included in Wages and salaries in the table above. 5. Until 2017 the cost of the programme was expensed when shares was granted as the pool was fixed. From 2017 onwards, the programme will be expensed equally over the grant year and the subsequent 3 years of vesting as the number of shares will be reduced if a participant terminates employment with Novo Nordisk.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.6 INCOME TAXES AND DEFERRED INCOME TAXES INCOME TAXES Accounting policies The tax expense for the period comprises current and deferred tax as well as interest on tax cases ongoing or settled during the year. Further, it includes adjustments to previous years and changes in provision for uncertain tax positions. Tax is recognised in the Income statement, except to the extent that it relates to items recognised in Equity or Other comprehensive income. Ongoing tax disputes, primarily related to transfer pricing cases, are included as part of Deferred tax assets, Tax receivables and Tax payables. Management judgement regarding recognition of deferred income tax assets and provision for uncertain tax positions Novo Nordisk is subject to income taxes around the world. Significant judgement and estimates are required in determining the worldwide accrual for income taxes, deferred income tax assets and liabilities, and provision for uncertain tax positions. Novo Nordisk recognises deferred income tax assets if it is probable that sufficient taxable income will be available in the future against which the temporary differences and unused tax losses can be utilised. Management has considered future taxable income and used judgement in assessing whether deferred income tax assets should be recognised. In the course of conducting business globally, tax and transfer pricing disputes with tax authorities may occur. Management judgement is applied to assess the possible outcome of such disputes. The 'most probable outcome' method is applied when making provisions for uncertain tax positions, and Novo Nordisk considers the provisions made to be adequate. However, the actual obligation may deviate and depends on the result of litigations and settlements with the relevant tax authorities. US tax reform The net deferred US tax asset has been reevaluated as a consequence of new US tax legislation, increasing the tax expense for 2017 by DKK 171 million. INCOME TAXES EXPENSED DKK million 2017 2016 2015 Current tax on profit for the year 10,562 8,981 9,648 Deferred tax on profit for the year 182 3,014 (1,130) Tax on profit for the year 10,744 11,995 8,518 Adjustments recognised for current tax of prior years (425) (3,191) 3 Adjustments recognised for deferred tax of prior years 231 1,069 102 Income taxes in the Income statement 10,550 9,873 8,623 Current tax on Other comprehensive income for the year (2) (28) — Deferred tax on Other comprehensive income for the year 1,043 (296) 87 Tax on other comprehensive income for the year, (income)/expense 1,041 (324) 87 Adjustments recognised for prior years include adjustments caused by events that occurred in the current year related to current and deferred tax of prior years. Such adjustments predominantly arise from tax payments regarding tax disputes and reversal of the associated tax liability recognised in prior years. DKK million 2017 2016 2015 Computation of effective tax rate: Statutory corporate income tax rate in Denmark 22.0% 22.0% 23.5% Deviation in foreign subsidiaries' tax rates compared with the Danish tax rate (net) 0.0% 0.2% (2.9%) Non-taxable income from the partial divestment of NNIT A/S — — (1.3%) Non-taxable income less non-tax-deductible expenses (net) 0.1% 0.1% 0.1% Others, including adjustment of prior years (0.4%) (1.6%) 0.4% Effective tax rate 21.7% 20.7% 19.8% The impact of the deviation in foreign subsidiaries' tax rates compared with the Danish tax rate is mainly driven by Swiss and US business activities. 2.6 INCOME TAXES AND DEFERRED INCOME TAXES (CONTINUED) INCOME TAXES PAID DKK million 2017 2016 2015

Income taxes paid in Denmark for current year 6,798 5,506 5,926 Income taxes paid outside Denmark for current year 2,639 2,645 3,040 Income taxes paid/ repayments relating to prior years (336) (5,252) 408 Total income taxes paid 9,101 2,899 9,374

The income taxes paid relating to prior years include repayments and adjustments arising from tax disputes primarily regarding transfer pricing.

DEFERRED INCOME TAXES Accounting policies

Deferred income taxes arise from temporary differences between the accounting and taxable values of the individual consolidated companies and from realisable tax loss carry-forwards. The tax value of tax loss carry-forwards is included in deferred tax assets to the extent that these are expected to be utilised in future taxable income. The deferred income taxes are measured according to current tax rules and at the tax rates assumed in the year the assets are expected to be utilised. In general, the Danish tax rules related to company dividends provide exemption from tax for most repatriated profits. A provision for withholding tax is only recognised if a concrete distribution of earnings is planned. The potential withholding tax amounts to DKK 343 million for 2017 (DKK 330 million in 2016). The value of future tax deductions in relation to share programmes is recognised as deferred tax until the shares are paid out to the employees. Any estimated excess tax deduction compared to the costs realised in the Income statement is charged to Equity.

The total tax value of unrecognised tax loss carry forward amounts to DKK 93 million in 2017 (DKK 73 million in 2016).

NOVO NORDISK ANNUAL REPORT 2017 73 CONSOLIDATED FINANCIAL STATEMENTS RESULTS FOR THE YEAR

## Edgar Filing: NOVO NORDISK A S - Form 6-K

SECTION 3 OPERATING ASSETS AND LIABILITIES Basis of preparation Results for the year Operating assets and liabilities Capital structure and financing items Other disclosures This section presents details of the operating assets that form the basis for the activities of Novo Nordisk, and related liabilities. These net assets impact Novo Nordisk's long-term target for 'Operating profit after tax to net operating assets' (OPAT/NOA); for a definition please refer to pp 96-97 (unaudited). Novo Nordisk, in line with industry practice, does not capitalise internal development costs, which impacts OPAT/NOA. Novo Nordisk's approach to managing operating assets is to retain assets for research, development and production activities under the company's own control, and to lease non-core assets related to administration and distribution. Management believes this is a significant factor in maintaining the quality of the company's products. Further, being able to deliver products to customers with limited notice is a priority. Consequently, the total production capacity reflects this priority, and the inventory level includes a level of safety stock. Impact of rebates in the US Management believes that a significant factor in the development of net operating assets relates to the provision for sales rebates in the US, presented as Provisions under current liabilities in the Balance sheet. The increase in 2017 reflects the combined increase in the Managed Care and Medicare Part D rebates, and is related to contract enhancements and price protection. This is partially countered by the effect of faster collection from pharmacy benefit managers and authorities.

Net operating assets (average) Operating profit after tax • OPAT/NOA (right hand scale) DEVELOPMENT IN OPERATING PROFIT AFTER TAX TO NET OPERATING ASSETS 0 5,000 10,000 15,000 20,000 25,000 30,000 35,000 40,000 45,000 0 20 40 60 80 100 120 140 160 180 2015 2016 2017 DKK million % 3.1 INTANGIBLE ASSETS Accounting policies Patents and licences, including acquired patents and licences for ongoing research and development projects, are carried at historical cost less accumulated amortisation and any impairment loss. Amortisation is based on the straight-line method over the estimated useful life. This is the shorter of the legal duration and the economic useful life, not exceeding 15 years. The amortisation of patents and licences begins after regulatory approval has been obtained. Internal development of software for internal use is recognised as intangible assets if the recognition criteria are met, for example a significant business system where the expenditure leads to the creation of a durable asset. Amortisation is based on the straight-line method over the estimated useful life of 3-15 years. The amortisation begins when the asset is in the location and condition necessary for it to be capable of operating in the manner intended by Management. Research and development projects Internal research costs are charged in full to the Consolidated income statement in the period in which they are incurred. Consistent with industry practice, internal development costs are also expensed until regulatory approval is obtained or highly probable; please refer to note 2.3. For acquired ongoing research and development projects, the probability effect is reflected in the cost of the asset, and the probability recognition criteria are therefore always considered satisfied. As the cost of acquired ongoing research and development projects can often be measured reliably, these projects fulfil the capitalisation criteria as intangible assets on acquisition. However, further internal development costs subsequent to acquisition are treated in the same way as other internal development costs. Impairment of assets Intangible assets with an indefinite useful life and intangible assets not yet available for use are not subject to amortisation. They are tested annually for impairment, irrespective of whether there is any indication that they may be impaired. Assets that are not subject to amortisation are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. Factors considered material that could trigger an impairment test include the following: • Development of a competing drug • Changes in the legal framework covering patents, rights and licences • Advances in medicine and/or technology that affect the medical treatments • Lower-than-predicted sales • Adverse impact on reputation and/or brand names • Changes in the economic lives of similar assets • Relationship to other intangible assets or property, plant and equipment • Changes or anticipated changes in participation rates or reimbursement policies. If the carrying amount of intangible assets exceeds the recoverable amount based on the existence of one or more of the above indicators of impairment, any impairment is measured based on discounted projected cash flows. Impairments are reviewed at each reporting date for possible reversal. NOVO NORDISK ANNUAL REPORT 2017

74 CONSOLIDATED FINANCIAL STATEMENTS OPERATING ASSETS AND LIABILITIES 3.2 PROPERTY, PLANT AND EQUIPMENT Accounting policies Property, plant and equipment is measured at historical cost less accumulated depreciation and any impairment loss. The cost of self-constructed assets includes costs directly and indirectly attributable to the construction of the assets. Any subsequent cost is included in the asset's carrying amount or recognised as a separate asset only when it is probable that future economic benefits associated with the item will flow to Novo Nordisk and the cost of the item can be measured reliably. In general, construction of major investments is self-financed and thus no interest on loans is capitalised as part of the cost. Depreciation is based on the straight-line method over the estimated useful lives of the assets: • Buildings: 12-50 years • Plant and machinery: 5-16 years • Other equipment: 3-10 years • Land: not depreciated. The depreciation commences when the asset is available for use, in other words when it is in the location and condition necessary for it to be capable of operating in the manner intended by Management. The assets' residual values and useful lives are reviewed and adjusted, if appropriate, at the end of each reporting period. If the asset's carrying amount is higher than its estimated recoverable amount, it is written down to the recoverable amount; please refer to note 3.1 for a description of impairment of assets. Capital expenditure, net • Capital expenditure / sales DEVELOPMENT IN CAPITAL EXPENDITURE 0 2,000 4,000 6,000 8,000 10,000 0 2 4 6 8 10 2015 2016 2017 DKK million % 3.1 INTANGIBLE ASSETS (CONTINUED) INTANGIBLE ASSETS DKK million 2017 2016 Patents and licences 2,095 1,591 Ongoing and developed software 1,230 1,123 Total 3,325 2,714 Additions to intangible assets amount to DKK 1,103 million of which DKK 81 million have not yet been paid. The additions in 2017 are related to research and development projects within Diabetes care and obesity (DKK \$89 million) and Biopharmaceuticals (DKK 714 million). In 2016 research and development projects were related to Biopharmaceuticals (DKK 1,199 million). In 2017, an impairment loss of DKK 195 million (DKK 416 million in 2016) related to patents and licences was recognised. All impairments was related to the Diabetes care and obesity segment. Intangible assets not yet in use amount to DKK 1,715 million (DKK 1,247 million in 2016), primarily patents and licences in relation to research and development projects. Impairment tests in 2017 and 2016 of patents and licences not yet in use are based on Management's projections and anticipated net present value of estimated future cash flows from marketable products. Terminal values used are based on the expected life of products, forecasted life cycle and cash flow over that period, and the useful life of the underlying assets. AMORTISATION AND IMPAIRMENT LOSSES DKK million 2017 2016 Cost of goods sold 193 186 Sales and distribution costs 15 11 Research and development costs 211 427 Administrative expenses 3 3 Other operating income, net 5 8 Total amortisation and impairment losses 427 635 Plant and equipment with no alternative use developed as part of a research and development project are expensed. However, plant and equipment with an alternative use or used for general research and development purposes are capitalised and depreciated over the estimated useful life as Research and development costs. Capital expenditure in 2017 was primarily related to investments in new production facilities for active pharmaceutical ingredients for diabetes care, mainly the facility in Clayton, US. Further, it related to new diabetes care filling capacity, expansion of the manufacturing capacity for biopharmaceutical products and the construction of new research facilities. In May 2015, Novo Nordisk initiated the construction of a new facility in Kalundborg, Denmark, for producing active pharmaceutical ingredients for NovoSeven® and future products for treating haemophilia. In August 2015, Novo Nordisk announced its intention to construct new facilities in Clayton, US, and Måløv, Denmark. The facilities in Clayton will produce active pharmaceutical ingredients, and the facility in Måløv will be for tableting and packaging of oral products. In November 2015, Novo Nordisk initiated the construction of a new insulin facility in Hillerød, Denmark. The ambition is that the facility will serve as a backup production facility for the US market and act as a launch site for new injectable diabetes products. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

3.3 INVENTORIES Accounting policies Inventories are stated at the lower of cost and net realisable value. Cost is determined using the first-in, first-out method. Cost comprises direct production costs such as raw materials, consumables and labour as well as indirect production costs. Production costs for work in progress and finished goods include indirect production costs such as employee costs, depreciation, maintenance etc. If the expected sales price less completion costs to execute sales (net realisable value) is lower than the carrying amount, a write-down is recognised for the amount by which the carrying amount exceeds its net realisable value. Inventory manufactured prior to regulatory approval (pre-launch inventory) is capitalised but immediately provided for, until there is a high probability of regulatory approval for the product. A write-down is made against inventory, and the cost is recognised in the Income statement as Research and development costs. Once there is a high probability of regulatory approval being obtained, the write-down is reversed, up to no more than the original cost. Key accounting estimate of indirect production costs capitalised Indirect production costs account for approximately 50% of the net inventory value, reflecting a lengthy production process compared with low direct raw material costs. The production of both diabetes care and obesity and biopharmaceutical products is highly complex from fermentation to purification and formulation, including quality control of all production processes. Furthermore, the process is very sensitive to manufacturing conditions. These factors all influence the parameters for capitalisation of indirect production costs at Novo Nordisk and the full cost of the products. Indirect production costs are measured using a standard cost method. This is reviewed regularly to ensure relevant measures of capacity utilisation, production lead time, cost base and other relevant factors, hence inventory is valued at actual cost. When calculating total inventory, Management must make judgements about cost of production, standard cost variances and idle capacity in estimating indirect production costs for capitalisation. Changes in the parameters for calculation of indirect production costs could have an impact on the gross margin and the overall valuation of inventories.

INVENTORIES DKK million 2017 2016 Raw materials 2,420 2,285 Work in progress 10,992 9,379 Finished goods 4,180 4,035 Total inventories (gross) 17,592 15,699 Write-downs at year-end 2,219 1,358 Total inventories (net) 15,373 14,341 Indirect production costs included in work in progress and finished goods 7,768 7,103 Share of total inventories (net) 51% 50%

MOVEMENTS IN INVENTORY WRITE-DOWNS Write-downs at the beginning of the year 1,358 1,419 Write-downs during the year 1,556 861 Utilisation of write-downs (438) (672) Reversal of write-downs (257) (250) Write-downs at the end of the year 2,219 1,358 All write-downs in both 2016 and 2017 relate to fully impaired inventory.

