ANGLOGOLD ASHANTI : REPORT FOR THE QUARTER AND SIX MONTHS

ENDED JUNE 30, 2005 PREPARED IN ACCORDANCE WITH IFRS

Quarter 2 2005

Report

for the quarter and six months ended 30 June 2005

Group results ...

- Gold production steady at 1.569Moz.
- Strong financial performance, including \$74m increase in profit attributable to equity shareholders to \$96m.
- Headline earnings adjusted for the effect of unrealised non-hedge derivatives up 19% to \$92m.
- Total cash costs down 2% to \$278/oz, with South African total cash costs 3% lower at R60,287/kg as a result of cost cutting initiatives.
- Interim dividend of R1.70 (\$0.25)/share declared.

Financial and **operating review**

OVERVIEW OF THE QUARTER

The June quarter has produced a good financial performance, with steady operational results, in line with those of last quarter. Headline earnings adjusted for the effect of unrealised non-hedge derivatives increased 19% to \$92m, of which \$35m relates to the net positive effect of a statutory tax rate reduction in Ghana to 25% for three years (and 28% thereafter). Profit attributable to equity shareholders was \$74m higher than that of the prior quarter, due to the statutory tax rate reductions and as a result of unrealised non-hedge derivative gains in the second quarter, compared with losses in the first quarter of the year.

A combination of factors had led to a 4% increase in gross profit adjusted for the effect of unrealised non-hedge derivatives of \$117m. The weakening of the rand contributed \$16m to profitability, while savings arising from improved efficiencies were partly offset by lower grades and inflationary increases, with the sustained strength of the oil price continuing to have a negative impact on open-pit operations.

As noted, production was consistent quarter-on-quarter, due to solid performances from the Brazilian, Malian and Australian assets and to significantly improved performances at several other operations, including Siguirí in Guinea, which posted a 37,000oz production increase following the first full quarter of operation of the newly commissioned carbon-in-pulp plant. Obuasi in Ghana also continued on its course of operational improvement, with production up 11% to 102,000oz and total cash costs down 10% to \$324/oz.

An 11% production improvement at Mponeng helped to offset production declines at several other South African operations, including TauTona and Great Noligwa. After several excellent quarters, production at Geita in Tanzania decreased 14% to 165,000oz and total cash costs climbed 55% to \$331/oz, as a result of both lower grades mined and reduced mining contractor efficiencies as the operation starts the transition to owner-mining.

In Australia, the Sunrise Dam mine enjoyed another record production quarter of 131,000oz, equal to that of the first quarter, with total cash costs improving 11% to A\$320/oz (\$246/oz).

At the AngloGold Ashanti Mineração operation in Brazil, gold production increased 7% to 61,000oz, with total cash costs climbing 10% to \$161/oz, largely as a consequence of the 7%

appreciation of the Brazilian real over the quarter. The Cerro Vanguardia mine in Argentina saw lower tonnage and feed grade, as planned in the production programme, with total cash costs 21% higher at \$171/oz, mainly due to retroactive January 2005 wage increases paid out during the second quarter.

Turning to costs, globally increasing mining contractor rates, the strong oil price and the generally higher price of consumables continue to require that cost containment remains a key management focus across the group. The stringent cost savings programmes noted last quarter are beginning to take effect and the South African region in particular made strides over the quarter in achieving its cost cutting targets, with local total cash costs at R60,287/kg constituting a 3% improvement quarter-on-quarter.

Looking ahead, production for the third quarter is estimated to be 1.551Moz at a total cash cost of \$279/oz, assuming the following exchange rates to the US dollar: R6.60; A\$0.76; BRL2.4 and Argentinean peso 2.80. Capital expenditure for the quarter is estimated at \$277m and will be managed in line with profitability.

After serving more than 30 years with AngloGold Ashanti and the Anglo American and De Beers companies, CFO Jonathan Best will retire at the end of July 2005. He is succeeded by Srinivasan Venkatakrisnan, currently deputy CFO, whose professional history includes a senior position with Deloitte and Touche in London, as well as the role of Finance Director of Ashanti from 2000, during which period he led the financial restructuring of the company.

During the quarter under review, the company also indicated that Dr Sam Jonah will move to a non-executive role on the Board of Directors.

AngloGold Ashanti's two Chief Operating Officers, Neville Nicolau (Africa) and Roberto Carvalho Silva (International) will now report directly to CEO Bobby Godsell.

OPERATING RESULTS FOR THE QUARTER SOUTH AFRICA

At **Great Noligwa**, volume mined improved by 13%, although yield dropped 7% as anticipated due to lower face values. Gold production fell 4% to 5,401kg (174,000oz) and total cash costs consequently increased 4% to R55,453/kg (\$270/oz). Gross profit adjusted for the effect of unrealised non-hedge derivatives increased 9% to R133m (\$21m).

The Lost-Time Injury Frequency Rate (LTIFR) was 15.66 lost-time injuries per million hours worked (9.51 for the previous quarter). Although Great Noligwa achieved 500,000 fatality-free shifts on 1 June 2005, one employee regrettably lost his life due to a fall of ground incident later in the month.

