United States Gasoline Fund, LP
Notes to Condensed Financial Statements
For the period ended September 30, 2013 (Unaudited)

NOTE 1 ORGANIZATION AND BUSINESS

The United States Gasoline Fund, LP (“UGA”) was organized as a limited partnership under the laws of the state of Delaware on April 13, 2007. UGA is a commodity pool that issues limited partnership units (“units”) that may be purchased and sold on the NYSE Arca, Inc. (the “NYSE Arca”). Prior to November 25, 2008, UGA’s units traded on the American Stock Exchange (the “AMEX”). UGA will continue in perpetuity, unless terminated sooner upon the occurrence of one or more events as described in its Second Amended and Restated Agreement of Limited Partnership dated as of March 1, 2013 (the “LP Agreement”). The investment objective of UGA is for the daily changes in percentage terms of its units’ per unit net asset value (“NAV”) to reflect the daily changes in percentage terms of the spot price of gasoline (also known as reformulated gasoline blendstock for oxygen blending, or “RBOB”, for delivery to the New York harbor), as measured by the daily changes in the price of the futures contract for gasoline traded on the New York Mercantile Exchange (the “NYMEX”) that is the near month contract to expire, except when the near month contract is within two weeks of expiration, in which case the futures contract will be the next month contract to expire (the “Benchmark Futures Contract”), less UGA’s expenses. It is not the intent of UGA to be operated in a fashion such that the per unit NAV will equal, in dollar terms, the spot price of gasoline or any particular futures contract based on gasoline. It is not the intent of UGA to be operated in a fashion such that its per unit NAV will reflect the percentage change of the price of any particular futures contract as measured over a time period greater than one day. United States Commodity Funds LLC (“USCF”), the general partner of UGA, believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in Futures Contracts (as defined below) and Other Gasoline-Related Investments (as defined below). UGA accomplishes its objective through investments in futures contracts for gasoline, crude oil, natural gas, heating oil and other petroleum-based fuels that are traded on the NYMEX, ICE Futures or other U.S. and foreign exchanges (collectively, “Futures Contracts”) and other gasoline-related investments such as cash-settled options on Futures Contracts, forward contracts for gasoline, cleared swap contracts and over-the-counter transactions that are based on the price of gasoline, crude oil and other petroleum-based fuels, Futures Contracts and indices based on the foregoing (collectively, “Other Gasoline-Related Investments”). As of September 30, 2013, UGA held 458 Futures Contracts for gasoline traded on the NYMEX and did not hold any Futures Contracts traded on ICE Futures.

UGA commenced investment operations on February 26, 2008 and has a fiscal year ending on December 31. USCF is responsible for the management of UGA. USCF is a member of the National Futures Association (the “NFA”) and became a commodity pool operator registered with the Commodity Futures Trading Commission (the “CFTC”) effective December 1, 2005. USCF is also the general partner of the United States Oil Fund, LP (“USOF”), the United States Natural Gas Fund, LP (“USNG”), the United States 12 Month Oil Fund, LP (“US12OF”) and the United States Diesel-Heating Oil Fund, LP (formerly, the United States Heating Oil Fund, LP) (“USDHO”), which listed their limited partnership units on the AMEX under the ticker symbols “USO” on April 10, 2006, “UNG” on April 18, 2007, “USL” on December 6, 2007 and “UHN” on April 9, 2008, respectively. As a result of the acquisition of the AMEX by NYSE Euronext, each of USOF’s, USNG’s, US12OF’s and USDHO’s units commenced trading on the NYSE Arca on November 25, 2008. USCF is also the general partner of the United States Short Oil Fund, LP (“USSO”), the United States 12 Month Natural Gas Fund, LP (“US12NG”) and the United States Brent Oil Fund, LP (“USBO”), which listed their limited partnership units on the NYSE Arca under the ticker symbols “DNO” on September 24, 2009, “UNL” on November 18, 2009 and “BNO” on June 2, 2010, respectively. USCF is also the sponsor of the United States Commodity Index Fund (“USCI”), the United States Copper Index Fund (“CPER”), the United States Agriculture Index Fund (“USAG”), and the United States Metals Index Fund (“USMI”), each a series of the United States Commodity Index Funds Trust. USCI, CPER, USAG and USMI listed their units on the NYSE Arca under the ticker symbol “USCI” on August 10, 2010, “CPER” on November 15, 2011, “USAG” on April 13, 2012 and “USMI” on June 19, 2012, respectively.

All funds listed previously are referred to collectively herein as the “Related Public Funds.” USCF has also filed registration statements to register units of the United States Sugar Fund (“USSF”), the United States Natural Gas Double Inverse Fund (“UNGD”), the United States Gasoil Fund (“USGO”) and the United States Asian Commodities Basket Fund (“UAC”), each a series of the United States Commodity Funds Trust I, and the US Golden Currency Fund (“HARD”), a series of the United States Currency Funds Trust. USSF, UNGD, USGO and HARD are currently not available to the public, as such funds are still in the process of review by various regulatory agencies which have regulatory authority over USCF and such funds. UAC has been declared effective by the regulatory agencies which have regulatory authority over USCF and UAC, but at the time of the filing of this quarterly report on Form 10-Q, UAC has not been made available to the public.

Effective February 29, 2012, UGA issues units to certain authorized purchasers (“Authorized Purchasers”) by offering baskets consisting of 50,000 units (“Creation Baskets”) through ALPS Distributors, Inc., as the marketing agent (the “Marketing Agent”). Prior to February 29, 2012, UGA issued units to Authorized Purchasers by offering baskets consisting of 100,000 units through the Marketing Agent. The purchase price for a Creation Basket is based upon the NAV of a unit calculated shortly after the close of the core trading session on the NYSE Arca on the day the order to create the basket is properly received.

From July 1, 2011 through December 31, 2013 (and continuing at least through May 1, 2014), the applicable transaction fee paid by Authorized Purchasers is \$350 to UGA for each order they place to create or redeem one or more baskets (“Redemption Baskets”); prior to July 1, 2011, this fee was \$1,000. Units may be purchased or sold on a nationally recognized securities exchange in smaller increments than a Creation Basket or Redemption Basket. Units purchased or sold on a nationally recognized securities exchange are not purchased or sold at the per unit NAV of UGA but rather at market prices quoted on such exchange.

In November 2007, UGA initially registered 30,000,000 units on Form S-1 with the U.S. Securities and Exchange Commission (the “SEC”). On February 26, 2008, UGA listed its units on the AMEX under the ticker symbol “UGA”. On that day, UGA established its initial per unit NAV by setting the price at \$50.00 and issued 300,000 units in exchange for \$15,000,000. UGA also commenced investment operations on February 26, 2008 by purchasing Futures Contracts traded on the NYMEX based on gasoline. As of September 30, 2013, UGA had registered a total of 72,800,000 units.

The accompanying unaudited condensed financial statements have been prepared in accordance with Rule 10-01 of Regulation S-X promulgated by the SEC and, therefore, do not include all information and footnote disclosure required under generally accepted accounting principles (“GAAP”) in the United States of America. The financial information included herein is unaudited; however, such financial information reflects all adjustments, consisting only of normal recurring adjustments, which are, in the opinion of USCF, necessary for the fair presentation of the condensed financial statements for the interim period.

NOTE 2 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Revenue Recognition

Commodity futures contracts, forward contracts, physical commodities and related options are recorded on the trade date. All such transactions are recorded on the identified cost basis and marked to market daily. Unrealized gains or losses on open contracts are reflected in the condensed statements of financial condition and represent the difference between the original contract amount and the market value (as determined by exchange settlement prices for futures contracts and related options and cash dealer prices at a predetermined time for forward contracts, physical commodities, and their related options) as of the last business day of the year or as of the last date of the condensed financial statements. Changes in the unrealized gains or losses between periods are reflected in the condensed statements of operations. UGA earns interest on its assets denominated in U.S. dollars on deposit with the futures commission merchant at the 90-day Treasury bill rate. In addition, UGA earns income on funds held at the custodian or futures commission merchant at prevailing market rates earned on such investments.

Brokerage Commissions

Brokerage commissions on all open commodity futures contracts are accrued on a full-turn basis.

Income Taxes

UGA is not subject to federal income taxes; each partner reports his/her allocable share of income, gain, loss deductions or credits on his/her own income tax return.

In accordance with GAAP, UGA is required to determine whether a tax position is more likely than not to be sustained upon examination by the applicable taxing authority, including resolution of any tax related appeals or litigation processes, based on the technical merits of the position. UGA files an income tax return in the U.S. federal jurisdiction, and may file income tax returns in various U.S. states. UGA is not subject to income tax return examinations by major taxing authorities for years before 2009. The tax benefit recognized is measured as the largest amount of benefit that has a greater than fifty percent likelihood of being realized upon ultimate settlement. De-recognition of a tax benefit previously recognized results in UGA recording a tax liability that reduces net assets. However, UGA's conclusions regarding this policy may be subject to review and adjustment at a later date based on factors including, but not limited to, on-going analysis of and changes to tax laws, regulations and interpretations thereof. UGA recognizes interest accrued related to unrecognized tax benefits and penalties related to unrecognized tax benefits in income tax fees payable, if assessed. No interest expense or penalties have been recognized as of and for the period ended September 30, 2013.

Creations and Redemptions

Effective February 29, 2012, Authorized Purchasers may purchase Creation Baskets or redeem Redemption Baskets only in blocks of 50,000 units at a price equal to the NAV of the units calculated shortly after the close of the core trading session on the NYSE Arca on the day the order is placed. Prior to February 29, 2012, Authorized Purchasers could only purchase Creation Baskets or redeem Redemption Baskets in blocks of 100,000 units.

UGA receives or pays the proceeds from units sold or redeemed within three business days after the trade date of the purchase or redemption. The amounts due from Authorized Purchasers are reflected in UGA's condensed statements of financial condition as receivable for units sold, and amounts payable to Authorized Purchasers upon redemption are reflected as payable for units redeemed.

Partnership Capital and Allocation of Partnership Income and Losses

Profit or loss shall be allocated among the partners of UGA in proportion to the number of units each partner holds as of the close of each month. USCF may revise, alter or otherwise modify this method of allocation as described in the LP Agreement.

Calculation of Per Unit Net Asset Value

UGA's per unit NAV is calculated on each NYSE Arca trading day by taking the current market value of its total assets, subtracting any liabilities and dividing that amount by the total number of units outstanding. UGA uses the closing price for the contracts on the relevant exchange on that day to determine the value of contracts held on such exchange.

Net Income (Loss) Per Unit

Net income (loss) per unit is the difference between the per unit NAV at the beginning of each period and at the end of each period. The weighted average number of units outstanding was computed for purposes of disclosing net income (loss) per weighted average unit. The weighted average units are equal to the number of units outstanding at the end of the period, adjusted proportionately for units added and redeemed based on the amount of time the units were outstanding during such period. There were no units held by USCF at September 30, 2013.

Offering Costs

Offering costs incurred in connection with the registration of additional units after the initial registration of units are borne by UGA. These costs include registration fees paid to regulatory agencies and all legal, accounting, printing and other expenses associated with such offerings. These costs are accounted for as a deferred charge and thereafter amortized to expense over twelve months on a straight-line basis or a shorter period if warranted.

Cash Equivalents

Cash equivalents include money market funds and overnight deposits or time deposits with original maturity dates of six months or less.

Reclassification

Certain amounts in the accompanying condensed financial statements were reclassified to conform to the current presentation.

Use of Estimates

The preparation of condensed financial statements in conformity with GAAP requires USCF to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent assets and liabilities at the date of the condensed financial statements, and the reported amounts of the revenue and expenses during the reporting period. Actual results may differ from those estimates and assumptions.

NOTE 3 FEES PAID BY THE FUND AND RELATED PARTY TRANSACTIONS

USCF Management Fee

Under the LP Agreement, USCF is responsible for investing the assets of UGA in accordance with the objectives and policies of UGA. In addition, USCF has arranged for one or more third parties to provide administrative, custody, accounting, transfer agency and other necessary services to UGA. For these services, UGA is contractually obligated to pay USCF a fee, which is paid monthly, equal to 0.60% per annum of average daily total net assets.

Ongoing Registration Fees and Other Offering Expenses

UGA pays all costs and expenses associated with the ongoing registration of its units subsequent to the initial offering. These costs include registration or other fees paid to regulatory agencies in connection with the offer and sale of units, and all legal, accounting, printing and other expenses associated with such offer and sale. For the nine months ended September 30, 2013 and 2012, UGA incurred \$34,745 and \$9,202, respectively, in registration fees and other offering expenses.

Directors' Fees and Expenses

UGA is responsible for paying its portion of the directors' and officers' liability insurance for UGA and the Related Public Funds and the fees and expenses of the independent directors who also serve as audit committee members of UGA and the Related Public Funds organized as limited partnerships and, as of July 8, 2011, the Related Public Funds organized as a series of a Delaware statutory trust. UGA shares the fees and expenses on a pro rata basis with each Related Public Fund, as described above, based on the relative assets of each fund computed on a daily basis. These fees and expenses for the year ending December 31, 2013 are estimated to be a total of \$560,625 for UGA and the Related Public Funds.

Licensing Fees

As discussed in *Note 4* below, UGA entered into a licensing agreement with the NYMEX on April 10, 2006, as amended on October 20, 2011. Pursuant to the agreement, through October 19, 2011, UGA and the Related Public Funds, other than USBO, USCI, CPER, USAG and USMI, paid a licensing fee that was equal to 0.04% for the first \$1,000,000,000 of combined net assets of the funds and 0.02% for combined net assets above \$1,000,000,000. On and

after October 20, 2011, UGA and the Related Public Funds, other than USBO, USCI, CPER, USAG and USMI, pay a licensing fee that is equal to 0.015% on all net assets. During the nine months ended September 30, 2013 and 2012, UGA incurred \$6,693 and \$11,321, respectively, under this arrangement.

