ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549
FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2014

Or
 TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File Number: 001-33783

THOMPSON CREEK METALS COMPANY INC.

(Exact name of registrant as specified in its charter)

British Columbia, Canada

(State or other jurisdiction of

incorporation or organization)

26 West Dry Creek Circle, Suite 810, Littleton, CO

(Address of principal executive offices)

(303) 761-8801

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Name of each exchange on which registered:
Common Stock, no par value	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405) is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment of this Form 10-K.

Edgar Filing: Thompson Creek Metals Co Inc. - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer <input checked="" type="checkbox"/>	Accelerated filer <input type="checkbox"/>	Non-accelerated filer <input type="checkbox"/> (Do not check if a smaller reporting company)	Smaller reporting company <input type="checkbox"/>
---	--	---	--

Indicate by check mark whether the registrant is a shell company (as defined by Rule 12b-2 of the Act). Yes No
As of February 16, 2015, there were 214,343,626 shares of the registrant's common stock, no par value, outstanding. As of June 30, 2014, the last day of the registrant's most recently completed second fiscal quarter, the aggregate market value of the registrant's common equity held by non-affiliates was approximately \$633 million, based on the closing price of the registrant's common stock on such date as reported on the New York Stock Exchange. For purposes of this calculation, shares of common stock held by executive officers, directors and holders of greater than 10% of the registrant's outstanding common stock are assumed to be affiliates of the registrant. This determination of affiliate status is not necessarily a conclusive determination for other purposes.

DOCUMENTS INCORPORATED BY REFERENCE

Part III incorporates certain information by reference from the registrant's definitive proxy statement for the 2015 annual meeting of stockholders to be filed no later than 120 days after the end of the registrant's fiscal year ended December 31, 2014.

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

Statement Regarding Forward-Looking Information

Certain statements in this report (including information incorporated by reference) are "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995, Section 27A of the Securities Act of 1933, as amended, Section 21E of the Securities Exchange Act of 1934, as amended, and applicable Canadian securities legislation, and are intended to be covered by the safe harbors provided by these regulations. All statements other than statements of historical fact set forth or incorporated herein by reference are forward-looking statements. These forward-looking statements may, in some cases, be identified by the use of terms such as "believe," "project," "expect," "anticipate," "estimate," "intend," "strategy," "future," "opportunity," "plan," "may," "should," "will," "would," "will be," "will continue," "will likely result," and similar expressions. Our forward-looking statements may include, without limitation, statements with respect to:

- future financial or operating performance of the Company or its subsidiaries and its projects;
- the availability of, and terms and costs related to, future borrowing, debt repayment and financing;
- future inventory, production, sales, payments from customers, cash costs, capital expenditures and exploration expenditures;
- expected mining and concentrate grades and recoveries;
- estimates of mineral reserves and resources, including estimated mine life and annual production;
- projected timing to ramp-up to design capacity at Mount Milligan Mine;
- the projected development of our exploration properties and future exploration at our operations;
- future concentrate shipment dates and shipment sizes;
- future operating plans and goals, including whether any operations will continue at Endako Mine or TC Mine;
- expected costs, including any severance costs;
- personnel decisions, including reductions in work force; and
- future copper, gold, and molybdenum prices.

Forward-looking statements are based on current expectations and assumptions that are subject to risks and uncertainties which may cause actual results to differ materially from the forward-looking statements. A detailed discussion of risks and uncertainties that could cause actual results and events to differ materially from such forward-looking statements is included in Item 1A, "Risk Factors" and elsewhere in this report. We undertake no obligation to update or revise publicly any forward-looking statements, whether as a result of new information, future events, or otherwise.

Table of Contents

PART I

In this report, references to “we,” “our” and “us” mean Thompson Creek Metals Company Inc. together with our subsidiaries, unless the context otherwise requires. All dollar amounts in this report are expressed in United States dollars (“\$”), unless otherwise indicated. Canadian currency is denoted as “C\$.” Financial information is presented in accordance with accounting principles generally accepted in the United States (“US GAAP”). References to “Notes” refer to the Notes to Consolidated Financial Statements included in Item 8 herein.

ITEMS 1. AND 2. BUSINESS AND PROPERTIES

OUR BUSINESS

VISION AND STRATEGY

We are a North American mining company engaged in the full mining cycle, which includes acquisition, exploration, development, and operation of mineral properties. In the past several years, we have evolved from being a major primary molybdenum producer to becoming a copper and gold mining company with the construction and development of our open-pit copper-gold mine and concentrator in British Columbia, Canada (“Mount Milligan Mine”). Mount Milligan Mine commenced operations in August 2013 and continues to ramp-up to design capacity. At December 31, 2014, the combined proven and probable estimated mineral reserves for Mount Milligan Mine totaled 2.4 billion pounds of contained copper and 6.2 million ounces of contained gold. We currently expect to increase our payable copper and gold production in 2015 as compared to 2014, and to complete our ramp-up of Mount Milligan Mine by year-end.

In addition to our gold and copper mining operation, we own and operate a metallurgical facility in Pennsylvania, USA (the “Langeloth Facility”), at which we roast molybdenum concentrate and other metals. We expect that the Langeloth Facility will operate at approximately 85% capacity in 2015 with the roasting of third-party material. We have shifted the core focus of our business to copper and gold while at the same time developing a strategy to achieve positive cash flow from our molybdenum business. This shift in core focus is primarily the result of recent and expected ongoing weakness in the molybdenum market due to additional supply of molybdenum from new copper producers that produce molybdenum as a by-product. In 2015, we expect to generate sufficient revenue from the Langeloth Facility, together with the sale of molybdenum inventory from TC Mine and Endako Mine (defined below), to cover care and maintenance costs and/or costs incurred during the temporary suspension of these mines. Please see “Molybdenum Mines” below.

Our current business strategy is to:

- achieve design recoveries and mill throughput at Mount Milligan Mine by the end of 2015 while containing costs;
- conduct our operations safely and in an environmentally responsible manner;
- transition Langeloth into one of the largest third party molybdenum conversion plants in the world, which is expected to contribute to positive cash flow from our molybdenum business in 2015;
- maintain the optionality of our molybdenum business; and
- improve our balance sheet and our competitive position in the industry.

In the medium term, we intend to seek opportunities to enhance our diverse production profile through accretive acquisitions and/or investments.

COPPER AND GOLD MINE

In August 2013, the phased start-up of operations began at the Mount Milligan Mine with the first feed to the concentrator, and in September 2013, the first copper-gold concentrate was produced. Mount Milligan Mine reached commercial production as of February 18, 2014, defined as operation of the mill at 60% design capacity mill throughput for 30 days, and has been cash flow positive since the second quarter of 2014. As previously disclosed, we have determined that additional crushing will be necessary to consistently achieve mill throughput of 60,000 tonnes per day (“tpd”), and we expect to construct a permanent secondary crushing circuit at Mount Milligan Mine when market conditions improve. In 2015, the detailed engineering phase is expected to be completed and commitments are expected to be made for the long lead items. The final capital cost estimate for the project will be determined once the detailed engineering is completed, and it is expected to be near the high end of the previously announced range of \$50

- \$75 million, inclusive of the approximately \$15 million in costs that we expect to incur in

4

Table of Contents

2015 for the engineering work and commitments for long lead items. Once construction commences, we estimate that it will take approximately 18 months to complete the permanent circuit. Temporary crushing will be utilized during 2015 and, as a result, we expect to reach approximately 60,000 tpd by year-end 2015.

MOLYBDENUM MINES

Until the Mount Milligan Mine became operational in the fall of 2013, our business was primarily focused on the extraction, processing, roasting, and sale of molybdenum. Through the end of 2014, we operated an open-pit molybdenum mine and concentrator in Idaho, USA (“TC Mine”), and an open-pit molybdenum mine, and concentrator in British Columbia, Canada, in which we own a 75% joint venture interest (“Endako Mine”). TC Mine was placed on care and maintenance in December 2014 after the mining and processing of ore from Phase 7 was completed. As previously disclosed, we are conducting limited stripping at the mine for the next phase of mining to maintain our options while we continue to evaluate alternatives for TC Mine. Effective December 31, 2014, operations at Endako Mine were temporarily suspended due to recent and expected ongoing weakness in the molybdenum price. We expect to re-evaluate the status of Endako Mine as market conditions warrant. For more information regarding severance and other costs relating to care and maintenance of TC Mine and the temporary suspension of Endako Mine, please see Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations” of this Form 10-K. At December 31, 2014, the combined proven and probable estimated mineral reserves for TC Mine and Endako Mine totaled 141.4 million pounds of contained molybdenum, with 74.7% of these reserves from TC Mine and 25.3% from Endako Mine (stated on a 100% basis). For detailed information regarding our mines and their mineral reserves, please see the “Mines” and “Mineral Reserves” sections, below.

LANGELOTH FACILITY

Langeloth is one of the largest molybdenum conversion plants in the world. In addition to the 36 million pounds of annual roasting capacity, Langeloth also can produce 9.5 million pounds of ferromolybdenum (one of only two such plants in the United States or three in North America) as well as 3 million pounds of pure moly oxide and 6,000 pounds of rhenium. Langeloth’s quality is recognized throughout the world, most especially in the United States. We believe Langeloth is well positioned to offer customers a number of competitive advantages relative to other large conversion plants operating in South America.

GENERAL

We were organized in 2000 as a corporation under the laws of Ontario, Canada, and were continued as a corporation under the laws of British Columbia, Canada in 2008. We are a corporation governed by the Business Corporations Act (British Columbia). In October 2006, we acquired Thompson Creek Metals Company USA, then a privately-held company incorporated and headquartered in the United States, and in so doing acquired TC Mine, Endako Mine and the Langeloth Facility. In October 2010, we acquired Terrane Metals Corp. (“Terrane”) and in so doing acquired the Mount Milligan development project, which is now Mount Milligan Mine. Through the Terrane acquisition we also acquired a copper, molybdenum and silver exploration property located in British Columbia, Canada (the “Berg Property”), and a gold exploration property located in Nunavut, Canada (the “Maze Lake Property”). Our corporate headquarters are in Littleton, Colorado, USA.

Table of Contents

The following map sets forth the locations of our mines, metallurgical facility, exploration properties and corporate office:

See the Notes to the Consolidated Financial statements in Item 8 for financial information about our operating segments and by geographic area.

PRODUCTS

Our principal products in 2014 were copper, gold, and molybdenum. In 2014, we produced 68.0 million pounds of copper in concentrate, containing 64.6 million pounds of payable copper, and 184,027 ounces of gold in concentrate, containing 177,606 ounces of payable gold. In 2014 and 2013, approximately 22% and 2%, respectively, of our product sales were attributable to copper, and approximately 22% and 1%, respectively, of our product sales were attributable to gold. We did not produce any copper or gold in 2012, as operations at Mount Milligan Mine did not commence until the fall of 2013.

We produced 26.3 million pounds of molybdenum in 2014. In 2014, 2013, and 2012, approximately 56%, 97%, and 100% of our product sales were attributable to molybdenum.

The table below sets forth certain operating and production data for each of the periods indicated:

Table of Contents

	Years Ended December 31,				
	2014	2013	2012	2011	2010
Copper					
Payable production (000's lb)	64,569	10,362	—	—	—
Cash cost (\$/payable lb produced) - By-Product ⁽¹⁾	\$1.15	\$7.76	—	—	—
Cash cost (\$/payable lb produced) - Co-Product ⁽¹⁾	\$1.97	\$5.40	—	—	—
Gold					
Payable production (troy oz)	177,606	19,879	—	—	—
Cash cost (\$/payable troy oz produced) - Co-Product ⁽¹⁾	\$525	\$1,468	—	—	—
Molybdenum - Produced					
TC Mine					
Production (000's lb)	17,371	20,889	16,238	21,368	25,071
Cash cost (\$/lb produced)	\$4.44	\$4.57	\$8.06	\$6.66	\$5.20
Endako Mine (75%)					
Production (000's lb)	8,885	9,056	6,191	6,977	7,506
Cash cost (\$/lb produced)	\$11.72	\$10.93	\$15.42	\$11.86	\$8.89
Total molybdenum production ⁽²⁾	26,256	29,945	22,429	28,345	32,577
Total average cash cost (\$/lb produced) ⁽¹⁾	\$6.91	\$6.49	\$10.09	\$7.94	\$6.07
Molybdenum - Processed					
Langeloth Facility					
Molybdenum Sold from Purchased Product (000's lb)	8,061	5,054	10,542	8,245	7,855
Toll Roasted and Upgraded Molybdenum Processed (000's lb)	726	3,782	6,296	7,071	5,703
Roasted Metal Products Processed (000's lb)	9,938	17,784	12,153	17,090	18,334

⁽¹⁾ See "Non-GAAP Financial Measures" for the definition and reconciliation of these non-GAAP measures.

⁽²⁾ Mined production pounds reflected are molybdenum oxide and high performance molybdenum disulfide ("HPM") from our share of production from our mines but excludes molybdenum processed from purchased products.

Table of Contents

Our financial results can vary significantly as a result of fluctuations in the market prices of copper, gold and molybdenum. World market prices for our products have fluctuated historically and are affected by numerous factors beyond our control. The average, high, and low daily market prices in US dollars for copper, gold, and molybdenum for the past five years are shown in the table below:

	Copper ⁽¹⁾			Gold ⁽²⁾			Molybdenum ⁽³⁾		
	Average	High	Low	Average	High	Low	Average	High	Low
2014	\$3.11	\$3.37	\$2.86	\$1,389	\$1,520	\$1,253	\$11.38	\$15.20	\$8.70
2013	\$3.32	\$3.75	\$3.01	\$1,418	\$1,694	\$1,195	\$10.30	\$12.00	\$9.08
2012	\$3.61	\$3.96	\$3.30	\$1,669	\$1,792	\$1,540	\$12.74	\$14.78	\$10.90
2011	\$4.00	\$4.62	\$3.05	\$1,572	\$1,895	\$1,319	\$15.49	\$18.00	\$12.60
2010	\$3.42	\$4.42	\$2.76	\$1,225	\$1,421	\$1,058	\$15.72	\$18.60	\$11.75

⁽¹⁾ London Metal Exchange (LME) spot copper price per pound.

⁽²⁾ London P.M. fixed price per ounce for gold on the London Bullion Market.

⁽³⁾ Platts Metals Week published price per pound for molybdenum oxide.

On February 16, 2015, the copper closing price on the LME was \$2.59 per pound, and the gold closing price on the London Bullion Market was \$1,229 per ounce. On February 16, 2015, the average molybdenum price quoted in Platts Metals Week was \$7.73 per pound.

Copper and Gold Concentrate Sales

We produce copper and gold in saleable concentrate form at our Mount Milligan Mine and sell the concentrate to third parties, including offtakers and traders, which we refer to as “MTM Customers.” We are currently party to four multi-year concentrate sales agreements. Pursuant to these agreements, we have agreed to sell an aggregate of approximately 140,000 tonnes in calendar year 2015, 140,000 tonnes in calendar year 2016, and 40,000 tonnes in each of calendar years 2017 and 2018.

Pricing under all of the sales agreements is determined by reference to specified published reference prices during the applicable quotation periods. Payment for the concentrate is based on the price for the agreed copper and gold content of the parcels delivered, less smelting and refining charges and certain other deductions, if applicable. The copper smelting and refining charges are negotiated in good faith and agreed by the parties for each contract year based on terms generally acknowledged as industry benchmark terms. The gold refining charges are as specified in the agreements.

The commitments under our current multi-year concentrate sales agreements cover approximately 85% of our expected concentrate production in 2015 and are also less than the total expected production in 2016 and beyond. We intend to either extend our current multi-year agreements as the terms expire, or we may enter into additional multi-year sales agreements. To the extent that production is expected to exceed the volume committed under these agreements, we will sell the additional volume under short-term contracts or on a spot basis.

Gold Stream Arrangement

Pursuant to an agreement dated October 2010, as subsequently amended in December 2011, August 2012, and December 2014, with a subsidiary of Royal Gold, Inc. (“Royal Gold”) (referred to as the “Gold Stream Arrangement”), we agreed to sell to Royal Gold 52.25% of the refined gold production from Mount Milligan Mine for a total upfront payment of \$781.5 million, plus \$435 per ounce, or the prevailing market rate if lower than \$435 per ounce, when the gold is delivered. We used the funds we received from Royal Gold in our purchase of Terrane and in the construction of the Mount Milligan Mine. To satisfy our obligations under the Gold Stream Arrangement, after we sell copper and gold concentrate from Mount Milligan Mine to MTM Customers, we purchase gold ounces in the market for delivery to Royal Gold in an amount based on a portion of the gold ounces in the copper and gold concentrate sold to MTM Customers, as determined in accordance with the terms of the Gold Stream Arrangement. For more information about the Gold Stream Arrangement, please see Note 10 in Item 8 of this 10-K, for a further discussion.

Table of Contents

Markets

Copper is a malleable and ductile element that is an excellent conductor of heat and electricity as well as being corrosion-resistant and antimicrobial. Refined copper is incorporated into wire and cable products for use in the construction, electric utility, communications and transportation industries. Copper is also used in industrial equipment and machinery, consumer products and a variety of other electrical and electronic applications and is also used to make brass. Copper substitutes include aluminum, plastics, stainless steel and fiber optics. Refined, or cathode, copper is also an internationally traded commodity. A combination of current mine production and recycled scrap material make up the annual copper supply. Copper is an internationally traded commodity, and its prices are determined by the major metals exchanges: the London Metal Exchange (“LME”), the Shanghai Futures Exchange and the COMEX division of the New York Mercantile Exchange. Prices on these exchanges generally reflect the worldwide balance of copper supply and demand and can be volatile and cyclical. In general, demand for copper reflects the rate of underlying world economic growth, particularly in industrial production and construction. Gold generally is used for fabrication or investment. Fabricated gold has a variety of end uses, including jewelry, electronics, dentistry, industrial and decorative uses, medals, medallions and official coins. Gold investors may buy gold bullion, official coins or jewelry or invest through options, futures or exchange-traded funds. A combination of current mine production, recycling and draw-down of existing gold stocks held by governments, financial institutions, industrial organizations and private individuals make up the annual world-wide gold supply. The price of gold is volatile and is affected by numerous factors. Factors affecting the market for gold include the sale or purchase of gold by various central banks and financial institutions, inflation, recession, fluctuation in the relative values of the US dollar and foreign currencies, changes in global and regional gold demand and political and economic conditions throughout the world.

Molybdenum

Our principal molybdenum products are molybdic oxide (also known as roasted molybdenum concentrate) and ferromolybdenum. Other products we produce include high soluble technical oxide, pure molybdenum trioxide and high purity molybdenum disulfide. Prior to December 31, 2014, we sourced molybdenum from our two primary mines, TC Mine and Endako Mine, and from third-party producers. As of January 1, 2015, our principal source for molybdenum concentrate will be third-party producers, and we will either purchase the concentrate from such third parties for processing and re-sale or convert the concentrate to finished products on behalf of such third parties. Unless and until we recommence operations at our primary molybdenum mines, operations at our Langeloth Facility, which has 36 million pounds of annual roasting capacity, will be focused on the roasting and tolling of third-party material.

Markets

Molybdenum is an industrial metal principally used for metallurgical applications as a ferro-alloy in steels where high strength, temperature-resistant or corrosion-resistant properties are sought. The addition of molybdenum enhances the strength, toughness and wear- and corrosion-resistance in steels when added as an alloy. Molybdenum is used in major industries including chemical and petro-chemical processing, oil and gas for drilling and pipelines, power generation, automotive and aerospace. Molybdenum is also widely used in non-metallurgical applications such as petroleum catalysts, lubricants, flame-retardants in plastics, water treatment and as a pigment. A combination of current mine production and recycled scrap material make up the annual molybdenum supply. Molybdenum is mined from both primary mines, ones that contain only molybdenum as an economic mineral, and as a by-product from certain copper mines.

Molybdenum prices are determined by transacting parties rather than by a metals exchange. Reference prices for molybdenum are available in several publications, including Platts Metals Week, Ryan’s Notes and Metal Bulletin. Molybdenum prices generally reflect the worldwide balance of molybdenum supply and demand and can be volatile and cyclical. In general, demand for molybdenum reflects the rate of underlying world economic growth, particularly in industrial production and construction.

SOURCES AND AVAILABILITY OF RAW MATERIALS

Our mining operations require significant energy, principally electricity, diesel and natural gas. Most of our energy is obtained from third parties under long-term contracts. Our mining operations also require significant quantities of

water for mining, ore processing and related support facilities. Although we believe we have sufficient water rights to conduct our mining operations, the loss of water rights for any of our mines, in whole or in part, or shortages of water to which we have rights, could require us to curtail or shut down mining operations. For a further discussion of risks associated with the availability of water, refer to Item 1A. "Risk Factors."

Table of Contents

COMPETITION

The mining industry is intensely competitive. Our competitive position is based on the quality and grade of our estimated mineral reserves, our ability to manage our costs compared to other producers throughout the world, our ability to maintain our financial integrity through the lows of the metal price cycles, our ability to attract and retain skilled employees, and our ability to manage our customer relationships. Our costs are governed to a large extent by the location, grade and nature of our estimated mineral reserves, our input costs, including energy, labor, and equipment, and our operating and management skills. The metals markets are cyclical, and our ability to maintain our competitive position over the long term is based on our ability to manage our costs, acquire and develop quality deposits, and hire and retain a skilled workforce. Our substantial indebtedness will limit our ability to significantly grow our business in the near term, but we intend to continue to grow our business through our exploration program and through future acquisitions in the long term.

Until we began producing concentrate from Mount Milligan Mine in late 2013, we exclusively mined molybdenum, and were thus subject to unique competitive advantages and disadvantages related to the price of molybdenum. As discussed above, the core focus of our business has shifted to copper and gold and away from molybdenum, which makes us less sensitive to fluctuations in the price of molybdenum but increases the effects of fluctuations in copper and gold prices on our business. Please see Item 1A, "Risk Factors" for further discussion regarding risks that may affect our competitive position.

EMPLOYEES

As of December 31, 2014, we employed approximately 980 people (approximately 700 in Canada and 280 in the United States).

Approximately 74% of employees at the Langeloth Facility are members of the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America union through its Local 1311. In January 2013, a new labor agreement was reached with the union at the Langeloth Facility to cover the period from March 11, 2013 through March 11, 2016. Approximately 86% of Endako Mine's employees are members of the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union through its Local 1-424. In January 2014, a labor agreement was reached with the union at Endako Mine for the period from April 1, 2013 to March 31, 2015. After March 31, 2015, the labor agreement will automatically renew under existing terms, unless either party gives 90 days' written notice prior to the expiration of the then-current term requiring the other party to commence collective bargaining for a renewal agreement. We believe that our relations with all of our employees are good.

ENVIRONMENTAL, HEALTH AND SAFETY MATTERS

Environment

Our mining and exploration activities are subject to extensive federal, provincial, state and local laws, regulations and permits governing protection of the environment. Among other things, our Canadian operations must comply with authorizations issued under the provincial Mines Act and the Environmental Management Act. We also implement Fish Habitat Compensation Plans at Mount Milligan Mine under the Fisheries Act and the Metal Mining Effluent Regulations. In the United States, TC Mine has permits issued under the federal Clean Water Act and Clean Air Act. Our tailings storage facility at TC Mine is governed by an Idaho statute administered by the Idaho Department of Water Resources. Our primary permits at the Langeloth Metallurgical Facility are issued under the federal Clean Water Act and Clean Air Act, both of which are implemented in Pennsylvania by the state Department of Environmental Protection.

Our policy is to conduct business in a way that safeguards public health and the environment. We believe that our operations are in compliance with applicable environmental laws and regulations in all material respects. Regular monitoring and compliance with periodic reporting requirements are integral components of all our environmental permits and authorizations. In Canada, we also conduct Environmental Effects Monitoring, which is a cyclical receiving-environment monitoring program to assess the potential effects of effluent on the fish population, fish tissue and the benthic invertebrate community.

The costs associated with implementation and compliance with environmental requirements are substantial and possible future legislation and regulations could cause additional operating expense, capital expenditures, restrictions and delays in the development and continued operation of our properties, the extent of which cannot be predicted with certainty. In the context of environmental permitting, including approval of reclamation plans and compliance with long-term, post-reclamation obligations, we are required to comply with known standards and regulations, which may entail significant costs. For further discussion of risks associated with environmental matters, refer to Item 1A. "Risk Factors."

Table of Contents

Estimated future reclamation costs are based primarily on legal and regulatory requirements. As of December 31, 2014, we have provided financial assurance for reclamation costs of approximately \$42.4 million at TC Mine, \$13.2 million at Endako Mine (of which our 75% share is approximately \$9.9 million) and \$25.9 million for Mount Milligan Mine. Environmental laws and regulations generally have become more stringent and restrictive during the life of our operations. Our reclamation obligations and the related financial assurances we are required to provide will likely increase over time.

Health and Safety; Corporate Responsibility

We are committed to ensuring the health and safety of our employees and operating in a sustainable, socially responsible manner in the communities in which we operate. We have adopted an Environmental, Health and Safety Policy under which we have, among other things, implemented systems to provide ongoing safety training, promote a proactive culture among our employees, and encourage open communication to improve operating practices affecting health and safety issues. To help us achieve one of our most important goals and in an effort to be a “Leader in Safety” among our peers, we have launched a Company-wide Safety and Leadership Initiative, which combines behavioral-based safety systems with the development of a safety-centric culture and safety leadership training. The initiative was first implemented at TC Mine in 2012 and resulted in improved safety results. We are rolling out the initiative at our remaining sites, including the corporate office, in 2015.

We have also prepared and implemented an Environmental, Health and Safety Management System at Mount Milligan Mine that is intended to comply with ISO 14001:2004 and OHSAS 18001. In 2014, our All Incident Reportable Rate improved to 2.46 from 2.48 in 2013.

In addition, we have adopted a Corporate Responsibility Policy that reflects our commitment to conducting our business in a manner that, among other things, maximizes positive impacts within the workplace for our employees and within the communities in which we work and live. We have developed plans and programs to promote sustainability in our business and are committed to building long-term relationships with the communities in which we operate. For example, at Mount Milligan Mine, we have implemented a Community Sustainability Committee, by which we meet quarterly with representatives of the local communities and First Nations.

In 2014, we issued our inaugural corporate responsibility report, which may be accessed on the “Responsibility” page of our website at www.thomsoncreekmetals.com. The Environment, Health and Safety Committee of the Board of Directors is responsible for overseeing the development and implementation of the Environmental, Health and Safety Policy, the Corporate Responsibility Policy, and other related policies, and to review the performance of the Company with respect to environmental, health and safety matters. Information regarding our performance is updated annually and is made available to the public in our annual corporate responsibility report, which is posted to our website at www.thomsoncreekmetals.com.

OUR MINES

MOUNT MILLIGAN MINE (COPPER AND GOLD)

General

Mount Milligan Mine is a conventional truck-shovel open-pit copper and gold mine and concentrator with a 60,000 tpd design capacity copper flotation processing plant. Mount Milligan Mine has an estimated life of approximately 24 years (based on spot metal prices of \$3.00 per pound copper and \$1,250 per ounce gold) and estimated average annual production of 85 million pounds of copper and 186,700 ounces of gold in 155,000 tonnes of concentrate, over the life of the mine. For the years 2015 through 2019, the average annual production is estimated to be higher at approximately 94 million pounds of copper and 285,800 ounces of gold in 165,000 tonnes of concentrate. As of the date of this Form 10-K, Mount Milligan Mine is our only material mineral property. On January 21, 2015, we filed an updated NI 43-101 technical report for Mount Milligan Mine. Please see "Mineral Reserves" below for more information, including a discussion of certain factors taken into consideration in determining the economic viability of the mine.

In October 2010, we acquired the Mount Milligan development project as part of our acquisition of Terrane, and began construction shortly thereafter. On August 15, 2013, the phased start-up of the mine operation began with the first feed to the concentrator, and in September 2013, the first copper-gold concentrate was produced at the mine. Mount Milligan Mine reached commercial production as of February 18, 2014, defined as operation of the mill at 60% design capacity mill throughput for 30 days. Ramp-up activities continued through 2014 and are ongoing. As previously disclosed, we expect to install a secondary

Table of Contents

crushing circuit to reach 60,000 tpd on a consistent basis. Temporary crushing will be utilized during 2015 and, as a result, we expect to reach approximately 60,000 tpd by year-end 2015.

Mount Milligan Mine is located within the Omenica Mining Division in North Central British Columbia, Canada, approximately 153 kilometers northwest of Prince George, 80 kilometers north of Fort St. James and 97 kilometers west of Mackenzie. Mount Milligan Mine is accessible by commercial air carrier to Prince George, British Columbia, then by vehicle from the east via Mackenzie on the Finlay Philip Forest Service Road and the North Philip Forest Service Road, and from the west via Fort St. James on the North Road and Rainbow Forest Service Road. Road travel to the Mount Milligan property site is 776 kilometers from Prince Rupert and 254 kilometers from Prince George. The forestry-based communities of Mackenzie and Fort St. James are within daily commuting distance of the Mount Milligan site, and both of these communities are serviced by rail. The infrastructure at Mount Milligan Mine includes a concentrator, a tailings storage facility and reclaim water ponds, an administrative building and change house, a truckshop/warehouse, a permanent operations residence, a first aid station, an emergency vehicle storage, a laboratory and sewage and water treatment facilities. The power supply is provided by B.C. Hydro via a 92-kilometer hydroelectric power line. We transport concentrate from the mine site to Mackenzie via truck, and from there transport it by railway to the port of Vancouver for shipment to MTM Customers.

Mount Milligan Mine includes 103 claims and one mining lease with a combined area of 46,271 hectares. The single mining lease that was issued to Terrane on September 9, 2009, expires on September 9, 2029, and requires a lease payment of approximately \$102,000, due annually on September 9. Mineral claims are subject to exploration expenditure obligations, or we may choose to pay annual fees to the Province in lieu of exploration expenditures. All mineral claims are in good standing with an expiry date of March 2016. We expect to renew such mineral claims in the ordinary course.

A 2% net smelter return royalty, commencing in the third year of commercial production, is payable to a previous owner of the property. The royalty holder, H.R.S. Resources Corp. (successor in interest to Richard Haslinger), has the right to receive annual advances of C\$20,000, first payable on or before December 31, 1994, and on each anniversary after the first advance until the commencement of commercial production, which payments have been maintained. We have a right of first refusal on any proposed disposition of the net smelter return royalty by H.R.S. Resources Corp.

We have also agreed to make certain payments to a First Nation over the course of the life of mine. We do not consider the amounts of these payments to be material to our business. The terms of the agreement under which we have agreed to make these payments are confidential.

As described above, we have entered into a Gold Stream Arrangement with Royal Gold pursuant to which we committed to sell an aggregate of 52.25% of the refined gold production from Mount Milligan Mine to Royal Gold. For more information about these transactions, see Note 10 in Item 8 of this 10-K, for a further discussion.

Table of Contents

History

Limited exploration activity on Mount Milligan was first recorded in 1937. In 1984, prospector Richard Haslinger and BP Resources Canada Limited located claims on the site. In 1986, Lincoln Resources Inc. (“Lincoln”) optioned the claims and in 1987 completed a diamond drilling program that led to the discovery of significant copper-gold mineralization. In 1991, Placer Development Ltd. (which became Placer Dome Inc.) (“Placer”) acquired Lincoln’s interest in the Mount Milligan property, resumed exploration drilling, completed a pre-feasibility study and applied for provincial and federal approvals to develop the project. These approvals expired in 2003. Barrick Gold Corporation purchased Placer in 2006 and sold its Canadian assets to Goldcorp Inc., which then in turn sold its interest in Mount Milligan to Atlas Cromwell. Atlas Cromwell then changed its name to Terrane Metals Corp. In October 2010, we acquired Terrane and the Mount Milligan project.

Geology, Deposit Types and Mineralization

Mount Milligan Mine is a tabular, near-surface, alkalic copper-gold porphyry deposit that measures some 2.6 kilometers north-south, 1.6 kilometers east-west and is more than 396 meters thick. It consists of two principal deposits, the Main deposit and Southern Star deposit. The Main deposit includes four contiguous zones: MBX, WBX, DWBX and 66, all of which are spatially associated with the MBX monzonite stock and Rainbow Dyke. The Southern Star deposit is centered on a monzonite stock of the same name and is some 500 meters south of the Main deposit. Mineralization consists primarily of chalcopyrite with lesser bornite and magnetite in areas of potassic alteration, and pyrite in areas of propylitic alteration. In the main deposit, mineralization is best developed in areas of potassic alteration, where copper and gold grades are related to chalcopyrite and pyrite. High gold values are found in each deposit, mostly associated with pyrite, but the highest gold grades are found in the 66 zone and are related mainly to pyrite mineralization.

Exploration

A 5,590-meter core drilling program was completed in 2011 to follow-up previous holes drilled into the footwall of the WBX and other stocks, where potential copper-gold mineralization was indicated at depth. A total of eight holes were drilled, testing primarily for down-faulted blocks of mineralized rock below the western portion of the current deposit and pit limits. An additional 867 meters of core was drilled in ten holes to provide new samples for metallurgical test work. There was no exploration activity at Mount Milligan in 2013. Exploration work was conducted in 2014 on the mining claims and consisted of soil sampling, geological mapping, ground geophysical surveying (induced Polarization and magnetics) along with detailed follow-up mapping.

Table of Contents

THOMPSON CREEK MINE (Molybdenum)

General

TC Mine is an open-pit molybdenum mine and concentrator located approximately 48 kilometers southwest of the town of Challis, Idaho, USA, with an estimated mine life of approximately seven years (based on a molybdenum price of \$10.00 per pound). TC Mine is accessible by commercial air carrier into the cities of Idaho Falls, Sun Valley and Boise, Idaho. Vehicle access to the mine is available by highway and gravel roads from each of these cities.

The TC Mine land holdings are comprised of 1,589 patented and unpatented lode, mill site and placer claims along with fee owned property totaling approximately 9,955 hectares. All current ore reserves are located on patented mineral claims and are not expected to be subject to any US federal government royalties that could be enacted in the future. Approximately 50% of the mineral claims are located within the boundaries of the Salmon-Challis National Forest, with the remaining 50% located within the perimeter of land managed by the United States Bureau of Land Management. Annual assessment fees, totaling approximately \$170,035 were made to the United States Bureau of Land Management in 2014 to maintain 1,097 unpatented mining claims at TC Mine through August 2015. We also paid state and county property taxes of \$750,792 in 2014. Currently there is no mining taking place on property that requires the payment of a royalty.

The TC Mine operation consists of an open-pit mine, ore crusher and conveyer system, mill and concentrator, tailings and containment dam, an administrative building, a truck shop/warehouse and support facilities. Open-pit mining began at TC Mine in 1983. Material mined from TC Mine is treated at a processing plant on site, and concentrate material is transported to our Langeloth Facility. Electric power is provided to the site by the Salmon River Electric Co-op through a 40 kilometer 230 kV power line to the South Butte Substation, then by a 4 kilometer 69 kV line to the mill site. Both of these lines are owned by TC Mine. Fresh water for TC Mine is pumped from the Salmon River. Due to declines in molybdenum prices and projected operating costs at TC Mine, in October 2012, we suspended waste stripping activity associated with Phase 8. Since that time, the molybdenum market has continued to weaken and, as a result, we put TC Mine on care and maintenance in December 2014 when the mining and processing of Phase 7 ore was completed. While TC Mine is on care and maintenance, we will conduct limited stripping for Phase 8 to maintain the optionality of the mine.

History

The TC Mine deposit was discovered in 1968 by Cyprus Mines Corporation (“Cyprus”). Surface exploration, diamond and reverse circulation drilling were done by Cyprus. Cyprus started construction of the mine in 1981, with full production beginning in 1983 and continuing until 1992 when operations were suspended due to depressed molybdenum prices. In 1993, Thompson Creek Metals Company USA, whom we acquired in October 2006, purchased the mine and resumed operations in 1994. The mine operated continuously from 1994 until it was placed on care and maintenance in December 2014; however, production was reduced during 2008 and 2009 due to reduced demand for molybdenum during that period.

Table of Contents

Geology, Deposit Types and Mineralization

The TC Mine porphyry molybdenum deposit is located near the structural intersection of two geologic provinces: continental, arc-related intrusive rocks of the late Cretaceous Idaho Batholith (the “Idaho Batholith”) are exposed to the west of the mine, while complexly deformed Paleozoic metasedimentary rocks are dominant to the east. The Idaho Batholith is a multi-phase, long-lived intrusion with a granitic to granodioritic composition. Paleozoic metasedimentary rocks form the wall-rock portions of the TC Mine deposit. Historic mining within the district was associated with syngenetic stratiform base-, precious-metal (i.e. lead-silver) mineralization which is locally developed in the Paleozoic units. The majority of the TC Mine molybdenum deposit is hosted within igneous rocks of the TC Mine intrusive complex, with minor amounts found within adjacent metasediments.

The TC Mine deposit is classified as an intrusive-hosted molybdenum porphyry system. Porphyry molybdenum deposits are divided into two subtypes: Climax-type and Quartz Monzonite (Endako)-type. TC Mine belongs to the Quartz Monzonite category. In contrast to the rift-related (extensional) Climax-type deposits, the Quartz Monzonite-type deposits are formed by subduction-related (compressional) processes. Molybdenum mineralization at TC Mine is primarily hosted in a composite granodiorite-quartz monzonite stock of Cretaceous age (i.e. TC Mine intrusive complex). This composite stock intruded carbonaceous and locally limy argillite (i.e. metasediments) of the Mississippian Copper Basin Formation. Where it is in contact with the TC Mine intrusive complex, the argillite has been contact-metamorphosed to hornfels and locally to skarn. The intrusive and sedimentary rocks are unconformably overlain by the Eocene Challis Volcanics, a post-mineral sequence of andesite to rhyodacite tuffs, flows and agglomerates. Locally, the volcanic cover is up to 305 meters thick. These volcanic rocks fill valleys and depressions in the paleotopography around the TC Mine site.

Exploration

On-site 2013 exploration activities around and peripheral to the TC Mine infrastructure consisted of surface mapping and rock sampling. During 2013, a drilling permit was approved by the United States Forest Service for exploration drilling of targets identified within the Bruno Creek drainage east of the current mine infrastructure. There were no exploration activities performed on the off-site Long Canyon and Little Fall Creek properties in 2014.