3.4 TRADE RECEIVABLES Accounting policies Trade receivables are recognised initially at fair value and subsequently measured at amortised cost using the effective interest method, less allowance for doubtful trade receivables. The allowance is deducted from the carrying amount of Trade receivables, and the amount of the loss is recognised in the Income statement under Sales and distribution costs. Subsequent recoveries of amounts previously written off are credited against Sales and distribution costs. Key accounting estimate of allowance for doubtful trade receivables Novo Nordisk's customer base comprises government agencies, wholesalers, retail pharmacies, Managed Care and other customers. Management makes allowance for doubtful trade receivables in anticipation of estimated losses resulting from the subsequent inability of customers to make required payments. If the financial circumstances of customers were to deteriorate, resulting in an impairment of their ability to make payments, an additional allowance could be required in future periods. When evaluating the adequacy of the allowance for doubtful trade receivables, Management analyses trade receivables and examines historical bad debt, customer concentrations, customer creditworthiness and payment history, current economic trends and changes in customer payment terms. Please refer to note 4.2 for a general description of credit risk. Many of the countries within Region AAMEO have significant sales and low credit ratings. As such, this region has a relatively high impact on the allowance for doubtful trade receivables. Instability and sharp currency depreciation are impacting the political climate in Russia and Iran. Novo Nordisk is monitoring these developments closely. Payment history as well as current economic conditions and indicators are taken into account in the valuation of trade receivables. Please refer to note 2.2 for a geographical split of trade receivables and allowance for doubtful trade receivables, and note 4.2 for the trade receivable programmes.

TRADE RECEIVABLES DKK million 2017 2016 Trade receivables (gross) 21,459 21,457 Allowance for doubtful trade receivables 1,294 1,223 Trade receivables (net) 20,165 20,234 Trade receivables (net) equals a credit period of 66 days (66 days in 2016). ## Edgar Filing: NOVO NORDISK A S - Form 6-K

3.5 RETIREMENT BENEFIT OBLIGATIONS Accounting policies Defined contribution plans Novo Nordisk operates a number of defined contribution plans throughout the world. These plans are externally funded in entities that are legally separate from the Group. Novo Nordisk's contributions to the defined contribution plans are charged to the Income statement in the year to which they relate. Defined benefit plans In a few countries, Novo Nordisk operates defined benefit plans. The plan in the US is structured as a post-retirement healthcare plan covering all employees. From 2012, this plan was frozen such that it no longer credited future service or admitted new participants, and a new defined contribution plan was established covering all employees in the US. The defined benefit plans for Germany cover all employees employed before November 2003. Obligations relating to employees employed after 2003 are covered by a defined contribution plan. In Switzerland, the employee pension scheme is set up as a combined defined benefit and defined contribution plan, and is mandatory. In Germany and Switzerland, the defined benefit plans are partly reimbursed by international insurance companies. The risk related to the plan assets in these countries is therefore limited to counterparty risk against these insurance companies. The plan in Japan covers all employees and is set up as a combined defined benefit and defined contribution plan. Recognition of defined benefit plans The costs for the year for defined benefit plans are determined using the projected unit credit method. This reflects services rendered by employees to the valuation dates and is based on actuarial assumptions primarily regarding discount rates used in determining the present value of benefits and projected rates of remuneration growth. Discount rates are based on the market yields of high-rated corporate bonds in the country concerned. Actuarial gains and losses arising from experience adjustments and changes in actuarial assumptions are charged or credited to Other comprehensive income in the period in which they arise. Past service costs are recognised immediately in the Income statement. Pension plan assets are only recognised to the extent that Novo Nordisk is able to derive future economic benefits such as refunds from the plan or reductions of future contributions. Novo Nordisk manages the allocation and investment of pension plan assets with the purpose of meeting the long-term objectives. The Group's defined benefit plans are pension plans and medical plans and are usually funded by payments from Group companies and by employees to funds independent of Novo Nordisk. Where a plan is unfunded, a liability for the retirement benefit obligation is recognised in the Balance sheet. Costs recognised for retirement benefits are included in Cost of goods sold, Sales and distribution costs, Research and development costs, and Administrative costs. The net obligation recognised in the Balance sheet is reported as non-current liabilities.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

3.5 RETIREMENT BENEFIT OBLIGATIONS (CONTINUED) Please refer to note 5.2 for a maturity analysis of the net retirement benefit obligation. Novo Nordisk does not expect the contributions over the next five years to differ significantly from current contributions. Actuarial valuations are performed annually for all major defined benefit plans. Assumptions regarding future mortality are based on actuarial advice in accordance with published statistics and experience in each country. Other assumptions such as medical cost trend rate and inflation are also considered in the calculation. Significant actuarial assumptions for the determination of the retirement benefit obligation (not considering plan assets) are discount rate and expected future remuneration increases. The sensitivity analysis below has been determined based on reasonably likely changes in the assumptions occurring at the end of the period.

DKK million 1 %-point increase 1 %-point decrease Discount rate (decrease)/increase (375) 463 Future remuneration growth (decrease)/increase 105 (95) The sensitivities above consider the single change shown with the other assumptions assumed to be unchanged. The table shows the NPV impact of net retirement liabilities.

3.6 PROVISIONS AND CONTINGENT LIABILITIES Accounting policies Provisions for sales rebates and discounts granted to government agencies, wholesalers, retail pharmacies, Managed Care and other customers are recorded at the time the related revenues are recorded or when the incentives are offered. Provisions are calculated based on historical experience and the specific terms in the individual agreements. Unsettled rebates are recognised as Provisions when the timing or amount is uncertain. Where absolute amounts are known, the rebates are recognised as Other liabilities. Please refer to note 2.1 for further information on sales rebates and provisions. Provisions for legal disputes are recognised where a legal or constructive obligation has been incurred as a result of past events and it is probable that there will be an outflow of resources that can be reliably estimated. In this case, Novo Nordisk arrives at an estimate based on an evaluation of the most likely outcome. Disputes for which no reliable estimate can be made are disclosed as contingent liabilities. Provisions are measured at the present value of the anticipated expenditure for settlement. This is calculated using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the obligation. The increase in the provision for interest is recognised as a financial expense. Novo Nordisk issues credit notes for expired goods as a part of normal business.

Where there is historical experience or a reasonably accurate estimate of expected future returns can otherwise be made, a provision for estimated product returns is recorded. The provision is measured at gross sales value. Key accounting estimate regarding ongoing legal disputes, litigations and investigations Provisions for legal disputes consist of various types of provision linked to ongoing legal disputes. Management makes estimates regarding provisions and contingencies, including the probability of pending and potential future litigation outcomes. These are by nature dependent on inherently uncertain future events. When determining likely outcomes of litigations etc, Management considers the input of external counsels on each case, as well as known outcomes in case law. Although Management believes that the total provisions for legal proceedings are adequate based on currently available information, there can be no assurance that there will not be any changes in facts or matters, or that any future lawsuits, claims, proceedings or investigations will not be material.

PROVISIONS	DKK million	Provisions for sales rebates	Provisions for legal disputes	Provisions for product returns	Other provisions
At the beginning of the year	19,971	1,915	767	1,178	23,831

At the end of the year	20,216	1,781	847	1,213	24,057
Non-current liabilities	—	1,781	508	1,013	3,302
Current liabilities	20,216	—	339	200	20,755
	20,461				

1. Other provisions consist of various types of provision, including obligations in relation to employee benefits such as jubilee benefits, company-owned life insurance etc. Assets offsetting obligations related to company-owned life insurance are presented as part of Other financial assets. For non-current liabilities, provisions for product returns will be utilised in 2019 and 2020. In the case of provisions for legal disputes, the timing of settlement cannot be determined.

OPERATING ASSETS AND LIABILITIES

## Edgar Filing: NOVO NORDISK A S - Form 6-K

3.6 PROVISIONS AND CONTINGENT LIABILITIES (CONTINUED) Contingent liabilities Novo Nordisk is currently involved in pending litigations, claims and investigations arising out of the normal conduct of its business. While provisions that Management deems to be reasonable and appropriate have been made for probable losses, there are uncertainties connected with these estimates. Novo Nordisk does not expect the pending litigations, claims and investigations, individually and in the aggregate, to have a material impact on Novo Nordisk's financial position, operating profit or cash flow in addition to the amounts accrued as provision for legal disputes. Pending litigation against Novo Nordisk As of 31 December 2017, Novo Nordisk, along with the majority of incretin-based product manufacturers in the US, is a defendant in product liability lawsuits related to use of incretin-based medications. To date, 250 plaintiffs have named Novo Nordisk in product liability lawsuits, predominantly claiming damages for pancreatic cancer that allegedly developed as a result of using Victoza® and other GLP-1/DPP-IV (incretin-based) products. 162 of the Novo Nordisk plaintiffs have also named other defendants in their lawsuits. Most Novo Nordisk plaintiffs have filed suit in California federal and state courts. In November 2015, all cases pending in the California federal and state courts were dismissed on Federal pre-emption grounds. Plaintiffs subsequently appealed these rulings to the Federal and California state appeals courts. In November 2017, the U.S. Court of Appeals for the Ninth Circuit reversed and vacated the Federal District Court Judge's ruling, thereby reinstating the dismissed federal lawsuits and remanding them back to the Federal District Court in California for further proceedings. The ruling by the US Court of Appeals does not bind the California State Appeals Court, which is currently reviewing the state court judge's pre-emption ruling. Currently, Novo Nordisk does not have any individual trials scheduled in 2018. Novo Nordisk does not expect the pending claims to have a material impact on its financial position, operating profit or cash flow. Since January 2017, several class action lawsuits have been filed against Novo Nordisk, former CEO Lars Rebien Sørensen, current CFO Jesper Brandgaard, and former President of Novo Nordisk Inc. Jakob Riis in the United States District Court for the District of New Jersey on behalf of all purchasers of Novo Nordisk American Depository Receipts between February 2015 and February 2017. All lawsuits have now been consolidated into one case. The lawsuit alleges that Novo Nordisk colluded with other insulin manufacturers to increase drug prices, artificially inflated its financial results, and made materially misleading statements to potential investors. Novo Nordisk has filed a Motion to Dismiss the case, and is currently awaiting the court's decision on this, expectedly within the first half of 2018. Novo Nordisk does not expect the litigation to have a material impact on Novo Nordisk's financial position, operating profit or cash flow. Since January 2017, nine pricing-related class action lawsuits have been brought against Novo Nordisk, Sanofi, Eli Lilly and in some cases certain Pharmacy Benefit Managers ("PBMs") on behalf of classes of U.S. purchasers of diabetes products. Six of these lawsuits have been consolidated into one matter pending in the United States District Court for the District of New Jersey. Two of the three remaining lawsuits are also pending in the same Federal Court in New Jersey, while the other lawsuit is currently pending in the United States District Court for the Western District of Texas. All pending matters allege that the manufacturers and PBMs colluded to artificially inflate list prices paid by consumers for diabetes products, while offering reduced prices to PBMs through rebates used to secure formulary access. Novo Nordisk does not expect the lawsuits to have a material impact on Novo Nordisk's financial position, operating profit or cash flow. Pending claims against Novo Nordisk and investigations involving Novo Nordisk In March 2016, the United States Department of Justice ("DOJ") served Novo Nordisk with a Civil Investigative Demand ("CID") calling for the production of documents and information regarding Novo Nordisk's haemophilia-related patient support programmes, as well as information relating to the marketing and promotion of NovoSeven®RT. The investigation is being conducted by DOJ in conjunction with the U.S. Attorney's Office for the Western District of Oklahoma. Furthermore, two CIDs from the Washington State Attorney General's ("WAG") office have been served on Novo Nordisk in 2014 and 2016, each calling for the production of documents and information regarding Novo Nordisk's haemophilia-related patient support programme, SevenSECURE®, as well as information relating to the marketing and promotion of NovoSeven®RT. The WAG has recently decided to cease further investigation under its CIDs and defer to the related investigation being conducted by the DOJ under its March 2016 CID. Novo Nordisk continues to cooperate with DOJ and the U.S. Attorneys' Office in this investigation. Novo Nordisk does not expect the investigation to have a material impact on Novo Nordisk's financial position, operating profit or cash flow. In March 2016, the US Attorney's Office for the Southern District of New York served Novo Nordisk with a Civil Investigative Demand calling for the production of documents and information regarding Novo Nordisk's contracts and business relationships with Pharmacy Benefit Managers concerning NovoLog®, Novolin® and Levemir®. Novo Nordisk continues to cooperate with the U.S. Attorney's Office in this investigation. Novo Nordisk does not expect the investigation to have a material impact on Novo Nordisk's financial position, operating profit or cash flow. On 18 January 2017, the Minnesota State Attorney General's Office served Novo Nordisk with a Civil Investigative Demand calling for the production of documents and information relating to pricing and trade practices for Novo Nordisk's long acting insulin products, including Levemir® and Tresiba®, from Q January 2008 through the present date. Novo Nordisk is cooperating with the Minnesota Attorney General in this investigation. Novo Nordisk does not expect the investigation to have a material impact on Novo Nordisk's financial position, operating profit or cash flow. On 7 March 2017, the Washington State Attorney General's Office served Novo Nordisk with a Civil Investigative Demand calling for the production of documents and information relating to pricing and trade practices for Novo Nordisk's insulin products from 1 January 2005 through the present date. Novo Nordisk is cooperating with the Washington State Attorney General in this investigation. Novo Nordisk does not expect the investigation to have a material impact on Novo Nordisk's financial position, operating profit or cash flow. On 26 April 2017, the New Mexico State Attorney General's Office served Novo Nordisk with a Civil Investigative Demand calling for the production of documents and information regarding the trade practice and pricing of Novo Nordisk's insulin products, namely NovoLog® and Novolin®, for the period of 1 January 2012 through the present date. Novo Nordisk is cooperating with the New Mexico Attorney General in this investigation. Novo Nordisk does not expect the investigation to have material impact on Novo Nordisk's financial position, operating profit or cash flow. Other contingent liabilities In addition to the above, the Novo Nordisk Group is engaged in certain litigation proceedings and various ongoing audits and investigations. In the opinion of Management, neither settlement or continuation of such proceedings, nor such pending audits and investigations are expected to have a material effect on Novo Nordisk's financial position, operating profit or cash flow.

CASH DISTRIBUTION TO SHAREHOLDERS After introducing interim dividend payments in 2016, Novo Nordisk paid out an interim dividend of DKK 3.00 per share in August 2017. The net cash distribution to shareholders in the form of dividends and share repurchases amounts to DKK 35.7 billion, compared with a free cash flow of DKK 32.6 billion. This is in line with the guiding principle of paying out excess capital to investors after funding organic growth and potential acquisitions. DKK million 2017 2016 2015 Interim dividend for the year 7,396 7,600 — Dividend for prior year 11,448 16,230 12,905 Share repurchases for the year 16,845 15,057 17,196 Total 35,689 38,887 30,101 The total dividend for 2017 amounts to DKK 19,206 million (DKK 7.85 per share). At the end of 2017, a final dividend of DKK 11,810 million (DKK 4.85 per share) is expected to be distributed pending approval at the Annual General Meeting. The interim dividend of DKK 7,396 million (DKK 3.00 per share) was paid in

## Edgar Filing: NOVO NORDISK A S - Form 6-K

August 2017. The total dividend for 2016 was DKK 19,048 (DKK 7.60 per share), of which the final dividend of DKK 11,448 million (DKK 4.60 per share) was paid in March 2017. No dividend is declared on treasury shares. This section provides an insight into Novo Nordisk's capital structure, earnings per share, free cash flow and financing items. The free cash flow impacts Novo Nordisk's long-term target for 'Cash to earnings (three-year average)'. Cash to earnings is defined as 'free cash flow as a percentage of net profit'. Free cash flow is the cash amount generated that is available for future investments in Novo Nordisk and distribution to shareholders without consuming prior years' cash creation retained in the company. Novo Nordisk has a low debt-to-equity ratio due to limited debt financing. Further information on the company's capital structure can be found in 'Shares and capital structure' on pp 44-45 (unaudited).