At **Kopanang**, volume mined improved by 2% quarter-on-quarter. Tonnes treated increased 6%, but this benefit was offset by a 7% yield reduction due to the release of lower grade underground ore. Gold production fell 2% to 3,659kg (118,000oz) as a result of a marginal gold lock-up underground, but total cash costs nevertheless improved 2% to R58,208/kg (\$283/oz) as a result of implemented cost savings initiatives. Gross profit adjusted for the effect of unrealised non-hedge derivatives improved 59% to R83m (\$13m), reflecting the improved total cash costs and a higher received price.

The LTIFR was 12.89 (12.45).

Tau Lekoa's volume mined increased 6% quarter-on-quarter, favourably impacting gold production, which increased 5% to 2,126kg (68,000oz). The implementation of cost saving initiatives together with the increased gold production resulted in a 1% improvement in total cash costs to R82,469/kg (\$400/oz). Gross loss adjusted for the effect of unrealised non-hedge derivatives improved significantly from R32m last quarter to R11m (\$2m) for the second quarter.

The LTIFR was 12.79 (10.77).

Moab Khotsong's improved gold production of 230kg (7,000oz) is not included in the South Africa region's production, as the revenue continues to be capitalised against pre-production costs.

Commercial production is scheduled for 2006.

The LTIFR was 17.45 (9.60).

At **Mponeng**, gold production improved 11% to 3,968kg (128,000oz), due to a 4% increase in volume mined and improvements in grade.

Yield climbed 14% to 9.5g/t. Total cash costs declined 10% to R57,209/kg (\$278/oz) as a

consequence of the quarter's increased production, and gross profit adjusted for the effect of unrealised non-hedge derivatives accordingly improved to R73m (\$11m), also reflecting the impact of a higher received price. The LTIFR was 9.90 (15.82). Regrettably, one employee died in a fall of ground incident. Gold production at **Savuka** rose 4% to 1,038kg (33,000oz), after an improved mining mix led to a significant increase in grade. The production improvement, together with the implementation of cost savings initiatives, resulted in a 12% decrease in total cash costs to R94,685/kg (\$461/oz). Gross loss adjusted for the effect of unrealised non-hedge derivatives declined 41% to R19m (\$3m). In spite of this quarter's operational improvement, Savuka is entering orderly closure mode with likely closure in March 2006.

The LTIFR was 16.75 (13.59).

At **TauTona**, volume mined was in line with that of the previous quarter, although increased off-reef mining due to geological constraints and a 4% drop in face values resulted in an 8% drop in both gold production to 3,747kg (120,000oz) and yield. Total cash costs, at R49,773/kg (\$243/oz), reflected a 5% improvement due to labour reductions and cost management interventions. Gross profit adjusted for the effect of unrealised non-hedge derivatives was held to the previous quarter's level of R59m (\$9m).

The LTIFR was 9.35 (8.84). TauTona achieved 500,000 fatality-free shifts on 19 April 2005.

ARGENTINA

At **Cerro Vanguardia** (92.5% attributable), gold production decreased in line with previously reported expectations by 11% to 51,000oz due to a decline in feed grade, as well as a decrease in ore treated after a maintenance-related milling stoppage in May.

Total cash costs, at \$171/oz, were 21% higher quarter-on-quarter, owing in part to lower gold production, although retroactive January wage increases paid out during the second quarter and higher plant maintenance costs also contributed. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined to \$7m, primarily as a result of 9% decrease in gold revenue.

The LTIFR was 3.74 (2.14).

AUSTRALIA

For the third consecutive quarter, **Sunrise Dam** maintained a record production level of 131,000oz. Volume treated also increased this quarter, helping to partly offset the effect of a slight decline in recovered grade to 4.28g/t. Total cash costs improved by 11% to A\$320/oz (\$246/oz), which more than offset the effect of higher mining costs. Gross profit adjusted for the effect of unrealised non-hedge derivatives increased 59% to A\$27m (\$21m) as a result of a significantly higher realised price.

It is expected that grades at Sunrise Dam will decline from the third quarter of this year, as mining moves from the high grade southern section of the pit to the lower grade northern section. Mining of this section will take approximately 18 months, and will be supplemented by the underground project, where 954m of underground capital development and 895m of operational development were completed this quarter. The project's development inclines and trial mining will access the higher grade ore.

The LTIFR was 4.89 (0.00).

BRAZIL

At **AngloGold Ashanti Mineração**, gold production increased 7% to 61,000oz, primarily due to improved throughput at Cuiabá mine and increased heap-leaching activity at Córrego do Sítio mine after heavy rains in the first quarter resulted in an accrual of waste material.

Total cash costs, at \$161/oz, were 10% higher as a consequence of the 7% appreciation of the Brazilian real and the increase in mined waste material over the quarter, although the improved gold production worked to partially offset these effects. Gross profit adjusted for the effect of unrealised non-hedge derivatives decreased 15% to \$11m as a consequence of increased cost of sales, which offset the effect of the higher quantity of gold sold.

The LTIFR was 1.45 (2.25). Regrettably, one of the mining contractor's employees died in a heavy mobile equipment incident at the Córrego do Sítio mine.