Annual assessment fees, totaling approximately \$97,805 were made to the United States Bureau of Land Management in 2014 to maintain 631 unpatented lode mining claims at both the Long Canyon and Little Fall Creek properties through August 2015.

On-site exploration activities in the TC Mine area in 2015 are expected to be minimal and may include surface mapping, rock sampling and target identification. No exploration work other than routine claim maintenance is planned for the off-site Long Canyon and Little Fall Creek properties in 2015.

ENDAKO MINE (Molybdenum)

General

Endako Mine is an open-pit molybdenum mine, concentrator and roaster located approximately 161 kilometers west of Prince George, British Columbia, Canada, with an estimated mine life of approximately two years (based on a molybdenum price of \$10.00 per pound).

Table of Contents

Endako Mine is accessible by commercial air carrier to Prince George, British Columbia, then by vehicle west on a paved highway for approximately 161 kilometers, then south on the Endako Mine road for an additional 11 kilometers. In March 2012, we completed a mill expansion project at Endako Mine. The expansion project included the construction of a new mill to replace the previous mill constructed in the 1960's. The new mill is designed to process 55,000 tons of ore per day compared to 31,000 tons per day in the old mill. The previous 45-year old mill at the site has been shut down and is currently on care and maintenance.

Endako Mine is operated as a joint venture (the "Endako Mine Joint Venture") between Thompson Creek Mining Ltd. ("TCML"), one of our subsidiaries, which holds a 75% interest, and Sojitz Moly Resources, Inc. ("Sojitz"), a subsidiary of Sojitz Corporation, which holds the remaining 25% interest. See "Endako Mine Joint Venture" below for further details regarding the Endako Mine Joint Venture.

The property is currently comprised of a contiguous group of 58 mineral tenures containing 32 claims and 26 leases, covering approximately 12,778 hectares. In addition, the Endako Mine Joint Venture holds surface rights to a portion of the mine site area. The mineral leases are subject to annual fees, and the mineral claims are subject to exploration expenditure obligations. We may choose to pay annual fees to the Province in lieu of exploration expenditures. All mineral claims are in good standing, and expiry dates range from March 2018 to February 2024. We expect to renew such mineral claims in the ordinary course.

Endako Mine deposit is divided into four named areas: Northwest, Denak West, Denak East and Endako. Mining is in progress or has occurred in the Endako and both Denak areas. The Northwest zone is yet to be produced. The property contains processing facilities, waste dumps and tailings disposal areas. There are no royalties, back-in rights, encumbrances on title or other agreements, other than the agreement governing the Endako Mine Joint Venture. The infrastructure at Endako Mine includes a 55,000 ton per day concentrator, a 40,000 to 45,000 pound per day roaster (and an additional non-operating roaster), tailings and reclaim water ponds, a crushing plant, an administrative building, a truck shop/warehouse, a change house, a first aid station, a laboratory, a garage and other shops. The power supply of the site is provided by a 9 kilometer, 69 kV power line owned by B.C. Hydro from a nearby substation. Water for the milling process is re-circulated from the tailings facility while make-up water is pumped from François Lake, located nearby.

In mid-December 2014, we announced that we and Sojitz had agreed to place Endako Mine on temporary suspension effective December 31, 2014, due to continued weakness in the molybdenum market. In connection with the temporary suspension, approximately 50% of salaried employees at Endako Mine were terminated by December 31, 2014, and the employment of the hourly employees have been temporarily suspended after the required 60-day notice period and will remain so suspended while the mine is on temporary suspension.

History

The Endako Mine deposit was discovered in 1927 by local hunters. Minor underground exploration work took place in subsequent years. In 1962, R&P Metals Corporation Ltd. began a diamond drilling program to evaluate the discovery and,

Table of Contents

based on the exploration results, incorporated a company named Endako Mines Ltd. Canadian Exploration Limited, a wholly owned subsidiary of Placer, entered into an option agreement with Endako Mines Ltd. in August 1962 and continued exploration on the property.

In March 1964, Placer decided to place the property into production. Production commenced in June 1965 at a plant capacity of approximately 10,000 tons per day (combined concentrator and roaster). Expansions in 1967 and improvements in 1980 increased the concentrator capacity. In 1982, the mine and concentrator were closed due to low molybdenum prices, but the roaster continued to operate, processing molybdenum concentrates from other operations on a toll basis.

The mine and mill were re-opened in 1986, and by 1989 production reached approximately 31,000 tons per day. In June 1997, TCML and Sojitz, the parties to the Endako Mine Joint Venture, purchased Endako Mine from Placer. We acquired TCML in October 2006 through our acquisition of Thompson Creek Metals Company USA.

Geology, Deposit Types and Mineralization

The Endako Mine deposit is located within the intermontane morphology/tectonic belt of British Columbia, Canada. The Endako Mine molybdenite deposit is hosted in the Endako quartz monzonite intrusive, a phase of the middle to late Jurassic François Lake Intrusions that form a large composite batholith. The deposit is genetically associated with the terminal stages of magmatic activity, represented by intrusion of the Casey monzogranite.

Molybdenite is the primary metallic mineral on the Endako Mine property. Minor pyrite, magnetite and chalcopyrite, and traces of sphalerite, bornite, specularite and scheelite are also present. Single occurrences of beryl and bismuthinite have been reported. Molybdenite occurs in two types of veins. Large veins (up to 1.2 meters wide) contain laminae and fine disseminations of molybdenite. The second vein type occurs as stockworks adjacent to the major veins in the form of fine fracture-fillings and veinlets of quartz-molybdenite. Pyrite is most abundant along the southern margin of the zone of molybdenum mineralization.

Exploration

No exploration activities were completed in 2014, and no exploration activities are planned for 2015, on the Endako Mine land tenure. A mine lease application filed in November 2013 to convert 24 mineral claims was successfully granted in June 2014. The new mine lease is required to allow mining in the areas we refer to as the Denak West Extension.

Endako Mine Joint Venture

The Endako Mine Joint Venture was formed on June 12, 1997 pursuant to the terms of the Exploration, Development and Mine Operating Agreement between TCML and Sojitz (the "Endako Mine Joint Venture Agreement"). We have been appointed manager of the Endako Mine Joint Venture with overall management responsibility for operations. As manager, we prepare annual budgets and production plans and submit them to Sojitz for approval. In the event Sojitz rejects any or all of a proposed budget or production plan, the parties are required to work to develop a mutually acceptable budget and production plan. As manager, we manage, direct and control Endako Mine, provided that each of the following actions requires the approval of both us and Sojitz: (i) disposition of all or a substantial portion of the Endako Mine assets; (ii) contracts with affiliates over \$500,000 or sales of product to our affiliates or affiliates of Sojitz; (iii) compensation for management of the business; (iv) modification of the Endako Mine Joint Venture Agreement; (v) any change in business purpose; (vi) any modifications or replacements to the production plan for Endako Mine; (vii) investment in other companies; (viii) any borrowing by the joint venture or loan to any third party or any guarantee; (ix) changes in the manager, other than by reasons of default; and (x) except in the case of emergency or unexpected expenditures, a discretionary capital expenditure in excess of \$1.0 million. Our and Sojitz's participating interests in the joint venture are currently 75% and 25%, respectively; those interests may be recalculated under certain circumstances set forth in the Endako Mine Joint Venture Agreement.

OTHER OPERATING PROPERTIES

Langeloth Metallurgical Facility

Our wholly-owned Langeloth Facility is located in Langeloth, Pennsylvania, approximately 40 kilometers west of Pittsburgh, on land we own in fee simple. The facility receives molybdenum disulfide concentrate from TC Mine,

Endako Mine and from third party producers that is either purchased for processing and re-sale or that is toll converted to finished products for third parties. The facility produces and sells ammonium perrhenate and rhenium metal pellets as well as sulfuric acid all

17

Table of Contents

recovered as by-products of processing the molybdenum disulfide. In addition, the Langeloth Facility calcines other metal containing materials from various third-party operations.

Four multiple-hearth furnaces are used for the conversion (roasting) of molybdenum disulfide concentrate into technical grade molybdenum oxide. These four roasters have the annual capacity to process 36 million pounds of molybdenum contained in concentrates. The molybdenum oxide can be sold as a finished product to customers or can be upgraded at the facility to molybdenum oxide briquettes, pure molybdenum trioxide powder or various sizes of ferromolybdenum products. Two furnaces are used to calcine non-hazardous metal containing materials that contain metals other than molybdenum.

The plant has been and continues to be upgraded by an ongoing capital improvement program. Further, an acid plant shutdown occurs approximately every three years to refurbish acid plant process equipment. Following an extended seven-week shutdown in 2012, we have planned a five-week shutdown in 2015.

EXPLORATION PROPERTIES

Berg Property

In October 2010, we acquired the Berg property as part of the Terrane acquisition. The Berg property is a copper, molybdenum, and silver exploration property that is located in the Omineca Mining Division within the Tahtsa Ranges of west-central British Columbia, Canada approximately 84 kilometers southwest of Houston and 23 kilometers northwest of the Huckleberry Mine. The Berg property is comprised of 115 mineral claims and one mining lease centered at 53° 48' North Latitude and 127° 26' West Longitude for a total of approximately 45,949 acres. The Berg property is 100% owned by us with a 1% net smelter return royalty held by Royal Gold on eight of the mineral claims and one mining lease, including those which host the deposit on the Berg property. All mineral claims and the mining lease are in good standing and good to dates ranging from August 2015 to November 2021. Mineral claims are subject to exploration expenditure obligations, or we may choose to pay annual fees to the province in lieu of exploration expenditures. We expect to renew such mineral claims and mining lease in the ordinary course.

Drilling on the property was initiated by Kennecott in 1965, and this led to the delineation of two main mineralized zones. In 1972, exploration and development of the Berg property were taken over by another owner under agreement with Kennecott, and by 1980, a total of 119 diamond drill holes for 20,128 meters had been completed on the Berg property. In 2007 and 2008, Terrane carried out diamond drill programs totaling 22,948 meters in 60 holes designed to confirm the results of previous work and define the resource with infill and step-out drilling, particularly below the historic resource, and provide fresh material for metallurgical test work. In 2011, we commissioned additional exploration and drilling delineation to support an advanced scoping study. The 2011 drilling program included 10,678 meters of drilling (35,024 feet). In 2014 a helicopter-supported surface mapping and sampling program was performed over the Berg property and the environmental baseline monitoring programs were maintained. In 2015, certain environmental monitoring programs will continue and additional geologic sampling and mapping will be considered.

Maze Lake Property

The Maze Lake property is an early-stage gold exploration project located in the Kivalliq District of Nunavut in Canada, 90 kilometers southwest of Rankin Inlet and 45 kilometers west of Whale Cove, both on Hudson Bay. An interest in the property was acquired by Terrane following the discovery of an 29 kilometer long gold trend that was identified by regional till sampling in 2000. The Maze Lake property consists of property covered by three Inuit Owned Lands Mineral Exploration Agreements with a total area of 12,409 hectares. Such Agreements allow us to terminate our interest in the property at any time.

In 2008, Terrane formed a joint venture (the "MLJV") with Laurentian Goldfields Ltd. to explore and develop the Maze Lake property. Upon formation of the MLJV, Terrane contributed its Maze Lake mining interests to the MLJV in return for a 43% interest in the MLJV. We acquired Terrane's interest in the MLJV in October 2010 as part of the Terrane acquisition. In June 2013, we acquired Laurentian Goldfields Ltd.'s interest in the MLJV, granted a 1% net smelter return royalty to Laurentian Goldfields Ltd., and terminated the MLJV.

The Mineral Exploration Agreements are in good standing, with the next annual holding fee of \$49,636 being due April 1, 2015 and the annual assessment work or payment of assessment work deficiency in the amount of \$397,912 being due June 30, 2015. In 2014, no drilling or field investigations were completed on the property. No additional drilling or field work is planned for 2015.

Table of Contents

MINERAL RESERVES

Our proven and probable mineral reserves have been estimated in accordance with the definitions of such terms adopted by the Canadian Institute of Mining, Metallurgy and Petroleum ("CIM") and incorporated in National Instrument 43-101 ("NI 43-101") by Canadian securities regulatory authorities. Technical reports have been filed regarding the disclosure of mineral reserves for our material property, Mount Milligan Mine, as required by NI 43-101. The proven and probable estimated mineral reserves are those tonnages contained within economically optimized pits, configured using current and predicted mining and processing methods and related operating costs and performance parameters. Mineral reserve estimates reflect our reasonable expectation that all necessary permits and approvals will be obtained and maintained. We believe that our proven and probable estimated mineral reserves are equivalent to proven and probable reserves as defined by the Securities and Exchange Commission's (the "SEC") Industry Guide 7. See the Glossary of Terms below for an explanation of mining terms used in this report.

The estimation of mineral reserves is constrained to an economically optimized pit based on all operating costs, including the costs to mine. Since all material lying within the optimized pit will be mined, the cut-off grade used in determining mineral reserves is estimated based on the material that, having been mined, is economic to transport and process without regard to primary mining costs (i.e., mining costs that were appropriately applied at the economic optimization stage).

The QA/QC controls program used in connection with the estimation of our mineral reserves consists of regular insertion and analysis of blanks and standards to monitor laboratory performance.

The following tables set forth the estimated copper and gold mineral reserves for Mount Milligan as of December 31, 2014:

Proven and Probable Copper and Gold Estimated Mineral Reserves at December 31, 2014⁽¹⁾

Property	Category	Metric Tonnes (millions)	Copper Grade (%Cu)	Contained Copper (millions of lbs)	Gold Grade (gram per tonne)	Contained Gold (millions of oz)
Mount Milligan	Proven—Mine	298.8	0.207	1,361.0	0.424	4.08
	Proven—Stockpile	1.3	0.184	5.4	0.469	0.02
	Probable—Mine	242.0	0.195	1,041.0	0.269	2.10
	Probable—Stockpile	—	—	—	—	—
	Proven + Probable	542.1	0.201	2,407.4	0.355	6.20
Total	Proven	300.1	0.206	1,366.4	0.424	4.10
	Probable	242.0	0.195	1,041.0	0.269	2.10
	Proven + Probable	542.1	0.201	2,407.4	0.355	6.20

The mineral reserve estimates for Mount Milligan Mine were prepared by Robert Clifford, our Director of Mine Engineering, who is a Qualified Person under NI 43-101. The mineral reserve estimates were prepared using an ultimate open pit design optimized at spot metal prices of \$3.00/lb copper, \$1,250/oz gold, an exchange rate of US\$1.00/C\$1.10, a cut-off grade of 0.176% copper equivalent, and takes into consideration metallurgical recoveries, concentrate grades, transportation costs, smelter treatment charges, and royalty and streaming arrangements in determining economic viability. The mineral reserve estimates are based on the cost and price assumptions included in the NI 43-101 technical report entitled "NI 43-101 Technical Report—Mount Milligan Mine—Northern Central British Columbia" dated January 21, 2015 and filed on SEDAR on January 21, 2015. Mill recoveries vary by rock type and region but average 84.2% copper and 72.5% gold. Anticipated losses resulting from beneficiation average approximately 4.0% copper and 2.5% gold.

The following table sets forth the estimated molybdenum mineral reserves for TC Mine and Endako Mine as of December 31, 2014:

Table of ContentsProven and Probable Molybdenum Estimated Reserves at December 31, 2014 ⁽¹⁾

Mine	Category	Metric Tonnes (millions)	Molybdenum Grade (%Mo)	Contained Molybdenum (millions of lbs)
TC Mine	Proven—Mine	34.3	0.077	58.3
	Proven—Stockpile	—	—	—
	Probable—Mine	31.7	0.068	47.3
	Probable—Stockpile	—	—	—
	Proven + Probable	66.0	0.073	105.6
Endako Mine	Proven—Mine	8.4	0.056	10.4
	Proven—Stockpile	1.7	0.039	1.4
	Probable—Mine	9.3	0.055	11.3
	Probable—Stockpile	14.0	0.041	12.7
	Proven + Probable	33.4	0.049	35.8
Total	Proven	44.4	0.072	70.1
	Probable	55.0	0.059	71.3
	Proven + Probable	99.4	0.065	141.4

The mineral reserve estimates for TC Mine and Endako Mine were prepared by the TC Mine and Endako Mine staff, respectively, under the supervision of Robert Clifford, our Director of Mine Engineering, who is a Qualified Person under NI 43-101. The mineral reserve estimates utilized a cut-off grade of 0.030% molybdenum ("Mo") and an average long-term molybdenum price of \$10.00 per pound. The mineral reserve for Endako Mine is stated on a 100% basis; we own 75% of Endako Mine. Mill recoveries vary by rock type and region but average 88.8% at TC Mine and 74.8% at Endako Mine. Anticipated losses resulting from beneficiation average 1% at both TC Mine and Endako Mine.

Reconciliation of Year-End 2014 and 2013 Proven and Probable Copper and Gold Estimated Mineral Reserves ⁽¹⁾

	Contained Copper (millions of lbs)	Copper Pounds (% of opening)	Contained Gold (millions of oz)	Gold Ounces (% of opening)
December 31, 2013	2,098	100%	5.95	100%
Depletion ⁽²⁾	(84)	(4)%	(0.29)	(5)%
Revisions and additions ⁽³⁾	393	19%	0.54	9%
December 31, 2014	2,407	115%	6.20	104%

(1) The figures incorporated in the table above were prepared by Robert Clifford, Director of Mine Engineering, who is a Qualified Person under NI 43-101.

(2) Depletion of mineral reserves reflects removal of in-situ pit reserves.

(3) Revisions/additions reflect changes due to exploration and economic model updates and optimizations utilizing cost and price assumptions as described in the NI 43-101 technical report entitled "NI 43-101 Technical Report—Mount Milligan Mine—Northern Central British Columbia" dated January 21, 2015 and filed on SEDAR on January 21, 2015.

Table of ContentsReconciliation of Year-End 2014 and 2013 Proven and Probable Molybdenum Estimated Mineral Reserves ⁽¹⁾

Property	TC Mine		Endako Mine	
	Contained Molybdenum (millions of pounds)	Pounds (% of opening)	Contained Molybdenum (millions of pounds)	Pounds (% of opening)
December 31, 2013	122.1	100%	75.8	100%
Depletions ⁽²⁾	(19.1)	(16)%	(16.3)	(22)%
Revisions and additions ⁽³⁾	2.5	2%	(23.7)	(31)%
December 31, 2014	105.5	86%	35.8	47%

⁽¹⁾ The figures incorporated in the table above were prepared by Robert Clifford, our Director of Mine Engineering, who is a Qualified Person under NI 43-101.

⁽²⁾ Depletion of mineral reserves reflects both removal of in-situ pit reserves and drawdown of stockpile reserves.

Revisions for TC Mine reflect the effect of higher realized grade during 2014. Revisions for Endako Mine reflect ⁽³⁾ changes due to exploration and economic model updates and optimizations utilizing an average long-term molybdenum price of \$10.00 per pound.

Reconciliation of Estimated Mineral Reserves Under NI 43-101 and Under SEC Industry Guide 7

As mineral reserves are reported under both NI 43-101 and SEC Industry Guide 7 standards, it is possible for mineral reserve figures to vary between the two standards due to the differences in reporting requirements under each standard. For example, NI 43-101 has a minimum requirement that mineral reserves be supported by a pre-feasibility study, whereas SEC Industry Guide 7 requires support from a detailed feasibility study that demonstrates that economic extraction is justified.

For our estimated mineral reserves at December 31, 2014, there is no difference between the mineral reserves as disclosed under NI 43-101 and those disclosed under SEC Industry Guide 7, and therefore no reconciliation is provided.

NON-RESERVES—ESTIMATED MEASURED AND INDICATED MINERAL RESOURCES

Cautionary note to US investors concerning estimates of measured and indicated mineral resources

This section uses the terms "measured mineral resources" and "indicated mineral resources." We advise U.S. investors that, while those terms are recognized and required by Canadian regulations, the SEC does not recognize them. U.S. investors are cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into mineral reserves.

The estimated measured and indicated mineral resources which are reported herein do not include that part of our mineral resources that have been converted to proven and probable mineral reserves as shown above. Measured and indicated mineral resources have been estimated in accordance with the definitions of such terms adopted by the CIM and incorporated in NI 43-101. We have filed a technical report regarding the disclosure of mineral resources for our material property, Mount Milligan Mine. Measured and indicated mineral resources are equivalent to mineralized material as such term is defined in SEC Industry Guide 7. See the Glossary of Terms below for an explanation of mining terms used in this report.

The total estimated measured and indicated mineral resources for all properties have been estimated at variable economic cut-off grades based on the metal prices provided below, and on economic parameters deemed realistic. The economic cut-off grades for mineral resources are lower than those for mineral reserves and are indicative of the fact that the mineral resource estimates include material that may become economic under more favorable conditions, including increases in metal prices.

Table of Contents

The following tables summarize our estimated non-reserves—measured and indicated mineral resources, exclusive of mineral reserves, at December 31, 2014:

Estimated Measured and Indicated Copper Mineral Resources at December 31, 2014

Property	Measured		Indicated		Measured & Indicated	
	Metric Tonnes (millions)	Copper Grade (%Cu)	Metric Tonnes (millions)	Copper Grade (%Cu)	Metric Tonnes (millions)	Copper Grade (%Cu)

Estimated Measured and Indicated Silver Mineral Resources at December 31, 2014

Property	Measured		Indicated		Measured & Indicated	
	Metric Tonnes (millions)	Silver Grade (gram/tonne)	Metric Tonnes (millions)	Silver Grade (gram/tonne)	Metric Tonnes (millions)	Silver Grade (gram/tonne)
Berg Property ⁽²⁾	53.3	4.5	452.7	3.7	506.0	3.8

The mineral resource estimates, exclusive of mineral reserves, for Mount Milligan Mine were prepared by Robert Clifford, Director of Mine Engineering, who is a Qualified Person under NI 43-101. The mineral resource estimates were tabulated within a conceptual open pit shell using spot metal prices of \$3.50/lb copper, \$1,500/oz gold, a cut-off grade of 0.176% copper equivalent, and takes into consideration metallurgical recoveries, concentrate grades, transportation costs, smelter treatment charges, and royalty and streaming arrangements. The mineral resource estimates are based on the cost and price assumptions included in a NI 43-101 technical report prepared for us entitled "NI 43-101 Technical Report—Mount Milligan Mine—Northern Central British Columbia" dated January 21, 2015 and filed on SEDAR on January 21, 2015.

The mineral resource estimate for the Berg property was approved by Robert Clifford, Director of Mine Engineering who is a Qualified Person under NI 43-101. The mineral resource estimate for the Berg property was prepared using a 0.30% copper equivalent cut-off, with copper equivalency defined using metal prices of \$1.60/lb copper, \$10.00/lb molybdenum, and \$10.00/oz silver, taking into account forecast metallurgical recoveries. Resources are reported to a maximum depth of 450 meters (1,476.38 feet) below surface.

The mineral resource estimates, exclusive of mineral reserves, for TC Mine and Endako Mine were prepared by the
(3) TC Mine and Endako Mine staff, respectively, under the supervision of Robert Clifford, Director of Mine
Engineering, who is a

Table of Contents

Qualified Person under NI 43-101. The mineral resource estimates utilized a cut-off grade of 0.025% Mo and an average long-term molybdenum price of \$12.00 per pound.

NON-RESERVES—ESTIMATED INFERRED MINERAL RESOURCES

Cautionary note to US investors concerning estimates of inferred mineral resources

This section uses the term "inferred mineral resources." We advise US investors that while this term is recognized and required by Canadian regulations, the SEC does not recognize it. "Inferred mineral resources" have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of inferred mineral resources will ever be converted into mineral reserves. In accordance with Canadian rules, estimates of inferred mineral resources cannot form the basis of feasibility or other economic studies. US investors are cautioned not to assume that part or all of the inferred mineral resources exists, or is economically or legally mineable.

Inferred mineral resources have been estimated in accordance with the definitions of such terms adopted by the CIM and incorporated in NI 43-101. We have filed technical reports regarding the disclosure of mineral resources for TC Mine and Endako Mine, Mount Milligan, and the Berg property. See the Glossary of Terms below for an explanation of mining terms used in this report.

The following tables summarize estimated non-reserves—inferred mineral resources as of December 31, 2014:

Estimated Inferred Mineral Resources

Property	Metric Tonnes (millions)	Copper Grade (%)	Gold Grade (gram/tonne)	Molybdenum Grade (%)	Silver Grade (gram/tonne)
Mount Milligan ⁽¹⁾	10.1	0.15	0.34	—	—
TC Mine ⁽²⁾	0.5	—	—	0.044	—
Endako Mine ⁽²⁾	2.2	—	—	0.039	—
Berg Property ⁽³⁾	144.6	0.23	—	0.033	2.5

The inferred mineral resource estimates for Mount Milligan Mine were prepared by Robert Clifford, Director of Mine Engineering, who is a Qualified Person under NI 43-101. The inferred mineral resource estimates were tabulated within a conceptual open pit shell using spot metal prices of \$3.50/lb copper, \$1,500/oz gold, a cut-off grade of 0.176% copper equivalent, and takes into consideration metallurgical recoveries, concentrate grades, transportation costs, smelter treatment charges, and royalty and streaming arrangements. The inferred mineral resource estimates are based on the cost and price assumptions included in a NI 43-101 technical report prepared for us entitled "NI 43-101 Technical Report—Mount Milligan Mine—Northern Central British Columbia" dated January 21, 2015 and filed on SEDAR on January 21, 2015.

The inferred mineral resource estimates for TC Mine and Endako Mine were prepared by the TC Mine and Endako Mine staff, respectively, under the supervision of Robert Clifford, Director of Mine Engineering, who is a Qualified Person under NI 43-101. The inferred mineral resource estimates utilized a cut-off grade of 0.025% Mo and an average long-term molybdenum price of \$12.00 per pound.

The inferred mineral resource estimate for the Berg property was approved by Robert Clifford, Director of Mine Engineering, who is a Qualified Person under NI 43-101. The inferred mineral resource estimate for the Berg property is reported using a 0.30% copper equivalent cut-off, with copper equivalency defined using metal prices of \$1.60/lb copper, \$10.00/lb molybdenum, and \$10.00/oz silver, taking into account forecast metallurgical recoveries. Resources are reported to a maximum depth of 450 meters (1,476.38 feet) below surface.

Table of Contents

GLOSSARY OF TERMS

SEC Industry Guide 7 Definitions

reserve	The term "reserve" refers to that part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination. Reserves must be supported by a feasibility ⁽¹⁾ study done to bankable standards that demonstrates the economic extraction. ("Bankable standards" implies that the confidence attached to the costs and achievements developed in the study is sufficient for the project to be eligible for external debt financing.) A reserve includes adjustments to the in-situ tonnes and grade to include diluting materials and allowances for losses that might occur when the material is mined.
proven reserve	The term "proven reserve" refers to reserves for which (a) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling and (b) the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape depth and mineral content of reserves are well-established.
probable reserve	The term "probable reserve" refers to reserves for which quantity and grade and/or quality are computed from information similar to that used for proven (measured) reserves, but the sites for inspection, sampling and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.
mineralized material ⁽²⁾	The term "mineralized material" refers to material that is not included in the reserve as it does not meet all of the criteria for adequate demonstration for economic or legal extraction.
non-reserves	The term "non-reserves" refers to mineralized material that is not included in the reserve as it does not meet all of the criteria for adequate demonstration for economic or legal extraction.

For SEC Industry Guide 7 purposes, the feasibility study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction is justified.

⁽²⁾ This category is substantially equivalent to the combined categories of measured mineral resource and indicated mineral resource specified in NI 43-101.

Table of Contents

NI 43-101 Definitions

mineral reserve	<p>The term "mineral reserve" refers to the economically mineable part of a measured or indicated mineral resource demonstrated by at least a preliminary feasibility study. The study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. A mineral reserve includes diluting materials and allowances for losses that may occur when the material is mined.</p>
proven mineral reserve	<p>The term "proven mineral reserve" refers to the economically mineable part of a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction is justified.</p>
probable mineral reserve	<p>The term "probable mineral reserve" refers to the economically mineable part of an indicated mineral resource, and in some circumstances, a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified.</p>
mineral resource	<p>The term "mineral resource" refers to a concentration or occurrence of diamonds, natural solid inorganic material, or natural solid fossilized organic material, including base and precious metals, coal, and industrial minerals, in or on the Earth's crust, in such form and quantity and of such a grade or quality that it has reasonable prospects for economic extraction. The location, quantity, grade, geological characteristics and continuity of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge.</p>
measured mineral resource	<p>The term "measured mineral resource" refers to that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are so well established that they can be estimated with confidence sufficient to allow the appropriate application of technical and economic parameters, to support production planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough to confirm both geological and grade continuity.</p>
indicated mineral resource	<p>The term "indicated mineral resource" refers to that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics can be estimated with a level of confidence sufficient to allow the appropriate application of technical and economic parameters, to support mine planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough for geological and grade continuity to be reasonably assumed.</p>
inferred mineral resource	<p>The term "inferred mineral resource" refers to that part of a mineral resource for which quantity and grade or quality can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes.</p>

Qualified Person ⁽¹⁾

The term "Qualified Person" refers to an individual who is an engineer or geoscientist with at least five years of experience in mineral exploration, mine development or operation or mineral project assessment, or any combination of these, has experience relevant to the subject matter of the mineral project and the technical report, and is a member in good standing of a professional association.

⁽¹⁾ SEC Industry Guide 7 does not require designation of a qualified person.

Additional Definitions

alteration—any change in the mineral composition of a rock brought about by physical or chemical means

assay—a measure of the valuable mineral content

chalcopyrite—common sulfide ore of copper, made of copper and iron sulfide

concentrate—the product of mineral flotation process which separates and concentrates ore minerals from waste material

Table of Contents

concentrator—plant and equipment that conducts process of mineral concentration

cut-off grade—when determining economically viable Mineral Reserves, the lowest grade of mineralized material that qualifies as ore, i.e. that can be mined and processed at a profit

diamond drilling—rotary drilling using diamond-set or diamond-impregnated bits, to produce a solid continuous core of rock sample

dissemination—where minerals occur as scattered particles in the rock

feasibility study—a comprehensive study of a mineral deposit in which all geological, engineering, legal, operating, economic, social, environmental and other relevant factors are considered in sufficient detail that it could reasonably serve as the basis for a final decision by a financial institution to finance the development of the deposit for mineral production.

formation—a distinct layer of sedimentary rock of similar composition

grade—quantity of metal per unit weight of host rock

granodiorite—a group of coarse-grained plutonic rocks intermediate in composition between quartz diorite and quartz monzonite containing quartz, plagioclase, potassium feldspar with biotite and hornblende

host rock—the rock in which a mineral or an ore body may be contained

hydrothermal—the products of the actions of heated water, such as a mineral deposit precipitated from a hot solution

in-situ—in its natural position

life-of-mine—a term commonly used to refer to the likely term of a mining operation and normally determined by dividing the tons of Mineral Reserve by the annual rate of mining and processing

mineral—a naturally occurring inorganic crystalline material having a definite chemical composition

mineralization—a natural accumulation or concentration in rocks or soil of one or more potentially economic minerals, also the process by which minerals are introduced or concentrated in a rock

Mo—molybdenum

molybdenite—a mineral of molybdenum disulfide; common sulphide ore of molybdenum

net smelter return (NSR)—refers to the revenue expected from ore delivered to the smelter, taking into account

metallurgical recoveries, concentrate grades, transportation costs and smelter treatment charges, usually measured on a per ton basis

open-pit—surface mining in which the ore is extracted from a pit or quarry, the geometry of the pit may vary with the characteristics of the ore body

ore—mineral bearing rock that can be mined and treated profitably under current or immediately foreseeable economic conditions

ore body—a mostly solid and fairly continuous mass of mineralization estimated to be economically mineable

ore grade—the average weight of the valuable metal or mineral contained in a specific weight of ore i.e. grams per tonne of ore

ounces—refer to troy ounces

outcrop—that part of a geologic formation or structure that appears at the surface of the Earth

oxide—gold bearing ore which results from the oxidation of near surface sulfide ore

porphyry—a deposit of molybdenum or copper bearing ores associated with intrusive igneous rocks of porphyritic texture

preliminary assessment—a study that includes an economic analysis of the potential viability of Mineral Resources taken at an early stage of the project prior to the completion of a preliminary feasibility study

Table of Contents

preliminary feasibility study and pre-feasibility study—each mean a comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration in the case of an open-pit, has been established and an effective method of mineral processing has been determined, and includes a financial analysis based on reasonable assumptions of technical, engineering, legal, operating, economic, social and environmental factors and the evaluation of other relevant factors which are sufficient for a qualified person, acting reasonably, to determine if all or part of the Mineral Resource may be classified as a Mineral Reserve

pyrite—common sulfide of iron

QA/QC—Quality Assurance/Quality Control is the process of controlling and assuring data quality for assays and other exploration and mining data

rock—indurated naturally occurring mineral matter of various compositions

sedimentary rock—rock formed at the Earth's surface from solid particles, whether mineral or organic, which have been moved from their position of origin and re-deposited

stockpile—a rock dump containing ore grade material to be processed at some point in the future

stockwork—a complex system of variably oriented veins

strip—to remove overburden in order to expose ore

sulfide—a mineral including sulfur (S) and iron (Fe) as well as other elements; metallic sulfur-bearing mineral often associated with gold mineralization

tailings—fine ground wet waste material produced from ore after economically recoverable metals or minerals have been extracted

ton—short ton, equal to 2,000 pounds, or 907.2 kilograms

tonne—metric tonne, equal to 1,000 kilograms or 2,204.6 pounds

vein—a thin, sheet-like crosscutting body of hydrothermal mineralization, principally quartz

volcanics—those originally molten rocks, generally fine grained, that have reached or nearly reached the Earth's surface before solidifying

The public can access our website at www.thompsoncreekmetals.com. From our website, you can download and print copies of our annual reports to shareholders, annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to any of those reports, as well as other reports relating to us that are filed with or furnished to the SEC or SEDAR. You can also download from our website our corporate governance policies, including our Corporate Governance Guidelines, Board of Directors Committee Charters, and our Code of Conduct and Ethics. The contents of our website are not incorporated into, and should not be considered, a part of this report. The public may also read and copy materials that we file with the SEC at the SEC's Public Reference Room, which is located at 100 F Street NE, Room 1580, Washington D.C. 20549. You can obtain information on the operation of the Public Reference Room by calling the SEC at (800) SEC-0330. The SEC also maintains a website that contains reports, proxy and information statements and other information regarding issuers that file electronically with the SEC at www.sec.gov.

Table of Contents

ITEM 1A. RISK FACTORS

Our operations and financial results are subject to various risks and uncertainties, including those described below, that could materially adversely affect our business, financial condition, results of operations, cash flows and the trading price of our common stock. Such risks are not the only ones we face and additional risks and uncertainties not presently known to us or that we currently deem immaterial may also affect our business.

Financial Risks

Extended declines in the prices of copper, gold and/or molybdenum would have a material adverse effect on our earnings and cash flows and could affect our ability to repay our debt. Fluctuations in the prices of copper, gold and/or molybdenum can cause significant volatility in our financial performance and materially and adversely affect the trading prices of our debt and common stock.

Our business is dependent on the prices of copper, gold and molybdenum, and given the fact that we are only operating Mount Milligan Mine at the present time, fluctuations of copper and gold prices will have a greater impact on our operating performance in the near future. The prices of copper, gold and molybdenum are volatile and are affected by numerous factors beyond our control. Factors tending to influence such prices include the following:

- the rates of global economic growth;
- regional and worldwide supply, including the start-up of new primary and bi-product mines;
- regional and worldwide demand for products containing copper, gold and/or molybdenum;
- the availability and cost of substitute materials;
- inventory levels;
- our production costs and the production costs of our competitors;
- expectations with respect to the rate of inflation;
- the relative strength of the US dollar and certain other currencies;
- interest rates;
- global or regional political or economic conditions, including interest rates and currency values; and
- sales by central banks and other holders, speculators and producers in response to any of the above factors.

The prices of copper, gold and molybdenum have fluctuated historically. During the three years ended December 31, 2014, the average spot copper price on the London Metals Exchange ranged from a low of \$3.01 to a high of \$3.96 per pound, the average London P.M. fixed prices for gold per ounce on the London Bullion Market ranged from a low of \$1,195 to a high of \$1,792 and the average price for molybdenum quoted in Platts Metals Week ranged from a low of \$8.70 to a high of \$15.20 per pound. There is no assurance that any hedging transactions designed to reduce the risk associated with fluctuations in metal prices will be successful.

Any decline in the prices of copper, gold or molybdenum adversely impacts our revenues, net income and cash flows and could affect our ability to make necessary capital investments, repay our debt and meet our debt service and other fixed obligations, and depress the trading prices of our common stock and our publicly traded debt securities.

Sustained declines in prices could also:

- cause us to revise our operating plans, resulting in reduced output, temporary suspension of operations or closure of one or more of our mines or other facilities;
- further reduce revenues through production declines due to cessation of mining of deposits that have become uneconomic;
- reduce funds available for capital expenditures, including installation of a secondary crushing circuit at Mount Milligan Mine;
- delay or prevent our ability to make accretive acquisitions or conduct exploration work;
- reduce existing reserves due to economic viability; and
- cause us to write down assets and accelerate depletion, reclamation and closure charges.

Table of Contents

Extended delays and additional material capital requirements to fully ramp up operations at Mount Milligan Mine could have a material adverse effect on our business, financial condition and results of operations.

While we achieved commercial production at Mount Milligan Mine (defined as 30 days of 60% design capacity mill throughput) as of February 18, 2014 and reached approximately 80% of design throughput in the second half of December 2014, ramp-up efforts continue, and we will need to make certain additional capital investments to reach on a consistent basis throughput of 60,000 tpd. As previously disclosed, we have determined that a secondary crushing circuit at Mount Milligan Mine will be necessary to consistently reach 60,000 tpd, but due to current metal prices, construction will not commence until market conditions improve. If we experience extended delays in completing the ramp-up phase, experience other operational challenges requiring additional material capital expenditures, and/or copper and gold prices decline significantly, we may need to write down Mount Milligan Mine's assets or make the decision to cease mining operations and production at Mount Milligan Mine, each or both of which would have a material adverse impact on our business. Our profitability will be substantially impacted by our ability to successfully operate Mount Milligan Mine at design capacity within our projected time frame and budget.

Our substantial indebtedness could adversely affect our financial condition.