Management considers foreign exchange exposure to be one of the main financial risks. Novo Nordisk aims to reduce the short-term impact from movements in key currencies by hedging future cash flows. Notes 4.2 and T.3 include more information in this respect. NOVO NORDISK ANNUAL REPORT 2017 81 CONSOLIDATED FINANCIAL STATEMENTS CAPITAL STRUCTURE AND FINANCIAL ITEMS

SECTION 4 CAPITAL STRUCTURE AND FINANCIAL ITEMS Basis of preparation Results for the year Operating assets and liabilities Capital structure and financial items Other disclosures

4.1 SHARE CAPITAL, DISTRIBUTION TO SHAREHOLDERS AND EARNINGS PER SHARE SHARE CAPITAL DKK million A share capital B share capital Total share capital Development in share capital: Share capital 2013 107 443 550 Cancelled in 2014 — (20) (20) Cancelled in 2015 — (10) (10) Cancelled in 2016 — (10) (10) Share capital at the beginning of the year 107 403 510 Cancelled in 2017 — (10) (10) Share capital at the end of the year 107 393 500 At the end of 2017, the share capital amounted to DKK 107 million in A share capital and DKK 393 million in B share capital (equal to 1,963 million B shares of DKK 0.20).

CASH DISTRIBUTION TO SHAREHOLDERS After introducing interim dividend payments in 2016, Novo Nordisk paid out an interim dividend of DKK 3.00 per share in August 2017. The net cash distribution to shareholders in the form of dividends and share repurchases amounts to DKK 35.7 billion, compared with a free cash flow of DKK 32.6 billion. This is in line with the guiding principle of paying out excess capital to investors after funding organic growth and potential acquisitions. DKK million 2017 2016 2015

Interim dividend for the year 7,396 7,600 — Dividend for prior year 11,448 16,230 12,905 Share repurchases for the year 16,845 15,057 17,196 Total 35,689 38,887 30,101 The total dividend for 2017 amounts to DKK 19,206 million (DKK 7.85 per share). At the end of 2017, a final dividend of DKK 11,810 million (DKK 4.85 per share) is expected to be distributed pending approval at the Annual General Meeting. The interim dividend of DKK 7,396 million (DKK 3.00 per share) was paid in August 2017. The total dividend for 2016 was DKK 19,048 (DKK 7.60 per share), of which the final dividend of DKK 11,448 million (DKK 4.60 per share) was paid in March 2017. No dividend is declared on treasury shares. This section provides an insight into Novo Nordisk's capital structure, earnings per share, free cash flow and financing items. The free cash flow impacts Novo Nordisk's long-term target for 'Cash to earnings (three-year average)'. Cash to earnings is defined as 'free cash flow as a percentage of net profit'. Free cash flow is the cash amount generated that is available for future investments in Novo Nordisk and distribution to shareholders without consuming prior years' cash creation retained in the company. Novo Nordisk has a low debt-to-equity ratio due to limited debt financing. Further information on the company's capital structure can be found in 'Shares and capital structure' on pp 44-45 (unaudited). Management considers foreign exchange exposure to be one of the main financial risks. Novo Nordisk aims to reduce the short-term impact from movements in key currencies by hedging future cash flows. Notes 4.2 and T.3 include more information in this respect.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

4.1 SHARE CAPITAL, DISTRIBUTION TO SHAREHOLDERS AND EARNINGS PER SHARE (CONTINUED) TREASURY SHARES Accounting policies

Treasury shares are deducted from the share capital on cancellation at their nominal value of DKK 0.20 per share. Differences between this amount and the amount paid to acquire or received for disposing of treasury shares are deducted directly in Equity. 2017 2016 Market value, DKK million As % of share capital before cancellation As % of share capital after cancellation Number of B shares of DKK 0.20 (million) Number of B shares of DKK 0.20 (million) Holding at the beginning of the year 11,631 1.8% 46 52 Cancellation of treasury shares (12,735) (2.0%) (50)

(50) Transfer regarding restricted stock units (152) — (4) Purchase during the year 16,845 60 48 Value adjustment 2,990 — — Holding at the end of the year 18,579 2.2% 56 46

Treasury shares are primarily acquired to reduce the company's share capital. In addition, a limited part is used to finance Novo Nordisk's long-term share-based incentive programme (restricted stock units) and restricted stock units to employees. Novo Nordisk's guiding principle is that any excess capital, after the funding of organic growth opportunities and potential acquisitions, should be returned to investors. Novo Nordisk applies a pharmaceutical industry payout ratio to dividend payments, which are complemented by share repurchase programmes. The purchase of treasury shares during the year relates to the remaining part of the 2016 share repurchase programme totalling DKK 1.5 billion and the DKK Q7 billion Novo Nordisk B share repurchase programme for 2017, of which DKK 1.7 billion was outstanding at year-end. The programme ended on 30 January R018. Transfer of treasury shares relates to the long-term share-based incentive programme and restricted stock units to employees. EARNINGS PER SHARE Accounting policies

Earnings per share is presented as both basic and diluted earnings per share. Basic earnings per share is calculated as net profit divided by the average number of shares outstanding. Diluted earnings per share is calculated as net profit divided by the sum of average number of shares outstanding, including the dilutive effect of the outstanding share pool. Please refer to 'Financial definitions' on pp 96-97 for a description of calculation of the dilutive effect. DKK million 2017 2016 2015

Net profit for the year	38,130	37,925	34,860	Average number of shares outstanding in 1,000 shares	2,473,218	2,529,945	2,571,219
Dilutive effect of average outstanding share pool in 1,000 shares	4,875	4,784	6,479	Average number of shares outstanding, including dilutive effect of outstanding share pool in 1,000 shares	2,478,093	2,534,729	2,577,698
Basic earnings per share DKK	15.42	14.99	13.56	Diluted earnings per share DKK	15.39	14.96	13.52

1. For further information on the outstanding share pool, please refer to note 5.1. NOVO NORDISK ANNUAL REPORT 2017 82

CONSOLIDATED FINANCIAL STATEMENTS CAPITAL STRUCTURE AND FINANCIAL ITEMS

## Edgar Filing: NOVO NORDISK A S - Form 6-K

4.2 FINANCIAL RISKS Novo Nordisk has centralised management of the Group's financial risks. The overall objectives and policies for the company's financial risk management are outlined in an internal Treasury Policy, which is approved by the Board of Directors. The Treasury Policy consists of the Foreign Exchange Policy, the Investment Policy, the Financing Policy and the Policy regarding Credit Risk on Financial Counterparts, and includes a description of permitted use of financial instruments and risk limits. Novo Nordisk only hedges commercial exposures and consequently does not enter into derivative transactions for trading or speculative purposes. Novo Nordisk uses a fully integrated Treasury Management System to manage all financial positions. All positions are marked-to-market based on real-time quotes. Management has assessed the following key risks: Type Financial risk Foreign exchange risk High Interest rate risk Low Liquidity risk Low Credit risk Low Foreign exchange risk Foreign exchange risk is an important financial risk for Novo Nordisk and can have a significant impact on the Income statement, Statement of comprehensive income, Balance sheet and Cash flow statement. The overall objective of foreign exchange risk management is to reduce the short-term negative impact of exchange rate fluctuations on earnings and cash flow. Consequently, this is likely to increase the predictability of the financial results. The majority of Novo Nordisk's sales are in USD, EUR, CNY, JPY, GBP and CAD. The foreign exchange risk is most significant in USD, CNY and JPY, while the EUR exchange rate risk is regarded as low because of Denmark's fixed-rate policy towards EUR. Novo Nordisk hedges existing assets and liabilities in key currencies as well as future expected cash flows up to a maximum of 24 months forward. Hedge accounting is applied to match the impact of the hedged item and the hedging instrument in the Consolidated income statement. Management has chosen to classify the result of hedging activities as part of financial items. During 2017, the hedging horizon varied between 5 and 14 months for USD, CNY, JPY, GBP and CAD. Currency hedging is based on expectations of future exchange rates and mainly uses foreign exchange forwards and foreign exchange options matching the due dates of the hedged items. Expected cash flows are continually assessed using historical inflows, budgets and monthly sales forecasts. Hedge effectiveness is assessed on a regular basis. The financial contracts existing at year-end cover the expected future cash flow for the following number of months: 2017 2016 USD 12 months 12 months CNY 16 months 9 months JPY 12 months 14 months GBP 13 months 12 months CAD 11 months 11 months 1. Chinese yuan traded offshore (CNH) is used when hedging Novo Nordisk's CNY currency exposure.

**KEY CURRENCIES** Exchange rate DKK per 100 2017 2016 2015 USD Average 660 673 673 Year-end 621 706 683 Year-end change (12.0%) 3.4% 11.6% CNY Average 98 101 107 Year-end 95 102 105 Year-end change (6.9%) (2.9%) 6.1% JPY Average 5.88 6.21 5.56 Year-end 5.51 6.03 5.67 Year-end change (8.6%) 6.3% 10.7% GBP Average 849 911 1,028 Year-end 839 869 1,011 Year-end change (3.5%) (14.0%) 6.2% CAD Average 508 508 527 Year-end 495 524 492 Year-end change (5.5%) 6.5% (6.6%)

Foreign exchange sensitivity analysis: A 5% immediate increase/decrease in the following currencies would impact Novo Nordisk's operating profit as outlined in the table below: Estimated for DKK million 2018 2017 USD 1,900 2,100 CNY 325 320 JPY 170 200 GBP 90 90 CAD 80 80

NOVO NORDISK ANNUAL REPORT 2017 83 CONSOLIDATED FINANCIAL STATEMENTS CAPITAL STRUCTURE AND FINANCIAL ITEMS

## Edgar Filing: NOVO NORDISK A S - Form 6-K

4.2 FINANCIAL RISKS (CONTINUED) At year-end, a 5% increase/decrease in all other currencies versus EUR and DKK would affect the hedging instruments' impact on Other comprehensive income and the Income statement as outlined in the table below:

	5% increase	5% decrease
Other comprehensive income	(1,994)	2,098
Income statement	210 (255)	210 (255)
Total	(1,784) 1,843	1,843 2,098

2017 Other comprehensive income (1,994) 2,098 Income statement 210 (255) Total (1,784) 1,843 2016 Other comprehensive income (2,477) 2,478 Income statement 94 (89) Total (2,383) 2,389

The foreign exchange sensitivity analysis comprises effects from the Group's cash, Trade receivables and Trade payables, current and non-current loans, current and non-current financial investments, foreign exchange forwards and foreign exchange options at year-end. Anticipated currency transactions, investments and non-current assets are not included. Interest rate risk Changes in interest rates affect Novo Nordisk's financial instruments. At the end of 2017, a 1 percentage point increase in the interest rate level would, all else being equal, result in a change in the fair value of Novo Nordisk's financial instruments of DKK 0 million (a decrease of DKK 3 million in 2016). The financial instruments included in the sensitivity analysis consist of marketable securities and non-current loans. Foreign exchange forwards and foreign exchange options are not included because of the limited effect that a parallel shift in interest rates in all currencies would have on these instruments. Liquidity risk The liquidity risk is considered to be low, and Novo Nordisk has limited debt financing. Novo Nordisk ensures the availability of the required liquidity through a combination of cash management, highly liquid investment portfolios and uncommitted as well as committed facilities. Novo Nordisk uses cash pools for optimisation and centralisation of cash management. Credit risk Credit risk arises from the possibility that transactional counterparties may default on their obligations, causing financial losses for the Group. Novo Nordisk considers its maximum credit risk on financial counterparties to be DKK 21,158 million (2016: DKK 21,228 million). In addition, Novo Nordisk considers its maximum credit risk on Trade receivables, Other receivables less prepayments and Other financial assets to be DKK 22,602 million (2016: DKK 22,974 million). Please refer to note 4.7 for details of the Group's total financial assets. To manage credit risk on financial counterparties, Novo Nordisk only enters into derivative financial contracts and money market deposits with financial counterparties possessing a satisfactory long-term credit rating from two out of the three selected ratings agencies: Standard and Poor's, Moody's and Fitch. Furthermore, maximum credit lines defined for each counterparty diversify the overall counterparty risk. The credit risk on bonds is limited, as investments are made in highly liquid bonds with solid credit ratings. The table below shows Novo Nordisk's credit exposure on cash, fixed-income marketable securities and financial derivatives.

	Cash at bank	Marketable securities	Derivative financial instruments	Total
2017	12,369	935	13,304	26,608
2016	5,967	1,369	7,336	14,672
AAA-range	2,007	2,007	12,442	16,456
AA-range	12,442	309	12,751	25,499
A-range	5,971	220	6,191	12,382
BBB-range	83	83	194	360
Not rated or below BBB-range	194	2	196	392
Total	18,690	2,009	529	21,228

1. Net yield on the bond portfolio in 2016 was -0.05%. Novo Nordisk has no significant concentration of credit risk related to Trade receivables or Other receivables and prepayments, as the exposure is spread over a large number of counterparties and customers. Novo Nordisk continues to monitor the credit exposure in Region AAMEO due to the increasing sales and low credit ratings of many countries in this region. Trade receivable programmes Novo Nordisk's subsidiaries in the US and Japan employ trade receivable programmes where trade receivables are sold on full non-recourse terms to optimise working capital. At year-end, the Group had derecognised receivables without recourse having due dates after 31 December amounting to: DKK million 2017 2016 2015 US 3,328 2,754 945 Japan 2,024 2,259 1,899 In addition, full non-recourse off-balance sheet factoring arrangement programmes are occasionally applied by Novo Nordisk affiliates around the world, with limited impact on the Group's trade receivables. Please refer to note 2.2 for the split of allowance for trade receivables by geographical segment.

Includes expired currency options of DKK 183 million deferred for realisation in 2018. 2. Realisation in 2017 of previously deferred loss amounts to DKK 1,955 million (DKK 1,915 million adjusted for DKK 40 million to be realised in 2018). Furthermore, an additional gain of DKK 1,987 million (DKK 2,027 million adjusted for DKK 40 million from prior years) as of 31 December 2017 has been deferred for realisation in 2018.

**4.3 DERIVATIVE FINANCIAL INSTRUMENTS** Accounting policies Novo Nordisk uses financial instruments to reduce the impact of foreign exchange and interest rate fluctuations on financial results. Use of derivative financial instruments The derivative financial instruments are used to manage the exposure to market risk. None of the derivatives are held for trading. Novo Nordisk uses forward exchange contracts and currency options to hedge forecast transactions, assets and liabilities. The overall policy is to hedge the majority of total currency exposure. Currently, net investments in foreign subsidiaries are not hedged. Initial recognition and measurement On initiation of the contract, Novo Nordisk designates each derivative financial contract that qualifies for hedge accounting as one of:

- hedges of the fair value of a recognised asset or liability (fair value hedge)
- hedges of the fair value of a forecast financial transaction (cash flow hedge).

