Cameco Reports Higher Third Quarter Earnings

The following discussion of the financial condition and operating results of Cameco Corporation should be read in conjunction with the unaudited consolidated financial statements and notes for the period ending September 30, 2004.

HIGHLIGHTS

Net consolidated earnings rise on stronger gold and uranium results

Higher prices deliver uranium earnings increase

Higher prices and production result in increased gold earnings

Bruce Power earnings affected by costs related to the scheduled vacuum building outage

Conversion services seven-week strike results in higher costs but no lost revenue

Management's discussion and analysis of financial condition and results of operations presented below reflects the effects of the restatement of our consolidated financial statements as at September 30, 2004 and 2003 and for the three month periods ended September 30, 2004 and 2003. See Restatements below for further discussion of this matter.

Restatements

(a) Accounting Change

The restructuring of Cameco's subsidiary, Centerra Gold Inc. (Centerra), prior to its initial public offering (IPO) included transactions to increase its interest in certain gold assets, and to settle its outstanding debt, as described below. The terms of these transactions, which were negotiated in the months leading up to the IPO, included the issuance of shares of Centerra on the closing of the transactions. Initially, these transactions were recorded based on estimates of the value of the tangible assets acquired and debt settled, determined based on discounted cash flow analyses.

In its year-end review, the company determined that in the case of a public company issuing shares to acquire assets or settle debt, the appropriate accounting treatment is to use the value of the acquiring company's shares to record the transaction. While Centerra was not a publicly traded company at the time it negotiated the restructuring transactions, it did become one concurrent with those transactions closing, as they were contingent on the closing of the IPO.

Table of Contents

Accordingly, by recording the value of the shares issued in the restructuring transactions at the IPO price, the impact on the balance sheet and statement of earnings at September 30, 2004 is an increase in each of the following:

	(thousands)
Goodwill	\$ 196,562
	\$ 196,562
Accounts payable and accrued liabilities	\$ 700
Future income taxes	23,817
Minority interest	93,010
Shareholders' equity	79,035
	\$ 196,562
Net earnings	\$ 86,233
Earnings per share	\$ 0.50

(b) Stock Split

On December 9, 2004, the Board of Directors of Cameco approved a split of the company's outstanding common shares on a three-for-one basis. The stock split was effected in the form of a stock dividend of two additional common shares for each share owned by shareholders of record at the close of business on December 31, 2004. The company's common shares commenced trading on a split basis on December 29, 2004 on the Toronto Stock Exchange and January 7, 2005 on the New York Stock Exchange. All equity-based benefit plans have been adjusted to reflect the stock split. All share and per-share data have been adjusted to reflect the stock split.

Note: All dollar amounts are expressed in Canadian dollars unless otherwise stated.

(a) 2004 excluded a net gain of \$94 million (\$0.55 per share) related to Centerra restructuring transactions recorded in the second and third quarters. 2003 excludes a non-recurring tax adjustment of \$86 million (\$0.50 per share) recorded in the second quarter of 2003.

CONSOLIDATED FINANCIAL RESULTS**Consolidated Earnings****Third Quarter**

For the three months ended September 30, 2004, net earnings increased to \$52 million (\$0.30 per share) from \$33 million (\$0.20 per share) in 2003. The results for 2004 include a net gain of \$5 million (\$0.03 per share) related to Centerra restructuring transactions.

Excluding the Centerra gain, net earnings increased for the three months ended September 30, 2004 by \$14 million (\$0.08 per share) compared to the same period in 2003. Improved earnings in the uranium and gold businesses were partially offset by reduced earnings from Bruce Power. The improvement in the uranium business was due primarily to a higher realized price, which was related to a significant increase in the spot market price for uranium. Earnings from the gold business benefited from higher production as a result of the commissioning of the Boroo gold mine as well as an improved realized price. Earnings from Bruce Power were slightly lower than

Table of Contents

the previous year due to costs associated with the vacuum building outage, which began in mid-September and required all four B units to be taken offline.

For more details on the uranium, conversion services, electricity and gold businesses, see Business Segment Results later in this report.

In the third quarter of 2004, Cameco's earnings included an after-tax net gain of \$5 million in the form of a break fee, which resulted from the unsuccessful effort to purchase an interest in the South Texas Project.

In the third quarter of 2004, the underwriters of the Centerra Gold Inc. (Centerra) IPO exercised their option to acquire an additional 1,875,000 shares of Centerra's common shares, resulting in a dilution of Cameco's interest from 54% to 53%. As a result, Cameco recorded an after-tax gain of \$6 million in the quarter due to a selling price that was greater than book value.

In the third quarter of 2004, total costs for administration, exploration, interest and other were about \$36 million, \$14 million higher than 2003. Administration costs increased by \$9 million due to higher costs associated with the restructuring of Centerra and increased stock compensation expenses. Exploration expenditures rose by \$5 million due to increased gold exploration activity in Central Asia and the United States. Interest and other costs were similar to those of the third quarter of 2003.

The effective tax rate decreased to 12% in the third quarter from 34% in the same period of 2003 due to a higher proportion of earnings from gold, which are earned in lower tax jurisdictions.

Earnings from operations were \$32 million in the third quarter of 2004 compared to \$13 million in 2003. The aggregate gross profit margin increased to 22% from 15% in 2003.

Year to Date

For the first nine months of 2004, net earnings were \$242 million (\$1.42 per share) compared to \$174 million (\$1.04 per share) in 2003.

Excluding the \$94 million Centerra restructuring gain recorded in 2004 and the \$86 million tax adjustment recorded in 2003, net earnings for the first nine months of 2004 increased by \$60 million (\$0.35 per share) compared to 2003. This increase was attributable to improved results in the uranium and gold businesses as well as stronger performance at Bruce Power.

The improvement in the uranium business was due to a higher realized price, which was related mainly to the significant increase in the spot price for uranium. Earnings from Bruce Power benefited from a 41% increase in production as a result of the restart of the two A reactors. Results from the gold business improved due to increased production and a higher realized selling price.

In the first nine months of 2004, total costs for administration, exploration, interest and other were about \$79 million, \$18 million higher than 2003. Administration costs increased by \$17 million due to a combination of higher costs in Centerra, increased stock compensation expenses and higher expenditures for quality and process enhancements. Exploration expenditures rose by \$7 million due to increased exploration activity in both the gold and uranium businesses. Interest and other costs decreased by about \$6 million due to higher investment income and reduced foreign exchange losses.

Table of Contents

Excluding the tax adjustment, the effective rate for income taxes in 2004 decreased to 21% from 33% as a higher proportion of earnings came from gold, which were earned in lower tax jurisdictions.

Earnings from operations were \$80 million compared to \$27 million in 2003 and the aggregate gross profit margin increased to 23% from 16% in 2003.

Quarterly Consolidated Financial Results (\$ millions except per share amounts)

Highlights	2004				2003			2002
	Q3	Q2	Q1	Q4	Q3	Q2	Q1	Q4
Revenue	313	242	132	272	232	220	103	271
Net earnings	52	151	39	34	33	104	37	23
Earnings per share (basic)	0.30	0.89	0.23	0.20	0.20	0.62	0.22	0.13
Cash from operations	140	(21)	49	79	77	38	52	14

Cash Flow

In the first nine months of 2004, Cameco generated cash from operations of \$169 million compared to \$171 million in 2003. This decrease of \$2 million was primarily due to an increase in inventory levels, which more than offset the benefit of higher revenues. Inventory levels fluctuate due to the timing of sales deliveries.