As of December 31, 2014, our total debt was approximately \$944.7 million, including equipment lease obligations, and we have unused net funding commitments of \$12.6 million available under the Caterpillar equipment financing facility. We also have \$761.5 million in deferred revenue under our Gold Stream Arrangement. Until the deposits received in the Gold Stream Arrangement have been fully offset against Royal Gold's purchases of gold under the agreement, the deposits will be secured by our Mount Milligan Mine assets. After the deposits have been fully offset, Royal Gold will continue to have a security interest in 52.25% of the refined gold produced from Mount Milligan Mine.

Subject to the limits contained in the indentures that govern our outstanding 2017 Notes, 2018 Notes and 2019 Notes, the amended and restated gold stream agreement with Royal Gold, and our other debt instruments, we may be able to incur additional debt. If we do so, the risks related to our high level of debt could intensify. Specifically, our high level of debt could have important negative consequences, including:

- making it difficult for us to satisfy our obligations with respect to our debt and increasing the risk that we default on our debt obligations;
- limiting our ability to obtain additional financing to fund future working capital, capital expenditures, acquisitions or other general corporate requirements;
- requiring a substantial portion of our cash flows to be dedicated to debt service payments instead of other purposes, thereby reducing the amount of cash flows available for working capital, capital expenditures, acquisitions and other general corporate purposes;
- increasing our vulnerability to declines in the prices of our commodities, general adverse economic and industry conditions;
- limiting our flexibility in planning for and reacting to changes in the industry in which we compete;
- limiting management's discretion in operating our business;
- placing us at a disadvantage compared to other, less leveraged competitors;
- increasing our cost of borrowing; and
- limiting our ability to pursue certain types of strategic opportunities.

We may be unable to generate sufficient cash to service all of our indebtedness and meet our ongoing liquidity needs, and we may not be able to refinance all or a portion of our debt on commercially reasonable terms or at all.

Our ability to make scheduled payments or to refinance our debt and to fund our planned capital expenditures and other liquidity needs depends on our financial and operating performance, which is subject to multiple factors, including prevailing economic conditions and commodity prices, some of which are beyond our control. There is no assurance that we will generate sufficient cash flow from operations or be able to obtain additional financing, on commercially reasonable terms or at all, to service our debt and fund our ongoing liquidity needs. We may need to refinance all or a portion of our existing debt on or before maturity. Our ability to restructure or refinance our debt

depends on the condition of the capital markets and our financial condition, and there is no assurance that we will be able to do so on commercially reasonable terms or at all.

The indentures that govern our outstanding 2017 Notes, 2018 Notes and 2019 Notes and our Amended and Restated Gold Stream Agreement with Royal Gold contain covenants that restrict our current and future operations and limit our flexibility and ability to respond to changes or take certain actions.

The indentures that govern our outstanding 2017 Notes, 2018 Notes and 2019 Notes contain certain restrictive covenants that impose significant operating and financial restrictions on us and, in some circumstances, limit our ability to engage in actions that may be in our long-term best interest, including, among other things, our ability to:

Table of Contents

- incur additional debt;
- sell, lease or transfer our assets;
- pay dividends or make other distributions or repurchase or redeem capital stock;
- prepay, redeem or repurchase certain debt;
- make loans or investments;
- enter into agreements restricting our subsidiaries' ability to pay dividends;
- make capital expenditures and investments;
- guarantee debts or other obligations;
- create liens;
- enter into transactions with our affiliates; and
- enter into certain merger, consolidation or other reorganization transactions.

In addition, our amended and restated gold stream agreement with Royal Gold contains restrictions on our ability to incur additional secured debt.

These restrictions could limit our ability to grow in accordance with our strategy or secure the needed working capital to withstand future downturns in our business or the economy in general, or otherwise take advantage of business opportunities that may arise, any of which could place us at a disadvantage relative to our competitors that may have less debt and are not subject to such restrictions.

A default under any of our indebtedness arrangements could trigger cross defaults to our other agreements, which could have a material adverse effect on our financial condition.

A failure to satisfy any of our debt obligations could be exacerbated by cross default provisions. For example, a default under the Caterpillar equipment financing facility will trigger cross defaults to our amended and restated gold stream agreement with Royal Gold, and vice versa, and could also trigger cross defaults to the indentures governing our outstanding notes and other material agreements. In the event of a default under the Caterpillar equipment financing facility, Caterpillar could: (1) terminate the lease by us of equipment purchased by the lender and leased to us pursuant to the facility; (2) terminate the lender's obligation to purchase additional equipment and lease such equipment to us pursuant to the terms of the facility; (3) accelerate the payment of all lease payments unpaid under the facility, together with default interest; (4) accelerate the payment of the balance of the purchase price for equipment, which would have been due and payable from the date of termination; and (5) foreclose on the equipment purchased and leased under the facility and apply the proceeds from the sale of such equipment to any shortfall in the payment by us of amounts due. In the event of default under our amended and restated gold stream agreement with Royal Gold, Royal Gold could require us to repay the amounts Royal Gold has invested in Mount Milligan Mine, as adjusted and reflected in the deposit record maintained in accordance with the agreement, which amounts totaled \$734.4 million as of December 31, 2014. In the event of a default under the indentures governing the 2017 Notes, 2018 Notes and 2019 Notes, the trustee or holders of at least 25% in principal of the outstanding 2017 Notes, 2018 Notes and 2019 Notes, as applicable, may declare the principal, premium, if any, and accrued and unpaid interest on the notes to be immediately due and payable. If we were to default under any of these arrangements, we may not have sufficient assets to repay such indebtedness upon a default or have access to sufficient alternative sources of funds. If we are unable to repay the indebtedness, the lenders could foreclose against the assets securing their borrowings and we could be forced into bankruptcy or liquidation.

We may enter into provisionally-priced sales contracts, which could have a negative impact on our revenues if prices decline.

From time to time, we enter into provisionally-priced sales contracts, whereby the contracts settle at prices to be determined at a future date. The future pricing mechanism of these agreements constitutes an embedded derivative, which is bifurcated and separately marked to estimated fair value at the end of each period. Changes to the fair value of embedded derivatives related to sales agreements are included in sales revenue in the determination of net income. To the extent final prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to sales, respectively, is recorded each reporting period until the date of final pricing. Accordingly, in times of falling commodities prices, our revenues are negatively impacted by lower prices received for contracts priced at current

market rates and also from a decrease related to the final pricing of provisionally-priced sales pursuant to contracts entered into in prior years; in times of rising commodities prices, the opposite occurs.

30

Table of Contents

A lowering or withdrawal of the ratings assigned to our debt securities by rating agencies may increase our future borrowing costs and reduce our access to capital.

Our debt currently has a non-investment grade rating, and any rating assigned could be lowered or withdrawn entirely by a rating agency if, in that rating agency's judgment, future circumstances relating to the basis of the rating, such as adverse changes, so warrant. Consequently, real or anticipated changes in our credit ratings will generally affect the market value of our outstanding debt securities. Any future lowering of our ratings likely would make it more difficult or more expensive for us to obtain additional debt financing and could lead our suppliers and other third parties with whom we do business to require us to provide financial assurance in the normal course of our operations.

Our operations are subject to currency fluctuations, which could adversely affect our results of operations and financial condition.

Exchange rate fluctuations may affect the costs that we incur in our operations. Our costs for Endako Mine and Mount Milligan Mine are incurred principally in Canadian dollars. However, our future revenue is tied to market prices for copper, gold, molybdenum, and silver, which are denominated in US dollars. The appreciation of the Canadian dollar against the US dollar can increase the cost of our production and capital expenditures in US dollars, and our results of operations and financial condition could be materially adversely affected. Although we have in the past used, and may in the future use, hedging strategies to limit our exposure to currency fluctuations, there can be no assurance that such hedging strategies will be successful or that they will mitigate the risk of such fluctuations.

Mine closure and reclamation costs for environmental liabilities may exceed the provisions we have made and our inability to provide reclamation bonding or maintain insurance could adversely affect our operating results and financial condition.

We are required by US federal and state laws and Canadian federal and provincial laws to provide financial assurance sufficient to allow a third party to implement approved closure and reclamation plans if we are unable to do so. These laws are complex and vary from jurisdiction to jurisdiction. The laws govern the determination of the scope and cost of the closure and reclamation obligations and the amount and forms of financial assurance. The amount and nature of the financial assurances are dependent upon a number of factors, including our financial condition and reclamation cost estimates.

As of December 31, 2014, we had provided the appropriate regulatory authorities in the United States and Canada with approximately \$79 million in reclamation financial assurance for our share of mine closure obligations in the various jurisdictions in which we operate. As our operations expand or reclamation expenses increase, our reclamation obligations and the financial assurances that we are required to provide may increase accordingly. Changes to these amounts, as well as the nature of the security to be provided, could significantly increase our costs, making the maintenance and development of existing and new mines less economically feasible. To the extent that the value of the security provided to the regulatory authorities is or becomes insufficient to cover the amount of financial assurance we are required to post, we would be required to replace or supplement the existing security with more expensive forms of security, which might include cash deposits, which would reduce our cash available for operations and financing activities.

We have initiated discussions with relevant US federal and state agencies concerning additional bonding or funding of a trust agreement to cover long-term water treatment at TC Mine, although we are not currently under any requirement to do so. The amount of funding required is subject to numerous variables, potentially including an appropriate discount rate, and cannot be determined at this time. We may be required to engage in a similar discussion with provincial authorities in British Columbia with respect to the Endako Mine.

There can be no assurance that we will be able to maintain or add to our current level of financial assurance. Failure to provide regulatory authorities with the required financial assurances could potentially result in the closure of one or more of our operations, which could result in a material adverse effect on our operating results and financial condition.

We are required, from time to time, to post financial assurances, and there can be no assurance that we will continue to be able to obtain financial assurances on acceptable terms.

In addition to our reclamation bonding obligations, we are from time to time required to post other financial assurance in the normal course of conducting our daily activities. This financial assurance can take several forms, including, but not limited to, letters of credit, performance bonds, deposits into escrow accounts for the benefit of the counterparty, trust funds or other funding mechanisms for long-term, post-reclamation obligations or the posting of cash collateral directly with the counterparty. In each case, the form of financial assurance to be provided is dictated by several factors, including expected length of time the financial assurance obligation is expected to remain outstanding, the amount of the obligation, the cost to us of providing the various forms of financial assurance and the creditworthiness of the counterparty. Our ability to obtain certain forms of financial assurance going forward will be impacted by our future financial performance, changes to our credit rating and other factors that may be beyond our control. There can be no assurance that we will be able to obtain certain forms of financial

Table of Contents

assurance going forward or that we will be able to post cash collateral in lieu of being able to secure one of these other forms of financial assurance.

We will rely on a few key customers for our copper-gold concentrate from Mount Milligan Mine, and the loss of any one key customer could reduce our revenues.

We have entered into four multi-year concentrate sales agreements for the sale of copper-gold-silver concentrate produced at Mount Milligan Mine. Pursuant to these agreements, we have agreed to sell an aggregate of approximately 140,000 tonnes of concentrate in calendar year 2015, 140,000 tonnes in calendar year 2016, and 40,000 tonnes in each of calendar years 2017 and 2018. A breach of the applicable sales agreement by us or the applicable customer, a significant dispute with one of these customers, a force majeure event affecting the parties' respective performances under the agreement, early termination of the agreement, or any other event significantly negatively impacting the contractual relationship with one of these customers could harm our financial condition. If, in such an event, we are unable to sell the affected concentrate volume to another customer, or we sell the affected concentrate to another customer on terms less advantageous to us, our revenues could be negatively impacted.

Our commodity hedging activities may reduce the realized prices we receive for our copper and gold, and involve market risk for the fair value of the derivatives, credit risk that our counterparties may be unable to satisfy their obligations to us, and financial risk due to fluctuations in the fair value of the derivatives.

In order to manage our cash flow exposure to copper and gold price volatility in selling production from Mount Milligan Mine, we enter into commodity derivatives from time to time for a portion or all of our expected production. Additionally, we receive cash provisional payments in selling production for Mount Milligan Mine, thus requiring that we purchase gold in order to satisfy our obligation to pay Royal Gold in gold. We enter into commodity derivatives from time to time in order to manage our gold price risk that arises when physical purchase and concentrate sales pricing periods do not match. We currently have in place unsecured hedging lines with various banks and trading companies in order to manage these exposures.

Commodity derivatives may limit the prices we actually realize and therefore could reduce our copper and gold revenues in the future. Our commodity hedging activities could impact our earnings in various ways, including recognition of certain mark-to-market gains and losses on derivative instruments. The fair value of our derivative instruments could fluctuate significantly between periods.

Our commodity derivatives may expose us to significant market risk, which is the risk that the fair value of a commodity derivative might be adversely affected by a change in underlying commodity prices or a change in our expected production, which may result in a significant financial loss on the derivative. We mitigate the potential market risk by establishing trading agreements with counterparties under which we are not required to post any collateral or make any margin calls on our derivatives. Our counterparties cannot require settlement solely because of an adverse change in the fair value of a derivative. We also mitigate the risk of having commodity derivative transactions in excess of our production by entering into derivatives for only a portion of our expected production. Our commodity derivatives also expose us to credit risk that counterparties may be unable to satisfy their obligations to us. We mitigate the potential credit risk by entering into derivatives with a number of counterparties, limiting the amount of exposure to any one counterparty, and monitoring the financial condition of the counterparties. If any of our counterparties were to default on its obligations to us under the derivative transaction or seek bankruptcy protection, it could result in a larger percentage of our future production being subject to commodity price changes which may have a significant adverse effect on our cash flow, our earnings and our financial condition. The risk of counterparty default is heightened in a poor economic environment.

The estimates contained in our production and cost guidance may not be achieved.

We provide estimates of future production, cash costs and capital costs for our operations. No assurance can be given that such estimates will be achieved. Many of the factors described in this Item 1A may result in our failure to achieve our production estimates or materially increase our costs, either of which would have an adverse impact on our future cash flows, results of operations, and financial condition.

An extended decline in metals prices, an increase in operating or capital costs, or a reduction in mineral reserve estimates, among other things, may cause us to record additional write downs, which could negatively impact our

results of operations.

When events and circumstances indicate that the carrying amount of our long-lived assets may not be recoverable, we evaluate the recoverability of the carrying value by comparing it to the anticipated undiscounted cash flows from such asset or asset group. Under U.S. GAAP, the carrying value of a long-lived asset or asset group is considered impaired when the anticipated undiscounted cash flows from such asset or asset group is less than its carrying value. The economic environment,

32

Table of Contents

copper, gold and molybdenum prices, and our stock price may be considered as impairment indicators for the purposes of these impairment assessments. As disclosed in Item 7 of this Form 10-K, we have recorded an aggregate of \$104.8 million in non-cash write downs of our exploration properties and our molybdenum fixed assets and materials and supplies inventory in 2014, primarily as a result of adverse conditions in the molybdenum market. If prices of copper, gold, and molybdenum decline for an extended period of time, if we fail to contain costs, or if we are required to reduce our mineral reserve estimates at our mines, we may be required to recognize further asset impairments and record additional write downs in the future, which would have an adverse impact on our results of operations.

Operational Risks

Our business is subject to production and operational risks that could adversely affect our business and our insurance may not cover these risks and hazards adequately or at all.

Mining and metals processing involve significant production and operational risks, some of which are outside of our control, including the following:

- unanticipated ground and water conditions;
- adverse claims to water rights and shortages of water to which we have rights;
- adjacent or adverse land or mineral ownership that results in constraints on current or future mine operations;
- geological problems, including earthquakes and other natural disasters;
- metallurgical and other processing problems;
- unusual or unexpected rock formations;
- ground or slope failures;
- tailings design or operational issues, including dam breaches or failures;
- structural cave-ins, wall failures or rock-slides;
- flooding or fires;
- equipment failures;
- periodic interruptions due to inclement or hazardous weather conditions or operating conditions and other force majeure events;
- lower than expected ore grades or recovery rates;
- accidents;
- delays in the receipt of or failure to receive necessary government permits;
- the results of litigation, including appeals of agency decisions;
- delays in transportation;
- interruption of energy supply;
- labor disputes;
- inability to obtain satisfactory insurance coverage;
- the availability of drilling and related equipment in the area where mining operations will be conducted; and
- the failure of equipment or processes to operate in accordance with specifications or expectations.

These risks could result in damage to, or destruction of, our mines, mills and roasting facilities, resulting in partial or complete shutdowns, personal injury or death, environmental or other damage to our properties or the properties of others, delays in mining, reduced production, monetary losses and potential legal liability. Milling operations are subject to hazards, such as equipment failure or failure of retaining dams around tailings disposal areas that may result in personal injury or death, environmental pollution and consequential liabilities.

In addition, we rely on a few key vendors for the transportation of concentrate from Mount Milligan Mine to our customers. Concentrate is transported from the mine site to Mackenzie, British Columbia, Canada by truck pursuant to a contract with a single trucking company, then to Vancouver by rail pursuant to a contract with a single railway operator, stored at the Port of Vancouver pursuant to a contract with the Port of Vancouver terminal operator, and shipped to our customers pursuant to a contract with a single shipping provider. A breach of the applicable contract by any of these vendors, a significant dispute with any of these vendors, a force majeure event or other operational or financial issues affecting one or more of these vendors, including labor strikes or work stoppages, or any other event

that would significantly impede the ability of these vendors to perform their contractual obligations to us or that would have a significant negative impact on our contractual relationship with them would adversely affect our ability to satisfy our obligations to our customers, which could have a material impact on our financial condition and results of operations.

Our insurance will not cover all the potential risks associated with our operations. In addition, although certain risks are insurable, we may be unable to maintain insurance to cover these risks at economically feasible premiums. Moreover, insurance

Table of Contents

against risks such as environmental pollution or other hazards as a result of exploration and production is not generally available to us or to other companies in the mining industry on acceptable terms. We might also become subject to liability for pollution or other hazards that may not be insured against or that we may elect not to insure against because of premium costs or other reasons. Losses from these events may cause us to incur significant costs that could have a material adverse effect upon our business. Furthermore, should we be unable to fund fully the cost of remedying an environmental problem, we might be required to suspend operations or enter into interim compliance measures pending completion of the required remedy.

Increased operating costs could affect our profitability.

Costs at any particular mining location are subject to variation due to a number of factors, such as changing ore grade, changing metallurgy and revisions to mine plans in response to the physical shape and location of the ore body. In addition, costs at our mines and at our

Facility are affected by the price of input commodities, such as fuel, electricity, labor, chemical reagents, grinding media, mill liners, explosives, steel and concrete. Commodity costs are, at times, subject to volatile price movements, including increases that could make production at certain operations less profitable and changes in laws and regulations affecting their price, use and transport. Reported costs may also be affected by changes in accounting standards. A material increase in costs at any significant location could have a significant effect on our profitability and operating cash flow.

Our mining production depends on the availability of sufficient water supplies.

Our operations require significant quantities of water for mining, ore processing and related support facilities.

Continuous production at our mines depends on our ability to maintain our water rights and claims. Although each operation has sufficient water rights and claims to cover current operational demands, we cannot predict the potential outcome of future legal proceedings affecting our water rights, claims and uses. The failure to obtain needed water permits, the loss of some or all water rights for any of our mines, in whole or in part, or shortages of water to which we have rights due to weather, equipment issues or other factors could require us to curtail or close mining production and could prevent us from pursuing expansion opportunities.

The temporary shutdown of any of our operations could expose us to significant costs and adversely affect our access to skilled labor.

From time to time, we may have to temporarily shut down one or more of our operating sites if they are not commercially viable due to factors such as declines in metal prices, increased costs, and adverse changes in interest rates or currency exchange rates. For example, effective December 31, 2014, we and our joint venture partner temporarily suspended operations at Endako Mine due to recent and expected ongoing weakness in the molybdenum price. During this temporary suspension and other temporary shutdowns that may arise in the future, we will have to continue to expend capital to maintain the site or facility and equipment. In addition, reductions in workforce, advance notice requirements under collective labor agreements or applicable law, and severance obligations arising from such suspension could cause us to incur significant labor costs. Furthermore, temporary shutdowns may adversely affect our future access to skilled labor, as employees who are laid off may seek employment elsewhere.

In addition, if our operations are shut down for an extended period of time, we may be required to engage in environmental remediation of the plant sites or accelerated reclamation of our mines, which would require us to incur additional costs. The costs of ramping up production at one of our operations following a temporary shutdown could be significant. Given the costs involved in a temporary shutdown of our operations, we may instead choose to continue to operate those operations at a loss. Such a decision could have a material adverse effect on our results of operations and financial condition.

We are subject to substantial government regulation. Changes to regulation or more stringent implementation could have a material adverse effect on our results of operations and financial condition.

Our mining, processing, development and mineral exploration activities are subject to various laws governing prospecting, development, production, taxes, labor standards and occupational health, mine safety, toxic substances and other matters. Mining and exploration activities are also subject to various laws and regulations relating to the protection of the environment. No assurance can be given that we will remain in compliance with applicable

regulations or that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner that could limit or curtail production or development of our properties. Amendments to current laws and regulations governing our operations and activities or more stringent implementation thereof could have a material adverse effect on our business, financial condition and results of operations.

Over the course of the last several years, significant new corporate governance and disclosure regulations and requirements have been adopted by US federal and state and Canadian federal, state and provincial governments, as well as the

Table of Contents

stock exchanges on which our common stock is listed. We are required to expend significant resources to monitor and implement these new rules and regulations. These additional compliance costs and related diversion of the attention of management and key personnel could have a material adverse effect on our business, financial condition and results of operations.

Estimates of mineral reserves and projected cash flows may prove to be inaccurate, which could negatively impact our results of operations and financial condition.

There are numerous uncertainties inherent in estimating mineral reserves and the future cash flows that might be derived from their production. Accordingly, the figures for mineral reserves and future cash flows contained in this Form 10-K are estimates only. In respect of mineral reserve estimates, no assurance can be given that the anticipated tonnages and grades will be achieved, that the indicated level of recovery will be realized or that mineral reserves can be mined or processed profitably. The ore grade actually recovered may differ from the estimated grades of the mineral reserves and mineral resources.

In addition, actual future cash flows may differ materially from estimates. Estimates of mineral reserves, and future cash flows to be derived from the production of such mineral reserves, necessarily depend upon a number of variable factors and assumptions, including, among others, geological and mining conditions that may not be fully identified by available exploration data or that may differ from experience in current operations; historical production from the area compared with production from other producing areas; the assumed effects of regulation by governmental agencies and assumptions concerning metal prices; exchange rates; interest rates; inflation; operating costs; development and maintenance costs; reclamation and post-reclamation costs; and the availability and cost of labor, equipment, raw materials and other services required to mine and refine the ore. Market price fluctuations of copper, gold and molybdenum, as well as increased production costs or reduced recovery rates, may render mineral reserves containing relatively lower grades of mineralization uneconomical to recover and may ultimately result in a restatement of mineral resources. In addition, there can be no assurance that mineral recoveries in small scale laboratory tests will be duplicated in larger scale tests under on-site conditions or during production.

For these reasons, estimates of our mineral reserves contained in this Form 10-K, including classifications thereof based on probability of recovery, and any estimates of future cash flows expected from the production of those mineral reserves, prepared by different engineers or by the same engineers at different times may vary substantially. The actual volume and grade of mineral reserves mined and processed, and the actual cash flows derived from that production, may not be as currently anticipated in such estimates. If our actual mineral reserves or cash flows are less than our estimates, our results of operations and financial condition may be materially impaired.

Future growth depends on our ability to bring new mines into production and to expand mineral reserves at existing mines.

Our ability to replenish our reserves is important to our long-term viability. Depleted reserves can be replaced in several ways, including by expanding known ore bodies, locating new deposits or acquiring new reserves from third parties. Exploration projects involve many risks, require substantial expenditures and may not result in the discovery of sufficient additional mineral deposits that can be mined profitably. Once a site with mineralization is discovered, it may take several years from the initial phases of drilling until production is possible, if ever, during which time the economic feasibility of production may change. As a result, there is no assurance that current or future exploration programs, such as the Berg property, and additional drilling at our existing operating mines, will be successful.

We intend to grow our business by acquiring quality mining assets. However, our capital available for new exploration projects and acquisitions is constrained due in large part to our substantial indebtedness incurred in connection with the development of Mount Milligan Mine and declines in metals prices. In addition, there can be no assurance that suitable acquisition opportunities will be identified or, if identified, that acquisitions will be consummated on favorable terms or at all. Our ability to identify, consummate and to integrate effectively any future acquisitions on terms that are favorable to us may be limited by the number of attractive acquisition targets, internal demands on our resources, competition from other mining companies and, to the extent necessary, our ability to obtain financing on satisfactory terms, or at all. In addition, we compete for attractive acquisition targets with other potential buyers that have more financial and other resources than us. There is a risk that depletion of reserves will not be offset

by discoveries or acquisitions. As a result, we cannot provide assurance that our exploration, development or acquisition efforts will result in any new commercial mining operations or yield new mineral reserves to replace or expand current mineral reserves. If we are not able to replace depleted reserves, it could have a material adverse effect on our business, prospects, results of operations and financial position.

Certain of our mines and exploration properties are located on land that is or may become subject to traditional territory and/or title claims by certain First Nations, and such claims and the attendant obligations of the provincial and federal governments to those First Nations may affect our current and future operations.

Table of Contents

Mount Milligan Mine, Endako Mine, the Berg property, and certain of our other properties are located on land in British Columbia and Nunavut that is or may become subject to various use and/or title claims by First Nations. The nature and extent of First Nations' rights and title to territory in Canada has been, and continues to be, the subject of extensive debate, claims, and litigation. In 2014, the Supreme Court of Canada recognized, for the first time in history, aboriginal title to a certain tract of land in British Columbia. While this recognition does not legally change the consultation and accommodation obligations of the provincial and federal governments with respect to actions affecting the land, including actions to approve or grant mining rights or permits, the decision may impact governmental actions and processes relating to economic development on such lands going forward, which could adversely impact our ability to obtain permits, licenses, and other approvals for our operations or exploration and development projects. Opposition by First Nations to our presence, operations or development on land subject to their traditional territory or title claims could negatively impact us in terms of public perception, costly legal proceedings, potential blockades or other interference by third parties in our operations, or court-ordered relief impacting our operations. In addition, we may be required to, or may voluntarily, enter into certain agreements with such First Nations in order to facilitate development of our properties, which could reduce the expected earnings or income from any future production.

Shortages of critical parts, equipment and skilled labor may adversely affect our operations and development projects. The mining industry has been impacted, from time to time, by increased demand for critical resources such as input commodities, drilling equipment, milling equipment, tires and skilled labor. These shortages have, at times, impacted the efficiency of our operations and resulted in cost increases and delays related to construction of the new mill at Endako Mine and the construction of Mount Milligan Mine. Such cost increases and delays affect operating costs, capital expenditures and production and construction schedules.

We are required to obtain government permits in order to conduct operations.

Government approvals and permits are currently required in connection with all of our operations, and further approvals and permits may be required in the future. We must obtain and maintain a variety of licenses and permits, which include or cover without limitation air quality, water quality, water rights, dam safety, emergency preparedness, hazardous materials, waste rock management, solid waste and tailings operations. The duration and success of our efforts to obtain permits are contingent upon many variables outside of our control. Obtaining governmental permits may increase costs and cause delays depending on the nature of the activity to be permitted and the applicable requirements implemented by the permitting authority. There can be no assurance that all necessary permits will be obtained or timely obtained and, if obtained, that the costs involved will not exceed our estimates or that we will be able to maintain such permits. To the extent such approvals are required and not obtained or maintained, our operations may be curtailed, or we may be prohibited from proceeding with planned exploration, development or operation of our mineral properties.

Our Langeloth Facility is currently operating with a National Pollutants Discharge Elimination System ("NPDES") permit, the terms of which have expired. However, the Langeloth Facility is authorized to continue to operate under its existing permit until a renewed permit is issued. On June 30, 2014, the Pennsylvania Department of Environmental Protection ("PaDEP") issued to us a final Title V air quality permit for the Langeloth Facility. A new NPDES permit, or revisions to our air quality permit, may contain more onerous requirements with which we must comply, and we could be required to install costly new pollution control equipment or to curtail or cease our operations, and our business may be adversely affected. Violations of the existing, or new, air quality or NPDES permit conditions at the Langeloth Facility could result in a range of criminal and civil penalties under the federal Clean Water Act and Clean Air Act or the Pennsylvania Clean Streams Law or Air Pollution Control Act.

TC Mine is also currently operating with an expired NPDES permit. TC Mine is authorized by federal regulation to continue to operate under its existing permit until the renewed permit is issued. A renewed NPDES permit may contain more onerous requirements with which we must comply, and we could be required to install costly new pollution control equipment or to curtail or cease our operations, and our business may be adversely affected. Violations of the existing, or new, NPDES permit conditions at TC Mine could result in a range of criminal and civil penalties under the federal Clean Water Act.

Our operations plan for Mount Milligan Mine provides that employees have the option to live in an operations residence located on the minesite, and that copper-gold concentrate from the mill will be transported to the District of Mackenzie (as opposed to Fort St. James) to be loaded onto railcars for transport to the Port of Vancouver. To construct and operate an operations residence and to load out concentrate in Mackenzie, we applied for and obtained an amendment to our Environmental Assessment Certificate for Mount Milligan Mine. Any failure to comply with the amendment as issued may have a material adverse effect on our business.

Obtaining and maintaining the various permits for our mine development operations and exploration projects, including the Berg property, will be complex, time-consuming and expensive. Changes in a mine's design, production rates, quality of material mined and many other matters often require submission of the proposed changes for agency approval prior to

Table of Contents

implementation, and these may not be obtained. In addition, changes in operating conditions beyond our control, changes in agency policy and federal and state laws, litigation or community opposition could further affect the successful permitting of operations.

Title to some of our mineral properties may be challenged or defective. Any impairment or defect in title could have a negative impact on our results of operations and financial condition.

The acquisition of title to mineral properties is a very detailed and time-consuming process. There is no guarantee that title to any of our properties will not be challenged or impaired. Third parties may have valid claims underlying portions of our interests, including prior unregistered liens; agreements; transfers or claims, including aboriginal land claims; and title may be affected by, among other things, undetected defects. As a result, we may be constrained in our ability to operate our properties or unable to enforce our rights with respect to our properties. An impairment to, or defect in, title to our properties could have a material adverse effect on our business, financial condition or results of operations.

Major network failures could have an adverse effect on our business.

Major equipment failures, natural disasters including severe weather, terrorist acts, acts of war, cyber attacks or other breaches of network systems or security that affect computer systems within our network could disrupt our business functions, including our production activities. Our mines and mills are automated and networked such that a cyber incident involving our information systems and related infrastructure could negatively impact our operations. A corruption of our financial or operational data or an operational disruption of our production infrastructure could, among other potential impacts, result in: (i) loss of production or accidental discharge; (ii) expensive remediation efforts; (iii) distraction of management; (iv) damage to our reputation or our relationship with customers; or (v) in events of noncompliance, which events could lead to regulatory fines or penalties. Any of the foregoing could have a material adverse effect on our business, results of operations and financial condition.

Environmental Risks

We must comply with comprehensive environmental statutes, regulations and other governmental controls, and we face significant environmental risks.

All phases of our operations are subject to environmental regulation. In Canada and the United States, environmental laws provide for, among other things, restrictions and prohibitions on spills, releases, emissions and discharges of various substances produced in association with, or resulting from, our operations. These laws also require that facility sites and mines be operated, maintained and reclaimed to the satisfaction of applicable regulatory authorities, including long-term obligations. Compliance with such laws, including without limitation, detailed monitoring and reporting requirements, can require significant expenditures. An exceedance of a permit limitation or failure to comply with a permit requirement may result in the imposition of fines and penalties, some of which may be material.

Companies engaged in the exploration, development and operation of mineral properties often experience increased costs and delays as a result of the compliance with applicable laws, regulations and permits.

For example, a decision to mine Phase 8 (the next phase of production) at TC Mine, would entail expansion of some facilities, with additional permitted surface disturbance on approximately 300 acres of US Bureau of Land Management ("BLM") administered land, 185 acres of National Forest System land and approximately 85 acres of private land owned by us. As a result, the mining of Phase 8 is subject to environmental analysis and preparation of an environmental impact statement ("EIS") pursuant to the federal National Environmental Policy Act ("NEPA"). The EIS would also cover a proposed land exchange in which we would receive approximately 5,000 acres of BLM land in exchange for 900 acres of private lands owned by us. The BLM is the lead agency for preparation of the EIS and other federal and state agencies are cooperating agencies. If and when completed, the EIS would be the basis for Records of Decision (RODs) by both the BLM and the United States Forest Service to approve our proposed Modified Mine Plan of Operations, by the BLM to approve the proposed land exchange (including a related amendment of the Resource Management Plan for the BLM's Challis Resource Area) and by the US Army Corps of Engineers to approve issuance of a permit under section 404 of the Clean Water Act. There is no assurance that the EIS will be completed, or that the RODs will be issued, or that these documents will be completed or issued on terms and conditions acceptable to us. The agencies' preferred alternatives in the EIS, or consultation pursuant to the Endangered

Species Act, may include terms and conditions that impose regulatory or reclamation requirements that will materially increase our costs during operations and closure of TC Mine. Moreover, litigation may be filed challenging the NEPA process for the mine expansion or the land exchange and the result thereof, which could materially increase our costs, or prevent or delay our ability to implement the expansion or the land exchange.

Environmental regulation is evolving in a manner that may require stricter standards and enforcement, increased fines and penalties for noncompliance, more stringent environmental assessments of proposed projects, and a heightened degree of

Table of Contents

training and responsibility for companies and their officers, directors and employees. Existing or future environmental regulation could have a material adverse effect on our business, financial condition and results of operations. We own or have owned, manage or have been in care or control of properties that may result in a requirement to environmentally remediate such properties that could involve material costs. In addition, environmental conditions or hazards may exist on the properties in which we hold interests that are unknown to us at present or that have been caused by previous or existing owners or operators of the properties. We may also acquire properties with environmental risks, and the indemnification proceeds we receive from the entity we acquire such properties from, if any, may not be adequate to pay all the fines, penalties and costs (including costs of remediation or removal and related response costs) incurred at or related to such properties.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions, including compliance and other orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, operation or administration costs or other remedial actions. Parties engaged in mining operations, including us, may be required to compensate those suffering loss or damage to person or property by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations. Amendments to current laws, regulations and permits governing operations and activities of mining companies, or more stringent implementation or enforcement thereof, could have a material adverse impact on us and cause increases in exploration expenses, remedial and reclamation obligations, capital expenditures or production costs, reduction in levels of production at producing properties, or abandonment of or delays in development of new mining properties. Regulation of greenhouse gas emissions effects and climate change issues may adversely affect our operations and markets.

Global climate change continues to attract considerable public, scientific and regulatory attention, and greenhouse gas emission regulation is becoming more commonplace and stringent. As energy, including energy produced from the combustion of carbon-based fuels, is a significant input to our mining and processing operations, we must also comply with emerging climate change regulatory requirements, including programs to reduce greenhouse gas emissions. Our principal energy sources are electricity, purchased petroleum products and natural gas. In addition, our processing facilities and mobile mining equipment emit carbon dioxide.

On July 1, 2008, the Province of British Columbia introduced a carbon tax on the purchase or use of fossil fuels within the province. The current carbon tax rate is \$30 per tonne of carbon dioxide equivalent emissions. British Columbia has determined to maintain the carbon tax, but not to increase the rate. Endako Mine and Mount Milligan Mine are located in British Columbia, and the carbon tax may have a material impact on our energy and compliance costs. The US federal and state governments may also enact an emission trading or similar program for greenhouse gas emissions, which could significantly increase our energy and regulatory compliance costs. For example, the US federal government has considered legislation to reduce greenhouse gas emissions through a cap-and-trade system of allowances and credits, among other provisions. In addition, the EPA has developed final rules requiring certain emitters of greenhouse gases to collect and report data with respect to their greenhouse gas emissions.

We are in the process of evaluating the potential impacts on our operations of these new and potential regulations. Either a carbon tax or a cap-and-trade program will likely result in increased future energy costs. The regulations will also likely increase our compliance costs. For example, we may be required to install new equipment to reduce emissions from our processing facilities in order to comply with new regulatory standards or to mitigate the financial impact of a new climate change program. We also may be subject to additional and extensive monitoring and reporting requirements. It is uncertain at this time how provincial and regional initiatives will interact with any federal climate change regulations.

The potential physical impacts of climate change on our operations are highly uncertain and may be particular to the unique geographic circumstances associated with each of our facilities. These may include changes in weather and rainfall patterns, water shortages, changing storm patterns and intensities and changing temperatures. These physical impacts could require us to curtail or close mining production and could prevent us from pursuing expansion opportunities. These effects may adversely impact the cost, production and financial performance of our operations.

We must remove and reduce impurities and toxic substances naturally occurring in copper, gold and molybdenum and comply with applicable law relating thereto, which could result in remedial action and other costs.

Mineral ores and mineral products, including copper, gold and molybdenum ore and products, contain naturally occurring impurities and toxic substances. Although we have implemented procedures that are designed to identify, isolate and safely remove or reduce such impurities and substances, such procedures require strict adherence and no assurance can be given that employees, contractors or others will not be exposed to or be affected by such impurities and toxic substances, which may subject us to liability. Standard operating procedures may not identify, isolate and safely remove or reduce such substances.

Table of Contents

Even with careful monitoring and effective control, there is still a risk that the presence of impurities or toxic substances in our products may result in such products being rejected by our customers, penalties being imposed due to such impurities or the products being barred from certain markets. Such incidents could require remedial action and could result in curtailment of operations. Legislation requiring manufacturers, importers and downstream users of chemical substances, including metals and minerals, to establish that the substances can be handled and used without negatively affecting health or the environment may impact our operations and markets. These potential compliance costs, litigation expenses, regulatory delays, remediation expenses and operational costs could negatively affect our financial results.

Other Risks

We own certain assets through joint ventures, and any disagreement or failure of partners to meet obligations could have a material adverse effect on our results of operations and financial condition.

Endako Mine is operated as a joint venture between our subsidiary, TCML, which holds a 75% interest, and Sojitz, which holds the remaining 25% interest. As a result, our interest in Endako Mine is subject to the risks normally associated with the conduct of joint ventures. While we are the operator of Endako Mine, Sojitz has certain consent and veto rights pursuant to the agreement governing the joint venture. Any disagreement between us and Sojitz or Sojitz's failure to meet its obligations to the joint venture could have a material adverse impact on our profitability or the viability of our interests held through joint ventures, which could have a material adverse impact on our future cash flows, earnings, results of operations and financial condition.

