Forward-Looking Statements

This Quarterly Report on Form 10-Q contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Any statements about our expectations, beliefs, plans, objectives, assumptions or future events or performance are not historical facts and may be forward-looking. We use words or phrases such as “anticipates,” “believes,” “could,” “estimates,” “expects,” “intends,” “plans,” “predicts,” “projects,” “may,” “will,” “should,” “continue,” “ongoing,” “future,” “potential” and phrases to identify forward-looking statements. Examples of forward-looking statements include, but are not limited to, statements about: programmable Platform Manager devices being expected to simplify board management design; the growth in popularity of mixed signal PLDs that combine digital and analog features; our plan to introduce new FPGA families; our existing facilities being suitable and adequate for our future needs; the majority of our revenue being through our sell-through distributors; changes to our unrecognized tax benefits and expectations regarding taxes and tax adjustments; our expectations that a significant portion of our revenue will continue to be dependent on the communications end market and the growth of our revenue from this end market; the Asia Pacific market being the primary source of our revenue; the costs and benefits of our restructuring plans; the impact of new accounting pronouncements; our making significant future investments in research and development; and our beliefs concerning the adequacy of our liquidity and ability to meet our operating and capital requirements and obligations.

Forward-looking statements involve estimates, assumptions, risks and uncertainties that could cause actual results to differ materially from those expressed in the forward-looking statements. The key factors that could cause our actual results to differ materially from the forward-looking statements include global economic conditions and uncertainty, the concentration and growth of our sales in the communications equipment end market, particularly as it relates to the concentration of our sales in the Asia Pacific region, market acceptance and demand for our new products, any disruption of our distribution channels, unexpected charges relating to our restructuring plans, the effect of the downturn in the economy on capital markets and credit markets, the impact of competitive products and pricing, unanticipated taxation requirements, or positions of the IRS, unexpected impacts of recent accounting guidance and the other risks that are described herein and that are otherwise described from time to time in our filings with the Securities and Exchange Commission, including, but not limited to, the items discussed in “Risk Factors” in Item 1A of Part II of this Report. You should not unduly rely on forward-looking statements because our actual results could differ materially from those expressed in any forward-looking statements made by us. In addition, any forward-looking statement applies only as of the date on which it is made. We do not plan to, and undertake no obligation to, update any forward-looking statements to reflect events or circumstances that occur after the date on which such statements are made or to reflect the occurrence of unanticipated events.

LATTICE SEMICONDUCTOR CORPORATION
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Note 1 - Basis of Presentation and Significant Accounting Policies:

The accompanying Condensed Consolidated Financial Statements are unaudited and have been prepared by Lattice Semiconductor Corporation (the "Company", "we", "us" or "our") pursuant to the rules and regulations of the Securities and Exchange Commission ("SEC") and in our opinion include all adjustments, consisting of normal recurring adjustments, necessary for the fair statement of results for the interim periods. Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted pursuant to such rules and regulations. These Condensed Consolidated Financial Statements should be read in conjunction with our audited financial statements and notes thereto included in our Annual Report on Form 10-K for the fiscal year ended January 1, 2011.

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts and classification of assets, such as marketable securities, accounts receivable, inventory, auction rate securities, deferred income taxes and liabilities, accrued expenses (including restructuring charges and accrual for bonus arrangements), income taxes, deferred income and allowances on sales to certain sell-through distributors, and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the fiscal periods presented. Actual results could differ from these estimates.

We report based on a 52 or 53-week fiscal year ending on the Saturday closest to December 31. Our first quarter of fiscal 2011 and first quarter of fiscal 2010 ended on April 2, 2011 and April 3, 2010, respectively. All references to quarterly or three months ended financial results are references to the results for the relevant fiscal period.

Cash Equivalents and Marketable Securities

We consider all investments that are readily convertible into cash and have original maturities of three months or less, to be cash equivalents. Cash equivalents consist primarily of highly liquid investments in time deposits or money market accounts and are carried at cost. We account for marketable securities as available for sale with unrealized gains or losses recorded as Accumulated other comprehensive income, unless losses are considered other-than-temporary, in which case, losses are charged to the Condensed Consolidated Statements of Operations.

Concentration Risk

Potential exposure to concentration risk consists primarily of cash and cash equivalents, marketable securities, trade receivables and supply of wafers for our new products. We place our investments primarily through four financial institutions and mitigate the concentration of credit risk by placing percentage limits on the maximum portion of the investment portfolio which may be invested in any one investment instrument. The Company's investment policy defines approved credit ratings for investment securities. Investments consisted primarily of money market instruments, "AA" or better corporate notes and bonds, "AA" or better rated U.S. municipal notes, and U.S. government agency obligations. See Note 3 for a discussion of the liquidity attributes of our marketable securities.

Concentration of credit risk with respect to trade receivables is mitigated by a geographically diverse customer base and our credit and collection process. Accounts receivable are recorded at the invoice amount, do not bear interest, and are shown net of allowances for doubtful accounts of \$0.9 million at both April 2, 2011 and January 1, 2011. We perform credit evaluations for essentially all customers and secure transactions with letters of credit or advance

payments where appropriate. We regularly review our allowance for doubtful accounts and the aging of our accounts receivable. Write-offs for uncollected trade receivables have not been significant to date.

We rely on Fujitsu Limited ("Fujitsu") for essentially all wafer purchases for our new products.

Revenue Recognition and Deferred Income

Revenue from sales to customers is recognized upon shipment, or in the case of sales by our sell-through distributors, at the time of reported resale, provided that persuasive evidence of an arrangement exists, the price is fixed or determinable, title has transferred, collection of resulting receivables is reasonably assured, there are no customer remaining acceptance

Table of Contents

requirements and no remaining significant obligations. We sell our products directly to end customers or through a network of independent manufacturers' representatives and indirectly through a network of independent sell-in and sell-through distributors. Distributors provide us periodic data regarding the product, price, quantity and end customer when products are resold as well as the quantities of our products they still have in stock. We must use estimates and apply judgment to reconcile sell-through distributors' reported inventories to their activities. Any differences between our estimates and actual results could lead to inaccurate reporting of our Revenue, Cost of products sold, Deferred income and allowances on sales to sell-through distributors, and Net income.

At the time of shipment to a sell-through distributor amounts are invoiced at published list price. The final price is set at the time of resale and is determined in accordance with a distributor price agreement. Amounts invoiced are recorded in Accounts receivable, net and inventory is transferred from Inventories to Deferred income and allowances on sales to sell-through distributors. Revenue and cost of products sold to sell-through distributors are deferred until either the product is resold by the distributor or, in certain cases, return privileges terminate, at which time Revenue and Cost of products sold are reflected in Net income. Our estimate of inventory valued at published list price and held by sell-through distributors with right of return totaled \$47.6 million and \$50.1 million at April 2, 2011 and January 1, 2011, respectively. Distributor advances totaled \$24.7 million and \$26.8 million at April 2, 2011 and January 1, 2011, respectively and are recorded in Deferred income and allowances to sell-through distributors. Deferred costs of sales related to inventory held by sell-through distributors totaled \$7.0 million and \$7.6 million at April 2, 2011 and January 1, 2011, respectively.

We expect the majority of our revenue in fiscal 2011 will be from reported resale from our sell-through distributors. Resale of product by sell-through distributors as a percentage of our total revenue was 62% and 55% for the three months ended April 2, 2011 and April 3, 2010, respectively.

Revenue from software licensing was not material for the periods presented.

New Accounting Pronouncements

There were no new accounting pronouncements during the three months ended April 2, 2011 that are expected to have a material impact on the Company's Condensed Consolidated Financial Statements.

Note 2 - Net Income Per Share:

Net income per share is computed based on the weighted average number of shares of common stock and potentially dilutive securities assumed to be outstanding during the period using the treasury stock method. Potentially dilutive securities consist of stock options, restricted stock units ("RSUs") and employee stock purchase plan ("ESPP") shares.

A reconciliation of basic and diluted Net income per share is presented below (in thousands, except per share data):

	Three Months Ended	
	April 2, 2011	April 3, 2010
Basic and diluted Net income	\$10,919	\$11,089
Shares used in basic Net income per share	117,996	115,669
Dilutive effect of stock options, RSUs and ESPP shares	3,868	1,048
Shares used in diluted Net income per share	121,864	116,717
Basic Net income per share	\$0.09	\$0.10
Diluted Net income per share	\$0.09	\$0.10

The computation of diluted net income per share for the first quarter of fiscal 2011, excludes the effects of stock options and RSUs aggregating 3.2 million shares, as they are antidilutive. The computation of diluted net income per share for the first quarter of fiscal 2010, excludes the effects of stock options and RSUs aggregating 5.9 million shares, as they are antidilutive. Stock options, RSUs and ESPP shares are considered antidilutive when the aggregate of exercise price, unrecognized stock-based compensation expense and excess tax benefit are greater than the average market price for our common stock during the period or when the Company is in a net loss position. Stock options and RSUs that are antidilutive in the first quarter of fiscal 2011 could become dilutive in the future.