All contracts are initially recognised at fair value and subsequently remeasured at fair value at the end of the reporting period. Gains and losses on currency options that do not meet the criteria for hedge accounting are recognised directly in the Income statement under Financial income or Financial expenses. Fair value hedges Value adjustments of fair value hedges are recognised in the Income statement along with any value adjustments of the hedged asset or liability that are attributable to the hedged risk. Cash flow hedges Value adjustments of the effective part of cash flow hedges are recognised directly in Other comprehensive income. The cumulative value adjustment of these contracts is transferred from Other comprehensive income to the Income statement under Financial income or Financial expenses when the hedged transaction is recognised in the Income statement. For options, this cumulative value adjustment is reflected in the value of the option. Discontinuance of cash flow hedging When a hedging instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in equity at that time remains in equity and is recognised when the forecast transaction is ultimately recognised in the Income statement. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in equity is immediately transferred to the Income statement under Financial income or Financial expenses. Fair value determination The fair value of derivative financial instruments is measured on the basis of quoted market prices of financial instruments traded in active markets. If an active market exists, the fair value is based on the most recently observed market price at the end of the reporting period. If a financial instrument is quoted in a market that is not active, Novo Nordisk bases its valuation on the most recent transaction price. Adjustment is made for subsequent changes in market conditions, for instance by including transactions in similar financial instruments assumed to be motivated by normal business considerations. If an active market does not exist, the fair value of standard and simple financial instruments, such as foreign exchange forward contracts, interest rate swaps, currency swaps and unlisted bonds, is measured according to generally accepted valuation techniques. Market-based parameters are used to measure the fair value.

## Edgar Filing: NOVO NORDISK A S - Form 6-K

4.3 DERIVATIVE FINANCIAL INSTRUMENTS (CONTINUED) The above financial contracts regarding cash flow hedging are expected to impact the Income statement within the periods shown below. The split is based on an estimate of when the cash flow hedges are expected to be reclassified to fair value hedges with the fair value then being transferred to Financial income or Financial expenses. The cash flow impact is an immediate consequence of the reclassification. 2017 2016 DKK million Positive fair value at year-end Negative fair value at year-end Positive fair value at year-end Negative fair value at year-end Expected timing of Income statement impact 0-12 months 2,072 45 236 2,191 More than 12 months — — 40

— Total cash flow hedges for which hedge accounting is applied 2,072 45 276 2,191

4.4 CASH AND CASH EQUIVALENTS, FINANCIAL RESOURCES AND FREE CASH FLOW Accounting policies The Cash flow statement shows how income and changes in balance sheet items affect cash and cash equivalents, in other words the cash generated or used in the period. The Cash flow statement is presented in accordance with the indirect method commencing with Net profit for the year. Cash flows in foreign currencies are translated to DKK at the average exchange rate for the respective year. Cash from operating activities converts income statement items from the accrual basis of accounting to cash basis. As such, starting with net profit, non-cash items are reversed and actual payments included. Further, the change in working capital is taken into account, as this shows the development in money tied up in the Balance sheet. Cash from investing activities shows payments related to the purchase and sale of Novo Nordisk's long-term investments. This includes fixed assets such as construction of new production sites, intangible assets such as patents and licences, and financial assets. Cash and cash equivalents consist of cash offset by short-term bank loans. Financial resources consist of cash and cash equivalents, marketable securities with original maturity of less than three months and undrawn committed credit facilities expiring after more than one year. DKK million 2017 2016 2015 CASH AND CASH EQUIVALENTS Cash at bank (note 4.2) 18,852 18,690 16,923 Current debt (bank overdrafts) (1,694) (229) (1,073) Cash and cash equivalents 17,158 18,461 15,850 FINANCIAL RESOURCES Cash and cash equivalents 17,158 18,461 15,850 Marketable securities (note 4.2) — 2,009 3,542 Undrawn committed credit facility 1 8,190 8,178 8,209 Financial resources 2 25,348 28,648 27,601 1. The undrawn committed credit facility in 2017 is a EUR 1,100 million facility (EUR 1,100 million in 2016 and EUR 1,100 million in 2015) committed by a portfolio of international banks. The facility matures in 2019. 2. Additional non-IFRS measure; please refer to pp 96-97 for definition. 4.6 OTHER NON-CASH ITEMS For the purpose of presenting the Cash flow statement, non-cash items with effect on the Income statement must be reversed to identify the actual cash flow effect from the Income statement. The adjustments are specified as follows: OTHER NON-CASH ITEMS DKK million

2017	2016	2015	Reversals of non-cash income statement items	Interest income and interest expenses, net (note 4.8)	Capital gain/(loss) on investments etc (note 4.8)
25	(16)	(15)	Result of associated company (note 4.8)	(14)	(24)
(14)			Share-based payment costs (note 5.1)	292	368
442			Changes in non-cash balance sheet items	Increase/(decrease) in provisions (note 3.6)	226
4,007	6,193		Increase/(decrease) in retirement benefit obligations (note 3.5)	(115)	265
155			Remeasurements of retirement benefit obligations (note 3.5)	103	(205)
(37)			Other adjustments	Exchange rate adjustments on working capital (note 4.5)	1,375
(168)	179		Other, primarily exchange rate adjustments	114	(358)
(1,006)			Total other non-cash items	2,027	3,882
5,908	4,7				

FINANCIAL ASSETS AND LIABILITIES Accounting policies Depending on the purpose, Novo Nordisk classifies investments into the following categories:

- Available-for-sale financial assets
- Loans and receivables
- Financial assets at fair value through the Income statement (derivatives).

Management determines the classification of its investments on initial recognition and re-evaluates this at the end of every reporting period to the extent that such a classification is permitted and required. Recognition and measurement Purchases and sales of investments are recognised on the settlement date. Investments are initially recognised at fair value. Available-for-sale financial assets and financial assets at fair value are subsequently carried at fair value. Fair value disclosures are made separately for each class of financial instruments at the end of the reporting period. Disposal of investments Investments are removed from the Balance sheet when the rights to receive cash flows from the investments have expired or have been transferred, and Novo Nordisk has transferred substantially all the risks and rewards of ownership. Available-for-sale financial assets Available-for-sale financial assets consist of equity investments and marketable securities. Equity investments are included in Other financial assets unless Management intends to dispose of the investment within 12 months of the end of the reporting period. In that case, the current part is included in Other receivables and prepayments. Unrealised gains and losses arising from changes in the fair value of financial assets classified as available for sale are recognised in Other comprehensive income. When financial assets classified as available for sale are sold or impaired, the accumulated fair value adjustments are included in the Income statement. The fair values of quoted investments (including marketable securities) are based on current bid prices at the end of the reporting period. Financial assets for which no active market exists are carried at fair value based on a valuation methodology or at cost if no reliable valuation model can be applied. Loans and receivables Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. If collection is expected within one year (or in the normal operating cycle of the business if longer), they are classified as Current assets. If not, they are presented as Non-current assets. Trade receivables and Other receivables are recognised initially at fair value. Subsequently they are measured at amortised cost using the effective interest method, less provision for allowance. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

SECTION 5 OTHER DISCLOSURES Basis of preparation Results for the year Operating assets and liabilities Capital structure and financing items Other disclosures This section provides details on notes that are statutory or by their nature of secondary importance for understanding the financial performance of Novo Nordisk. A list of subsidiaries in the Novo Nordisk Group is also included here. 5.1 SHARE-BASED PAYMENT SCHEMES Accounting policies Share-based compensation Novo Nordisk operates equity-settled, share-based compensation plans. The fair value of the employee services received in exchange for the grant of shares is recognised as an expense and allocated over the vesting period. The total amount to be expensed over the vesting period is determined by reference to the fair value of the shares granted, excluding the impact of any non-market vesting conditions. The fair value is fixed at the grant date, and adjusted for expected dividends during the vesting period. Non-market vesting conditions are included in assumptions about the number of shares that are expected to vest. At the end of each reporting period, Novo Nordisk revises its estimates of the number of shares expected to vest. Novo Nordisk recognises the impact of the revision of the original estimates, if any, in the Income statement and in a corresponding adjustment to Equity (change in proceeds) over the remaining vesting period. Adjustments relating to prior years are included in the Income statement in the year of adjustment. SHARE-BASED PAYMENT Expensed in the Income statement DKK million 2017 2016 2015 Restricted stock units to employees 169 245 135 Long-term share-based incentive programme (Management Board) 2 19 1 29 108 Long-term share-based incentive programme (management group below Management Board) 3 102 94 199 Shares allocated to individual employees 2 — — Share-based payment expensed in the Income statement 292 368 442 1. The expense for 2017 reflects the value at launch (adjusted for expected dividend) of the programme, amortised over four years. The expense for 2015 and 2016 reflects the full value of the programme (adjusted for expected dividend) for the year, as vesting conditions were met. 2. The programme includes payments to former members of the Management Board at a total value of DKK 3 million (DKK 3 million in 2016 and DKK 16 million in 2015). 3. The expense for the year reflects the value at launch (adjusted for expected dividend) of the last four programmes, amortised over four years. Restricted stock units to employees To commemorate the Group's net sales passing DKK 100 billion for the first time in 2015, all employees in the company (excluding NNE A/S and Steno Diabetes Center A/S) as of January 2016 were offered 50 restricted stock units. A restricted stock unit gives the holder the right to receive one Novo Nordisk B share free of charge in February 2019 subject to continued employment. The cost of the DKK 508 million programme is amortised over the vesting period. Long-term share-based incentive programme For a description of the programme, please refer to 'Remuneration' in 'Governance, leadership and shares', pp 50-53 (unaudited). Management Board On 1 February 2018, the Board of Directors approved the transfer of a total of 356,195 Novo Nordisk B shares to the pool for members of Management Board for the financial year 2017. The value at launch of the programme (adjusted for expected dividends) was DKK 76 million. On average, this corresponds to 8.2 months' fixed base salary plus pension contribution for the CEO, 6.2 months' fixed base salary plus pension contribution per member of Executive Management as of 1 March 2017 and 5.5 months' fixed base salary for Senior Vice Presidents. For 2017, the shares will no longer remain in the pool if a member of the Management Board leaves Novo Nordisk, why the cost of the 2017 programme is amortised over the vesting period 2017-2020 at an annual amount of DKK 19 million. The grant date of the programme was February 2017, and the share price used for the conversion was the average share price (DKK 237) for Novo Nordisk B shares on Nasdaq Copenhagen in the period 2-16 February 2017, adjusted for expected dividend. Based on the split of participants when the pool was established, approximately 38% of the pool will be allocated to members of Executive Management and 62% to other members of the Management Board. The shares allocated to the joint pool for 2014 were released to the individual participants subsequent to approval of the Annual Report 2017 by the Board of Directors and after the announcement of the 2017 full-year financial results on 1 February 2018. The shares allocated correspond to a value at launch of the programme of DKK 66 million, expensed in 2014. Management group below Management Board The management group below the Management Board has a share-based incentive programme with similar performance criteria. For 2017, a total of W61,826 shares were allocated to the pool for this group, corresponding to a value at launch of the programme (adjusted for expected dividends) of DKK Q62 million. The cost of the 2017 programme is amortised over the vesting period 2017-2020 at an annual amount of DKK 40 million. The shares allocated to the pool for 2014 were released to the individual participants subsequent to approval of the Annual Report 2017 by the Board of Directors and after the announcement of the 2017 full-year financial results on 1 February 2018. The shares allocated correspond to a value at launch of the programme of DKK 155 million amortised over the period R014-2017. The number of shares to be transferred (518,079 shares) is lower than the original number of shares allocated to the share pool, as some participants had left the company before the programme's release conditions were met.  Other purchase obligations 4,335  
 Total obligations recognised in the Balance sheet 8,445,563  
 Total contractual obligations 8,488,564

1. No material finance lease obligations existed in 2017 or 2016. 2. Potential milestone payments are associated with uncertainty as they are linked to successful achievements in research activities. The operating lease commitments are related to non-cancellable operating leases primarily for premises, company cars and office equipment. Approximately 74% of the commitments are related to leases outside Denmark. The lease costs for 2017 and 2016 were DKK 1,392 million and DKK 1,513 million respectively. The purchase obligations primarily relate to purchase agreements regarding medical equipment and consumer goods. Novo Nordisk expects to fund these commitments with existing cash and cash flow from operations. Research and development obligations entail uncertainties in relation to the period in which payments are due because a proportion of the obligations is dependent on milestone achievements. The due periods disclosed are based on Management's best estimate. Novo Nordisk has engaged in research and development projects with a number of external enterprises. Other guarantees primarily related to guarantees issued by Novo Nordisk in relation to rented property. Security for debt Land, buildings and equipment etc at carrying amount 3,68 million. World Diabetes Foundation (WDF) At the Annual General Meeting in 2014, a donation to WDF was agreed. For the years 2018-2024, the donation is 0.1% of the Group's net insulin sales. The annual donation in this period cannot exceed the lower of DKK 90 million or 15% of the taxable income of Novo Nordisk A/S in the financial year in question. For 2017, the total donation amounts to DKK 85 million (DKK 85 million in 2016 and DKK 86 million in 2015), which is recognised in Administrative costs in the Income statement.