Intense competition could reduce our market share or harm our financial performance.

The mining industry is intensely competitive, and we compete with many companies that have more financial and technical resources than we do. Our competitive position is based on the quality and grade of our mineral reserves, our ability to manage our costs compared to other producers throughout the world, our ability to maintain our financial integrity through the lows of the metal price cycles and our ability to manage our customer relationships. Our costs are governed to a large extent by the location, grade and nature of our mineral reserves; our input costs including energy, labor and equipment; and our operating and management skills. The metals markets are cyclical, and our ability to maintain our competitive position over the long term is based on our ability to manage our costs, acquire and develop quality deposits and hire and retain a skilled workforce. We intend to continue to grow our business through our exploration program and through future acquisitions; however, in the near term our substantial indebtedness will limit our ability to significantly grow our business. Our competitors may have an advantageous market position and have greater financial and other resources and may, therefore, be able to better withstand poor and volatile market conditions, obtain financing on better terms and attract better or more qualified employees, any of which may have an adverse impact on our business, financial condition and results of operations.

We are dependent upon key management personnel and executives.

We are dependent upon a number of key management personnel. Our ability to manage our exploration, development and operating activities, and hence our success, depend in large part on the efforts of these individuals. We face intense competition for qualified personnel, and there can be no assurance that we will be able to attract and retain such personnel. We do not maintain "key person" life insurance. Accordingly, the loss of the services of one or more of such key management personnel could have a material adverse effect on our business.

Our business depends on good relations with our employees.

Production at our operations depends on the efforts of our employees. Endako Mine and Langeloth Facility each have certain unionized employees. The labor agreement currently in place with respect to the unionized employees at our Langeloth Facility is effective through March 11, 2016, and the labor agreement currently in place with respect to the unionized employees at Endako Mine is effective through March 31, 2015, with automatic annual renewals until either party provides notice requiring negotiation of a new collectively bargaining agreement. Although our unionized employees have agreed to "no-strike" clauses in their respective union agreements, there can be no assurance that Endako Mine and Langeloth Facility will not suffer from work stoppages. A strike, lockout or other work stoppage at one or both of these operations could have a material adverse effect on our business, results of operations and financial condition. There can be no assurance that one or both union agreements will be renewed on a timely basis and on

terms favorable to us. There is also a possibility that our employees at TC Mine and Mount Milligan Mine will unionize in the future.

Further, changes in governmental regulations relating to labor relations, or otherwise in our relationship with our employees, including our unionized employees, may result in strikes, lockouts or other work stoppages, any of which could have a material adverse effect on our business, results of operations and financial condition.

Unfavorable outcomes of legal proceedings may adversely affect our business and financial condition.

Table of Contents

We are from time to time involved in or subject to legal proceedings related to our business. Such legal proceedings can be complex, costly, and highly disruptive to business operations by diverting the attention and energies of management and other key personnel. The assessment of the outcome of legal proceedings, including our potential liability, if any, is a highly subjective process that requires judgments about future events that are not within our control. The outcome of litigation, arbitration or other legal proceedings, including amounts ultimately received or paid upon judgment or settlement, may differ materially from management's outlook or estimates, including any amounts accrued in the financial statements. Actual outcomes, including judgments, awards, settlements or orders, could have a material adverse effect on our business, financial condition, operating results, or cash flows. Our stock price may be volatile and your investment in our common stock could suffer a decline in value. Broad market and industry factors may adversely affect the price of our common stock, regardless of our actual operating performance. Factors that could cause fluctuation in the price of our common stock may include, among other things:

- changes in financial estimates by us or by any securities analysts who might cover our stock;
- speculation about our business in the press or the investment community;
- conditions or trends in our industry or the economy generally;
- changes in the prices of copper, gold or molybdenum;
- stock market price and volume fluctuations of other publicly traded companies and, in particular, those that are in the mining industry;
- announcements by us or our competitors of significant acquisitions, strategic partnerships or divestitures;
- capital commitments;
- additions or departures of key personnel; and
- sales of our common stock, including sales by our directors, officers or significant stockholders.

In the past, securities class action litigation has often been instituted against companies following periods of volatility in their stock price. This type of litigation could result in substantial costs to us and divert our management's attention and resources.

If we cannot meet the New York Stock Exchange ("NYSE") or Toronto Stock Exchange ("TSX") continued listing requirements, our common stock may be delisted.

Our common stock is currently listed on the NYSE and the Toronto Stock Exchange (TSX). In the future, we may be unable to meet the continued listing requirements of the NYSE and the TSX. For example, if the average closing price of our common stock falls below \$1.00 for 30 consecutive trading days, our common stock may be delisted by the NYSE. The average closing price of our common stock during January 2015 was \$1.39.

A delisting of our common stock could negatively impact us by, among other things, reducing the liquidity and market price of our common stock; reducing the number of investors willing to hold or acquire our common stock, which could negatively impact our ability to raise equity or debt financing; decreasing the amount of news and analyst coverage for the Company; and limiting our ability to issue additional securities or obtain additional financing in the future. In addition, delisting from the NYSE and/or the TSX might negatively impact our reputation and, as a consequence, our business.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 3. LEGAL PROCEEDINGS

We are from time to time involved in or subject to legal proceedings related to our business. While it is not feasible to predict or determine the outcome of such proceedings, it is the opinion of management that the resolution of such proceeding is not expected to have a material adverse effect on our consolidated financial position, results of operations or cash flows.

ITEM 4. MINE SAFETY DISCLOSURES

Under Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act, mine operators are required to include in their periodic reports filed with the SEC certain information concerning mine safety violations

and other regulatory matters. The required information is included in Exhibit 95 to this report.

Table of Contents

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUERS PURCHASES OF EQUITY SECURITIES

Price Range of Common Stock

Our common stock is listed on the New York Stock Exchange ("NYSE") under the symbol "TC" and the Toronto Stock Exchange ("TSX") under the symbol "TCM". On February 16, 2015, there were 214,343,626 shares of our common stock outstanding, which were held by 52 stockholders of record.

The following table sets forth information relating to the high and low sales prices of our common stock on the NYSE and TSX for the quarterly periods indicated.

		Price Range of Common Stock			
		NYSE (US\$)		TSX (C\$)	
		High	Low	High	Low
2013	1st quarter	\$4.55	\$2.95	\$4.49	\$2.99
	2nd quarter	\$3.94	\$2.42	\$4.00	\$2.49
	3rd quarter	\$4.05	\$2.81	\$4.25	\$2.94
	4th quarter	\$3.65	\$1.72	\$3.76	\$1.84
2014	1st quarter	\$3.11	\$2.10	\$3.39	\$2.31
	2nd quarter	\$3.17	\$2.15	\$3.46	\$2.39
	3rd quarter	\$3.09	\$2.20	\$3.38	\$2.45
	4th quarter	\$2.27	\$1.37	\$2.55	\$1.57

Dividends

We have not declared or paid any dividends on our common stock since the date of our formation. We intend to retain our earnings, if any, to finance the growth and development of our business and have no present intention of paying dividends or making any other distributions in the foreseeable future. In addition, the indentures governing our senior notes contains covenants restricting our ability to pay dividends to our shareholders.

Stock Performance Graph

The following graph compares the cumulative total shareholder return for \$100 invested in our common stock on the TSX on December 31, 2009 against the cumulative total shareholder return of the S&P/TSX Composite Index and the S&P Composite Index—Materials for our five most recently completed years, assuming the reinvestment of all dividends (all amounts assume a foreign exchange rate of US\$1.00 = C\$1.00):

The foregoing performance graph and related information shall not be deemed "soliciting material" or "filed" with the SEC or be subject to Section 18 of the Securities Exchange Act of 1934, as amended, nor shall such information be incorporated by reference into any future filing under the Securities Act of 1933 or the Securities Exchange Act of 1934, each as amended, except to the extent that we specifically incorporate it by reference into such filing.

ITEM 6. SELECTED FINANCIAL DATA

The following selected consolidated financial data is derived from our audited consolidated financial statements included in this report and our other reports filed with the SEC. The consolidated financial statements presented herein have been prepared in accordance with accounting principles generally accepted in the United States ("US GAAP"). These historical results are not necessarily indicative of results for any future period. The following table includes non-GAAP financial measures "adjusted net income (loss)," "adjusted net income (loss) per share—basic," and "adjusted net income (loss) per share—diluted." For a definition of these non-GAAP measures and a reconciliation to the most directly comparable financial measure calculated and presented in accordance with US GAAP, please read Non-GAAP Financial Measures in Item 7

⁽¹⁾ See Non-GAAP Financial Measures in Item 7 for the definition and reconciliation of these non-GAAP measures.
ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This Management's Discussion and Analysis ("MD&A") provides information that management believes is relevant to an assessment and understanding of the consolidated financial condition and results of operations of Thompson Creek Metals Company Inc. and its consolidated subsidiaries (collectively, "Thompson Creek," "TCM," "we," "us" or "our") for the three months ended December 31, 2014 and 2013 and the three years ended December 31, 2014, and should be read in conjunction

Table of Contents

with the Consolidated Financial Statements and accompanying notes thereto in Item 8 and Risk Factors in Item 1A. This MD&A contains "forward-looking statements". See "Statement Regarding Forward-Looking Information," above.

The results of operations reported and summarized below are not necessarily indicative of future operating results. Throughout this MD&A, all references to earnings or losses per share are on a diluted basis, unless otherwise noted. The consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States ("US GAAP"). All dollar amounts are expressed in United States dollars ("US\$") unless otherwise indicated. References to C\$ refers to Canadian dollars.

Highlights for 2014

Total cash and cash equivalents at December 31, 2014 were \$265.6 million compared to \$233.9 million at December 31, 2013. Total debt, including capital lease obligations, at December 31, 2014 was \$944.7 million, compared to \$1.0 billion at December 31, 2013.

Cash generated by operating activities was \$184.8 million in 2014 compared to \$44.8 million in 2013.

Mount Milligan Mine achieved commercial production, defined as operation of the mill at 60% design capacity mill throughput for 30 days, and has been cash flow positive since the second quarter of 2014. In 2014, we made 12 shipments of concentrate from Mount Milligan Mine and recognized 12 sales.

Consolidated revenues for 2014 were \$806.7 million compared to \$434.4 million in 2013. Copper and gold sales contributed \$350.7 million in revenue in 2014 compared to \$14.3 million in 2013. Molybdenum sales for 2014 were \$441.2 million compared to \$400.8 million in 2013.

Sales volumes and average realized sales prices for copper and gold for 2014 were 64.7 million pounds of copper at an average realized price of \$3.02 per pound and 172,741 ounces of gold at an average realized price of \$1,002 per ounce, as compared to 2.8 million pounds of copper at an average realized price of \$3.29 per pound and 5,541 ounces of gold at an average realized price of \$1,006 per ounce for 2013. Molybdenum sales volumes in 2014 were 36.6 million pounds at an average realized price of \$12.06 per pound compared to 36.5 million pounds at an average realized price of \$10.97 per pound for 2013.

Consolidated operating income for 2014 was \$36.1 million compared to an operating loss of \$175.3 million for 2013. Consolidated operating income (loss) for 2014 and 2013 was impacted by non-cash asset impairments of \$104.8 million and \$194.9 million, respectively, and non-cash lower-of-cost-or-market product inventory write downs of \$25.5 million and \$57.8 million, respectively.

Net loss for 2014 was \$124.2 million, or \$0.64 per share compared to a net loss of \$215.0 million, or \$1.26 per share for 2013. The net loss for 2014 and 2013 included non-cash foreign exchange losses of \$99.8 million and \$70.8 million, respectively, primarily on intercompany notes.

Non-GAAP adjusted net income for 2014 was \$54.6 million, or \$0.25 per diluted share compared to a non-GAAP adjusted net loss for 2013 of \$5.0 million, or \$0.03 per share. Non-GAAP adjusted net income (loss) excludes the non-cash impact of asset impairment losses and foreign exchange losses, net of the related tax impacts. See "Non-GAAP Financial Measures" for the definition and reconciliation of non-GAAP adjusted net income (loss).

Payable production at Mount Milligan Mine for 2014 was 64.6 million pounds of copper and 177,606 ounces of gold, compared to 2013 payable production of 10.4 million pounds of copper and 19,879 ounces of gold.

•

Non-GAAP unit cash cost per pound of copper produced for 2014 was, on a by-product basis, \$1.15 per pound, and, on a co-product basis, \$1.97 per pound of copper and \$525 per ounce of gold. Non-GAAP unit cash costs in 2013 were, on a by-product basis, \$7.76 per pound, and on a co-product basis, \$5.40 per pound of copper and \$1,468 per ounce of gold. See “Non-GAAP Financial Measures” for the definition and reconciliation of non-GAAP cash costs.

Molybdenum production for 2014 was 26.3 million pounds compared to 29.9 million pounds in 2013.

Non-GAAP average molybdenum cash cost per pound produced for 2014 was \$6.91 per pound compared to \$6.49 per pound in 2013. See “Non-GAAP Financial Measures” for the definition and reconciliation of non-GAAP cash costs.

Table of Contents

Open market bond repurchases from December 2014 through the first week of January 2015 resulted in the principal retirement of \$32.9 million of our outstanding principal amount of unsecured bonds, reducing future interest payments by approximately \$13.3 million. Total cash used through December 31, 2014 for this program was \$23.4 million, with the total cash used for the program through the first week of January 2015 of \$30.4 million. These bond repurchases in December 2014 and January 2015, combined with the execution of the tMEDS exchange offer in the second quarter of 2014, have reduced our outstanding principal debt by \$43.8 million and extinguished future interest payments by \$14.1 million.

Capital expenditures in 2014 were \$82.1 million, comprised of \$77.0 million for Mount Milligan Mine (including payment of approximately \$21.0 million related to 2013 accruals in connection with the construction and development) and \$5.1 million of other capital costs for Endako Mine, TC Mine, the Langeloth Facility and corporate combined, compared to \$428.9 million in 2013.

See "Financial Review" and "Liquidity and Capital Resources" in this MD&A for additional information related to highlights.

Overview

We are a North American mining company. Through 2014 we operated a copper and gold mine, two primary molybdenum mines and a metallurgical roasting facility. Our Mount Milligan Mine is a conventional truck-shovel open-pit copper and gold mine and concentrator with a 60,000 tpd copper-gold flotation processing plant in British Columbia, Canada. Our molybdenum properties are TC Mine, an open-pit molybdenum mine and concentrator in Idaho, USA, and Endako Mine, an open-pit molybdenum mine, concentrator and roaster in British Columbia, Canada in which we own a 75% joint venture interest. We also operate the Langeloth Facility in Pennsylvania, USA. Through December 31, 2014 we had three reportable segments, based on products and geography: Copper-Gold, US Operations Molybdenum and Canadian Operations Molybdenum. The Copper-Gold segment includes all expenditures, including all mining, milling, on-site general and administration and transportation from Mount Milligan Mine. The US Operations Molybdenum segment includes all mining, milling, mine site administration, transportation, roasting (at the Langeloth Facility) and sale of molybdenum products from TC Mine, as well as all roasting and sales of third-party purchased material from the Langeloth Facility. The Canadian Operations Molybdenum segment includes all mining, milling, on-site general and administration, transportation, roasting (at the Langeloth Facility) and sale of molybdenum products from the 75% owned Endako Mine.

Commencing in 2015, we are shifting the core focus of our business to copper and gold while at the same time developing a strategy to achieve positive cash flow from our molybdenum business. This shift is primarily the result of recent and expected ongoing weakness in the molybdenum market due to additional supply of molybdenum from new copper producers that produce molybdenum as a by-product. Please see Items 1 and 2 of this Form 10-K for further discussion about our business.

Commodity Prices

Our financial results can vary significantly as a result of fluctuations in the market prices of copper, gold and molybdenum and fluctuations in our production. World market prices for our products have fluctuated historically and are affected by numerous factors beyond our control. Any significant weakness in demand or reduction in prices may have a material adverse effect on our operating results, cash flows and financial condition.

The average published price for our products has fluctuated as follows for the periods shown:

Table of Contents

	Copper ⁽¹⁾	Gold ⁽²⁾	Molybdenum oxide ⁽³⁾
January 2015	\$2.64	\$1,251	\$9.10
Fourth quarter 2014	\$3.00	\$1,318	\$9.30
Third quarter 2014	\$3.17	\$1,283	\$12.70
Second quarter 2014	\$3.08	\$1,289	\$13.61
First quarter 2014	\$3.19	\$1,293	\$9.98
Fourth quarter 2013	\$3.24	\$1,271	\$9.65
Third quarter 2013	\$3.21	\$1,327	\$9.42

⁽¹⁾ Average Metals Bulletin Daily published price for London Metal Exchange (LME) settlement per pound.

⁽²⁾ Average Metals Bulletin Daily published price for daily average London price per troy ounce.

⁽³⁾ Average Platts Metals Week published price per pound for molybdenum oxide.

We have a hedging program in place to provide downside protection for copper and gold prices for 2015. We have hedged (using forward sales contracts) approximately 8 million pounds of Mount Milligan Mine's monthly copper production through May 2015 at an average price of approximately \$3.10 per pound. In addition, as of December 31, 2014 we have hedged (using zero cost collars) approximately 22,000 ounces of our share of the gold for January through December 2015 at floor prices ranging from \$1,150 per ounce to \$1,175 per ounce and at ceiling prices ranging from \$1,237 per ounce to \$1,267 per ounce. We also hedged an additional 3,300 ounces of our share of the gold at \$1,230 per ounce for January 2015 (using a forward sales contract). Subsequent to December 31, 2014, we entered into additional zero cost copper and gold collars as described below:

	Quantity	Floor/Put	Ceiling/Call	Maturities Through
Gold collar (oz)	7,000	\$1,200	\$1,360	June-December 2015
Copper collar (lb)	19,800,000	\$2.00	\$2.99	April-December 2015

See Item 1A, "Risk Factors" for a discussion of risks relating to commodity hedging activities.

Copper-Gold

Mount Milligan Mine reached commercial production as of February 18, 2014. Ramp-up activities continued through 2014 and are ongoing. As of December 31, 2014, Mount Milligan Mine has an estimated life of approximately 24 years (based on an assumed spot copper price of \$3.00 per pound and an assumed spot gold price of \$1,250 per ounce) and estimated average annual production of approximately 85 million pounds of copper and 186,700 ounces of gold in 155,000 tonnes of concentrate over the life of the mine. For the years 2015 through 2019, the average annual production is estimated to be higher at approximately 94 million pounds of copper and 285,800 ounces of gold in 165,000 tonnes of concentrate. As discussed in Items 1 and 2 of this Form 10-K, the updated Mount Milligan Mine mineral reserve estimates increase ore tonnes by approximately 14%, increase contained copper by approximately 15%, and increase contained gold by approximately 4%, in each case, as compared to the mineral reserve estimates reported in the Company's Form 10-K for the year ended December 31, 2013. These updated reserves are expected to positively impact DD&A in the future. Please see "Mineral Reserves" in Items 1 and 2 of this Form 10-K for important information regarding the calculation of mineral reserves for Mount Milligan Mine.

As previously disclosed, we have determined that additional crushing will be necessary to consistently achieve mill throughput of 60,000 tonnes per day ("tpd"), and we expect to construct a permanent secondary crushing circuit at Mount Milligan Mine when market conditions improve. In 2015, the detailed engineering phase is expected to be completed and commitments are expected to be made for the long lead items. The final capital cost estimate for the project will be determined once the detailed engineering is completed, and it is expected to be near the high end of the previously announced range of \$50 - \$75 million, inclusive of the approximately \$15 million in costs that we expect to incur in 2015 for the engineering work and commitments for long lead items. Once construction commences, we estimate that it will take approximately 18 months to complete. Temporary crushing will be utilized during 2015 and,

as a result, we expect to reach approximately 60,000 tpd by year-end 2015. Once installed and commissioned, we expect that the permanent secondary crushing circuit will not only allow us to achieve mill throughput of 60,000 tpd on a consistent basis but also increase mill throughput to approximately 62,500 tpd.

Table of Contents

See “Selected Consolidated Financial and Operational Information” and “Segment Discussion” in this MD&A for operating and financial results for the Copper-Gold segment for the quarter and year ended December 31, 2014.

US Operations Molybdenum

TC Mine was placed on care and maintenance in December 2014 after the mining and processing of ore from Phase 7 was completed. In connection with the placement of the mine on care and maintenance, during the third and fourth quarters of 2014, we reduced the work force at TC Mine by 77% and recognized severance costs of approximately \$2.1 million. We expect to incur approximately \$6 - \$8 million in care and maintenance costs on an annual basis. While TC Mine is on care and maintenance, we will conduct limited stripping for Phase 8, which is expected to cost approximately \$8 - \$10 million in 2015. Although we had initially expected to incur certain costs relating to tailings dam slope management at TC Mine during 2015 and 2016, we do not expect to incur these costs before 2020 after which the requirement for this work will be reassessed.

See “Selected Consolidated Financial and Operational Information” and “Segment Discussion” in this MD&A for production and financial information for the US Operations Molybdenum segment for the quarter and year ended December 31, 2014.

Canadian Operations Molybdenum

Effective December 31, 2014, operations at Endako Mine were temporarily suspended due to recent and expected ongoing weakness in the molybdenum price. As a result, approximately 50% of salaried employees at the Endako Mine were terminated during December 2014, resulting in severance costs of approximately \$1.2 million. Hourly employees received sixty days’ notice that their employment would be temporarily suspended and will remain so suspended while the Endako Mine is on temporary suspension. We continued to pay wages for the hourly employees during the sixty-day notice period, of which our share totals approximately \$1.5 million, which has been accrued as of December 31, 2014. As of the date of this report Endako Mine operations continue to be temporarily suspended.

See “Selected Consolidated Financial and Operational Information” and “Segment Discussion” in this MD&A for production and financial information for the Canadian Operations Molybdenum segment for the quarter and year ended December 31, 2014.

Liquidity

Our cash and cash equivalents balance was \$265.6 million at December 31, 2014 which was substantially the same as the September 30, 2014 cash balance of \$266.6 million, despite a cash outflow of \$23.4 million for open market repurchases of bonds in December 2014. Our cash and cash equivalents balance was \$216.1 million, \$202.7 million and \$233.9 million at June 30, 2014, March 31, 2014 and December 31, 2013, respectively. With expected cash flow from Mount Milligan Mine at current copper and gold prices and foreign exchange rates, expected cash flow from our residual molybdenum operations at current molybdenum prices, and cash on hand as of December 31, 2014, we believe there will be sufficient liquidity to fund planned capital expenditures, working capital needs and scheduled debt and interest payments during 2015. Please refer to the "Liquidity and Capital Resources" section in this MD&A for further discussion.

Outlook

We currently estimate that in 2015 our payable copper production will increase approximately 40% to 55% and payable gold production will increase approximately 25% to 30% from 2014 and that unit cash costs on a by-product basis will decrease by approximately 26% to 48%, making Mount Milligan Mine a low cost producer of copper on a by-product basis. While our molybdenum business has been scaled back significantly due to the placement of TC Mine on care and maintenance and the temporary suspension of Endako Mine, we believe that cash flows from the Langeloth Facility, together with the sale of inventory from the molybdenum mines at current prices, will be more than sufficient to cover the cash costs and cash capital expenditures of the our molybdenum business during 2015. The following table presents our guidance for the full year 2015.

Table of Contents

	Year Ended December 31, 2015 (Estimated)
Mount Milligan Mine Copper and Gold ⁽¹⁾	
Concentrate production (000's dry tonnes)	170 - 190
Copper payable production (000's lb)	90,000 - 100,000
Gold payable production (000's oz) ⁽¹⁾	220 - 240
Unit cash cost - By-product (\$/payable lb copper produced): ^{(2) (3)}	\$0.60 - \$0.85
Molybdenum Business - Cash Inflow (Outflow) (\$ in millions): ⁽³⁾⁽⁴⁾	
Ongoing molybdenum operations - Langeloth	\$10 - \$15
Suspended molybdenum operations:	
TC Mine	
Care and Maintenance	(\$6 - \$8)
Phase 8 Stripping	(\$8 - \$10)
Sale of Inventory (\$8/lb - \$9/lb oxide price)	\$25 - \$28
Endako Mine (75% share) ⁽⁵⁾	
Temporary suspension	(\$5 - \$8)
Sale of inventory (\$8/lb - \$9/lb oxide price)	\$9 - \$10
Total Cash Flow from Molybdenum Operations	\$25 - \$27
Capital expenditures (\$ in millions): ⁽³⁾	
Mount Milligan operations ⁽⁴⁾	\$22 ± 10%
Mount Milligan tailings dam ⁽⁴⁾	\$24 ± 10%
Mount Milligan secondary crusher engineering ⁽⁴⁾	\$15 ± 10%
Langeloth and other	\$7 ± 10%
Total capital expenditures	\$68 ± 10%

(1) The Mount Milligan Mine guidance assumes that the mill will reach throughput of approximately 60,000 tpd, by year-end 2015.

(2) Copper by-product unit cash cost is calculated using copper payable production and deducts a gold by-product credit, which is determined based on expected revenue from payable gold production assuming a gold price of approximately \$800 per ounce, which takes into account the contractual price of \$435 per ounce under the Gold Stream Arrangement.

(3) Estimates for cash costs, molybdenum cash inflow (outflow) and cash capital expenditures assume a foreign exchange rate of US\$1.00 = C\$1.15.

(4) Excludes cash capital expenditures related to 2014 accruals paid in 2015.

(5) If the Endako Mine is placed on care and maintenance, our share of expected severance costs of approximately \$10 to \$12 million would be incurred.

See Item 1A for a discussion of risk factors relating to our production and cost guidance.

Table of Contents

- (1) See "Non-GAAP Financial Measures" for the definition and reconciliation of these non-GAAP measures. Payable production for copper and gold reflects estimated metallurgical losses resulting from handling of the concentrate and payable metal deductions, subject to metal content, levied by smelters. The current payable percentage applied is approximately 95.0% for copper and 96.5% for gold, which may be revised on a prospective basis after sufficient history of payable amounts are determined.

Three Months Ended December 31, 2014 (Unaudited)

Net Income (Loss)

Net loss for the fourth quarter of 2014 was \$135.6 million, or \$0.63 per diluted share, compared to a net loss of \$210.5 million, or \$1.24 per diluted share for the fourth quarter of 2013. Net loss in the fourth quarter of 2014 was primarily the result of non-cash write downs of the molybdenum fixed assets and materials and supplies inventory of \$79.5 million, exploration property write downs of \$25.3 million, lower-of-cost-or-market molybdenum product inventory write downs of \$25.5 million and non-cash foreign currency losses of \$35.3 million primarily related to intercompany notes, partially offset by higher copper and gold sales volumes as compared to the fourth quarter of 2013, and a consolidated income and mining tax benefit of \$16.4 million.

Net loss in the fourth quarter of 2013 was primarily the result of, non-cash asset impairments of \$194.9 million, lower-of-cost-or-market molybdenum product inventory write downs of \$57.8 million, and non-cash foreign currency losses of \$40.8 million, primarily related to intercompany notes.

Non-GAAP adjusted net loss for the fourth quarter of 2014 (which excluded asset impairments, net of tax impacts, and the non-cash impact of foreign exchange losses related to intercompany notes, net of tax impacts) was \$10.0 million, or \$0.05 per share. Non-GAAP adjusted net loss for the fourth quarter of 2013 (which excluded asset impairments, net of tax impacts, and the non-cash impact of primarily unrealized foreign exchange losses, net of tax impacts) was \$29.3 million, or \$0.17 per share.

Revenues

Revenues in the fourth quarter of 2014 were \$168.0 million, up 43.5% compared to revenues of \$117.1 million for the fourth quarter of 2013. This increase in revenues was driven by the increased copper and gold sales from Mount Milligan Mine, partially offset by lower molybdenum sales, which was primarily driven by lower molybdenum sales volumes. During the fourth quarter of 2014, we sold 15.5 million pounds of payable copper and 38,910 ounces of payable gold at average realized sales prices of \$2.75 per pound of copper and \$1,003 per ounce of gold, respectively. During the fourth quarter of 2013, we sold 2.8 million pounds of payable copper and 5,541 ounces of payable gold at average realized sales prices of \$3.29 per pound of copper and \$1,006 per ounce of gold, respectively.

We sold approximately 8.1 million pounds and 9.7 million pounds of molybdenum in the fourth quarters of 2014 and 2013, respectively, of which 5.8 million pounds and 9.2 million pounds, respectively, were from our mines. In the fourth quarter of 2014, the average realized sales price for molybdenum was \$10.79 per pound compared to \$10.11 per pound for the fourth quarter of 2013.

Operating Expenses

Operating expenses for the fourth quarter of 2014 were \$128.6 million, which were up 11.2% from the same quarter in 2013. The increase in operating expenses in the fourth quarter of 2014 was driven by \$41.4 million of operating expenses at Mount Milligan Mine related to copper and gold production and an increase in lower-of-cost-or-market molybdenum product inventory write downs within operating expenses, offset by a decrease in copper and gold product inventory write-downs from the fourth quarter of 2013.

Lower-of-cost-or-market product inventory write downs within operating expenses for each reportable segment during the three months ended December 31, 2014 and 2013 were as follows:

	Three Months Ended December 31,	
	2014	2013
Copper-Gold	\$—	\$20.2
US Operations Molybdenum	2.1	—
Canadian Operations Molybdenum	11.5	7.1
	\$13.6	\$27.3

Table of Contents

Operating expenses in the comparable periods were impacted by foreign exchange rates. Foreign exchange rates at December 31, 2014 were US\$1.00 = C\$1.16 compared to US\$1.00 = C\$1.06 at December 31, 2013. The foreign exchange rate averaged US\$1.00 = C\$1.14 for the fourth quarter of 2014 compared to an average rate of US\$1.00 = C\$1.05 for the same period in 2013.

The non-GAAP financial measure of cash cost per pound produced from Mount Milligan Mine in the fourth quarter of 2014 was \$1.16 per pound of payable copper produced, on a by-product basis, and \$1.88 per pound of payable copper produced on a co-product basis and \$506 per ounce of payable gold produced on a co-product basis. The by-product cash cost for copper for the fourth quarter of 2014 was negatively impacted by a lower volume of gold ounces sold during the fourth quarter when compared to the third quarter of 2014; which was somewhat offset by a higher average realized sales price for gold in the fourth quarter of 2014 compared to the third quarter of 2013.

The non-GAAP financial measure of cash cost per pound produced from our molybdenum mines was \$10.34 per pound in the fourth quarter of 2014 compared to \$6.91 per pound for the same quarter in 2013. Cash cost per pound produced was higher in the fourth quarter of 2014 primarily due to lower production at Endako Mine as a result of significantly lower than anticipated ore grades and mill recoveries coupled with higher cash costs at TC Mine due to significantly lower ore grades and mill recoveries associated with processing stockpiled material as discussed above.

Depreciation, Depletion and Amortization Expense ("DD&A")

DD&A in the fourth quarter of 2014 was \$21.6 million compared to \$13.4 million in the fourth quarter of 2013 due to the increase of DD&A from Mount Milligan Mine, partially offset by lower DD&A for TC Mine and our share of Endako Mine. During the fourth quarter of 2013 and 2012, we recognized our share of a non-cash asset impairment, which significantly lowered the carrying value and depreciable base of our share of the assets at Endako Mine, which, in turn, lowered DD&A for our share of Endako Mine in the fourth quarters of 2014 and 2013. In addition, during the fourth quarter of 2013, we recognized a non-cash asset impairment at TC Mine, which significantly lowered the carrying value and depreciable base of the assets at TC Mine, which, in turn, lowered DD&A for TC Mine in the fourth quarter of 2014.

Lower-of-cost-or-market product inventory write downs within DD&A for the three months ended December 31, 2014 and 2013 were as follows:

	Three Months Ended December 31,	
	2014	2013
Copper-Gold	\$—	\$2.1
US Operations Molybdenum	0.2	—
Canadian Operations Molybdenum	1.1	1.0
	\$1.3	\$3.1

General and Administrative Expense

General and administrative expense in the fourth quarter of 2014 was \$6.6 million compared to \$3.9 million in the fourth quarter of 2013. Higher general and administrative expense in the fourth quarter of 2014 was primarily due to an increase of \$2.3 million in compensation expense in connection with severance costs and bonuses. General and administrative expense for the fourth quarter of 2014 and 2013 included \$0.6 million and \$0.5 million, respectively, in stock-based compensation expense. Under US GAAP, stock-based compensation is included in the specific operating statement categories that include the compensation costs of the employees, officers and directors for which the stock-based award applies.

Asset Impairments

The following table sets forth the write downs of property, plant, and equipment and development assets, mineral reserves and materials and supplies inventory for the periods presented:

Table of Contents

	Three Months Ended		
	December 31, 2014	December 31, 2013	December 31, 2012
US Operations Molybdenum			
Property, plant, and equipment	\$—	\$127.8	\$—
Materials and supplies	3.3	1.6	—
Canadian Operations Molybdenum			
Property, plant, and equipment assets	66.7	59.4	530.5
Materials and supplies	9.5	5.3	—
Exploration Properties and Other			
Mineral reserves	25.3	—	—
	\$104.8	\$194.1	\$530.5

Given the temporary suspension of the Endako Mine due to recent and expected ongoing weakness in the molybdenum price and a decrease in the Endako Mine molybdenum proven and probable reserves resulting from mining performance in 2014, we re-evaluated the long-lived assets at the Endako Mine for impairment as of December 31, 2014. This evaluation indicated that our share of the anticipated undiscounted cash flows from Endako Mine's assets were less than our share of the carrying value of the fixed assets due to the expected future molybdenum price and anticipated production and cash costs from the Endako Mine. This resulted in estimating our share of the assets' estimated fair value, which was also less than our share of their carrying values and long lived asset impairment was recorded as shown above.

Additionally, as of December 31, 2014, we evaluated the fair value of our exploration properties, the remaining materials and supplies inventory at TC Mine, and other long-lived assets, given the significant decline in commodity prices in the fourth quarter of 2014. As a result of these evaluations, we determined that the fair values of the exploration properties and the remaining materials and supplies inventory at TC Mine were less than our carrying values of such assets. We recognized non-cash asset impairments, as discussed above, representing a write-down to the assets' estimated fair values as of December 31, 2014. Our impairment analysis did not result in any other long-lived asset impairments during the fourth quarter of 2014. However, there can be no assurance that there will not be further asset impairments related to future operational challenges and/or if commodity prices further decline.

For the fourth quarter of 2013, we recorded a non-cash asset impairment representing a write down to TC Mine assets' estimated fair value as of December 31, 2013. In addition, as of December 31, 2013, we updated the molybdenum reserves for Endako Mine using price of \$10 per pound of molybdenum oxide compared to \$12 per pound used previously, resulting in a significant reduction in the reserves. The reduction constituted a triggering event, requiring us to evaluate our long-lived assets for impairment in the fourth quarter. This evaluation resulted in a non-cash asset impairment at Endako Mine representing a write down to the assets' estimated fair value as of December 31, 2013.

Interest and Finance Fees

Interest and finance fees were \$22.9 million in the fourth quarter of 2014 compared to \$23.2 million in the fourth quarter of 2013. Beginning in September 2013, in conjunction with the start-up phase of Mount Milligan Mine, we ceased capitalizing a large portion of the incurred interest and debt issuance costs related to the our secured and unsecured notes, Tangible Equity Units ("tMEDS") and equipment financing facility.

In the fourth quarter of 2014 and 2013, we capitalized \$0.8 million and \$1.4 million, respectively of interest and amortization of debt issuance costs. We capitalize interest expense allocable to the cost of developing mining properties and to construct new facilities until assets are ready for their intended use. This capitalized interest will be

amortized using the units-of-production method over the estimated life of the ore body based on recoverable quantities to be mined from proven and probable reserves.

Gain from Debt Extinguishment

Gain from debt extinguishment of \$2.1 million in the fourth quarter of 2014 was due to the retirement of unsecured notes repurchased in the open market at less than their outstanding principal amount net of the effect of writing off deferred financing costs associated with such notes. Please refer to Note 9 in Item 8 of this 10-K, for further discussion.

Foreign Exchange Gains and Losses

Table of Contents

For the fourth quarter of 2014 and 2013, we recognized \$35.3 million and \$40.8 million, respectively, of foreign exchange losses. These non-cash foreign currency losses were primarily unrealized and related to intercompany notes that were entered into as part of a strategy to manage cash balances to fund our operations and provide future tax benefits. The increase in foreign exchange losses was primarily due to the weakening of the C\$ against the US\$. The foreign exchange rate at which the notes were revalued was US\$1.00 = C\$1.16 at December 31, 2014 compared to US\$1.00 = C\$1.06 at December 31, 2013. The foreign exchange rate averaged US\$1.00 = C\$1.14 for the fourth quarter of 2014 compared to an average rate of US\$1.00 = C\$1.05 for the same period in 2013.

Income and Mining Tax (Benefit) Expense

For the fourth quarter of 2014, we had a tax benefit of \$16.4 million compared to a benefit of \$66.4 million for the fourth quarter of 2013. The primary difference in the effective tax rate between the two periods is driven by the change in our valuation allowances by jurisdiction due to the asset impairments.

As a result of the asset impairments of our exploration properties for the fourth quarter of 2014, we recognized a tax benefit of \$7.0 million through a reduction of deferred tax liabilities. However, the asset impairment for Endako Mine and TC Mine assets for the fourth quarter of 2014 did not have a tax impact due to a valuation allowance. This yielded a net effective tax rate of 6.7% on \$104.8 million of asset impairments.

As a result of the asset impairment at TC Mine for the fourth quarter of 2013, we recognized a tax benefit of \$47.4 million through a reduction of deferred tax liabilities, offset with a valuation allowance impact associated with the asset impairment of \$1.5 million expense. However, the asset impairment for Endako Mine for the fourth quarter of 2013 did not have a tax impact due to a valuation allowance. This yielded a net effective tax rate of 23.6% on \$194.1 million of asset impairments.

The tax benefit for the three months ended December 31, 2014 was also increased due to a \$0.5 million gain on foreign exchange recorded as a component of deferred tax benefit. The tax benefit for the three months ended December 31, 2013 was also decreased due to a \$0.1 million loss on foreign exchange recorded as a component of deferred tax benefit.