At **Serra Grande** (50% attributable), gold production was maintained at last quarter's level of 24,000oz, although total cash costs rose 4% to \$153/oz due to the appreciation of the Brazilian real. Gross profit adjusted for the effect of unrealised non-hedge derivatives was nevertheless maintained at last quarter's level of \$6m as a consequence of a 4% increase in gold sold.

The LTIFR was 0.00 (4.88).

GHANA

As anticipated and reported last quarter, the higher grade hard rock stockpile at **Bibiani** was depleted and production consequently decreased 9% to 30,000oz. Going forward, production will likely focus on the lower grade satellite pits and old tailings treatment, although a study on the underground potential is presently being reviewed.

Total cash costs increased marginally quarter-on-quarter to \$296/oz and gross loss adjusted for the effect of unrealised non-hedge derivatives also increased from last quarter's break-even point to \$1m.

The LTIFR was 0.00 (2.13).

At **Iduapriem** (85% attributable), gold production decreased by 13% to 40,000oz after crushing and conveyor problems negatively affected plant throughput. Total cash costs consequently increased 18% to \$339/oz. The crusher problems have been addressed and recommendations from the previously reported mine-to-mill study will be implemented during the second half of the year, leading management to expect significant improvements in plant throughput and a related boost in production over the next two quarters. Gross profit adjusted for the effect of unrealised non-hedge derivatives at \$2m, remained unchanged quarter-on-quarter.

The LTIFR was 1.15 (0.00).

As a result of increased tonnages and improved grade, gold production at **Obuasi** climbed 11% to meet a management target of 102,000oz for the quarter. Total cash costs consequently improved by 10% to \$324/oz. In spite of these operational improvements, gross loss adjusted for the effect of unrealised non-hedge derivatives increased from \$1m to \$5m due to a lower price received.

Over the quarter, development and ore definition drilling improved by 16% and 15%, respectively, and in the second half of the year further improvements in the mining mix and flexibility are anticipated. Regrettably, two employees lost their lives this quarter, one as a result of a fall and the other in a materials handling accident. The LTIFR was 3.56 (4.73).

REPUBLIC OF GUINEA

At **Signiri** (85% attributable), gold production increased 86% from that of the previous quarter to 80,000oz and total cash costs declined 46% to \$212/oz. Gross profit adjusted for the effect of unrealised non-hedge derivatives rose by \$7m to \$9m, due primarily to increased gold income.

The new carbon-in-pulp plant recorded a significantly improved performance, although a series of pipeline failures prevented the plant from operating at full capacity. This issue is being addressed. As the plant begins to operate at optimal levels, likely at the end of the third quarter, the last of the heap-leach gold will be recovered, and production levels will normalise.

On 27 July 2005, AngloGold Ashanti reached an agreement with the government of Guinea to amend the Convention de Base (stability agreement) and resolve all outstanding disputes for a sum of \$7m. In addition, the company has agreed, as part of the settlement, to meet historical and follow-up fees and costs of a consultant that the government retained to advise and assist it in its negotiations and resolution of the dispute. In consideration of the above settlement, the government has irrevocably confirmed its waiver and abandonment of all claims and disputes of any nature whatsoever against the AngloGold Ashanti group of companies.

The LTIFR was 0.64 (0.50).

MALI

At **Morila** (40% attributable), production was maintained at last quarter's level of 67,000oz, as an increase in tonnage throughput offset the effect of a planned reduction in recovered grade. Total cash costs, at \$173/oz, remain

unchanged quarter-on-quarter. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined by 8% to \$11m due to lower level of gold sold quarter-on-quarter. The LTIFR was 1.16 (1.24).

At **Sadiola** (38% attributable), gold production increased by 13% to 43,000oz due to a 14% improvement in recovered grade. Although tonnage throughput was negatively affected this quarter by a mill breakdown, Sadiola remains on track to meet its annual attributable production target.

Total cash costs declined by 10% to \$256/oz and gross profit adjusted for the effect of unrealised non-hedge derivatives increased to \$4m, a result of the improvements in recovered grade and production.

The LTIFR was 0.00 (1.16).

At **Yatela** (40% attributable), production was maintained at last quarter's level of 23,000oz, although total cash costs climbed 7% to \$299/oz due to increased mining contractor costs. Gross profit adjusted for the effect of unrealised non-hedge derivatives, at \$1m, was 50% below that of the previous quarter due to the increased operating costs and lower gold sold.

The LTIFR was 0.00 (0.00).

NAMIBIA

At **Navachab**, gold production decreased by 5% to 18,000oz due to an 8% decrease in tonnage throughput, which was adversely affected in April by a crusher failure that resulted in significant downtime. Total cash costs declined by 12% to \$362/oz as a result of the reduced production, and the gross loss adjusted for the effect of unrealised non-hedge derivatives was \$1m, compared to last quarter's break-even position.

Going forward, tonnage throughput and production are expected to climb, as the crusher problem has been resolved and the mine is currently producing according to plan. Navachab is expected to achieve its production target for the year.

The LTIFR was 8.49 (0.00).