Table of Contents

9

Table of Contents

Note 3 - Marketable Securities:

The following table summarizes the contractual maturities of our marketable securities (at fair value and in thousands):

	April 2, 2011	January 1, 2011
Short-term marketable securities:		
Maturities of less than five years	\$53,219	\$63,836
Long-term marketable securities:		
Maturities of more than ten years	7,389	10,232
	\$60,608	\$74,068

The following table summarizes the composition of our marketable securities (at fair value and in thousands):

	April 2, 2011	January 1, 2011
Short-term marketable securities:		
Corporate and government bonds and notes and commercial paper	\$53,219	\$63,836
Long-term marketable securities:		
Federally-insured or FFELP guaranteed student loans	7,389	10,232
	\$60,608	\$74,068

The following table summarizes the composition of our auction rate securities (in thousands):

	April 2, 2011		S&P Credit rating	January 1, 2011		S&P Credit rating
	Par Value	Fair Value		Par Value	Fair Value	
Long-term marketable securities:						
Federally-insured or FFELP guaranteed student loans	\$8,300	\$7,389	AAA	\$11,600	\$10,232	AAA
	\$8,300	\$7,389		\$11,600	\$10,232	

On March 29, 2011, the Company sold student loan auction rate securities, with a par value of \$3.3 million and fair value of \$2.8 million for \$3.3 million, reported a gain of \$0.6 million and relieved \$0.1 million of previously unrecognized gain in Accumulated other comprehensive income, in the first quarter of fiscal 2011. At April 2, 2011, due to continued multiple failed auctions and a determination of illiquidity, the auction rate securities held by the Company are classified as Long-term marketable securities. These auction rate securities are exposed to risks associated with student loan asset-backed notes. Such loans are insured by the federal government or guaranteed by the Federal Family Educational Loan Program. The Company intends to sell its auction rate securities as markets for these securities resume or reasonable offers become available.

Note 4 - Fair Value of Financial Instruments:

	Fair value measurements as of April 2, 2011			
	Total	Level 1	Level 2	Level 3
Short-term marketable securities	\$53,219	\$53,219	\$—	\$—
Long-term marketable securities	7,389	—	—	7,389
	\$60,608	\$53,219	\$—	\$7,389

We invest in various financial instruments including corporate and government bonds and notes, commercial paper and auction rate securities. The Company carries these instruments at their fair value in accordance with Financial

Accounting Standards Board Accounting Standards Codification ("ASC") 820, "Fair Value Measurements and Disclosures" ("ASC 820"). The framework under the provisions of ASC 820 establishes three levels of inputs that may be used to measure fair value. Each level of input has different levels of subjectivity and difficulty involved in determining fair value.

Table of Contents

Level 1 instruments generally represent quoted prices in active markets. Therefore, determining fair value for Level 1 instruments generally does not require significant management judgment, and the estimation is not difficult. Our Level 1 instruments consist of federal agency, municipal or corporate notes and bonds that are traded in active markets and are classified as Short-term marketable securities on our Condensed Consolidated Balance Sheet.

Level 2 instruments include inputs other than Level 1 that are observable, either directly or indirectly, such as quoted prices for similar assets or liabilities; quoted prices for identical instruments in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities. We have no investments in Level 2 instruments.

Level 3 instruments include unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. Our auction rate securities are classified as Level 3 instruments. Management uses a combination of the market and income approach to derive the fair value of auction rate securities, which includes third party valuation results, investment broker provided market information and available information on the credit quality of the underlying collateral. As a result, the determination of fair value for Level 3 instruments requires significant management judgment and subjectivity. Our Level 3 instruments are classified as Long-term marketable securities on our Condensed Consolidated Balance Sheet.

During the three months ended April 2, 2011 and April 3, 2010, the following changes occurred in our Level 3 instruments (in thousands):

	Three Months Ended	
	April 2, 2011	April 3, 2010
Beginning fair value of Long-term marketable securities	\$10,232	\$12,939
Fair value of securities sold or redeemed	(2,843) (117
Ending fair value of Long-term marketable securities	\$7,389	\$12,822

In accordance with ASC 320, "Investments-Debt and Equity Securities," the Company recorded an unrealized gain of less than \$0.1 million during the three months ended April 2, 2011 on certain Short-term marketable securities (Level 1 instruments), which has been recorded in Accumulated other comprehensive income. Future fluctuations in fair value related to these instruments that the Company deems to be temporary, including any recoveries of previous write-downs, would be recorded to Accumulated other comprehensive income. In addition, during the three months ended April 2, 2011, the Company realized a gain of \$0.6 million related to the sale of a portion of its Long-term marketable securities portfolio. If the Company were to determine in the future that any further decline in fair value is other-than-temporary, we would record an impairment charge, which could have a materially detrimental impact on our operating results. If we were to liquidate our position in these securities, it is likely that the amount of any future realized gain or loss would be different from the unrealized gain or loss reported in Accumulated other comprehensive income or the previously reported other-than-temporary impairment charge.

Note 5 - Inventories (in thousands):

	April 2, 2011	January 1, 2011
Work in progress	\$27,638	\$25,516
Finished goods	10,431	11,817
	\$38,069	\$37,333

Table of Contents

Note 6 - Changes in Stockholders' Equity and Comprehensive Income (in thousands):

	Common stock	Paid-in capital	Treasury stock	Accumu- lated deficit	Accumu- lated other compre- hensive income	Total
Balances, January 1, 2011	\$ 1,179	\$630,184	\$—	\$(313,140)	\$499	\$318,722
Net income for the quarter ended April 2, 2011	—	—	—	10,919	—	10,919
Unrealized gain, net, related to marketable securities	—	—	—	—	9	9
Recognized gain on redemption of marketable securities, previously unrealized	—	—	—	—	(133)	(133)
Translation adjustments	—	—	—	—	75	75
Comprehensive income	—	—	—	—	—	10,870
Common stock issued in connection with the exercise of stock options, ESPP and vested RSUs (net of taxes)	7	1,506	—	—	—	1,513
Stock repurchase	(7)	—	(4,323)	—	—	(4,330)
Retirement of repurchased stock	—	(4,323)	4,323	—	—	—
Stock-based compensation expense related to stock options, ESPP and RSUs	—	1,344	—	—	—	1,344
Balances, April 2, 2011	\$ 1,179	\$628,711	\$—	\$(302,221)	\$450	\$328,119

On October 21, 2010, the Company's Board of Directors approved a stock repurchase program pursuant to which up to \$20.0 million of outstanding common stock may be repurchased from time to time. The duration of the repurchase program is twelve months. In connection with this stock repurchase program, the Company entered into a 10b5-1 plan. During the first quarter of fiscal 2011, approximately 700,000 shares were repurchased for \$4.3 million. During fiscal 2010, approximately 371,000 shares were repurchased for \$2.0 million. All shares repurchased under this program were retired by April 2011. All repurchases have and will be open market transactions and funded from available working capital. The number of shares that will be repurchased in the future will depend on market conditions, including the price of the common stock.

Note 7 - Income Taxes:

We are subject to federal income tax as well as income tax of multiple state and foreign jurisdictions. We are no longer subject to federal, state and local, or foreign income tax examinations for years before 2001. We have federal net operating loss carryforwards that expire at various dates between 2023 and 2029. We have state net operating loss carryforwards that expire at various dates from 2011 through 2029. We also have federal and state credit carryforwards, some of which do not expire, with the remainder expiring at various dates from 2011 through 2031. We have provided a valuation allowance equal to our net federal and state deferred tax assets as we have not met the more-likely-than-not realization threshold for deferred tax asset recognition. We evaluate both positive and negative evidence to determine if some or all of our deferred tax assets should be recognized on a quarterly basis. In future

periods, if we determine that we are more-likely-than-not to realize some or all of our deferred tax assets, we will recognize a deferred tax asset and a benefit in the period in which such determination is made. As of April 2, 2011, the net deferred tax asset relates to foreign jurisdictions where we have concluded it is more-likely-than-not that we will realize the net deferred tax assets in future periods.

The Internal Revenue Service (“IRS”) has examined our income tax returns for 2001 and 2002, and has issued proposed adjustments of \$1.4 million, plus interest. These adjustments relate to the treatment of acquisition costs and a tax accounting method change for prepaid expenses. Although we do not agree with the proposed adjustment related to the prepaid expense matter, we believe that we have reached a tentative agreement concerning the acquisition costs. During the three months ended March 29, 2008, we made a payment of \$0.3 million related to this tentative agreement. On May 23, 2008, the Company filed a petition with the Tax Court seeking a redetermination of the prepaid expense adjustment. Although the final resolution of this

Table of Contents

matter is uncertain, we believe that adequate amounts have been provided for as unrecognized tax benefits. There is the possibility of either a favorable or unfavorable effect on our results of operations in the period in which these matters are effectively settled. We will recognize any uncertain tax benefit in the period settled.

We are not currently under examination in any state, local or foreign jurisdictions. A 2008 Taiwan exam has been settled with no material adjustments.