Three Years Ended December 31, 2014

Net Income (Loss)

Net loss for the year ended December 31, 2014 was \$124.2 million, or \$0.64 per diluted share, compared to net loss of \$215.0 million, or \$1.26 per share, for the year ended December 31, 2013 and net loss of \$546.3 million, or \$3.24 per share, for the year ended December 31, 2012.

The net loss for 2014 was primarily the result of non-cash asset impairments of \$104.8 million, discussed previously and non-cash foreign currency losses of \$99.8 million primarily on intercompany notes. The net loss was partially offset by net income generated from Mount Milligan Mine, an income and mining tax benefit of \$21.7 million, higher molybdenum sales due to higher average molybdenum realized sales prices and lower molybdenum cost of sales compared to 2013.

The net loss for 2013 was primarily the result of non-cash asset impairments of \$194.9 million, discussed previously. The net loss was also the result of non-cash foreign currency losses of \$70.8 million primarily on intercompany notes and negative operating margins from Mount Milligan Mine. The net loss was partially offset by an income tax benefit of \$63.4 million, higher molybdenum sales volume somewhat offset by lower average molybdenum realized sales prices and lower molybdenum operating expenses compared to 2012.

The net loss for 2012 was primarily the result of a \$530.5 million non-cash asset impairments at Endako Mine and \$47.0 million in non-cash impairment of goodwill. Lower sales volume, lower average realized sales prices and higher cash costs also contributed to net loss for the year. Net loss for 2012 was partially offset by an income tax benefit, non-cash foreign currency gains of \$12.2 million on intercompany notes and a non-cash unrealized gain on common stock purchase warrants of \$1.8 million.

The net loss for the year ended December 31, 2014 also included lower-of-cost-or-market product inventory write downs of \$25.5 million compared to lower-of-cost-or-market product inventory write downs of \$57.8 million in 2013

and \$73.8 million in 2012.

Non-GAAP adjusted net income for the year ended December 31, 2014 was \$54.6 million, or \$0.25 per diluted share, non-GAAP adjusted net loss for the year ended December 31, 2013 was \$5.0 million, or \$0.03 per diluted share, and non-GAAP adjusted net loss for the year ended December 31, 2012 was \$44.8 million, or \$0.27 per diluted share. See "Non-GAAP Financial Measures" below for the definition and reconciliation of adjusted net income (loss).

55

Table of Contents

Revenue

Revenues for the year ended December 31, 2014 were \$806.7 million, up 85.7% compared to 2013, primarily driven by the addition of a full year of copper and gold revenues from Mount Milligan Mine and higher molybdenum sales due to higher average realized molybdenum sales prices. During 2014, we sold 64.7 million pounds of payable copper and 172,741 ounces of payable gold for total revenue of \$350.7 million compared to the sale of 2.8 million pounds of payable copper and 5,541 ounces of gold for total revenue of \$14.3 million during 2013. During the year ended December 31, 2014, we made 12 shipments to MTM Customers and received provisional payments for 12 of these shipments and final settlement payments for 8 shipments.

During 2014 and 2013, we sold 36.6 million pounds and 36.5 million pounds of molybdenum, respectively, of which 28.5 million pounds and 31.5 million pounds, respectively, were from our molybdenum mines. The average realized sales price for molybdenum in 2014 was \$12.06 per pound, which was \$1.09 per pound, or 9.9% higher than in 2013. Revenues for the year ended December 31, 2013 were \$434.4 million, up 8.2% compared to 2012. During 2013, we sold 36.5 million pounds of molybdenum, which was 7.8 million pounds more than the volume sold in 2012. Increases in molybdenum sales volumes were the result of higher production at TC Mine due to higher grade ore, and mill recoveries as well as improved operating efficiency, and higher ore grade and mill recoveries at Endako Mine. The average realized sales price for molybdenum in 2013 was \$10.97 per pound, which was \$2.51 per pound lower compared to the average realized sales price for molybdenum in 2012.

Operating Expenses

Operating expenses in 2014 were \$523.8 million, up 59.6% compared to 2013. The increase in operating expenses in 2014 was primarily the result of operating Mount Milligan Mine for an entire year, which was partially offset by a decrease in lower-of-cost-or-market product inventory write-downs and lower costs at TC Mine.

Operating expenses in 2013 were \$328.2 million, down 12.4% compared to 2012. The decrease in operating expenses in 2013 was primarily the result of significantly lower costs at TC Mine due to the suspension of waste stripping activities, resulting in a reduction in costs for the year of \$28.6 million and decreased lower-of-cost-or-market product inventory write downs, which were partially offset by operating costs for Mount Milligan as we entered the production phase during the fourth quarter of 2013.

Lower-of-cost-or-market product inventory write downs within operating expenses for 2014, 2013 and 2012 were as follows:

	Years Ended December 31,		
	2014	2013	2012
Copper-Gold	\$—	\$20.2	\$—
US Operations Molybdenum	2.1	—	14.4
Canadian Operations Molybdenum	20.4	24.1	38.2
	\$22.5	\$44.3	\$52.6

Product inventory write downs for the Canadian Operations Molybdenum segment in 2014 were primarily the result of higher cost production from Endako Mine due to lower than anticipated ore grades and recoveries. Product inventory write downs for the US Operations Molybdenum segment in 2014 were primarily the result of higher cost production from TC Mine in the fourth quarter of 2014 as we processed stockpiled ore from Phase 7, which resulted in higher unit cash costs in relation to molybdenum market prices.

Copper-gold product inventory write downs in 2013 were the result of the start-up of the mine, with higher unit cash costs in relation to copper and gold market prices.

Canadian Operations Molybdenum product inventory write downs in 2013 were primarily due to various operational issues experienced in the first half of 2013, discussed in the Segment Discussion, together with materials and supplies surplus and obsolete inventory write downs in the fourth quarter of 2013, which resulted in higher unit cash costs in relation to molybdenum market prices.

US Operations Molybdenum product inventory write downs in 2012 were the result of planned mine pit sequencing from Phase 6 to Phase 7, which resulted in significantly higher waste removal costs and lower grade ore in the last half of 2011 and first nine months of 2012, which, in turn, reduced production and increased cash costs per pound

produced at TC Mine.

56

Table of Contents

Canadian Operations Molybdenum product inventory write down in 2012 was primarily due to higher unit cash costs at Endako Mine, caused by lower production as a result of lower-than-anticipated ore grades and mill recoveries.

The non-GAAP financial measures of cash cost per pound produced from our mines for 2014, 2013 and 2012 were as follows:

	Years Ended December 31,		
	2014	2013	2012
Copper-Gold			
Copper (\$/payable lb. produced - By-product basis)	\$1.15	\$7.76	\$—
Copper (\$/payable lb. produced - Co-product basis)	\$1.97	\$5.40	\$—
Gold (\$/payable oz. produced - Co-product basis)	\$525	\$1,468	\$—
Molybdenum			
Thompson Creek Mine	\$4.44	\$4.57	\$8.06
Endako Mine	\$11.72	\$10.93	\$15.42
Molybdenum mines weighted-average	\$6.91	\$6.49	\$10.09

See "Non-GAAP Financial Measures" below for the definition and reconciliation of cash cost per pound produced.

For Copper-Gold, 2014 production increased over 2013 as the Mount Milligan Mine had a full year of production in 2014 compared to four months of production in 2013 due to the start-up of the mine. Mount Milligan unit cash costs were lower primarily as a result of the higher production and favorable foreign exchange rates, as discussed below in the Segment Discussion. For molybdenum, the increase in the cash cost per pound produced was primarily due to lower production from Endako Mine, which was partially offset by favorable foreign exchange rates for costs at Endako Mine. For Endako Mine, our share of the production was lower due to lower than anticipated ore grades and recoveries, which was somewhat offset by higher ore tonnes milled.

For Copper-Gold, cash cost per pound produced for 2013 reflects production for the fourth quarter of 2013 only, due to the start-up of Mount Milligan Mine. For molybdenum, the decrease in cash cost per pound produced in 2013, as compared to 2012 was primarily driven by lower cash costs at TC Mine. Cash cost per pound produced at TC Mine decreased due to the absence of costs for waste stripping and higher production from a higher ore grade. Cash cost per pound produced was also lower at Endako Mine in 2013, as compared to 2012, due to increased recovery and higher ore grade and lower operating costs, which was partially offset by a write down of surplus and obsolete materials and supplies inventory at Endako Mine of \$2.0 million, or \$0.23 per pound produced. During the first half of 2012, the new mill at Endako Mine was in the start-up phase, and the new mill had lower than anticipated recovery rates throughout 2012 that resulted in low production and high cash costs.

DD&A

DD&A in 2014 was \$99.9 million, an increase of 92.5%, compared to 2013. This increase was primarily attributable to the addition of a full year of DD&A at Mount Milligan Mine, which was partially offset by lower DD&A at TC Mine and Endako Mine due to the fourth quarter 2013 non-cash write-downs of the property, plant and equipment at TC Mine and Endako Mine, which reduced the carrying value and depreciable base of our molybdenum assets (or our share of the carrying value and depreciable base of the assets, in the case of Endako Mine), and a lower volume of molybdenum pounds sold from our mines compared to 2013. Additionally, DD&A was impacted by reduced lower-of-cost-or-market product inventory write downs in 2014 compared to 2013.

DD&A in 2013 was \$51.9 million, a decrease of 18.9%, compared to 2012. This decrease was primarily attributable to lower DD&A at Endako Mine as a result of the fourth quarter 2012 non-cash write down of our share of the Endako property, plant and equipment assets, which significantly lowered the carrying value and depreciable base of our share of assets at Endako Mine, offset by a higher volume of molybdenum pounds sold from our mines compared to 2012 and the start-up of the production phase at Mount Milligan Mine during the fourth quarter of 2013. Additionally, DD&A was impacted by reduced lower-of-cost-or-market product inventory write downs in 2013 compared to 2012. Lower-of-cost-or-market product inventory write downs within DD&A for 2014, 2013 and 2012 were as follows:

Table of Contents

	Years Ended December 31,		
	2014	2013	2012
Copper-Gold	\$—	\$2.1	\$—
US Operations Molybdenum	0.2	—	1.2
Canadian Operations Molybdenum	2.8	4.1	20.0
	\$3.0	\$6.2	\$21.2

General and Administrative Expense

General and administrative expense in 2014 was \$23.5 million compared to \$21.6 million and \$27.6 million in 2013 and 2012, respectively. General and administrative expense in 2014, 2013 and 2012 included \$3.6 million, \$3.3 million and \$3.9 million, respectively, of non-cash stock-based compensation expense. General and administrative expense increased in 2014 from 2013 primarily due to a \$1.8 million increase in compensation expense in connection with severance costs and bonuses, a \$1.3 million increase in tax consulting and audit services which were partially offset by other lower consulting fees. General and administrative expenses were lower in 2013 compared to 2012 primarily due to lower salaries and benefits and consulting fees.

Exploration Expense

Exploration expense in 2014 was \$0.9 million compared to \$1.4 million in 2013 and \$2.2 million in 2012. The 2014 expenses were primarily comprised of mineral tenure payments of \$0.5 million relating to the Berg and Maze Lake properties, and \$0.4 million relating to exploration activities at TC Mine and Mount Milligan Mine.

The 2013 expenses were comprised primarily of \$0.6 million in mineral tenure payments for the Berg property, exploration drilling activities at TC Mine, Endako Mine and Mount Milligan Mine of \$0.2 million, and \$0.6 million for property payments on the Davidson property. In the fourth quarter of 2013, we terminated the vending agreement through which we had held an interest in the Davidson property.

The 2012 exploration expenses were comprised of \$1.1 million for the Berg property; exploration drilling activities at TC Mine, Endako Mine and Mount Milligan Mine of \$0.6 million; and \$0.5 million for property payments on the Davidson property.

Asset Impairments

The following table sets forth the write downs of property, plant, and equipment and development assets, mineral reserves and materials and supplies inventory for the years presented:

	Year Ended		
	December 31, 2014	December 31, 2013	December 31, 2012
US Operations Molybdenum			
Property, plant, and equipment	\$—	\$127.8	\$—
Materials and supplies	3.3	1.6	—
Canadian Operations Molybdenum			
Property, plant, and equipment assets	66.7	59.4	530.5
Materials and supplies	9.5	5.3	—
Exploration Properties and Other			
Mineral reserves	25.3	—	—
Land	—	0.8	—
Goodwill	—	—	47.0
	\$104.8	\$194.9	\$577.5

Please see the discussion above in "Three Months Ended December 31, 2014 (Unaudited) - Asset Impairments" for more information regarding the non-cash asset impairments in the US Operations Molybdenum and Canadian Operations Molybdenum segments for 2014 and 2013 and the impairments to mineral reserves of exploration properties, which were recorded in the fourth quarter of the respective fiscal year.

Table of Contents

During 2013, we negotiated a contract with US Energy to sell land originally acquired by one of our subsidiaries for easements related to the Mt. Emmons project, in respect of which we terminated our interest in 2011. We assessed the impact of this contract on the carrying value of the land, and during the third quarter of 2013, recorded a non-cash impairment representing a write down to the land's fair value.

In 2012, the significant decline in molybdenum prices and the performance of TC Mine and Endako Mine caused us to closely monitor and evaluate potential write downs throughout the year. During the third quarter of 2012, we suspended waste stripping activity associated with the next phase of production at TC Mine. This decision and the decline in molybdenum prices represented significant changes in our business, requiring us to evaluate for potential impairments on an enterprise-wide basis at September 30, 2012. For purposes of the impairment evaluation, management considered estimates of after-tax discounted future cash flows of the individual reporting units, life-of-mine plans developed using long-term analyst pricing reflective of the then-current price environment, management's projections for operating costs and the market value of our equity. As a result of this evaluation, an impairment charge representing the remaining balance of goodwill, was recorded in the third quarter of 2012. Additionally, during the fourth quarter of 2012, we recorded a non-cash asset impairment of Endako Mine long lived assets, as discussed above.

Interest and Finance Fees

Interest and finance fees of \$92.3 million in 2014 were composed of \$87.0 million in interest and finance fees on tMEDS and secured and unsecured notes, \$5.1 million in interest on mobile mining equipment loans and \$0.2 million in debt issuance cost amortization and commitment fees. In 2014, we capitalized interest and debt issuance costs totaling \$4.1 million.

Interest and finance fees of \$24.1 million in 2013 were composed of approximately \$21.7 million in interest and finance fees on tMEDS and secured and unsecured notes, \$2.2 million in interest on mobile mining equipment loans and \$0.2 million in debt issuance cost amortization and commitment fees. Beginning in September 2013, in conjunction with the start-up phase at Mount Milligan, we ceased capitalizing a large portion of incurred interest and debt issuance costs related to our secured and unsecured notes, tMEDS and equipment financing facility. In 2013, we capitalized interest and debt issuance costs totaling \$75.2 million.

Interest and finance fees of \$12.8 million in 2012 were composed of approximately \$2.7 million commitment fees on the unused revolving credit facility prior to its termination, \$9.5 million of debt issuance cost amortization and \$0.6 million of interest on the mobile mining equipment loans. In 2012, we capitalized interest and debt issuance costs totaling \$45.8 million.

In 2014, we made cash interest payments of \$91.3 million related to our secured and unsecured notes, tMEDS and equipment financing facility. In 2013, we made cash interest payments of \$81.8 million related to our unsecured notes, tMEDS, equipment financing facility and revolving credit facility. In 2012, we made cash interest payments of \$41.3 million.

Gain from debt extinguishment

Gain from debt extinguishment of \$1.6 million in 2014 was due to the retirement of unsecured notes repurchased in the open market at less than their outstanding principal amount, net of the effect of writing off deferred financing costs associated with such notes. This gain was partially offset by a loss from debt extinguishment of \$0.5 million in the first nine months of 2014 due to the extinguishment of the senior amortizing notes component of the tMEDS units tendered in the Exchange Offer. See Note 9 in Item 8 of this 10-K, for a further discussion.

Other

Other income in 2014 was \$8.1 million compared to \$1.1 million for 2013. The 2014 increase was due primarily to a settlement in 2014 associated with interest on a state tax refund received in 2010 and \$4.7 million in favorable mark-to-market income related to copper and gold commodity price hedges, of which \$2.0 million was realized and \$2.7 million was unrealized.

Foreign Exchange Gains and Losses

During 2014, we recognized foreign exchange losses of \$99.8 million compared to foreign exchange losses of \$70.8 million in 2013 and foreign exchange gains of \$12.2 million in 2012.

During 2014, the US\$ strengthened against the C\$, which resulted in an unrealized foreign exchange loss of \$101.3 million primarily on increased borrowings on the intercompany notes that are denominated in C\$ but are measured in US\$. The unrealized foreign exchange loss discussed above was offset by a realized foreign exchange gain of \$1.5 million on C\$ cash balances which have the US\$ as their measurement currency and on US\$ payables and receivables which have the C\$ as their measurement currency.

Table of Contents

During 2013, the US\$ strengthened against the C\$, which resulted in an unrealized foreign exchange loss of \$70.4 million primarily on increased borrowings on the intercompany notes that are denominated in C\$ but are measured in US\$. The remaining foreign exchange loss was the result of C\$ cash balances that have the US\$ as their measurement currency and on US\$ payables and receivables that have the C\$ as their measurement currency.

During 2012, the US\$ weakened against the C\$, which resulted in an unrealized foreign exchange gain of \$13.3 million on intercompany notes that are denominated in C\$ but are measured in US\$ and an unrealized foreign exchange loss of \$1.7 million on foreign currency derivative instruments. The remaining foreign exchange gain was the result of C\$ cash balances that have the US\$ as their measurement currency and on US\$ payables and receivables that have the C\$ as their measurement currency.

The foreign exchange rate was US\$1.00 = C\$1.16 at December 31, 2014 compared to US\$1.00 = C\$1.06 at December 31, 2013 and US\$1.00 = C\$0.99 at December 31, 2012.

Income and Mining Tax (Benefit) Expense

We had a tax benefit of \$21.7 million in 2014 compared to a benefit of \$63.4 million in 2013 and a benefit of \$111.1 million in 2012. The primary difference effective tax rate between the three years is driven by the change in our valuation allowances by jurisdiction due to the asset impairments.

As a result of the asset impairments of our exploration properties in 2014, we recognized a tax benefit of \$7.0 million through a reduction of deferred tax liabilities. The asset impairments for Endako Mine and TC Mine assets for 2014 did not have a tax impact due to a valuation allowance. This yielded a net effective tax rate on impairments of 6.7% on \$104.8 million of asset impairments.

As a result of the asset impairments in the US for 2013, we recognized a tax benefit of \$47.7 million through a reduction of deferred tax liabilities, offset with a valuation allowance impact associated with the asset impairments of \$1.5 million expense. The asset impairment for Endako Mine in 2013 did not have a tax impact due to a valuation allowance. This yielded a net effective tax rate of 23.7% on \$194.9 million of asset impairments.

As a result of the asset impairment for Endako Mine for 2012, we recognized a tax benefit of \$183.3 million through a reduction of our deferred tax liabilities, offset with a valuation allowance impact associated with the asset impairment by \$119.2 million expense. This yielded a net effective tax rate of 12.1% on \$530.5 million of asset impairments.

The tax benefit for the year ended December 31, 2014 was also increased by \$7.4 million due to a change in various tax positions and by \$1.1 million due to a gain on foreign exchange recorded as a component of deferred tax benefit. The tax benefit for the year ended December 31, 2013 was also decreased due to the change in the British Columbia provincial income tax rate and a \$0.5 million loss on foreign exchange recorded as a component of deferred tax benefit.

Segment Discussion

The following discussion presents operating and financial results for the three months ended December 31, 2014 and 2013, and years ended December 31, 2014, 2013 and 2012 for each reportable segment.

Copper-Gold

Mount Milligan Mine

The following table summarizes Mount Milligan Mine's operating and financial results for the three months ended December 31, 2014 and 2013 and years ended December 31, 2014, 2013 and 2012:

Table of Contents

Payable production for copper and gold reflects estimated metallurgical losses resulting from handling of the concentrate and payable metal deductions, subject to metal content, levied by smelters. The current payable percentage applied is approximately 95.0% for copper and 96.5% for gold, which may be revised on a prospective basis after sufficient history of payable amounts is determined.

⁽²⁾ See “Non-GAAP Financial Measures” for the definition and reconciliation of these non-GAAP measures.

General

Mount Milligan Mine began the commissioning and start-up phase during the third quarter of 2013 and reached commercial production as of February 18, 2014, defined as operation of the mill at 60% design capacity mill throughput for 30 days. Ramp-up activities continued throughout 2014 and are ongoing. The full year of production and sales in 2014, as compared to the partial year of production and sales in 2013, impacts comparability of the operating and financial results for the Copper-Gold segment year-over-year and quarter-over-quarter from 2013 to 2014. As supplemental disclosure, we provide certain operating and financial results for, and discusses comparability between, the fourth quarter of 2014 and the third quarter of 2014.

Copper and Gold Production and Cash Costs

Due to the timing of Mount Milligan Mine start-up and production, as discussed above, concentrate production, payable copper production, and non-GAAP unit cash costs for the year and three months ended December 31, 2014 improved significantly in relation to the comparable 2013 periods.

For the fourth quarter of 2014 compared to the third quarter of 2014, there was a 16.2% increase in concentrate production (dry tonnes), a 10.8% increase in payable copper production, and an 8.3% increase in mill throughput. Non-GAAP unit cash costs for the 2014 fourth quarter compared to the 2014 third quarter were \$1.16 per pound compared to \$0.77 per pound on a copper by-product basis, respectively, \$1.88 per pound compared to \$1.80 per

pound on a co-product basis for payable copper, respectively, and \$506 per ounce compared to \$477 per ounce on a co-product basis for payable gold, respectively. By-product cash costs in the fourth quarter of 2014 were negatively impacted by lower ounces of gold sold due to lower gold produced in the fourth quarter of 2014 compared to third quarter of 2014, which was somewhat offset by favorable movements in exchange rates and fuel prices.

Table of Contents

The US\$ strengthened against the C\$ in the fourth quarter of 2014. Rates at December 31, 2014 were US\$1.00 = C\$1.16 and the average foreign exchange rate was US\$1.00 = C\$1.14 for the fourth quarter of 2014.

Operating costs were positively impacted by favorable foreign exchange rates, as the US\$ strengthened against the C\$ in 2014. The average foreign exchange rate was US\$1.00 = C\$1.14 for the fourth quarter of 2014 compared to US\$1.00 = C\$1.09 for the third quarter of 2014, resulting in a favorable impact on operating costs of approximately \$2.1 million. The average foreign exchange rate was US\$1.00 = C\$1.10 for 2014 compared to US\$1.00 = C\$1.06 for 2013 resulting in a favorable impact on operating costs of approximately \$14.1 million.

Copper and Gold Sold

During the three months and year ended December 31, 2014, we sold 15.5 million pounds and 64.7 million pounds of copper, respectively, and 38,910 ounces and 172,741 ounces of payable gold, respectively when compared to 2.8 million pounds of copper and 5,541 ounces of gold for each of the comparable periods in 2013. During the three months and year ended December 31, 2014 we made three and twelve shipments and sales, respectively, compared to one shipment and sale during each of the comparable periods in 2013.

As outlined in the table above, the copper and gold sales were lower in the fourth quarter of 2014 when compared to the third quarter of 2014 primarily due to less concentrate shipped and sold in the 2014 fourth quarter together with lower metal content. Additionally, copper sales were negatively impacted from lower average realized copper prices in the fourth quarter of 2014 while gold sales were positively impacted from higher average realized gold prices in the fourth quarter of 2014. While we recorded three sales in both the fourth and third quarter of 2014 the average realized prices were \$2.75 per pound of payable copper and \$1,003 per ounce of payable gold in the fourth quarter of 2014 compared to \$3.02 per pound of payable copper and \$952 per ounce of payable gold in the third quarter of 2014. The average realized prices for copper and gold for the three months and year ended December 31, 2014 were impacted by the final settlement of certain provisional payments together with mark-to-market adjustments for provisional payments not yet settled.

Capital Expenditures

During the three months ended December 31, 2014, we made C\$11.5 million of capital expenditures for Mount Milligan Mine, consisting of C\$3.7 million for the permanent operations residence, C\$7.2 million for operations and C\$0.6 million for the construction project. During 2014, we made C\$85.6 million of cash capital expenditures for Mount Milligan, consisting of C\$32.9 million for the permanent operations residence, C\$34.0 million for operations and C\$18.7 million for the construction project. Total cash capital expenditures of C\$85.6 million during 2014 included C\$22.2 million in cash payments of accruals related to 2013.

The permanent operations residence was completed in 2014. Residents commenced moving into the facilities beginning early October 2014, with the move complete by the end of November 2014. As of December 31, 2014, we have incurred approximately C\$52.0 million in aggregate capital expenditures for the construction of the permanent operations residence of which C\$0.3 million was accrued at December 31, 2014 and still remains to be paid in cash.

US Operations Molybdenum

Thompson Creek Mine (TC Mine)

The table that follows summarizes TC Mine's operating and financial results for the three months ended December 31, 2014 and 2013 and years ended December 31, 2014, 2013 and 2012:

Table of Contents

(Unaudited)	Three Months Ended		Years Ended December 31,

⁽¹⁾ Mined molybdenum production pounds reflected are molybdenum oxide and HPM.

⁽²⁾ See "Non-GAAP Financial Measures" for the definition and reconciliation of these non-GAAP measures.

General

As previously disclosed, effective December 31, 2014, TC Mine was placed on care and maintenance after completing the processing of stockpiled ore from Phase 7. We are conducting limited stripping at the mine for the next phase of mining to maintain options while we continue to evaluate alternatives for TC Mine. During the third and fourth quarters of 2014, as a result of the completion of the mining of Phase 7 ore and the processing of stockpiled material and in connection with the placement of TC Mine on care and maintenance, we reduced our work force at TC Mine by 77% and recognized severance costs of approximately \$2.1 million.

As discussed above, we recognized non-cash asset impairments on the remaining materials and supplies inventory at TC Mine of \$3.3 million in 2014, and non-cash asset impairments representing a write down to TC Mine assets' estimated fair value as of December 31, 2013 of \$129.4 million.

Molybdenum Production and Cash Costs

For the fourth quarter of 2014, molybdenum production at TC Mine was 2.5 million pounds compared to production of 4.8 million pounds in the fourth quarter of 2013. The 2014 fourth quarter production was lower primarily due to significantly lower ore grades and mill recoveries associated with the processing of stockpiled material. TC Mine completed the processing stockpiled ore in the fourth quarter of 2014 and the mine was placed on care and maintenance, as previously noted.

Molybdenum production at TC Mine for 2014 was 17.4 million pounds compared to 20.9 million pounds for 2013. Production was negatively affected in 2014 by lower ore grades and mill recoveries primarily related to the processing of stockpiled ore in the fourth quarter of 2014, as previously noted. Lower-of-cost-or-market product inventory write downs at TC Mine were \$2.3 million and nil during 2014 and 2013, respectively.

For 2013, molybdenum production from TC Mine was up 28.6% from 2012. For the full year of 2013 compared to the full year of 2012, production in 2013 was favorably impacted by significantly higher grade ore, which resulted in higher mill recovery and higher production, compared to 2012. Production in the second and third quarters of 2012 was negatively impacted by a pit wall slough in May 2012, which was more than offset by the mining of higher grade ore in the fourth quarter of 2012. Lower-of-cost-or-market product inventory write downs at TC Mine were nil and \$15.6 million during 2013 and 2012, respectively.

The non-GAAP financial measure of cash cost per pound produced in the fourth quarter of 2014 was \$6.52 per pound compared to \$4.69 per pound for the same quarter in 2013. The cash costs were 39% higher in the 2014 fourth quarter primarily due to lower production which was somewhat offset by lower operating costs related to the completion of mining Phase 7 and processing stockpiled ore, including postponed maintenance repairs and major equipment rebuilds, fewer wear part

Table of Contents

replacements, lower diesel consumption and decreased blasting costs. See "Non-GAAP Financial Measures" below for the definition and calculation of cash cost per pound produced.

In 2014, the non-GAAP financial measure of cash cost per pound produced decreased by 2.8% from 2013. The cash cost in 2014 was lower than 2013 primarily due to lower operating costs as discussed above, which was somewhat offset by lower production. See "Non-GAAP Financial Measures" below for the definition and calculation of cash cost per pound produced.

In 2013, the non-GAAP financial measure of cash cost per pound produced decreased by 43.3% compared to 2012. The cash cost in 2013 was lower due to the absence of stripping costs and higher production from a significantly higher ore grade. Cash cost in 2012 included stripping costs of \$28.6 million, or \$1.76 per pound produced, compared nil in 2013. Additionally, during 2012, TC Mine incurred costs associated with a new access road to work around a pit wall slough that occurred in May 2012. See "Non-GAAP Financial Measures" below for the definition and calculation of cash cost per pound produced.

Molybdenum Sold

Molybdenum pounds sold from TC Mine in the fourth quarter of 2014 was down 49.4% from the fourth quarter of 2013. Lower sales volumes in the fourth quarter of 2014 were mainly the result of lower production during the fourth quarter of 2014 compared to the same period in 2013. The average realized sales price in the fourth quarter of 2014 was \$12.26 per pound versus \$10.27 per pound in the same period in 2013.

For 2014, TC Mine, sales volumes decreased 20.9% compared to 2013 mainly due to lower production. The average realized sales price for 2014 was \$12.30 per pound versus \$11.07 per pound in 2013.

For 2013, TC Mine sales volumes increased 103.4% compared to 2012 mainly due to higher production. The average realized sales price for 2013 was \$11.07 per pound compared to \$13.71 per pound in 2012. Production and sales in 2012 were adversely impacted by planned stripping activities at TC Mine in the first half of 2012. To accommodate 2012's lower production, we entered into annual sales contracts for lower volumes of product and supplemented production in the first half of 2012 with product purchased from third parties. Also contributing to lower sales volumes in 2012 was a weaker spot market in the second half of 2012, which in turn led to a build-up of inventory during that period.

Langeloth Facility

Operating results for the Langeloth Facility represent activities related to the roasting and processing of third-party concentrate and other metals at the Langeloth Facility and excludes product volumes and costs related to the roasting and processing of TC Mine and Endako Mine product. The Langeloth Facility costs associated with roasting and processing of TC Mine and Endako Mine product are included in each Mine's respective operating results. In spite of TC Mine being placed on care and maintenance and Endako Mine's suspended operations we expect the Langeloth Facility to operate at approximately 85% capacity in 2015 from a supply of third party product and tolling arrangements.

The following is a summary of the Langeloth Facility's operating results for the three months ended December 31, 2014 and 2013 and years ended December 31, 2014, 2013 and 2012:

(Unaudited)	Three Months Ended		Years Ended December 31,		
	December 31, 2014	2013	2014	2013	2012
Operational Statistics					
Molybdenum sold from purchased product (000's lb)	2,376	468	8,061	5,054	10,542
Realized price on molybdenum sold from purchased product (\$/lb)	\$9.16	\$10.15	\$12.02	\$11.35	\$13.50
	80	732	726	3,782	6,296

Toll roasted and upgraded molybdenum processed (000's lb)

Roasted metal products processed (000's lb)	748	3,250	9,938	17,784	12,153
---	-----	-------	-------	--------	--------

Molybdenum sold from third-party purchased molybdenum concentrate increased for the quarter and fiscal year ended December 31, 2014, as compared to the same periods in 2013, as a result of lower production and sales from our molybdenum mines in 2014. The average realized sales price was \$9.16 per pound and \$12.02 per pound for the 2014 fourth quarter and fiscal year, respectively, compared to \$10.15 per pound and \$11.35 per pound for the 2013 fourth quarter and fiscal year, respectively, primarily due to changes in the market price of molybdenum oxide during the 2014 periods.

Table of Contents

Molybdenum sold from purchased product for the year ended December 31, 2013 was down 52.1% from 2012 primarily due to substantially lower molybdenum purchases in 2013 compared to the same period in 2012 as a result of higher production at both of our molybdenum mines. Additionally Langeloth processed all Endako Mine concentrates in 2013 due to the Endako roaster shutdown in the first quarter of 2013. The average realized sales price on molybdenum sold from purchased product in 2013 was down 15.9% compared to the same period in 2012 due to a decrease in the market price of molybdenum oxide throughout 2013.

The volume of toll roasted and upgraded molybdenum processed during the fourth quarter of 2014 and the fiscal year 2014 decreased 89.1% and 80.8%, respectively, compared to the same periods in 2013, primarily due to lower capacity for toll roasted third-party material due to higher volume of third party purchased material.

The volume of toll roasted molybdenum processed during 2013 decreased 39.9% compared to 2012 primarily due to lower capacity for third-party material due to higher volume of material processed from our own molybdenum mines. The volume of roasted metal products processed during the 2014 fourth quarter and fiscal year decreased 77.0% and 44.1%, respectively, compared to the same periods in 2013 due to decreased customer demand and the lack of available material. The volume of roasted metal products increased 46.3% for 2013 compared to 2012 due to increased customer demand.

Canadian Operations Molybdenum**Endako Mine**

The table and related discussion that follows summarize our 75% share of Endako Mine's operating and financial results for the three months ended December 31, 2014 and 2013 and years ended December 31, 2014, 2013, and 2012:

(Unaudited)	Three Months Ended		Years Ended December 31,

⁽²⁾ See "Non-GAAP Financial Measures" for the definition and reconciliation of these non-GAAP measures.

General

As discussed above, due to adverse conditions in the molybdenum market, our Endako Mine was placed on temporary suspension, effective December 31, 2014. We recognized non-cash asset impairments on our share of the Endako Mine assets of \$76.2 million in 2014, \$64.7 million in 2013 and \$530.5 million in 2012.

Molybdenum Production and Cash Costs

Our 75% share of molybdenum production at Endako Mine in the 2014 fourth quarter and fiscal year was decreased by 24.2% and 1.9%, respectively, compared to the corresponding periods in 2013, primarily due to lower ore grades and mill recoveries.

Our 75% share of molybdenum production at Endako Mine in 2013 was 46.3% higher compared to 2012 primarily due to higher ore grades and higher mill recoveries as a result of mining fresh ore in the last half of 2013 versus

processing stockpiled

65

Table of Contents

ore. During 2012, production was negatively affected by lower than anticipated mined ore grade in the first eight months of 2012 from the Denak West pit, a lower than expected recovery rate from the new mill and lower ore grade from stockpiled ore processed in the last five months of 2012, which were partly offset by higher mill throughput in 2012.

Lower-of-cost-or-market product inventory write downs at Endako Mine were \$12.6 million and \$8.1 million for the fourth quarter of 2014 and 2013, respectively, and \$23.2 million, \$28.2 million and \$58.2 million for fiscal year 2014, 2013 and 2012, respectively.

The non-GAAP financial measure of cash cost per pound produced increased 37.5% and 7.2% in the 2014 fourth quarter and fiscal year, respectively, compared to the same periods in 2013. These higher cash costs were primarily driven by lower production from lower ore grades and recoveries together with higher mining costs associated with longer truck hauls, partially offset by lower diesel costs and the favorable impact of foreign exchange rates. The foreign exchange rate averaged US\$1.00 = C\$1.14 for the fourth quarter of 2014 compared to an average rate of US\$1.00 = C\$1.05 for the same period in 2013. Foreign exchange rates averaged US\$1.00 = C\$1.06 for fiscal 2014 compared to US\$1.00 = C\$1.03 for fiscal 2013, See "Non-GAAP Financial Measures" below for the definition and reconciliation of cash cost per pound produced.

For 2013, the cash cost per pound produced decreased 29.1% compared to 2012. Cash cost per pound produced was lower due to higher ore grades and recoveries, lower operating costs and favorable foreign exchange rates in 2013 compared to 2012. Foreign exchange rates averaged US\$1.00 = C\$1.03 for fiscal 2013 compared to US\$1.00 = C\$0.99 for fiscal 2012. See "Non-GAAP Financial Measures" below for the definition and reconciliation of cash cost per pound produced.

Molybdenum Sold

Our share of molybdenum sold from Endako Mine in the fourth quarter of 2014 was 6.0% lower than the fourth quarter of 2013. The average realized sales price in the fourth quarter of 2014 was \$10.34 per pound, which was higher than the fourth quarter of 2013 average realized sales price of \$9.67 per pound as a result of improved market prices for molybdenum oxide.

For 2014, our share of molybdenum sold from Endako Mine was 25.6% higher compared to 2013 together with 11.4% higher average realized sales prices over the same period. Higher sales volumes were primarily due to the sale of molybdenum inventory from 2013 production. Higher average realized prices were the result of improved market prices for molybdenum oxide.

For 2013, our share of molybdenum sold from Endako Mine was 19.7% higher compared to 2012 while the average realized sales price was down 19.9% over the same period. Higher sales volumes were the result of higher production, as discussed above, while lower prices were the result of declining market prices for molybdenum oxide.

Liquidity and Capital Resources

Our financial position was as follows:

	At December 31,	
	2014	2013
Cash and cash equivalents	\$265.6	\$233.9
Accounts receivable, including related party receivables	\$46.1	\$54.1
Accounts payable	\$93.1	\$104.9
Current portion of debt, including equipment financings	\$26.7	\$37.2
Total working capital	\$272.2	\$315.4
Total debt, including equipment financings	\$944.7	\$1,012.8

We monitor our positions with, and the credit quality of, the financial institutions and companies in which we invest our cash and cash equivalents. We manage our credit risk from accounts receivable through our collection activities. As of the date of this Annual Report on Form 10-K, we have not experienced any material delinquencies regarding the collection of accounts receivable.

During 2014, our debt and liquidity positions were primarily affected by the following:

• Cash generated by operating activities of \$184.8 million;

Capital expenditures of \$82.1 million, primarily related to the construction of the permanent residence, operating capital and the payment of amounts accrued during 2013 related to the construction and development of Mount Milligan Mine; and

66

Table of Contents

Principal payments of \$56.1 million.

We monitor our exposure to the prices of our products as well as the currencies in which we operate. During the year ended December 31, 2014, we entered into hedges to manage exposure to fluctuations in the prices of copper and gold (particularly the exposure between the provisional and final payments from our customers), and also purchased gold to satisfy our obligations under the Gold Stream Arrangement. During 2014, we also entered into hedges to manage exposure to the potential strengthening of the Canadian dollar against the US dollar. See Note 6 in Item 8 for further discussion.