Investor Tax Reporting Cost

The fees and expenses associated with UGA's audit expenses and tax accounting and reporting requirements are paid by UGA. These costs are estimated to be \$250,000 for the year ending December 31, 2013.

Other Expenses and Fees and Expense Waivers

In addition to the fees described above, UGA pays all brokerage fees and other expenses in connection with the operation of UGA, excluding costs and expenses paid by USCF as outlined in Note 4 below. USCF has voluntarily agreed to pay certain expenses normally borne by UGA, to the extent that such expenses exceed 0.15% (15 basis points) of UGA's NAV, on an annualized basis, through at least December 31, 2013. USCF has no obligation to continue such payments into subsequent periods. For the nine months ended September 30, 2013, USCF waived \$121,746 of UGA's expenses. This voluntary expense waiver is in addition to those amounts USCF is contractually obligated to pay as described in Note 4.

NOTE 4 CONTRACTS AND AGREEMENTS

UGA is party to a marketing agent agreement, dated as of February 15, 2008, as amended from time to time, with the Marketing Agent and USCF, whereby the Marketing Agent provides certain marketing services for UGA as outlined in the agreement. The fee of the Marketing Agent, which is borne by USCF, is equal to 0.06% on UGA's assets up to \$3 billion; and 0.04% on UGA's assets in excess of \$3 billion. In no event may the aggregate compensation paid to the Marketing Agent and any affiliate of USCF for distribution related services exceed 10% of the gross proceeds of UGA's offering.

The above fee does not include the following expenses, which are also borne by USCF: the cost of placing advertisements in various periodicals; website construction and development; or the printing and production of various marketing materials.

UGA is also party to a custodian agreement, dated January 16, 2008, as amended from time to time, with Brown Brothers Harriman & Co. ("BBH&Co.") and USCF, whereby BBH&Co. holds investments on behalf of UGA. USCF pays the fees of the custodian, which are determined by the parties from time to time. In addition, UGA is party to an administrative agency agreement, dated February 7, 2008, as amended from time to time, with USCF and BBH&Co., whereby BBH&Co. acts as the administrative agent, transfer agent and registrar for UGA. USCF also pays the fees of BBH&Co. for its services under such agreement and such fees are determined by the parties from time to time.

Currently, USCF pays BBH&Co. for its services, in the foregoing capacities, a minimum amount of \$75,000 annually for its custody, fund accounting and fund administration services rendered to UGA and each of the Related Public Funds, as well as a \$20,000 annual fee for its transfer agency services. In addition, USCF pays BBH&Co. an asset-based charge of (a) 0.06% for the first \$500 million of UGA's, USOF's, USNG's, US12OF's, USDHO's, USSO's, US12NG's, USBO's, USCI's, CPER's, USAG's and USMI's combined net assets, (b) 0.0465% for UGA's, USOF's, USNG's, US12OF's, USDHO's, USSO's, US12NG's, USBO's, USCI's, CPER's, USAG's and USMI's combined net assets greater than \$500 million but less than \$1 billion, and (c) 0.035% once UGA's, USOF's, USNG's, US12OF's, USDHO's, USSO's, US12NG's, USBO's, USCI's, CPER's, USAG's and USMI's combined net assets exceed \$1 billion. The annual minimum amount will not apply if the asset-based charge for all accounts in the aggregate exceeds \$75,000. USCF also pays transaction fees ranging from \$7 to \$15 per transaction.

On October 8, 2013, UGA entered into a brokerage agreement with RBC Capital Markets, LLC (“RBC Capital” or “RBC”) to serve as UGA’s futures commission merchant (“FCM”), effective October 10, 2013. Prior to October 10, 2013, the FCM was UBS Securities LLC (“UBS Securities”). The agreements require RBC Capital and UBS Securities to provide services to UGA in connection with the purchase and sale of Futures Contracts and Other Gasoline-Related Investments that may be purchased and sold by or through RBC Capital and/or UBS Securities for UGA’s account. In accordance with each agreement, RBC Capital and UBS Securities charge UGA commissions of approximately \$7 to \$15 per round-turn trade, including applicable exchange and NFA fees for Futures Contracts and options on Futures Contracts. Such fees include those incurred when purchasing Futures Contracts and options on Futures Contracts when UGA issues units as a result of a Creation Basket, as well as fees incurred when selling Futures Contracts and options on Futures Contracts when UGA redeems units as a result of a Redemption Basket. Such fees are also incurred when Futures Contracts and options on Futures Contracts are purchased or redeemed for the purpose of rebalancing the portfolio. UGA also incurs commissions to brokers for the purchase and sale of Futures Contracts, Other Gasoline-Related Investments or short-term obligations of the United States of two years or less (“Treasuries”). During the nine months ended September 30, 2013, total commissions accrued to brokers amounted to \$29,833. Of this amount, approximately \$28,818 was a result of rebalancing costs and approximately \$1,015 was the result of trades necessitated by creation and redemption activity. By comparison, during the nine months ended September 30, 2012, total commissions accrued to brokers amounted to \$51,603. Of this amount, approximately \$46,678 was a result of rebalancing costs and approximately \$4,925 was the result of trades necessitated by creation and redemption activity. The decrease in the total commissions accrued to brokers for the nine months ended September 30, 2013, as compared to the nine months ended September 30, 2012, was primarily a function of a lower number of futures contracts that were held and traded as a result of UGA’s reduced net assets during the nine months ended September 30, 2013. As an annualized percentage of average daily total net assets, the figure for the nine months ended September 30, 2013 represents approximately 0.07% of average daily total net assets. By comparison, the figure for the nine months ended September 30, 2012 represented approximately 0.07% of average daily total net assets. However, there can be no assurance that commission costs and portfolio turnover will not cause commission expenses to rise in future quarters.

UGA and the NYMEX entered into a licensing agreement on April 10, 2006, as amended on October 20, 2011, whereby UGA was granted a non-exclusive license to use certain of the NYMEX’s settlement prices and service marks. Under the licensing agreement, UGA and the Related Public Funds, other than USBO, USCI, CPER, USAG and USMI, pay the NYMEX an asset-based fee for the license, the terms of which are described in Note 3. UGA expressly disclaims any association with the NYMEX or endorsement of UGA by the NYMEX and acknowledges that “NYMEX” and “New York Mercantile Exchange” are registered trademarks of the NYMEX.

NOTE 5 FINANCIAL INSTRUMENTS, OFF-BALANCE SHEET RISKS AND CONTINGENCIES

UGA engages in the trading of futures contracts, options on futures contracts and cleared swaps (collectively, “derivatives”). UGA is exposed to both market risk, which is the risk arising from changes in the market value of the contracts, and credit risk, which is the risk of failure by another party to perform according to the terms of a contract.

UGA may enter into futures contracts, options on futures contracts and cleared swaps to gain exposure to changes in the value of an underlying commodity. A futures contract obligates the seller to deliver (and the purchaser to accept) the future delivery of a specified quantity and type of a commodity at a specified time and place. Some futures contracts may call for physical delivery of the asset, while others are settled in cash. The contractual obligations of a buyer or seller may generally be satisfied by taking or making physical delivery of the underlying commodity or by making an offsetting sale or purchase of an identical futures contract on the same or linked exchange before the designated date of delivery.

The purchase and sale of futures contracts, options on futures contracts and cleared swaps require margin deposits with a futures commission merchant. Additional deposits may be necessary for any loss on contract value. The

Commodity Exchange Act requires a futures commission merchant to segregate all customer transactions and assets from the futures commission merchant's proprietary activities.

Futures contracts and cleared swaps involve, to varying degrees, elements of market risk (specifically commodity price risk) and exposure to loss in excess of the amount of variation margin. The face or contract amounts reflect the extent of the total exposure UGA has in the particular classes of instruments. Additional risks associated with the use of futures contracts are an imperfect correlation between movements in the price of the futures contracts and the market value of the underlying securities and the possibility of an illiquid market for a futures contract.

All of the futures contracts held by UGA were exchange-traded through September 30, 2013. The risks associated with exchange-traded contracts are generally perceived to be less than those associated with over-the-counter transactions since, in over-the-counter transactions, a party must rely solely on the credit of its respective individual counterparties. However, in the future, if UGA were to enter into non-exchange traded contracts, it would be subject to the credit risk associated with counterparty non-performance. The credit risk from counterparty non-performance associated with such instruments is the net unrealized gain, if any, on the transaction. UGA has credit risk under its futures contracts since the sole counterparty to all domestic and foreign futures contracts is the clearinghouse for the exchange on which the relevant contracts are traded. In addition, UGA bears the risk of financial failure by the clearing broker.

UGA's cash and other property, such as Treasuries, deposited with a futures commission merchant are considered commingled with all other customer funds, subject to the futures commission merchant's segregation requirements. In the event of a futures commission merchant's insolvency, recovery may be limited to a pro rata share of segregated funds available. It is possible that the recovered amount could be less than the total of cash and other property deposited. The insolvency of a futures commission merchant could result in the complete loss of UGA's assets posted with that futures commission merchant; however, the majority of UGA's assets are held in investments in Treasuries, cash and/or cash equivalents with UGA's custodian and would not be impacted by the insolvency of a futures commission merchant. The failure or insolvency of UGA's custodian, however, could result in a substantial loss of UGA's assets.

USCF invests a portion of UGA's cash in money market funds that seek to maintain a stable per unit NAV. UGA is exposed to any risk of loss associated with an investment in such money market funds. As of September 30, 2013 and December 31, 2012, UGA held investments in money market funds in the amounts of \$42,494,983 and \$47,494,982, respectively. UGA also holds cash deposits with its custodian. Pursuant to a written agreement with BBH&Co., uninvested overnight cash balances are swept to offshore branches of U.S. regulated and domiciled banks located in Toronto, Canada, London, United Kingdom, Grand Cayman, Cayman Islands and Nassau, Bahamas, which are subject to U.S. regulation and regulatory oversight. As of September 30, 2013 and December 31, 2012, UGA held cash deposits and investments in Treasuries in the amounts of \$9,492,143 and \$14,075,770, respectively, with the custodian and futures commission merchant. Some or all of these amounts may be subject to loss should UGA's custodian and/or futures commission merchant cease operations.

For derivatives, risks arise from changes in the market value of the contracts. Theoretically, UGA is exposed to market risk equal to the value of futures contracts purchased and unlimited liability on such contracts sold short. As both a buyer and a seller of options, UGA pays or receives a premium at the outset and then bears the risk of unfavorable changes in the price of the contract underlying the option.

UGA's policy is to continuously monitor its exposure to market and counterparty risk through the use of a variety of financial, position and credit exposure reporting controls and procedures. In addition, UGA has a policy of requiring review of the credit standing of each broker or counterparty with which it conducts business.

The financial instruments held by UGA are reported in its condensed statements of financial condition at market or fair value, or at carrying amounts that approximate fair value, because of their highly liquid nature and short-term maturity.

NOTE 6 FINANCIAL HIGHLIGHTS

The following table presents per unit performance data and other supplemental financial data for the nine months ended September 30, 2013 and 2012 for the unitholders. This information has been derived from information presented in the condensed financial statements.

	For the nine months ended		For the nine months ended	
	September 30, 2013		September 30, 2012	
	(Unaudited)		(Unaudited)	
Per Unit Operating Performance:				
Net asset value, beginning of period	\$	58.39	\$	48.37
Total income (loss)		(1.79)		12.71
Net expenses		(0.41)		(0.35)
Net increase (decrease) in net asset value		(2.20)		12.36
Net asset value, end of period	\$	56.19	\$	60.73
Total Return		(3.77)	%	25.55 %
Ratios to Average Net Assets				
Total income (loss)		(0.43)	%	17.05 %
Management fees*		0.60	%	0.60 %
Total expenses excluding management fees*		0.61	%	0.36 %
Expenses waived*		(0.27)	%	(0.10) %
Net expenses excluding management fees*		0.33	%	0.26 %
Net income (loss)		(1.12)	%	16.41 %

* Annualized

Total returns are calculated based on the change in value during the period. An individual unitholder's total return and ratio may vary from the above total returns and ratios based on the timing of contributions to and withdrawals from UGA.

NOTE 7 FAIR VALUE OF FINANCIAL INSTRUMENTS

UGA values its investments in accordance with Accounting Standards Codification 820 Fair Value Measurements and Disclosures ("ASC 820"). ASC 820 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurement. The changes to past practice resulting from the application of ASC 820 relate to the definition of fair value, the methods used to measure fair value, and the expanded disclosures about fair value measurement. ASC 820 establishes a fair value hierarchy that distinguishes between: (1) market participant assumptions developed based on market data obtained from sources independent of UGA (observable inputs) and (2) UGA's own assumptions about market participant assumptions developed based on the best information available under the circumstances (unobservable inputs). The three levels defined by the ASC 820 hierarchy are as follows:

Level I Quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level II Inputs other than quoted prices included within Level I that are observable for the asset or liability, either directly or indirectly. Level II assets include the following: quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability, and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

Level III Unobservable pricing input at the measurement date for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that observable inputs are not available.

In some instances, the inputs used to measure fair value might fall within different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest input level that is significant to the fair value measurement in its entirety.

The following table summarizes the valuation of UGA's securities at September 30, 2013 using the fair value hierarchy:

At September 30, 2013	Total	Level I	Level II	Level III
Short-Term Investments	\$ 45,494,728	\$ 45,494,728	\$	\$
Exchange-Traded Futures Contracts				
United States Contracts	(1,506,179)	(1,506,179)		

During the nine months ended September 30, 2013, there were no transfers between Level I and Level II.

The following table summarizes the valuation of UGA's securities at December 31, 2012 using the fair value hierarchy:

At December 31, 2012	Total	Level I	Level II	Level III
Short-Term Investments	\$ 51,194,826	\$ 51,194,826	\$	\$
Exchange-Traded Futures Contracts				
United States Contracts	2,608,343	2,608,343		

During the year ended December 31, 2012, there were no transfers between Level I and Level II.