5.3 RELATED PARTY TRANSACTIONS Novo Nordisk A/S is controlled by Novo Holdings A/S (incorporated in Denmark), which owns 28.1% of the share capital in Novo Nordisk A/S, representing 76.1% of the total number of votes, excluding treasury shares. The remaining shares are widely held. The ultimate parent of the Group is the Novo Nordisk Foundation (incorporated in Denmark). Both entities are considered related parties. Being an associated company of Novo Nordisk A/S, NNIT Group is considered a related party. Due to joint ownership, associated companies and Management of Novo Nordisk A/S, the Novozymes Group and Xellia Pharmaceuticals are also considered related parties. The Group has had the following material transactions with related parties: DKK million 2017 2016 2015 Novo Nordisk Foundation Donations to Steno Diabetes Center A/S via Novo Nordisk — (69) (69) Services provided by Novo Nordisk (4) (3) (3) Services provided by Novo Nordisk Foundation — 31 — Novo Holdings A/S Services provided by Novo Nordisk (3) (2) (3) Sale of NNIT B shares — — (797) Dividend payment to Novo Holdings A/S 4,085 5,052 2,687 NNIT Group Services provided by Novo Nordisk (25) (30) (32) Services provided by NNIT 1,231 1,239 1,316 Dividend payment from NNIT (26) (26) — Novozymes Group Services provided by Novo Nordisk (145) (163) (185) Services provided by Novozymes 163 150 165 Xellia Pharmaceuticals Services provided by Novo Nordisk (13) (108) (11) Novo Nordisk has transferred the activities of Steno Diabetes Center A/S to the Capital Region of Denmark as of 1 January 2017. In Novo Nordisk A/S, there have been no transactions with the Board of Directors or Executive Management besides remuneration. There have not been any other transactions with the Board of Directors or Executive Management of NNIT A/S, Novozymes A/S, Novo Holdings A/S, the Novo Nordisk Foundation, Xellia Pharmaceuticals ApS or associated companies. For information on remuneration to the Management of Novo Nordisk, please refer to 'Remuneration' on pp 50-53 (unaudited) and note 2.4, 'Employee costs'. There are no loans to the Board of Directors or Executive Management in 2017, nor were there in 2016 or 2015. There are no material unsettled transactions with related parties at the end of the year. 5.4 FEE TO STATUTORY AUDITORS DKK million 2017 2016 2015 Statutory audit 24 24 24 Audit-related services 4 4 4 Tax advisory services 10 9 8 Other services 5 4 7 Total fee to statutory auditors 43 41 43 Fees for other services than statutory audit of the financial statements amounts to DKK 19 million (DKK 17 million in 2016 and DKK 19 million in 2015). PricewaterhouseCoopers Statsautoriseret Revisionspartnerselskab (PricewaterhouseCoopers Denmark) provided other services in the amount of DKK 8 million (DKK 7 million in 2016 and DKK 7 million in 2015). Other services than statutory audit of the financial statements provided by PricewaterhouseCoopers Statsautoriseret Revisionspartnerselskab (PricewaterhouseCoopers Denmark) comprise services relating to tax compliance and transfer pricing, educational training, review of Social and Environmental information, due diligence, other assurance opinions and agreed-upon procedures, as well as accounting advice. 1. Following the change in the Board of Directors and the retirement of members of Executive Management and the Senior Management Board, the holding of shares at the beginning of the year has been updated compared with the Annual Report 2016. For new members shareholdings are included from the day they became member of Executive Management. 2. Calculation of market value is based on the quoted share price of DKK 334.50 at the end of the year. 3. The annual allocation to the pool is locked up for three years before it is transferred to the participants employed at the end of each three-year period. Based on the split of participants when the pool was established, approximately 38% of the pool will be allocated to the members of Executive Management and approximately 62% to other members of the Senior Management Board. In the lock-up period, the pool may potentially be reduced in the event of lower-than-planned value creation in subsequent years. 4. The pool includes the 2014 programme released on 1 February 2018, but excludes 367,648 shares assigned to retired Executive Management and Senior Management Board members. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

**FINANCIAL DEFINITIONS** Financial ratios have been calculated in accordance with the guidelines from the Danish Society of Financial Analysts, and supplemented by certain key ratios for Novo Nordisk. Financial ratios are described below and in the section 'Non-IRFS financial measures'. **ADR** An American Depositary Receipt (or ADR) represents ownership of the shares of a non-US company and trades in US financial markets. **Basic earnings per share (EPS)** Net profit divided by the average number of shares outstanding. **Diluted earnings per share** Net profit divided by average number of shares outstanding, including the dilutive effect of the outstanding restricted stock units. **Effective tax rate** Income taxes as a percentage of profit before income taxes. **Equity ratio** Total equity at year-end as a percentage of total assets at year-end. **Gross margin** Gross profit as a percentage of sales. **Net profit margin** Net profit as a percentage of sales. **Number of shares outstanding** The total number of shares, excluding the holding of treasury shares. **Operating margin** Operating profit as a percentage of sales. **Other comprehensive income (OCI)** Other comprehensive income comprises all items recognised in Equity for the year other than those related to transactions with owners of the company. Examples of items that are required to be presented in OCI are: • Exchange rate adjustments of investments in subsidiaries • Remeasurements of defined benefit plans • Changes in fair value of financial instruments in a cash flow hedge. **Payout ratio** Total dividends for the year as a percentage of net profit. **Return on equity (ROE)** Net profit for the year as a percentage of shareholders' equity (average). **NON-IFRS FINANCIAL MEASURES** In the Annual Report, Novo Nordisk discloses certain financial measures of the Group's financial performance, financial position and cash flows that reflect adjustments to the most directly comparable measures calculated and presented in accordance with IFRS. These non-IFRS financial measures may not be defined and calculated by other companies in the same manner, and may thus not be comparable. The non-IFRS financial measures presented in the Annual Report are: • Sales and operating profit in local currencies • Operating profit after tax to net operating assets • Financial resources • Free cash flow • Cash to earnings refers to an IFRS financial measure. **Sales and operating profit growth in local currencies** 'Growth in local currencies' means that the effect of changes in exchange rates is included. The measure is defined as sales/operating profit for the year measured at prior-year average exchange rates compared with sales/ operating profit for the prior year. Growth in local currencies is considered to be relevant information for investors in order to understand the underlying development in sales and operating profit by adjusting for the impact of currency fluctuations. **SALES IN LOCAL CURRENCIES** DKK million 2017 2016 2015 Net sales 111,696 111,780 107,927 Effect of exchange rate 2,609 2,110 (11,672) Sales in local currencies 114,305 113,890 96,255 **OPERATING PROFIT IN LOCAL CURRENCIES** DKK million 2017 2016 2015 Operating profit 48,967 48,432 49,444 Effect of exchange rate 1,770 1,099 (7,838) Operating profit in local currencies 50,737 49,531 41,606 **Operating profit after tax to net operating assets (OPAT/NOA)** Operating profit after tax to net operating assets is defined as 'operating profit after tax (using the effective tax rate) as a percentage of average inventories, receivables, property, plant and equipment, intangible assets and deferred tax assets less non-interest-bearing liabilities including provisions and deferred tax liabilities (where average is the sum of the above assets and liabilities at the beginning of the year and at year-end divided by two)'. Management believes Operating profit after tax to net operating assets is a useful measure in providing investors and Management with information regarding the Group's performance. The calculation of the financial target 'Operating profit after tax to net operating assets' is a widely accepted measure of earnings efficiency in relation to total capital employed. The following table shows the calculation of Operating profit after tax to net operating assets: **OPERATING PROFIT AFTER TAX TO NET OPERATING ASSETS** DKK million 2017 2016 2015 Operating profit after tax 38,341 38,407 39,654 / Average net operating assets 26,776 25,578 26,668 Operating profit after tax to net operating assets in % 143.2% 150.2% 148.7% **NOT AUDITED PART OF MANAGEMENT'S REVIEW** **NOVO NORDISK ANNUAL REPORT 2017 96 FINANCIAL DEFINITIONS**

OPAT/NOA NUMERATOR Reconciliation of Operating profit to operating profit after tax: DKK million 2017 2016 2015 Operating profit 48,967 48,432 49,444 Tax on operating profit (using effective tax rate) (10,626) (10,025) (9,790) Operating profit after tax 38,341 38,407 39,654 OPAT/NOA DENOMINATOR Reconciliation of Average net operating assets: DKK million 2017 2016 2015 Intangible assets 3,325 2,714 2,158 Property, plant and equipment 35,247 30,179 25,545 Deferred income tax assets 1,941 2,683 6,806 Inventories 15,373 14,341 12,758 Trade receivables 20,165 20,234 15,485 Tax receivables 958 1,552 3,871 Other receivables and prepayments 2,428 2,411 2,257 Deferred tax liabilities (846) (13) (6) Retirement benefit obligations (1,336) (1,451) (1,186) Provisions (non-current) (3,302) (3,370) (2,765) Trade payables (5,610) (6,011) (4,927) Tax payables (4,242) (3,976) (3,777) Other liabilities (14,446) (14,181) (12,655) Provisions (current) (20,755) (20,461) (17,059) Net operating assets 28,900 24,651 26,505

Average net operating assets 26,776 25,578 26,668 Financial resources Financial resources at the end of the year is defined as the sum of cash and cash equivalents at the end of the year, bonds with original term to maturity exceeding three months and undrawn committed credit facilities. Management believes that Financial resources at the end of the year is an important measure of the Group's financial strength from an investor's perspective, capturing the robustness of the Group's financial position and its financial preparedness for unforeseen developments. The following table reconciles total financial resources with Cash and cash equivalents, the most directly comparable IFRS financial measure: FINANCIAL RESOURCES DKK million 2017 2016 2015 Cash and cash equivalents 17,158 18,461 15,850 Marketable securities — 2,009 3,542 Undrawn committed credit facilities 8,190 8,178 8,209 Financial resources 25,348 28,648 27,601 Free cash flow Novo Nordisk defines free cash flow as 'net cash generated from operating activities' less 'net cash used in investing activities' excluding net change in marketable securities. A positive free cash flow shows that the Group is able to finance its activities and that external financing is thus not necessary for the Group's operating activities. This non-IFRS liquidity measure is therefore believed to provide useful information to investors in addition to the most directly comparable IFRS financial measure, 'Net cash generated from operating activities'. The following table shows a reconciliation of Free cash flow with Net cash generated from operating activities, the most directly comparable IFRS financial measure: FREE CASH FLOW DKK million 2017 2016 2015 Net cash generated from operating activities 41,168 48,314 38,287 Net cash used in investing activities (6,571) (6,790) (6,098) Net purchase of marketable securities (2,009) (1,533) 2,033 Free cash flow 32,588 39,991 34,222 Cash to earnings Cash to earnings is defined as 'free cash flow as a percentage of net profit'. Management believes that Cash to earnings is an important performance metric because it measures the Group's ability to turn earnings into cash. Hence it is considered a meaningful measure for investors to understand the development of the Group's net cash generated from operating and investing activities. Since Management wants this measure to capture the ability of the Group's operations to generate cash, free cash flow is used as the numerator instead of net cash flow. The following table shows the calculation of Cash to earnings: CASH TO EARNINGS DKK million 2017 2016 2015 Free cash flow 32,588 39,991 34,222 / Net profit 38,130 37,925 34,860 Cash to earnings 85.5% 105.4% 98.2%

NOVO NORDISK ANNUAL REPORT 2017 98 CONSOLIDATED SOCIAL STATEMENT  
SUPPLEMENTARY INFORMATION STATEMENT OF SOCIAL PERFORMANCE

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

NOTES TO THE CONSOLIDATED SOCIAL STATEMENT Basis of preparation Patients Employees Assurance In the Consolidated social statement, Novo Nordisk reports on three dimensions of performance: patients, employees and assurance. Progress is reported on one long-term target, namely company reputation (see pp 12,15 and note 4.6, p 103). A long-term commitment to provide access to affordable insulin The Novo Nordisk Way states that 'our key contribution is to discover and develop innovative biological medicines and make them accessible to patients throughout the world'. Novo Nordisk's Access to Insulin Commitment guarantees provision of low-priced human insulin to ensure access to quality treatments for patients in the poorest parts of the world for many years to come. The guarantee applies to Least Developed Countries as defined by the UN and other low-income countries as defined by the World Bank as well as selected organisations providing relief in humanitarian situations. The ceiling price for 2017 was set at 4 US dollars per vial, which is a level not exceeding 20% of the human insulin list prices in the western world. At this price, the cost for insulin treatment per patient per day was 16 cents. The average realised price for insulin sold under the programme was 3 dollars per vial, corresponding to 12 cents per patient per day.

SECTION 1 BASIS OF PREPARATION General reporting standards and principles Novo Nordisk adheres to the following internationally recognised voluntary reporting standards and principles (for overview, see p 113):

- The International Integrated Reporting Framework, <IR>, developed by the International Integrated Reporting Council. The framework consists of a set of content elements and guiding principles intended to improve the quality of information available to providers of financial capital.
- The UN Global Compact, a strategic policy initiative for businesses that are committed to aligning their operations and strategies with 10 universally accepted principles in the areas of human rights, labour, environment, anti-corruption and broader UN Goals. As a participant, Novo Nordisk reports on progress during 2017 in its Communication on Progress, which can be found at [novonordisk.com/annualreport](http://novonordisk.com/annualreport).
- The framework AA1000APS(2008) and AA1000AS(2008), which states that reporting must provide a complete, accurate, relevant and balanced picture of the organisation's approach to and impact on society. Novo Nordisk applies AA1000APS(2008) as a component in creating a generally applicable approach to assessing and strengthening the credibility of the Group's public reporting of social and environmental information. Novo Nordisk has designed processes to ensure that the qualitative and quantitative information that documents the social and environmental dimensions of performance is assured, as well as the systems that underpin the data and performance. The principles outlined in AA1000APS(2008) have been applied as described below.

Inclusivity As a pharmaceutical business with global reach, Novo Nordisk is committed to being accountable to those stakeholders who are impacted by the organisation. From a social responsibility perspective, the key stakeholder groups are patients who rely on Novo Nordisk products, employees at Novo Nordisk and throughout the Group's value chain, and local communities. Novo Nordisk maps its stakeholders and has processes in place to ensure inclusion of stakeholder concerns and expectations. In addition, Novo Nordisk continuously develops its stakeholder engagement and capacity to be a sustainable business at corporate, regional and affiliate levels.

Materiality Key issues are identified through ongoing stakeholder engagement and trendspotting, informed by data-driven analysis and addressed by programmes or action plans with clear and measurable targets. Long-term targets are set to guide performance in strategic areas. The issues presented in the Annual Report are deemed to have a significant impact on the Group's future business performance and may support stakeholders in their decision-making.

Responsiveness The report reaches out to a wide range of stakeholders, each with specific needs and interests. The management report is prepared with the retail investors in mind. To most stakeholders, however, the Annual Report is just one element of interaction and communication with the company. The Annual Report reflects how the company is managing operations in ways that respond to and consider stakeholder concerns and interests.

Applying materiality The Consolidated social statement is a result of assessing legal requirements and disclosure commitments applicable to Novo Nordisk. It is further assessed whether information is tied directly or indirectly to Novo Nordisk's ability to create value over the short, medium and long term. When assessing whether a disclosure is material to include in the Consolidated social statement, Executive Management considers whether the matter could substantively affect the company's strategy, business model, ability to access required resources or key stakeholders. The disclosures included in the Consolidated social statement are approved by the Audit Committee. The conclusion from the external assurance provider is available in the Independent assurance report on p 111. The Consolidated social statement contains additional performance information of strategic importance, such as patients reached with diabetes care products, employee turnover, employee engagement, gender diversity, training of employees in business ethics, supplier audits and product quality. In 2017, Novo Nordisk sold human insulin according to the Access to Insulin Commitment in 30 of the world's 50 poorest countries. In total, 0.3 million patients were treated with insulin sold at or below the ceiling price. Outside this scheme, Novo Nordisk also sold human insulin below the ceiling price in other countries, reaching an estimated 5 million patients in 2017 compared to an estimated 6.5 million patients in 2016. The decline was caused by lower sales of human insulin, mainly due to an impact from lower tender volumes of human insulin in some large tender markets in 2017, partly offset by growth in sales of modern and new-generation insulin as well as Victoza®. Novo Nordisk is unable to guarantee that the price at which the company sells the insulin will be reflected in the price to the consumer. Printing the price on the actual products is one initiative to avoid mark-ups on price.

