Edgar Filing: OGE ENERGY CORP - Form 8-K

Completion of the transaction followed quickly after a July 2 order from the Federal Energy Regulatory Commission, which approved OG&E's acquisition of the 77 percent interest in the McClain plant. Including McClain, OG&E has nine power plants with total generating capacity of 6,100 megawatts.

This acquisition is an important milestone in our ongoing effort to provide our customers with savings and reliability, said Steven E. Moore, chairman, president and CEO of OGE Energy. We are pleased to add the efficient McClain facility to our low-cost, flexible fleet of power plants.

Construction of the McClain plant began in February 2000. OMPA acquired its 23 percent interest in December 2000 and NRG McClain LLC acquired the remaining 77 percent in June 2001, the same month the plant opened.

Using two generating turbines fueled by natural gas, the plant has demonstrated efficiency that OG&E believes will enable the company to deliver at least \$75 million of savings to retail electric customers over a three-year period as required by a 2002 rate settlement agreement with the Oklahoma Corporation Commission.

Our customers have been benefiting during the past year from an agreement we've had with NRG to purchase power from the McClain plant, Moore said. Today, we're pleased to announce that we've secured those savings for OG&E's customers for years to come.

OG&E serves approximately 728,000 customers in a service territory spanning 30,000 square miles in Oklahoma and western Arkansas. OGE Energy also is the parent company of Enogex Inc., a natural gas pipeline business with principal operations in Oklahoma and Arkansas.