Cameco's cash from operations does not include its pro rata interest in Bruce Power's operating cash flow of \$141 million in 2004 compared to \$118 million in 2003. Cameco accounts for this investment using the equity method and thus Bruce Power's operating cash flows are not consolidated with Cameco's. For further information, refer to note 3 of the unaudited interim consolidated financial statements and notes for the period ending September 30, 2004 (financial statements).

Balance Sheet

At September 30, 2004, total long-term debt was \$537 million, a decrease of \$69 million compared to December 31, 2003. At September 30, 2004, Cameco's net debt to capitalization ratio was 14%, down from 22% at the end of 2003.

Effective January 1, 2004, Cameco changed its accounting policy for financial instruments. This change resulted in the preferred securities and convertible debentures being classified as debt rather than equity. See note 2 to the financial statements. Cameco redeemed the preferred securities on December 17, 2004.

Compared to the end of 2003, product inventories increased by \$70 million as production and purchases of uranium exceeded sales during the first nine months of 2004. Of this increase, about

Table of Contents

\$35 million was related to higher uranium inventory levels and about \$20 million was due to an increase in unit costs for uranium. The remainder was related to higher gold inventory levels.

At September 30, 2004, the consolidated cash balance totalled \$197 million. Centerra held approximately 80% of this amount.

Foreign Exchange Update

Cameco sells most of its uranium and conversion services in US dollars while most of its uranium and all of its conversion services are produced in Canada. As such, the company's uranium and conversion services revenue is denominated mostly in US dollars, while its production costs are denominated primarily in Canadian dollars.

The company attempts to provide some protection against exchange rate fluctuations by planned hedging activity designed to smooth volatility. Therefore, Cameco's uranium and conversion revenues are partly sheltered against declines in the US dollar in the shorter term.

In addition, Cameco has a portion of its annual cash outlays denominated in US dollars, including uranium and conversion services purchases, which provide a natural hedge against US currency fluctuations. While natural hedges provide cash flow protection against exchange rate fluctuations, the influence on earnings may be dispersed over several fiscal periods and is more difficult to identify.

During the quarter, the Canadian dollar strengthened against the US dollar from \$1.3404 at June 30, 2004 to \$1.2639 at September 30, 2004.

At September 30, 2004, Cameco had a foreign currency hedge portfolio of \$549 million (US). These hedges are expected to yield an average exchange rate of \$1.3618 (\$0.73 US = \$1.00 CDN). The net mark-to-market gain on these hedge positions was \$49 million at September 30, 2004.

Timing differences between the settlement and designation of hedge contracts may result in deferred revenue or deferred charges. At September 30, 2004, deferred revenue totalled \$25 million. The schedule for deferred revenue to be released to earnings, by year, is as follows:

	Sept. 30/04	2005	2006	2007
Deferred revenue (\$ millions)	5	22	6	(8)

In 2004, most of the net inflows of US dollar are hedged with currency derivatives. Net inflows represent forecast uranium and conversion sales less expected outlays (denominated in US dollars). For the uranium and conversion services businesses in the third quarter of 2004, the effective exchange rate, after allowing for hedging, was about \$1.39 compared to \$1.50 in the second quarter of 2004 and \$1.45 in the third quarter of 2003. Results from the gold business are converted into Canadian dollars at prevailing exchange rates.

Table of Contents

For the remainder of 2004, every one-cent change in the US to Canadian dollar exchange rate would change net earnings by about \$1 million (CDN). For 2005, every one-cent change in the US to Canadian dollar exchange rate would change net earnings by about \$3 million (CDN).

Consolidated Outlook for 2004

In 2004, consolidated revenue is expected to exceed that reported in 2003 due largely to increased production and ownership as well as a higher realized price in the gold business. In the uranium business, revenue is likely to be marginally higher due to a stronger realized price, which is expected to offset reduced volumes. On a consolidated basis, the gross profit margin is projected to improve from the 20% reported in 2003.

Consolidated Outlook for the Fourth Quarter

Revenue in the fourth quarter of 2004 is expected to be about 15% higher than the third quarter reflecting higher volumes in uranium and higher prices in all business segments. Earnings from Bruce Power are expected to be lower than in the third quarter due to reduced output resulting from the current maintenance outages. For the remainder of 2004, the effective rate for income taxes is expected to be in the range of 15% to 20%. In the fourth quarter, Cameco will recognize the unamortized portion of issue costs related to the preferred securities in earnings, resulting in a charge of \$4 million to net earnings.

Table of Contents

Uranium Earnings

Third Quarter

Revenue from the uranium business decreased by 4% to \$163 million from \$170 million in the third quarter of 2003 due to a 16% decline in sales volume. As the timing of deliveries of nuclear products within a calendar year is at the discretion of customers, Cameco's quarterly delivery patterns can vary significantly.

The decline in deliveries was largely offset by an increase in the average realized price, which rose 18% in US dollars (but 14% in Canadian dollars) over the third quarter of 2003. The difference in the percentage price increase is due to a less favourable foreign exchange rate. The higher realized price was mainly the result of a higher uranium spot price, which averaged \$19.29 (US) in the third quarter compared to \$11.52 (US) in the third quarter of 2003, an increase of 67%.

The total cost of products and services sold, including depreciation, depletion and reclamation (DDR) was \$138 million in the third quarter of 2004 compared to \$149 million in 2003. This decrease was mainly due to the 16% decrease in sales volume for the quarter.

Earnings before taxes from the uranium business increased by \$4 million in the third quarter of 2004 while the profit margin improved to 15% from 12% in 2003 due to the higher realized selling price.

Year to Date

Revenue from the uranium business decreased by 2% to \$378 million from \$385 million in 2003, due to lower deliveries, which were largely offset by an improved realized price. The higher realized price was the result of an increase in the uranium spot price, which averaged \$17.94 (US) in the first nine months compared to \$10.85 (US) in 2003, an increase of 65%. The benefit of the improved spot price was partially offset by lower prices on fixed-price contracts, contract price ceilings and a less favourable foreign exchange rate.

During the first nine months of 2004, the total cost of products and services sold, including DDR was \$319 million compared to \$340 million in 2003, reflecting an 11% decline in sales volume. On a per unit basis, the cost of product sold was about 5% higher than in the previous year. However, the cost of sales for 2003 included \$24 million in rehabilitation costs due to the water inflow incident at McArthur River. Excluding these costs, the unit cost of sales rose by 13% due to higher costs for purchased uranium and higher production costs at Rabbit Lake.

Earnings before taxes from the uranium business increased by \$13 million in the first nine months of 2004 and the profit margin improved to 16% from 12% in 2003.

Uranium Outlook for the Year

In 2004, Cameco's uranium revenue is expected to be marginally higher than in 2003 as the effect of a projected 15% improvement in selling price is expected to be largely offset by lower deliveries. About one-third of uranium deliveries are expected to occur in the last quarter of the year.

Table of Contents

Uranium margins are expected to improve to nearly 20% compared to the 15% reported in 2003, which included the expensing of the rehabilitation costs for McArthur River and the standby costs for Key Lake.

Uranium Outlook for the Fourth Quarter

For the fourth quarter of 2004, uranium revenue is projected to increase by about 25% over the third quarter as a result of higher deliveries. Cameco expects its average realized price, in Canadian dollars, will be about 10% greater than in the third quarter.

2004 Uranium Price Sensitivity Analysis

For deliveries in the fourth quarter of 2004, a \$1.00 (US) per pound increase in the U₃O₈ spot price from its current level of \$20.00 (US) per pound would increase revenue by about \$1 million (CDN), whereas a \$1.00 (US) per pound decrease would reduce revenue by about \$2 million (CDN). Please see uranium price sensitivity discussion below.