NOVO NORDISK ANNUAL REPORT 2017 99CONSOLIDATED SOCIAL STATEMENTSUPPLEMENTARY INFORMATION STATEMENT OF SOCIAL PERFORMANCE

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

Principles of consolidation The Consolidated social statement and disclosures cover the Novo Nordisk Group comprising Novo Nordisk A/S and entities controlled by Novo Nordisk A/S. SOCIAL ACCOUNTING POLICIES The accounting policies set out below and in the notes have been applied consistently in the preparation of the Consolidated social statement for all the years presented. Changes to accounting policies and disclosures The following disclosure changes have been made to align with Management priorities:

- 'Patients reached with diabetes care products via the Access to Insulin Commitment' is added as a separate line item to disclose progress on expanding access to care via the new commitment replacing the disclosure of 'Least developed countries (LDCs) where Novo Nordisk sells insulin according to the differential pricing policy'. The number of LDCs with sales has been added to the note as additional information.
- 'Sustainable engagement score' replaces 'Working the Novo Nordisk Way' to align with a new methodology.
- The calculation of 'Company reputation' has been adjusted due to implementation of a new methodology for tracking 'Sustainable engagement score'. This methodology does not allow for comparison with the RepTrak® methodology used for measuring company reputation among external stakeholder groups. Historical data have been restated accordingly.

OTHER ACCOUNTING POLICIES Sustainable engagement score Sustainable engagement score is measured on a scale of 1–5 and based on questions in the annual employee survey, OurVoice, related to sustainable engagement. The score is calculated as the share of employees who responded favourably (4 or 5) to relevant questions. For 2017, the response rate was 94%. Relevant employees trained in business ethics The mandatory business ethics training is based on globally applicable e-learning, the Business Ethics Code of Conduct and related tests released annually by the Novo Nordisk Business Ethics Compliance Office. The target groups for the individual tests vary in size and are defined by Novo Nordisk. The target groups are all employees of Novo Nordisk at the end of the reporting period except employees on leave, student assistants, PhDs and postdocs. The percentage of employees completing the training is calculated as the percentage of completion of both the Code of Conduct and the related tests, based on internal registrations.

SECTION 2 PATIENTS 2.1 PATIENTS REACHED WITH NOVO NORDISK DIABETES CARE PRODUCTS (ESTIMATE) Accounting policies The number of full-year patients reached with Novo Nordisk diabetes care products, excluding devices and PrandiMet®, is estimated by dividing Novo Nordisk's annual sales volume by the annual usage dose per patient for each product class as defined by the World Health Organization (WHO). PrandiMet® is not included as no WHO-defined dosage exists. The number of full-year patients reached with Novo Nordisk diabetes care products via the Access to Insulin Commitment is estimated by dividing Novo Nordisk's annual sales volume in the least developed countries as defined by the United Nations and other low-income countries as defined by the World Bank as well as selected organisations providing relief in humanitarian situations by the annual usage dose per patient for human insulin in vials as defined by WHO. The WHO-defined daily dosage has not changed since 1982 and may not reflect the recommended or prescribed daily dose accurately. Actual doses are based on individual characteristics (eg age and weight) and pharmacokinetic considerations. Despite this uncertainty, Novo Nordisk assesses this to be the most consistent way of reporting. Development The estimated number of full-year patients reached with Novo Nordisk's diabetes care products decreased from 28.0 million in 2016 to 27.7 million in 2017. The decline was caused by lower sales of human insulin, mainly due to an impact from lower tender volumes of human insulin in some large tender markets in 2017, partly offset by growth in sales of modern and new-generation insulin as well as Victoza®. An additional 0.9 million people were reached with modern and new-generation insulin.

2.2 DONATIONS Accounting policies Donations by Novo Nordisk to the World Diabetes Foundation (WDF) and the Novo Nordisk Haemophilia Foundation are recognised as an expense when the donation is paid out or when an unconditional commitment to donate has been made. The WDF donation is recognised in Administrative costs in the Income statement. For additional information regarding WDF, see note U.2 in the Consolidated financial statements. DONATIONS DKK million 2017 2016 2015 World Diabetes Foundation 85 85 86 Novo Nordisk Haemophilia Foundation 18 21 19 Total 103 106 105 In 2017, the estimated number of patients reached via the Access to Insulin Commitment was 0.3 million, and Novo Nordisk sold insulin according to this commitment in 30 countries. Beyond this scheme, Novo Nordisk also sold human insulin below the ceiling price in other countries, as well, reaching an estimated 5 million patients in 2017.

NOVO NORDISK ANNUAL REPORT 2017 100 CONSOLIDATED SOCIAL STATEMENT SUPPLEMENTARY INFORMATION STATEMENT OF SOCIAL PERFORMANCE

## Edgar Filing: NOVO NORDISK A S - Form 6-K

2.3 ANIMALS PURCHASED FOR RESEARCH Accounting policies The record of animals purchased for research comprises the number of animals purchased for all research undertaken by Novo Nordisk either in-house or by external contractors. The number of animals purchased is based on internal registration of purchased animals and yearly reports from external contractors. ANIMALS PURCHASED Number 2017 2016 2015 Mice, rats and other rodents 65,869 76,049 65,335 Pigs 835 891 939 Rabbits 493 347 443 Dogs 63 227 214 Non-human primates 241 406 302 Other vertebrates 122 0 7 Total animals purchased 67,623 77,920 67,240 The number of animals purchased for research in 2017 decreased by 13% compared with 2016 and reflect the changes in stages of the different research projects. In all, 97% of the animals purchased were rodents. The variation in the purchase of large animals from year to year reflects the different development phases the research projects have reached.

R.4 NEW PATENT FAMILIES (FIRST FILINGS) Accounting policies The number of new patent families (first filings) is based on new patent applications that were filed during the year. Development A total of 65 new patent families were established in 2017, a decrease of Q2% compared with filing activity in 2016, when 74 patent families were established. The patent expiry dates for the product portfolio are shown in the table below. The dates provided are for expiry in the US, Germany, China and Japan of patents on the active ingredient, unless otherwise indicated, and include extensions of patent term (including for paediatric extension, where applicable). For several products, in addition to the compound patent, Novo Nordisk holds other patents on manufacturing processes, formulations or uses that may be relevant for exclusivity beyond the expiration of the active ingredient patent. Furthermore, regulatory data protection may apply.

2.4 MARKETED PRODUCTS IN KEY MARKETS (ACTIVE INGREDIENTS) US Germany China Japan Diabetes care: NovoRapid® (NovoLog®) Expired Expired Expired Expired NovoMix® 30 (NovoLog® Mix 70/30) Expired Expired Expired Expired NovoNorm® (Prandin®) Expired Expired Expired Expired Levemir® 2019 2019 Expired 2019 Victoza® 2022 2022 Expired 2022 Tresiba® 2029 2028 2024 2027 Ryzodeg® 2029 2028 2024 2024 Xultophy® 2029 2028 2024 2024 Fiasp® (2030)2 (2030)2 (2030)2 (2030)2 Ozempic® 20313 20313 2026 20313 Obesity: Saxenda® 2022 2022 Expired Expired7 Biopharmaceuticals: Norditropin® (Norditropin® SimpleXx®) Expired Expired Expired Expired NovoSeven® Expired4 Expired4 Expired4 Expired4 NovoEight® N/A N/A N/A N/A NovoThirteen® (TRETEN®) 2021 Expired N/A Expired Vagifem® 10 mcg 20225,6 20215 N/A 20215 Refixia® (REBINYN®) 20283 20273 2022 20273 1. Patent term extension until 2027 may apply. 2. Protected by formulation patent, which expires in 2030; compound patent has expired. 3. Current estimates. T. Room temperature-stable formulation patent until 2023 in China, Germany and Japan and until 2025 in the US. U. Patent covers low-dose treatment regimen. 6. Licensed to several generic manufacturers from October 2016. 7. Protected by formulation patent, which expires in 2024. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

SECTION 3 EMPLOYEES 3.1 EMPLOYEES Accounting policies The number of employees is recorded as all employees except externals, employees on unpaid leave, interns, bachelor and master thesis employees, and substitutes at year-end. Employees are attributed to geographical regions according to their primary workplace across the commercial units, research and development, manufacturing and support functions. Employees in corporate functions are included in Region Europe and employees in the global service centre are included in Region AAMEO. The rate of turnover is measured as the number of employees, excluding temporary employees, who left the Group during the financial year divided by the average number of employees, excluding temporary employees. Diversity at Novo Nordisk is reported as the percentage split by gender in all managerial positions and for newly appointed managers. Managerial positions are defined as all managers at Novo Nordisk (global job level incl CEO, EVP, SVP, CVP, VP, Director, Manager and Team Leader). New managers are defined as all employees who have moved to a managerial position within the last 12 months – both promoted and externally hired. EMPLOYEES Numbers 2017 2016 2015 North America 6,391 6,394 6,439 Region Europe 21,920 22,529 21,871 - of which in Denmark 17,510 18,221 17,398 Region AAMEO 6,767 6,200 5,606 Region China 4,482 4,356 4,389 Region Japan & Korea 1,252 1,190 1,119 Region Latin America 1,870 1,777 1,698 Total employees 42,682 42,446 41,122 Full-time employees 42,076 41,971 40,638 Employee turnover 11.0% 9.7% 9.2% Increase in employees 1% 3% (1%) Gender split among all managers 60:40 59:41 59:41 Share of women among newly appointed managers 43% 43% 44% The growth in employees was mainly driven by the global service centre in Bangalore, India. Employee turnover increased from 9.7% in 2016 to 11.0% in 2017. The increased employee turnover in 2017 was mainly due to the workforce reduction at the end of 2016; as a part of this workforce was still employed at the end of 2016 it affects the 2017 employee turnover.

3.2 FREQUENCY OF OCCUPATIONAL ACCIDENTS Accounting policies The frequency of occupational accidents with absence is measured as the internally reported number of accidents using full-time employees, excluding externals, employees on unpaid leave, interns, bachelor and master thesis employees, and substitutes, per million nominal working hours. An occupational accident with absence is any work-related accident causing at least one day of absence in addition to the day of the accident. Development The average frequency rate of occupational accidents with absence was 7.7 per million working hours in 2017, compared with 3.0 in 2016, corresponding to a 10% decrease. There were no work-related fatalities in 2017, compared with one fatality in 2016. The performance improvement is mainly attributed to the mandatory training in product supply. Novo Nordisk works with a zero-injury mindset and has a long-term commitment to continuously improving safety performance.

SECTION 4 ASSURANCE 4.1 BUSINESS ETHICS REVIEWS The number of business ethics reviews is recorded as the number of business ethics reviews and trend reports performed by Group Internal Audit in affiliates, production sites and headquarter areas. Any gaps between procedures and behaviour are identified and presented to Management and the Board of Directors as findings. An action plan for the closure of findings is agreed upon, and Group Internal Audit follows up on the implementation of the agreed actions before closing the findings. Development A total of 34 business ethics reviews were completed in 2017 with 130 findings, compared with 52 reviews with 234 findings in 2016. It is Group Internal Audit's assessment that the overall business ethics compliance level is sound. Closure of findings progressed as planned, and there were no overdue findings as of 31 December 2017. All management teams, from entry level upwards, are encouraged to focus on enhanced diversity, with the aim of ensuring a robust pipeline of talent for management positions. Among employees as a whole, the gender split was 49% women and 51% men in 2017. The graph below shows the gender split among managers for the last three years.

GENDER IN MANAGEMENT EVP/SVP CVP/VP/GM Managers 0 20 40 60 80 100 80 60 40 20 0 100 2015 2016 2017 % Men % Women NOVO NORDISK ANNUAL REPORT 2017 102 CONSOLIDATED SOCIAL STATEMENT SUPPLEMENTARY INFORMATION STATEMENT OF SOCIAL PERFORMANCE

## Edgar Filing: NOVO NORDISK A S - Form 6-K

4.2 FULFILMENT OF ACTION POINTS FROM FACILITATIONS OF THE NOVO NORDISK WAY Accounting policies Facilitation is the internal audit process for assessing compliance with the Novo Nordisk Way. The assessment is based on review of documentation followed by an on-site visit where randomly selected employees, Management and stakeholders are interviewed. Any identified gaps related to the Novo Nordisk Way are presented to Management as findings. The facilitator and Management agree on an action plan to close the findings. The percentage of fulfilment of action points is measured as an average of timely closure of action points issued in the current year and the two previous years. The reason for using a three-year average as the basis for the calculation is that action lead times typically vary from a few months to more than a year. FACILITATIONS AND FINDINGS 2017 2016 2015 Fulfilment of action points 97% 95% 94% Facilitations 65 84 65 Findings 264 283 257 A total of 65 units were facilitated covering approximately 21,000 employees, of whom almost 3,000 were interviewed. In addition, feedback on those units was collected from almost 700 stakeholders. Overall, the facilitations in 2017, as in 2016, showed a 'high level' of compliance with the Novo Nordisk Way. Corrective actions and corresponding deadlines were agreed with local management for all actions. The main areas of improvement identified, covering approximately 60% of all findings, concerned Essential 2 'We set ambitious goals and strive for excellence', Essential 5 'We build and maintain good relations with our key stakeholders' and Essential 7 'We focus on personal performance'. The 10 Essentials are part of the Novo Nordisk Way. See p 17 for additional information.

T.3 SUPPLIER AUDITS Accounting policies The number of supplier audits concluded by Novo Nordisk's Supplier Audit department includes the number of responsible sourcing audits and quality audits conducted in the areas of direct- and indirect-spend materials. SUPPLIER AUDITS Numbers 2017 2016 2015 Responsible sourcing audits 28 27 28 Quality audits 218 196 212 Total supplier audits 246 223 240 The number of audits concluded in 2017 increased by 10% compared with R016. The increase in quality audits was mainly due to an expanded focus on outsourced services. There were no critical findings in 2017.

4.4 PRODUCT RECALLS Accounting policies The number of product recalls is recorded as the number of times Novo Nordisk has instituted a recall and includes recalls in connection with clinical trials. A recall can affect various countries but only counts as one recall. Development Novo Nordisk had six product recalls from the market in 2017, which is the same level as in 2016. None of these recalls were critical. Local health authorities were informed in all instances to ensure that distributors, pharmacies, doctors and patients received appropriate information. 4.5 FAILED INSPECTIONS Accounting policies The number of failed inspections is measured in relation to the US Food & Drug Administration (USFDA), the European Medicines Agency (EMA), the Japanese Pharmaceuticals & Medical Devices Agency (PMDA), Lloyd's Register Quality Assurance (LRQA) and domestic authorities for strategic manufacturing sites. Failed inspections are defined as inspections where Warning Letters or EMA non-compliance letters related to GMP inspections are received, GMP/ISO certificates for strategic sites are lost, pre-approval inspections result in a Warning Letter, study conclusions are changed due to GCP/GLP inspection issues, or marketing or import authorisations are withdrawn due to inspection issues. Strategic sites are defined as the manufacturing sites in Brazil, China, Denmark, France and the US. Development In 2017, as in 2016, there were no failed inspections among those resolved at year-end. In 2017, 83 inspections were conducted compared with 74 in R016. At year-end, 54 inspections had been passed and 29 were unresolved, as final inspection reports had not been received or the final authority acceptance was pending, which is normal. Follow-up on unresolved inspections will continue in 2018.