Effective January 1, 2009, UGA adopted the provisions of Accounting Standards Codification 815 Derivatives and Hedging, which require presentation of qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts and gains and losses on derivatives.

NOTE 8 SUBSEQUENT EVENTS

UGA has performed an evaluation of subsequent events through the date the condensed financial statements were issued. The subsequent events, which did not necessitate disclosures and/or adjustments to the financial statements, were as follows:

On October 8, 2013, USCF entered into a Futures and Cleared Derivatives Transactions Customer Account Agreement with RBC Capital to serve as UGA's FCM, effective October 10, 2013. Prior to October 10, 2013, UBS Securities was UGA's FCM. This agreement requires RBC Capital to provide services to UGA, as of October 10, 2013, in connection with the purchase and sale of Futures Contracts and Other Gasoline-Related Investments that may be purchased or sold by or through RBC Capital for UGA's account. For the period October 10, 2013 and after, UGA pays RBC Capital commissions for executing and clearing trades on behalf of UGA. Prior to October 10, 2013, and therefore for the entire period of this quarterly report on Form 10-Q for the period ended September 30, 2013, UGA paid UBS Securities commissions for executing and clearing trades on behalf of UGA.

RBC Capital's primary address is 500 West Madison Street, Suite 2500, Chicago, Illinois 60661. UBS Securities' principal business address is 677 Washington Blvd., Stamford, CT 06901. From UGA's commencement of trading to October 10, 2013, UBS Securities was a futures clearing broker for UGA. Effective October 10, 2013, RBC Capital became the futures clearing broker for UGA. Both RBC Capital and UBS Securities are registered in the U.S. with the Financial Industry Regulatory Authority as a broker-dealer and with the CFTC as a FCM. RBC Capital and UBS Securities are members of various U.S. futures and securities exchanges.

RBC is a large broker-dealer subject to many different complex legal and regulatory requirements. As a result, certain of RBC's regulators may from time to time conduct investigations, initiate enforcement proceedings and/or enter into settlements with RBC with respect to issues raised in various investigations. RBC complies fully with its regulators in all investigations being conducted and in all settlements it reaches. In addition, RBC is and has been subject to a variety of civil legal claims in various jurisdictions, a variety of settlement agreements and a variety of orders, awards and judgments made against it by courts and tribunals, both in regard to such claims and investigations. RBC complies fully with all settlements it reaches and all orders, awards and judgments made against it.

RBC has been named as a defendant in various legal actions, including arbitrations, class actions and other litigation including those described below, arising in connection with its activities as a broker-dealer. Certain of the actual or threatened legal actions include claims for substantial compensatory and/or punitive damages or claims for indeterminate amounts of damages. RBC is also involved, in other reviews, investigations and proceedings (both formal and informal) by governmental and self-regulatory agencies regarding RBC's business, including among other matters, accounting and operational matters, certain of which may result in adverse judgments, settlements, fines, penalties, injunctions or other relief.

RBC contests liability and/or the amount of damages, as appropriate, in each pending matter. In view of the inherent difficulty of predicting the outcome of such matters, particularly in cases where claimants seek substantial or indeterminate damages or where investigations and proceedings are in the early stages, RBC cannot predict the loss or range of loss, if any, related to such matters; how or if such matters will be resolved; when they will ultimately be resolved; or what the eventual settlement, fine, penalty or other relief, if any, might be. Subject to the foregoing, RBC believes, based on current knowledge and after consultation with counsel, that the outcome of such pending matters will not have a material adverse effect on the consolidated financial condition of RBC.

On March 11, 2013, the New Jersey Bureau of Securities entered a consent order settling an administrative complaint against RBC, which alleged that RBC failed to follow its own procedures with respect to monthly account reviews and failed to maintain copies of the monthly account reviews with respect to certain accounts that James Hankins Jr. maintained at the firm in violation of N.J.S.A. 49:3-58(a)(2)(xi) and 49:3-59(b). Without admitting or denying the

findings of fact and conclusions of law, RBC consented to a civil monetary penalty of \$150,000 (of which \$100,000 was suspended as a result of the firm's cooperation) and to pay disgorgement of \$300,000.

On May 2, 2012, the Massachusetts Securities Division entered a consent order settling an administrative complaint against RBC, which alleged that RBC recommended unsuitable products to its brokerage and advisory clients and failed to supervise its registered representatives' sales of inverse and leveraged ETFs in violation of Section 204(a)(2) of the Massachusetts Uniform Securities Act ("MUSA"). Without admitting or denying the allegations of fact, RBC consented to permanently cease and desist from violations of MUSA, pay restitution of \$2.9 million to the investors who purchased the inverse and leveraged ETFs and pay a civil monetary penalty of \$250,000.

On September 27, 2011, the SEC commenced and settled an administrative proceeding against RBC for willful violations of Sections 17(a)(2) and 17(a)(3) of the 1933 Act for negligently selling the collateralized debt obligations to five Wisconsin school districts despite concerns about the suitability of the product. The firm agreed to pay disgorgement of \$6.6 million, prejudgment interest of \$1.8 million, and a civil monetary penalty of \$22 million.

On February 24, 2009, the SEC commenced and settled an administrative proceeding against RBC for willful violations of Section 15B(c)(1) of the 1934 Act and Municipal Securities Rulemaking Board Rules G-17, G-20 and G-27, related to municipal expenses in connection with ratings agency trips. The firm was censured and paid a civil monetary penalty of \$125,000.

On June 9, 2009, the SEC commenced and settled a civil action against RBC for willful violations of Section 15(c) of the 1934 Act, in connection with auction rate securities (ARS). The firm agreed to repurchase ARS owned by certain retail customers and to use best efforts to provide ineligible customers opportunities to liquidate ARS, and other ancillary relief.

Please see RBC's Form BD for more details.

RBC Capital will only act as a clearing broker for UGA and as such will be paid commissions for executing and clearing trades on behalf of UGA. Prior to October 10, 2013, UBS Securities acted only as clearing broker for UGA and as such was paid commissions for executing and clearing trades on behalf of UGA. Neither RBC Capital nor UBS Securities has passed upon the adequacy or accuracy of this quarterly report on Form 10-Q. Neither RBC Capital nor UBS Securities will act in any supervisory capacity with respect to USCF or participate in the management of USCF or UGA.

Neither RBC Capital nor UBS Securities is affiliated with UGA or USCF. Therefore, neither USCF nor UGA believe that there are any conflicts of interest with RBC Capital and UBS Securities or their trading principals arising from their acting as UGA's FCM.

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

The following discussion should be read in conjunction with the condensed financial statements and the notes thereto of the United States Gasoline Fund, LP (“UGA”) included elsewhere in this quarterly report on Form 10-Q.

Forward-Looking Information

This quarterly report on Form 10-Q, including this “Management’s Discussion and Analysis of Financial Condition and Results of Operations,” contains forward-looking statements regarding the plans and objectives of management for future operations. This information may involve known and unknown risks, uncertainties and other factors that may cause UGA’s actual results, performance or achievements to be materially different from future results, performance or achievements expressed or implied by any forward-looking statements. Forward-looking statements, which involve assumptions and describe UGA’s future plans, strategies and expectations, are generally identifiable by use of the words “may,” “will,” “should,” “expect,” “anticipate,” “estimate,” “believe,” “intend” or “project,” the negative of these words or variations on these words or comparable terminology. These forward-looking statements are based on assumptions that may be incorrect, and UGA cannot assure investors that the projections included in these forward-looking statements will come to pass. UGA’s actual results could differ materially from those expressed or implied by the forward-looking statements as a result of various factors.

UGA has based the forward-looking statements included in this quarterly report on Form 10-Q on information available to it on the date of this quarterly report on Form 10-Q, and UGA assumes no obligation to update any such forward-looking statements. Although UGA undertakes no obligation to revise or update any forward-looking statements, whether as a result of new information, future events or otherwise, investors are advised to consult any additional disclosures that UGA may make directly to them or through reports that UGA in the future files with the U.S. Securities and Exchange Commission (the “SEC”), including annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K.

Introduction

UGA, a Delaware limited partnership, is a commodity pool that issues units that may be purchased and sold on the NYSE Arca, Inc (the “NYSE Arca”). The investment objective of UGA is for the daily changes in percentage terms of its units’ per unit net asset value (“NAV”) to reflect the daily changes in percentage terms of the spot price of gasoline, as measured by the daily changes in the price of the futures contract for unleaded gasoline (also known as reformulated gasoline blendstock for oxygen blending, or “RBOB”, for delivery to the New York harbor), traded on the New York Mercantile Exchange (the “NYMEX”) that is the near month contract to expire, except when the near month contract is within two weeks of expiration, in which case it will be measured by the futures contract that is the next month contract to expire (the “Benchmark Futures Contract”), less UGA’s expenses. “Near month contract” means the next contract traded on the NYMEX due to expire. “Next month contract” means the first contract traded on the NYMEX due to expire after the near month contract. It is not the intent of UGA to be operated in a fashion such that the per unit NAV will equal, in dollar terms, the spot price of gasoline or any particular futures contract based on gasoline. It is not the intent of UGA to be operated in a fashion such that its per unit NAV will reflect the percentage change of the price of any particular futures contract as measured over a time period greater than one day. The general partner of UGA, United States Commodity Funds LLC (“USCF”), believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in Futures Contracts (as defined below) and Other Gasoline-Related Investments (as defined below).

UGA invests in futures contracts for gasoline, crude oil, natural gas, heating oil and other petroleum-based fuels that are traded on the NYMEX, ICE Futures or other U.S. and foreign exchanges (collectively, “Futures Contracts”) and other gasoline-related investments such as cash-settled options on Futures Contracts, forward contracts for gasoline, cleared swap contracts and over-the-counter transactions that are based on the price of gasoline, crude oil and other

petroleum-based fuels, Futures Contracts and indices based on the foregoing (collectively, “Other Gasoline-Related Investments”). For convenience and unless otherwise specified, Futures Contracts and Other Gasoline-Related Investments collectively are referred to as “Gasoline Interests” in this quarterly report on Form 10-Q.

UGA seeks to achieve its investment objective by investing in a combination of Futures Contracts and Other Gasoline-Related Investments such that daily changes in its per unit NAV, measured in percentage terms, will closely track the daily changes in the price of the Benchmark Futures Contract, also measured in percentage terms. USCF believes the daily changes in the price of the Benchmark Futures Contract have historically exhibited a close correlation with the daily changes in the spot price of gasoline. It is not the intent of UGA to be operated in a fashion such that the per unit NAV will equal, in dollar terms, the spot price of gasoline or any particular futures contract based on gasoline. It is not the intent of UGA to be operated in a fashion such that its per unit NAV will reflect the percentage change of the price of any particular futures contract as measured over a time period greater than one day. USCF believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in Futures Contracts and Other Gasoline-Related Investments.

Regulatory Disclosure

Impact of Accountability Levels, Position Limits and Price Fluctuation Limits. Futures contracts include typical and significant characteristics. Most significantly, the Commodity Futures Trading Commission (the “CFTC”) and the futures exchanges have established accountability levels and position limits on the maximum net long or net short futures contracts in commodity interests that any person or group of persons under common trading control (other than as a hedge, which an investment by UGA is not) may hold, own or control. The net position is the difference between an individual or firm’s open long contracts and open short contracts in any one commodity. In addition, most U.S. futures exchanges, such as the NYMEX, limit the daily price fluctuation for futures contracts. Currently, the ICE Futures imposes position and accountability limits that are similar to those imposed by U.S.-based futures exchanges and also limits the maximum daily price fluctuation, while some other non-U.S. futures exchanges have not adopted such limits.

The accountability levels for the Benchmark Futures Contract and other Futures Contracts traded on the NYMEX are not a fixed ceiling, but rather a threshold above which the NYMEX may exercise greater scrutiny and control over an investor’s positions. The current accountability level for any one month in the Benchmark Futures Contract is 5,000 contracts. In addition, the NYMEX imposes an accountability level for all months of 7,000 net futures contracts for investments in futures contracts for gasoline. In addition, ICE Futures maintains accountability levels, position limits and monitoring authority for its unleaded gasoline futures contracts. If UGA and the Related Public Funds (as defined below) exceed these accountability levels for investments in the futures contract for gasoline, the NYMEX and ICE Futures will monitor UGA’s and the Related Public Funds’ exposure and may ask for further information on their activities including the total size of all positions, investment and trading strategy, and the extent of liquidity resources of UGA and the Related Public Funds. If deemed necessary by the NYMEX and/or ICE Futures, UGA could be ordered to reduce its aggregate net position back to the accountability level. As of September 30, 2013, UGA held 458 futures contracts for gasoline traded on the NYMEX. As of September 30, 2013, UGA did not hold any Futures Contracts traded on ICE Futures. For the nine months ended September 30, 2013, UGA did not exceed accountability levels on the NYMEX or ICE Futures.

Position limits differ from accountability levels in that they represent fixed limits on the maximum number of futures contracts that any person may hold and cannot allow such limits to be exceeded without express CFTC authority to do so. In addition to accountability levels, the NYMEX and ICE Futures impose position limits on contracts held in the last few days of trading in the near month contract to expire. It is unlikely that UGA will run up against such position limits because UGA’s investment strategy is to close out its positions and “roll” from the near month contract to expire to the next month contract beginning two weeks from expiration of the contract. For the nine months ended September 30, 2013, UGA did not exceed any position limits imposed by the NYMEX and ICE Futures.

The regulation of commodity interest trading in the United States and other countries is an evolving area of the law, as exemplified by the various discussions of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”). The various statements made in this summary are subject to modification by legislative action and

changes in the rules and regulations of the CFTC, the National Futures Association (the “NFA”), the futures exchanges, clearing organizations and other regulatory bodies. Pending final resolution of all applicable regulatory requirements, some specific examples of how the new Dodd-Frank Act provisions and rules adopted thereunder could impact UGA are discussed below.

Futures Contracts and Position Limits

The CFTC is prohibited by statute from regulating trading on non-U.S. futures exchanges and markets. The CFTC, however, has adopted regulations relating to the marketing of non-U.S. futures contracts in the United States. These regulations permit certain contracts on non-U.S. exchanges to be offered and sold in the United States.