We believe that it is reasonably possible that \$1.5 million of unrecognized tax benefits and \$1.0 million of associated interest and penalties could significantly change during the next twelve months. The \$2.5 million potential change would represent a decrease in unrecognized tax benefits, comprised of items related to matters currently being litigated with the IRS, certain federal and state credits and uncertain income tax positions related to foreign tax filings for years that will no longer be subject to examination under expiring statutes of limitations.

We are paying foreign income taxes, which are reflected in the Provision for income taxes in the Condensed Consolidated Statements of Operations and are primarily related to the cost of operating an offshore research and development subsidiary and sales subsidiaries. We are not currently paying federal income taxes and do not expect to pay such taxes until the benefits of our tax net operating losses are fully utilized. We expect to pay a nominal amount of state income tax. We accrue interest and penalties related to uncertain tax positions in the Provision for income taxes.

Note 8 - Restructuring:

During 2011, the Company's Board of Directors adopted a restructuring plan to more efficiently implement the Company's product development strategy and to better align the Company's corporate strategy with the Company's sales resources (the "2011 restructuring plan"). In connection with the 2011 restructuring plan, the Company will reduce and refocus its headcount at certain of its research and development facilities, including Pennsylvania and Shanghai, China. The 2011 restructuring plan will be substantially implemented during 2011, with a total projected restructuring charge of approximately \$3.0 million to \$6.0 million through fiscal 2012, of which \$2.7 million was recorded in the first quarter of fiscal 2011.

During fiscal 2009, we initiated a restructuring plan ("2009 restructuring plan") to lower operating expenses primarily by reducing headcount, reducing occupancy in certain leased facilities and to transfer inventory management, order fulfillment, and direct sales logistics from our headquarters in Oregon to a third party contractor in Singapore. In addition, the Company established an operations center in Singapore to transfer some of its supply chain activities from the Company's headquarters in Oregon. As part of the 2011 restructuring plan we updated our estimate of the remaining severance and lease loss reserve for the 2009 restructuring plan. This resulted in a credit to restructuring charge of \$0.8 million, primarily for re-occupying certain leased facilities.

At April 2, 2011, the Condensed Consolidated Balance Sheet included an accrual of \$2.5 million primarily related to severance and related expenses under the provisions of the 2011 restructuring plan. In addition, the Condensed Consolidated Balance Sheet included an accrual of \$0.3 million related to operating lease commitments under the provisions of the restructuring plan we initiated in 2005.

Table of Contents

The following table displays the activity related to all restructuring plans described above (in thousands):

	Balance at January 1, 2011	Charged to expense during three months ended April 2, 2011	Paid or settled	Adjustments to reserve	Balance at April 2, 2011
2011 restructuring plan:					
Severance and related costs	\$—	\$2,494	\$(74)) \$—	\$2,420
Other	—	157	(74)) —	83
Total 2011 restructuring plan	—	2,651	(148)) —	2,503
Pre-2011 restructuring plans:					
Severance and related costs	175	—	—	(175)) —
Lease loss reserve and other	1,027	6	(134)) (647)) 252
Total restructuring plans	\$1,202	\$2,657	\$(282)) \$(822)) \$2,755

Total Restructuring charges included in our Condensed Consolidated Statements of Operations was as follows (in thousands):

	Three Months Ended	
	April 2, 2011	April 3, 2010
Severance and related costs	\$2,319	\$67
Lease loss reserve and other	(484)) 15
Total Restructuring charges	\$1,835	\$82

We cannot be certain as to the actual amount of any remaining restructuring charges, changes in original estimates or the timing of their recognition for financial reporting purposes.

Note 9 - Stock-Based Compensation:

Total stock-based compensation expense included in the Condensed Consolidated Statements of Operations was as follows (in thousands):

	Three Months Ended	
	April 2, 2011	April 3, 2010
Line item:		
Cost of products sold	\$58	\$75
Research and development	600	449
Selling, general and administrative	634	671
Restructuring charges	52	—
	\$1,344	\$1,195

Note 10 - Legal Matters:

On June 11, 2007, a patent infringement lawsuit was filed by Lizy K. John (“John”) against Lattice Semiconductor Corporation in the U.S. District Court for the Eastern District of Texas, Marshall Division. John seeks an injunction, unspecified damages, and attorneys' fees and expenses. The Company filed a request for re-examination of the patent by the United States Patent and Trademark Office (“PTO”), which was granted by the PTO, and the re-examination is in

progress. The litigation has been stayed pending the results of the re-examination. At this stage of the proceedings, we do not have an estimate of the likelihood or the amount of any potential exposure to us.

Table of Contents

On April 30, 2010, Stragent, LLC (“Stragent”), a non-practicing entity, and its alleged assignee Seesaw Foundation (“Seesaw”), filed a patent infringement lawsuit against the Company and Freescale Semiconductor, Inc. in the U.S. District Court for the Eastern District of Texas, Tyler Division, seeking unspecified damages. On April 29, 2011, the Company and Stragent entered into an agreement resolving the litigation.

On July 20, 2010, Intellitech Corporation (“Intellitech”) filed a patent infringement lawsuit against the Company, Altera Corporation and Xilinx, Inc. in the U.S. District Court for the District of Delaware, seeking unspecified damages. At this stage of the proceedings, we do not have an estimate of the likelihood or the amount of any potential exposure to us.

On December 8, 2010, Intellectual Ventures I LLC and Intellectual Ventures II LLC (“Intellectual Ventures”) filed a patent infringement lawsuit against the Company, Altera Corporation and Microsemi Corporation in the U.S. District Court for the District of Delaware, seeking unspecified damages. At this stage of the proceedings, we do not have an estimate of the likelihood or the amount of any potential exposure to us.

We are also exposed to certain other asserted and unasserted potential claims. There can be no assurance that, with respect to potential claims made against us, we could resolve such claims under terms and conditions that would not have a material adverse effect on our business, our liquidity or our financial results.

Note 11 - Segment and Geographic Information:

We operate in one industry segment comprising the design, development, manufacture and marketing of high performance programmable logic devices. Our revenue by major geographic area based on ship-to location was as follows (dollars in thousands):

	Three Months Ended					
	April 2, 2011		April 3, 2010			
United States:	\$13,685	17	%	\$9,022	13	%
Export revenue:						
Asia Pacific (primarily China and Taiwan)	43,652	53		38,093	54	
Europe	17,581	21		12,482	18	
Japan	6,437	8		9,043	13	
Other Americas	1,260	1		1,792	2	
Total export revenue	68,930	83		61,410	87	
Total revenue	\$82,615	100	%	\$70,432	100	%

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

Lattice Semiconductor Corporation (“Lattice” or the “Company”) designs, develops and markets high performance programmable logic products and related software. Programmable logic products are widely used semiconductor components that can be configured by the end customer as specific logic circuits, and enable the end customer to shorten design cycle times and reduce development costs. Within the programmable logic market there are two groups of products - programmable logic devices (“PLD”) and field programmable gate arrays (“FPGA”) - each representing a distinct silicon architectural approach. Products based on the two alternative programmable logic architectures are generally optimal for different types of logic functions, although many logic functions can be implemented using either architecture. We believe that a substantial portion of programmable logic customers utilize both PLD and FPGA architectures. Our end customers are primarily original equipment manufacturers in the wired and wireless communications, computing, industrial, consumer, automotive, medical and military end markets.

Critical Accounting Policies and Estimates

Critical accounting policies are those that are both most important to the portrayal of a company's financial condition and results and require management's most difficult, subjective and complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain. Management believes that there have been no significant changes during the three months ended April 2, 2011 to the items that we disclosed as our critical accounting policies and estimates in Management's Discussion and Analysis of Financial Condition and Results of Operations in our Annual Report on Form 10-K for the fiscal year ended January 1, 2011.

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts and classification of assets, such as marketable securities, accounts receivable, inventory, auction rate securities, deferred income taxes and liabilities, accrued liabilities (including restructuring charges and accrual for bonus arrangements), income taxes, deferred income and allowances on sales to certain sell-through distributors, and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the fiscal periods presented. Actual results could differ from those estimates.

New Accounting Pronouncements

There were no new accounting pronouncements during the three months ended April 2, 2011 that are expected to have a material impact on the Company's Condensed Consolidated Financial Statements.

Results of Operations

Revenue

Key elements of our Condensed Consolidated Statements of Operations (dollars in thousands) were as follows:

	Three Months Ended					
	April 2, 2011			April 3, 2010		
Revenue	\$82,615	100.0	%	\$70,432	100.0	%
Gross margin	49,609	60.0		41,168	58.5	

Edgar Filing: LATTICE SEMICONDUCTOR CORP - Form 10-Q

Research and development	20,140	24.4	14,682	20.9	
Selling, general and administrative	17,170	20.8	15,418	21.9	
Restructuring charges	1,835	2.2	82	0.1	
Income from operations	\$10,464	12.7	% \$10,986	15.6	%

Revenue for the three months ended April 2, 2011 increased to \$82.6 million, compared to \$70.4 million for the three months ended April 3, 2010. Revenue growth was strong primarily in the Industrial and other, and secondarily in the Consumer, end markets. We expect future near-term revenue for the Communications end market to grow faster than other end markets.