Uranium Price Sensitivity Analysis (2005 & 2006)

As previously disclosed, many of the company's uranium contracts were signed years ago when spot prices were much lower. As a result, these contracts have pricing terms that limit the benefit of spot price increases experienced to date.

The following table indicates the approximate percentage of targeted sales volume that will be impacted by further increases in the spot price above \$20 (US) per pound U₃O₈. As shown in the table below, the proportion of targeted sales that is sensitive to further increases in the spot price grows significantly in 2006.

	% Sales Target	
	2005	2006
Price Insensitive ¹	91%	65%
Price Sensitive ²	9%	35%

¹ fixed-price contracts and market-related contracts not sensitive to increases in the spot price above \$20 (US)

² market-related contracts plus uncommitted volumes

Cameco expects that a \$1.00 (US) increase in the spot price from \$20.00 (US) per pound would increase 2005 net earnings by \$2 million (CDN) or \$0.04 per share. This sensitivity assumes that one US dollar is equivalent to \$1.36 Canadian after allowing for hedging.

Given the level of sales targeted each year (32 million pounds in 2004), the company is continually in the market signing new contracts for deliveries beginning in two to three years. About 25% to 30% of the current contract portfolio rolls off each year, and is therefore replaced in large part with contracts that were entered into in the last two to three years. During this period of rapidly increasing prices, the company has continued to enter into new contracts.

Table of Contents

It is also important to note that over the past several years, Cameco's strategy was to ensure adequate cash flow in the near term with a mix of market-related and fixed-price contracts. At the same time, it sought to limit sales commitments beyond 2006, given the then prevailing market conditions, contracting terms and the company's expectations about future prices.

For the present, Cameco continues to target a sales portfolio where 60% of the contracts have prices that reference the spot price near the time of delivery and 40% have fixed/base-escalated prices. The new fixed/base price contracts generally reflect longer-term prices at the time of contract award. Therefore, in the coming years, Cameco's contract portfolio will be positively impacted by these higher fixed/base price contracts and have more upside potential under new spot-related contracts.

Uranium Market Update

Uranium Spot Market

The industry average spot price on September 30, 2004 was \$20.00 (US) per pound U_3O_8 , up 8% from \$18.50 (US) at June 30, 2004. This compares to \$12.23 (US) at the end of the third quarter of 2003.

Total spot market volume reported for the third quarter of 2004 was 3.5 million pounds U_3O_8 , for a total year to date of 12.8 million pounds. The quarterly volume is similar to the 3.8 million pounds for the third quarter of 2003 and the year to date volume is down from the corresponding nine-month total at that time of 14.8 million pounds.

Spot demand in 2004 continued to be slightly lower than in 2003, as buyers with near-term requirements exercised upward volume flexibilities under existing contracts in an effort to avoid paying higher prices. The vast majority of transactions in the third quarter were conducted off-market as buyers attempted to minimize upward pressure on prices. Spot sellers are offering limited volumes, with over 75% of spot purchases made by suppliers (about 60% of which were producers). Many producers are buying to cover commitments, including additional volumes arising from customers exercising their rights to increase contract deliveries. In addition, spot suppliers are not aggressively placing the volumes they have, resulting in price increases throughout the quarter.

Uranium Long-Term Market

The long-term market in 2004 continued to be active in the third quarter and long-term contracting in 2004 is expected to be significantly higher than the estimated 75 million pounds U_3O_8 contracted in 2003.

The long-term price indicators, published by TradeTech and Ux Consulting Company, LLC, were at \$23.00 (US) per pound U_3O_8 on September 30, 2004, up from \$18.50 (US) and \$19.00 (US) at the end of the second quarter.

Table of Contents***US Highly Enriched Uranium (HEU) Update***

The US Department of Energy has requested Expressions of Interest for the purchase of 15 to 17.4 tonnes of HEU (equivalent to about 7.6 million pounds U₃O₈ and 2,900 tonnes of conversion services) from their stockpile of HEU to be available to the market in approximately equal annual amounts from 2006 through 2009. A formal request for proposals may be issued by the US Department of Energy in the first quarter of 2005.

Uranium Operations Update***Uranium Production***

 Cameco's Share of Production	Three Months Ended	Three Months Ended	Nine Months Ended	Nine Months Ended
(million lbs U₃O₈)	Sept. 30/04	Sept. 30/03	Sept. 30/04	Sept. 30/03
McArthur River/Key Lake	3.2	3.6	9.1	6.9
Rabbit Lake	1.2	1.1	3.8	4.2
Smith Ranch/Highland	0.3	0.3	0.9	0.9
Crow Butte	0.2	0.2	0.6	0.6
Total	4.9	5.2	14.4	12.6

McArthur River/Key Lake

Production at McArthur River/Key Lake totalled 4.5 million pounds for the third quarter of 2004. Cameco's share is 3.2 million pounds.

The excess water inflow at McArthur River was successfully sealed off in July 2004. Total water inflow to the mine is less than 200 m³/hr, which is lower than it was before the water inflow incident.

McArthur River/Key Lake is on track to produce 18.5 million pounds for 2004 (Cameco's share is 12.9 million pounds).

Both the McArthur River and Key Lake operating licences require renewal on October 31, 2004. The Canadian Nuclear Safety Commission (CNSC) approved the renewal of these licenses on October 25, 2004 and they are valid until October 31, 2008.

The CNSC has indicated that the proposed production capacity increase to 22 million pounds U₃O₈ per year will require a screening level environmental assessment (EA) under the Canadian Environmental Assessment Act. A hearing was held as scheduled on September 15, 2004 to review EA guidelines for the production capacity increase. The EA guidelines are currently under consideration by the commission. The company expects a decision from the CNSC in late 2005. If approval is received, Cameco expects it will take a couple of years to ramp up production. Cameco is developing a plan to determine the optimal sustainable production rate.

Rabbit Lake

Rabbit Lake produced 1.2 million pounds U₃O₈ during the third quarter of 2004 and is expected to produce 5.8 million pounds in 2004.

Table of Contents

Prospects for additional reserves have been identified near the current mine. During the quarter, underground delineation drilling continued. The company has begun underground development in this area to establish a deeper exploration drift for further drilling later this year. It is anticipated that an estimate of the additional reserves will be available by year end.

Smith Ranch-Highland and Crow Butte

Smith Ranch-Highland and Crow Butte produced 0.5 million pounds during the third quarter of 2004. The operations are expected to produce 2.0 million pounds collectively for the year.

Uranium Projects Update

Cigar Lake

On July 7, 2004, the CNSC held the first of two hearings for the full construction licence at Cigar Lake. Following the hearing, the CNSC announced its decision to issue a licence to Cameco for construction of specific surface facilities at Cigar Lake. The licence is valid until January 31, 2005.

The second hearing for the full construction licence is scheduled for November 17, 2004. Assuming the full construction licence is obtained, the Cigar Lake partners will decide whether to proceed with development of the mine. Construction of the mine is expected to take up to 27 months, with uranium production possible in 2007. The anticipated annual production at full capacity is 18 million pounds. Cameco owns 50% of Cigar Lake. The Cigar Lake partners are updating the 2001 preliminary estimate of \$350 million for project development. Given the recent price increases in steel products, scope changes and additional operational requirements mandated by regulation, the project cost is expected to increase by 25% to 30% over the initial estimate.

