ADVANCED SEMICONDUCTOR ENGINEERING, INC. REPORTS YEAR 2002
SECOND-QUARTER FINANCIAL RESULTS

Taipei, Taiwan, R.O.C., August 6th, 2002 - Advanced Semiconductor Engineering, Inc. (TAIEX: 2311, NYSE: ASX), ("ASE", or the "Company"), one of the world's largest independent providers of semiconductor packaging and testing services, today reported quarterly revenues of NT\$10,828 million, up 8% sequentially and up 28% versus a year ago period.

Net income amounted to NT\$74 million in the second quarter ended June 1st, 2002. Diluted earnings per share for the quarter was NT\$0.02, or US\$0.003 per ADS2.

"ASE's performance in the second quarter was within our expectation." commented Mr. Jason Chang, Chairman of ASE. "Despite the weakness in PC sector in the second quarter, it was mitigated by our well-balanced exposure in all 3C areas. We have witnessed volume increases in the wireless communication area, and the consumer sector continued to demonstrate steady growth. Even though visibility remains low as we enter into the second half of the year, we remain confident in achieving sequential quarterly growth given our wide customer base and the accelerated outsourcing in IC backend manufacturing."

Dr. Leonard Liu, President of ASE Group further commented: "In addition to continuously developing leading edge technologies and processes through our internal efforts, we also made significant progress in teaming up with our customers and complimentary service providers to align our technology roadmap with those of the semiconductor industry leaders. The outsourcing trend in the IC assembly and test business is currently driven by the availability of leading edge technology and capacity of the independent service providers, as well as their capability to deliver total turn-key solutions. We are striving to redefine the business model of IC backend manufacturing services by providing the most advanced and complete manufacturing solutions to our customers, and we believe that ASE is equipped with all the critical capabilities to drive the change,"

Edgar Filing: ADVANCED SEMICONDUCTOR ENGINEERING INC - Form 6-K

CONSOLIDATED FINANCIAL RESULTS

- o Net revenues amounted to NT\$10,828 million, up 8% sequentially and up 28% versus year ago quarter.
- o The revenue contribution can be broken down into - NT\$8,437 million from assembly operations, NT\$2,390 million from testing operations, and NT\$1 million from other miscellaneous sales.
- o Costs of goods sold were NT\$9,212 million and included NT\$2,810 in depreciation expenses. Gross profit for the quarter was NT\$1,616 million, representing a gross margin of 15%, up three percentage points sequentially.

1 All financial information is in accordance with generally accepted accounting principles in the Republic of China and was unaudited.

2 One ADS is equal to 5 shares of the Company.

1

Advanced Semiconductor Engineering, Inc.

[Logo]

- o Total operating expenses were NT\$1,612 million, including NT\$494 million in research and development expenses. Goodwill amortization related to the acquisition of consolidated entities was NT\$202 million. Selling, general and administrative expenses totaled NT\$1,118 million.
- o Net interest expense for the quarter was NT\$344 million. Foreign exchange loss amounted to NT\$262 million, as a result of the appreciation of the NT dollars, which had a negative impact on our US dollar-denominated deposits. On the other hand, the relatively weakness of the NT dollars versus the Japanese Yen also has a negative impact on our Yen-denominated liabilities.
- o The Company recognized an investment loss of NT\$73 million from its minority-owned affiliates, including NT\$49 million from Hung Ching Construction and NT\$24 million from other invested companies. The company also recorded an investment income of NT\$42 million from Universal Scientific Industrial Co., LTD. ("USI). The goodwill amortization related to non-consolidated affiliates of NT\$56 million remained unchanged compared to previous quarter.
- o Loss before tax was NT\$379 million. The Company recognized an income tax benefit of NT\$204 million during the quarter.
- o Minority income adjustment for the quarter amounted to NT\$249 million.
- o Effective January 1st, 2002, ROC GAAP requires that the Company's stocks held and owned by its subsidiaries be presented as treasury stocks. As a result of this GAAP change, total number of outstanding shares used in calculating the Company's EPS has reduced from 3,254,800,000 shares to 3,090,678,000 shares, reflecting a deduction of 164,122,000 shares representing Company's stock held by its subsidiaries. After adjusting for this GAAP change, the Company's loss per share for the first quarter of 2002 was NT\$0.07, or a loss per ADS of US\$0.011. The Company's earnings per share for the second quarter of 2002 was NT\$0.02, or US\$0.003 per ADS.
- o Capital expenditures in Q2 2002 totaled US\$103 million. The breakdown of the capital expenditures by operations is as follows: US\$64 million for assembly operations, US\$26 million for testing operations and US\$13 million for material manufacturing operations. The entire capital expenditure was for advanced assembly, test and substrate capacity and technology upgrades.
- o EBITDA for the quarter totaled NT\$3,430 million. As of June 30, 2002, the Company had cash on hand of NT\$7,638 million, as compared to NT\$10,080 million as of March 31, 2002. The decrease in our cash position was mainly

Edgar Filing: ADVANCED SEMICONDUCTOR ENGINEERING INC - Form 6-K

due to the sinking fund requirement in connection with the Company's Euro Convertible Bond due in November 2002, as well as the repayment of certain of the company's long term debt. Total bank debt amounted to NT\$39,840 million, of which NT\$23,786 million constituted long term financing.