Table of Contents

Revenue by Product Line

FPGA and PLD revenue increased in the first quarter of fiscal 2011 when compared to the first quarter of fiscal 2010. There was a 38% increase in FPGA units sold in the first quarter of fiscal 2011 when compared to the first quarter of fiscal 2010, driven primarily by an increase in demand for our New products across all end markets. PLD revenue also increased across all product classifications (except for two of our mainstream product families) in the first quarter of fiscal 2011 when compared to the first quarter of fiscal 2010, due primarily to an increase in units sold.

The composition of our revenue by product line for the first quarter of fiscal 2011 and 2010 was as follows (dollars in thousands):

	Three Months Ended					
	April 2, 2011			April 3, 2010		
FPGA	\$31,179	38	%	\$23,371	33	%
PLD	51,436	62		47,061	67	
Total revenue	\$82,615	100	%	\$70,432	100	%

Revenue by End Market

Revenue from the Industrial and other end market and the Consumer end market increased 67% and 28%, respectively, when the quarter ended April 2, 2011 is compared to the quarter ended April 3, 2010. By contrast, revenue in the Communications end market was about flat over this same quarterly comparison and accounted for approximately 44% and 52% of our total revenue for the quarter ended April 2, 2011 and April 3, 2010, respectively. This is primarily due to strength in the wireless segment of the Communications end market. We expect that a significant portion of our revenue will continue to be dependent on the health of the Communications end market.

The composition of our revenue by end market for the first quarter of fiscal 2011 and 2010 was as follows (dollars in thousands):

	Three Months Ended					
	April 2, 2011			April 3, 2010		
Communications	\$36,331	44	%	\$36,404	52	%
Industrial and other	25,778	31		15,427	22	
Computing	10,611	13		10,859	15	
Consumer	9,895	12		7,742	11	
Total revenue	\$82,615	100	%	\$70,432	100	%

Revenue by Product Classification

Revenue for New products increased 31% for the first quarter of fiscal 2011, compared to the first quarter of fiscal 2010. New product revenue increased primarily due to an increase in unit sales and an increase in average selling price. Revenue for Mainstream products increased 7% for the first quarter of fiscal 2011 compared to the first quarter of fiscal 2010. Mainstream product revenue increased due to an increase in average selling price partially offset by a decrease in unit sales. The increase in average selling price for New and Mainstream products resulted from changes in product mix and end customer mix. Mature product revenue increased 10% for the first quarter of fiscal 2011, compared to the first quarter of fiscal 2010. Mature product revenue increased primarily due to an increase in units sold partially offset by a decrease in average selling price.

Table of Contents

The composition of our revenue by product classification for the first quarter of fiscal 2011 and 2010 was as follows (dollars in thousands):

	Three Months Ended					
	April 2, 2011			April 3, 2010		
New *	\$36,739	44	%	\$28,006	40	%
Mainstream *	26,304	32		24,658	35	
Mature *	19,572	24		17,768	25	
Total revenue	\$82,615	100	%	\$70,432	100	%

* Product Classifications:

New:	LatticeECP3, LatticeXP2, LatticeECP2/M, MachXO, Power Manager II, ispClockA/D/S, ispMACH 4000ZE
Mainstream:	ispXPLD, ispGDX2, ispMACH 4000/Z, ispXPGA, LatticeSC, LatticeECP, LatticeXP, ispClock, Power Manager I, Software and IP
Mature:	FPSC, ORCA 2, ORCA 3, ORCA 4, ispPAC, ispLSI 8000V, ispMACH 5000B, ispMACH 2LV, ispMACH 5LV, ispLSI 2000V, ispLSI 5000V, ispMACH 5000VG, all 5-volt CPLDs, GDX/V, ispMACH 4/LV, all SPLDs

* Product categories are modified as appropriate relative to our portfolio of products and the generation within each major product family. New products consist of our latest generation of products, while Mainstream and Mature are older or based on unique late stage customer-based production needs. Generally, product categories are adjusted every two to three years, at which time prior periods are reclassified to conform to the new categorization. No adjustments were made in the first quarter of fiscal 2011.

Revenue by Geography

Domestic revenue increased to 17% of total revenue for the first quarter of fiscal 2011 from 13% when compared to the first quarter of fiscal 2010. Export revenue as a percentage of total revenue was 83% for the first quarter of fiscal 2011, compared to 87% for the first quarter fiscal 2010. Export revenue as a percentage of overall revenue decreased primarily due to lower revenue reported in the Japan market across all product families. We believe the export market to the Asia Pacific region will remain the primary source of our revenue due to more favorable business conditions and a continuing trend towards outsourcing of manufacturing by North American and European customers to the Asia Pacific region.

The composition of our revenue by geography, based on ship-to location, is as follows (dollars in thousands):

	Three Months Ended					
	April 2, 2011			April 3, 2010		
United States:	\$13,685	17	%	\$9,022	13	%
Export revenue:						
Asia Pacific (primarily China and Taiwan)	43,652	53		38,093	54	
Europe	17,581	21		12,482	18	
Japan	6,437	8		9,043	13	
Other Americas	1,260	1		1,792	2	
Total export revenue	68,930	83		61,410	87	

Total revenue	\$82,615	100	%	\$70,432	100	%
---------------	----------	-----	---	----------	-----	---

Gross Margin and Operating Expenses

Our gross margin percentage was 60.0% in the first quarter of fiscal 2011, compared to 58.5% in the first quarter of fiscal 2010. The increase in gross margin percentage during 2011 compared to 2010 was primarily attributed to higher production volume during the first three months of fiscal 2011 when compared to fixed overhead costs charged to Cost of products sold. Additionally, gross margin increased because revenue from the Industrial and other end market, which typically has higher gross margins than revenue shipped to all other end markets, increased during the first quarter of fiscal 2011.

Research and development expense was \$20.1 million in the first quarter of fiscal 2011, compared to \$14.7 million in the

18

Table of Contents

first quarter of fiscal 2010. Research and development expenses consist primarily of personnel, masks, engineering wafers, third-party design automation software, test equipment and tooling depreciation, and qualification expenses. The increase in the first quarter of fiscal 2011 compared to the first quarter of fiscal 2010 was primarily a result of an increase in engineering mask and wafer costs and an increase in labor costs. We believe that a continued commitment to research and development is essential to maintain product leadership and provide innovative new product offerings, and therefore we expect to continue to make significant future investments in research and development. As we continue to move to more advanced process technologies such as 65nm, mask and engineering wafer costs are becoming increasingly more expensive and will therefore represent a greater proportion of total research and development expenses.

Selling, general and administrative expense was \$17.2 million for the first quarter of fiscal 2011, compared to \$15.4 million in the first quarter of fiscal 2010. This increase in fiscal 2011 compared to fiscal 2010 was a result of an increase in labor related costs, sales commission costs, legal costs in connection with defense of patent infringement claims and marketing related costs.

During 2011, the Company's Board of Directors adopted a restructuring plan to more efficiently implement the Company's product development strategy and to better align the Company's corporate strategy with the Company's sales resources (the "2011 restructuring plan"). In connection with the 2011 restructuring plan, the Company will reduce and refocus its headcount at certain of its research and development facilities, including Pennsylvania and Shanghai, China. The 2011 restructuring plan will be substantially implemented during 2011, with a total projected restructuring charge of approximately \$3.0 million to \$6.0 million through fiscal 2012, of which \$2.7 million was recorded in the first quarter of fiscal 2011.

The Company also implemented restructuring plans during the fiscal years 2009 ("2009 restructuring plan") and 2005. In connection with the 2009 restructuring plan, a credit of \$0.8 million was recorded in the first quarter of fiscal 2011, primarily due to a change in original estimates of lease and severance and related costs. The first quarter of fiscal 2010 includes restructuring charges of \$0.1 million primarily resulting from severance costs under the 2009 restructuring plan.

Other income, net

The following table summarizes the activity in Other income, net (in thousands):

	Three Months Ended	
	April 2, 2011	April 3, 2010
Interest income	\$299	\$247
Gain related to sale of auction rate securities	590	30
(Loss) gain on foreign exchange transactions and other, net	(226) 25
Total	\$663	\$302

The increase in Other income, net in the first quarter of fiscal 2011 as compared to the first quarter of fiscal 2010 resulted from a gain from the sale of Long-term marketable securities. Interest income was flat in the first quarter of fiscal 2011 compared to the first quarter of fiscal 2010 as a result of lower interest rates offset by higher invested balances.

Provision for income taxes

We are paying foreign income taxes, which are reflected in the Provision for income taxes in the Condensed Consolidated Statements of Operations and are primarily related to the cost of operating an offshore research and development subsidiary and sales subsidiaries. We are not currently paying federal income taxes and do not expect to pay such taxes until the benefits of our tax net operating loss carryforwards are fully utilized. We expect to pay a nominal amount of state income tax. We accrue interest and penalties related to uncertain tax positions in the Provision for income taxes.