Inkai

The test mine at Inkai in Kazakhstan produced about 0.14 million pounds U_3O_8 during the third quarter of 2004 and is expected to produce 0.4 million pounds for the year. Cameco owns 60% of the Inkai project. The Inkai Joint Venture has notified the Kazakh government that it intends to increase Inkai production to 5.2 million pounds per year at full capacity, up from the previous estimate of 2.6 million pounds.

The Inkai Joint Venture partners have decided to proceed with construction of the Inkai in situ leach mine. The Inkai Joint Venture intends to submit an environmental assessment and a design plan for the commercial facility to Kazakh regulatory authorities in the coming months, with approval expected by mid-2005. Following approval, construction will begin with commercial production scheduled for 2007. The costs net of sales proceeds from Inkai production are capitalized until commercial production is achieved.

Uranium Exploration Update

Cameco's uranium exploration division completed extensive field programs in both Saskatchewan and Australia during the third quarter. A total of 22 mid-stage projects were active, with diamond drilling on roughly half of these. Several targets were advanced as a result of favourable geology, structure and alteration.

Table of Contents

More advanced surface exploration also took place at Cameco's Rabbit Lake and McArthur River operations, where the targets are additional ore reserves, and at the advanced Cree Extension project. On Cree Extension, the Millenium zone, first encountered in 2000, continues to be evaluated with additional drilling. However, at this point there is not sufficient information to estimate a resource. The Millenium zone is located 40 kilometres northeast of Key Lake, and is owned by Cameco (42%), JCU Canada Exploration Ltd. (30%) and Cogema Resources Inc. (28%).

Conversion Services**Highlights**

	Three Months Ended Sept. 30/04	Three Months Ended Sept. 30/03	Nine Months Ended Sept. 30/04	Nine Months Ended Sept. 30/03
Revenue (\$ millions)	34	34	98	95
Gross profit (\$ millions)		2	22	22
Gross profit %		5	23	23
EBT (\$ millions)		1	21	21
Sales volume (tU)	4,375	4,457	11,542	11,301
Production volume (tU)		1,876	7,060	9,214

Conversion Services Earnings***Third Quarter***

In the third quarter of 2004, revenue from the conversion business was unchanged at \$34 million compared to the same period in 2003 as a 2% decline in sales volume was offset by a modest increase in the realized price.

The total cost of products and services sold, including depreciation, depletion and reclamation (DDR) was \$34 million in the third quarter of 2004 compared to \$32 million in 2003. This increase was largely attributable to the labour dispute at the Port Hope conversion facility, which disrupted production in the quarter. Costs incurred during the period of the strike were charged to earnings. On a per unit basis, the cost of products and services sold increased by about 9% over the previous year.

Earnings before taxes from the conversion business decreased by \$1 million. The gross profit margin decreased to 0% from 5% due to the labour dispute, which caused unit costs to increase compared to 2003.

Year to Date

Revenue from the conversion business rose marginally to \$98 million from \$95 million in 2003 due to a 2% increase in sales volumes.

The total cost of products and services sold, including DDR, was \$75 million in the first nine months of 2004 compared to \$73 million in 2003. This increase was attributable to the higher deliveries and the expensing of costs incurred during the labour dispute.

Table of Contents

Earnings before taxes and the profit margin from the conversion business remained unchanged in the first nine months of 2004.

Conversion Services Outlook for the Year

Revenue from the conversion business is likely to be marginally higher than in 2003 due to a small increase in deliveries. The realized price is expected to be similar to 2003. Production for 2004 is now projected to be about 10,100 tonnes, down from previous projections of 12,500 tonnes. As a result, unit costs are expected to be higher than in previous years impacting the profit margin for conversion services.

Conversion Services Outlook for the Fourth Quarter

For the fourth quarter of 2004, conversion revenue is projected to be higher than the third quarter. Profit margins are expected to be higher than in the third quarter due to the resumption of normal operations following the labour dispute.

Conversion Services Price Sensitivity Analysis

The majority of conversion sales are at fixed prices. In the short term, Cameco's financial results are relatively insensitive to changes in the spot price for conversion. The new fixed-price contracts generally reflect longer-term prices at the time of contract award. Therefore, in the coming years, Cameco's contract portfolio will be positively impacted by these higher fixed price contracts.

UF₆ Conversion Market Update

The industry average spot market price (TradeTech and Ux) for North American uranium conversion services increased to \$9.00 (US) per kgU at September 30, 2004, up from \$7.75 (US) at June 30, 2004. This compares to \$4.85 (US) per kgU at the end of the third quarter of 2003. In Europe, the industry average spot conversion price increased by \$0.87 (US) to \$10.00 (US) from the end of June 2004.

Conversion Services Operations Update

Production

There was no conversion production during the third quarter of 2004. This was due to the Port Hope plant being closed to conduct its annual maintenance and summer vacation program, followed by a labour dispute.

For the first nine months of 2004, production totalled 7,060 tonnes of uranium.

Labour Dispute Resolved

On September 14, 2004, about 200 hourly employees at Cameco's Port Hope conversion facility accepted a three-year contract offer. The employees, represented by two locals of the United Steelworkers of America, voted 62% in favour of the contract offer. They had been on strike since midnight July 28, 2004.

Table of Contents

Normal work resumed on September 16, 2004, to complete the scheduled annual maintenance work and prepare the plant for resumption of production. All work is going as planned. The UO₂ plant was restarted in early October and UF₆ plant operations resumed on October 24, 2004 with the plant producing the first UF₆ as it ramps up towards normal production.

During the strike, Cameco met sales obligations to customers by reducing its conversion inventory.

Nuclear Electricity Generation**Highlights*****Bruce Power Limited Partnership (100% basis)***

	Three Months Ended	Three Months Ended	Nine Months Ended	Nine Months Ended
	Sept. 30/04	Sept. 30/03	Sept. 30/04	Sept. 30/03
Output (terawatt hours)	8.7	6.5	26.1	18.6
Capacity factor (%) ¹	85	94	85	90
Realized price (\$ per MWh)	45	45	46	49
<i>(\$ millions)</i>				
Revenue	395	297	1,228	939

Interest	17	17	50	49
Earnings before taxes	81	84	345	291
Cash from operations	153	88	446	372
Capital expenditures (including sustaining capital)	71	108	250	400

¹Capacity factor for a given period represents the amount of electricity actually produced for sale as a percentage of the amount of electricity the plants are capable of producing for sale.

In the third quarter of 2004, Bruce Power generated cash from operations of \$153 million compared to \$88 million in the third quarter of 2003. For the first nine months of 2004, Bruce Power generated \$446 million compared to \$372 million during the same period in 2003.

Capital expenditures for the third quarter of 2004 totalled \$71 million compared to \$108 million during the same period in 2003. For the first nine months of 2004, capital expenditures were \$250 million compared to \$400 million in the first nine months of 2003. As previously reported, Bruce Power's 2004 capital expenditure program is expected to total \$400 million, of which \$280 million is for improvements to the six operating reactors and infrastructure projects. The additional \$120 million is anticipated for sustaining capital and site service support areas.

For the nine months ended September 30, 2004, Bruce Power's operating cash flows exceeded capital expenditures by \$196 million allowing for the repayment of \$120 million of short-term debt. The remainder is expected to finance operating requirements.

Table of Contents***Cameco's Earnings from Bruce Power***

Pre-tax earnings from Bruce Power	28	37	119	102

Third Quarter***Earnings***

For the third quarter, Bruce Power earnings before taxes declined slightly to \$81 million from \$84 million in 2003 due to higher operating costs associated with the vacuum building outage and from moving towards a six-unit operational site. Cameco's pre-tax earnings from Bruce Power amounted to \$28 million compared to \$37 million in 2003.

