2. Basis of presentation and significant accounting policies

(a) Basis of Presentation

Basis of Presentation – The accompanying condensed unaudited consolidated financial statements include the accounts of the Company and its subsidiaries. The details of subsidiaries are disclosed in Note 1. Significant inter-company balances and transactions have been eliminated upon consolidation. The condensed unaudited consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States of America (“U.S. GAAP”) for interim financial information and with the instructions in Article 10 of Regulation S-X. Accordingly they do not include all of the information and footnotes required by such accounting principles for complete financial statements. These financial statements should be read in conjunction with the consolidated financial statements and related footnotes included in the Company’s Annual Report on Form 10-K for the year ended December 31, 2016.

The accompanying interim condensed consolidated financial statements are unaudited, but in the opinion of the Company’s management, contain all necessary adjustments, which include normal recurring adjustments, for a fair statement of the results of operations, financial position and cash flows for the interim periods presented.

The condensed consolidated balance sheet as of December 31, 2016 is derived from the Company’s audited financial statements at that date but does not include all of the information and footnotes required by U.S. GAAP for complete financial statements.

Certain information and footnote disclosures normally included in financial statements that have been prepared in accordance with U.S. GAAP have been condensed or omitted pursuant to the rules and regulations of the Securities and Exchange Commission, although the Company’s management believes that the disclosures contained in these financial statements are adequate to make the information presented herein not misleading. For further information, please refer to the financial statements and the notes thereto included in the Company’s 2016 Annual Report on Form 10-K, as filed with the Securities and Exchange Commission.

The results of operations for the three months ended March 31, 2017 are not necessarily indicative of the results of operations to be expected for the full fiscal year ending December 31, 2017.

Estimation - The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the dates of the financial statements, and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ from those estimates.

Foreign Currencies - China Automotive, the parent company, and HLUSA maintain their books and records in United States Dollars, "USD," their functional currency. The Company's subsidiaries based in the PRC and Genesis maintain their books and records in Renminbi, "RMB," their functional currency. The Company's subsidiary based in Brazil maintains its books and records in Brazilian reais, "BRL," its functional currency. In accordance with ASC Topic 830, "FASB Accounting Standards Codification", foreign currency transactions denominated in currencies other than the functional currency are remeasured into the functional currency at the rate of exchange prevailing at the balance sheet date for monetary items. Nonmonetary items are remeasured at historical rates. Income and expenses are remeasured at the rate in effect on the transaction dates. Transaction gains and losses, if any, are included in the determination of net income for the period.

(b) Recent Accounting Pronouncements

In January 2017, the FASB issued ASU 2017-04: Intangibles—Goodwill and Other (Topic 350): Simplifying the Test for Goodwill Impairment. To simplify the subsequent measurement of goodwill, the Board eliminated Step 2 from the goodwill impairment test. Under the amendments in this Update, an entity should perform its annual, or interim, goodwill impairment test by comparing the fair value of a reporting unit with its carrying amount. An entity should recognize an impairment charge for the amount by which the carrying amount exceeds the reporting unit's fair value; however, the loss recognized should not exceed the total amount of goodwill allocated to that reporting unit. An entity should apply the amendments in this Update on a prospective basis. An entity is required to disclose the nature of and reason for the change in accounting principle upon transition. A public business entity that is a U.S. Securities and Exchange Commission (SEC) filer should adopt the amendments in this Update for its annual or any interim goodwill impairment tests in fiscal years beginning after December 15, 2019. Early adoption is permitted for interim or annual goodwill impairment tests performed on testing dates after January 1, 2017. The adoption of this guidance is not expected to have a material effect on the Company's consolidated financial statements.

(c) Significant Accounting Policies

There have been no updates to the significant accounting policies set forth in the notes to the consolidated financial statements for the year ended December 31, 2016.

3. Short-term investments

Short-term investments comprise time deposits with terms of three months or more which are due within one year. The carrying values of time deposits approximate fair value because of their short maturities. The interest earned is recognized in the consolidated statements of income over the contractual term of the deposits.

As of March 31, 2017, the Company had pledged short-term investments of RMB 39.9 million, equivalent to approximately \$5.8 million, to secure standby letters of credit under HSBC Bank and China CITIC Bank (Note 13). The use of the pledged short-term investments is restricted.