BUSINESS REVIEW

Assembly Operation

- o Revenues generated from the Company's assembly operation were NT\$8,437 million, up 8% sequentially and an increase of 34% year-over-year.
- o Total assembly volume reached 57.7 billion pins, up 6% from the previous quarter and up 49% year-over-year.
- o Average selling price (ASP) per pin increased 2% sequentially, and down 13% year-over-year. o Fine pitch assembly (bonding pad pitch below 60 micron) comprised 51% of total assembly revenues, down from 54% sequentially and up from 46% year-over-year.
- o BGA revenues comprised 47% of total assembly revenues, down from 54% from the previous quarter and down from 49% from one year ago. The decrease in the percentage of BGA revenue was mainly due to the relative weakness in the PC sector as most high-end chipsets and graphic chips for PCs use BGA packages. The average number of pins per unit for the BGA packages was 238 in Q2 2002, compared to 284 pins in Q1 2002 and 210 in Q2 2001.
- o Volume from advanced leadframe based packages, including Low-profile Quad Flat Package (LQFP) and Thermal-enhanced Quad Flat Package (TQFP) increased 20%

2

Advanced Semiconductor Engineering, Inc.

[Logo]

sequentially and 88% year-over-year. Revenues from QFP, LQFP and TQFP packages accounted for 35% of total assembly revenues, up from 28% from the previous quarter and also 29% a year ago.

- o Gross margin of the assembly operations was 18%, up two percentage points sequentially and up six percentage points year-over-year.
- o The average utilization rate of the assembly operation was around 65% to 70%. The fine pitch assembly capacity operated at near-full utilization.
- o Capital spending on the assembly operations amounted to US\$64 million, of which US\$55 million was for the wirebonding assembly capacity, and US\$9 million was for wafer bumping and flip chip assembly capacity.
- o As of June 30, 2002, there were 4,040 wirebonders in operations, of which 2,540 wirebonders were capable of performing fine pitch wirebonding services. A total of 237 wirebonders were purchased and delivered during the second quarter of 2002.

Testing Operations

- o Revenues generated from the Company's testing operation were NT\$2,390 million, up 7% sequentially and up 8% year-over-year.
- o Of the total testing revenues, 86% was contributed by the Company's final test operation, 6% by the wafer sort operation, and 8% by the engineering test operation.
- o Testing volume (in terms of test time) increased around mid-ten percent sequentially, whereas ASP declined in the mid-single digit percentage.
- o Gross margin of the test operation was 6%, compared to negative 2% in the

Edgar Filing: ADVANCED SEMICONDUCTOR ENGINEERING INC - Form 6-K

- o previous quarter and 5% in the second quarter of 2001.
- o The average utilization rate of the testing operation was approximately 60%, with higher utilization rates on advanced tester platforms.
- o As of June 30, 2002, the Company operated a total of 1,048 testers.

Material Operations

- o Materials revenues were NT\$724 million for the quarter and consisted of NT\$228 million in QFP leadframe and NT\$496 million in PBGA substrates. Leadframe revenue grew 13% compared to the previous quarter as a result of stronger demand in the high-end etching QFP leadframe packages. PBGA substrate revenues declined 19%, reflecting the decreased volume in BGA packages. The materials revenues were not reflected in the Company's consolidated revenues since they were inter-company sales transaction.

Highlights

- o ASE and MTBS to jointly develop next generation Large Silicon Flip Chip Package.
- o ASE Hosts Third-Annual Tech Forum on Semiconductor Packaging and Test.
- o ASE to collaborate with IBM on next generation flip chip packaging technology.
- o ISE Offers Semiconductor Companies Worldwide Remote Access to Broad Range of Test Platforms.
- o ASE Advances in Fine Pitch Wire Bonding Technology.

BUSINESS OUTLOOK

The following statements are based on current expectations. These statements are forward-looking, and actual results may differ materially. Economic and industry conditions remain uncertain, and continue to make it particularly difficult to forecast product demand.

The Company expects

- o consolidated revenues to grow by mid-single digit percentage points sequentially
- o gross margin to improve by low-single digit percentage points sequentially
- o operating margin to be at a low-single digit percentage

About ASE Inc.

ASE Inc. is one of the world's largest independent providers of semiconductor packaging services and, together with its subsidiary ASE Test Limited (Nasdaq: ASTSF), one of the world's largest independent providers of semiconductor testing services, including front-end engineering testing, wafer probing and final testing services. The Company's international customer base of more than 200 blue-chip customers includes such leading names as Advanced Micro Devices, Inc., Altera Corporation, Cirrus Logic International Ltd., Conexant Systems, Inc., LSI Logic Corporation, and Qualcomm Incorporated. With advanced-process technological capabilities and a global presence spanning Taiwan, Korea, Hong