Output

Bruce Power achieved a capacity factor of 85% in the third quarter of 2004 compared to 94% in the same period of 2003. The lower capacity factor in the third quarter of 2004 reflects the scheduled outages during that period. During the third quarter of 2004, the Bruce Power units generated 8.7 terawatt hours (TWh) of electricity. This output included 3.1 TWh from the two A units (A3 and A4), which were available for the full quarter. In the third quarter of 2003, all four B units were operational producing 6.5 TWh. The two A units were not operating in the third quarter of 2003.

On September 11, 2004, unit B6 was taken off line for its scheduled maintenance inspection and will remain off line for a total of three months. In addition, the CNSC requires all Candu operators to conduct a thorough examination of the vacuum building structure every 12 years. Since the vacuum building is a shared safety system, the remaining three B units were taken off line on September 18 so crews could check the integrity of the structure. The vacuum building inspection was expected to take about a month but was completed in 25 days. Two B units returned to service on October 11 and 13, while unit B5 will be kept off line for a short time due to a heat transport pump requiring additional maintenance. The repairs on B5 are expected to be complete by mid-November.

A unique safety feature of Candu reactors, the vacuum building is designed to prevent the release of radioactive material to the environment in the event of an accident. A large cylindrical structure, it is connected to the generating station by a pressure relief duct and kept at negative atmospheric pressure so any release of radioactive steam can be sucked into the vacuum building.

Table of Contents

Throughout the vacuum building inspection, Bruce A Units 3 and 4 both operated at 100% capacity factors and continued to generate 1,500 MW of electricity.

Price

For the third quarter, Bruce Power's revenue increased to \$395 million from \$297 million in 2003. This can be attributed primarily to the higher output noted above.

The realized price achieved from a mix of contract and spot sales averaged \$45 per megawatt hour (MWh) during the third quarter of 2004; similar to the same period in 2003.

During the quarter, the Ontario electricity spot price averaged about \$46 per MWh, the same as the third quarter of 2003.

To reduce its exposure to spot market prices, Bruce Power has a portfolio of fixed-price sales contracts. During the third quarter of 2004, about 45% of Bruce Power's output was sold under fixed-price contracts compared to 66% in the same period in 2003.

Cameco provides guarantees to customers under these contracts of up to \$123 million. At September 30, 2004, Cameco's actual exposure under these guarantees was \$53 million. In addition, Cameco provides financial assurances for other Bruce Power commitments, which totalled about \$82 million at September 30, 2004.

Costs

Output was up 34% while operating costs (including depreciation and amortization) of \$297 million were higher by almost 52% on a quarter-over-quarter basis. This was primarily as a result of the fact that six units, rather than four, are now operating with the resultant increase in staff and material costs. In the third quarter of 2003, staff costs related to the restart of two Bruce A reactors were capitalized to the project. In addition, depreciation costs and supplemental rent also increased on a quarter-over-quarter basis as a result of bringing the two Bruce A units into service.

About 95% of Bruce Power's operating costs are fixed. As such, most of the costs are incurred whether the plant is operating or not. On a per unit basis, the operating cost in the third quarter of 2004 was \$34 per MWh, 13% higher than in the third quarter of 2003. This increase was primarily due to costs and lost generation associated with the vacuum building outage.

Year to Date

Earnings

For the nine months ended September 30, 2004, Bruce Power earnings before taxes were \$345 million compared to \$291 million in 2003. The increase can be attributed to higher electricity generation in the first nine months of 2004 compared to the same period in 2003. Year to date, Cameco's pre-tax earnings from Bruce Power amounted to \$119 million compared to \$102 million for the same period in 2003.

Table of Contents

Output

For the first nine months of the year, the Bruce Power units achieved a total capacity factor of 85%, down from 90% in the same period last year. These units produced 26.1 TWh during the first nine months of the year, a 40% increase over the same period last year, reflecting the addition of the two A units as well as the 3% increase in net capacity on Bruce B Unit 6 achieved through fuel configuration that has increased output by approximately 40 MW.

Price

For the first nine months of 2004, generation revenue totalled \$1,228 million, up 31% compared to the first nine months of 2003. During this period, Bruce Power's realized price averaged \$46 per MWh from a mix of contract and spot sales, an 8% decrease over the same period last year. The Ontario electricity spot price averaged about \$50 per MWh during the first nine months of the year compared to \$56 per MWh a year ago.

During the first nine months of 2004, about 47% of Bruce Power's output was sold under fixed-price contracts compared to 63% in the same period in 2003.

Costs

For the first nine months of 2004, operating costs (including depreciation and amortization) were \$833 million, 39% higher than the same period in 2003. This was primarily as a result of moving towards a six-unit operational site and the resulting increase in staff and material costs. In the first nine months of 2003, staff costs attributed to the Bruce A restart were capitalized to the project. In addition, depreciation costs and supplemental rent also increased year over year as a result of bringing the two Bruce A units into service.

About 95% of Bruce Power's operating costs are fixed. As such, most of the costs are incurred whether the plant is operating or not. On a per unit basis, the year-to-date operating cost was \$32 per MWh, similar to the first nine months in 2003.

Bruce Power Outlook for the Year

There are no further planned outages for Bruce Power's reactors in 2004. The aggregate capacity factor for the year is now expected to reach 83%.

Bruce Power's revenue is expected to increase in 2004 as six units will be in operation compared to four in 2003. Margins are also expected to be somewhat higher than in 2003. The improved margins depend upon successful completion of the planned outage and the spot price performance in the last quarter of the year.

Table of Contents**Bruce Power Outlook for the Fourth Quarter**

The planned month-long maintenance outage for all four B units has been completed with two of the three anticipated B units returning to service. Unit B5 will be out for a short unplanned outage as noted above, while the fourth unit (B6) remains in its maintenance outage as planned. This is expected to reduce fourth quarter output by about 10% compared to the third quarter. The benefit of an expected increase in the electricity spot price is likely to be offset by higher maintenance costs and lost revenue associated with the outage. Together, these factors are anticipated to decrease Bruce Power's earnings in the fourth quarter compared to the third quarter.

Electricity Price Sensitivity Analysis

At the end of the quarter, about 40% of Bruce Power's planned output for the remainder of 2004 was under fixed-price contracts. A \$1.00 per MWh change in the spot price for electricity in Ontario would change Cameco's after-tax earnings from Bruce Power by about \$1 million.

Gold**Centerra Gold Inc.**

Following the exercise of the over-allotment option by the underwriters, which closed on July 28, 2004, Centerra has 72.1 million common shares outstanding. Cameco Gold Inc., a wholly-owned subsidiary of Cameco, owns 38.0 million common shares or 53% of Centerra.

The operating results of the Kumtor Gold Company (Kumtor) have been fully consolidated as of June 22, 2004. Prior to that, Cameco proportionately consolidated its interest in Kumtor. Cameco also fully consolidates the results of Boroo, Centerra's gold mine in Mongolia. Cameco adjusts for a 47% minority interest in Centerra, which reflects that share of earnings attributable to shareholders other than Cameco.

Financial Highlights

¹Beginning in the third quarter of 2004, Cameco fully consolidates Kumtor's results.

²Commercial operations commenced March 1, 2004.