As described more fully in Note 11 in Item 8, during 2014, in connection with the settlement of the Exchange Offer, we extinguished \$10.9 million of the senior amortizing notes component of the tendered tMEDS by making a principal payment of \$1.2 million and issuing common stock to the senior amortizing note holders. This transaction resulted in future principal and interest cash payment savings of \$11.7 million. As described more fully in Note 9 in Item 8, during the fourth quarter of 2014 we repurchased \$25.7 million of our senior unsecured notes in open market transactions. These transactions resulted in cash savings of \$12.4 million, of which \$2.5 million related to the discounted purchase and \$9.9 million related to future interest savings. Additionally, in the first quarter of 2015, we repurchased an additional \$7.3 million of our senior unsecured notes, resulting in cash savings of \$3.8 million, of which \$0.4 million related to the discounted purchase and \$3.4 million related to future interest saving. With the exchange of the tMEDS and the recent note repurchases, we have reduced our outstanding debt by \$43.8 million and extinguished future interest payments by \$14.1 million. We may from time to time redeem, retire and/or purchase more outstanding debt, depending upon prevailing market conditions, our liquidity requirements, contractual restrictions and other factors. However, there can be no assurance that we will take any of these actions.

With expected cash flow from the Mount Milligan Mine at current copper and gold prices and foreign exchange rates, expected cash flow from our residual molybdenum operations at current molybdenum prices, and the \$265.6 million of cash and cash equivalents as of December 31, 2014, we believe we will have sufficient liquidity to fund our planned capital expenditures, working capital needs and our scheduled debt and interest payments during 2015. We expect our molybdenum business to generate positive cash flow in 2015. In addition, we will defer capital investment and/or exploration activities, as necessary, for cost containment purposes, as evidenced by our recent decision to defer the full capital investment for the secondary crusher at Mount Milligan Mine until copper prices recover. None of our outstanding notes begin to mature until December 2017. Please refer to the discussion in “Overview” and “Outlook” sections above for further discussion.

In the long term, our ability to fund capital expenditures, working capital needs and scheduled debt and interest payments will primarily depend on cash flow from Mount Milligan Mine. As our outstanding notes approach maturity, we will likely need to refinance the notes or seek additional financing, which may include debt or equity issuances, to ensure that we can maintain sufficient liquidity. We may also seek financing in the future to fund ongoing operations and/or capital requirements, make acquisitions and for general corporate purposes. In April 2014, the SEC declared effective our shelf registration statement on Form S-3 pursuant to which we may issue from time to time up to \$1 billion of common stock, preferred stock, debt securities, guarantees of debt securities, and other securities. In July 2014, we filed a renewal of our existing short form base shelf prospectus in Canada, which qualifies the distribution of up to \$1 billion of securities. However, there are many factors that will impact our ability to access the capital markets on acceptable terms, or at all, including general market conditions and prevailing metals prices. Please see Item 1A of this Form 10-K for further discussion of these risks.

Operating Cash Flows

Cash generated by operating activities was \$184.8 million and \$44.8 million for the years ended December 31, 2014 and 2013, respectively, and cash used in operating activities was \$28.2 million in 2012. The increase in cash flow from operations from 2013 to 2014 was primarily a result of copper and gold sales at Mount Milligan Mine, while the increase in cash flow from operations from 2012 to 2013 was primarily the result of higher revenues and lower unit costs from our molybdenum mines, with the increase in revenues partially offset by the 2013 related copper and gold operating expenses. For the years ended December 31, 2014 and 2013, cash flow from operations benefited from \$27.9 million and \$0.6 million, respectively in net payables related to the Gold Stream Arrangement for undelivered

ounces.

Investing Activities

Cash used in investing activities in 2014 was \$93.9 million compared to \$449.1 million in 2013 and \$811.9 million in 2012. The decline in 2014 is primarily related to the completion of the construction and development of Mount Milligan Mine. During 2014, we spent \$82.1 million on property, plant, equipment and development expenditures primarily related to the construction of the permanent operations residence at Mount Milligan Mine, the construction and development of the Mount Milligan project (which was primarily related to the payment of accruals as of December 31, 2013) and operating capital. During 2013, we spent \$428.9 million on property, plant, equipment and development expenditures primarily related to the construction and development of Mount Milligan Mine. During 2012, we spent \$771.5 million on property, plant, equipment and development expenditures primarily related to Endako Mine mill expansion and the construction and development of

67

Table of Contents

Mount Milligan Mine. Payments of capitalized interest primarily related to development of Mount Milligan Mine were \$9.1 million during the year ended December 31, 2014 compared to \$74.7 million and \$40.7 million during the years ended December 31, 2013 and 2012, respectively. Reclamation deposits for 2014 represented \$10.0 million of cash collateral that was posted against existing surety bonds for reclamation bonds compared to \$7.0 million and \$5.3 million for 2013 and 2012, respectively.

Reclamation deposit activity for 2014 represented \$2.9 million of net cash collateral, net of a \$7.1 million refund of cash collateral previously provided, that was posted against existing surety bonds for reclamation bonding. During 2013, we replaced certain reclamation bond deposits with letters of credit arrangements secured by a guarantee from a surety bond provider resulting in a \$21.1 million net refund of reclamation cash deposits. Reclamation deposit activity for 2012 represented \$5.3 million of cash deposits for reclamation bonding.

As of December 31, 2013, we had approximately \$5.7 million outstanding under letters of credit/demand guarantees facility for an environmental bond with Fisheries and Oceans Canada related to Mount Milligan. All letters of credit outstanding under this facility were secured by cash collateral which were included in the net reclamation deposit activity for 2013 described above. Subsequent to December 31, 2014, these letters of credit were terminated and replaced with letters of credit arrangements secured by a guarantee from a surety bond provider, and the \$5.7 million cash collateral was refunded.

Financing Activities

Summary of Financing Activities

Cash used in financing activities for 2014 was \$55.8 million compared to cash generated of \$110.8 million for 2013. The decrease was due primarily to cash proceeds received in 2013 from the Gold Stream Arrangement and equipment financing transactions. During 2014, financing activities consisted of repurchases of senior unsecured notes in the fourth quarter, as discussed above, and payments on long-term debt and equipment financings.

Cash generated by financing activities in 2013 was \$110.8 million compared to \$1,071.8 million in 2012. The decrease was due primarily to the 2012 issuance of the senior secured and unsecured notes and tMEDS described below. Additionally, we received lower proceeds from the Gold Stream Arrangement and equipment financing transactions, as planned, during 2013.

Cash generated by financing activities in 2012 was \$1,071.8 million primarily related proceeds from the Gold Stream Arrangement, equipment financing transactions and the 2012 issuance of the senior secured and unsecured notes and tMEDS described below. These proceeds were partially offset by debt and capital lease obligation repayments and debt and equity issuance costs.

Gold Stream Arrangement

Pursuant to the Gold Stream Arrangement, we agreed to sell Royal Gold 52.25% of the refined gold production from Mount Milligan Mine for a total upfront payment of \$781.5 million, plus \$435 per ounce, or the prevailing market rate if lower than \$435 per ounce, when the gold is delivered. Pursuant to the Gold Stream Arrangement, we received total cash payments from Royal Gold through December 31, 2014 of \$781.5 million, comprised of payments of \$111.9 million in 2013, \$305.0 million in 2012, \$138.1 million in 2011 and \$226.5 million in 2010.

The Gold Stream Arrangement restricts our ability to incur debt that is secured by the Mount Milligan Mine assets. Subject to the exceptions discussed below, we cannot incur debt that is secured by the Mount Milligan Mine assets in excess of \$350.0 million until the earlier of the date upon which 425,000 ounces of refined gold have been sold and delivered to Royal Gold or the date upon which the aggregate dollar amount of the difference between the market price for the gold delivered to Royal Gold and the price actually paid by Royal Gold exceeds \$280.0 million. Per the December 2014 amendment, discussed in Note 10 of Item 8, we are additionally permitted to pledge the Mount Milligan Mine assets to secure up to \$25.0 million of hedging obligations incurred in connection with gold and copper production from Mount Milligan Mine, foreign currency exchange risk relating to Mount Milligan Mine and one or more corporate credit facilities utilized in connection with Mount Milligan Mine. Provided that Mount Milligan Mine meets specified throughput, recovery and delivery conditions, the \$25.0 million could increase to \$50.0 million.

We must maintain a deposit record during the term of the Gold Stream Arrangement wherein the \$781.5 million total amount paid by Royal Gold is reduced by the difference between the current market price at the time of sale of refined

gold to Royal Gold and \$435 per ounce, multiplied by the amount of refined gold sold in such sale (referred to as “the Remaining Deposit”). If, at the end of the initial 50-year term of the agreement, the Remaining Deposit has not been reduced to nil, we must pay to Royal Gold the remaining balance reflected in the Remaining Deposit. As of December 31, 2014, the Remaining Deposit was \$734.4 million. In the event of any default under our agreement with Royal Gold, Royal Gold could require us to repay the Remaining Deposit.

Table of Contents

In connection with our first 12 shipments of concentrate from Mount Milligan Mine, we were required to pay to Royal Gold a percentage of the provisional payments that we receive from the applicable offtakers. We were obligated to make such payments to Royal Gold in the form of gold. As our agreements with the offtakers provide that we will receive provisional payments in cash, we will be required to buy gold to satisfy our obligation to pay Royal Gold in gold. The percentage of the provisional payments that we were required to pay to Royal Gold declined by shipment, declining to nil after the 12th shipment for the life of the agreement. After the 12th shipment (which was made in the fourth quarter of 2014), we are required to pay Royal Gold upon receipt of final payment from the applicable offtakers.

We receive provisional payments in cash, thus requiring that we purchase gold in order to satisfy the obligation to pay Royal Gold in gold. In order to hedge our gold price risk that arises when physical purchase and concentrate sales pricing periods do not match, we have and will continue to hedge our exposure to gold prices in connection with these provisional payments to Royal Gold. We currently have in place unsecured hedging lines with various banks in order to manage this exposure.

Royal Gold has a security interest in all of the Mount Milligan Mine assets until its total deposit amount has been reduced to nil. Royal Gold's security interest is subject to subordination to project or corporate financings by us, except that in such circumstances, Royal Gold retains a first priority interest in 52.25% of the refined gold from Mount Milligan. After the total deposit amount has been reduced to nil, Royal Gold's security will consist solely of its first priority interest in 52.25% of the refined gold. The cash payments received under the Gold Stream Arrangement are recorded as deferred revenue and classified as a liability on our Consolidated Balance Sheets. Mount Milligan Mine began delivering gold to Royal Gold in the fourth quarter of 2013, as such the deferred revenue is being recognized over the life of the mine based on the amount of gold delivered.

9.75% Senior Secured Notes

On November 27, 2012, we issued \$350.0 million of 9.75% senior secured notes (the "2017 Notes"), which mature on December 1, 2017 and began accruing interest upon issuance. The proceeds received in the offering were \$336.8 million, net of financing fees of \$10.0 million and a discount of \$3.2 million. The net proceeds from the offering were used to fund the completion of Mount Milligan and for general working capital purposes. The 2017 Notes are guaranteed on a senior basis by substantially all of our subsidiaries and are secured by a first priority lien subjected to permitted liens on substantially all of our and the guarantors' property and assets. See Note 9 in Item 8 for further discussion.

12.5% Senior Unsecured Notes

On May 11, 2012, we issued \$200.0 million of 12.5% senior unsecured notes due in 2019 (the "2019 Notes"), which mature on May 1, 2019 and began accruing interest upon issuance. The proceeds received in the offering were \$193.1 million, net of financing fees of \$6.9 million. The net proceeds from the offering were used to fund the completion of Mount Milligan and for general working capital purposes. The 2019 Notes are guaranteed on a senior basis by substantially all of our subsidiaries. During the fourth quarter of 2014, we repurchased \$11.5 million of its 2019 Notes in an open market transaction. In connection with the repurchase of these notes, we recorded a debt extinguishment loss \$0.2 million and wrote-off \$0.2 million of unamortized debt issuance costs. See Note 9 in Item 8 for further discussion.

Tangible Equity Units (tMEDS)

On May 11, 2012, we completed a public offering of 8,800,000 tangible equity units ("tMEDS") with a stated value of \$25.00 per unit. The proceeds received in the offering were \$212.3 million, which were net of financing fees of \$7.7 million. The net proceeds from the offering were used to fund the completion of Mount Milligan Mine and for general working capital purposes. On May 21, 2014, we commenced an offer ("Exchange Offer") to exchange any and all of

the 8,340,000 then outstanding units of tMEDS for a number of shares of our common stock. See Note 9 in Item 8 for further discussion.

7.375% Senior Unsecured Notes

On May 20, 2011, we issued \$350.0 million of 7.375% senior unsecured notes (the "2018 Notes"), which mature on June 1, 2018 and began accruing interest upon issuance. The proceeds received in the offering were \$339.9 million, net of financing fees of \$10.1 million. The net proceeds from the offering were used to fund the development of Mount Milligan and for general working capital purposes. The 2018 Notes are guaranteed on a senior basis by substantially all of our subsidiaries. During the fourth quarter of 2014, we repurchased \$14.2 million of its 2018 Notes in an open market transaction. In connection with the repurchase of these notes, we recorded a debt extinguishment gain \$2.3 million and wrote-off \$0.3 million of unamortized debt issuance costs. See Note 9 in Item 8 for further discussion.

Caterpillar Equipment Financing Facility

Table of Contents

On March 30, 2011, we entered into an equipment financing facility, as amended from time to time (the "Equipment Facility"), pursuant to which Caterpillar Financial Services Limited ("Caterpillar") agreed to underwrite up to \$132.0 million in mobile fleet equipment financing for Mount Milligan Mine. Each borrowing under the Equipment Facility represents a capital lease and has a term of 48 or 60 months. Interest on the amounts borrowed under the Equipment Facility is payable at either floating or fixed rates, at our option. At the end of each 48 or 60 month lease period, we have the option to purchase the underlying equipment for a nominal sum. The Equipment Facility includes non-financial covenants, and as of December 31, 2014, we were in compliance with these covenants. Our ability to finance additional equipment under the Equipment Facility expired in September 2014 per the terms of the Equipment Facility agreement. On January 15, 2015 we entered into an amendment with Caterpillar which extends our ability to finance \$12.6 million of additional equipment under the Equipment Facility through December 2015. As of December 31, 2014, we had drawn down \$109.0 million under the Equipment Facility.

Endako Sale-Leaseback

In 2013, we entered into a sale-leaseback transaction with Caterpillar Financial Services Limited ("Caterpillar") with respect to certain Endako Mine equipment ("Endako Sale Lease-Back"). We received \$5.3 million in cash from Caterpillar for the sale of this equipment, which was subsequently leased back, after an upfront down payment of \$1.4 million. The lease is considered to be a capital lease, with interest payments based on a fixed rate. The agreement includes certain non-financial covenants, and as of December 31, 2014, we were in compliance with these covenants. As of December 31, 2014, this resulted in a capital lease obligation of \$2.3 million.

Mobile Mining Equipment Loans

On December 8, 2010, we executed an equipment financing agreement with Caterpillar in the amount of \$12.8 million secured by six units of mobile mining equipment purchased by us during 2010. This fixed-rate loan bears interest at 3.6% and is scheduled to mature no later than December 8, 2015.

Contractual Obligations

Below is a tabular disclosure of contractual obligations as of December 31, 2014:

(amounts in millions)	2015	2016	2017	2018	2019	Thereafter	Total
Debt ⁽¹⁾	\$3.9	\$—	\$350.0	\$335.8	\$188.6	\$—	\$878.3
Operating leases	2.9	2.5	1.6	0.4	0.2	—	7.6
Capital lease obligations ⁽²⁾	22.8	24.1	18.9	2.7	—	—	68.5
Asset retirement obligations ⁽³⁾	0.2	0.2	0.2	15.5	3.2	50.6	69.9
Gold Stream Arrangement ⁽⁴⁾	42.9	52.7	68.1	68.1	68.1	434.5	734.4
Purchase obligations ⁽⁵⁾	0.5	—	—	—	—	—	0.5
Other ⁽⁶⁾	1.1	0.6	0.1	—	—	—	1.8
	\$74.3	\$80.1	\$438.9	\$422.5	\$260.1	\$485.1	\$1,761.0

Amounts represent principal payments on fixed rate debt and equipment loans. Interest expense and discount amortization on 2017 Notes have not been included. See Note 9 to the Consolidated Financial Statements for more information.

(2) Amounts represent principal payments on capital leases. Interest expense has not been included. See Note 8 to the Consolidated Financial Statements for more information.

Mining operations are subject to extensive environmental regulations in the jurisdictions in which they operate. Pursuant to environmental regulations, we are required to close its operations and reclaim and remediate the lands that operations have disturbed. The estimated undiscounted cash outflows of these remediation and reclamation obligations are reflected here. For more information regarding asset retirement obligations, see Note 12 to the Consolidated Financial Statements.

(4) Amount represents obligations due based on budgeted sales projections and a long-term gold price of \$1,250 at December 31, 2014. See Note 10 to the Consolidated Financial Statements for more information.

Purchase obligations are not recorded in the Consolidated Financial Statements. Purchase obligations represent
(5) purchase commitments for engineering and equipment related to the development of Mount Milligan. See Note 16 to the Consolidated Financial Statements for more information.

70

Table of Contents

Other contractual obligations include labor and service contracts. See Note 13 to the Consolidated Financial Statements for more information. Payments related to derivative contracts cannot be reasonably estimated given variable market conditions. See Note 6 to the Consolidated Financial Statements for more information.

Off-Balance Sheet Arrangements

As of December 31, 2014, we have commitments to purchase approximately 14.8 million pounds of molybdenum sulfide concentrate from 2015 to 2017 to be priced at the time of purchase. In addition, we have fixed-priced contracts, under which we have committed to sell approximately 599.7 thousand pounds of molybdenum in 2015 at an average market price of \$12.05 per pound.

Non-GAAP Financial Measures

In addition to the consolidated financial statements presented in accordance with US GAAP, we use certain non-GAAP financial measures to assess our operating performance for the reasons described further below. These measures do not have standard meanings prescribed by US GAAP and may not be comparable to similar measures presented by other companies. The presentation of these measures is not intended to be considered in isolation from, as a substitute for, or as superior to, the financial information prepared and presented in accordance with US GAAP. In addition, these non-GAAP measures have limitations in that they do not reflect all of the amounts associated with the results of operations as determined in accordance with US GAAP.

Adjusted Net Income (Loss), Adjusted Net Income (Loss) Per Share—Basic and Diluted

Management of the Company uses adjusted net income (loss) and adjusted net income (loss) per share—basic and diluted to evaluate the Company's operating performance and for planning and forecasting future business operations. The Company believes the use of these measures allows investors and analysts to compare results of the continuing operations of the Company to similar operating results of other mining companies, by excluding unusual or infrequent items that are considered non-core to our business.

Adjusted net income (loss) represents the income (loss) prepared in accordance with US GAAP, adjusted for significant non-cash items.

For 2014, the significant non-cash items were the asset impairments, the net realized and unrealized gain and losses related to the impact of foreign exchange due primarily to intercompany notes, and related tax effects. For 2013 and 2012, the significant non-cash items were the asset impairments, goodwill impairment, and the non-cash gain and losses related to the impact of foreign exchange due primarily to intercompany notes, and related tax effects.

We review and evaluate our long-lived assets for impairment using a two-step approach when events and changes in circumstances indicate that the related carrying amounts of its assets may not be recoverable. We have experienced non-cash impairment write downs of our long-lived assets of different types during 2014, 2013 and 2012, as described in Note 5 within Item 8, and, therefore, these charges should not be considered non-recurring. However, management does not consider these impairment charges in its evaluation of our financial performance and excludes non-cash asset write-downs and related tax impacts from adjusted net income (loss) and adjusted net income (loss) per share — basic and diluted. We believe that presentation of our non-GAAP measures excluding these non-cash impairment losses provides useful information to our investors regarding our financial condition and results of operations.

During 2012, we recorded a non-cash goodwill impairment charge, as described in Note 5 within Item 8. In addition we recognized a non-cash loss related to our common stock purchase warrants. Management does not consider the impairment charge or the non-cash loss on warrants in its evaluation of our financial performance and excludes the expense from adjusted net income (loss) and adjusted net income (loss) per share — basic and diluted. We believe that presentation of our non-GAAP measures excluding this charge provides useful information to our investors regarding our financial condition and results of operations.

In connection with our strategy to manage cash balances, fund our operations and provide future tax benefits, we may enter into intercompany loan arrangements. At times, the loans are denominated in currencies other than the measurement currency of one of the parties. US GAAP requires that notes that are intended to be repaid should not be considered a capital contribution, and, therefore, the foreign exchange fluctuations related to these loans impact net income (loss) each period. At each period end, we compare the exchange rate between the Canadian and US dollars to

the exchange rate at the end of the prior reporting period. The difference between those rates is recorded as an unrealized gain or loss on the Consolidated Statements of Operations and Comprehensive Income (Loss) at each period end. Settlement of these intercompany loans results in realized foreign exchange gains or losses recorded on the Consolidated Statements of Operations and Comprehensive

Income (Loss). As the loans between the parent company and its subsidiaries are the primary driver of our foreign exchange gains and losses, as discussed above, management does not consider gains or losses on foreign exchange in its evaluation of our financial performance. We believe that presentation of our non-GAAP measures excluding these gains or losses provides useful information to our investors regarding our financial condition and results of operations. We follow the guidance issued by the Emerging Issues Task Force that common stock purchase warrants with a strike price denominated in a currency other than the entity's reporting currency are not considered linked to equity, and as a result, are to be accounted for as derivatives, as discussed in Note 6 within Item 8. In connection with our acquisition of Terrane during 2011, we agreed to pay holders of warrants issued by Terrane certain share and cash consideration. A cash payment was not required by us at settlement; therefore, management does not consider gains or losses on these warrants in its evaluation of our financial performance. The last of these warrants expired in June 2012. Adjusted net income (loss) per share (basic and diluted) is calculated using adjusted net income (loss), as defined above, divided by the weighted-average basic and weighted-average diluted shares outstanding during the period as determined in accordance with US GAAP. If the adjustments to net (loss) on a US GAAP basis result in non-GAAP adjusted net income, we calculate weighted-average diluted shares outstanding in accordance with US GAAP and use that to calculate adjusted net income per share—diluted. If the adjustments to net income on a US GAAP basis result in non-GAAP adjusted net (loss), we utilize weighted-average basic shares outstanding to calculate adjusted net income per share—diluted, in accordance with US GAAP.

The following tables reconcile net income (loss) presented in accordance with US GAAP to the non-GAAP financial measures of adjusted net income (loss) and adjusted net income (loss) per share—basic and diluted, for the years ended December 31, 2014, 2013 and 2012 and for all of the previous eight quarters. All figures within the tables are unaudited and are presented in US\$ in millions, except shares and per share amounts.

	Years Ended December 31,		
	2014	2013	2012
Net income (loss)	\$ (124.2) \$ (215.0) \$ (546.3
Add (Deduct):			
Asset impairments	104.8	194.9	530.5
Tax benefit of asset impairments ⁽¹⁾	(7.0) (47.7) (183.3
Tax valuation allowance ⁽¹⁾	—	1.5	119.2
(Gain) loss on foreign exchange ⁽²⁾	98.7	71.3	(12.2
Tax expense (benefit) on foreign exchange (gain) loss	(17.7) (10.0) 2.1
Unrealized (gain) loss on common stock purchase warrants	—	—	(1.8
Goodwill impairment	—	—	47.0
Non-GAAP adjusted net income (loss)	\$ 54.6	\$ (5.0) \$ (44.8
Net income (loss) per share			
Basic	\$ (0.64) \$ (1.26) \$ (3.24
Diluted	\$ (0.64) \$ (1.26) \$ (3.24
Adjusted net income (loss) per share			
Basic	\$ 0.28	\$ (0.03) \$ (0.27

Weighted-average shares			
Basic	193.7	171.1	168.4
Diluted	220.3	216.8	216.2

⁽¹⁾ The asset impairments for Endako Mine in 2014 and 2013 and the asset impairment for TC Mine in 2014 did not have a net tax impact due to offsetting valuation allowance movement; therefore, the non-GAAP adjusted net income (loss) presentation excluded this tax effect.

Edgar Filing: Thompson Creek Metals Co Inc. - Form 10-K

(2) Included foreign exchange gains of \$1.1 million and foreign exchange loss of \$0.5 million presented in income and mining tax expense (benefit) in the Consolidated Statements of Operations for the years ended December 31, 2014 and 2013, respectively.

	Three Months Ended							
	Dec 31 2014	Sep 30 2014	Jun 30 2014	Mar 31 2014	Dec 31 2013	Sep 30 2013	Jun 30 2013	Mar 31 2013

(1) The asset impairment for Endako Mine in 2014 and 2013 and the asset impairment for TC Mine in 2014 did not have a net tax impact due to offsetting valuation allowance movement; therefore, the non-GAAP adjusted net income (loss) presentation excluded this tax effect.

(2) Included foreign exchange gains of \$0.5 million and \$0.6 million; foreign exchange loss of \$0.4 million; foreign exchange gain of \$0.4 million; and foreign exchange losses of \$0.1 million and \$0.4 million presented in income and mining tax expense (benefit) in the Consolidated Statements of Operations for the three months ended December 31, 2014, September 30, 2014, June 30, 2014, March 31, 2014, December 31, 2013 and September 30, 2013, respectively.

Copper-Gold Operations - Unit Cash Cost and Average Realized Price per Payable Pound or Payable Ounce Sold
Unit cash cost on a by-product and co-product basis are considered key measures in evaluating operating performance in our Copper-Gold operations, as well as measures of profitability and efficiency on a consolidated basis. Although, unit cash cost on a by-product and co-product basis are not measures of financial performance, do not have standardized meaning prescribed by US GAAP and may not be comparable to similar measures presented by other companies, we believe these non-GAAP measures provide useful supplemental information to investors.

Unit cash cost on a by-product and co-product basis represent the mining, milling, on-site general and administration, truck and rail transportation, warehousing, refining and treatment, and ocean freight and insurance costs; and exclude the effects of changes in inventory; non-cash corporate allocations; other non-cash employee benefits, such as stock-based compensation; depreciation, depletion, amortization and accretion.

On a by-product basis, sales of by-product metals are deducted when computing cash costs in accordance with the cash cost standard endorsed by the World Gold Council and, previously, the Gold Institute.

On a co-product basis, cash costs are allocated between copper and gold based on production. Copper production is stated in thousands of pounds. Gold production has been converted to thousands of copper equivalent (Cu eq.) pounds using the gold production for the periods presented, as well as the most recent quarterly average prices for copper and gold. The price used for

73

copper is the most recent quarterly average of the Metals Bulletin Daily published price for LME settlement per tonne. The price used for gold is a weighted average of the most recent quarterly average of the Metals Bulletin Daily published prices for daily average London price per ounce adjusted for the fixed price established under the Gold Stream Arrangement (\$435 per oz).

The following tables provide a reconciliation of cash costs, unit cash costs, and operating expenses for Copper-Gold operations included in our Consolidated Statements of Operations and Comprehensive Income (Loss) in the determination of net income (loss).

Non-GAAP cash cost

(US\$ in millions)	Three Months Ended December 31,		Years Ended December 31,	
	2014	2013	2014	2013
Direct mining costs ⁽¹⁾	\$45.2	\$71.5	\$183.4	\$83.3
Truck and rail transportation and warehousing costs	3.3	0.6	13.3	0.6
Costs reflected in inventory and operations costs	\$48.5	\$72.1	\$196.7	\$83.9

Non-GAAP unit cash cost	\$506	\$1,385	\$525	\$1,468

⁽¹⁾ Gold has been converted from payable ounces to thousands of copper equivalent pounds by using the gold production for the periods presented, using a gold price of \$829 and \$901 per ounce for the years ended December 30, 2014 and 2013, respectively, (adjusted for the Royal Gold price of \$435 per ounce) and a copper price of \$3.10 and \$3.32 per pound for the years ended December 30, 2014 and 2013, respectively.

Average realized sales price

The average realized sales price per payable pound or payable ounce sold is calculated by dividing copper or gold sales revenue, gross, by the pounds or ounces sold, respectively, as shown in the tables below.

Edgar Filing: Thompson Creek Metals Co Inc. - Form 10-K

(US\$ in millions, except pounds, ounces and per unit amounts)	Three Months Ended December 31,		Years Ended December 31,	
	2014	2013	2014	2013
Average realized sales price for Copper				
Payable pounds of copper sold (000's lb)	15,478	2,801	64,692	2,801
Copper sales, net	\$38.2	\$8.7	\$178.4	\$8.7
Refining and treatment costs	4.4	0.5	16.7	0.5
Copper sales, gross	\$42.6	\$9.2	\$195.1	\$9.2
Average realized sales price per payable pound sold ⁽¹⁾	\$2.75	\$3.29	\$3.02	\$3.29
Average realized sales price for Gold				
Payable ounces of gold sold under Gold Stream Arrangement	20,217	2,845	89,546	2,845
TCM share of payable ounces of gold sold to MTM Customers	18,692	2,696	83,194	2,696
Payable ounces of gold sold	38,909	5,541	172,740	5,541
Gold sales related to cash portion of Gold Stream Arrangement	\$8.8	\$1.3	\$39.0	\$1.3
Gold sales related to deferred portion of Gold Stream Arrangement	6.3	1.0	31.2	1.0
Gold sales under Gold Stream Arrangement	15.1	2.3	70.2	2.3
TCM share of gold sales to MTM Customers	23.7	3.3	102.1	3.3
Gold sales, net	38.8	5.6	172.3	5.6
Refining and treatment charges	0.2	—	0.8	—
Gold sales, gross	\$39.0	\$5.6	\$173.1	\$5.6
Average realized sales price related to cash portion of Gold Stream Arrangement	\$435	\$435	\$435	\$435
Average realized sales price related to deferred portion of Gold Stream Arrangement	\$312	\$359	\$348	\$359
Average realized sales price per payable ounce sold under Gold Stream Arrangement	\$747	\$794	\$783	\$794
Average realized sales price per payable ounce sold for TCM share ⁽¹⁾	\$1,279	\$1,234	\$1,237	\$1,234
Average realized sales price per payable ounce sold ⁽¹⁾	\$1,002	\$1,006	\$1,002	\$1,006

⁽¹⁾ The average realized sales price per payable pound of copper sold and per payable ounce of gold sold is impacted by any final volume and pricing adjustments and mark-to-market adjustments for shipments made in prior periods. Molybdenum Operations - Cash Cost per Pound Produced, Weighted-Average Cash Cost per Pound Produced and Average Realized Sales Price per Pound Sold

Cash cost per pound produced, weighted-average cash cost per pound produced and average realized sales price per pound sold are considered key measures in evaluating our operating performance in our Molybdenum operations, as well as profitability and efficiency on a consolidated basis. Although cash cost per pound produced, weighted-average cash cost per pound produced and average realized sales price per pound sold are not measures of financial performance, do not have standardized meanings prescribed by US GAAP, and may not be comparable to similar measures presented by other companies, we believe these non-GAAP measures provide useful supplemental information to investors.

Cash cost per pound produced represents the mining, milling, on-site general and administration, transportation to Langeloth Facility, and allocation of roasting and packaging from the Langeloth Facility for molybdenum oxide and HPM produced; and excludes the effects of purchase price adjustments; changes in inventory; non-cash corporate allocations; other non-cash employee benefits, such as stock-based compensation; and depreciation, depletion, amortization and accretion. Mining includes all stripping costs. Stripping costs that provide access to mineral reserves that will be produced in future periods are expensed as incurred under US GAAP.

The weighted-average cash cost per pound produced represents the cumulative total of the cash costs for TC Mine and Endako Mine divided by the cumulative total production from TC Mine and Endako Mine.

Edgar Filing: Thompson Creek Metals Co Inc. - Form 10-K

The following tables provide a reconciliation of cash costs and cash cost per pound produced, by mine, and operating expenses included in our Consolidated Statements of Operations and Comprehensive Income (Loss) in the determination of net income (loss).

Weighted-average cash cost—Non-GAAP	\$226.3	22,429	\$10.09

(1) Pounds produced are shown in molybdenum oxide and include an estimated loss from our share of the sulfide production from the mines to oxide. They exclude molybdenum processed from purchased product.

(2) Other operations represent activities related to the roasting and processing of third-party concentrate and other metals at the Langeloth Facility and exclude product volumes and costs related to the roasting and processing of TC Mine and Endako Mine concentrate. The Langeloth Facility costs associated with roasting and processing of TC Mine and Endako Mine concentrate are included in their respective operating results above.

Average realized sales price

The average realized sales price per pound sold represents molybdenum sales revenue divided by the pounds sold.

(US\$ in millions, except pounds and per pound amounts)	Three Months Ended December 31,		Year Ended December 31,		
	2014	2013	2014	2013	2012
Molybdenum sold (000's lb)	8,132	9,670	36,579	36,521	28,689
Molybdenum sales	\$87.7	\$97.7	\$441.2	\$400.8	\$386.8
Average realized sales price per pound	\$10.79	\$10.11	\$12.06	\$10.97	\$13.48

Critical Accounting Estimates

In preparing financial statements, we make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses. Critical accounting assumptions affect the consolidated financial statements materially and require a significant level of judgment by management. There is a reasonable likelihood that materially different amounts could be reported under different conditions or using different assumptions and estimates.

Asset Impairments

We evaluate the carrying value of long-lived assets to be held and used, using a fair-value based approach when events and circumstances indicate that the related carrying amount of our assets may not be recoverable. The economic environment and copper, gold and molybdenum prices may be considered as impairment indicators for the purposes of these impairment assessments. In accordance with US GAAP, the carrying value of a long-lived asset or asset group is considered impaired when the anticipated undiscounted cash flows from such asset or asset group is less than its carrying value. In that event, a loss will be recorded in our Consolidated Statements of Operations and Comprehensive Income (Loss) based on the difference between book value and the estimated fair value of the asset or asset group computed using discounted estimated future cash flows, or the application of an expected fair value

technique in the absence of an observable market price. Future cash flows include

78

Table of Contents

estimates of recoverable quantities to be produced from estimated proven and probable mineral reserves, commodity prices (considering current and historical prices, price trends and related factors), production quantities and capital expenditures, all based on life-of-mine plans and projections. In estimating future cash flows, assets are grouped at the lowest level for which identifiable cash flows exist that are largely independent of cash flows from other asset groups. Generally, in estimating future cash flows, all assets are grouped at a particular mine for which there are identifiable cash flows.

Effective December 31, 2014, we placed the Endako Mine on temporary suspension due to adverse molybdenum market conditions. Additionally, given mining performance for 2014, there was a decrease in the Endako Mine molybdenum proven and probable reserves. The temporary suspension and reserve decrease constituted triggering events, requiring us to re-evaluate long-lived assets for impairment in the fourth quarter of 2014. This evaluation indicated that our share of the anticipated undiscounted cash flows from Endako Mine assets were less than its share of the carrying value of the fixed assets due to the expected future molybdenum price and anticipated production and cash costs from the Endako Mine. This resulted in estimating our share of the assets' estimated fair value, which was also less than our share of their carrying values. As a result, this evaluation resulted in non-cash asset impairments to our share of Endako Mine's assets in the fourth quarter of 2014, representing write downs to the assets' estimated fair value as of December 31, 2014.

Additionally, as of December 31, 2014, we evaluated the fair value of our exploration properties given the significant decline in commodity prices in the fourth quarter of 2014. As a result, the fair value of those properties was less than the carrying values and we recognized non-cash asset impairments in the fourth quarter of 2014, representing a write-down to the assets' estimated fair value as of December 31, 2014.

We also evaluated the fair value of the remaining materials and supplies inventory at our TC Mine as of December 31, 2014, given recent weakness in commodity markets. As a result, the fair value of TC Mine's materials and supplies inventory was less than the carrying value and we recognized a non-cash asset impairment in the fourth quarter of 2014.

Given recent declines in commodity prices, we assessed all of our other long-lived assets for impairment in the fourth quarter of 2014. Our impairment analysis did not result in any other long-lived asset impairments during the fourth quarter of 2014. However, there can be no assurance that there will not be further asset write downs related to future operational challenges and/or if commodity prices further decline.

As of December 31, 2013 our decision to place TC Mine on care and maintenance and the update to the Endako Mine molybdenum reserves using a price of \$10 per pound of molybdenum oxide compared to \$12 per pound used previously, constituted triggering events, requiring us to evaluate its long-lived assets at these mines for impairment in the fourth quarter of 2013. As a result of these analyses, we recorded a non-cash asset impairment, representing a write down to the assets' estimated fair value as of December 31, 2013.

Additionally during 2013, we negotiated a contract with US Energy to sell land originally acquired by one of our subsidiaries for easements related to the Mt. Emmons project, in respect of which we terminated our interest in 2011. We assessed the impact of this contract on the carrying value of the land, and recorded a non-cash impairment representing a write down to the land's fair value.

For the year ended December 31, 2012, we recorded a non-cash write down of our share of the Endako property, plant, equipment and development assets representing a write down to the assets' estimated fair value.

During the third quarter of 2012, we suspended waste stripping activity associated with the next phase of production at TC Mine. This decision and the decline in molybdenum prices represented significant changes in our business, requiring an evaluation for potential impairments on an enterprise-wide basis in accordance with US GAAP at September 30, 2012. For purposes of the impairment evaluation, estimates of after-tax discounted future cash flows of the individual reporting units were used. The estimated cash flows were derived from life-of-mine plans developed using long-term analyst pricing reflective of the then-current price environment and management's projections for operating costs. We also considered the market value of its equity. As a result of this evaluation, a goodwill impairment charge representing the entire balance of goodwill, was recorded in other expense and (income) in our Consolidated Statements of Operations and Comprehensive Income (Loss) in 2013.

These impairments were included in total costs and expenses in our Consolidated Statements of Operations and Comprehensive Income (Loss) and excluded from the non-GAAP measures of adjusted net income (loss) per share-basic and diluted. See Note 5 in Item 8 for more information. See "Non-GAAP Financial Measures" in Item 7 for the definition and calculation of adjusted net income (loss).

Table of Contents

Mineral Reserves and Depreciation, Depletion and Amortization

Property, plant, equipment and development are recorded at cost. Expenditures for property, plant, equipment and development relating to new assets or improvements are capitalized if they extend useful lives or extend functionality. Fixed plant and machinery are amortized using the units-of-production method over the estimated life of the ore body based on contained pounds to be produced from estimated proven and probable mineral reserves. Facilities, mobile and other equipment are depreciated on either a declining-balance basis or a straight-line basis over the shorter of their estimated useful life or the life of the mine. Repairs and maintenance costs are charged to expense as incurred, except when these repairs extend the life or functionality of the asset. In these instances, that portion of the expenditure is capitalized and amortized over the period benefited.