TANZANIA

Production at **Geita** declined as anticipated by 14% to 165,000oz due to a 20% decrease in recovered grade. As previously reported, grades and production are both expected to decline for the remainder of the year as the high-grade ore in the current cut-back will be exhausted before the higher grade ore of the next mining phase in the Nyankanga pit can be accessed.

Total cash costs, at \$331/oz, were 55% higher than those of the previous quarter, reflecting both decreased mining contractor efficiency and lower grades. As a result of the decrease in production and higher operating costs, a gross loss adjusted for the effect of unrealised non-hedge derivatives of \$9m was incurred.

To help address these concerns, the AngloGold Ashanti board last quarter approved a move to owner-mining at Geita. The transition will be completed at the end of July 2005, with limited cost benefit evident from the fourth quarter of this year, and the full gains expected from the start of 2006.

The LTIFR was 0.48 (1.06).

USA

At **Cripple Creek & Victor** (67% ownership with 100% interest in production until initial loans are repaid), gold production decreased 12% to 71,000oz, as ore placed at significant distance to the leach pad liner in the first quarter resulted in delayed recoveries in the second. A production increase should be evident from next quarter.

As a result of the decreased production, total cash costs, at \$227/oz, were 3% higher quarter-on-quarter. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined to \$2m as a result of the lower production and lower realised price.

The LTIFR was 0.00 (0.00). In June, CC&V achieved 19 months without a lost-time accident.

Notes:

- All references to price received includes realised non-hedge derivatives.
- In the case of joint venture operations, all production and financial results are attributable to AngloGold Ashanti.

- Rounding of figures may result in computational discrepancies.

6

Exploration

Total exploration expenditure during the second quarter amounted to \$19m (\$12m expensed and \$7m capitalised), versus \$15m in the previous quarter. Of the \$19m, \$9m (\$2m expensed, \$7m capitalised) was spent on brownfields exploration activities at existing mines, while the remaining \$10m funded greenfields exploration in Tanzania, Alaska, China, Mongolia, Colombia, Peru, Russia and the DRC.

Brownfields

In **Ghana** at Obuasi, site establishment is in progress for the first two of six surface diamond holes of the Obuasi Ultra Deeps project. These are planned to intersect the Obuasi Fissure 3,400m below surface and are expected to be completed by January 2007.

At Sadiola in **Mali**, the contract for the pre-feasibility study of the Deep Sulphides project will be awarded in the third quarter. Testing of the sulphide potential below the oxide mineralisation at the FE3, FE3 South and FE4 satellite pits over the second quarter did not yield economic intercepts.

At Morila, the third drilling phase has been completed on the underground Samacline target located 500m west of the current pit at a depth of 400m below surface. A preliminary scoping study investigating the underground mining potential of this target is in progress.

At Sigui in **Guinea**, drilling results remain encouraging on both the oxide and sulphide extensions of the existing pits. Reconnaissance drilling on a previously delineated 2km soil geochemical anomaly at Foulata, which is situated 45km west of the plant, has delineated a potential oxide Mineral Resource.

In **Tanzania** at Geita, diamond drilling of the Geita Hill North East Extension zone continues to intersect mineralisation down dip and along strike. Drilling of the Geita Hill footwall zone is underway to confirm potential additional mineralisation outside the current pit limits.

In **Brazil**, drilling at various sites at Córrego do Sítio continues to define sulphide mineralisation below existing oxide Mineral Resources and a pre-feasibility study and trial mining is planned to commence in 2006.

At Crixás, down-plunge drill testing of the Forquilha Sul and Mina I-West ore-bodies

intersected sub-economic mineralisation, effectively closing off known ore shoots at depth. Exploration continues to look for further orebodies down plunge.

In **Australia**, AngloGold Ashanti has divested its interests in selected tenements north of Sunrise Dam Gold Mine to Crescent Gold Limited.

Greenfields

In the **DRC**, drilling re-commenced in mid-April at Adidi and preliminary results confirm historical grade and tonnage estimates (1.2Moz at 9.9g/t). Preliminary drilling was also carried out on two additional targets derived from mapping and geochemical sampling during the first quarter.

In **Alaska**, results from the initial drilling programme on the Lost Mine South project in the Pogo area delineated a near-surface, broad, shallow dipping gold zone with grades in the 1-2g/t range; follow-up drilling is planned for the third quarter. Two additional high grade targets are planned to be drill tested in Alaska during the summer.

In South America, greenfields exploration is focussed in **Colombia**. Diamond drilling has commenced at the San Carlos project in the Bolivar department and AngloGold Ashanti is planning to drilltest a further three prospects in Colombia in the second half of 2005.

Review of the **gold market**

Whilst the quarter saw a wide range of \$30/oz in the spot gold price, and some interesting changes in investor interest in buying gold, the most significant moves during this period occurred in the currency markets.