Table of Contents

Liquidity and Capital Resources

Financial Condition Sources and Uses of Cash (in thousands):

	Three Months Ended	
	April 2, 2011	April 3, 2010
Net cash provided by operating activities	\$1,022	\$20,894
Net cash provided by (used in) investing activities	9,861	(20,810)
Net cash used in financing activities	(2,817)	(33)
Net increase in cash and cash equivalents	\$8,066	\$51

Operating Activities

Net cash provided by operating activities was \$1.0 million in the first three months of fiscal 2011, compared to \$20.9 million in the first three months of fiscal 2010, as a result of the decrease in Current portion of foundry advances of \$6.2 million in first quarter of fiscal 2010 and no such decrease in 2011. In addition, Deferred income and allowances on sales to sell-through distributors increased by \$6.6 million in the first quarter of fiscal 2010 with no material change in the first fiscal quarter of 2011. Finally, net cash was provided by an increase in Accounts payable and accrued expenses and Accrued payroll obligations in the first quarter of fiscal 2010 of \$6.9 million, whereas net cash was used in Accounts payable and accrued expenses and Accrued payroll obligations in the first quarter of fiscal 2011 of \$4.6 million.

Investing Activities

Net cash provided by (used in) investing activities increased by \$30.7 million in the first three months of fiscal 2011, compared to the first three months of fiscal 2010 as sales of Short-term marketable securities and Long-term marketable securities exceeded purchases of Short-term marketable securities in the first quarter of fiscal 2011, compared to the first quarter of fiscal 2010. The sale of Long-term marketable securities consisted of student loan auction rate securities with a par value of \$3.3 million and fair value of \$2.8 million for a gain of \$0.6 million in the first quarter of fiscal 2011. Also, Capital expenditures increased from \$2.0 million in the first quarter of fiscal 2010, to \$4.1 million in first quarter of fiscal 2011.

Financing Activities

Net cash used in financing activities increased by \$2.8 million for the first three months of fiscal 2011 compared to the first three months of fiscal 2010 due to the purchase of Treasury stock in the amount of \$4.3 million in the first quarter of fiscal 2011 while no such purchases took place in the first quarter of fiscal 2010. This was partially offset by an increase in Net proceeds from issuance of common stock from less than \$0.1 million in the first quarter of fiscal 2010, to \$1.7 million in the first quarter of fiscal 2011.

Liquidity

As of April 2, 2011, our principal source of liquidity was \$235.7 million of Cash and cash equivalents and Short-term marketable securities, which were approximately \$2.5 million less than the balance of \$238.2 million at January 1, 2011. Working capital increased to \$281.7 million at April 2, 2011 from \$271.0 million at January 1, 2011.

We believe that our existing liquid resources and cash expected to be generated from future operations will be adequate to meet our operating, capital requirements and obligations for at least the next twelve months.

At April 2, 2011 and January 1, 2011, the Company held auction rate securities with a par value of \$8.3 million and \$11.6 million, respectively. On March 29, 2011, the Company sold student loan auction rate securities, with a par value of \$3.3 million and fair value of \$2.8 million for \$3.3 million, reported a gain of \$0.6 million and relieved \$0.1 million of previously unrecognized gain in Accumulated other comprehensive income. The Company intends to sell its auction rate securities as markets for these securities resume or reasonable offers become available. At April 2, 2011, due to continued multiple failed auctions and a determination of illiquidity, the fair value of auction rate securities held by the Company and classified as Long-term marketable securities was \$7.4 million. These auction rate securities are exposed to risks associated with student loan asset-backed notes. Such loans are insured by the federal government or guaranteed by the Federal Family Educational Loan Program. If we were to liquidate our position in these securities, the amount realized could be materially different than the

Table of Contents

estimated fair value amounts at which we are carrying these securities and there could be a materially detrimental effect on our financial results.

In accordance with ASC 320, "Investments-Debt and Equity Securities," the Company recorded an unrealized gain of less than \$0.1 million during the three months ended April 2, 2011 on certain Short-term marketable securities (Level 1 instruments), which has been recorded in Accumulated other comprehensive income. Future fluctuations in fair value related to these instruments that the Company deems to be temporary, including any recoveries of previous write-downs, would be recorded to Accumulated other comprehensive income. In addition, during the three months ended April 2, 2011, the Company realized a gain of \$0.6 million related to the sale of a portion of its Long-term marketable securities portfolio.

If the Company were to determine in the future that any further decline in fair value is other-than-temporary, we would record an impairment charge, which could have a materially detrimental impact on our operating results. If we were to liquidate our position in these securities, it is likely that the amount of any future realized gain or loss would be different from the unrealized gain or loss reported in Accumulated other comprehensive income.

On October 21, 2010, the Company's Board of Directors approved a stock repurchase program pursuant to which up to \$20.0 million of outstanding common stock may be repurchased from time to time. The duration of the repurchase program is twelve months. In connection with this stock repurchase program, the Company entered into a 10b5-1 plan. During the first quarter of fiscal 2011, approximately 700,000 shares were repurchased for \$4.3 million. During fiscal 2010, approximately 371,000 shares were repurchased for \$2.0 million. All shares repurchased under this program were retired by April 2011. All repurchases have and will be open market transactions and funded from available working capital. The number of shares that will be repurchased in the future will depend on market conditions, including the price of the common stock.

We may in the future seek new or additional sources of funding. In addition, in order to secure additional wafer supply, we may from time to time consider various financial arrangements including equity investments, advance purchase payments, loans, or similar arrangements with independent wafer manufacturers in exchange for committed wafer capacity. To the extent that we pursue any such additional financing arrangements, additional debt or equity financing may be required. There can be no assurance that such additional financing will be available when needed or, if available, will be on favorable terms. Any future equity financing will decrease existing stockholders' equity percentage ownership and may, depending on the price at which the equity is sold, result in dilution.

Contractual Obligations

There have been no significant changes to the Company's contractual obligations outside of the ordinary course of business in the first three months of fiscal 2011 as summarized in Management's Discussion and Analysis of Financial Condition and Results of Operations in the Company's Annual Report on Form 10-K for the year ended January 1, 2011.

Off-Balance Sheet Arrangements

As of April 2, 2011, we did not have any off-balance sheet arrangements, as defined in Item 303(a)(4)(ii) of SEC Regulation S-K.

Table of Contents

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Credit Market Risks

At April 2, 2011 and January 1, 2011, we held auction rate securities with a par value of \$8.3 million and \$11.6 million, respectively. At April 2, 2011, the auction rate securities held by us had an estimated fair value of \$7.4 million. At January 1, 2011, the auction rate securities had an estimated fair value of \$10.2 million. Our investments in auction rate securities are subject to interest rate and market risk.

Foreign Currency Exchange Rate Risk

We have international subsidiary and branch operations. In addition, a portion of our silicon wafer and other purchases are denominated in Japanese yen and we bill our Japanese customers in yen. We are, therefore, subject to foreign currency exchange rate exposure. These exposures are actively monitored by management, which may employ various strategies, including derivative financial instruments, to mitigate the impact on the Company. We do not hold or issue derivative financial instruments for trading or speculative purposes.

Except for the above, there have been no material changes to the quantitative and qualitative disclosures about market risk reported in our Annual Report on Form 10-K for the year ended January 1, 2011.

ITEM 4. CONTROLS AND PROCEDURES

Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures

Under the supervision and with the participation of our management, including our principal executive officer and our principal financial officer, we conducted an evaluation of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended. Based on this evaluation, our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were effective as of the end of the period covered by this quarterly report.

Changes in Internal Control over Financial Reporting

There has been no change in our internal control over financial reporting that occurred during the period covered by this Quarterly Report on Form 10-Q that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

We are in the process of implementing a new ERP system. The first phase of the implementation was completed during the fourth quarter of 2010 and included implementing new modules related to our general ledger, accounts payable and elements of our cost accounting systems. During the period, legacy operating and financial information was migrated to the new ERP system, which resulted in the modification of certain controls, procedures and processes. We follow a system implementation life cycle process that requires significant pre-implementation planning, design and testing. We plan to continue to replace our legacy systems with the new ERP system functionality over the next several years.

Table of Contents

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

The information set forth above under Note 10 contained in the “Notes to Condensed Consolidated Financial Statements” is incorporated herein by reference.

ITEM 1A. RISK FACTORS

The risk factors included herein include any material changes to and supersede the description of the risk factors associated with our business previously disclosed in Item 1A of our Annual Report on Form 10-K for the year ended January 1, 2011. The following risk factors and other information included in this Quarterly Report should be carefully considered. The risks and uncertainties described below are not the only ones we face. Additional risks and uncertainties not presently known to us or that we currently deem immaterial also may impair our business operations. If any of the following risks occur, our business, financial condition, operating results and cash flows could be materially adversely affected.

Global economic conditions and uncertainty, as well as the highly cyclical nature of the semiconductor industry, could adversely affect our revenue, gross margin and expenses, collectability of accounts receivable and supplier relationships, and ability to access capital markets.