The estimate that most significantly affects the units-of-production rate is the quantity of proven and probable molybdenum mineral reserves. The estimation of mineral reserves is complex and involves the use of estimates and assumptions. These estimates and assumptions include the use of geological modeling and sampling, as well as estimates of long-term copper, gold and molybdenum prices and future mining costs. These estimates and assumptions can change as a result of numerous factors, including new information gained from development activities, evolving production history and a reassessment of the viability of production under different economic conditions. Significant judgment is involved in the reserve estimates, and actual results may differ significantly from current assumptions.

Asset Retirement Obligations

Accounting for reclamation and remediation obligations requires management to make estimates of the future costs we will incur to complete the work required to comply with existing laws and regulations at each mining operation. Actual costs may differ from the amounts estimated. Also, future changes to environmental laws and regulations could increase the extent of reclamation and remediation work required.

Revenue Recognition

For concentrate sales, revenue is recognized when title and risk of loss pass and when collectability is reasonably assured. For concentrate, this is typically when a provisional payment is received. The passing of title and risk of loss are based on terms of the sales contract, generally upon shipment or delivery of product. Revenues from our concentrate sales are recorded based on a provisional sales price, with an adjustment made for a final sales price calculated in accordance with the terms specified in the relevant sales contract. Moreover, because a portion of the metals contained in copper-gold concentrates is unrecoverable as a result of the smelting process, revenues from concentrate sales are also recorded net of allowances based on the quantity and value of these unrecoverable metals. Revenues from concentrate sales are recorded net of treatment and all refining charges and the impact of derivative contracts. Treatment and refining charges represent payments or price adjustments that are contractually negotiated, as typical in the industry. Moreover, because a portion of the metals contained in concentrate is unrecoverable as a result of the smelting process, our revenues from concentrate sales are also recorded net of allowances based on the quantity and value of these unrecoverable metals.

Under the long-established structure of sales agreements prevalent in the industry, metals contained in concentrate are generally provisionally priced at the time of shipment. The provisional prices are finalized in a specified future month (generally one to four months from the shipment date) based on quoted monthly average spot copper prices on the London Metal Exchange (LME) or the London Bullion Market association (LBMA). We receive market prices based on prices in the specified future month, which results in mark-to-market price fluctuations recorded to revenues until the date of settlement. We have hedging arrangements in place to limit the exposure to such pricing fluctuations.

To satisfy our obligations under the Gold Stream Arrangement, we purchase unallocated refined gold and arrange for delivery to Royal Gold's designated account. We recognize revenue for sales of refined gold when title and risk of loss passes and when collectability is reasonably assured. Revenue from and costs for unallocated refined gold delivered under the Gold Stream Arrangement and gains and losses related to forward commodity gold contracts to hedge our exposure under the Gold Stream Arrangement are netted and recorded to gold sales.

We recognize revenue from molybdenum sales when persuasive evidence of an arrangement exists, the price is determinable, the product has been delivered, title has transferred and collection is reasonably assured. Our sales contracts specify the point in the delivery process at which title transfers to the customer (shipping point or destination). Shipping and handling fees are accounted for on a gross basis under the terms of the contract. We recognize tolling and calcining revenue under contractual arrangements as the services are performed on a per-unit basis.

We enter into provisionally-priced molybdenum sales contracts, whereby the contracts settle at prices to be determined at a future date based upon quoted prices. The future pricing mechanism of these agreements constitutes an embedded derivative,

Table of Contents

which is bifurcated and separately marked to an estimated fair value at the end of each period. Changes to the fair value of embedded derivatives related to molybdenum sales agreements are included in molybdenum sales revenue in the determination of net income (loss).

Income and Mining Taxes

In preparing the consolidated financial statements, we estimate the actual amount of taxes currently payable or receivable, as well as deferred tax assets and liabilities attributable to temporary differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred income tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which these temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates and laws is recognized in net income (loss) in the period in which such changes are enacted.

A valuation allowance is provided for those deferred tax assets for which it is more likely than not that the related benefits will not be realized. In determining the amount of the valuation allowance, we consider estimated future taxable income, reversal of taxable temporary differences, carry backs and prudent and feasible tax planning strategies in each jurisdiction. If we determine that all or a portion of the deferred tax assets will not be realized, a valuation allowance will be increased with a charge to income tax expense. Conversely, if we make a determination that we ultimately will be able to realize all or a portion of the related benefits for which a valuation allowance has been provided, all or a portion of the related valuation allowance will be reduced with a credit to income tax expense.

At December 31, 2014, tax valuation allowances totaled \$279.4 million. Of this amount, \$74.9 million related to allowances covering our foreign tax credit and alternative minimum tax credit carry-forwards in the US, \$15.1 million related to allowances covering some of the capital and non-capital tax loss carry-forwards in Canada, \$22.4 million related to allowances covering unrealized foreign exchange capital losses and \$167.0 million related to allowances covering some of our tax basis in previous capital expenditures, primarily associated with the mill expansion project at Endako Mine and the stripping costs at TC Mine.

The determination of our tax expense for the year and future tax assets and liabilities involves significant management estimation and judgment involving a number of assumptions. In determining these amounts, management interprets tax legislation in a variety of jurisdictions and makes estimates of the expected timing of the reversal of future tax assets and liabilities. We also make estimates of future earnings that affect cross border tax rate assumptions, tax planning strategies and the extent to which potential future tax benefits may be used. We are subject to assessments by various taxation authorities who may interpret tax legislation differently. These differences may affect the final amount or the timing of the payment of taxes. We provide for such differences where known based on management's best estimate of the probable outcome of these matters.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Commodity Price Risk

Our consolidated revenues include the sale of concentrate from Mount Milligan mine and the sale of molybdenum in various forms from TC and Endako Mines and from third-party material that is purchased, processed and sold from our and other mines as well as the Langeloth Facility. Our financial results can vary significantly as a result of fluctuations in the market prices of copper, gold and molybdenum.

Copper and Gold

Substantially all of our concentrate sales contracts provide final pricing in a specified future month (generally one to four months from the shipment date) based primarily on quoted LBMA monthly average spot gold prices or quoted LME monthly average spot copper prices. We receive market prices based on prices in the specified future period, which results in price fluctuations recorded through revenues until the date of settlement. To the extent final prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to revenues is recorded each reporting period until the date of final pricing. Accordingly, in times of rising copper and gold prices, our revenues benefit from adjustments to the final pricing of provisionally priced sales pursuant to contracts entered into in prior periods; in times of falling copper and gold prices, the opposite occurs.

At December 31, 2014, we had copper sales totaling 64.7 million pounds of copper recorded at an average realized price of \$3.02 per pound, of which approximately 21.2 million pounds are subject to final pricing over the next several months. We estimate that each \$0.10 change in the price realized from the December 31, 2014 provisional price recorded would have a net impact on 2014 consolidated revenues of approximately \$6.3 million. Additionally, at December 31, 2014, under derivative

81

Table of Contents

contracts designed to hedge our copper price risk, we had contracts to sell 7.7 million pounds of copper at prices between \$3.05-\$3.19 per pound through May, 2015.

At December 31, 2014, we had gold sales totaling 172,741 ounces of gold recorded at an average realized price of \$1,002 per ounce, of which approximately 11,356 ounces are subject to final pricing over the next several months. We estimate that each \$25 change in the price realized from the December 31, 2014 provisional price recorded would have a net impact on our share of the 2014 consolidated revenues of approximately \$2.0 million.

To satisfy our obligation under the Gold Stream Arrangement, we purchase unallocated refined gold and arrange for delivery to Royal Gold's designated account. We are currently required to pay Royal Gold upon receipt of final payment from the applicable offtakers. We receive final payments in cash, thus requiring the purchase of gold in order to satisfy the obligation to pay Royal Gold in gold.

In order to hedge our gold price risk that arises when physical purchase and concentrate sales pricing periods do not match, we enter into certain forward gold purchase and sales contracts where we purchase gold at an average price during a quotational period (QP) and sell gold at a spot price. We record our commodity contracts at fair value using a market approach based on observable quote market prices and contracted prices.

At December 31, 2014, under derivative contracts designed to hedge gold price risk, we had contracts to purchase 31,060 ounces of gold at prices to be determined and to sell 31,761 ounces at prices between \$1,150-\$1,230 per ounce.

Molybdenum

We enter into provisionally-priced sales contracts, whereby the contracts settle at prices to be determined at a future date. The future pricing mechanism of these agreements constitutes an embedded derivative, which is bifurcated and separately marked to estimated fair value at the end of each period. Changes to the fair value of embedded derivatives related to molybdenum sales contracts are included in molybdenum sales revenue in the determination of net income (loss). To the extent final prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to molybdenum sales is recorded each reporting period until the date of final pricing. Accordingly, in times of rising molybdenum prices, molybdenum sales benefit from higher prices received for contracts priced at current market rates and also from an increase related to the final pricing of provisionally-priced sales pursuant to contracts entered into in prior years; in times of falling molybdenum prices, the opposite occurs. We also enter into certain molybdenum sales contracts to sell future molybdenum production at fixed prices. These fixed prices may be different than the quoted market price at the date of sale.

For the year ending December 31, 2014, we estimate that for each \$1 per pound change in the price realized for molybdenum sales (using molybdenum pounds sold from our mines), our 2014 revenue would change by approximately \$28.5 million.

The following table sets forth our outstanding provisionally-priced molybdenum contracts as of December 31, 2014:

	Pounds to be Sold/Purchased (000's lb)
Provisionally-priced contracts:	
Sales	68.6
Purchases	380.0
Fixed-price sales contracts:	
Molybdenum committed ⁽¹⁾	599.7

⁽¹⁾ As of December 31, 2014 for our fixed-priced molybdenum sales contracts the average price per pound is \$12.05. For the years ended December 31, 2014, 2013 and 2012, we treated these contracts as normal purchase and normal sales contracts.

In the normal course of operations, we enter into agreements for the purchase of molybdenum. As of December 31, 2014, we had commitments to purchase approximately 14.8 million pounds of molybdenum sulfide concentrate from

2015 to 2017, to be priced at a discount to the market price for molybdenum oxide at the time of purchase.
Other

82

Table of Contents

In the normal course of operations, we enter into agreements for the purchase of natural gas for use at the Langeloth facility. As of December 31, 2014, we had commitments to purchase approximately 147.9 thousand dekatherms (dt) from October 2015-September 2016 at prices ranging from \$2.91-\$3.38.

Foreign Currency Exchange Risk

We transact business in various currencies in the normal course of operations. All of our revenues are denominated in the US dollar; however, we pay certain expenses attributable to its Canadian operations in the Canadian dollar. As a result, we have ongoing foreign exchange translation risk with respect to its Canadian operations. A decrease of 10% in the value of the US dollar relative to the Canadian dollar would have impacted operating income (loss), (excluding the impact of non-cash asset impairments), during the year ended December 31, 2014 by approximately \$39.9 million. To help mitigate this risk, from time to time, we enter into foreign currency forward contracts, in which we have agreed to buy Canadian dollars at an agreed-upon rate. Please refer to Note 6 within Item 8 of this 10-K for further discussion. We record our currency contracts at fair value using a market approach based on observable quoted exchange rates and contracted notional amounts. As of December 31, 2014, we had 8 open foreign currency contracts.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders

Thompson Creek Metals Company Inc.:

We have audited the accompanying consolidated balance sheets of Thompson Creek Metals Company Inc. and subsidiaries as of December 31, 2014 and 2013, and the related consolidated statements of operations and comprehensive income (loss), shareholders' equity, and cash flows for each of the years in the three year period ended December 31, 2014. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Thompson Creek Metals Company Inc. and subsidiaries as of December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the years in the three year period ended December 31, 2014, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Thompson Creek Metals Company Inc.'s internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control - Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated February 19, 2015 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

1. Description of Business

Thompson Creek Metals Company Inc. ("TCM") is a North American mining company incorporated under the laws of British Columbia with copper, gold and molybdenum mining, milling, processing and marketing operations in Canada and the United States ("US").

The Copper-Gold operations consist of Mount Milligan Mine, a conventional truck-shovel open-pit copper and gold mine and concentrator in British Columbia. The US operations for molybdenum include the Thompson Creek Mine ("TC Mine") (mine and mill) in Idaho and the Langeloth Metallurgical Roasting Facility (the "Langeloth Facility") in Pennsylvania. The Canadian operations for molybdenum consist of a 75% joint venture interest in the Endako Molybdenum Mine Joint Venture ("Endako Mine") (mine, mill and roaster) in British Columbia. As previously disclosed, effective December 31, 2014, TC Mine was placed on care and maintenance after completing the processing of stockpiled ore from Phase 7. TCM is conducting limited stripping at the mine for the next phase of mining (referred to as "Phase 8") to maintain its options while TCM continue to evaluate alternatives for TC Mine. Additionally, due to adverse conditions in the molybdenum market, TCM's Endako Mine was placed on temporary suspension, effective December 31, 2014. TCM will continue to closely monitor market conditions and re-evaluate the status of the Endako Mine as market conditions warrant.

TCM also has a 100% interest in a copper and molybdenum exploration property located in British Columbia (the "Berg property"), a 100% interest in a gold exploration project located in Nunavut, Canada (the "Maze Lake property"), and a 0.51% net smelter return royalty and a 10.2% net profits interest in a zinc and lead exploration project located in Canada (the "Howards Pass property").

2. Significant Accounting Policies

Basis of Preparation and Principles of Consolidation

The accompanying consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States ("US GAAP"). The consolidated financial statements include the accounts of TCM and its subsidiaries, and intercompany accounts and transactions have been eliminated in consolidation. TCM also consolidates its 75% proportionate interest in the accounts of the unincorporated Endako Mine joint venture. Certain prior year amounts in the financial statements have been reclassified to conform to the current year presentation. Intercompany accounts and transactions have been eliminated in consolidation. Financial amounts are presented in United States ("US") dollars unless otherwise stated. References to C\$ are Canadian dollars.

Use of Estimates

The preparation of financial statements in conformity with US GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities as of the date of the financial statements and the reported amounts of revenues and expenditures during the reporting period. As the estimation process is inherently uncertain, actual future outcomes could differ from current estimates and assumptions, potentially having material effects on future financial statements. The more significant areas requiring the use of management estimates include mineral reserve estimation; useful asset lives for depreciation, depletion and amortization; reclamation and closure costs; environmental obligations; deferred taxes and valuation allowances; asset fair values in evaluating asset impairments and estimates of recoverable copper, gold and other minerals.

Currency Translation

The functional currency of TCM and its US operations is the US dollar. Monetary assets and liabilities denominated in foreign currencies are translated into US dollars at exchange rates in effect at the balance sheet date, with resulting gains or losses reported in (gain) loss on foreign exchange in the computation of net income (loss). Other non-monetary assets and liabilities are translated at historic rates. Revenues, expenses and cash flows in foreign currencies are translated into US dollars at average exchange rates.

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

2. Significant Accounting Policies (Continued)

The functional currency of TCM's Canadian operations is the Canadian dollar. The assets and liabilities for those subsidiaries with a Canadian dollar functional currency are translated at exchange rates in effect at the balance sheet date, and revenues and expenditures are translated at average exchange rates. Differences arising from these foreign currency translations are recorded in the Consolidated Balance Sheets as accumulated other comprehensive income (loss) within Shareholders' equity.

Change in Estimate

On January 1, 2014, the Life of Mine Plan ("LOM") for the Endako Mine was revised to reflect long term molybdenum pricing expectations. As a result, Endako Mine's estimated mine life was reduced to approximately 3.5 years from 15 years. During the second quarter of 2014, in light of the reduced mine life and to better reflect the economic utilization of property, plant and equipment assets at the Endako Mine, TCM reduced the depreciable lives of Endako Mine's property, plant and equipment assets using the straight line and declining balance depreciation convention (the depreciable lives of assets using the units-of-production depreciation convention had been reduced in the first quarter of 2014) and began considering the salvage values of these assets when recognizing its share of depreciation, depletion and amortization expense. This change in estimate, effective as of April 1, 2014, was accounted for prospectively in accordance with ASC 205, Accounting Changes and Error Corrections. This change lowered depreciation expense and increased net income by \$2.3 million, or approximately \$0.01 per diluted share, and \$7.4 million, or approximately \$0.04 per diluted share, respectively, for the three months and year ended December 31, 2014.

Fair Value Measurement

US GAAP accounting standards define fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The standards establish a fair value hierarchy that distinguishes between (1) market participant assumptions developed based on market data obtained from independent sources (observable inputs) and (2) an entity's own assumptions about market participant assumptions developed based on the best information available in the circumstances (unobservable inputs). The fair value hierarchy consists of three broad levels, which gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy are described below:

- Level 1 Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities.
- Level 2 Quoted prices in markets that are not active or inputs that are observable, either directly or indirectly, for substantially the full term of the asset or liability.
- Level 3 Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (supported by little or no market activity).

Cash and Cash Equivalents and Restricted Cash

Cash is comprised of cash deposits held at banks. Cash equivalents are financial instruments issued or guaranteed by major financial institutions and governments that have an original maturity date of less than 90 days. Cash equivalents are stated at cost, which approximates market value. Restricted cash is primarily comprised of amounts withheld related to certain construction contracts and amounts to fund TCM's deferred compensation program.

Accounts Receivable

Accounts receivable are carried at their estimated collectible amounts. Accounts receivable included trade receivables of \$45.1 million and \$41.6 million and other receivables of \$1.0 million and \$6.2 million as of December 31, 2014 and 2013, respectively. Other receivables as of December 31, 2014 primarily consisted of \$2.0 million of Goods and Services Sales Tax refunds receivable; \$0.9 million of Langeloth Facility receivables; \$0.3 million of third party molybdenum receivables; \$1.3 million in settlement receivables on hedges and other miscellaneous receivables,

partially offset by \$3.5 million of mark-to-market adjustments relating to provisional invoices for Mount Milligan Mine copper and gold concentrate sales. Other receivables as of December 31, 2013 primarily consisted of \$3.3 million of Goods and Services Sales Tax refunds and Canadian

(US dollars in millions, except per share amounts)

2. Significant Accounting Policies (Continued)

Harmonized Sales Tax refunds and \$0.3 million of mark-to-market adjustments relating to provisional invoices for Mount Milligan Mine copper and gold concentrate sales.

Product Inventories

Product inventories are carried at the lower of cost or market and assessed monthly to determine if a write down is required; through the first quarter of 2012, the assessment was performed quarterly. Cost is comprised of production costs for copper-gold concentrate ("concentrate") and molybdenum concentrate ("molybdenum") produced and processed from TCM's mines, as well as amounts paid for molybdenum concentrate purchased from third parties. Production costs include the direct mining, milling and on-site general and administrative costs; costs of processing and roasting; transportation, shipping, freight and insurance costs; refining and treatment costs; warehouse costs; stock-based compensation and depreciation, depletion and amortization. Stripping costs (i.e., the costs of removing overburden and waste material to access mineral deposits) incurred during the production phase of a mine are considered variable production costs and are included as a component of inventory produced during the period in which stripping costs are incurred. For concentrate, TCM uses the weighted-average cost method for production and sales of product inventory. For molybdenum, TCM uses the first-in, first-out cost method for production and sales of product inventory. For both the copper-gold operations and molybdenum operations, the weighted-average cost method is used for stockpiled ore.

Obsolescence

TCM routinely evaluates materials and supplies inventory for obsolescence. When necessary, obsolete and surplus materials and supplies are written down in a manner that reduces the inventory value to an amount that does not exceed its net realizable value, which may be considered salvage value, with the difference charged to current period expenses. During 2014, 2013 and 2012, TCM recorded write downs for obsolete materials and supplies inventory of \$2.8 million, \$2.4 million and \$0.2 million, respectively.

Property, Plant, Equipment and Development

Mineral Properties

TCM capitalizes the costs to acquire mineral properties. On acquisition of a mineral property, TCM estimates the fair value of proven and probable mineral reserves, as well as the value beyond proven and probable mineral reserves, and records any costs incurred as assets at the date of acquisition. The costs assigned to mineral properties in production are amortized over the life of the mine using the units-of-production method based on the volume of mineral produced in relation to the total estimated proven and probable mineral reserves. The cost assigned to the value beyond proven and probable mineral reserves is not amortized. However, as new information is obtained or economic conditions change, mineralized material may be converted into proven and probable mineral reserves at which time the capitalized costs associated with mineralized material are reclassified as costs subject to amortization.

Mine Development

Capitalization of mine development costs that meet the definition of an asset begins once all operating permits have been secured, mineralization is classified as proven and probable reserves and a final feasibility study has been completed. Mine development costs include engineering and metallurgical studies, drilling and other related costs to delineate an ore body and the removal of overburden to initially expose an ore body at open pit surface mines. Costs incurred before mineral resources are classified as proven and probable reserves are expensed and classified as exploration expense, unless it can be substantiated prior to the commencement of a drilling program that the drilling costs will result in the conversion of a mineral resource into proven and probable reserves. All capitalized costs are amortized using the units-of-production method over the estimated life of the ore body based on recoverable quantities to be produced from estimated proven and probable mineral reserves. Interest expense allocable to the cost of developing mining properties and to construct new facilities is capitalized until assets are ready for their intended use. Gains or losses from sales or retirements of assets are included in costs and expenses on the Consolidated Statements

of Operations and Comprehensive Income (Loss). Tax credits, which will be used to offset future taxable income, generated from qualifying new mine development costs are included as reductions to property, plant, equipment and development and increases to deferred tax assets on the Consolidated Balance Sheets. The benefit from these tax incentives will

91

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

2. Significant Accounting Policies (Continued)

be reflected in net income over the estimated life of the ore body, along with the capitalized mine development costs which generated the credits.

Facilities and Equipment

Mining facilities and equipment are recorded at cost. Expenditures for facilities and equipment relating to new assets or improvements are capitalized if they extend useful lives or extend functionality. Fixed plant and machinery are amortized using the units-of-production method over the lesser of the estimated life of the equipment or the ore body based on recoverable quantities to be produced from estimated proven and probable mineral reserves. Facilities, mobile and other equipment are depreciated on either a declining-balance or straight-line basis over the shorter of their estimated useful life or the life of the mine. The declining-balance percentages range from 10% to 50%, and the estimated useful lives range from 3 years to life-of-mine. Processing facilities are depreciated on a straight-line basis over the estimated useful lives ranging from 2 to 20 years. Tax allowances, which will be used to offset future taxable income, generated from qualifying new mine facilities and equipment expenditures are included as reductions to property, plant, equipment and development and increases to deferred tax assets on the Consolidated Balance Sheets. The benefit from these tax incentives will be reflected in net income over estimated life of the facilities and equipment, along with the associated expenditures which generated the allowances.

Repairs and maintenance costs are charged to expense as incurred, except when these repairs extend the life or functionality of the asset. In these instances, expenditures are capitalized and amortized over the period benefited. Depreciation, depletion and amortization is allocated to product inventory cost and then included in depreciation, depletion and amortization as inventory is sold.

Additionally, interest expense and financing fees allocable to the cost of developing mining properties and to constructing new facilities is capitalized until assets are ready for their intended use. For the years ended December 31, 2014, 2013 and 2012, \$4.1 million, \$75.2 million and \$52.3 million, respectively, of interest expense and financing fees were capitalized and \$9.1 million, \$74.7 million, \$40.7 million, respectively of interest that had been formerly capitalized was paid.

Exploration

Exploration includes geological and geophysical work on areas without identified reserves, together with drilling and other related costs. These costs are expensed as incurred.

Asset Impairments

TCM reviews and evaluates its long-lived assets for impairment using a two-step approach when events and changes in circumstances indicate that the related carrying amounts of its assets may not be recoverable. If total estimated future cash flows on an undiscounted basis are less than the carrying amount of the assets (step 1), TCM performs an evaluation of the estimated fair value of the asset or asset group (step 2). An impairment loss is measured and recorded based on the difference between book value and the estimated fair value of the asset or asset group. Fair value is estimated using discounted estimated future cash flows, or the application of an expected fair value technique in the absence of an observable market price. Future cash flows include estimates of recoverable quantities to be produced from estimated proven and probable mineral reserves, commodity prices (considering current and historical prices, price trends and related factors), production quantities and capital expenditures, all based on life-of-mine plans and projections. In estimating future cash flows, assets are grouped at the lowest level for which identifiable cash flows exist that are largely independent of cash flows from other asset groups. Generally, in estimating future cash flows, all assets are grouped at a particular mine for which there are identifiable cash flows. The assumptions underlying future cash flow estimates are subject to significant risks and uncertainties. Any differences between TCM's assumptions and market conditions and/or TCM's operating performance could have a material effect on the determination of ore reserves or the ability to recover the carrying amounts of TCM's long-lived assets, thus resulting in impairment charges.

During 2014, 2013 and 2012, TCM experienced triggering events that caused management to update its impairment evaluation. As a result of this evaluation, in 2014 TCM further impaired the value of the remaining materials and supplies inventory at TC Mine and TCM's share of the property, plant and equipment assets and materials and supplies inventory at Endako Mine. Additionally in 2014, TCM also wrote down the value of the TCM exploration properties. In 2013 TCM wrote down to the assets' fair value the property, plant and equipment assets and materials and supplies inventory at TC Mine and

Table of Contents

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

2. Significant Accounting Policies (Continued)

TCM's share of those assets at Endako Mine. In 2012 TCM wrote down TCM's share of the assets at Endako Mine. See Note 5 for further discussion.

Goodwill

During 2012, TCM suspended waste stripping activity associated with the next phase of production at TC Mine, which, coupled with declines in molybdenum prices, represented significant changes in TCM's business, thereby requiring TCM to evaluate goodwill for impairment on an enterprise-wide basis. As a result of this evaluation, the then-remaining balance of goodwill was impaired during 2012. See Note 5 for further discussion.

Legal Fees

TCM generally recognizes legal expenses as incurred; when it is determined that a contingency meets the criteria for recognition as a liability on the balance sheet, TCM also accrues for the related incurred legal fees associated with that probable contingency.

Debt Issuance Costs

Included in other long-term assets are costs associated with the issuance of TCM's secured and unsecured senior notes and tangible equity units ("tMEDS"). The remaining unamortized issuance costs at December 31, 2014 and 2013 totaled \$15.3 million and \$21.3 million, respectively, and are being amortized over the life of the senior notes or the tMEDS, as applicable. Amortization costs for the secured and unsecured senior notes and tMEDS were capitalized to Mount Milligan Mine until the underlying assets became ready for their intended use.

Equipment Financings

TCM is the lessee of equipment under the Equipment Facility with Caterpillar (see Note 8). In 2013, TCM entered into an equipment financing transaction with Caterpillar with respect to certain Endako Mine equipment. In 2013 and 2012, TCM also entered into equipment financing transactions with Caterpillar with respect to certain equipment at Mount Milligan Mine pursuant to the Equipment Facility. On January 15, 2015 TCM entered into an amendment with Caterpillar which extends its ability to finance additional equipment under the Equipment Facility through December 2015. The assets and liabilities under these capital leases are recorded at the lower of the present value of the minimum lease payments or the fair value of the asset. Once ready for their intended use, the assets are depreciated over the lower of their related lease terms or their estimated productive lives. Beginning in September 2013, in conjunction with the start-up phase of Mount Milligan Mine, TCM ceased capitalizing the interest and debt issuance costs associated with the leases under the Equipment Facility for Mt. Milligan Mine as the related assets were placed in service.

Financial Instruments

From time to time, TCM enters into various arrangements, such as forward commodity contracts, foreign currency forward contracts and fixed- and provisionally-priced purchase and sale contracts. TCM does not account for any of these arrangements using hedge accounting.

Financial and derivative instruments (including embedded derivatives) and any outstanding common stock purchase warrants are recorded at fair value on the Consolidated Balance Sheets. Changes in the fair value of derivatives are recorded each period in the Consolidated Statements of Operations and Comprehensive Income (Loss). All of TCM's once-outstanding common stock purchase warrants were exercised or expired as of December 31, 2012.

Provision for Income and Mining Taxes

TCM computes income taxes using the asset and liability approach that results in the recognition of deferred tax assets and liabilities for the expected future tax consequences or benefits of temporary differences between the financial reporting basis and the tax basis of assets and liabilities, as well as operating loss and tax credit carry-forwards, using enacted tax rates in effect in the years in which the differences are expected to reverse.

In assessing the realization of deferred tax assets, management considers whether it is more likely than not that some portion or all of its deferred tax assets will not be realized. Management considers the scheduled reversal of deferred

tax

93

(US dollars in millions, except per share amounts)

2. Significant Accounting Policies (Continued)

liabilities, projected future taxable income, carryback of losses and tax planning strategies in making this assessment. A valuation allowance is provided for the portion of TCM's net deferred tax assets for which it is not more likely than not that they will be realized.

Asset Retirement Obligations

Future obligations to retire an asset, including site closure, dismantling, remediation and ongoing treatment and monitoring, are recorded as a liability at fair value at the time of construction or development. The fair value determination is based on estimated future cash flows, the current credit-adjusted risk-free discount rate and an estimated inflation factor. The value of asset retirement obligations is evaluated on an annual basis or as new information becomes available on the expected amounts and timing of cash flows required to discharge the liability. The fair value of the liability is added to the carrying amount of the associated asset, and this additional carrying amount is depreciated or amortized over the estimated life of the asset. An accretion cost, representing the increase over time in the present value of the liability, is recorded each period as accretion expense. As reclamation work is performed or liabilities are otherwise settled, the recorded amount of the liability is reduced.

Revenue Recognition

TCM sells its products pursuant to sales contracts entered into with its customers. For concentrate sales, revenue is recognized when title and risk of loss pass and when collectability is reasonably assured. For concentrate, this is when a provisional payment is received. The passing of title and risk of loss are based on terms of the sales contract, generally upon shipment or delivery of product. Revenues from TCM's concentrate sales are recorded based on a provisional sales price, with adjustments made for a final sales price calculated in accordance with the terms specified in the relevant sales contract, including the price to be received under the Gold Stream Arrangement, as well as any potential losses from TCM's commitment under the Gold Stream Arrangement. Revenues from concentrate sales are recorded net of treatment and all refining charges and the impact of derivative contracts. Treatment and refining charges represent payments or price adjustments that are contractually negotiated, as is typical in the industry. Moreover, because a portion of the metals contained in concentrate is unrecoverable as a result of the smelting process, TCM's revenues from concentrate sales are also recorded net of allowances based on the quantity and value of these unrecoverable metals.

Under the long-established structure of sales agreements prevalent in the industry, metals contained in concentrate are generally provisionally priced at the time of shipment. The provisional prices are finalized in a specified future month (generally one to four months from the shipment date) based on quoted monthly average spot gold prices on the London Metal Exchange ("LME") or spot copper prices on the London Bullion Market Association ("LBMA"). TCM receives market prices based on prices in the specified future month, which results in mark-to-market price fluctuations recorded to revenues until the date of settlement. To the extent final prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to revenues is recorded each reporting period until the date of final pricing.

To satisfy its obligations under the Gold Stream Arrangement, TCM purchases unallocated refined gold and arranges for delivery to Royal Gold's designated account. TCM recognizes revenue for sales of refined gold when title and risk of loss passes and when collectability is reasonably assured. Revenue from and costs for unallocated refined gold delivered under the Gold Stream Arrangement and gains and losses related to TCM's forward commodity gold contracts to hedge the Company's exposure under the Gold Stream Arrangement are netted and recorded to gold sales. TCM recognizes revenue from molybdenum sales when persuasive evidence of an arrangement exists, the price is fixed and determinable, the product has been delivered, title has transferred and collection is reasonably assured. TCM's sales contracts specify the point in the delivery process at which title transfers to the customer (shipping point

or destination). Shipping and handling fees are accounted for on a gross basis under the terms of the contract. TCM recognizes tolling and calcining revenue under contractual arrangements as the services are performed on a per-unit basis.

TCM enters into provisionally-priced molybdenum, copper and gold sales contracts, whereby the contracts settle at prices to be determined at a future date based upon quoted prices. The future pricing mechanism of these agreements constitutes an embedded derivative, which is bifurcated and separately marked to an estimated fair value at the end of each period. Changes to

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

2. Significant Accounting Policies (Continued)

the fair value of embedded derivatives related to molybdenum sales agreements are included in molybdenum sales revenue in the determination of net income (loss).

Stock-Based Compensation

Stock Options

TCM measures compensation related to stock options based on the fair value of instruments issued. The fair value of stock options at grant date is estimated using a Black-Scholes option pricing model. Compensation expense is recognized on a straight-line basis over the stock option vesting period and included in the specific income statement categories that include the costs and benefits of the employees granted the stock-based award. Proceeds arising from the exercise of stock options are credited to common stock.

Performance Share Units

Performance share units ("PSUs") are accounted for at fair value using a Monte Carlo simulation valuation model on the date of grant. The Monte Carlo model is based on random projections of stock price paths. Expected volatility is calculated using a weighted average of historical daily volatilities and represents the extent to which TCM's stock price performance is expected to fluctuate during each of the calendar periods of the award's anticipated term. The fair value is recognized as an expense on a straight-line basis over the requisite service period (usually the vesting period) and included in the specific income statement categories that include the costs and benefits of the employees granted PSUs. Upon vesting, common shares are issued to the employee from authorized but unissued common stock.

According to the provisions of ASC 718, Compensation—Stock Compensation, stock based compensation expense is reversed for unvested and forfeited PSUs.

Restricted Stock Units

Restricted stock units ("RSUs") are accounted for at fair value, which is based on the market value of TCM's common shares on the day of grant. The total fair value is recognized as an expense on a straight-line basis over the vesting period and included in the specific income statement categories that include the costs and benefits of the employee and directors granted RSUs. Upon vesting, common shares are issued to the employee or director from authorized but unissued common stock. According to the provisions of ASC 718, Compensation—Stock Compensation, stock based compensation expense is reversed for unvested and forfeited RSUs.

Employee Stock Purchase Plan

TCM's employee stock purchase plan ("ESPP") provides an opportunity for TCM's employees to purchase its common shares at 85% of the closing price at the beginning of the offering period or at the end of the offering period, whichever is lower. The ESPP was suspended effective July 1, 2013 pending approval of an amended plan by the TCM shareholders. Effective May 13, 2014, TCM shareholders approved the Amended and Restated Thompson Creek Metals Company Inc. 2010 Employee Stock Purchase Plan that makes additional shares of TCM's common stock available for issuance.

Earnings per Share

Earnings per share calculations are based on the weighted-average number of common shares issued and outstanding during the year. Diluted earnings per share are calculated using the treasury stock method, which assumes that outstanding stock options and warrants with an average exercise price less than the average market price of TCM's common shares are exercised, and the proceeds are used to repurchase common shares at the average market price of the common shares for the period. In years in which a loss is incurred, the effect of potential issuances of shares under the exercise of options, warrants and RSUs would be anti-dilutive, and therefore, are excluded from diluted earnings per share calculations.

3. Inventory

The carrying value of product inventory was as follows:

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

3. Inventory (Continued)

	December 31, 2014	December 31, 2013
Copper and Gold Inventory:		
Concentrate	\$29.4	\$39.8
Stockpiled ore	8.3	4.8
	\$37.7	\$44.6
Molybdenum Inventory:		
Finished product	\$45.0	\$27.5
Work-in-process	13.5	28.0
Stockpiled ore	0.4	22.0
	\$58.9	\$77.5
	\$96.6	\$122.1

During 2014, 2013 and 2012, the carrying value of TCM's copper and gold and molybdenum inventory exceeded the market value, resulting in write downs of \$25.5 million, \$57.8 million, and \$73.8 million, respectively.

The following table sets forth the inventory write downs in the accompanying Consolidated Statements of Operations and Comprehensive Income (Loss) for the years presented:

	Years Ended		
	December 31, 2014	December 31, 2013	December 31, 2012
Copper-Gold			
Operating expense	\$—	\$20.2	\$—
Depreciation, depletion and amortization	—	2.1	—
Start-up costs	—	7.3	—
US Operations Molybdenum			
Operating expense	2.1	—	14.4
Depreciation, depletion and amortization	0.2	—	1.2
Canadian Operations Molybdenum			
Operating expense	20.4	24.1	38.2
Depreciation, depletion and amortization	2.8	4.1	20.0
	\$25.5	\$57.8	\$73.8

4. Property, Plant, Equipment and Development, Net

Property, plant, equipment and development, net, was comprised of the following:

	December 31, 2014	December 31, 2013
Mining properties and mineral reserves	\$703.7	\$768.6
Mining and milling equipment and facilities	1,523.4	1,661.2
Processing facilities	171.1	168.5
Construction-in-progress	23.1	42.7
Other	6.5	18.3
	2,427.8	2,659.3
Less: Accumulated depreciation, depletion and amortization	(209.5) (121.3

\$2,218.3

\$2,538.0

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

4. Property, Plant, Equipment and Development (Continued)

The construction-in-progress balance included \$19.2 million and \$33.2 million related to Mount Milligan Mine as of December 31, 2014 and 2013, respectively. The construction-in-progress balance at December 31, 2014 consisted of \$11.7 million for Phase 2 of the tailings facility system and \$7.5 million for other items for Mount Milligan Mine. During the years ended December 31, 2014, December 31, 2013 and December 31, 2012 TCM recognized non-cash property plant equipment and development asset impairments of \$92.0 million, \$188.0 million and \$530.5 million, respectively. See Note 5 for further discussion of asset impairments.

5. Asset Impairments

Asset Impairments

The following table sets forth the write downs of property, plant, and equipment and development assets, mineral reserves, materials and supplies inventory and goodwill in the accompanying Consolidated Statements of Operations and Comprehensive Income (Loss) for the years presented:

	Years Ended		
	December 31, 2014	December 31, 2013	December 31, 2012
US Operations Molybdenum			
Property, plant, and equipment	\$—	\$127.8	\$—
Materials and supplies	3.3	1.6	—
Canadian Operations Molybdenum			
Property, plant, and equipment and development assets ⁽¹⁾	66.7	59.4	530.5
Materials and supplies	9.5	5.3	—
Exploration Properties and Other			
Mineral reserves	25.3	—	—
Land	—	0.8	—
Goodwill	—	—	47.0
	\$104.8	\$194.9	\$577.5

⁽¹⁾ Included an impairment charge on development assets for Endako Mine for the year ended December 31, 2012.