The \$/euro exchange rate broke down decisively from the euro strength displayed in late 2004 and early 2005. Having tested \$1.35/€ twice during the first quarter of the year, the European currency retreated by almost 10% against the dollar, and closed the quarter at \$1.21/€. The weakness of the euro and resurgence of the US dollar contributed to a shift also in the local currency and the rand weakened against the US dollar by 8% during this quarter. At its weakest point of R6.96/\$1, the South African currency had lost some 19% against the US dollar since the rate of R5.65/\$1 at which the rand opened in 2005. The average \$/euro exchange rate for the quarter of \$1.26/€ reflected the US currency being 4% stronger than in the first quarter of 2005. The South African currency weakened against the US dollar on average by 7% quarter on quarter.

Gold

The statistics of the gold spot price in US dollars reveal little of the changes in the gold market during the period under review. The average spot price for the quarter of \$427/oz was unchanged from the average price of gold for the first quarter of 2005. The high of \$444/oz was within two dollars of the high for the first quarter, and the low of \$413/oz was similarly close to the first quarter. However, the behaviour of the gold price was remarkable for its divergence from movements in the value of the US dollar during this quarter. See *Graph 1 : Euro / US\$ Exchange Rate & US\$ Gold Spot Price: January 2004 – July 2005 Indexed*.

The distinctive feature of the gold price rally of the past four years has been the extent to which the gold price has risen in proportion to the weakening of the US dollar against the euro, and fallen back when the US dollar has strengthened against the euro. During this quarter however, as the US dollar strengthened against the euro, the US dollar spot price of gold actually finished June some 2% firmer on the quarter. As a direct consequence of the stronger \$/weaker euro, and a stronger spot gold price, the euro price of gold rose by 12% during this quarter to a high of

€368/oz.

In effect, traders on the New York Comex elected to remain long gold as the US currency strengthened. There appeared to be no single justification for this change of trading strategy on Comex. One important element was that of short covering on the Comex. Certain investors had gone significantly short gold early in the quarter when US dollar strength first emerged, taking Comex to a net long position of only 5.6Moz, the lowest net long position since mid-2003. When this short move attracted no further selling interest, the market saw sustained short covering in June notwithstanding the strong US dollar. This reaction on Comex took the net long gold position on the exchange back up to almost 18Moz net long at the end of June. In effect, investors were buying US dollars and buying gold during the same period. See *Graph 2 : New York Comex Gold Net Open Position vs IMM US\$ Net Open Position 2001 – 2005*.

The correction in the spot gold market was still under-way at the end of the quarter, when the gold price closed at \$434/oz. After the end of the quarter, the price fell as low as \$421/oz, although it has since recovered slightly to trade at around \$425/oz.

The sustained investor interest in gold during this quarter does not necessarily reflect a complete break between gold price movement and changes in the value of the US dollar. It is very likely that gold will again respond positively to renewed US dollar weakness in the future, but off a higher base. The events of this quarter confirm the fact that the New York Comex remains the primary market place for investor and speculator activity in gold, and for the spot pricing of the metal. See *Graph 3 : New York Comex Net Open Interest Position and Gold Price: January 2004-July 2005*.

The combination of a strong spot gold price and a weaker rand during the quarter produced sharply higher rand gold prices and some relief for local gold producers. From a low of R81,500/kg during the quarter, the local price reached almost R96,500/kg, while the average of R87,800/kg for the quarter was R5,000/kg or 6% higher than the average price for the first quarter. During July, however, a degree of recovery in the rand has taken the local gold price back below R90,000/kg.

Physical Demand

Physical offtake of gold continued to improve during the first quarter of 2005, following the healthy performance of demand in 2004.

Consumption of gold in jewellery in the first quarter increased by 17% year-on-year, largely on the back of growth in Indian demand. Gold jewellery offtake in the developed markets of the USA, Europe and Japan remained flat to down. Net bullion supply on the market increased by 23%, driven particularly by higher official sales of 254t during the first quarter and significantly reduced de-hedging by gold producers, and the market remained effectively in balance.

However, gold offtake in the second quarter suffered from the combination of higher gold prices in local currencies (on the back of the stronger US dollar) and seasonally low demand for jewellery. Offtake in India has fallen particularly during this quarter due to these two factors. Nevertheless, the major physical gold markets seem to have adjusted to higher gold prices in general, and demand would be expected to increase again should gold weaken from the higher spot price levels at which it traded at the end of the second quarter.

Official Sector

The official sector contributed to better sentiment towards gold during this quarter with the announcement by the G8 of a debt relief programme for heavily indebted poor countries which would not be funded by the revaluation or sale of the gold reserves of the IMF, as had been proposed in recent months. Although most commentators had expressed doubt that the proposal by UK's Gordon Brown, for the funding of debt relief by the sale of IMF gold reserves would succeed, the announcement removed a residual uncertainty that new sales might cap the gold market for a time.

The high level of official gold sales during the early months of 2005 has led to less official selling since then, and assisted the physical market in the second quarter, when physical demand has fallen.

Currencies

At the end of June, the US dollar had gained 11% against the euro since the beginning of 2005, most of this during the second quarter of the year. During July, the US dollar gained further to reach a high of \$1.186/€, a level last seen in mid-2004.