In determining the need for a valuation allowance, the Company considered the following significant factors: an assessment of recent years' profitability and losses by tax authorities; the Company's expectation of profits based on margins and volumes expected to be realized, which are based on current pricing and volume trends; the long period in all significant operating jurisdictions before the expiry of net operating losses, noting further that a portion of the deferred tax asset is composed of deductible temporary differences that are subject to an expiry period until realized under tax law. The Black-Scholes option model requires management to make various estimates and assumptions, including expected term, expected volatility, risk-free rate and dividend yield. The expected term represents the period of time that stock-based compensation awards granted are expected to be outstanding and is estimated based on considerations including the vesting period, contractual term and anticipated employee exercise patterns. Expected volatility is based on the historical volatility of the Company's stock. The risk-free rate is based on the U.S. Treasury yield curve in relation to the contractual life of stock-based compensation instruments. The dividend yield assumption is based on historical patterns and future expectations for the Company's dividends.

Assumptions used to estimate the fair value of the stock options on the grant dates are as follows:

Issuance Date	Expected volatility	Risk-free rate	Expected term (years)	Dividend yield
December 2, 2016	134.80	% 1.84	5	0.00 %

27. Significant concentrations

A significant portion of the Company's business is conducted in China where the currency is the RMB. Regulations in China permit foreign owned entities to freely convert the RMB into foreign currency for transactions that fall under the "current account," which includes trade related receipts and payments, interest and dividends. Accordingly, the Company's Chinese subsidiaries may use RMB to purchase foreign exchange for settlement of such "current account" transactions without pre-approval. However, pursuant to applicable regulations, foreign-invested enterprises in China may pay dividends only out of their accumulated profits, if any, determined in accordance with the PRC law. In calculating accumulated profits, foreign investment enterprises in China are required to allocate at least 10% of their annual net income each year, if any, to fund certain reserve funds, including mandated employee benefits funds, unless these reserves have reached 50% of the registered capital of the enterprises.

Transactions other than those that fall under the "current account" and that involve conversion of RMB into foreign currency are classified as "capital account" transactions; examples of "capital account" transactions include repatriations of investment by or loans to foreign owners, or direct equity investments in a foreign entity by a China domiciled entity. "Capital account" transactions require prior approval from China's State Administration of Foreign Exchange, or SAFE, or its provincial branch to convert a remittance into a foreign currency, such as USD, and transmit the foreign currency outside of China.

This system could be changed at any time and any such change may affect the ability of the Company or its subsidiaries in China to repatriate capital or profits, if any, outside China. Furthermore, SAFE has a significant degree of administrative discretion in implementing the laws and has used this discretion to limit convertibility of current account payments out of China. Whether as a result of a deterioration in the Chinese balance of payments, a shift in the Chinese macroeconomic prospects or any number of other reasons, China could impose additional restrictions on capital remittances abroad. As a result of these and other restrictions under the laws and regulations of the PRC, the Company's PRC subsidiaries are restricted in their ability to transfer a portion of their net assets to the parent. The Company has no assurance that the relevant Chinese governmental authorities in the future will not limit further or eliminate the ability of the Company's PRC subsidiaries to purchase foreign currencies and transfer such funds to the Company to meet its liquidity or other business needs. Any inability to access funds in China, if and when needed for use by the Company outside of China, could have a material and adverse effect on the Company's liquidity and its business.

The Company considers an accounting estimate to be critical if:

It requires the Company to make assumptions about matters that were uncertain at the time it was making the estimate, and

Changes in the estimate or different estimates that the Company could have selected would have had a material impact on the Company's financial condition or results of operations.

The table below presents information about the nature and rationale for the Company's critical accounting estimates:

Balance Sheet Caption	Critical Estimate Item	Nature of Estimates Required	Assumptions/Approaches Used	Key Factors
Accrued liabilities and other long-term liabilities	Warranty obligations	Estimating warranty requires the Company to forecast the resolution of existing claims and expected future claims on products sold. OEMs (Original Equipment Manufacturers) are increasingly seeking to hold suppliers responsible for product warranties, which may impact the Company's exposure to these costs.	The Company bases its estimate on historical trends of units sold and payment amounts, combined with its current understanding of the status of existing claims and discussions with its customers.	<ul style="list-style-type: none"> ·OEM sourcing ·OEM policy decisions regarding warranty claims
Property, plant and equipment, intangible assets and other long-term assets	Valuation of long-lived assets and investments	The Company is required from time to time to review the recoverability of certain of its assets based on projections of anticipated future cash flows, including future profitability assessments of various product lines.	The Company estimates cash flows using internal budgets based on recent sales data, independent automotive production volume estimates and customer commitments.	<ul style="list-style-type: none"> ·Future production estimates ·Customer preferences and decisions
Inventory	Write-down of inventory	The Company is required from time to time to review the cashability of inventory based on projections of anticipated future cash flows, including write-down of inventory for prices that are higher than market price and undesirable inventories.	The Company estimates cash flows using internal budgets based on recent sales data, independent automotive production volume estimates and customer commitments.	<ul style="list-style-type: none"> ·Future production estimates ·Customer preferences and decisions