In October 2011, the CFTC adopted rules that impose new position limits on Referenced Contracts (as defined below) involving 28 energy, metals and agricultural commodities (the “Position Limit Rules”). The Position Limit Rules were scheduled to become effective on October 12, 2012. However, on September 28, 2012, the United States District Court for the District of Columbia vacated these regulations on the basis of ambiguities in the provisions of the Commodity Exchange Act (“CEA”) (as modified by the Dodd-Frank Act) upon which the regulations were based. In its September 28, 2012 decision, the court remanded the Position Limit Rules to the CFTC with instructions to use its expertise and experience to resolve the ambiguities in the statute. On November 15, 2012, the CFTC indicated that it will move forward with an appeal of the District Court’s decision to vacate the Position Limit Rules. At this time, it is not possible to predict how the CFTC’s appeal could affect UGA, but it may be substantial and adverse. Furthermore, until such time as the appeal is resolved or, if applicable revisions to the Position Limit Rules are proposed and adopted, the regulatory architecture in effect prior to the enactment of the Position Limit Rules will govern transactions in commodities and related derivatives (collectively, “Referenced Contracts”). Under that system, the CFTC enforces federal limits on speculation in agricultural products (e.g., corn, wheat and soy), while futures exchanges enforce position limits and accountability levels for agricultural and certain energy products (e.g., oil and natural gas). As a result, UGA may be limited with respect to the size of its investments in any commodities subject to these limits. Finally, subject to certain narrow exceptions, the vacated Position Limit Rules would have required the aggregation, for purposes of the position limits, of all positions in the 28 Referenced Contracts held by a single entity and its affiliates, regardless of whether such position existed on U.S. futures exchanges, non-U.S. futures exchanges, in cleared swaps or in over-the-counter swaps. The CFTC is presently considering new aggregation rules, under a rulemaking proposal that is distinct from the Position Limit Rules. At this time, it is unclear how any modified aggregation rules may affect UGA, but it may be substantial and adverse. By way of example, the aggregation rules in combination with any potential revised Position Limit Rules may negatively impact the ability of UGA to meet its investment objectives through limits that may inhibit USCF’s ability to sell additional Creation Baskets of UGA.

Based on its current understanding of the final position limit regulations, USCF does not anticipate significant negative impact on the ability of UGA to achieve its investment objective.

“Swap” Transactions

The Dodd-Frank Act imposes new regulatory requirements on certain “swap” transactions that UGA is authorized to engage in that may ultimately impact the ability of UGA to meet its investment objective. On August 13, 2012, the CFTC and the SEC published joint final rules defining the terms “swap” and “security-based swap.” The term “swap” is broadly defined to include various types of over-the-counter derivatives, including swaps and options. The effective date of these final rules was October 12, 2012.

The Dodd-Frank Act requires that certain transactions ultimately falling within the definition of “swap” be executed on organized exchanges or “swap execution facilities” and cleared through regulated clearing organizations (which are referred to in the Dodd-Frank Act as “derivative clearing organizations” (“DCOs”)), if the CFTC mandates the central clearing of a particular contract. On November 28, 2012, the CFTC issued its final clearing determination requiring that certain credit default swaps and interest rate swaps be cleared by registered DCOs. This is the CFTC’s first clearing determination under the Dodd-Frank Act and became effective on February 11, 2013. Beginning on March 11, 2013, “swap dealers,” “major swap participants” and certain active funds were required to clear certain credit default swaps and interest rate swaps; and beginning on June 10, 2013, commodity pools, certain private funds and entities predominantly engaged in financial activities were required to clear the same types of swaps. As a result, if UGA

enters into or has entered into certain interest rate and credit default swaps on or after June 10, 2013, such swaps will be required to be centrally cleared. Determination on other types of swaps are expected in the future, and, when finalized, could require UGA to centrally clear certain over-the-counter instruments presently entered into and settled on a bi-lateral basis. If a swap is required to be cleared, the initial margin will be set by the clearing organization, subject to certain regulatory requirements and guidelines. Initial and variation margin requirements for swap dealers and major swap participants who enter into uncleared swaps and capital requirements for swap dealers and major swap participants who enter into both cleared and uncleared trades will be set by the CFTC, the SEC or the applicable “Prudential Regulator.”

The Dodd-Frank Act also requires that certain swaps determined to be available to trade on a swap execution facility (“SEF”) must be executed over such a facility. On June 5, 2013, the CFTC published a final rule regarding the obligations of SEFs, including the obligation for facilities offering multiple person execution services to register as a SEF by October 2, 2013. On September 27 and 30, 2013, the CFTC’s Division of Market Oversight granted no-action relief to SEFs from compliance with certain regulatory and reporting requirements. The no-action relief granted on September 27, 2013 included relief, in effect until November 1, 2013, from a requirement that a SEF enforce its own rulebooks and compel its participants to consent to the jurisdiction of the SEF. Based upon applications filed by several SEFs with the CFTC in the second half of October 2013, it is expected that the CFTC will determine that certain interest rate swaps will be determined to be available to trade on those SEFs in the first quarter of 2014.

On April 11, 2013, the CFTC published a final rule to exempt swaps between certain affiliated entities within a corporate group from the clearing requirement. The rule permits affiliated counterparties to elect not to clear a swap subject to the clearing requirement if, among other things, the counterparties are majority-owned affiliates whose financial statements are included in the same consolidated financial statements and whose swaps are documented and subject to a centralized risk management program. However, the exemption does not apply to swaps entered into by affiliated counterparties with unaffiliated counterparties.

On November 14, 2012, the CFTC proposed new regulations that would require enhanced customer protections, risk management programs, internal monitoring and controls, capital and liquidity standards, customer disclosures and auditing and examination programs for futures commission merchants (“FCMs”). The proposed rules are intended to afford greater assurances to market participants that customer segregated funds and secured amounts are protected, customers are provided with appropriate notice of the risks of futures trading and of the FCMs with which they may choose to do business, FCMs are monitoring and managing risks in a robust manner, the capital and liquidity of FCMs are strengthened to safeguard their continued operations and the auditing and examination programs of the CFTC and the self-regulatory organizations are monitoring the activities of FCMs in a thorough manner. The final regulations have not yet been adopted.

Additionally, the CFTC published rules on February 17, 2012 and April 3, 2012 that require “swap dealers” and “major swap participants” to: 1) adhere to business conduct standards, 2) implement policies and procedures to ensure compliance with the CEA and 3) maintain records of such compliance. These new requirements may impact the documentation requirements for both cleared and non-cleared swaps and cause swap dealers and major swap participants to face increased compliance costs that, in turn, may be passed along to counterparties (such as UGA) in the form of higher fees and expenses that related to trading swaps.

On April 5, 2013, the CFTC’s Division of Clearing and Risk issued a letter granting no-action relief from certain swap data reporting requirements for swaps entered into between affiliated counterparties. In general, the letter grants relief from, among others: real-time, historical and regular swap reporting (under Part 43, Part 45 and Part 46 of the CFTC’s regulations, respectively).

On April 9, 2013, the CFTC’s Division of Market Oversight issued a letter granting time-limited no-action relief to non-swap dealer, non-major swap participant counterparties from the real-time, regular and historical swap reporting requirements (under Part 43, Part 45 and Part 46 of the CFTC’s regulations, respectively). The regular reporting requirements (Part 45 of the CFTC regulations) for interest rate and credit swaps of a financial entity (including a commodity pool such as UGA) began on April 10, 2013. The letter delays implementation of the reporting requirements based upon the asset class underlying the swap and the classification of the reporting counterparty. For a financial entity (including a commodity pool such as UGA), regular reporting requirements for equity, foreign exchange and other commodity swaps (including swaps on gasoline) began on May 29, 2013 and reporting of all historical swaps for all asset classes begins on September 30, 2013.

In addition to the rules and regulations imposed under the Dodd-Frank Act, swap dealers that are European banks may also be subject to European Market Infrastructure Regulation (“EMIR”). These regulations have not yet been fully implemented.

General Regulation Applicable to UGA

On August 12, 2013, the CFTC issued final rules establishing compliance obligations for commodity pool operators (“CPOs”) of investment companies registered under the Investment Company Act of 1940 (the “Investment Company Act”) that are required to register due to recent changes to CFTC Regulation 4.5. The final rules were issued in a CFTC release entitled “Harmonization of Compliance Obligations for Registered Investment Companies Required to Register as Commodity Pool Operators.” For entities that are registered with both the CFTC and the SEC, the CFTC will accept the SEC’s disclosure, reporting and recordkeeping regime as substituted compliance for substantially all of Part 4 of the CFTC’s regulations, so long as they comply with comparable requirements under the SEC’s statutory and regulatory compliance regime. Thus, the final rules (the “Harmonization Rules”) allow dually registered entities to meet certain CFTC regulatory requirements for CPOs by complying with SEC rules to which they are already subject. Although UGA is not a registered investment company under the Investment Company Act, the Harmonization Rules amended certain CFTC disclosure rules to make the requirements for all CPOs to periodically update their disclosure documents consistent with those of the SEC. This change will decrease the burden to UGA and USCF of having to comply with inconsistent regulatory requirements. It is not known whether the CFTC will make additional amendments to its disclosure, reporting and recordkeeping rules to further harmonize these obligations with those of the SEC as they apply to UGA and USCF, but any such further rule changes could result in additional operating efficiencies for UGA and USCF.

With regard to any other rules that the CFTC may adopt in the future, the effect of any such regulatory changes on UGA is impossible to predict, but it could be substantial and adverse.

USCF, which is registered as a CPO and as a swaps firm with the CFTC, is authorized by the Amended and Restated Agreement of Limited Partnership of UGA (the “LP Agreement”) to manage UGA. USCF is authorized by UGA in its sole judgment to employ and establish the terms of employment for, and termination of, commodity trading advisors or FCMs.

Price Movements

Gasoline futures prices were volatile during the nine months ended September 30, 2013 and exhibited a general downward trend throughout the quarter. The price of the Benchmark Futures Contract started the period at \$2.7617 per gallon. Prices fell over the course of the period and hit a peak on July 16, 2013 of \$3.1343 per gallon. The low for the period was on September 23, 2013, when the prices dropped to \$2.6150 per gallon. The period ended with the Benchmark Futures Contract at \$2.6282 per gallon, down approximately 4.83% over the period (investors are cautioned that these represent prices for gasoline on a wholesale basis and should not be directly compared to retail prices at a gasoline service station). UGA’s per unit NAV began the period at \$58.39 and ended the period at \$56.19 on September 30, 2013, a decrease of approximately 3.77% over the period. UGA’s per unit NAV reached its high for the period on February 14, 2013 at \$65.48 and reached its low for the period on April 23, 2013 at \$53.89. The Benchmark Futures Contract prices listed above began with the February 2013 contracts and ended with the November 2013 contracts. The decrease of approximately (4.83)% on the Benchmark Futures Contract listed above is a hypothetical return only and could not actually be achieved by an investor holding Futures Contracts. An investment in Futures Contracts would need to be rolled forward during the time period described in order to simulate such a result. Furthermore, the change in the nominal price of these differing Futures Contracts, measured from the start of the period to the end of the period, does not represent the actual benchmark results that UGA seeks to track, which are more fully described below in the section titled “Tracking UGA’s Benchmark.”

During the nine months ended September 30, 2013, the gasoline futures market exhibited periods of both contango and backwardation. During periods of contango, the price of the near month gasoline Futures Contract was typically lower than the price of the next month gasoline Futures Contract, or contracts further away from expiration. On days when the market was in backwardation, the price of the near month gasoline Futures Contract was typically higher than the price of the next month gasoline Futures Contract, or contracts further away from expiration. For a discussion of the impact of backwardation and contango on total returns, see “*Term Structure of Gasoline Prices and the Impact on Total Returns*” below.

Valuation of Futures Contracts and the Computation of the Per Unit NAV

The per unit NAV of UGA's units is calculated once each NYSE Arca trading day. The per unit NAV for a particular trading day is released after 4:00 p.m. New York time. Trading during the core trading session on the NYSE Arca typically closes at 4:00 p.m. New York time. UGA's administrator uses the NYMEX closing price (determined at the earlier of the close of the NYMEX or 2:30 p.m. New York time) for the contracts held on the NYMEX, but calculates or determines the value of all other UGA investments, including ICE Futures contracts or other futures contracts, as of the earlier of the close of the NYSE Arca or 4:00 p.m. New York time.

Results of Operations and the Gasoline Market

Results of Operations. On February 26, 2008, UGA listed its units on the American Stock Exchange (the "AMEX") under the ticker symbol "UGA." On that day, UGA established its initial offering price at \$50.00 per unit and issued 300,000 units to the initial authorized purchaser in exchange for \$15,000,000 in cash. As a result of the acquisition of the AMEX by NYSE Euronext, UGA's units no longer trade on the AMEX and commenced trading on the NYSE Arca on November 25, 2008.

Since its initial offering of 30,000,000 units, UGA has registered one subsequent offering of its units: 50,000,000 units which were registered with the SEC on April 30, 2010. Units offered by UGA in the subsequent offering were sold by it for cash at the units' per unit NAV as described in the applicable prospectus. As of September 30, 2013, UGA had issued 9,000,000 units, 900,000 of which were outstanding. As of September 30, 2013, there were 71,000,000 units registered but not yet issued.

More units may have been issued by UGA than are outstanding due to the redemption of units. Unlike funds that are registered under the Investment Company Act of 1940, as amended, units that have been redeemed by UGA cannot be resold by UGA. As a result, UGA contemplates that additional offerings of its units will be registered with the SEC in the future in anticipation of additional issuances and redemptions.