During the four years of correction in the US currency against the euro since 2001, the market has seen several US dollar rallies led by economic good news from the USA, where cyclical strength in the US economy has outweighed the structural problems in that economy. However, during the second quarter of 2005, the cyclical advantages of sound economic growth and rising interest rates in the USA were complemented by recognition of major negative factors in European economies, and the fact that these weaknesses were fundamentally at odds with a stronger euro. Sentiment towards the euro was also damaged by political uncertainties raised by the referenda in France and Holland in June, in which voters rejected the new European Constitution. The US dollar was the direct beneficiary of the market's concern about the European currency, and market fears about the US trade and fiscal deficits receded during the period under review.

Whilst the dollar has moved largely on good news in the US economy and bad news in Europe, the stronger US currency has now broken through the technical trend lines of the correction of the past four years. This technical break has occurred in respect of the exchange rate both against the euro and against a trade-weighted currency index. It will be interesting to see what this means for the US currency during the rest of this year, particularly if cyclically favourable circumstances in the US should weaken. Market commentary is divided between institutions that now see a stronger dollar by the end of 2005, and those who still expect dollar weakness to resume, albeit with more modest year-end targets.

Whilst South Africa suffered no particular negative economic shift during this quarter, the local currency lost ground sharply against the US dollar. This move was driven by the stronger dollar, but also by some public recognition by leading monetary and political figures of the harm done to sectors of the South African economy by a strong local currency.

Whilst the further movement of the dollar against the euro will obviously influence rand exchange rates, the market seems more persuaded now of the likelihood of a weaker rand going forward.

Hedging

As at 30 June 2005, the net delta hedge position of AngloGold Ashanti was 10.32Moz or 321t valued at the spot gold price at the end of the quarter of \$434.50/oz. This net delta position reflects a decrease of some 400,000oz or 12.5t in the net size of the AngloGold Ashanti hedge compared with the position at the end of the previous quarter. The net reduction reflects the maturing of price contracts during the past quarter.

The marked-to-market value of the hedge position as at 30 June 2005 was negative \$1,032m, little changed from the negative value of \$1,066m recorded at the end of March 2005. However, this value of \$1,032m was calculated off a closing spot price \$7/oz higher than the closing price at the end of March at which the previous valuation was calculated. The marked-to-market value of the hedge at 27 July 2005 at a spot price of \$422.80/oz was negative \$925.620m. The price received by the company for the quarter under review was \$422/oz, compared with an average spot price for the period of \$427/oz. The company continues to manage its hedged positions actively, and to reduce overall levels of pricing commitments in respect of future gold production by the company.

11

Hedge position

As at 30 June 2005, the group had outstanding the following forward-pricing commitments against future production. The total net delta tonnage of the hedge of the company on this date was 10.32Moz or 321t (at 31 March 2005: 10.72Moz or 334t).

The marked-to-market value of all hedge transactions making up the hedge positions was a negative \$1.032bn (negative R6.94bn) as at 30 June 2005 (as at 31 March 2005: \$1.066bn or R6.62bn). This value at 30 June 2005 was based on a gold price of \$434.50/oz, exchange rates of R/\$6.7240 and A\$/0.7560 and the prevailing market interest rates and volatilities at that date.

As at 27 July 2005, the marked-to-market value of the hedge book was a negative \$925.620m (negative R6.192bn), based on a gold price of \$422.80/oz and exchange rates of R/\$6.69 and A\$/0.7546 and the prevailing market interest rates and volatilities at the time.

These marked-to-market valuations are not predictive of the future value of the hedge position, nor of future impact on the revenue of the company. The valuation represents the cost of buying all hedge contracts at the time of valuation, at market prices and rates available at the time.

Notes**for the quarter and six months ended 30 June 2005****1.****Basis of preparation**

The financial statements have been prepared in accordance with the historic cost convention except for certain financial instruments which are stated at fair value. The group's accounting policies used in the preparation of these financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2004 except for the new and revised International Financial Reporting Standards (IFRS) statements which are effective 1 January 2005, where applicable.

The option to account for actuarial gains and losses through equity reserves under IAS19 revised has been adopted. The financial effects of the adoption on prior periods are disclosed in Note 13.

The financial statements of AngloGold Ashanti have been prepared in compliance with IAS34, in compliance with the JSE Listings Requirements and in the manner required by the South African Companies Act, 1973 for the preparation of financial information of the group for the quarter and six months ended 30 June 2005.

Where the preparation or classification of an item has been amended, comparative information has been reclassified to ensure comparability with the current period. The amendments have been made to provide the users of the financial statements with additional information. Refer to Note 7, discontinued operations, Note 13, financial effects of IAS19 revised and Note 19, convertible bonds.

(1)

Calculated on the basic weighted average number of ordinary shares.

(2)
Non-hedge derivatives in the income statement comprise the change in fair value of all non-hedge derivatives as follows:

-
Open positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the current

reporting date; and

-

Settled positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the date of settlement.