Our revenue and gross margin can fluctuate significantly due to downturns in the general economy or the semiconductor industry. These downturns are often severe and prolonged and can result in significant reductions in the demand for PLD and FPGA products in markets in which we compete. Global economic weakness or cyclical downturns have previously resulted from periods of economic recession, reduced access to credit markets, weakening or strengthening of the U.S. dollar relative to other currencies, weak end-user demand, excess industry capacity, political instability, terrorist activity, military actions, or general reductions in inventory levels by customers, and may cause a decrease in revenue, gross margin, earnings or growth rates and problems with our ability to manage inventory levels and collect customer receivables. Such economic conditions had a negative impact on our results of operations during much of 2009. Although business conditions improved in 2010, that trend may not continue. In addition, our relationships with our employees and suppliers and ability to access capital markets could be adversely affected. In addition, customer financial difficulties have previously resulted, and could result in the future, in increases in bad debt write-offs and additions to reserves in our accounts receivable. Global economic and cyclical downturns also may lead to restructuring actions and associated expenses. Uncertainty about future economic conditions makes it difficult for us to forecast operating results and to make decisions about future investments. Any or all of these factors could adversely affect our financial condition and results of operations in the future.

A downturn in the communications equipment end market could cause a reduction in demand for our products and limit our ability to maintain revenue levels and operating results.

Historically the majority of our revenue (approximately 44% of the first quarter of fiscal 2011 revenue) is derived from customers participating in the communications equipment end market. In addition, during fiscal year 2009, the Company participated in the China 3G telecommunications network build-out by selling products used by two large telecommunication equipment providers (one of which was supported through distribution), which accounted for a combined 19% of our aggregate revenue. This is primarily due to strength in the wireless segment of the communications end market. For the 2010 fiscal year, the same two large telecommunication equipment providers accounted for a combined 12% of revenue. In the past, a general weakening in demand for programmable logic products from customers in the communications end market has adversely affected our revenue. In addition, telecommunication equipment providers are building networks for 4G networks in which we compete. Any

deterioration in the communication end market, our ability to compete for new solutions in future telecommunications solutions (e.g. 4G networks) or reduction in capital spending to support this end market could lead to a reduction in demand for our products which could adversely affect our revenue and results of operations.

Our customer design-in activity, and thus, future revenue growth is dependent on market acceptance of our new silicon and software design tool products and the continued market acceptance of our current products. Future revenue is inherently uncertain and could impact our ability to manage production or our ability to forecast sales.

We face uncertainties relating to the potential impact of customer design-in activity because it is unknown whether any particular customer design-in will ultimately result in sales of significant volume. After a specific customer design-in is obtained, many factors can impact the timing and amount of sales that are ultimately realized. Changes in the competitive position of our technology, the customer's product competitiveness or product strategy, the financial position of the customer, and other factors can impact the timing and amount of sales ultimately realized from any specific customer design-in.

Table of Contents

We are presently shipping our latest generation FPGA, PLD and Programmable Mixed Signal product families that are critical to our ability to grow our overall revenue. We also plan to continue upgrading our customer design tool products and increase our offerings of intellectual property cores. Our future revenue growth is dependent on customer design-in activity, market acceptance of our new silicon and software design tool products and the continued market acceptance of our current products. The success of these products is dependent on a variety of specific technical factors including:

- successful product definition;
- timely and efficient completion of product design;
- timely and efficient implementation of wafer manufacturing and assembly processes;
- product performance;
- product cost;
- the quality and reliability of the product; and
- ease of use.

If, due to these or other factors, our new silicon and software products do not achieve market acceptance, or our current products do not maintain market acceptance, our ability to manage production levels or accurately forecast the future revenue, our operating results may be adversely affected.

We may not be able to successfully compete in the highly competitive semiconductor industry.

The semiconductor industry is intensely competitive and many of our direct and indirect competitors have substantially greater financial, technological, manufacturing, marketing and sales resources. The current level of competition in the programmable logic market is high and may increase in the future. We currently compete directly with companies that have licensed our technology or have developed similar products, including Actel Corporation (acquired by Microsemi Corporation in November 2010), Altera Corporation, and Xilinx, Inc. We also compete indirectly with numerous semiconductor companies that offer products based on alternative solutions such as ASIC, ASSP, microcontroller, analog, and digital signal processing (DSP) technologies. These direct and indirect competitors are established, multinational semiconductor companies as well as emerging companies. If we are unable to compete successfully in this environment, our future results will be adversely affected.

Our revenue and gross margin, including quarter over quarter, are subject to fluctuations due to many factors which makes our future financial results less predictable.

Our operating results, including quarter over quarter, have fluctuated in the past and may continue to fluctuate. Consequently, our operating results may fail to meet the expectations of analysts and investors. Our revenue and gross margin may fluctuate due to product mix, inventory fluctuations at our distributor end customers, market acceptance of new products, competitive pricing dynamics, geographical and market-segment pricing strategies, wafer, package and assembly prices and yields, overhead absorption, as well as provisions for warranty and excess and obsolete inventory.

We have limited ability to foresee changes or the pace of changes in sales by product classification. In the past we have also experienced periods of decline in sales of our mainstream and mature products. If, in any period, sales of our mature and mainstream products decline and sales of new products do not increase at a rate that is sufficient to counteract this decline, then our total revenue would decline. In addition, as mature products typically generate a higher gross margin than mainstream or new products, a faster than normal decline in sales of mature products could adversely impact our gross margins.

We also have experienced, and may experience in the future, gross margin declines in certain products or end-markets, reflecting the effect of competitive pricing pressures, inventory write-downs, charges associated with the cancellation of planned production lines, costs associated with our customers unplanned demand to build inventory, and increases in component and manufacturing costs resulting from higher labor and material costs borne by our manufacturers and suppliers that, as a result of competitive pricing pressures or other factors, we are unable to pass on to our customers.

Further, our ability to predict end customer demand, our customers' end customer demand, and resale of our products by our sell-through distributors is limited. Typically, a significant amount of our revenue comes from "turns orders," which are orders placed and filled within the same period. By definition, turns orders are not captured in a backlog measurement at the beginning of a quarter. Accordingly, we cannot use backlog as a reliable measure of predicting revenue.

Table of Contents

Currently Fujitsu Semiconductor Limited ("Fujitsu") is our sole source supplier of wafers for our newest FPGA and PLD products. We may be unsuccessful in defining, developing and identifying manufacturing processes for the new programmable logic products required to maintain or expand our business.

As a semiconductor company, we operate in a dynamic environment marked by rapid product obsolescence. The programmable logic market is characterized by rapid technology and product evolution. Consequently, our future success depends on our ability to introduce new FPGA, PLD and associated software design tool products that meet evolving customer needs while achieving acceptable margins. We are presently shipping our latest generation product families that are critical to our ability to grow our overall revenue. We also plan to continue upgrading our customer design tool products and increase our offerings of intellectual property cores. If we fail to introduce new products in a timely manner, or if these products or future new products fail to achieve market acceptance, our operating results could be adversely affected.

The Company and Fujitsu have entered into agreements pursuant to which Fujitsu manufactures most of our new products on its 130 nanometer, 90 nanometer and 65 nanometer CMOS process technologies, as well as on 130, 90 and 65 nanometer technologies with embedded flash memory that we have jointly developed with Fujitsu. Fujitsu is our sole source supplier of wafers for our newest FPGA and PLD products. The success of certain of our next generation products is dependent on our ability to successfully partner with Fujitsu or new foundry partners. If for any reason we are unsuccessful in establishing new foundry relationships for our next generation products, our future operating results could be adversely affected.

To develop new products and maintain the competitiveness of existing products, we need to migrate to more advanced wafer manufacturing processes that use smaller device geometries. We also may need to use additional foundry partners. Because we depend upon foundry partners to provide their facilities and support for our process technology development, we may experience delays in the availability of advanced wafer manufacturing process technologies at existing or new wafer fabrication facilities. As a result, volume production of our advanced process technologies at fabrication facilities may not be achieved. This could adversely affect our operating results.

The introduction of new silicon and software design tool products in a dynamic market environment presents significant business challenges. Product development commitments and expenditures must be made well in advance of product sales. The market acceptance of new products depends on accurate projections of long-term customer demand, which by their nature are uncertain. In order to secure new or additional wafer supply, we may from time to time consider various financial arrangements including equity investments, advance purchase payments, loans, or similar arrangements with independent wafer manufacturers in exchange for committed wafer capacity. To the extent that we pursue any such additional financing arrangements, additional debt or equity financing may be required. There can be no assurance that such additional financing will be available when needed or, if available, will be on favorable terms. Any future equity financing will decrease existing stockholders' equity percentage ownership and may, depending on the price at which the equity is sold, result in dilution.

Export sales, primarily to the Asia Pacific region, account for the majority of our revenue and may decline in the future due to economic and governmental uncertainties.

We derive the majority of our revenue from export sales. Accordingly, if we experience a decline in export sales, our operating results could be adversely affected. Our export sales are subject to numerous risks, including:

- changes in local economic conditions;
- exchange rate volatility;
- governmental stimulus packages, controls and trade restrictions;
- export license requirements and restrictions on the export of technology;

political instability, war, terrorism or pandemic disease;
changes in tax rates, tariffs or freight rates;
reduced protection for intellectual property rights in some countries;
longer receivable collection periods;
natural or man-made disasters in the countries where we sell our products;
interruptions in transportation;
different labor regulations; and
difficulties in staffing and managing foreign sales offices.