Deferred income taxes	Recoverability of deferred tax assets	The Company is required to estimate whether recoverability of its deferred tax assets is more likely than not based on forecasts of taxable earnings in the related tax jurisdiction.	The Company uses historical and projected future operating results, based upon approved business plans, including a review of the eligible carry forward period, tax planning opportunities and other relevant considerations.	<ul style="list-style-type: none"> ·Tax law changes ·Variances in future projected profitability, including by taxing entity
Tax payable and deferred tax assets/liabilities	Uncertain tax positions	The Company is required to determine and assess all material positions, including all significant uncertain positions in all tax years that are still subject to assessment or challenge under relevant tax statutes.	The Company applies a more likely than not threshold and a two-step approach for tax position measurement and financial statement recognition. For the two-step approach, the first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained, including resolution of related appeals or litigation processes, if any. The second step is to measure the tax benefit as the largest amount that is more than 50% likely to be realized upon settlement.	<ul style="list-style-type: none"> ·An allocation or a shift of income between jurisdictions ·The characterization of income or a decision to exclude reporting taxable income in a tax return ·A decision to classify a transaction, entity, or other position in a tax return as tax exempt

In addition, there are other items within the Company’s financial statements that require estimation, but are not as critical as those discussed above, including provision of accounts and notes receivable. Although not significant in recent years, changes in estimates used in these and other items could have a significant effect on the Company’s consolidated financial statements.

As a percentage of net sales, sales of EPS were 25.5 % for the three months ended March 31, 2017, compared to 27.5 % for the same period in 2016. The increase in net product sales was mainly due to increased sales and the changes in the product mix in the three months ended March 31, 2017.

The depreciation of China's currency, the RMB, against the U.S. dollar in the first quarter of 2017 as compared to the first quarter of 2016 had a negative impact on net sales as more than 80% of the Company's business is conducted in China.

In summary, the Company had an increase in sales volume leading to a sales increase of \$15.8 million, a decrease in average selling price of steering gears leading to a sales decrease of \$6.7 million, and the effect of foreign currency translation of the RMB against the U.S. dollar, which led to a sales decrease of \$6.7 million.

Liquidity and Capital Resources

Capital Resources and Use of Cash

The Company has historically financed its liquidity requirements from a variety of sources, including short-term borrowings under bank credit agreements, bankers' acceptances, issuances of capital stock and notes and internally generated cash. As of March 31, 2017, the Company had cash and cash equivalents and time deposits included in short-term investments of \$59.5 million, compared to \$61.6 million as of December 31, 2016, representing a decrease of \$2.1 million, or 3.4%. Short-term investments included pledged short-term investments of \$5.8 million and \$5.7 million as of March 31, 2017 and December 31, 2016, respectively.

The Company had working capital (total current assets less total current liabilities) of \$168.1 million as of March 31, 2017, compared to \$161.0 million as of December 31, 2016, representing an increase of \$7.1 million, or 4.4%.

The Company intends to indefinitely reinvest the funds in subsidiaries established in the PRC.

The Company believes that, in view of its current cash position, the cash expected to be generated from the operations and funds available from bank borrowings as detailed in subsequent paragraphs will be sufficient to meet its working capital and capital expenditure requirements, including the repayment of bank loans, for at least twelve months commencing from the date of this report.

Capital Source

The Company's capital source is multifaceted, such as bank loans and banker's acceptance facilities. In financing activities and operating activities, the Company's banks require the Company to sign line of credit agreements and repay all existing borrowings under such facilities within one year. On the condition that the Company can provide adequate mortgage security and has not violated the terms of the line of credit agreement, such one year facilities can be extended for another year.

The Company had short-term loans of \$69.2 million (See Note 13) and bankers' acceptances of \$83.9 million (See Note 14) as of March 31, 2017.

The Company currently expects to be able to obtain similar bank loans, i.e., RMB loans, and bankers' acceptance facilities in the future if it can provide adequate mortgage security following the termination of the above-mentioned agreements, see the table under "Bank Arrangements" below for more information. If the Company is not able to do so, it will have to refinance such debt as it becomes due or repay that debt to the extent it has cash available from operations or from the proceeds of additional issuances of capital stock. Owing to depreciation, the value of the mortgages securing the above-mentioned bank loans and banker's acceptances will be reduced by approximately \$15.2 million over the next 12 months. If the Company wishes to obtain the same amount of bank loans and banker's acceptances, it will have to provide additional mortgages of \$15.2 million as of the maturity date of such line of credit agreements, see the table under "Bank Arrangements" below for more information. The Company can still obtain a reduced line of credit with a reduction of \$10.4 million, which is 68.4%, the mortgage rate, of \$15.2 million, if it cannot provide additional mortgages. The Company expects that the reduction in bank loans will not have a material adverse effect on its liquidity.