Headline earnings adjusted for the effect of unrealised non-hedge derivatives, is intended to illustrate earnings after adjusting for:

-

The unrealised fair value change in contracts that are still open at the reporting date, as well as, the unwinding of the historic

marked-to-market value of the positions settled in the period; and

-

Investment in hedge restructure transaction: During the hedge restructure of the quarter ended 31 December 2004 and the quarter

ended 31 March 2005, \$83m and \$69m in cash was injected into the hedge book in these quarters to increase the value of long-

dated contracts. The entire investment in short-dated derivatives (certain of which have now matured) and investment in long-dated

derivatives (all of which have not yet matured), for the purposes of the adjustment to earnings, will only be taken into account when

the realised portion of long-dated non-hedge derivatives are settled, and not when the short-term contracts are settled.

The financial effects of the IAS19 revised option for the current quarter relating to the pension plan asset and the post-retirement medical liability as well as the effects on the equity reserves for the current and the prior periods are disclosed in the Statement of recognised income and expense.

Rounding if figures may result in computational discrepancies

26

14.

Contingent liabilities

AngloGold Ashanti acts as ultimate guarantor in respect of sureties provided to bankers and other parties by its subsidiaries in respect of certain loans and commitments. At 30 June 2005, the aggregate contingent liability is approximately \$88m. Discussions are continuing in respect of the class action being brought against the former Ashanti Goldfields and it is anticipated that the final outcome of this claim will have no material effect on the company.

15. Attributable interest

Although AngloGold Ashanti holds a 66.7% interest in Cripple Creek & Victor Gold Mining Company Limited, it is currently entitled to receive 100% of the cash flows from the operation until the loan, extended to the joint venture by AngloGold Ashanti USA Inc., is repaid.

16. Announcements

16.1 On 15 April 2005, the South African Department of Water Affairs and Forestry issued a directive ordering three mining groups, DRDGold, Harmony and AngloGold Ashanti to share equally the costs of pumping water at some shafts of DRDGold's North West operations in South Africa. This follows an interdict application made by AngloGold Ashanti in response to DRDGold's threat to cease funding the pumping of water at these shafts, after placing Buffelsfontein, its subsidiary that operated the North West operations, into liquidation on 22 March 2005. The aggregate monthly cost of pumping is estimated at R8m (\$1m).

16.2 On 28 April 2005, the company announced that agreement had been reached with Trans-Siberian Gold plc (TSG) on revised terms for the second subscription of shares in TSG, and a revised subscription price of £1.30 per share, compared to £1.494 per share agreed between the parties on 30 June 2004. The revised terms of the subscription were approved by TSG shareholders on 27 May 2005 and AngloGold Ashanti's 17.5 percent equity interest in TSG increased to 29.9 percent on 31 May 2005, the date on which the second subscription was completed.

16.3 On 29 April 2005, AngloGold Ashanti announced the conditional sale of exploration assets in the Laverton area in Australia, comprising the Sickie royalty of \$30 per ounce, the Child Harold prospect, various 100 percent AngloGold Ashanti Australia-owned interests including the Lord Byron and Fish projects as well as its interests in the Jubilee, Black Swan and Jasper Hills Joint Ventures to Crescent Gold Limited, for a total consideration of A\$4m (\$3m). A\$0.3m (\$0.2m) was payable on the execution of a binding sale and purchase agreement, A\$1m (\$0.8m) is payable in Crescent Gold shares and A\$3m (\$2m) is payable in cash, on or before 15 December 2006.

16.4 On 17 March 2005, it was announced that with effect from 1 May 2005, Mr R Carvalho Silva and Mr N F Nicolau would be appointed executive directors to the board of AngloGold Ashanti. At the same time, Mr J G Best indicated that he would be retiring from the board and that Mr S Venkatakrishnan would be appointed to the board with effect from 1 August 2005.

16.5 On 21 June 2005, Dr S E Jonah indicated that he wished to move to a non-executive role on the board of AngloGold Ashanti, with effect from 31 July 2005. He will retain the title of President.

16.6 On 19 July 2005, Aflase Gold and Uranium Resources Limited (Aflase) announced that it had purchased from AngloGold Ashanti, its Weltevreden mine in an all script deal valued at R75m (\$11m). On finalisation of the transaction AngloGold Ashanti will hold in excess of 5% of Aflase shares.

16.7 On 27 July 2005, the board approved the appointment of Mr Réne Médori, as a non-executive director with effect from 1 August 2005, in place of Mr Tony Lea, who retires from the board with effect from 31 July 2005. Mr Medori has nominated Mr Peter Whitcutt as his alternate.

16.8 On 27 July 2005 AngloGold Ashanti reached an agreement with the Government of Guinea to amend the Convention de Base (stability agreement) and resolve all outstanding disputes for a sum of \$7m. In addition, the company has agreed as part of this settlement to meet historical and follow-up fees and costs of a consultant that the Government retained to advise and assist it in its negotiations and resolution of the dispute. In consideration of the above settlement, the Government has irrevocably confirmed its waiver and abandonment of all claims and disputes of any nature whatsoever against the AngloGold Ashanti group of companies.

17. Dividend

The directors have today declared Interim Dividend No. 98 of 170 (Interim Dividend No. 96: 170) South African cents per ordinary share for the six months ended 30 June 2005. In compliance with the requirements of STRATE, given the company's primary listing on the JSE Limited (formerly JSE Securities Exchange South Africa), the salient dates for payment of the dividend are as follows:

To holders of ordinary shares and to holders of CHESS Depositary Interests (CDIs)

Each CDI represents one-fifth of an ordinary share.