As of September 30, 2013, UGA had the following authorized purchasers: Citadel Securities LLC, Citigroup Global Markets Inc., Credit Suisse Securities USA LLC, Deutsche Bank Securities Inc., JP Morgan Securities Inc., Merrill Lynch Professional Clearing Corp., Morgan Stanley & Company Inc., NewEdge USA LLC, Nomura Securities International Inc., RBC Capital Markets Corporation, SG Americas Securities LLC, Virtu Financial BD LLC and Virtu Financial Capital Markets.

For the Nine Months Ended September 30, 2013 Compared to the Nine Months Ended September 30, 2012

As of September 30, 2013, the total unrealized loss on Futures Contracts owned or held on that day was \$1,506,179 and UGA established cash deposits and investments in short-term obligations of the United States of two years or less ("Treasuries") and money market funds that were equal to \$51,987,126. UGA held 90.71% of its cash assets in overnight deposits and investments in money market funds at its custodian bank, while 9.29% of the cash balance was held as investments in Treasuries and margin deposits for the Futures Contracts purchased at the FCM. The ending per unit NAV on September 30, 2013 was \$56.19.

By comparison, as of September 30, 2012, the total unrealized loss on Futures Contracts owned or held on that day was \$260,946 and UGA established cash deposits and investments in Treasuries and money market funds that were equal to \$72,961,165. UGA held 83.53% of its cash assets in overnight deposits and investments in money market funds at its custodian bank, while 16.47% of the cash balance was held as investments in Treasuries and margin deposits for the Futures Contracts purchased at the FCM. The decrease in cash assets in overnight deposits and investments in Treasuries and money market funds for the nine months ended September 30, 2013, as compared to the nine months ended September 30, 2012, was the result of UGA's smaller size during the nine months ended September

30, 2013 as measured by total net assets. The ending per unit NAV on September 30, 2012 was \$60.73. The decrease in the per unit NAV for September 30, 2013 as compared to the nine months ended September 30, 2012 was primarily due to the decrease in the price of the Benchmark Futures Contract between the nine months ended September 30, 2012 and the nine months ended September 30, 2013.

Portfolio Expenses. UGA's expenses consist of investment management fees, brokerage fees and commissions, certain offering costs, licensing fees, the fees and expenses of the independent directors of USCF and expenses relating to tax accounting and reporting requirements. The management fee that UGA pays to USCF is calculated as a percentage of the total net assets of UGA. UGA pays USCF a management fee of 0.60% of its average daily total net assets. The fee is accrued daily and paid monthly.

During the nine months ended September 30, 2013, the average daily total net assets of UGA were \$59,658,794. The management fee incurred by UGA during the period amounted to \$267,729. By comparison, during the nine months ended September 30, 2012, the average daily total net assets of UGA were \$100,813,057. The management fee paid by UGA during the period amounted to \$452,832.

In addition to the management fee, UGA pays all brokerage fees and other expenses, including tax reporting costs, licensing fees for the use of intellectual property, ongoing registration or other fees paid to the SEC, the Financial Industry Regulatory Authority ("FINRA") and any other regulatory agency in connection with offers and sales of its units subsequent to the initial offering and all legal, accounting, printing and other expenses associated therewith. The gross total of these fees and expenses for the nine months ended September 30, 2013 was \$270,008, as compared to \$273,109 for the nine months ended September 30, 2012. The decrease in gross total expenses excluding management fees for the nine months ended September 30, 2013 as compared to the nine months ended September 30, 2012, was primarily due to UGA's smaller size during the nine months ended September 30, 2013, as represented by total net assets. For the nine months ended September 30, 2013, UGA incurred \$34,745 in ongoing registration fees and other expenses relating to the registration and offering of additional units. By comparison, for the nine months ended September 30, 2012, UGA incurred \$9,202 in ongoing registration fees and other expenses relating to the registration and offering of additional units. The increase in registration fees and expenses incurred by UGA for the nine months ended September 30, 2013, as compared to the nine months ended September 30, 2012, was primarily due to an increased amortization schedule during the nine months ended September 30, 2013 as compared to the nine months ended September 30, 2012. During the nine months ended September 30, 2013 and 2012, an expense waiver was in effect which offset certain of the expenses incurred by UGA. The total amount of the expense waiver was \$121,746 for the nine months ended September 30, 2013 and \$75,028 for the nine months ended September 30, 2012. For the nine months ended September 30, 2013 and 2012, the expenses of UGA, including management fees, commissions, and all other expenses, before allowance for the expense waiver, totaled \$537,737 and \$725,941, respectively, and after allowance for the expense waiver, totaled \$415,991 and \$650,913, respectively.

UGA is responsible for paying its portion of the directors' and officers' liability insurance of UGA and the United States Oil Fund, LP, the United States Natural Gas Fund, LP, the United States 12 Month Oil Fund, LP, the United States Diesel-Heating Oil Fund, LP (formerly, the United States Heating Oil Fund, LP), the United States Short Oil Fund, LP, the United States 12 Month Natural Gas Fund, LP, the United States Brent Oil Fund, LP, the United States Commodity Index Fund, the United States Copper Index Fund, the United States Agriculture Index Fund and the United States Metals Index Fund (collectively, the "Related Public Funds") and the fees and expenses of the independent directors who also serve as audit committee members of UGA and the Related Public Funds organized as limited partnerships and, as of July 8, 2011, the Related Public Funds organized as a series of a Delaware statutory trust. UGA shares the fees and expenses on a pro rata basis with each Related Public Fund, as described above, based on the relative assets of each fund computed on a daily basis. These fees and expenses for the year ending December 31, 2013 are estimated to be a total of \$560,625 for UGA and the Related Public Funds. By comparison, for the year ended December 31, 2012, these fees and expenses amounted to a total of \$540,586 for UGA and the Related Public Funds. UGA's portion of such fees and expenses for the year ended December 31, 2012 was \$18,888.

UGA also incurs commissions to brokers for the purchase and sale of Futures Contracts, Other Gasoline-Related Investments or Treasuries. During the nine months ended September 30, 2013, total commissions accrued to brokers amounted to \$29,833. Of this amount, approximately \$28,818 was a result of rebalancing costs and approximately \$1,015 was the result of trades necessitated by creation and redemption activity. By comparison, during the nine months ended September 30, 2012, total commissions accrued to brokers amounted to \$51,603. Of this amount, approximately \$46,678 was a result of rebalancing costs and approximately \$4,925 was the result of trades necessitated by creation and redemption activity. The decrease in the total commissions accrued to brokers for the nine months ended September 30, 2013, as compared to the nine months ended September 30, 2012, was primarily a function of a lower number of futures contracts that were held and traded as a result of UGA's reduced net assets during the nine months ended September 30, 2013. As an annualized percentage of average daily total net assets, the figure for the nine months ended September 30, 2013 represents approximately 0.07% of average daily total net assets. By comparison, the figure for the nine months ended September 30, 2012 represented approximately 0.07% of average daily total net assets. However, there can be no assurance that commission costs and portfolio turnover will not cause commission expenses to rise in future quarters.

The fees and expenses associated with UGA's audit expenses and tax accounting and reporting requirements are paid by UGA. These costs are estimated to be \$250,000 for the year ending December 31, 2013. USCF has voluntarily agreed to pay certain expenses normally borne by UGA to the extent that such expenses exceed 0.15% (15 basis points) of UGA's NAV, on an annualized basis, through at least December 31, 2013. USCF has no obligation to continue such payments into subsequent periods. For the nine months ended September 30, 2013, USCF waived \$121,746 of UGA's expenses. This voluntary expense waiver is in addition to those amounts USCF is contractually obligated to pay as described in *Note 4 in Item 1* of this quarterly report on Form 10-Q.

Dividend and Interest Income. UGA seeks to invest its assets such that it holds Futures Contracts and Other Gasoline-Related Investments in an amount equal to the total net assets of its portfolio. Typically, such investments do not require UGA to pay the full amount of the contract value at the time of purchase, but rather require UGA to post an amount as a margin deposit against the eventual settlement of the contract. As a result, UGA retains an amount that is approximately equal to its total net assets, which UGA invests in Treasuries, cash and/or cash equivalents. This includes both the amount on deposit with the FCM as margin, as well as unrestricted cash and cash equivalents held with UGA's custodian bank. The Treasuries, cash and/or cash equivalents earn income that accrues on a daily basis. For the nine months ended September 30, 2013, UGA earned \$11,081 in dividend and interest income on such Treasuries, cash and/or cash equivalents. Based on UGA's average daily total net assets, this was equivalent to an annualized yield of approximately 0.02%. UGA purchased Treasuries during the nine months ended September 30, 2013 and also held cash and/or cash equivalents during this time period. By comparison, for the nine months ended September 30, 2012, UGA earned \$19,976 in dividend and interest income on such Treasuries, cash and/or cash equivalents. Based on UGA's average daily total net assets, this was equivalent to an annualized yield of approximately 0.03%. UGA purchased Treasuries during the nine months ended September 30, 2012 and also held cash and/or cash equivalents during this time period. Interest rates on short-term investments held by UGA, including cash, cash equivalents and Treasuries, were lower during the nine months ended September 30, 2013, as compared to the nine months ended September 30, 2012. As a result, the amount of income earned by UGA as a percentage of average total net assets was lower during the nine months ended September 30, 2013, as compared to the nine months ended September 30, 2012.

For the Three Months Ended September 30, 2013 Compared to the Three Months Ended September 30, 2012

Portfolio Expenses. During the three months ended September 30, 2013, the average daily total net assets of UGA were \$57,299,506. The management fee incurred by UGA during the period amounted to \$86,656. By comparison, during the three months ended September 30, 2012, the average daily total net assets of UGA were \$80,884,284. The management fee paid by UGA during the period amounted to \$121,989.

In addition to the management fee, UGA pays all brokerage fees and other expenses, including tax reporting costs, licensing fees for the use of intellectual property, ongoing registration or other fees paid to the SEC, FINRA and any other regulatory agency in connection with offers and sales of its units subsequent to the initial offering and all legal, accounting, printing and other expenses associated therewith. The gross total of these fees and expenses for the three months ended September 30, 2013 was \$78,909, as compared to \$93,983 for the three months ended September 30, 2012. The decrease in gross total expenses excluding management fees for the three months ended September 30, 2013 as compared to the three months ended September 30, 2012, was primarily due to UGA's smaller size during the three months ended September 30, 2013, as represented by total net assets. For the three months ended September 30, 2013, UGA incurred \$11,709 in ongoing registration fees and other expenses relating to the registration and offering of additional units. By comparison, for the three months ended September 30, 2012, UGA incurred \$4,652 in ongoing registration fees and other expenses relating to the registration and offering of additional units. The increase in registration fees and expenses incurred by UGA for the three months ended September 30, 2013, as compared to the three months ended September 30, 2012, was primarily due to an increased amortization schedule during the three months ended September 30, 2013 as compared to the three months ended September 30, 2012. During the three months ended September 30, 2013 and 2012, an expense waiver was in effect which offset certain of the expenses incurred by UGA. The total amount of the expense waiver was \$30,338 for the three months ended September 30, 2013 and \$37,603 for the three months ended September 30, 2012. For the three months ended September 30, 2013 and 2012, the expenses of UGA, including management fees, commissions, and all other expenses, before allowance for the expense waiver, totaled \$165,565 and \$215,972, respectively, and after allowance for the expense waiver, totaled \$135,227 and \$178,369, respectively.

UGA is responsible for paying its portion of the directors' and officers' liability insurance of UGA and the Related Public Funds and the fees and expenses of the independent directors who also serve as audit committee members of UGA and the Related Public Funds organized as limited partnerships and, as of July 8, 2011, the Related Public Funds organized as a series of a Delaware statutory trust. UGA shares the fees and expenses on a pro rata basis with each Related Public Fund, as described above, based on the relative assets of each fund computed on a daily basis. These fees and expenses for the year ending December 31, 2013 are estimated to be a total of \$560,625 for UGA and the Related Public Funds. By comparison, for the year ended December 31, 2012, these fees and expenses amounted to a total of \$540,586 for UGA and the Related Public Funds. UGA's portion of such fees and expenses for the year ended December 31, 2012 was \$18,888.

UGA also incurs commissions to brokers for the purchase and sale of Futures Contracts, Other Gasoline-Related Investments or Treasuries. During the three months ended September 30, 2013, total commissions accrued to brokers amounted to \$9,866. Of this amount, approximately \$9,625 was a result of rebalancing costs and approximately \$241 was the result of trades necessitated by creation and redemption activity. By comparison, during the three months ended September 30, 2012, total commissions accrued to brokers amounted to \$14,218. Of this amount, approximately \$13,349 was a result of rebalancing costs and approximately \$869 was the result of trades necessitated by creation and redemption activity. The decrease in the total commissions accrued to brokers for the three months ended September 30, 2013, as compared to the three months ended September 30, 2012, was primarily a function of a lower number of futures contracts that were held and traded as a result of UGA's reduced net assets during the three months ended September 30, 2013. As an annualized percentage of average daily total net assets, the figure for the three months ended September 30, 2013 represents approximately 0.07% of average daily total net assets. By comparison, the figure for the three months ended September 30, 2012 represented approximately 0.07% of average daily total net assets. However, there can be no assurance that commission costs and portfolio turnover will not cause commission expenses to rise in future quarters.

The fees and expenses associated with UGA's audit expenses and tax accounting and reporting requirements are paid by UGA. These costs are estimated to be \$250,000 for the year ending December 31, 2013. USCF has voluntarily agreed to pay certain expenses normally borne by UGA to the extent that such expenses exceed 0.15% (15 basis points) of UGA's NAV, on an annualized basis, through at least December 31, 2013. USCF has no obligation to

continue such payments into subsequent periods. For the three months ended September 30, 2013, USCF waived \$30,338 of UGA's expenses. This voluntary expense waiver is in addition to those amounts USCF is contractually obligated to pay as described in *Note 4* in *Item 1* of this quarterly report on Form 10-Q.