³Total cash cost is a non-GAAP measure and is discussed under **Non-GAAP measures** **Total cash costs**

Earnings from Gold***Third Quarter***

In the third quarter of 2004, revenue generated in the gold business rose to \$115 million from \$28 million compared to the third quarter of last year due to the full consolidation of Kumtor's results and to production from the Boroo mine, commissioned in 2004. The realized price for gold increased to \$398 (US) in the quarter from \$312 (US) per ounce in the same quarter last year, due to a reduced hedge level, which provided greater exposure to the higher spot price.

For the quarter, the gross profit margin for gold declined to 37% from 43% in 2003 due to higher cash costs at Kumtor, largely the result of lower production. On a 100% basis, Kumtor's production was 19% lower at 166,805 ounces compared to 207,128 ounces in the previous year.

Production at the Kumtor mine decreased due to a lower ore grade that averaged 4.3 grams per tonne (g/t) compared to 5.2 g/t in 2003. Kumtor's total cash cost per ounce increased to \$192 (US) compared to \$160 (US) in 2003 due to the decrease in production.

Production at Boroo continued to exceed expectations at 68,773 ounces. Output is higher than expected due primarily to higher ore grades than had been predicted by the ore reserve model. Boroo's total cash cost per ounce was \$135 (US) for the third quarter of 2004.

Year to Date

Revenue from the gold business increased to \$212 million from \$75 million compared to the same period last year, reflecting the full consolidation of Kumtor's results since June 2004 as well as from production at the Boroo mine. A higher realized price for gold also added to revenues, increasing to \$380 (US) in 2004 compared to \$315 (US) in 2003 due to a reduced hedge level, which provided greater exposure to the higher spot price. The Canadian dollar revenues do not reflect this entire increase due to the strength of the Canadian dollar relative to last year.

Table of Contents

Production at the Kumtor mine increased by 48,752 ounces (10%) due to a higher ore grade that averaged 4.6 g/t compared to 4.2 g/t in 2003. Kumtor's total cash cost per ounce decreased to \$185 (US) compared to \$200 (US) in 2003 due to the increase in production.

Production at Boroo has totalled 151,426 ounces since commercial production was declared on March 1, 2004. Boroo's total cash cost per ounce was \$135 (US) for the first nine months of 2004.

The gross profit margin for gold rose to 36% in the first nine months of 2004 compared to 30% in 2003.

Gold Market Update

The average spot market gold price during the third quarter of 2004 was \$401 (US), ending the quarter at \$416 (US) per ounce. This compares to \$396 (US) at June 30, 2004 and \$388 (US) at the end of the third quarter of 2003.

As of the end of September, all forward sales agreements for Centerra have been closed and all credit support has been removed.

Timing differences between the settlement and designation of hedge contracts have resulted in deferred charges. At September 30, 2004, these deferred charges totalled \$8 million (US).

Gold Outlook for the Year

At Kumtor, production is still expected to total 655,000 ounces due to a milling plan that calls for a mix of lower grade stockpiled ore and higher grade mine ore.

The 2004 forecast production for Boroo is now expected to be 245,000 ounces. This estimate includes pre-commercial production from January to February 2004 of 27,703 ounces.

Given the planned total production from the Kumtor and Boroo mines, greater revenue is expected compared to 2003, assuming gold prices remain near current levels. Profits are expected to improve as a result of increased production. Furthermore, Kumtor's results are now fully consolidated, which will cause a significant increase in the amount of reported revenue.

Gold Outlook for the Fourth Quarter

For the fourth quarter of 2004, profits from the gold business are projected to decline compared to the third quarter as a result of lower production from the Kumtor and Boroo mines where ore grades are expected to be lower than in the third quarter.

Gold Price Sensitivity Analysis

For the remainder of 2004, gold sales are unhedged. A \$10.00 (US) per ounce change in the gold spot price would change revenue by about \$2.5 million (CDN), cash flow by about \$2.4 million (CDN) and net earnings by about \$1.2 million (CDN).

Table of Contents

NUCLEAR INDUSTRY DEVELOPMENTS

United States

A report published in August 2004 by the University of Chicago under the sponsorship of the US Department of Energy has concluded that future nuclear power costs are competitive with both coal and natural gas generation once early plant costs are absorbed. The study states that the principal economic barrier to new nuclear plants are the costs associated with first-of-a-kind construction and federal financial policies could make construction of the first nuclear plants more competitive.

In the US, for the third consecutive year, nuclear was the lowest-cost electricity producer of base load electricity excluding hydro. Nuclear power production costs were marginally lower than coal and about one-third the cost of oil and gas.

Canada

The Canadian Energy Research Institute published a report in August 2004 that compares the lifetime costs of new base load generation in Ontario. One of the conclusions of the report was that refurbishment of existing nuclear units may be particularly attractive as it could be completed more rapidly than the construction of new plants.

The report also noted that the deployment of a twin ACR-700 nuclear reactor, including first-of-a-kind costs, is either the lowest-cost option or comparable with coal-fired generation when CO₂ emissions costs are included. Deployment of later ACR-700s result in costs competitive with coal, even in the absence of CO₂ emissions costs, as more units of the same design are built.

It further noted that gas-fired generation for base load supply looks unattractive due to anticipated increases in natural gas prices.

Europe

In Sweden, the government has announced that the Barseback 2 reactor will be closed in 2005, the second closure under its nuclear phase out program. This is a delay of approximately two years from the original phase out plan. This loss of about 600 megawatts equates to about 225,000 pounds U₃O₈ per year, but it is anticipated this demand will be replaced through uprates of other Swedish reactors by 2010.

Table of Contents

China

Late in September 2004, China issued a call for bids for four new reactors at two different locations. The tender requested bids, within five months, on nuclear power plants between 1,000 and 1,500 megawatts each. Bid evaluation is expected to be complete by late 2005, but no construction dates were specified. These four units are in addition to the nine reactors currently operating, two reactors under construction, and four units in the planning stages. China now has 6,600 megawatts of nuclear generation in operation. China has stated that it wishes to increase generating capacity to 36,000 megawatts by 2020, which would involve adding an average of 2,000 megawatts per year between now and then.

LIQUIDITY AND CAPITAL RESOURCES

Changes in liquidity and capital resources during the third quarter included the following:

Credit Facilities

In the third quarter of 2004, Cameco prepaid an \$8 million (US) equipment loan. On October 5, 2004, Cameco extended the terms of its revolving credit facilities by one year.

Commercial Commitments

During the quarter, commercial commitments declined 8% to \$349 million from \$381 million at June 30, 2004. Early closing of gold hedge positions reduced Cameco's credit support obligations to counterparties under these arrangements by \$18 million. Cameco is not providing any credit support for Centerra. Obligations to provide financial guarantees supporting Bruce Power decreased by \$16 million while financial guarantees supporting Inkai increased by \$2 million to the end of the quarter.

Credit Ratings

As of September 30, 2004, Cameco had the following ratings for its senior debt from third-party rating agencies:

Dominion Bond Rating Service Limited (DBRS) A (low) with a stable outlook

Moody's Investors Service Baa1 with a stable outlook

Standard & Poor's (S&P) BBB+ with a stable outlook

Notice of Redemption of Cameco Preferred Securities

On October 25, 2004, Cameco's board of directors approved the redemption of all \$125 million (US) of outstanding 8.75% Preferred Securities for cash on December 17, 2004. The preferred securities are redeemable at a redemption price equal to 100% of the principal amount plus accrued and unpaid interest thereon to the date of redemption. In the fourth quarter, Cameco recognized the unamortized portion of the issue costs in earnings, resulting in a charge of \$4 million (CDN) to net earnings.

Table of Contents

SHARE CAPITAL

At September 30, 2004, there were 174,492,269 common shares outstanding.

