THOMSON ACQUIRES CURRENT DRUGS LTD.

Strengthens Position in Emerging Pharmaceutical and Biotechnology Research Solutions Market

STAMFORD, Conn. and TORONTO, August 23, 2002 The Thomson Corporation (NYSE: TOC; TSX: TOC) today announced that it has acquired privately-held, UK-based Current Drugs Ltd. (Current Drugs), a global leader in the delivery of integrated competitor intelligence services to the research solutions market serving the pharmaceutical and biotechnology industries. Current Drugs provides databases, systems and services such as the Investigational Drugs database (IDdb), the premier service for scientists and business executives involved in drug research and development. Financial terms of the agreement were not disclosed.

The addition of Current Drugs enhances the offerings Thomson provides to the drug discovery and development functions within pharmaceutical and biotechnology companies. When combined with other Thomson products and businesses such as Derwent World Patent Index, Derwent GENESEQ, ISI Web of Science, as well as the workflow capabilities of Wila Verlag, Current Drugs further enables Thomson to deliver a highly differentiated, comprehensive research solution to the pharmaceutical and biotechnology market.

"This is a very exciting development for all involved," said Mike Tansey, chief executive officer of Thomson Scientific. "Thomson brings to Current Drugs the additional expertise, must-have content, and infrastructure needed to grow the business and meet the expanding needs of its customers. And with the addition of this business, Thomson will soon be able to offer a range of databases and services on the IDdb platform that will help customers achieve improved productivity in their R&D organizations."

Thomson Acquires Current Drugs Ltd.

Page 2

Based in London, Current Drugs provides databases, systems, and services to the pharmaceutical and biotechnology industries and to the companies that service these industries, such as clinical research organizations and chemical suppliers. Its primary product, the IDdb, delivers mission-critical content in a manner that enables integration with a client's own proprietary data and supports the researcher workflow by using a proprietary thesaurus. In addition to IDdb, Current Drugs provides products focusing on specific areas of scientific research, including the distinguished review journal *Current Opinion in Drug Discovery and Development*, and patent-based competitor intelligence services for the bio-pharmaceutical sector.

"I am delighted that Current Drugs has joined Thomson, enabling us to grow this successful business and better meet the needs of customers," said Ian Tarr, Managing Director of Current Drugs. "Thomson is well-known in the industry as a leading publisher of widely-used, comprehensive databases and integrated information solutions, and I look forward to working with colleagues at Derwent and ISI to deliver a range of integrated information solutions on our IDdb platform."

Current Drugs will become a part of the Scientific & Healthcare operating group within Thomson, and will continue to be run by its current business management group led by Ian Tarr, reporting directly to Michael Tansey.

The Thomson Corporation

The Thomson Corporation, with 2001 revenues of \$7.2 billion, is a global leader in providing integrated information solutions to business and professional customers. Thomson provides value-added information, software tools and applications to more than 20 million users in the fields of law, tax, accounting, financial services, higher education, reference information, corporate training and assessment, scientific research and healthcare. The Corporation's common shares are listed on the New York and Toronto stock exchanges (NYSE: TOC; TSX: TOC).