Dividend and Interest Income. UGA seeks to invest its assets such that it holds Futures Contracts and Other Gasoline-Related Investments in an amount equal to the total net assets of its portfolio. Typically, such investments do not require UGA to pay the full amount of the contract value at the time of purchase, but rather require UGA to post an amount as a margin deposit against the eventual settlement of the contract. As a result, UGA retains an amount that is approximately equal to its total net assets, which UGA invests in Treasuries, cash and/or cash equivalents. This includes both the amount on deposit with the FCM as margin, as well as unrestricted cash and cash equivalents held with UGA's custodian bank. The Treasuries, cash and/or cash equivalents earn income that accrues on a daily basis. For the three months ended September 30, 2013, UGA earned \$3,015 in dividend and interest income on such Treasuries, cash and/or cash equivalents. Based on UGA's average daily total net assets, this was equivalent to an annualized yield of approximately 0.02%. UGA purchased Treasuries during the three months ended September 30, 2013 and also held cash and/or cash equivalents during this time period. By comparison, for the three months ended September 30, 2012, UGA earned \$6,093 in dividend and interest income on such Treasuries, cash and/or cash equivalents. Based on UGA's average daily total net assets, this was equivalent to an annualized yield of approximately 0.03%. UGA purchased Treasuries during the three months ended September 30, 2012 and also held cash and/or cash equivalents during this time period. Interest rates on short-term investments held by UGA, including cash, cash equivalents and Treasuries, were lower during the three months ended September 30, 2013, as compared to the three months ended September 30, 2012. As a result, the amount of income earned by UGA as a percentage of average total net assets was lower during the three months ended September 30, 2013, as compared to the three months ended September 30, 2012.

Tracking UGA's Benchmark

USCF seeks to manage UGA's portfolio such that changes in its average daily per unit NAV, on a percentage basis, closely track the daily changes in the average price of the Benchmark Futures Contract, also on a percentage basis. Specifically, USCF seeks to manage the portfolio such that over any rolling period of 30-valuation days, the average daily change in UGA's per unit NAV is within a range of 90% to 110% (0.9 to 1.1) of the average daily change in the price of the Benchmark Futures Contract. As an example, if the average daily movement of the price of the Benchmark Futures Contract for a particular 30-valuation day time period was 0.5% per day, USCF would attempt to manage the portfolio such that the average daily movement of the per unit NAV during that same time period fell between 0.45% and 0.55% (*i.e.*, between 0.9 and 1.1 of the benchmark's results). UGA's portfolio management goals do not include trying to make the nominal price of UGA's per unit NAV equal to the nominal price of the current Benchmark Futures Contract or the spot price for gasoline. USCF believes that it is not practical to manage the portfolio to achieve such an investment goal when investing in listed gasoline Futures Contracts.

For the 30-valuation days ended September 30, 2013, the simple average daily change in the Benchmark Futures Contract was (0.243)%, while the simple average daily change in the per unit NAV of UGA over the same time period was (0.247)%. The average daily difference was (0.004)% (or (0.4) basis points, where 1 basis point equals 1/100 of 1%). As a percentage of the daily movement of the Benchmark Futures Contract, the average error in daily tracking by the per unit NAV was (2.487)%, meaning that over this time period UGA's tracking error was within the plus or minus 10% range established as its benchmark tracking goal. The first chart below shows the daily movement of UGA's per unit NAV versus the daily movement of the Benchmark Futures Contract for the 30-valuation day period ended September 30, 2013, the last trading day in September. The second chart below shows the monthly total returns of UGA as compared to the monthly value of the Benchmark Futures Contract for the five years ended September 30, 2013.

Since the commencement of the offering of UGA's units to the public on February 26, 2008 to September 30, 2013, the simple average daily change in the Benchmark Futures Contract was 0.038%, while the simple average daily change in the per unit NAV of UGA over the same time period was 0.036%. The average daily difference was (0.003)% (or (0.3) basis points, where 1 basis point equals 1/100 of 1%). As a percentage of the daily movement of the Benchmark Futures Contract, the average error in daily tracking by the per unit NAV was (0.952)%, meaning that over this time period UGA's tracking error was within the plus or minus 10% range established as its benchmark tracking goal.

**** PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

**** PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

An alternative tracking measurement of the return performance of UGA versus the return of its Benchmark Futures Contract can be calculated by comparing the actual return of UGA, measured by changes in its per unit NAV, versus the *expected* changes in its per unit NAV under the assumption that UGA's returns had been exactly the same as the daily changes in its Benchmark Futures Contract.

For the nine months ended September 30, 2013, the actual total return of UGA as measured by changes in its per unit NAV was (3.77)%. This is based on an initial per unit NAV of \$58.39 as of December 31, 2012 and an ending per unit NAV as of September 30, 2013 of \$56.19. During this time period, UGA made no distributions to its unitholders. However, if UGA's daily changes in its per unit NAV had instead exactly tracked the changes in the daily total return of the Benchmark Futures Contract, UGA would have had an estimated per unit NAV of \$56.59 as of September 30, 2013, for a total return over the relevant time period of (3.08)%. The difference between the actual per unit NAV total return of UGA of (3.77)% and the expected total return based on the Benchmark Futures Contract of (3.08)% was an error over the time period of (0.69)%, which is to say that UGA's actual total return underperformed the benchmark result by that percentage. USCF believes that a portion of the difference between the actual total return and the expected benchmark total return can be attributed to the net impact of the expenses that UGA pays, offset in part by the income that UGA collects on its cash and cash equivalent holdings. During the nine months ended September 30, 2013, UGA earned dividend and interest income of \$11,081, which is equivalent to a weighted average income rate of approximately 0.02% for such period. In addition, during the nine months ended September 30, 2013, UGA also collected \$4,550 from its Authorized Purchasers for creating or redeeming baskets of units. This income also contributed to UGA's actual total return. During the nine months ended September 30, 2013, UGA incurred net expenses of \$415,991. Income from dividends and interest and Authorized Purchaser collections net of expenses was \$(400,360), which is equivalent to an annualized weighted average net income rate of approximately (0.90)% for the nine months ended September 30, 2013.

By comparison, for the nine months ended September 30, 2012, the actual total return of UGA as measured by changes in its per unit NAV was 25.55%. This was based on an initial per unit NAV of \$48.37 as of December 31, 2011 and an ending per unit NAV as of September 30, 2012 of \$60.73. During this time period, UGA made no distributions to its unitholders. However, if UGA's daily changes in its per unit NAV had instead exactly tracked the changes in the daily total return of the Benchmark Futures Contract, UGA would have had an estimated per unit NAV of \$61.11 as of September 30, 2012, for a total return over the relevant time period of 26.34%. The difference between the actual per unit NAV total return of UGA of 25.55% and the expected total return based on the Benchmark Futures Contract of 26.34% was an error over the time period of (0.79)%, which is to say that UGA's actual total return underperformed the benchmark result by that percentage. USCF believes that a portion of the difference between the actual total return and the expected benchmark total return can be attributed to the net impact of the expenses that UGA paid, offset in part by the income that UGA collected on its cash and cash equivalent holdings. During the nine months ended September 30, 2012, UGA earned dividend and interest income of \$19,976, which was equivalent to a weighted average income rate of approximately 0.03% for such period. In addition, during the nine months ended September 30, 2012, UGA also collected \$10,850 from its Authorized Purchasers for creating or redeeming baskets of units. This income also contributed to UGA's actual total return. During the nine months ended September 30, 2012, UGA incurred net expenses of \$650,913. Income from dividends and interest and Authorized Purchaser collections net of expenses was \$(620,087), which is equivalent to an annualized weighted average net income rate of approximately (0.82)% for the nine months ended September 30, 2012.

There are currently three factors that have impacted or are most likely to impact UGA's ability to accurately track its Benchmark Futures Contract.

First, UGA may buy or sell its holdings in the then current Benchmark Futures Contract at a price other than the closing settlement price of that contract on the day during which UGA executes the trade. In that case, UGA may pay a price that is higher, or lower, than that of the Benchmark Futures Contract, which could cause the changes in the daily per unit NAV of UGA to either be too high or too low relative to the daily changes in the Benchmark Futures

Contract. During the nine months ended September 30, 2013, USCF attempted to minimize the effect of these transactions by seeking to execute its purchase or sale of the Benchmark Futures Contract at, or as close as possible to, the end of the day settlement price. However, it may not always be possible for UGA to obtain the closing settlement price and there is no assurance that failure to obtain the closing settlement price in the future will not adversely impact UGA's attempt to track the Benchmark Futures Contract over time.

Second, UGA earns dividend and interest income on its cash, cash equivalents and Treasuries. UGA is not required to distribute any portion of its income to its unitholders and did not make any distributions to unitholders during the nine months ended September 30, 2013. Interest payments, and any other income, were retained within the portfolio and added to UGA's NAV. When this income exceeds the level of UGA's expenses for its management fee, brokerage commissions and other expenses (including ongoing registration fees, licensing fees and the fees and expenses of the independent directors of USCF), UGA will realize a net yield that will tend to cause daily changes in the per unit NAV of UGA to track slightly higher than daily changes in the Benchmark Futures Contract. During the nine months ended September 30, 2013, UGA earned, on an annualized basis, approximately 0.02% on its cash and cash equivalent holdings. It also incurred cash expenses on an annualized basis of 0.60% for management fees, approximately 0.07% in brokerage commission costs related to the purchase and sale of futures contracts and approximately 0.27% for other net expenses. The foregoing fees and expenses resulted in a net yield on an annualized basis of approximately (0.90)% and affected UGA's ability to track its benchmark. If short-term interest rates rise above the current levels, the level of deviation created by the yield would decrease. Conversely, if short-term interest rates were to decline, the amount of error created by the yield would increase. When short-term yields drop to a level lower than the combined expenses of the management fee and the brokerage commissions, then the tracking error becomes a negative number and would tend to cause the daily returns of the per unit NAV to underperform the daily returns of the Benchmark Futures Contract. USCF anticipates that interest rates will continue to remain at historical lows and, therefore, it is anticipated that fees and expenses paid by UGA will continue to be higher than interest earned by UGA. As such, USCF anticipates that UGA will continue to underperform its benchmark until such a time when interest earned at least equals or exceeds the fees and expenses paid by UGA.

Third, UGA may hold Other Gasoline-Related Investments in its portfolio that may fail to closely track the Benchmark Futures Contract's total return movements. In that case, the error in tracking the Benchmark Futures Contract could result in daily changes in the per unit NAV of UGA that are either too high, or too low, relative to the daily changes in the Benchmark Futures Contract. During the nine months ended September 30, 2013, UGA did not hold any Other Gasoline-Related Investments. If UGA increases in size, and due to its obligations to comply with regulatory limits, UGA may invest in Other Gasoline-Related Investments which may have the effect of increasing transaction related expenses and may result in increased tracking error.

Term Structure of Gasoline Futures Prices and the Impact on Total Returns. Several factors determine the total return from investing in a futures contract position. One factor that impacts the total return that will result from investing in near month futures contracts and "rolling" those contracts forward each month is the price relationship between the current near month contract and the next month contract. For example, if the price of the near month contract is higher than the next month contract (a situation referred to as "backwardation" in the futures market), then absent any other change there is a tendency for the price of a next month contract to rise in value as it becomes the near month contract and approaches expiration. Conversely, if the price of a near month contract is lower than the next month contract (a situation referred to as "contango" in the futures market), then absent any other change there is a tendency for the price of a next month contract to decline in value as it becomes the near month contract and approaches expiration.

As an example, assume that the price of gasoline for immediate delivery (the "spot" price), was \$2 per gallon, and the value of a position in the near month futures contract was also \$2. Over time, the price of a gallon of gasoline will fluctuate based on a number of market factors, including demand for gasoline relative to its supply. The value of the near month contract will likewise fluctuate in reaction to a number of market factors. If investors seek to maintain their position in a near month contract and not take delivery of the gasoline, every month they must sell their current near month contract as it approaches expiration and invest in the next month contract.

If the futures market is in backwardation, *e.g.*, when the expected price of gasoline in the future would be less, the investor would be buying a next month contract for a lower price than the current near month contract. Using the \$2 per gallon price above to represent the front month price, the price of the next month contract could be \$1.96 per barrel, that is, 2% cheaper than the front month contract. Hypothetically, and assuming no other changes to either

prevailing gasoline prices or the price relationship between the spot price, the near month contract and the next month contract (and ignoring the impact of commission costs and the income earned on cash and/or cash equivalents), the value of the \$1.96 next month contract would rise as it approaches expiration and becomes the new near month contract with a price of \$2. In this example, the value of an investment in the second month contract would tend to rise faster than the spot price of gasoline, or fall slower. As a result, it would be possible in this hypothetical example for the spot price of gasoline to have risen 10% after some period of time, while the value of the investment in the second month futures contract would have risen 12%, assuming backwardation is large enough or enough time has elapsed. Similarly, the spot price of gasoline could have fallen 10% while the value of an investment in the futures contract could have fallen only 8%. Over time, if backwardation remained constant, the difference would continue to increase.

If the futures market is in contango, the investor would be buying a next month contract for a higher price than the current near month contract. Using again the \$2 per gallon price above to represent the front month price, the price of the next month contract could be \$2.04 per barrel, that is, 2% more expensive than the front month contract. Hypothetically, and assuming no other changes to either prevailing gasoline prices or the price relationship between the spot price, the near month contract and the next month contract (and ignoring the impact of commission costs and the income earned on cash and/or cash equivalents), the value of the next month contract would fall as it approaches expiration and becomes the new near month contract with a price of \$2. In this example, it would mean that the value of an investment in the second month would tend to rise slower than the spot price of gasoline, or fall faster. As a result, it would be possible in this hypothetical example for the spot price of gasoline to have risen 10% after some period of time, while the value of the investment in the second month futures contract will have risen only 8%, assuming contango is large enough or enough time has elapsed. Similarly, the spot price of gasoline could have fallen 10% while the value of an investment in the second month futures contract could have fallen 12%. Over time, if contango remained constant, the difference would continue to increase.