T.6 COMPANY REPUTATION Accounting policies Company reputation is measured annually using the RepTrak® methodology developed by Reputation Institute. The total score is measured as the mean company reputation score among people with diabetes, general practitioners and diabetes specialists across key markets. Reputation is measured on a scale of 0–100, with 100 being the best possible score. A score above 80 is considered excellent; a score between 70 and 80 is considered strong. Data were collected between June and September 2017. The data are collected through annual surveys carried out by external consultancy firms. COMPANY REPUTATION By stakeholder group 2017 2016 2015 People with diabetes 77.2 73.7 73.9 General practitioners 79.1 78.9 83.9 Diabetes specialists 81.7 80.9 85.3 Total score 79.3 77.8 81.1 NOVO NORDISK ANNUAL REPORT 2017 103CONSOLIDATED SOCIAL STATEMENTSUPPLEMENTARY INFORMATION STATEMENT OF SOCIAL PERFORMANCE

## Edgar Filing: NOVO NORDISK A S - Form 6-K

STATEMENT OF ENVIRONMENTAL PERFORMANCE FOR THE YEAR ENDED 31 DECEMBER Note 2017 2016 2015 RESOURCES Energy consumption (1,000 GJ) 2.1 2,922 2,935 2,778 Share of renewable power for production 2.1 79% 78% 78% Water consumption (1,000 m3) 2.2 3,276 3,293 3,131 EMISSIONS AND WASTE CO2 emissions from energy consumption (1,000 tons) 3.1 90 92 107 CO2 emissions from product distribution (1,000 tons) 3.1 39 38 43 Waste (1,000 tons) 3.2 157 153 159 COMPLIANCE Breaches of regulatory limit values 4.1 23 42 28 NOTES TO THE CONSOLIDATED ENVIRONMENTAL STATEMENT Basis of preparation Resources Emissions and waste Compliance In the Consolidated environmental statement, Novo Nordisk reports on performance in terms of resources, and emissions and waste. Progress is reported against long-term targets to continuously reduce environmental impacts. See pp 13 and 15. The Statement of environmental performance contains additional performance information of strategic importance, such as energy and water consumption, CO2 emissions, waste and breaches of regulatory limit values. Steady progress on reducing CO2 emissions from production sites In 2017, 79% of the power used at production sites came from renewable sources, such as wind, hydropower and biomass. With planned initiatives, the company is well on track to meet the target that all production sites are to be 100% powered by renewable energy by 2020. The target is in line with the Paris Agreement. The graph shows how CO2 emissions and sales have been decoupled. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

**SECTION 1 BASIS OF PREPARATION** General reporting standards and principles The Consolidated environmental statement has been prepared in accordance with the same standards as those for the Consolidated social statement. See section 1 'Basis of preparation' of the Consolidated social statement on p 99. Principles of consolidation The Consolidated environmental statement covers the production sites including office buildings and R&D facilities at the sites, except for CO<sub>2</sub> emissions from product distribution, which covers external suppliers used to distribute Novo Nordisk products.

**ENVIRONMENTAL ACCOUNTING POLICIES** The accounting policies set out below have been consistently applied in the preparation of the Consolidated environmental statement for all the years presented. Changes to accounting policies and disclosures The following disclosure changes have been made to align with Management priorities: • 'Organic residues' and 'Waste' were previously reported as two separate line items. As of 2017, organic residues will be reported as part of the disclosure of waste, and the note has been updated accordingly. • 'Non-hazardous waste' is no longer reported as a separate line item but included as part of the information in note 3.2 Waste.

**SECTION 2 RESOURCES** 2.1 ENERGY CONSUMPTION AND SHARE OF RENEWABLE POWER Accounting policies Energy consumption is measured as both direct supply of energy (internally produced energy), which is energy Novo Nordisk produces from mainly biogas, natural gas and wood, and indirect supply of external energy (externally produced energy), which is power, steam and district heat. The consumption of fuel (internally produced energy) and externally produced energy is based on meter readings and invoices. Share of renewable power is reported according to the Greenhouse Gas (GHG) Protocol Scope 2 Guideline. It is calculated as the sum of power in each country that comes from 100% renewable sources, either sourced from the market or self-produced.

	2017	2016	2015
ENERGY CONSUMPTION	1,000 GJ	2017	2016
Diabetes care and obesity	2,015	2,050	2,006
Biopharmaceuticals	482	460	322
Not allocated	1,425	1,425	1,450
Total energy consumption	2,922	2,935	2,778

Share of renewable power for production 79% 78% 78% 1. Not allocated consists of consumption that cannot be directly linked to the production of either Diabetes care and obesity or Biopharmaceuticals, ie office buildings and research activities. In 2017, energy consumption decreased slightly. Novo Nordisk continues to focus on energy efficiency, and projects implemented in 2017 are expected to give annual savings of more than 18,000 GJ. The share of renewable power increased slightly to 79% in 2017 from 78% in 2016. Novo Nordisk has a target to reach 100% power from renewable sources by 2020 and at year-end, 11 out of 16 production sites use power from renewable sources.

**2.2 WATER CONSUMPTION** Accounting policies Water consumption is measured based on meter readings and invoices. It includes drinking water, industrial water and steam.

	2017	2016	2015
WATER CONSUMPTION	1,000 m <sup>3</sup>	2017	2016
Diabetes care and obesity	2,808	2,866	2,753
Biopharmaceuticals	290	260	213
Not allocated	1,178	1,167	1,165
Total water consumption	3,276	3,293	3,131

1. Not allocated consists of consumption that cannot be directly linked to the production of either Diabetes care and obesity or Biopharmaceuticals, ie office buildings and research activities. In 2017, water consumption decreased slightly. Water-saving projects remain in focus, and projects implemented in 2017 are expected to give annual water savings of more than 100,000m<sup>3</sup>, which corresponds to 3% of the total water use. More than half of the water-saving projects were implemented at a production site located in an area subject to high seasonal variations in water availability. 7% of Novo Nordisk's water consumption is in areas subject to high water stress.

**SECTION 3 EMISSIONS AND WASTE** 3.1 CO<sub>2</sub> EMISSIONS Accounting policies CO<sub>2</sub> emissions from energy consumption The amount of CO<sub>2</sub> emissions from energy consumption covers consumption at production sites measured in metric tons. CO<sub>2</sub> emissions from energy consumption are calculated according to the GHG Protocol and based on emission factors from the previous year. CO<sub>2</sub> emissions from product distribution CO<sub>2</sub> emissions from product distribution are calculated by external transportation suppliers as the estimated emissions from product distribution in metric tons. CO<sub>2</sub> emissions are calculated based on the worldwide distribution of semi-finished and finished products, raw materials and components by air, sea and road between production sites and from production sites to affiliates, direct customers and importing distributors. CO<sub>2</sub> emissions from product distribution from affiliates to pharmacies, hospitals and wholesalers are not included.

NOVO NORDISK ANNUAL REPORT 2017 105 CONSOLIDATED ENVIRONMENTAL STATEMENTS SUPPLEMENTARY INFORMATION STATEMENT OF ENVIRONMENTAL PERFORMANCE

## Edgar Filing: NOVO NORDISK A S - Form 6-K

3.1 CO2 EMISSIONS (CONTINUED) CO2 EMISSIONS 1,000 TONS 2017 2016 2015 CO2 emissions from energy consumption 90 92 107 - Diabetes care and obesity 76 78 88 - Biopharmaceuticals 12 11 6 - Not allocated 1 2 3 13 CO2 emissions from product distribution 39 38 43 Total CO2 emissions 129 130 150 1. Not allocated consists of consumption that cannot be directly linked to the production of either Diabetes care and obesity or Biopharmaceuticals, ie office buildings and research activities. CO2 emissions from energy consumption at production sites decreased slightly by 2% due to reduced energy use at production sites using fossil fuel-based energy. Emissions from product distribution increased by 3% compared with 2016. Emissions from air and ground transport remained stable. More products were distributed by sea. Distributing as many products as possible by sea remains a priority for Novo Nordisk, as sea transport reduces both CO2 emissions and costs relative to product volume.

3.2 WASTE Accounting policies Waste is measured as the sum of all the waste disposed of based on weight receipts. WASTE 1,000 TONS 2017 2016 2015 Recycling 122 116 123 - Organic residues 116 109 114 - Other (paper, cardboard, metals etc) 6 7 9 Energy recovery 2 28 30 28 - Ethanol waste 3 21 24 21 - Other (various combustible waste) 7 6 7 No energy recovery 4 6 6 7 - Water waste 5 5 6 - Other 1 1 1 Landfill 1 1 1 Total waste 157 153 159 1. Organic residues for recycling is waste from the production of the active pharmaceutical ingredients, where the energy is recovered in biogas plants and the digested slurry is used on local farmland as fertiliser. 2. Energy recovery is waste disposed of at incineration plants with energy recovery and at biogas plants. 3. Ethanol is used in purification of diabetes and biopharmaceutical products. The ethanol is recovered in own regeneration plants and re-used many times. The ethanol waste reported here is from production with no regeneration or residues from the regeneration process. 4. Water waste and other waste not suitable for other disposal methods, such as hazardous waste for incineration and various other types of waste. The total waste volume increased by 3% compared with 2016, which was mainly due to an increase in the organic residues from the fermentation of insulin. Ethanol waste decreased due to process optimisations and increased regeneration of ethanol. 8% of all the waste was categorised as hazardous waste, a decrease from 0% in 2016. This is mainly a result of the decrease in ethanol waste. At Novo Nordisk, it is a priority to recycle as much waste as possible or ensure energy recovery when recycling is not possible. 96% of total waste is either recycled, used for biogas production or incinerated at plants where the energy is used for heat and power production.

SECTION 4 COMPLIANCE 4.1 BREACHES OF REGULATORY LIMIT VALUES Accounting policies Breaches of regulatory limit values cover all breaches reported to the environmental authorities. Development Incidents with breaches of regulatory limit values decreased from 42 in 2016 to 23 in 2017, primarily due to improved control of the pH and Biological Oxygen Demand (BOD) and Chemical Oxygen Demand (COD) at one facility. The majority of the breaches were related to wastewater, with minor impacts on the environment. P 30 60 90 120 150 WASTE DISPOSAL 2015 2016 2017 Energy recovery No energy recovery Landfill/Recycling 1,000 tons NOVO NORDISK ANNUAL REPORT 2017 106 CONSOLIDATED ENVIRONMENTAL STATEMENT SUPPLEMENTARY INFORMATION STATEMENT OF ENVIRONMENTAL PERFORMANCE

## Edgar Filing: NOVO NORDISK A S - Form 6-K

STATEMENT BY THE BOARD OF DIRECTORS AND EXECUTIVE MANAGEMENT ON THE ANNUAL REPORT Today, the Board of Directors and Executive Management approved the Annual Report of Novo Nordisk A/S for the year 2017. The Board of Directors and Executive Management are jointly responsible for ensuring the integrity and quality of the report. The Annual Report has been prepared in accordance with the International Integrated Reporting Framework. The Consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act. Further, the Financial statements of the parent company and Management's review have been prepared in accordance with the Danish Financial Statements Act. In our opinion, the Consolidated financial statements and the Financial statements of the parent company give a true and fair view of the financial position at 31 December 2017, the results of the Group's and parent company's operations, and consolidated cash flows for the financial year 2017. Furthermore, in our opinion, Management's review includes a true and fair account of the development in the operations and financial circumstances, of the results for the year and of the financial position of the Group and the parent company as well as a description of the most significant risks and elements of uncertainty facing the Group and the parent company. Novo Nordisk's Consolidated social and environmental statements have been prepared in accordance with the reporting principles of materiality, inclusivity and responsiveness of AA1000APS(2008), and social and environmental accounting policies. They give a true and fair account and a balanced and reasonable presentation of the organisation's social and environmental performance in accordance with these principles. We recommend that the Annual Report be adopted at the Annual General Meeting. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

INDEPENDENT AUDITOR'S REPORT To the shareholders of Novo Nordisk A/S Our opinion In our opinion, the Consolidated Financial Statements give a true and fair view of the Group's financial position at 31 December 2017 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2017 in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act. Moreover, in our opinion, the Parent Company Financial Statements give a true and fair view of the Parent Company's financial position at 31 December 2017 and of the results of the Parent Company's operations for the financial year 1 January to 31 December 2017 in accordance with the Danish Financial Statements Act. Our opinion is consistent with our Auditor's Long-form Report to the Audit Committee and the Board of Directors. What we have audited The Consolidated Financial Statements of Novo Nordisk A/S for the financial year 1 January to 31 December 2017, pp. 58-94, comprise the income statement and statement of comprehensive income, cash flow statement, balance sheet, equity statement and the notes, including summary of significant accounting policies. The Parent Company Financial Statements of Novo Nordisk A/S for the financial year 1 January to 31 December 2017, pp. 114-118, comprise the income statement, balance sheet, equity statement and the notes, including summary of significant accounting policies. Collectively referred to as the "Financial Statements". Basis for opinion We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the Auditor's responsibilities for the audit of the Financial Statements section of our report. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion. Independence We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) and the additional requirements applicable in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code. To the best of our knowledge and belief, prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014 were not provided. Appointment We were first appointed auditors of Novo Nordisk A/S in April 1982 for the financial year 1982. We have been reappointed annually by shareholder resolution for a total period of uninterrupted engagement of 36 years including the financial year 2017. Key audit matters Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the Financial Statements for 2017. These matters were addressed in the context of our audit of the Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. Key audit matter How our audit addressed the key audit matter Revenue recognition relating to rebates and discounts in the US business The Group sells to various customers in the US, which can fall under certain commercial and government mandated contracts and reimbursement arrangements, of which the most significant are Managed Care, Medicare, Medicaid and charge-backs to wholesalers. These arrangements result in deductions to gross sales in arriving at net sales and give rise to obligations for the Group to provide customers with rebates, discounts and allowances, which for unsettled amounts are recognised as an accrual. We have focused on this area because rebates, discounts and allowances are complex and because establishing an appropriate accrual requires significant judgment and estimation by Management. This judgment is particularly complex in a US healthcare environment in which competitive pricing pressure and product discounting are growing trends. Refer to Note 2.1 and Note 3.6. We have obtained Management's calculations for accruals under applicable schemes and assessed the significance of assumptions applied by comparing them to the Group's stated commercial policies, the terms of the applicable contracts, third party data and historical levels of paid rebates and discounts in the US business. We have compared the assumptions to contracted prices, historical rebates, discounts, allowances and to current payment trends. We have also considered the historical accuracy of the Group's estimates in previous years. We have formed an independent assessment of the most significant elements of the accrual at 31 December 2017 using third party data and compared this expectation to the actual accrual recognised by the Group. NOVO NORDISK ANNUAL REPORT 2017 108 INDEPENDENT AUDITOR'S REPORT INDEPENDENT AUDITOR'S REPORT

## Edgar Filing: NOVO NORDISK A S - Form 6-K

Statement on Management's Review Management is responsible for Management's Review, pp 1-56 and pp 95-97. Our opinion on the Financial Statements does not cover Management's Review, and we do not express any form of assurance conclusion thereon. In connection with our audit of the Financial Statements, our responsibility is to read Management's Review and, in doing so, consider whether Management's Review is materially inconsistent with the Financial Statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. Moreover, we considered whether Management's Review includes the disclosures required by the Danish Financial Statements Act. Based on the work we have performed, in our view, Management's Review is in accordance with the Consolidated Financial Statements and the Parent Company Financial Statements and has been prepared in accordance with the requirements of the Danish Financial Statement Act. We did not identify any material misstatement in Management's Review. Management's responsibilities for the Financial Statements Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act and for the preparation of parent company financial statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as Management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error. In preparing the Financial Statements, Management is responsible for assessing the Group's and Parent Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless Management either intends to liquidate the Group or Parent Company or to cease operations, or has no realistic alternative but to do so. Auditor's responsibilities for the audit of the Financial Statements Our objectives are to obtain reasonable assurance about whether the Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Financial Statements. As part of an audit in accordance with ISAs and the additional requirements under Danish audit regulation, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Financial Statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Parent Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of Management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Financial Statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the Parent Company to cease to continue as a going concern.