RELATED PARTY TRANSACTION

Cameco buys a significant amount of goods and services for its Saskatchewan mining operations from northern Saskatchewan suppliers to support economic development in the region. One such supplier is Kitsaki Management Limited Partnership. Harry Cook, a director of Cameco, is the chair of this company and is also the chief of Lac LaRonge Indian Band, which owns Kitsaki. In 2004 to the end of the third quarter, Cameco had paid Kitsaki subsidiary companies \$16.4 million for transportation and catering services.

NON-GAAP MEASURES

In addition to disclosing results in accordance with the Canadian generally accepted accounting principles (GAAP), Cameco also provides supplementary non-GAAP measures as a method to evaluate the company's operating performance.

Adjusted Net Earnings

The measure adjusted net earnings for 2004 excludes the earnings impact of the transactions related to the Centerra restructuring. The restructuring allowed Cameco to recognize a non-recurring increase to net earnings of \$94 million (\$0.55 per share) in the second quarter of 2004.

The measure for 2003 excludes the effects of changes in Canadian federal tax legislation that was substantially enacted in June 2003. These changes affected taxation of resource sector earnings and resulted in Cameco recording a recovery of \$86 million (\$0.50 per share) in the second quarter of 2003.

Management believes the exclusion of these items provides a more meaningful basis for period-to-period comparisons of the company's financial results.

Total Cash Cost

This MD&A presents information about total cash cost of production of an ounce of gold for the operating properties of Centerra. Except as otherwise noted, total cash cost per ounce is calculated by dividing total cash costs, as determined using the industry standard published by the Gold Institute, by gold ounces produced for the relevant period. The Gold Institute is a non-profit international association of miners, refiners, bullion suppliers and manufacturers of gold products, which has developed a standard format for reporting costs on a per ounce basis.

Total cash costs, as defined in the Gold Institute standard, include mine operating costs such as mining, processing, administration, royalties and production taxes, but exclude amortization, reclamation costs, financing costs and capital, development and exploration.

Table of Contents

Total cash cost per ounce has been included because certain investors use this information to assess performance and also to determine the ability of Centerra to generate cash flow for use in investing and other activities. The inclusion of total cash cost per ounce enables investors to better understand year-on-year changes in production costs, which in turn affect profitability and cash flow.

CAUTION REGARDING FORWARD-LOOKING INFORMATION

Statements contained in this news release, which are not historical facts, are forward-looking statements that involve risks, uncertainties and other factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements. Factors that could cause such differences, without limiting the generality of the following, include: volatility and sensitivity to market prices for uranium, electricity in Ontario and gold; the impact of the sales volume of uranium, conversion services, electricity generated and gold; competition; the impact of change in foreign currency exchange rates and interest rates; imprecision in reserve estimates; environmental and safety risks including increased regulatory burdens; unexpected geological or hydrological conditions; adverse mining conditions, political risks arising from operating in certain developing countries; a possible deterioration in political support for nuclear energy; changes in government regulations and policies, including trade laws and policies; demand for nuclear power; replacement of production and failure to obtain necessary permits and approvals from government authorities; legislative and regulatory initiatives regarding deregulation, regulation or restructuring of the electric utility industry in Ontario; Ontario electricity rate regulations; weather and other natural phenomena; ability to maintain and further improve positive labour relations; operating performance of the facilities; decrease in electrical production due to planned outages extending beyond their scheduled periods or unplanned outages; success of planned development projects; and other development and operating risks.

Although Cameco believes that the assumptions inherent in the forward-looking statements are reasonable, undue reliance should not be placed on these statements, which only apply as of the date of this report. Cameco disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.

Table of Contents

Cameco Corporation
Notes to Consolidated Financial Statements
(Unaudited)

1. Accounting Policies

These consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles and follow the same accounting principles and methods of application as the most recent annual consolidated financial statements, except for changes in accounting policies impacting financial instruments and hedging relationships as noted below. The financial statements should be read in conjunction with Cameco's annual consolidated financial statements included in the 2003 annual report. Certain comparative figures for the prior period have been reclassified to conform to the current period's presentation.

2. Restatements**(a) Accounting Change (note 11)**

The restructuring of Cameco's subsidiary, Centerra Gold Inc. (Centerra), prior to its initial public offering (IPO) included transactions to increase its interest in certain gold assets, and to settle its outstanding debt, as described below. The terms of these transactions, which were negotiated in the months leading up to the IPO, included the issuance of shares of Centerra on the closing of the transactions. Initially, these transactions were recorded based on estimates of the value of the tangible assets acquired and debt settled, determined based on discounted cash flow analyses.

In its year-end review, the company determined that in the case of a public company issuing shares to acquire assets or settle debt, the appropriate accounting treatment is to use the value of the acquiring company's shares to record the transaction. While Centerra was not a publicly traded company at the time it negotiated the restructuring transactions, it did become one concurrent with those transactions closing, as they were contingent on the closing of the IPO.

Accordingly, by recording the value of the shares issued in the restructuring transactions at the IPO price, the impact on the balance sheet and statement of earnings at September 30, 2004 is an increase in each of the following:

	(thousands)
Goodwill	\$ 196,562
	\$ 196,562
Accounts payable and accrued liabilities	\$ 700
Future income taxes	23,817
Minority interest	93,010
Shareholders' equity	79,035
	\$ 196,562

Net earnings	\$ 86,233
Earnings per share	\$ 0.50

Table of Contents
Cameco Corporation
Notes to Consolidated Financial Statements
(Unaudited)
(b) Stock Split

On December 9, 2004, the Board of Directors of Cameco approved a split of the company's outstanding common shares on a three-for-one basis. The stock split was effected in the form of a stock dividend of two additional common shares for each share owned by shareholders of record at the close of business on December 31, 2004. The company's common shares commenced trading on a split basis on December 29, 2004 on the Toronto Stock Exchange and January 7, 2005 on the New York Stock Exchange. All equity-based benefit plans have been adjusted to reflect the stock split. All share and per-share data have been adjusted to reflect the stock split.

(c) Financial Instruments

Effective January 1, 2004, Cameco has adopted the amendments to CICA Handbook Section 3860, Financial Instruments. This change in accounting policy was applied retroactively and, accordingly, the consolidated financial statements of prior periods were restated. The amendments to this section address the balance sheet presentation of financial instruments as liabilities or equity. Accordingly, amounts previously reflected as equity charges are now recorded as interest expense. In addition, an increased amount of interest has been capitalized to property, plant and equipment. The cumulative effect of the change in policy on the balance sheet and statement of earnings at December 31, 2003 is as follows:

	(thousands)
Long-term receivables, investments and other	\$ 14,067
Property, plant and equipment	49,233
	\$ 63,300
Future income taxes	\$ 26,576
Long-term debt	361,670
Shareholders' equity	(324,946)
	\$ 63,300
Net earnings	\$ 3,477
Earnings per share	\$ 0.02

For the nine months ended September 30, 2004, the change in policy had a positive impact on net earnings of \$5.3 million (September 30, 2003 \$1.2 million), which caused a \$0.03 change in the basic earnings per share (September 30, 2003 \$0.01).

(d) Hedging Relationships

Effective January 1, 2004, Cameco adopted the new Canadian Accounting Guideline, Hedging Relationships, which established new criteria for hedging relationships in effect on or after January 1, 2004. To qualify for hedge accounting, the hedging relationship must be appropriately documented and there must be reasonable assurance, both at the inception and throughout the term of the hedge, that the hedging relationship will be effective. Effectiveness requires a high degree of correlation of changes in fair values or cash flows between the hedged item and the hedge. The adoption of this accounting guideline had no material impact on the consolidated financial statements.

