NOTE A Security valuation:

Portfolio securities listed on recognized United States or foreign security exchanges are valued at the last quoted sales price in the principal market where they are traded. Listed securities with no such sales price and unlisted securities are valued at the mean between the current bid and asked prices, if any, from brokers. Short-term investments having maturities of sixty days or less are valued at amortized cost (original purchase cost as adjusted for amortization of premium or accretion of discount) which when combined with accrued interest approximates market value. Securities for which market quotations are not readily available or are deemed unreliable are valued at fair value in good faith by or at the direction of the Board of Directors considering relevant factors, data and information including, if relevant, the market value of freely tradable securities of the same class in the principal market on which such securities are normally traded. Direct Investments are valued at fair value as determined by or at the direction of the Board of Directors based on financial and other information supplied by the Direct Investment Manager regarding each Direct Investment. Forward currency contracts are valued at the current cost of offsetting the contract. Equity linked securities are valued at fair value primarily based on the value(s) of the underlying security (or securities), which normally follows the same methodology as the valuation of securities listed on recognized exchanges.

Factors used in determining fair value may include, but are not limited to, the type of security, the size of the holding, the initial cost of the security, the existence of any contractual restrictions on the security s disposition, the price and extent of public trading in similar securities of the issuer or of comparable companies, the availability of quotations from broker-dealers, the availability of values of third parties other than the Investment Manager or Direct Investment Manager, information obtained from the issuer, analysts, and/or the appropriate stock exchange (if available), an analysis of the company s financial statements, an evaluation of the forces that influence the issuer and the market(s) in which the security is purchased and sold and with respect to debt securities, the maturity, coupon, creditworthiness, currency denomination, and the movement of the market in which they trade.

The Fund s investments in Chinese companies involve certain risks not typically associated with investments in securities of U.S. companies or the U.S. Government, including risks relating to (1) social, economic and political uncertainty; (2) price volatility, lesser liquidity and smaller market capitalization of securities markets in which securities of Chinese companies trade; (3) currency exchange fluctuations, currency blockage and higher rates of inflation; (4) controls on foreign investment and limitations on repatriation of invested capital and on the Fund s ability to exchange local currencies for U.S. dollars; (5) governmental involvement in and control over the economy; (6) risk of nationalization or expropriation of assets; (7) the nature of the smaller, less seasoned and newly organized Chinese companies, particularly in China; and (8) the absence of uniform accounting, auditing and financial reporting standards, practices and disclosure requirements and less government supervision and regulation.

Fair Value Measurement

The Fund has adopted fair valuation accounting standards which establish a definition of fair value and set out a hierarchy for measuring fair value. These standards require additional disclosures about the various inputs and valuation techniques used to develop the measurements of fair value and a discussion of changes in valuation techniques and related inputs during the period. These inputs are summarized in the three broad levels listed below:

Level 1 Inputs that reflect unadjusted quoted prices in active markets for identical assets or liabilities that the Fund has the ability to access at the measurement date;

Level 2 Inputs other than quoted prices that are observable for the asset or liability either directly or indirectly, including inputs in markets that are not considered to be active;

Level 3 Inputs that are unobservable.

The following is a summary of the inputs used as of January 31, 2014 in valuing the Fund s investments carried at value:

Direct Investments: The Fund may invest up to 25% of the net proceeds from its offering of its outstanding common stock in direct investments; however, the Board of Directors of the Fund has suspended additional investments in direct investments. Direct investments are generally restricted and do not have a readily available resale market. Because of the absence of any public trading market for these investments, the Fund may take longer to liquidate these positions than would be the case for publicly traded securities. Although these securities may be resold in privately negotiated transactions, the prices on these sales could be less than those originally paid by the Fund. Issuers whose securities are not publicly traded may not be subject to public disclosure and other investor protections requirements applicable to publicly traded securities. The value of these securities at January 31, 2014 was \$ or 0.0% of the Fund s net assets. The table below details the acquisition date, cost, and value of the Fund s direct investments as determined by the Board of Directors of the Fund. The Fund does not have the right to demand that such securities be registered.