2005

Currency conversion date for UK pounds, Australian dollars and Ghanaian cedis

Thursday, 4 August

Last date to trade ordinary shares cum dividend

Friday, 12 August

Last date to register transfers of certificated securities cum dividend

Friday, 12 August

Ordinary shares trade ex dividend

Monday, 15 August

Record date

Friday, 19 August

Payment date

Friday, 26 August

On the payment date, dividends due to holders of certificated securities on the South African share register will either be electronically transferred to shareholders' bank accounts or, in the absence of suitable mandates, dividend cheques will be posted to such shareholders.

Dividends in respect of dematerialised shareholdings will be credited to shareholders' accounts with the relevant CSDP or broker.

To comply with the further requirements of STRATE, between Monday, 15 August 2005 and Friday, 19 August 2005, both days inclusive, no transfers between the South African, United Kingdom, Australian and Ghana share registers will be permitted and no ordinary shares pertaining to the South African share register may be dematerialised or rematerialised.

To holders of American Depositary Shares

Each American Depositary Share (ADS) represents one ordinary share.

2005

Ex dividend on New York Stock Exchange

Wednesday, 17 August

Record date

Friday, 19 August

Approximate date for currency conversion

Friday, 26 August

Approximate payment date of dividend

Monday, 5 September

Assuming an exchange rate of R6.69/\$1, the dividend payable on an ADS is equivalent to 25.41 US cents. This compares with the interim dividend of 25.62 US cents per ADS paid on 7 September 2004. However, the actual rate of payment will depend on the exchange rate on the date for currency conversion.

To holders of Ghanaian Depositary Shares (GhDSs)

100 GhDSs represent one ordinary share.

2005

Last date to trade and to register GhDSs cum dividend

Friday, 12 August

GhDSs trade ex dividend

Monday, 15 August

Record date

Friday, 19 August

Approximate payment date of dividend

Monday, 29 August

Assuming an exchange rate of R1/¢1,349 the dividend payable per GhDS is equivalent to 22.93 cedis. This compares with the interim dividend of 24.848 cedis per GhDS paid on 30 August 2004. However, the actual rate of payment will depend on the exchange rate on the date for currency conversion. In Ghana, the authorities have determined that dividends payable to residents on the Ghana share register be subject to a final withholding tax at a rate of 10%, similar to the rate applicable to dividend payments made by resident companies which is currently at 10%.

28

18.

Group financial statements

The group financial statements for the quarter and six months ended 30 June 2005 were authorised for issue in accordance with a resolution of the directors passed on 27 July 2005. AngloGold Ashanti is a limited liability company incorporated in the Republic of South Africa.

19. Convertible bonds

The group changed its accounting policy for convertible bonds during the first quarter of 2005. Previously, convertible bonds were accounted for as compound financial instruments, part equity and part liability. The equity component was not re-measured for changes in fair value.

Convertible bonds are now accounted for entirely as a liability, with the option component disclosed as a derivative liability, carried at fair value. Changes in such fair value are recorded in the income statement.

This change was made in response to additional guidance becoming available on the interpretation of International Financial Reporting Standards. This change is applied retrospectively and comparative figures have been restated.

The impact on comparative figures is as follows:

Quarter to 30 June 2004:

Profit attributable to equity shareholders increased by \$61m;

Option component previously disclosed as equity (\$82m) is removed from shareholders equity, and replaced by a derivative liability of \$43m.

Six months ended 30 June 2004:

Profit attributable to equity shareholders increased by \$39m;

Option component previously disclosed as equity (\$82m) is removed from shareholders equity, and replaced by a derivative liability of \$43m.

20. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

By order of the Board

R P EDEY

R M GODSELL

Chairman

Gross profit (loss) adjusted for the effect of unrealised non-hedge derivatives plus amortisation of tangible and intangible assets, less non-cash revenues.

Rounding of figures may result in computational discrepancies.

Based on risks and returns the directors consider that the primary reporting format is by business segment. The directors consider that there is only one business segment being mining, extraction and production of gold. Therefore the disclosures for the primary segment have already been given in the abbreviated financial statements. The secondary reporting format is by geographical analysis by origin.

Attributable year to date production at Moab Khotsong yielded 354 kilograms which will be

3

The yield of Bibiani, Siguirí and Iduapriem represents open-pit operations.
capitalised against pre-production costs.

4

Yatela and Cripple Creek & Victor Joint Venture operations yield reflects gold

1

The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad.
placed/tonnes placed.

2

The yield of AngloGold Ashanti Mineração represents underground operations.

5

The yield of Obuasi represents underground operations.

Rounding of figures may result in computational discrepancies.

63

Certain statements contained in this document, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold Ashanti's exploration and production projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of the annual report on Form 20-F or to reflect the occurrence of unanticipated events. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein. For a discussion on such risk factors, refer to AngloGold Ashanti's annual report on Form 20-F for the year ended 31 December 2004, which was filed with the Securities and Exchange Commission (SEC) on 14 July 2005.