Table of Contents

Cameco Corporation
Notes to Consolidated Financial Statements
(Unaudited)

(e) Stock-Based Compensation

CICA Handbook Section 3870, Stock-based Compensation and Other Stock-based Payments, establishes a fair value based method of accounting for stock-based compensation plans which Cameco adopted from January 1, 2003.

The change in accounting policy was applied retroactively and, accordingly, the consolidated financial statements of prior periods were restated. For the first nine months of 2003, the change in policy had a negative impact on net earnings of \$1.7 million, which caused a \$0.01 change in the basic net earnings and diluted earnings per share. The income statement was restated to reflect an increase in the administration expense by \$1.7 million. The cumulative effect of the change in policy on the balance sheet at September 30, 2003 was to increase contributed surplus by \$1.7 million and decrease retained earnings by \$1.7 million.

10. Stock-Based Compensation

For the nine months ended September 30, 2004, Cameco has recorded compensation expense of \$5.4 million with an offsetting credit to contributed surplus.

Cameco has applied the pro forma disclosure provisions of the standard to awards granted on or after January 1, 2002 but prior to January 1, 2003. The pro forma effect of awards granted prior to January 1, 2002 has not been included. The pro forma net earnings, basic and diluted earnings per share as a result of the grant of these options are:

	(Restated)	(Restated)	(Restated)	(Restated)
	Three Months Ended		Nine Months Ended	
	Sept	Sept	Sept	Sept
(thousands)	30/04	30/03	30/04	30/03
Pro forma net earnings	\$ 51,415	\$ 32,930	\$ 241,627	\$ 173,082
Pro forma basic earnings per share	0.30	0.20	1.41	1.03
Pro forma diluted earnings per share	0.29	0.19	1.35	1.02

The fair value of the options issued was determined using the Black-Scholes option pricing model with the following assumptions:

	(Restated)	(Restated)
	2004	2003
Number of options granted	1,934,250	1,901,700
Average strike price	\$ 21.81	\$ 12.01
Dividend	\$ 0.20	\$ 0.20
Expected volatility	37%	20%
Risk-free interest rate	3.3%	4.1%
Expected life of option	4 years	5 years
Expected forfeitures	15%	10%
Weighted average grant date fair values	\$ 6.78	\$ 2.51

11. Restructuring of the Gold Business**(a) Initial Public Offering**

Under its initial public offering,
Centerra issued 5,000,000

common shares to the public on June 30, 2004 for net proceeds of \$73,625,000 after deducting the underwriter's fees of 5%. On July 28, 2004, the underwriters to the initial public offering of Centerra exercised their over-allotment option to acquire an additional 1,875,000 shares for net proceeds of \$27,609,000.

(b) Acquisition of Additional 66.7% in Kumtor Gold Company (KGC)

Pursuant to the restructuring agreement between Cameco Gold Inc. (a wholly owned subsidiary of Cameco) and Kyrgyzaltyn, Centerra acquired an additional 66.7% interest in KGC, resulting in KGC becoming a wholly owned subsidiary of Centerra. The purchase price consisted of \$11,000,000 (US) in cash, the contribution of a promissory note receivable and common shares of Centerra. The acquisition was accounted for using the purchase method and the results of operations are included, as to 100%, in the consolidated financial statements from June 22, 2004. Previously, Cameco Gold Inc.'s 33.3% interest was accounted for by the proportionate consolidation method.

The values assigned to the net assets acquired are as follows:

	(Restated)
	(thousands)
Cash and other working capital	\$ 60,602
Property, plant and equipment	177,413
Goodwill [note 12]	178,733
Asset retirement obligation	(14,852)
Subordinated debt	(44,282)
Net assets acquired	\$ 357,614
Financed by:	
Cash	\$ 15,158
Note receivable from Kyrgyzaltyn	5,155
Settlement of shareholder subordinated loan	60,622
Common shares of Centerra	276,679
	\$ 357,614

(c) **Acquisition of Additional 43.7% in AGR Limited (AGR)**

Effective June 30, 2004, Centerra acquired an additional 43.7% interest in AGR, resulting in Centerra's interest in AGR rising to 99.9%. The purchase price was satisfied through the issuance of Centerra common shares. The acquisition was accounted for as a step purchase and the results of operations are included as it was already a consolidated subsidiary.

The values assigned to the net assets acquired are as follows:

	(Restated)
	(thousands)
Reduction of minority interest	\$ 18,598
Mark-to-market loss on hedge contracts	(7,946)
Property, plant and equipment	30,412
Goodwill [note 12]	35,573
Net assets acquired	\$ 76,637

Financed by:	
Common shares of Centerra	\$ 76,637

(d) Exchange of KGC Subordinated Debt

Effective June 30, 2004, Centerra exchanged common shares and cash in exchange for the subordinated debt of KGC.

	(Restated)
	(thousands)
Fair value of exchange amount:	
Common shares issued	\$ 47,449
Cash	18,975
	66,424
Net book value of subordinated debt acquired	(53,906)
Loss on exchange of debt	\$ 12,518

(e) Dilution Gain

The transactions noted above resulted in Cameco's interest in Centerra being diluted. As a result of this dilution, Cameco recorded a gain of \$139 million.

12. Goodwill Restated

The acquisitions undertaken as part of the gold restructuring were accounted for using the purchase method whereby assets and liabilities assumed were recorded at their fair market value as of the date of acquisition. The excess of the purchase price over such fair value was recorded as goodwill. The change in goodwill is due to the following:

	(thousands)
Balance, beginning of period	\$
Acquired during the period KGC [note 11]	178,733
AGR [note 11]	35,573
Change in foreign exchange rate	(17,744)
Balance, end of period	\$ 196,562

13. Statements of Cash Flows Restated

Other Operating Items

(thousands)	Three Months Ended		Nine Months Ended	
	Sept 30/04	Sept 30/03	Sept 30/04	Sept 30/03
Inventories	\$ 28,716	\$ 48,220	\$ (57,496)	\$ 32,795
Accounts receivable	67,480	(9,479)	93,194	47,009
Accounts payable and accrued liabilities	(26,090)	(29,098)	(31,474)	(37,342)
Other	(25,862)	10,461	(24,980)	6,400
Total	\$ 44,244	\$ 20,104	\$ (20,756)	\$ 48,862

14. Commitments and Contingencies

An action against Cameco, Power Resources Inc. (PRI), and certain other parties was filed by Mountain West Mines Inc. (MWM) in the State of Wyoming, U.S.A.. The action alleges that PRI and the other defendants owe MWM royalties on uranium mined in the Powder River Basin of Wyoming (which encompasses the Highland and Smith Ranch operations) and sets forth a claim for unpaid royalties of approximately \$6.4 million (US) plus interest, and a continuing royalty on uranium from operations within the Powder River Basin of approximately 4% of the selling price.

Management is of the opinion, after review of the facts with counsel, that PRI will prevail and, therefore, this action will not have a material impact on Cameco's financial position, results of operations and liquidity.

15. Subsequent Event

Redemption of preferred securities

On October 25, 2004, Cameco's Board of Directors approved the redemption of all \$125 million (US) of outstanding 8.75% preferred securities for cash on December 17, 2004. The preferred securities are redeemable at a redemption price equal to 100% of the principal amount plus accrued and unpaid interest thereon to the date of redemption. In the fourth quarter, Cameco will recognize the unamortized portion of the issue costs in earnings, resulting in a charge of \$4 million (Cdn) to net earnings.