The chart below compares the price of the near month contract to the price of the next month contract over the last 10 years. When the price of the near month contract is higher than the price of the next month contract, the market would be described as being in backwardation. When the price of the near month contract is lower than the price of the next month contract, the market would be described as being in contango. Although the prices of the near month contract and the price of the next month contract do tend to move up or down together, it can be seen that at times the near month prices are clearly higher than the price of the next month contract (backwardation), and other times they are below the price of the next month contract (contango). In addition, investors can observe that gasoline prices, both near month and next month, often display a seasonal pattern in which the price of gasoline tends to rise in the summer months and decline in the winter months. This mirrors the physical demand for gasoline, which typically peaks in the summer.

**** PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS***

An alternative way to view backwardation and contango data over time is to subtract the dollar price of the next month gasoline futures contract from the dollar price of the near month gasoline futures contract. If the resulting number is a positive number, then the price of the near month contract is higher than the price of the next month and the market could be described as being in backwardation. If the resulting number is a negative number, then the near month price is lower than the price of the next month and the market could be described as being in contango. The chart below shows the results from subtracting the next month contract price from the price of the near month contract for the 10-year period between September 30, 2003 and September 30, 2013. Investors will note that the near month gasoline futures contract spent time in both backwardation and contango. Investors will further note that the markets display a very seasonal pattern that corresponds to the seasonal demand patterns for gasoline mentioned above. That is, in many, but not all cases, the price of the near month is higher than the next month during the middle of the summer months as the price of gasoline for delivery in those summer months rises to meet peak demand. At the same time, the price of the near month contract, when that month is just before the onset of spring, does not rise as far or as fast as the price of a next month contract whose delivery falls closer to the start of the summer season.

*** PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS**

While the investment objective of UGA is not to have the market price of its units match, dollar for dollar, changes in the spot price of gasoline, contango and backwardation have impacted the total return on an investment in UGA units during the past year relative to a hypothetical direct investment in gasoline. For example, an investment in UGA units made on December 31, 2012 and held to September 30, 2013, decreased based upon the changes in the NAV for UGA units on those days, by approximately 3.77%, while the spot price of gasoline for immediate delivery during the same period decreased by 4.83% (note: this comparison ignores the potential costs associated with physically owning and storing gasoline, which could be substantial). By comparison, an investment in UGA units made on December 31, 2011 and held to September 30, 2012, increased based upon the changes in the NAV for UGA units on those days, by approximately 25.55%, while the spot price of gasoline for immediate delivery during the same period decreased by 9.89% (note: this comparison ignores the potential costs associated with physically owning and storing gasoline, which could be substantial).

Periods of contango or backwardation do not materially impact UGA's investment objective of having the daily percentage changes in its per unit NAV track the daily percentage changes in the price of the Benchmark Futures Contract since the impact of backwardation and contango tend to equally impact the daily percentage changes in price of both UGA's units and the Benchmark Futures Contract. It is impossible to predict with any degree of certainty whether backwardation or contango will occur in the future. It is likely that both conditions will occur during different periods

Gasoline Market. During the nine months ended September 30, 2013, the price of unleaded gasoline in the United States was impacted by several factors. In particular, USCF believes that rising crude oil prices in the United States were partially offset by resolution of refinery maintenance issues towards the end of September 2013, resulting in a net decrease in gasoline prices. The price of the Benchmark Futures Contract started the period at \$2.761 per gallon. Prices rose sharply over the course of the period and hit a peak on February 19, 2013 of \$3.3152 per gallon. The low for the period was on September 23, 2013, when the price dropped to \$2.6150 per gallon. The period ended with the Benchmark Futures Contracts at \$2.6282 per gallon, down approximately 4.83% over the period (investors are cautioned that these represent prices for gasoline on a wholesale basis and should not be directly compared to retail prices as a gasoline service station).

Crude Oil Market. During the nine months ended September 30, 2013, crude oil prices were impacted by several factors. On the consumption side, demand growth remained moderate inside and outside the United States as global economic growth, including emerging economies such as China and India, showed signs of slow economic growth. Europe in particular showed signs of weakness as the ongoing financial and banking crisis raised concerns during the first quarter of 2013. On the supply side, efforts to reduce production in recent years by the Organization of the Petroleum Exporting Countries (“OPEC”) to more closely match global consumption were partially successful. However, continuing concerns about the political standoff with Iran have left the market subject to bouts of heightened volatility as OPEC’s ability to replace Iranian oil currently subject to embargo is not unlimited. In addition, security issues in Libya, Egypt, Iraq, and Syria also contribute to heightened volatility. In recent years, oil production in the United States and Canada has increased. However, limits on oil transportation infrastructure, including pipelines, have made it more difficult for the increased production to move to the centers of refining, often leading to a build-up in crude oil inventory in areas of the United States, such as the U.S. Midwest, and Canada. The result is that crude oil prices in the U.S. Midwest, where the pricing point of the light, sweet crude oil contract is located, have tended to trade at a lower price than crude oil in other parts of the United States and lower than global crude oil benchmarks such as Brent. United States crude oil prices finished the third quarter of 2013 approximately 11.45% higher than at the beginning of the year, as the global economy continues to adjust to periods of slow recovery and economic growth. USCF believes that should the global economic situation cease to improve, or decline, there is a meaningful possibility that crude oil prices could further retreat from their current levels, while any military actions involving Iran would likely have the opposite effect

USCF believes that over both the medium-term and the long-term, changes in the price of crude oil will exert the greatest influence on the price of refined petroleum products such as gasoline. At the same time, there can be other factors that, particularly in the short term, cause the price of gasoline to rise (or fall), more (or less) than the price of crude oil. For example, higher gasoline prices cause American consumers to reduce their gasoline consumption, particularly during the high demand period of the summer driving season and gasoline prices are impacted by the availability of refining capacity. Furthermore, a slowdown or recession in the U.S. economy may have a greater impact on U.S. gasoline prices than on global crude oil prices. As a result, it is possible that changes in gasoline prices may not match the changes in crude oil prices.

Unleaded Gasoline Price Movements in Comparison to Other Energy Commodities and Investment Categories. USCF believes that investors frequently measure the degree to which prices or total returns of one investment or asset class move up or down in value in concert with another investment or asset class. Statistically, such a measure is usually done by measuring the correlation of the price movements of the two different investments or asset classes over some period of time. The correlation is scaled between 1 and -1, where 1 indicates that the two investment options move up or down in price or value together, known as “positive correlation,” and -1 indicates that they move in completely opposite directions, known as “negative correlation.” A correlation of 0 would mean that the movements of the two are neither positively nor negatively correlated, known as “non-correlation.” That is, the investment options sometimes move up and down together and other times move in opposite directions.

For the ten-year time period between September 30, 2003 and September 30, 2013, the table below compares the monthly movements of unleaded gasoline prices versus the monthly movements of the prices of several other energy commodities, such as natural gas, crude oil and diesel-heating oil, as well as several major non-commodity investment asset classes, such as large cap U.S. equities, U.S. government bonds and global equities. It can be seen that over this particular time period, the movement of unleaded gasoline on a monthly basis was neither strongly correlated nor inversely correlated with the movements of natural gas, large cap U.S. equities, U.S. government bonds or global equities. However, movements in unleaded gasoline were strongly correlated to movements in crude oil and diesel-heating oil.

Correlation Matrix September 30, 2003-2013	Large Cap U.S. Equities (S&P 500)	U.S. Gov't. Bonds (EFFAS U.S. Gov't. Bond Index)	Global Equities (FTSE World Index)	Crude Oil	Diesel- Heating Oil	Natural Gas	Unleaded Gasoline
Large Cap U.S. Equities (S&P 500)	1.000	(0.285)	0.967	0.419	0.382	0.099	0.196

PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS

The table below covers a more recent, but much shorter, range of dates than the above table. Over the shorter, one-year period ended September 30, 2013, unleaded gasoline was neither strongly correlated nor inversely correlated with large cap U.S. equities, U.S. government bonds, global equities, crude oil, and natural gas. Unleaded gasoline remained strongly correlated with diesel-heating oil over the shorter period.

Correlation Matrix 12 Months ended September 30, 2013	Large Cap U.S. Equities (S&P 500)	U.S. Gov't. Bonds (EFFAS U.S. Gov't. Bond Index)	Global Equities (FTSE World Index)	Crude Oil	Diesel- Heating Oil	Natural Gas	Unleaded Gasoline
Large Cap U.S. Equities (S&P 500)	1.000	0.177	0.852	0.270	0.047	0.065	(0.009)

PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS

Investors are cautioned that the historical price relationships between gasoline and various other energy commodities, as well as other investment asset classes, as measured by correlation may not be reliable predictors of future price movements and correlation results. The results pictured above would have been different if a different range of dates had been selected. USCF believes that gasoline has historically not demonstrated a strong correlation with equities or bonds over long periods of time. However, USCF also believes that in the future it is possible that gasoline could have long term correlation results that indicate prices of gasoline more closely track the movements of equities or bonds. In

addition, USCF believes that, when measured over time periods shorter than ten years, there will always be some periods where the correlation of gasoline to equities and bonds will be either more strongly positively correlated or more strongly negatively correlated than the long term historical results suggest.

The correlations between gasoline, crude oil, natural gas and diesel-heating oil are relevant because USCF endeavors to invest UGA's assets in Futures Contracts and Other Gasoline-Related Investments so that daily changes in percentage terms in UGA's per unit NAV correlate as closely as possible with daily changes in percentage terms in the price of the Benchmark Futures Contract. If certain other fuel-based commodity futures contracts do not closely correlate with the gasoline Futures Contract, then their use could lead to greater tracking error. As noted above, USCF also believes that the changes in percentage terms in the price of the Benchmark Futures Contract will closely correlate with changes in percentage terms in the spot price of gasoline.

Critical Accounting Policies

Preparation of the condensed financial statements and related disclosures in compliance with accounting principles generally accepted in the United States of America requires the application of appropriate accounting rules and guidance, as well as the use of estimates. UGA's application of these policies involves judgments and actual results may differ from the estimates used.

USCF has evaluated the nature and types of estimates that it makes in preparing UGA's condensed financial statements and related disclosures and has determined that the valuation of its investments, which are not traded on a United States or internationally recognized futures exchange (such as forward contracts and over-the-counter contracts) involves a critical accounting policy. The values which are used by UGA for its Futures Contracts are provided by its commodity broker who uses market prices when available, while over-the-counter contracts are valued based on the present value of estimated future cash flows that would be received from or paid to a third party in settlement of these derivative contracts prior to their delivery date and valued on a daily basis. In addition, UGA estimates interest and dividend income on a daily basis using prevailing rates earned on its cash and cash equivalents. These estimates are adjusted to the actual amount received on a monthly basis and the difference, if any, is not considered material.

Liquidity and Capital Resources

UGA has not made, and does not anticipate making, use of borrowings or other lines of credit to meet its obligations. UGA has met, and it is anticipated that UGA will continue to meet, its liquidity needs in the normal course of business from the proceeds of the sale of its investments or from the Treasuries, cash and/or cash equivalents that it intends to hold at all times. UGA's liquidity needs include: redeeming units, providing margin deposits for its existing Futures Contracts or the purchase of additional Futures Contracts and posting collateral for its over-the-counter contracts and payment of its expenses, summarized below under "Contractual Obligations."

UGA currently generates cash primarily from: (i) the sale of baskets consisting of 50,000 units ("Creation Baskets") and (ii) income earned on Treasuries, cash and/or cash equivalents. UGA has allocated substantially all of its net assets to trading in Gasoline Interests. UGA invests in Gasoline Interests to the fullest extent possible without being leveraged or unable to satisfy its current or potential margin or collateral obligations with respect to its investments in Futures Contracts and Other Gasoline-Related Investments. A significant portion of UGA's NAV is held in cash and cash equivalents that are used as margin and as collateral for its trading in Gasoline Interests. The balance of the assets is held in UGA's account at its custodian bank and in investments in Treasuries at the FCM. Income received from UGA's investments in money market funds and Treasuries is paid to UGA. During the nine months ended September 30, 2013, UGA's expenses exceeded the income UGA earned and the cash earned from the sale of Creation Baskets and the redemption of Redemption Baskets. During the nine months ended September 30, 2013, UGA did not use other assets to pay expenses, which could cause a decrease in UGA's NAV over time. To the extent expenses exceed income, UGA's NAV will be negatively impacted.

UGA's investments in Gasoline Interests may be subject to periods of illiquidity because of market conditions, regulatory considerations and other reasons. For example, most commodity exchanges limit the fluctuations in futures contracts prices during a single day by regulations referred to as "daily limits." During a single day, no trades may be

executed at prices beyond the daily limit. Once the price of a futures contract has increased or decreased by an amount equal to the daily limit, positions in the contracts can neither be taken nor liquidated unless the traders are willing to effect trades at or within the specified daily limit. Such market conditions could prevent UGA from promptly liquidating its positions in Futures Contracts. During the nine months ended September 30, 2013, UGA did not purchase or liquidate any of its positions while daily limits were in effect; however, UGA cannot predict whether it may have to purchase or liquidate positions in the future.

Prior to the initial offering of UGA, all payments with respect to UGA's expenses were paid by USCF. UGA does not have an obligation or intention to refund such payments by USCF. USCF is under no obligation to pay UGA's current or future expenses. Since the initial offering of units, UGA has been responsible for expenses relating to:

(i) management fees, (ii) brokerage fees and commissions, (iii) licensing fees for the use of intellectual property, (iv) ongoing registration expenses in connection with offers and sales of its units subsequent to the initial offering, (v) other expenses, including tax reporting costs, (vi) fees and expenses of the independent directors of USCF and (vii) other extraordinary expenses not in the ordinary course of business, while USCF has been responsible for expenses relating to the fees of UGA's Marketing Agent, Administrator and Custodian and registration expenses relating to the initial offering of units. If USCF and UGA are unsuccessful in raising sufficient funds to cover these respective expenses or in locating any other source of funding, UGA will terminate and investors may lose all or part of their investment.