Litigations The pharmaceuticals industry is heavily regulated which increases inherent litigation risk and litigation and contingent liabilities may arise from product-specific and general legal proceedings, from guarantees, marketing practices, unethical behaviour or government investigations connected with the Group's activities. We have focused on this area as the amounts involved are potentially material and the valuation of the provision is based on application of material judgment and estimation and therefore is associated with uncertainty. Accordingly, unexpected adverse outcomes could significantly impact the Group's reported profit and statement of financial position. Refer to Note 3.6. We have discussed the status of significant known actual and potential litigation with in-house legal counsel. We have obtained and substantively tested evidence to support the decisions and rationale for provisions held or decisions not to recognise provisions, including correspondence with external legal counsel and other counter-parties to litigations and considered Management's assessment of the probability of defending any litigation and the reliability of estimating any provisions. We have developed an independent expectation of the litigation provision based on litigation history and other available evidence to assess the valuation and completeness of the provisions recognised by the Group. We have obtained confirmations from external legal counsel to confirm our understanding of settled and outstanding litigation and asserted claims. We have evaluated significant adjustments to legal provisions recorded during the year to determine if they were indicative of management bias. We have tested the completeness of the external legal counsels from whom we have asked for direct confirmation by testing legal expenses on a sample basis and comparing to internal documents. • Evaluate the overall presentation, structure and content of the Financial Statements, including the disclosures, and whether the Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation. • Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the Consolidated Financial Statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion. We communicate with those charged with governance (the Board of Directors) regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit. We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards. From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Financial Statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication. INDEPENDENT AUDITOR'S REPORT

## Edgar Filing: NOVO NORDISK A S - Form 6-K

INDEPENDENT LIMITED ASSURANCE REPORT ON THE CONSOLIDATED SOCIAL AND ENVIRONMENTAL REPORTING To the Stakeholders of Novo Nordisk A/S Novo Nordisk A/S engaged us to provide limited assurance on the information described below and set out in the Annual Report of Novo Nordisk for the year ended 31 December 2017. Our conclusion Based on the procedures we have performed and the evidence we have obtained:

- A) Nothing has come to our attention that causes us to believe that the Consolidated social and environmental statement of Novo Nordisk's Annual Report for the year ended 31 December 2017 has not been prepared, in all material respects, in accordance with the Reporting Criteria.
- B) Nothing has come to our attention that causes us to believe that the description of Novo Nordisk's alignment with AA1000APS (2008) (AA1000ApS) principles of Inclusivity, Materiality and Responsiveness is not fairly stated. This conclusion is to be read in the context of what we say in the remainder of our report. What we are assuring The scope of our work was limited to assurance over: A) the Statement of social and environmental performance and associated Notes on pages 98 to 106 in the Annual Report of Novo Nordisk (the "Selected Information"). B) Novo Nordisk's description of alignment with the AA1000APS principles of Inclusivity, Materiality and Responsiveness for the year ended 31 December 2017, which is set out on pages 99 to 100 (the "Stakeholder Engagement description") of the Annual Report. Professional standards applied and level of assurance We performed a limited assurance engagement in accordance with International Standard on Assurance Engagements 3000 (Revised) 'Assurance Engagements other than Audits and Reviews of Historical Financial Information' and AA1000AS (Type 2, moderate, which is the equivalent to ISAE 3000 limited assurance). A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both the risk assessment procedures, including an understanding of internal control, and the procedures performed in response to the assessed risks; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed. Our independence and quality control We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other ethical requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. We also qualify as independent as defined by the AA1000 Assurance Standard (2008) (AA1000AS). The firm applies International Standard on Quality Control Q and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements. Our work was carried out by an independent multidisciplinary team with experience in sustainability reporting and assurance. Understanding reporting and measurement methodologies The Selected Information needs to be read and understood together with the Reporting Criteria (page 99 to 106), which Novo Nordisk A/S is solely responsible for selecting and applying. The absence of a significant body of established practice on which to draw to evaluate and measure non-financial information allows for different, but acceptable, measurement techniques and can affect comparability between entities and over time. Work performed A) We are required to plan and perform our work in order to consider the risk of material misstatement of the Selected Information. In doing so, we:
  - conducted interviews with data owners to understand the key processes and controls for reporting site performance data;
  - obtained an understanding of the key processes and controls for managing, recording and reporting the Selected Information.
  - performed limited substantive testing on a selective basis of the Selected Information at corporate head office to check that data had been appropriately measured, recorded, collated and reported;
  - performed analysis of data from reporting sites, selected on the basis of risk and materiality to the group; and
  - considered the disclosure and presentation of the Selected Information.B) In respect of Novo Nordisk's description of alignment with AA1000APS principles of Inclusivity, Materiality and Responsiveness we performed the following activities:
  - interviewed members of Novo Nordisk's Executive Management, Communication, Relations & Corporate Affairs and Global Market Access to determine their understanding of their stakeholders, the mechanisms used to engage them and key issues that are of interest to each stakeholder group;
  - interviewed external stakeholders to determine their perception of Novo Nordisk's capabilities in relation to stakeholder engagement, in particular, in relation to being inclusive and responsive to stakeholders on material topics;
  - reviewed evidence on a selective basis to support the assertions made in these interviews and in the Stakeholder Engagement description;
  - confirmed the existence of systems and procedures to support Novo Nordisk's Triple Bottom Line governance and stakeholder relationships.Our work focused on access and affordability, including a review of Novo Nordisk's Access to insulin commitment, pricing policy and strategy in the US and in International Operations; and
  - assessed the disclosure and presentation of the Stakeholder Engagement description. Novo Nordisk's responsibilities Novo Nordisk's management are responsible for:
    - designing, implementing and maintaining internal controls over information relevant to the preparation of the Selected Information that is free from material misstatement, whether due to fraud or error;
    - establishing objective Reporting Criteria for preparing the Selected Information;
    - measuring and reporting the Selected Information based on the Reporting Criteria; and
    - reporting the Stakeholder Engagement description; and
    - the content of the Annual Report 2017. Our responsibility We are responsible for:
      - planning and performing the engagement to obtain limited assurance about whether the Selected Information and the Stakeholder Engagement description is free from material misstatement, whether due to fraud or error;
      - forming an independent conclusion, based on the procedures we have performed and the evidence we have obtained; and
      - reporting our conclusion to the Stakeholders of Novo Nordisk A/S. Observations and recommendations According to AA1000AS, we are required to include observations and recommendations for improvements in relation to adherence to the AA1000APS principles. We have no significant recommendations regarding Inclusivity, Materiality and Responsiveness. We have communicated a number of minor recommendations for improvement to the management of Novo Nordisk. ## Edgar Filing: NOVO NORDISK A S - Form 6-K

A selection of Novo Nordisk's injection devices

**PRODUCT OVERVIEW**

**DIABETES CARE**

**NEW-GENERATION INSULIN AND COMBINATIONS** • Tresiba®, insulin degludec • Ryzodeg®, insulin degludec/insulin aspart • Fiasp®, fast-acting insulin aspart • Xultophy®, insulin degludec/liraglutide

**MODERN INSULIN** • Levemir®, insulin detemir • NovoRapid®, insulin aspart • NovoRapid® PumpCart®, pre-filled insulin pump cartridge • NovoMix® 30, biphasic insulin aspart • NovoMix® 50, biphasic insulin aspart • NovoMix® 70, biphasic insulin aspart

**HUMAN INSULIN** • Insulatard®, isophane (NPH) insulin • Actrapid®, regular human insulin • Mixtard® 30, biphasic human insulin • Mixtard® 40, biphasic human insulin • Mixtard® 50, biphasic human insulin

**GLUCAGON-LIKE PEPTIDE-1** • Victoza®, liraglutide

**OTHER PRE-FILLED INSULIN DELIVERY SYSTEMS** • FlexTouch®, U100, U200 • FlexPen® • InnoLet®

**OTHER INSULIN DELIVERY SYSTEMS** • PumpCart®, NovoRapid® cartridge to be used in pump • Cartridge • Vial

**INSULIN PENS** • NovoPen® 5 PLUS • NovoPen® 5 • NovoPen® 4 • NovoPen® 3 • NovoPen Echo®, with memory function

**NEEDLES** • NovoFine® Plus • NovoFine® • NovoTwist® • NovoFine® AutoCover

**ORAL ANTIDIABETIC AGENTS** • NovoNorm®, repaglinide

**GLUCAGON** • GlucaGen®, glucagon for diagnostic use • GlucaGen® Hypokit, glucagon emergency kit for severe hypoglycaemia

**OBESITY**

**GLUCAGON-LIKE PEPTIDE-1** • Saxenda®, liraglutide 3 mg

**BIOPHARMACEUTICALS**

**HAEMOPHILIA** • NovoSeven®, recombinant factor VIIa, also available with pre-filled syringe in an increasing number of countries • NovoEight®, recombinant factor VIII • NovoThirteen®, recombinant factor XIII

**HUMAN GROWTH HORMONE** • Norditropin®, somatropin (rDNA origin) • Norditropin® FlexPro®, pre-filled multidose delivery system • Norditropin® NordiFlex®, pre-filled multidose delivery system • Norditropin® NordiLet®, pre-filled multidose delivery system • Norditropin® SimpleXx®, durable multidose delivery system • NordiPen® • PenMate®, automatic needle inserter (for NordiPen® and NordiFlex®)

**HORMONE REPLACEMENT THERAPY** • Vagifem®, estradiol hemihydrate • ActiVelle®, estradiol/norethisterone acetate • Kliogest®, estradiol/norethisterone acetate • Novofem®, estradiol/norethisterone acetate • Trisequens®, estradiol/norethisterone acetate • Estrofem®, estradiol

**ADDITIONAL INFORMATION**

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**MORE INFORMATION AND REFERENCES** Additional Reporting Novo Nordisk provides additional disclosure to satisfy legal requirements and stakeholder interests. Additional reports can be downloaded from [novonordisk.com/annualreport](http://novonordisk.com/annualreport). **MATERIALITY** Novo Nordisk leans on the International Integrated Reporting Council's definition of materiality. Information deemed material for providers of financial capital in their decision-making is included in the Annual Report, ie of such relevance and importance that it could substantively influence their assessments of Novo Nordisk's ability to create value over the short, medium and long term. **ANNUAL REPORT** The full statutory Annual Report is available online [novonordisk.com/annualreport](http://novonordisk.com/annualreport). A printed extract excluding the financial statements of the parent company is available in English. This Annual Report is prepared in accordance with the International Financial Reporting Standards and the Danish Financial Statements Act. Moreover, it meets the requirements of an integrated report, as per the International Integrated Reporting Framework. A shortened, printed version, consisting of the Management review and excerpts from the consolidated statements, is available in Danish. **FORM 20-F** The Form 20-F is filed using a standardised reporting form so that investors can evaluate the company alongside US domestic equities. It is an annual reporting requirement by the US Securities and Exchange Commission (SEC) for foreign private issuers with equity shares listed on exchanges in the United States. **CORPORATE GOVERNANCE REPORT** The corporate governance report discloses Novo Nordisk's compliance with Danish Corporate Governance Recommendations to meet the requirements of the Danish Financial Statements Act. **COMMUNICATION ON PROGRESS** The Communication on Progress to the UN Global Compact is a voluntary reporting on performance towards its 10 principles on human rights, labour rights, environment and anti-corruption and additional progress reporting on corporate sustainability leadership and UN goals. It complements the Annual Report to meet the requirements of the Danish Financial Statements Act, sections 99a and 99b, on corporate responsibility and gender diversity. It also adheres to the UN Guiding Principles Reporting Framework on respect of human rights. **NEWS AND UPDATES FOR MORE NEWS FROM NOVO NORDISK, VISIT** [novonordisk.com/investors](http://novonordisk.com/investors) [novonordisk.com/media](http://novonordisk.com/media) [novonordisk.com/sustainable-business](http://novonordisk.com/sustainable-business) **REFERENCES** 1.  PARENT COMPANY

---

## Edgar Filing: NOVO NORDISK A S - Form 6-K

**NOTES 1 ACCOUNTING POLICIES** The financial statements of the parent company have been prepared in accordance with the Danish Financial Statements Act (Class D) and other accounting regulations for companies listed on Nasdaq Copenhagen. The accounting policies for the financial statements of the parent company are unchanged from the last financial year. The accounting policies are the same as for the Consolidated financial statements with the adjustments described below. For a description of the accounting policies of the Group, please refer to the Consolidated financial statements, pp 63-64.

No separate statement of cash flows has been prepared for the parent company; please refer to the Statement of cash flows for the Group on p 59.

**SUPPLEMENTARY ACCOUNTING POLICIES FOR THE PARENT COMPANY** Financial assets In the financial statements of the parent company, investments in subsidiaries are recorded under the equity method, using the respective share of the net asset values in subsidiaries. Net profit of subsidiaries less unrealised intra-Group profits is recorded in the Income statement of the parent company. To the extent that net profit exceeds declared dividends from such companies, net revaluation of investments in subsidiaries is transferred to Net revaluation reserve under Equity according to the equity method.

Profits in subsidiaries are disclosed as profit after tax. Fair value adjustments of financial assets categorised as 'Available for sale' are recognised in the Income statement. Tax For Danish tax purposes, the parent company is assessed jointly with its Danish subsidiaries. The Danish jointly taxed companies are included in a Danish on-account tax payment scheme for Danish corporate income tax. All current taxes under the scheme are recorded in the individual companies. Novo Nordisk A/S and its Danish subsidiaries are included in the joint taxation of the parent company, Novo Holdings A/S. Uncertain tax positions are presented individually as part of Tax receivables/ Tax payables. Novo Nordisk recognises deferred income tax assets if it is probable that sufficient taxable income will be available in the future against which the temporary differences can be utilised.

 million respectively. Security for debt Land, buildings and equipment etc at carrying amount — 64 1. Potential milestone payments are associated  
 with uncertainty as they are linked to successful achievements in research activities. Novo Nordisk A/S and its Danish subsidiaries are jointly taxed with the  
 Danish companies in the Novo Holdings A/S. The joint taxation also covers withholding taxes in the form of dividend tax, royalty tax and interest tax.  
 The Danish companies are jointly and individually liable for the joint taxation. Any subsequent adjustments to income taxes and withholding taxes may  
 lead to a larger liability. The tax for the individual companies is allocated in full on the basis of the expected taxable income. For information on pending  
 litigation and other contingencies, please refer to notes 3.6 and 5.2 to the Consolidated financial statements. NOVO NORDISK ANNUAL REPORT 2017