Table of Contents

We depend on distributors, primarily those that use the sell-through distribution model, to generate a majority of our sales and complete order fulfillment. The failure of our distributors to sell our products and otherwise perform as expected could materially reduce our future sales.

We rely heavily on our distribution partners to sell our products to end customers, generate a majority of our sales, complete order fulfillment and stock our products. Our distributors also help us to provide technical support and other value-added services to end customers.

We expect that the majority of our revenue in fiscal 2011 will be reported resale by our sell-through distributors. We depend on the timeliness and accuracy of these resale reports from our distributors; late or inaccurate resale reports could have a detrimental effect on our ability to recognize revenue and our ability to predict future sales. In addition, our distribution channels recently have experienced consolidation due to merger and acquisition activity in that business sector. Consolidation may result in our distributors allocating fewer resources to the distribution and sale of our products, which could adversely affect our financial results.

Our primary sell-through distributors, Arrow Electronics, Inc., including Nu Horizons Electronics Corp., (a wholly owned subsidiary of Arrow Electronics, Inc. USA), Avnet, Inc., and Weikeng (International and Industrial) Co. LTD made up 49%, 34% and 28% of total revenue for fiscal years 2010, 2009 and 2008, respectively. At times, our sales are concentrated in a small number of distributors, which are in various international locations and of various financial strength. Financial difficulties, inability to access capital markets, or other reasons, may affect our distributors' performance, which could materially harm our business and our operating results. Additionally, any reduction in sales efforts, failure to provide good customer service or any other failure to perform by our distributors as expected, could materially reduce our future sales and adversely affect our operating results.

Product quality problems could lead to reduced revenue, gross margins and net income.

We generally warrant our products for varying lengths of time against non-conformance to our specifications and certain other defects. Because our products, including hardware, software and intellectual property cores, are highly complex and increasingly incorporate advanced technology, our quality assurance programs may not detect all defects, whether manufacturing defects in individual products or systematic defects that could affect numerous shipments. Inability to detect a defect could result in increased engineering expenses necessary to remediate the defect and also result in increased costs due to inventory impairment charges. On occasion we have also repaired or replaced certain components or made software fixes or refunded the purchase price or license fee paid by our customers due to product or software defects. If there are material increases in product defects, the costs to remediate such defects, net of reimbursed amounts from our vendors, if any, or to resolve warranty claims compared with our historical experience, may adversely affect our revenue, gross margins and net income.

If our foundry partners experience quality or yield problems, we may face a shortage of products available for sale and our revenue or gross margin could be adversely affected.

We depend on our foundry partners to deliver high quality silicon wafers with acceptable yields in a timely manner consistent with our safety stock inventory level and production plan. As is common in our industry, we have experienced wafer yield problems and delivery delays. The reliable manufacture of high performance programmable logic devices is a complicated and technically demanding process requiring:

- a high degree of technical skill;
- state-of-the-art equipment;
- the availability of certain basic materials and supplies, such as chemicals, gases, polysilicon, silicon wafers and ultra-pure metals;

- the absence of defects in production wafers;
- the elimination of minute impurities and errors in each step of the fabrication process; and
- effective cooperation between the wafer supplier and us.

As a result, our foundry partners may periodically experience difficulties in achieving acceptable quality and yield levels when manufacturing our silicon wafers. If our foundry partners are unable for a prolonged period to produce silicon wafers that meet our specifications with acceptable yields, or we do not have adequate safety stock in times of delivery delays, our operating results could be adversely affected.

Table of Contents

If our assembly and test supply contractors experience quality or yield problems, we may face a shortage of products available for sale.

We rely on contractors to assemble and test our devices with acceptable quality and yield levels. As is common in our industry, we have experienced quality and yield problems in the past. The majority of our revenue is derived from semiconductor devices assembled in advanced packages. The assembly of advanced packages is a complex process requiring:

- a high degree of technical skill;
- state-of-the-art equipment;
- the absence of defects in assembly and packaging manufacturing;
- the elimination of raw material impurities and errors in each step of the process; and
- effective cooperation between the assembly contractor and us.

As a result, our contractors may experience difficulties in achieving acceptable quality and yield levels when assembling and testing our semiconductor devices. If we experience prolonged quality or yield problems in the future and we do not have adequate levels of safety stock inventory on-hand, our operating results could be adversely affected.

If we are unable to adequately protect our intellectual property rights, our financial results and competitive position may suffer.

Our success depends in part on our proprietary technology. We intend to continue to protect our proprietary technology through patents, copyrights and trade secrets. Despite this intention, we may not be successful in achieving adequate protection. Claims allowed on any of our patents may not be sufficiently broad to protect our technology. Patents issued to us also may be challenged, invalidated or circumvented. Finally, our competitors may develop competing technologies. If any of these events occur, our competitive position could be adversely affected.

Companies in the semiconductor industry vigorously pursue and defend their intellectual property rights. We may be forced to pursue legal action to protect or enforce our intellectual property rights. If we become involved in protracted intellectual property disputes or litigation, we may be forced to use substantial financial and management resources, which could have an adverse affect on our operating results.

We face a number of patent infringement claims and may be subject to other intellectual property disputes, which could require us to spend a significant sum to defend and could cause losses.

Our industry is characterized by frequent claims regarding patents and other intellectual property rights of others. We have been, and from time to time expect to be, notified of claims that we are infringing upon the intellectual property rights of others. For instance, we are exposed to certain asserted and unasserted potential claims, including the pending patent litigation brought against us by Lizy K. John, SeeSaw, Intellitech and Intellectual Ventures I LLC and Intellectual Ventures II LLC, as described in Item 1. Legal Proceedings, above. If any third party makes a valid claim against us, we could face significant liability and could be required to make material changes to our products and processes. In response to any claims of infringement, there can be no assurance that we would be able to successfully defend against the claims. Any such litigation could result in a substantial diversion of our efforts and the use of substantial management and financial resources, which by itself could have a material adverse effect on our financial condition and operating results. We may seek licenses under patents that we are alleged to be infringing; however, we may not be able to obtain a license on favorable terms, or at all, which could have an adverse effect on our operating results.

Our wafer supply, which is sourced entirely from the Asia Pacific region, could be interrupted, could experience increased costs or could be reduced, which may result in a shortage of products available for sale or increased costs.

We do not manufacture finished silicon wafers and most of our products, including all of our newest products, are manufactured by a sole source. Currently, our silicon wafers are manufactured by Fujitsu in Japan, Seiko Epson Corporation in Japan, United Microelectronics Corporation in Taiwan and GLOBALFOUNDRIES in Singapore. If any of our current or future foundry partners significantly interrupts or reduces our wafer supply, increases wafer costs, or if any of our relationships with our partner suppliers are terminated, our operating results could be adversely affected.

Table of Contents

In the past, we have experienced delays in obtaining wafers and in securing supply commitments from our foundry partners. At present, we anticipate that our supply commitments are adequate. However, these existing supply commitments may not be sufficient for us to satisfy customer demand in future periods. Additionally, notwithstanding our supply commitments, we may still have difficulty in obtaining wafer deliveries consistent with the supply commitments. We negotiate wafer prices and supply commitments from our suppliers on at least an annual basis. If any of our foundry partners were to reduce its supply commitment or increase its wafer prices, and we cannot find alternative sources of wafer supply, our operating results could be adversely affected.

Many other factors that could disrupt our wafer supply are beyond our control. Since worldwide manufacturing capacity (and that of Fujitsu) for silicon wafers is limited and inelastic, we could be harmed by significant industry-wide (or our own) increases in overall wafer demand or interruptions in wafer supply, or periods of increased wafer prices. During periods of economic uncertainty, our foundry partners may reduce or restructure their operations which may also affect the availability and price of wafers, and adversely affect our operating results. Additionally, a future disruption of any of our foundry partners' foundry operations as a result of a fire, earthquake, act of terrorism, political unrest, governmental uncertainty, war, disease or other natural disaster or catastrophic event could disrupt our wafer supply and could adversely affect our operating results.

Our supply of assembled and tested products, all from the Asia Pacific region, could be interrupted or reduced, which may result in a shortage of products available for sale.

We do not assemble our finished products or perform all testing of our products. Our finished silicon wafers are assembled and tested by independent contractors located in Indonesia, Japan, Malaysia, the Philippines, Singapore and South Korea. Economic, financial, social and political conditions in Asia have historically been volatile. Financial difficulties, the effects of currency fluctuation, governmental actions or restrictions, prolonged work stoppages, political unrest, war, natural disaster, disease or any other difficulties experienced by our suppliers may disrupt our supply and could adversely affect our operating results.

In the past, we have experienced delays in obtaining assembled and tested products and in securing assembly and test capacity commitments from our suppliers. At present, we anticipate that our assembly and test capacity commitments are adequate; however, these existing commitments may not be sufficient for us to satisfy customer demand in future periods. Additionally, notwithstanding our assembly and test capacity commitments, we may still have difficulty in obtaining deliveries of finished products consistent with the capacity commitments. We negotiate assembly and test prices and capacity commitments from our contractors on a periodic basis. If any of our assembly or test contractors were to reduce its capacity commitment or increase its prices, and we cannot find alternative sources, our operating results could be adversely affected.