Market Risk

Trading in Futures Contracts and Other Gasoline-Related Investments, such as forwards, involves UGA entering into contractual commitments to purchase or sell gasoline at a specified date in the future. The aggregate market value of the contracts will significantly exceed UGA's future cash requirements since UGA intends to close out its open positions prior to settlement. As a result, UGA is generally only subject to the risk of loss arising from the change in value of the contracts. UGA considers the "fair value" of its derivative instruments to be the unrealized gain or loss on the contracts. The market risk associated with UGA's commitments to purchase gasoline is limited to the aggregate market value of the contracts held. However, should UGA enter into a contractual commitment to sell gasoline, it would be required to make delivery of the gasoline at the contract price, repurchase the contract at prevailing prices or settle in cash. Since there are no limits on the future price of gasoline, the market risk to UGA could be unlimited.

UGA's exposure to market risk depends on a number of factors, including the markets for gasoline, the volatility of interest rates and foreign exchange rates, the liquidity of the Futures Contracts and Other Gasoline-Related Investments markets and the relationships among the contracts held by UGA. Drastic market occurrences could ultimately lead to the loss of all or substantially all of an investor's capital.

Credit Risk

When UGA enters into Futures Contracts and Other Gasoline-Related Investments, it is exposed to the credit risk that the counterparty will not be able to meet its obligations. The counterparty for the Futures Contracts traded on the NYMEX and on most other futures exchanges is the clearinghouse associated with the particular exchange. In general, in addition to margin required to be posted by the clearinghouse in connection with cleared trades, clearinghouses are backed by their members who may be required to share in the financial burden resulting from the nonperformance of one of their members and, therefore, this additional member support should significantly reduce credit risk. Some foreign exchanges are not backed by their clearinghouse members but may be backed by a consortium of banks or other financial institutions. There can be no assurance that any counterparty, clearinghouse, or their members or their financial backers will satisfy their obligations to UGA in such circumstances.

USCF attempts to manage the credit risk of UGA by following various trading limitations and policies. In particular, UGA generally posts margin and/or holds liquid assets that are approximately equal to the market value of its obligations to counterparties under the Futures Contracts and Other Gasoline-Related Investments it holds. USCF has implemented procedures that include, but are not limited to, executing and clearing trades only with creditworthy parties and/or requiring the posting of collateral or margin by such parties for the benefit of UGA to limit its credit exposure. An FCM, when acting on behalf of UGA in accepting orders to purchase or sell Futures Contracts on United States exchanges, is required by CFTC regulations to separately account for and segregate as belonging to UGA, all assets of UGA relating to domestic Futures Contracts trading. These FCMs are not allowed to commingle UGA's assets with their other assets. In addition, the CFTC requires commodity brokers to hold in a secure account UGA's

assets related to foreign Futures Contracts trading.

If, in the future, UGA purchases over-the-counter contracts, see “*Item 3. Quantitative and Qualitative Disclosures About Market Risk*” in this quarterly report on Form 10-Q for a discussion of over-the-counter contracts.

As of September 30, 2013, UGA held cash deposits and investments in Treasuries and money market funds in the amount of \$51,987,126 with the custodian and FCM. Some or all of these amounts may be subject to loss should UGA’s custodian and/or FCM cease operations.

Off Balance Sheet Financing

As of September 30, 2013, UGA had no loan guarantee, credit support or other off-balance sheet arrangements of any kind other than agreements entered into in the normal course of business, which may include indemnification provisions relating to certain risks that service providers undertake in performing services which are in the best interests of UGA. While UGA’s exposure under these indemnification provisions cannot be estimated, they are not expected to have a material impact on UGA’s financial position.

European Sovereign Debt

UGA had no direct exposure to European sovereign debt as of September 30, 2013 and has no direct exposure to European sovereign debt as of the filing of this quarterly report on Form 10-Q.

Redemption Basket Obligation

In order to meet its investment objective and pay its contractual obligations described below, UGA requires liquidity to redeem units, which redemptions must be in blocks of 50,000 units as of February 29, 2012 called “Redemption Baskets”. (Prior to February 29, 2012, the size of the Redemption Basket was 100,000 units.) UGA has to date satisfied this obligation by paying from the cash or cash equivalents it holds or through the sale of its Treasuries in an amount proportionate to the number of units being redeemed.

Contractual Obligations

UGA’s primary contractual obligations are with USCF. In return for its services, USCF is entitled to a management fee calculated daily and paid monthly as a fixed percentage of UGA’s NAV, currently 0.60% of NAV on its average daily total net assets.

USCF agreed to pay the start-up costs associated with the formation of UGA, primarily its legal, accounting and other costs in connection with USCF’s registration with the CFTC as a CPO and the registration and listing of UGA and its units with the SEC, FINRA and NYSE Arca (formerly, AMEX), respectively. However, since UGA’s initial offering of units, offering costs incurred in connection with registering and listing additional units of UGA have been directly borne on an ongoing basis by UGA, and not by USCF.

USCF pays the fees of UGA’s marketing agent, ALPS Distributors, Inc., and the fees of the custodian and transfer agent, Brown Brothers Harriman & Co. (“BBH&Co.”), as well as BBH&Co.’s fees for performing administrative services, including those in connection with the preparation of UGA’s condensed financial statements and its SEC, NFA and CFTC reports. USCF and UGA have also entered into a licensing agreement with the NYMEX pursuant to which UGA and the Related Public Funds, other than USBO, USCI, CPER, USAG and USMI, pay a licensing fee to the NYMEX. UGA also pays the fees and expenses associated with its tax accounting and reporting requirements. USCF has voluntarily agreed to pay certain expenses normally borne by UGA to the extent that such expenses exceed 0.15% (15 basis points) of UGA’s NAV, on an annualized basis, through at least December 31, 2013. USCF has no obligation to continue such payments into subsequent periods. This voluntary expense waiver is in addition to those amounts USCF is contractually obligated to pay as described in *Note 4 to the Notes to Condensed Financial*

Statements (Unaudited) in Item 1 of this quarterly report on Form 10-Q.

In addition to USCF's management fee, UGA pays its brokerage fees (including fees to a FCM), over-the-counter dealer spreads, any licensing fees for the use of intellectual property, and, subsequent to the initial offering, registration and other fees paid to the SEC, FINRA, or other regulatory agencies in connection with the offer and sale of units, as well as legal, printing, accounting and other expenses associated therewith, and extraordinary expenses. The latter are expenses not incurred in the ordinary course of UGA's business, including expenses relating to the indemnification of any person against liabilities and obligations to the extent permitted by law and under the LP Agreement, the bringing or defending of actions in law or in equity or otherwise conducting litigation and incurring legal expenses and the settlement of claims and litigation. Commission payments to a FCM are on a contract-by-contract, or round turn, basis. UGA also pays a portion of the fees and expenses of the independent directors of USCF. See *Note 3* to the *Notes to Condensed Financial Statements (Unaudited)* in *Item 1* of this quarterly report on Form 10-Q.

The parties cannot anticipate the amount of payments that will be required under these arrangements for future periods, as UGA's per unit NAVs and trading levels to meet its investment objective will not be known until a future date. These agreements are effective for a specific term agreed upon by the parties with an option to renew, or, in some cases, are in effect for the duration of UGA's existence. Either party may terminate these agreements earlier for certain reasons described in the agreements.

As of September 30, 2013, UGA's portfolio consisted of 458 RBOB Gasoline Futures RB Contracts traded on the NYMEX. As of September 30, 2013, UGA did not hold any Futures Contracts traded on ICE Futures. For a list of UGA's current holdings, please see UGA's website at www.unitedstatesgasolinefund.com.

Item 3. Quantitative and Qualitative Disclosures About Market Risk.

Over-the-Counter Derivatives (Including Spreads and Straddles)

In the future, UGA may purchase over-the-counter contracts ("OTC Contracts"). Unlike most exchange-traded futures contracts or exchange-traded options on such futures, each party to an OTC Contract bears the credit risk that the other party may not be able to perform its obligations under its contract.

Swap transactions, like other financial transactions, involve a variety of significant risks. The specific risks presented by a particular swap transaction necessarily depend upon the terms and circumstances of the transaction. In general, however, all swap transactions involve some combination of market risk, credit risk, counterparty credit risk, funding risk, liquidity risk and operational risk.

Highly customized swap transactions in particular may increase liquidity risk, which may result in a suspension of redemptions. Highly leveraged transactions may experience substantial gains or losses in value as a result of relatively small changes in the value or level of an underlying or related market factor.

In evaluating the risks and contractual obligations associated with a particular swap transaction, it is important to consider that a swap transaction may be modified or terminated only by mutual consent of the original parties and subject to agreement on individually negotiated terms. Therefore, it may not be possible for USCF to modify, terminate or offset UGA's obligations or its exposure to the risks associated with a transaction prior to its scheduled termination date.

To reduce the credit risk that arises in connection with such contracts, UGA will generally enter into an agreement with each counterparty based on the Master Agreement published by the International Swaps and Derivatives Association that provides for the netting of its overall exposure to its counterparty, if the counterparty is unable to meet its obligations to UGA due to the occurrence of a specified event, such as the insolvency of the counterparty.

USCF assesses or reviews, as appropriate, the creditworthiness of each potential or existing counterparty to an OTC Contract pursuant to guidelines approved by USCF's board of directors (the "Board"). Furthermore, USCF on behalf of UGA only enters into OTC Contracts with counterparties who are, or are affiliates of, (a) banks regulated by a United States federal bank regulator, (b) broker-dealers regulated by the SEC, (c) insurance companies domiciled in the United States, or (d) producers, users or traders of energy, whether or not regulated by the CFTC. Any entity acting as a counterparty shall be regulated in either the United States or the United Kingdom unless otherwise approved by the Board after consultation with its legal counsel. Existing counterparties are also reviewed periodically by USCF. UGA will also require that the counterparty be highly rated and/or provide collateral or other credit support. Even if collateral is used to reduce counterparty credit risk, sudden changes in the value of OTC transactions may leave a party open to financial risk due to a counterparty default since the collateral held may not cover a party's exposure on the transaction in such situations.

In general, valuing OTC derivatives is less certain than valuing actively traded financial instruments such as exchange-traded futures contracts and securities or cleared swaps because the price and terms on which such OTC derivatives are entered into or can be terminated are individually negotiated, and those prices and terms may not reflect the best price or terms available from other sources. In addition, while market makers and dealers generally quote indicative prices or terms for entering into or terminating OTC Contracts, they typically are not contractually obligated to do so, particularly if they are not a party to the transaction. As a result, it may be difficult to obtain an independent value for an outstanding OTC derivatives transaction.

During the nine months ended September 30, 2013, UGA did not employ any hedging methods such as those described above since all of its investments were made over an exchange. Therefore, during such period, UGA was not exposed to counterparty risk.

UGA anticipates that the use of Other Gasoline-Related Investments together with its investments in Futures Contracts will produce price and total return results that closely track the investment goals of UGA. However, there can be no assurance of this. OTC Contracts may result in higher transaction-related expenses than the brokerage commissions paid in connection with the purchase of Futures Contracts, which may impact UGA's ability to successfully track the Benchmark Futures Contract.

Item 4. Controls and Procedures.

Disclosure Controls and Procedures

UGA maintains disclosure controls and procedures that are designed to ensure that material information required to be disclosed in UGA's periodic reports filed or submitted under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported within the time period specified in the SEC's rules and forms.

The duly appointed officers of USCF, including its chief executive officer and chief financial officer, who perform functions equivalent to those of a principal executive officer and principal financial officer of UGA if UGA had any officers, have evaluated the effectiveness of UGA's disclosure controls and procedures and have concluded that the disclosure controls and procedures of UGA have been effective as of the end of the period covered by this quarterly report on Form 10-Q.

Change in Internal Control Over Financial Reporting

There were no changes in UGA's internal control over financial reporting during UGA's last fiscal quarter that have materially affected, or are reasonably likely to materially affect, UGA's internal control over financial reporting.

Part II. OTHER INFORMATION

Item 1. Legal Proceedings.

Not applicable.

Item 1A. Risk Factors.

There have been no material changes to the risk factors previously disclosed in UGA's Annual Report on Form 10-K for the fiscal year ended December 31, 2012, filed on March 13, 2013.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

Not applicable.

40

Item 3. Defaults Upon Senior Securities.

Not applicable.

Item 4. Mine Safety Disclosures.

Not applicable.

Item 5. Other Information.

Monthly Account Statements

Pursuant to the requirement under Rule 4.22 under the Commodity Exchange Act, each month UGA publishes an account statement for its unitholders, which includes a Statement of Income (Loss) and a Statement of Changes in Net Asset Value. The account statement is furnished to the SEC on a current report on Form 8-K pursuant to Section 13 or 15(d) of the Exchange Act and posted each month on UGA's website at www.unitedstatesgasolinefund.com.

Item 6. Exhibits.

Listed below are the exhibits, which are filed as part of this quarterly report on Form 10-Q (according to the number assigned to them in Item 601 of Regulation S-K):

Exhibit Number	Description of Document
31.1(1)	Certification by Principal Executive Officer Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
31.2(1)	Certification by Principal Financial Officer Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
32.1(1)	Certification by Principal Executive Officer Pursuant to 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
32.2(1)	Certification by Principal Financial Officer Pursuant to 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
101.INS(2)	XBRL Instance Document.
101.SCH(2)	XBRL Taxonomy Extension Schema.
101.CAL(2)	XBRL Taxonomy Extension Calculation Linkbase.
101.DEF(2)	XBRL Taxonomy Extension Definition Linkbase.
101.LAB(2)	XBRL Taxonomy Extension Label Linkbase.
101.PRE(2)	XBRL Taxonomy Extension Presentation Linkbase.

- (1) Filed herewith.
- (2) In accordance with Rule 406T of Regulation S-T, the information in these exhibits is furnished and deemed not filed or part of a registration statement or prospectus for purposes of Sections 11 or 12 of the Securities Act of 1933, is deemed not filed for purposes of Section 18 of the Securities Exchange Act of 1934, and otherwise is not subject to liability under these sections.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