Many other factors that could disrupt our supply of finished products are beyond our control. Because worldwide capacity for assembly and testing of semiconductor products is limited and inelastic, we could be harmed by significant industry-wide increases in overall demand or interruptions in supply. The assembly of complex packages requires a consistent supply of a variety of raw materials such as substrates, lead frames and mold compound. The worldwide manufacturing capacity for these materials is also limited and inelastic. A significant industry-wide increase in demand, or interruptions in the supply of these materials to our assembly or test contractors, could adversely effect our operating results. Additionally, a future disruption of any of our assembly or test contractors' operations as a result of a fire, earthquake, act of terrorism, political unrest, governmental uncertainty, war, disease or other natural disaster or catastrophic event could disrupt our supply of assembled and tested devices and could adversely affect our operating results.

In addition, our quarterly revenue levels may be affected to a significant extent by our ability to match inventory and current production mix with the product mix required to fulfill orders. The large number of individual parts we sell

and the large number of customers for our products, combined with limitations on our and our customers' ability to forecast orders accurately and our relatively lengthy manufacturing cycles, may make it difficult to achieve a match of inventory on hand, production units, and shippable orders sufficient to realize quarterly or annual revenue projections.

We may experience a disruption of our business activities due to the transition to a new Chief Executive Officer.

On October 12, 2010, the Company's Board of Directors announced the appointment of Darin G. Billerbeck as the Company's President and Chief Executive Officer, effective November 8, 2010. We may experience disruption in our business activities as we transition to a new chief executive officer, and our relationships with employees, customers and suppliers could be adversely affected by these disruptions. In addition, our competitors may seek to use this transition and the related potential disruptions to gain a competitive advantage over us. Our future operating results depend substantially upon the continued service of our key personnel, our ability to attract and retain qualified management personnel and the successful execution of the 2011 restructuring plan adopted to more efficiently implement the Company's product development strategy and to better

Table of Contents

align its corporate strategy with its sales resources. Our business, financial condition and results of operations could be materially adversely affected by the loss of any of our key employees, by the failure of any key employee to perform in his or her current position, or by our inability to attract and retain skilled employees.

If our independent software and hardware developers and suppliers are unable or unwilling to meet our contractual requirements, we may face a delay or shortage of the introduction of new products, or the support of existing products.

We rely on independent software and hardware developers for the design, development, supply and support of IP cores, design and development software, and certain elements of evaluation boards. As a result, failure or significant delay to complete software or hardware under contract to deliver could disrupt the release of or introduction of new products, which might be detrimental to the capability of our new products to win designs. Any of these delays or inability to complete the design or development could have an adverse effect on our business, financial condition, or operating results.

We recently implemented a new enterprise-wide financial reporting system which may cause operating or reporting disruptions.

The Company converted to a new enterprise-wide financial reporting ("ERP") system to improve processes, enhance the access and timeliness of critical business information and strengthen controls throughout the Company. We converted to this new system in October 2010. Many companies have experienced operating or reporting disruptions when converting to a new ERP system or integrating the new ERP system with legacy systems, including limitations on a company's ability to deliver and bill for customer shipments, maintain current and complete books and records, maintain an effective internal control environment and meet external reporting deadlines. While we have not yet experienced any significant disruptions to our business, we may encounter some unexpected aspects of the conversion that cause difficulty in the new reporting system which could adversely affect the Company's business, results of operations and cash flows.

We depend upon a third party to provide inventory management, order fulfillment, and direct sales logistics.

We rely on a third party vendor located in Singapore to provide cost-effective and efficient supply chain services. Among other activities, these outsourced services relate to direct sales logistics, including order fulfillment, inventory management and warehousing, and distribution of inventory to third party distributors. If our third party supply chain partner were to discontinue services for us or its operations are disrupted as a result of a fire, earthquake, act of terrorism, political unrest, governmental uncertainty, war, disease or other natural disaster or catastrophic event, our ability to fulfill direct sales orders and distribute inventory timely, cost effectively, or at all, would be hindered, which could adversely affect our business.

An acquisition may harm our business, financial condition or operating results.

We have made acquisitions in the past to execute on our business strategy which create uncertainty to our future operating results and cash flows. We may acquire products, technologies or businesses from third parties. An acquisition will require considerable management time, may divert time away from operations, require substantial cash resources, require us to incur or assume debt, and involve the issuance of the Company's equity securities. The success of any acquisition requires the integration of products, technologies, personnel and administrative resources, and could result in departures of key personnel, equity dilution or acquisition of unknown liabilities. As a result, an acquisition could disrupt our operations and may have an adverse effect on our business, financial condition or operating results.

We may have failed to adequately insure against certain risks, and, as a result, our financial condition and results may be adversely affected.

We carry insurance customary for companies in our industry, including, but not limited to, liability, property and casualty, worker's compensation and business interruption insurance. We also insure our employees for basic medical expenses. In addition, we have insurance contracts that provide director and officer liability coverage for our directors and officers. Other than the specific areas mentioned above, we are self-insured with respect to most other risks and exposures, and the insurance we carry in many cases is subject to a significant policy deductible or other limitation before coverage applies. Based on management's assessment and judgment, we have determined that it is more cost effective to self-insure against certain risks than to incur the insurance premium costs. The risks and exposures for which we self-insure include, but are not limited to, natural disasters, product defects, political risk, theft, patent infringement and some employment practice matters. Should there be a catastrophic loss due to an uninsured event such as an earthquake or a loss due to adverse occurrences in any area in which we are self-insured, our financial condition or operating results could be adversely affected.

Table of Contents

ITEM 2. ISSUER PURCHASES OF EQUITY SECURITIES

(c).

Period	Total Number of Shares Purchased	Average Price paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Program	Maximum Dollar Value of Shares That May Yet Be Purchased Under the Program
Month #1				
January 2, 2011 through January 29, 2011	264,000	\$5.94	264,000	\$16,460,000
Month #2				
January 30, 2011 through February 26, 2011	148,247	\$6.31	148,247	\$15,525,000
Month #3				
February 27, 2011 through April 2, 2011	296,550	\$6.16	296,550	\$13,699,000
Total	708,797	\$6.11	708,797	\$13,699,000

On October 21, 2010, the Company's Board of Directors approved a stock repurchase program pursuant to which up to \$20.0 million of outstanding common stock may be repurchased from time to time. The duration of the repurchase program is twelve months. In connection with this stock repurchase program, the Company entered into a 10b5-1 plan. During the first quarter of fiscal 2011, approximately 700,000 shares were repurchased for \$4.3 million. All shares repurchased under this program were retired by April 2011. All repurchases have and will be open market transactions and funded from available working capital. The number of shares that will be repurchased in the future will depend on market conditions, including the price of the common stock.

Table of Contents

ITEM 6. EXHIBITS

Exhibit Number	Description
3.1	The Company's Restated Certificate of Incorporation filed February 24, 2004 (Incorporated by reference to Exhibit 3.1 filed with the Company's Annual Report on Form 10-K for the year ended January 3, 2004).
3.2	The Company's Bylaws, as amended and restated as of January 31, 2006 (Incorporated by reference to Exhibit 99.1 filed with the Company's Current Report on Form 8-K filed February 3, 2006).
4.4	Indenture, dated as of June 20, 2003, between the Company and U.S. Bank National Association (Incorporated by reference to Exhibit 4.1 filed with the Company's Registration Statement on Form S-3 on August 13, 2003).
4.5	Form of Note for the Company's Zero Coupon Convertible Subordinated Notes (Incorporated by reference to Exhibit 4.2 filed with the Company's Registration Statement on Form S-3 on August 13, 2003).
10.23	Advance Production Payment Agreement dated March 17, 1997 among Lattice Semiconductor Corporation and Seiko Epson Corporation and S MOS Systems, Inc. (Incorporated by reference to Exhibit 10.23 filed with the Company's Annual Report on Form 10-K for the fiscal year ended January 1, 2005)(1).
10.24*	Lattice Semiconductor Corporation 1996 Stock Incentive Plan, as amended, and Related Form of Option Agreement (Incorporated by reference to Exhibits (d)(1) and (d)(2) to the Company's Schedule TO filed on February 13, 2003).
10.33*	2001 Outside Directors' Stock Option Plan, as amended and restated effective May 1, 2007 (Incorporated by reference to the Appendix A filed with the Company's 2007 Definitive Proxy Statement on Schedule 14A filed on April 5, 2007).
10.34*	2001 Stock Plan, as amended, and related Form of Option Agreement (Incorporated by reference to Exhibits (d)(3) and (d)(4) to the Company's Schedule TO filed on February 13, 2003).
10.35	Intellectual Property Agreement by and between Agere Systems Inc. and Agere Systems Guardian Corporation and Lattice Semiconductor Corporation as Buyer, dated January 18, 2002 (Incorporated by reference to Exhibit 10.35 filed with the Company's Annual Report on Form 10-K for the year ended December 29, 2001).