Effective December 31, 2014, TCM and its joint venture partner temporarily suspended operations at Endako Mine due to recent and expected ongoing weakness in the molybdenum price. Additionally, given mining performance for 2014, there was a decrease in the Endako Mine molybdenum proven and probable reserves. The temporary suspension and reserve decrease constituted triggering events, requiring TCM to re-evaluate its proportionate share of Endako Mine's long-lived assets for impairment in the fourth quarter of 2014. This evaluation indicated that TCM's share of the anticipated undiscounted cash flows from Endako Mine assets, using the two-step approach discussed in Note 2, were less than its share of the carrying value of the fixed assets due to the expected future molybdenum price and anticipated production and cash costs from the Endako Mine. This resulted in estimating TCM's share of the assets' estimated fair value, which was also less than TCM's share of their carrying values. As a result, this evaluation resulted in non-cash write downs of the Endako Mine property, plant and equipment assets and materials and supply inventory.

Additionally, as of December 31, 2014, TCM evaluated the fair value of its exploration properties given the significant decline in commodity prices in the fourth quarter of 2014. This evaluation indicated that the fair value of these properties was less than TCM's carrying values and non-cash write downs were recognized in the fourth quarter

of 2014, representing a write-down to the assets' estimated fair value as of December 31, 2014.

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

5. Asset Impairments (Continued)

TCM also evaluated the fair value of its remaining materials and supplies inventory at TC Mine as of December 31, 2014, given recent weakness in commodity markets. As a result, the fair value of TC Mine's materials and supplies inventory was less than the carrying value and TCM recognized non-cash write downs in the fourth quarter of 2014.

Given recent declines in commodity prices, TCM assessed all long-lived assets for impairment in the fourth quarter of 2014. The impairment analysis did not result in any other long-lived asset impairments during the fourth quarter of 2014.

As of December 31, 2013 TCM's decision to place TC Mine on care and maintenance and the update to its Endako Mine molybdenum reserves using a price of \$10 per pound of molybdenum oxide compared to \$12 per pound used previously, constituted triggering events, requiring TCM to evaluate the long-lived assets at these mines for impairment in the fourth quarter of 2013. As a result of these analyses, TCM recorded a non-cash asset impairment, representing a write down to the assets' estimated fair value as of December 31, 2013.

Additionally during 2013, TCM negotiated a contract with US Energy to sell land originally acquired by one of its subsidiaries for easements related to the Mt. Emmons project, in respect of which TCM terminated its interest in 2011. TCM assessed the impact of this contract on the carrying value of the land, and recorded a non-cash write down of the land representing a write down to the land's fair value.

For the year ended December 31, 2012, TCM recorded a non-cash write down of its share of the Endako Mine's property, plant, equipment and development assets representing a write down to the assets' estimated fair value.

These impairments were included in total costs and expenses in TCM's Consolidated Statements of Operations and Comprehensive Income (Loss) and excluded from TCM's non-GAAP measures of adjusted net income (loss) per share-basic and diluted. See "Non-GAAP Financial Measures" in Item 7 for the definition and calculation of adjusted net income (loss).

Goodwill

On October 26, 2006, TCM acquired Thompson Creek Metals Company USA, a private company that owned, among other assets, TC Mine, Endako Mine and the Langeloth Facility. This acquisition was accounted for using the purchase method, whereby the purchase consideration was allocated to the estimated fair values of the assets acquired and liabilities assumed at the effective date of the purchase. Because the purchase price exceeded the fair value of the net identifiable assets acquired, TCM recorded goodwill related to this transaction.

During the third quarter of 2012, TCM suspended waste stripping activity associated with the next phase of production at TC Mine. This decision and the decline in molybdenum prices represented significant changes in TCM's business, requiring TCM to evaluate for potential impairments on an enterprise-wide basis at September 30, 2012. For purposes of the impairment evaluation, estimates of after-tax discounted future cash flows of the individual reporting units were used. The estimated cash flows were derived from life-of-mine plans developed using long-term analyst pricing reflective of the then-current price environment and management's projections for operating costs. TCM also considered the market value of its equity. As a result of this evaluation, a goodwill impairment charge representing the entire balance of goodwill, was recorded in other (income) expense in its Consolidated Statements of Operations and Comprehensive Income (Loss) in 2012.

6. Financial Instruments

TCM enters into various derivative financial instruments in the normal course of operations to manage exposure to the market prices of copper, gold and molybdenum. TCM does not apply hedge accounting to its derivative instruments.

Accordingly, changes in fair value of derivative instruments are recorded in the Consolidated Statements of Operations and Comprehensive Income (Loss), except those contracts for which TCM has elected to apply the normal purchases and normal sales scope exception.

The following table provides details about the fair values of TCM's derivative assets and liabilities:

98

(US dollars in millions, except per share amounts)

6. Financial Instruments (Continued)

	Fair Value as of December 31,	
	2014	2013
Assets ⁽¹⁾		
Commodity contracts	\$ 1.8	\$ 0.2
Liabilities ⁽¹⁾		
Forward currency contracts	\$ 0.3	\$ —

⁽¹⁾TCM's derivative assets are included in prepaid expenses and other current assets, and derivative liabilities are included in other current liabilities. TCM is exposed to credit risk when counterparties with which it has entered into derivative transactions are unable to satisfy their obligations. To reduce counterparty credit exposure, TCM deals primarily with large, credit-worthy financial institutions and companies and limits credit exposure to each. TCM believes the counterparties to the contracts to be credit-worthy entities and, therefore, TCM believes credit risk of counterparty non-performance is relatively low, and as such, the fair value of the derivatives has not been adjusted. The following table sets forth the gains (losses) on derivative instruments for the years presented:

Derivative Type and Activity	Statement of Operations Classification	Years Ended		
		December 31, 2014	December 31, 2013	December 31, 2012
Gold hedges related to Gold Stream Arrangement	Gold sales	\$(1.3)	\$ —	\$ —
Copper and Gold hedges; other commodity contracts	Other	\$ 4.8	\$ 1.6	\$ (2.5)
Molybdenum hedges	Molybdenum sales	\$ —	\$ (0.1)	\$ (0.4)
Forward currency contracts	Gain (loss) on foreign exchange, net	\$(0.2)	\$ —	\$ (1.8)
Common stock purchase warrant derivatives	Change in fair value of common stock purchase warrants	\$ —	\$ —	\$ 1.8

Gold Hedges Related to Gold Stream Arrangement and Other Commodity Contracts

TCM must satisfy its obligation under the Gold Stream Arrangement (discussed in Note 10) by delivering gold to Royal Gold after TCM receives payment from third-party purchasers, including offtakers and traders, that purchase concentrate from Mount Milligan Mine ("MTM Customers"). During 2014, in connection with TCM's first 12 shipments of concentrate from Mount Milligan Mine, TCM delivered gold to Royal Gold based on a percentage of the gold ounces included in each provisional sale of gold to MTM Customers within two days of receiving a provisional payment.

TCM receives payment from MTM Customers in cash, thus requiring the purchase of gold in order to satisfy the obligation to pay Royal Gold in gold. In order to hedge its gold price risk that arises when physical purchase and concentrate sales pricing periods do not match, hereafter referred to as the Gold Stream Risk, TCM has entered into certain forward gold purchase and sales contracts pursuant to which it purchases gold at an average price during a quotational period and sells gold at a spot price. TCM records its forward commodity contracts at fair value using a market approach based on observable quoted market prices and contracted prices.

In addition to the Gold Stream Risk and in connection with the sale of concentrate from Mount Milligan Mine, TCM is exposed to copper and gold price fluctuations between the dates of concentrate shipment, provisional payment and final payment. In order to hedge the price risk for the metals contained in concentrate, TCM has entered into certain forward copper and gold purchase and sale contracts pursuant to which it purchases copper or gold at an average price during a quotational period and sells copper or gold at a spot price. Additionally, TCM has entered into zero cost collars pursuant to which it agrees with a counterparty to a floor and ceiling relative to future prices of gold. If the gold price is below the floor, the counterparty pays TCM the difference between the price and the floor. If the gold

price is above the ceiling, TCM pays the counterparty the difference between the ceiling and the price. TCM records its commodity contracts at fair value using a market approach based on observable quoted market prices and contracted prices. These activities are intended to protect against the price risk related to the MTM Customer purchase contracts.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

6. Financial Instruments (Continued)

The following table provides details of TCM's commodity contracts as of December 31, 2014:

	Quantity	Sell Price	Buy Price	Maturities Through
Gold Hedge Sales related to Gold Stream Arrangement (oz)	6,461	\$1,192-\$1,213	TBD	January 2015
Gold Hedge Purchases related to Gold Stream Arrangement (oz)	31,060	TBD	TBD	January 2015-April 2015
Forward Gold Sales (oz)	3,300	\$1,230	TBD	January 2015
Forward Copper Sales (lb)	7,716,100	\$3.05-\$3.19	TBD	January 2015-May 2015
	Quantity	Put Price	Call Price	Maturities Through
Gold Collars (oz)	22,000	\$1,150-\$1,175	\$1,237 - \$1,267	January 2015-December 2015

Provisionally-Priced Contracts

Certain molybdenum, copper and gold sales contracts provide for provisional pricing. These sales contain an embedded derivative related to the provisional-pricing mechanism, which is bifurcated and accounted for as a derivative. TCM also enters into provisionally-priced molybdenum purchase contracts that also contain an embedded derivative, which is bifurcated and accounted for as a derivative.

TCM determines the fair value of its provisionally-priced contracts using a market approach based upon observable inputs from published market prices and contract terms. Changes to the fair values of the embedded derivatives related to provisionally-priced molybdenum purchases are included in operating expenses in the Consolidated Statements of Operations and Comprehensive Income (Loss) as the product is sold.

The following table sets forth TCM's outstanding provisionally-priced contracts as of December 31, 2014:

	Open Positions	Average Price Per Unit		Maturities Through
		Contract	Market	
Embedded derivatives in provisional sales contracts:				
Molybdenum (thousands of pounds)	68.6	\$9.38	\$8.88	January 2015
Copper (millions of pounds)	21.2	TBD	TBD	April 2015
Gold (ounces)	11,356	TBD	TBD	January 2015
Embedded derivatives in provisional purchase contracts:				
Molybdenum (thousands of pounds)	380.0	\$7.80	\$8.96	February 2015

Forward Currency Contracts

TCM transacts business in various currencies in the normal course of its operations and for capital expenditures. In addition, with all of its revenues denominated in US dollars, TCM has an ongoing foreign exchange risk with respect to its Canadian operations. To help mitigate this risk, TCM has entered into foreign currency forward contracts pursuant to which it has agreed to buy Canadian dollars at an agreed-upon rate. TCM records its currency contracts at fair value using a market approach based on observable quoted exchange rates and contracted notional amounts. As of December 31, 2014, TCM had 8 open foreign currency option contracts. As of December 31, 2013 and 2012, TCM had no open foreign currency contracts.

The following table provides details of TCM's forward currency contracts as of December 31, 2014:

	Notional Amount	Buy Price	Maturities Through
Forward currency contracts	\$25,000,000	\$1USD/C\$1.14-C\$1.16	January 2015 - March 2015

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

6. Financial Instruments (Continued)

Fixed-Priced Contracts

TCM has entered into certain sales contracts pursuant to which it sells future molybdenum production at fixed prices. These fixed prices may be different than the quoted market prices at the date of sale. TCM has elected to treat these contracts as normal purchase and normal sale contracts.

The Gold Stream Arrangement contains an agreement to sell gold at a fixed price, but it does not meet the definition of a derivative instrument. See discussion of the Gold Stream Arrangement in Note 10.

The following table sets forth TCM's outstanding molybdenum fixed-priced sales contracts as of December 31, 2014:

	Quantity (000's lb)	Sell Price	Maturities Through
Molybdenum fixed price sales	599.7	\$12.05	November 2015

7. Fair Value Measurement

US GAAP defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The standards establish a fair value hierarchy that distinguishes between (1) market participant assumptions developed based on market data obtained from independent sources (observable inputs) and (2) an entity's own assumptions about market participant assumptions developed based on the best information available in the circumstances (unobservable inputs). The sensitivity to changes in inputs and their impact on the fair value measurement can be significant. The fair value hierarchy consists of three broad levels, which gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy are described below:

Level 1	Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities.
Level 2	Quoted prices in markets that are not active or inputs that are observable, either directly or indirectly, for substantially the full term of the asset or liability.
Level 3	Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (supported by little or no market activity).

The following table sets forth TCM's financial liabilities measured at fair value by level within the fair value hierarchy. As required, liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement, as discussed in Note 2.

	Fair Value at December 31, 2014			
	Total	Level 1	Level 2	Level 3
Liabilities:				
Senior secured notes	\$393.2	\$—	\$393.2	\$—
Senior unsecured notes	453.3	—	453.3	—
tMEDS	0.4	—	—	0.4
	\$846.9	\$—	\$846.5	\$0.4

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

7. Fair Value Measurement (Continued)

	Fair Value at December 31, 2013			
	Total	Level 1	Level 2	Level 3
Liabilities:				
Senior secured notes	\$397.2	\$—	\$397.2	\$—
Senior unsecured notes	492.4	—	492.4	—
tMEDS	12.7	—	—	12.7
	\$902.3	\$—	\$889.6	\$12.7

TCM classified its senior secured and unsecured notes within Level 2 because they are valued using a mix of inputs, including a risk-free interest rate input that is quoted in an active market and credit spread inputs that are observable but are not quoted market prices for identical liabilities. Both inputs are negatively correlated to the fair value measure; an increase (decrease) in the input will decrease (increase) the fair value measure.

TCM classified its tMEDS within Level 3 because they are valued using significant unobservable inputs. TCM determined the fair value of the debt component of tMEDS using a discounted cash flow model by obtaining yields for comparably-rated issuers trading in the market, considering the market yield of existing TCM debt and the credit rating of TCM.

As of December 31, 2014, the carrying values of the 9.75% senior secured notes were lower than their fair values of approximately \$393.2 million, while the carrying value of the 7.375% senior unsecured notes, the 12.5% senior unsecured notes and tMEDS were higher than their fair values of \$273.0 million, \$180.3 million and \$0.4 million, respectively. TCM determined the fair value of the notes using a discounted cash flow valuation model, consisting of inputs such as risk-free interest rates and credit spreads.

As of December 31, 2013, the carrying values of the 9.75% senior secured notes were lower than their fair values of approximately \$397.2 million, while the carrying value of the 7.375% senior unsecured notes, the 12.5% senior unsecured notes and tMEDS were higher than their fair values of \$297.7 million, \$194.7 million and \$12.7 million, respectively. TCM determined the fair value of the notes using a discounted cash flow valuation model, consisting of inputs such as risk-free interest rates and credit spreads.

There were no transfers into or out of Level 1, 2 or 3 during the years ended December 31, 2014 and 2013. TCM's policy is to recognize transfers as of the actual date of the event or change in circumstances.

The following table sets forth a reconciliation of activity related to Level 3 financial liabilities for the years ended December 31, 2014 and 2013:

	Total	Debt
Balance at January 1, 2013	\$27.8	\$27.8
Settlement and revaluation of tMEDS	(15.1)	(15.1)
Balance at December 31, 2013	12.7	12.7
Settlement and revaluation of tMEDS	(12.3)	(12.3)
Balance at December 31, 2014	\$0.4	\$0.4

8. Leases

TCM's total capital lease obligations consisted of the following:

(US dollars in millions, except per share amounts)

8. Leases (Continued)

	December 31, 2014	December 31, 2013
Equipment Facility capital leases	\$20.3	\$27.2
Equipment Facility sale leaseback	45.9	59.8
Endako Mine sale leaseback	2.3	3.5
Total lease obligations	68.5	90.5
Less: Current portion	(22.8) (21.8
Total long-term lease obligations	\$45.7	\$68.7

Equipment Financings

On March 30, 2011, TCM entered into an equipment financing facility, as amended from time to time (the "Equipment Facility"), pursuant to which Caterpillar Financial Services Limited ("Caterpillar") agreed to underwrite up to \$132.0 million in mobile fleet equipment financing for Mount Milligan Mine. Each borrowing under the Equipment Facility represents a capital lease and has a term of 48 or 60 months. Interest on the amounts borrowed under the Equipment Facility is payable at either floating or fixed rates, at TCM's option. At the end of each 48 or 60 month lease period, TCM has the option to purchase the underlying equipment for a nominal sum. The Equipment Facility includes non-financial covenants, and as of December 31, 2014, TCM was in compliance with these covenants. TCM's ability to finance additional equipment under the Equipment Facility expired in September 2014 per the terms of the Equipment Facility agreement. On January 15, 2015, TCM entered into an amendment with Caterpillar which extends its ability to finance additional equipment under the Equipment Facility through December 2015.

During 2013, TCM entered into three leases with Caterpillar with respect to certain equipment pursuant to the Equipment Facility, of which two are considered sale-leaseback transactions. Interest payments are based on a fixed rate of 5.50%

Also during 2013, TCM entered into a sale-leaseback transaction with Caterpillar with respect to certain Endako Mine equipment (the "Endako Sale Leaseback"), which is separate from the Equipment Facility. TCM received \$5.3 million in cash from Caterpillar for the sale of this equipment, which was subsequently leased back, after an upfront down payment of \$1.4 million. Interest payments are based on a fixed rate of 5.85%. The agreement includes certain non-financial covenants, and as of December 31, 2014, TCM was in compliance with these covenants.

TCM received \$37.8 million in cash from Caterpillar for the sale of equipment, including the Endako Sale Leaseback, which was subsequently leased back. These leases resulted in an increase to TCM's capital lease obligation at December 31, 2013 of \$33.2 million after upfront payments of \$4.6 million.

As of December 31, 2014 and 2013, TCM had \$66.2 million and \$87.0 million, respectively, in outstanding borrowings under the Equipment Facility. Interest pertaining to the Equipment Facility is allocable to the cost of developing mining properties and to constructing new facilities and is capitalized until assets are ready for their intended use. Beginning in September 2013, in conjunction with the start-up phase of Mount Milligan Mine, TCM ceased capitalizing the interest and debt issuance costs associated with the leases under the Equipment Facility for Mount Milligan Mine as the related assets were placed in service.

Interest and debt issuance costs on the equipment financings, as described above, consisted of the following:

	Years Ended December 31,		
	2014	2013	2012
Interest paid	\$4.6	\$4.7	\$1.0
Interest and debt issuance costs capitalized	\$—	\$3.7	\$1.9
Interest and debt issuance costs expensed	\$5.0	\$1.9	\$—

(US dollars in millions, except per share amounts)

8. Leases (Continued)

Future lease payments under capital leases as of December 31, 2014 for each of the next five years and in the aggregate were:

	Total (in millions)
2015	\$22.8
2016	24.1
2017	18.9
2018	2.7
2019	—
Total future capital lease payments	\$68.5

Operating Leases

TCM leases certain assets, such as equipment and office space, under operating leases expiring at various dates through 2018. Future lease payments under operating leases as of December 31, 2014 for each of the next five years and in the aggregate were:

	Total (in millions)
2015	\$2.9
2016	2.5
2017	1.6
2018	0.4
2019	0.2
Thereafter	—
Total future operating lease payments	\$7.6

Rent expense for 2014, 2013 and 2012 was \$0.5 million, \$0.7 million and \$0.6 million, respectively.

9. Debt

TCM's secured and unsecured notes, tMEDS, equipment loans and other credit facilities consisted of the following:

	December 31, 2014	December 31, 2013
9.75% Senior secured notes due 2017, net of discount	\$347.9	\$347.3
7.375% Senior unsecured notes due 2018	335.8	350.0
12.5% Senior unsecured notes due 2019	188.5	200.0
tMEDS	1.2	19.4
Equipment loans	2.8	5.4
Other	—	0.2
Total debt	876.2	922.3
Less: Current portion	(3.9) (15.4
Total long-term debt	\$872.3	\$906.9

Interest paid, capitalized and expensed was as follows:

Interest paid	\$86.7	\$77.1	\$40.3
Interest capitalized	\$4.1	\$71.5	\$50.4
Interest expensed	\$87.3	\$22.2	\$12.8

9.75% Senior Secured Notes

On November 27, 2012, TCM issued \$350.0 million of 9.75% senior secured notes (the "2017 Notes"). The proceeds received in the offering were \$336.8 million, net of financing fees of \$10.0 million and a discount of \$3.2 million. The net proceeds from the 2017 Notes offering were used to fund the completion of Mount Milligan Mine and for general working capital purposes. The 2017 Notes are guaranteed on a senior basis by substantially all of TCM's subsidiaries and are secured by a first priority lien subjected to permitted liens on substantially all of TCM's and the guarantors' property and assets.

The 2017 Notes mature on December 1, 2017 and accrue interest from November 27, 2012 until maturity at a fixed rate of 9.75% per year. Interest on the 2017 Notes is payable on February 1 and August 1 of each year, commencing February 1, 2013, to the holders of record at the close of business on the January 15 and July 15 prior to each interest payment date.

The 2017 Notes are governed by a base indenture, dated May 11, 2012, supplemented by the first supplemental indenture, dated May 11, 2012, and the fifth supplemental indenture, dated November 27, 2012 (the "2017 Notes Indenture"). There are no maintenance covenants with respect to TCM's financial performance. However, the 2017 Notes Indenture does contain transaction-based restrictive covenants that restrict TCM's ability and the ability of certain of TCM's subsidiaries to incur additional indebtedness; pay dividends or make other distributions or repurchase or redeem capital stock; prepay, redeem or repurchase certain debt; make loans and investments; sell assets; incur liens; enter into transactions with affiliates; and enter into agreements restricting the Company's subsidiaries ability to pay dividends and consolidate, merge or sell all or substantially all of TCM's assets, in each case subject to certain exceptions.

The 2017 Notes are redeemable at TCM's option at any time prior to December 1, 2015 at a price equal to 100% of the principal amount of the 2017 Notes, plus accrued and unpaid interest and a make-whole premium. TCM may also redeem up to 35% of the original principal amount of the 2017 Notes at any time prior to December 1, 2015 with the proceeds of certain equity offerings at a redemption price of 109.75% of the principal amount of the 2017 Notes, together with accrued and unpaid interest to, but not including, the date of redemption. TCM may also redeem the 2017 Notes at any time on or after December 1, 2015 at the redemption prices specified in the 2017 Notes Indenture together with accrued and unpaid interest to, but not including, the date of redemption. Finally, TCM may redeem the 2017 Notes at any time upon the occurrence of specified events relating to Canadian tax law at a redemption price of 100% of the principal amount of the 2017 Notes plus accrued and unpaid interest to, but not including, the date of redemption.

The 2017 Notes Indenture contains customary events of default. If an event of default occurs and is continuing under the 2017 Notes Indenture, the trustee or holders of at least 25% in principal of the outstanding 2017 Notes may declare the principal, premium, if any, and accrued and unpaid interest on all the 2017 Notes to be due and payable

immediately. Certain events of bankruptcy or insolvency are events of default that would result in the 2017 Notes being due and payable immediately upon the occurrence of such events of default.

12.5% Senior Unsecured Notes

On May 11, 2012, TCM issued \$200.0 million of 12.5% senior unsecured notes (the “2019 Notes”). The proceeds received in the offering were \$193.1 million, net of financing fees of \$6.9 million. The net proceeds from the 2019 Notes offering were used to fund the completion of Mount Milligan Mine and for general working capital purposes. The 2019 Notes are guaranteed on a senior basis by substantially all of TCM's subsidiaries.

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

9. Debt (Continued)

The 2019 Notes mature on May 1, 2019 and accrue interest from May 11, 2012 until maturity at a fixed rate of 12.5% per year. Interest on the 2019 Notes is payable on May 1 and November 1 of each year, commencing November 1, 2012, to the holders of record at the close of business on the April 15 and October 15 prior to each interest payment date.

The 2019 Notes are governed by a base indenture as supplemented by the first supplemental indenture and the second supplemental indenture thereto, each dated May 11, 2012 (the "2019 Notes Indenture"). There are no maintenance covenants with respect to the Company's financial performance. However, the 2019 Notes Indenture does contain transaction-based restrictive covenants that restrict the Company's ability and the ability of certain of the Company's subsidiaries to incur additional indebtedness; pay dividends or make other distributions or repurchase or redeem capital stock; prepay, redeem or repurchase certain debt; make loans and investments; sell assets; incur liens; enter into transactions with affiliates; and enter into agreements restricting the Company's subsidiaries ability to pay dividends and consolidate, merge or sell all or substantially all of TCM assets, in each case subject to certain exceptions.

The 2019 Notes are redeemable at TCM's option at any time prior to May 1, 2016 at a price equal to 100% of the principal amount of the 2019 Notes, plus accrued and unpaid interest and a make-whole premium. TCM may also redeem up to 35% of the original principal amount of the 2019 Notes at any time prior to May 1, 2015 with the proceeds of certain equity offerings at a redemption price of 112.5% of the principal amount of the 2019 Notes, together with accrued and unpaid interest to, but not including, the date of redemption. TCM may also redeem the 2019 Notes at any time on or after May 1, 2016 at the redemption prices specified in the 2019 Notes Indenture together with accrued and unpaid interest to, but not including, the date of redemption. Finally, TCM may redeem the 2019 Notes at any time upon the occurrence of specified events relating to Canadian tax law at a redemption price of 100% of the principal amount of the 2019 Notes plus accrued and unpaid interest to, but not including, the date of redemption.

The 2019 Notes Indenture contains customary events of default. If an event of default occurs and is continuing under the 2019 Notes Indenture, the trustee or holders of at least 25% in principal of the outstanding 2019 Notes may declare the principal, premium, if any, and accrued and unpaid interest on all the 2019 Notes to be due and payable immediately. Certain events of bankruptcy or insolvency are events of default that would result in the 2019 Notes being due and payable immediately upon the occurrence of such events of default.

During the fourth quarter of 2014, TCM repurchased \$11.5 million of its 2019 Notes in open market transactions. In connection with the repurchase of these notes, TCM recorded a debt extinguishment loss of \$0.2 million and reduced \$0.2 million of the related unamortized debt issuance costs.

7.375% Senior Unsecured Notes

On May 20, 2011, TCM issued of \$350.0 million of 7.375% senior unsecured notes (the "2018 Notes"). The proceeds received in the offering were \$339.9 million, net of financing fees of \$10.1 million. The net proceeds from the 2018 Notes offering were used to fund the development of Mount Milligan and for general working capital purposes. The 2018 Notes are guaranteed on a senior basis by substantially all of the Company's subsidiaries.

The 2018 Notes mature on June 1, 2018 and accrue interest from May 20, 2011 until maturity at a fixed rate of 7.375% per year. Interest is payable on June 1 and December 1 of each year, and the first interest payment occurred on December 1, 2011. Interest is payable to the holders of record at the close of business on the May 15 and November 15 prior to each interest payment date.

The 2018 Notes are governed by an indenture, dated May 20, 2011 (the “2018 Notes Indenture”). There are no maintenance covenants with respect to TCM's financial performance. However, the 2018 Notes Indenture does contain transaction-based restrictive covenants that restrict the Company's ability and the ability of certain of TCM subsidiaries to incur additional indebtedness; pay dividends or make other distributions or repurchase or redeem capital stock; prepay, redeem or repurchase certain debt; make loans and investments; sell assets; incur liens; enter into transactions with affiliates; enter into agreements restricting the Company's subsidiaries ability to pay dividends and consolidate, merge or sell all or substantially all of TCM assets, in each case subject to certain exceptions.

9. Debt (Continued)

TCM may redeem the 2018 Notes at any time upon the occurrence of specified events relating to Canadian tax law at a redemption price of 100% of the principal amount of the 2018 Notes plus accrued and unpaid interest to, but not including, the date of redemption.

The 2018 Notes Indenture contains customary events of default. If an event of default occurs and is continuing under the 2018 Notes Indenture, the trustee or holders of at least 25% in principal of the outstanding 2018 Notes may declare the principal, premium, if any, and accrued and unpaid interest on all the 2018 Notes to be due and payable immediately. Certain events of bankruptcy or insolvency are events of default that would result in the 2018 Notes being due and payable immediately upon the occurrence of such events of default. In December 2011, TCM completed an exchange offer of the original 2018 Notes for a like principal amount of exchange notes registered under the Securities Act of 1933, pursuant to a registration rights agreement with the initial purchasers.

During the fourth quarter of 2014, TCM repurchased \$14.2 million of its 2018 Notes in a open market transactions. In connection with the repurchase of these notes, TCM recorded a debt extinguishment gain of \$2.3 million and reduced \$0.3 million of the related unamortized debt issuance costs.

Mobile Mining Equipment Loans

On December 8, 2010, TCM executed an equipment financing agreement with Caterpillar in the amount of \$12.8 million secured by six units of mobile mining equipment purchased by TCM during 2010. This fixed-rate loan bears interest at 3.6%, is scheduled to mature no later than December 8, 2015 and has an outstanding payable amount of \$2.8 million as of December 31, 2014.

Total Debt

Aggregate maturities, net of discount amortization on the 2018 Notes, of the outstanding borrowings at December 31, 2014 were as follows:

Years	Principal Due (in millions)
2015	\$3.9
2016	—
2017	350.0
2018	335.8
2019	188.6
Thereafter	—
Total maturities	878.3
Discount amortization on 2017 Notes	(2.1)
Total debt	\$876.2

10. Gold Stream Arrangement

Pursuant to an agreement dated October 2010, as subsequently amended in December 2011, August 2012 and December 2014, with a subsidiary of Royal Gold, Inc. ("Royal Gold") (referred to as the "Gold Stream Arrangement"), TCM agreed to sell to Royal Gold 52.25% of the refined gold production from Mount Milligan Mine for a total upfront payment of \$781.5 million, plus \$435 per ounce, or the prevailing market rate if lower than \$435 per ounce, when the gold is delivered. The upfront cash payments received under the Gold Stream Arrangement, of \$111.9 million in 2013, \$305.0 million in 2012, \$138.1 million in 2011 and \$226.5 million in 2010, were recorded as deferred revenue and classified as a liability on TCM's Consolidated Balance Sheets.

The Gold Stream Arrangement restricts TCM's ability to incur debt that is secured by the Mount Milligan Mine assets. Subject to the exceptions discussed below, TCM cannot incur debt that is secured by the Mount Milligan Mine assets in excess of \$350.0 million until the earlier of the date upon which 425,000 ounces of refined gold have been sold and delivered to Royal Gold or the date upon which the aggregate dollar amount of the difference between the market

price for the gold delivered to

107

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

10. Gold Stream Arrangement (Continued)

Royal Gold and the price actually paid by Royal Gold exceeds \$280.0 million. Per the December 2014 amendment, discussed in Note 10 of Item 8, TCM is additionally permitted to pledge the Mount Milligan Mine assets to secure up to \$25.0 million of hedging obligations incurred in connection with gold and copper production from Mount Milligan Mine, foreign currency exchange risk relating to Mount Milligan Mine and one or more corporate credit facilities utilized in connection with Mount Milligan Mine. Provided that Mount Milligan Mine meets specified throughput, recovery and delivery conditions, the \$25.0 million could increase to \$50.0 million.

TCM must maintain a deposit record during the term of the Gold Stream Arrangement wherein TCM reduces the \$781.5 million total amount paid by Royal Gold by the difference between the current market price at the time of sale of refined gold to Royal Gold and \$435 per ounce, multiplied by the amount of refined gold sold in such sale. If, at the end of the initial 50-year term of the agreement, the total deposit amount reflected in the deposit record has not been reduced to nil, TCM must pay to Royal Gold the remaining balance reflected in the deposit record. As of December 31, 2014, the remaining deposit per the Gold Stream Arrangement totaled \$734.4 million. In the event of any default under the Company's agreement with Royal Gold, Royal Gold could require TCM to repay the outstanding deposit. Royal Gold has a security interest in all of the Mount Milligan Mine assets until its total deposit amount has been reduced to nil. Royal Gold's security interest is subject to subordination to project or corporate financings by TCM, except that in such circumstances, Royal Gold retains a first priority interest in 52.25% of the refined gold from Mount Milligan Mine. After the total deposit amount has been reduced to nil, Royal Gold's security will consist solely of its first priority interest in 52.25% of the refined gold. The cash payments received under the Gold Stream Arrangement are recorded as deferred revenue and classified as a liability on TCM's Consolidated Balance Sheets. TCM sells copper and gold concentrate from Mount Milligan Mine to MTM Customers, and then purchases gold ounces in the market for delivery to Royal Gold, in an amount based on a portion of the gold ounces in the copper and gold concentrate sold to MTM Customers as determined in accordance with the terms of the Gold Stream Arrangement. Mount Milligan Mine began selling copper and gold concentrate to MTM Customers and delivering gold ounces to Royal Gold in the fourth quarter of 2013, at which time TCM began to recognize an amount of the deferred revenue as gold ounces are delivered to Royal Gold, as explained further below. In connection with TCM's first 12 shipments of copper and gold concentrate (which concluded in the fourth quarter of 2014) from Mount Milligan Mine to MTM Customers, TCM was required to deliver gold ounces to Royal Gold based on a percentage of gold ounces in each provisional sale of gold to MTM Customers within two days of receiving a provisional payment for the sale of the copper and gold concentrate, with subsequent delivery of the remaining gold ounces upon final settlement. Hereinafter, all deliveries of gold to Royal Gold will be based solely on the final settlement of provisional sales of concentrate to MTM Customers and payable at the time of final settlement. The gold ounces delivered to Royal Gold under the Gold Stream Arrangement are based on the contained gold ounces in the provisional payments and final settlements multiplied by a 97% payable factor.

Revenues from the Gold Stream Arrangement are recognized upon the provisional sale of the copper and gold concentrate delivered to MTM Customers based on the amount of the provisional gold ounces in such sale, with adjustments made for the \$435 per ounce price, the per ounce price for the deferred revenue that was received upfront pursuant to the terms of the Gold Stream Arrangement and certain adjustments.

The components of revenue under the Gold Stream Arrangement are as follows:

- recognition of an amount of deferred revenue based on the amount of gold ounces delivered to Royal Gold in the applicable period compared to total expected gold deliveries over the life of the mine;
- recognition of receipts of \$435 per ounce, or the prevailing market rate if lower than \$435 per ounce, when the gold ounces are delivered;
-

recognition of any unrealized losses resulting from the difference between the \$435 per ounce plus the deferred revenue per ounce price and the prevailing spot price at the end of any period, net of purchase costs for the gold ounces delivered to Royal Gold; and

gains or losses related to TCM's commodity gold contracts used to hedge TCM's Gold Stream Risk, as defined above. The following table presents the revenue under the Gold Stream Arrangement for the years ended December 31, 2014 and 2013, respectively in the form of (i) cash receipts based on gold sales during the applicable period, and (ii) deferred revenue for gold ounces delivered and deferred revenue to be recognized upon final settlement during the applicable period:

10. Gold Stream Arrangement (Continued)

(US\$ in millions)	Years Ended	
	December 31, 2014	December 31, 2013
Gold sales related to cash portion of Gold Stream Arrangement ⁽¹⁾	\$39.0	\$1.3
Gold sales related to deferred portion of Gold Stream Arrangement ⁽¹⁾⁽²⁾	31.2	1.0
Total gold sales under Gold Stream Arrangement ⁽¹⁾⁽²⁾	\$70.2	\$2.3

⁽¹⁾ Recognized revenue and related gold ounces based on provisional sales may be subject to adjustment upon final settlement.

⁽²⁾ Consists of \$19.2 million and \$0.8 million of revenue which was previously deferred, for the years ended December 31, 2014 and 2013, respectively. Revenue ultimately to be recognized upon delivery of gold is \$12.0 million and \$0.7 million for the years ended December 31, 2014 and 2013, respectively.

11. Tangible Equity Units ("tMEDS")

On May 11, 2012, TCM completed a public offering of 8,800,000 tMEDS with a stated value of \$25.00. Each tMEDS unit consisted of a prepaid common stock purchase contract and a senior amortizing note due May 15, 2015. Each prepaid common stock purchase contract will automatically settle on May 15, 2015, unless settled earlier as described below. At any time prior to the third business day immediately preceding May 15, 2015, the holder may settle the purchase contract early. Each contract settled prior to November 10, 2012 was settled for 4.3562 shares of common stock, which is 95% of the minimum settlement rate. Each contract settled on or after November 11, 2012 but prior to the third business day preceding May 15, 2015 will be settled for 4.5855 shares of common stock, subject in either case to certain adjustments.

On May 21, 2014, TCM commenced an offer ("Exchange Offer") to exchange any and all of the 8,340,000 then outstanding units of tMEDS for a number of shares of TCM's common stock. Pursuant to the terms of the Exchange Offer, as amended, each holder of tMEDS could tender all or a portion of such holder's tMEDS in exchange for (i) 5.3879 shares of common stock plus (ii) a number of shares of common stock equal to \$1.25 divided by \$2.73, which is the five day arithmetic daily volume-weighted average price of the TCM common stock over the trading period beginning on June 16, 2014 and ending on June 20, 2014. The Exchange Offer expired on June 24, 2014, and 7,206,862 units, or 86.4%, of the tMEDS were tendered for exchange, and accepted by TCM. In exchange for the tendered tMEDS, TCM issued 42,129,829 shares of its common stock. During the year ended December 31, 2013, holders settled 460,000 purchase contracts for which TCM issued 2,109,330 shares of common stock.

As of December 31, 2014, 1,133,138 tMEDS remained outstanding. Such tMEDS will continue to be held pursuant to their original terms and conditions, including mandatory conversion on May 15, 2015, as described above.

Additionally, on July 8, 2014, TCM filed an application to notify the SEC of its delisting of any and all units of tMEDS which remained outstanding following settlement of the Exchange Offer, and the delisting became effective 10 days after such filing. TCM does not intend to re-list its tMEDS on another securities exchange.

Although each outstanding unit of tMEDS was treated as one unit for purposes of the Exchange Offer, the accounting treatment considers each component of each unit of tMEDS, a prepaid common stock purchase contract and a senior amortizing note, separately. In June 2014, in connection with shares of common stock issued in exchange for the prepaid common stock purchase contract components of the tendered tMEDS, TCM recorded a \$145.5 million increase to common stock and a \$145.5 million decrease to additional paid-in capital equal to the value of the shares issued in exchange for the prepaid common stock purchase contract components of the tendered tMEDS, net of a \$0.2

million decrease to additional paid-in capital for issuance costs incurred by TCM.

In connection with the settlement of \$10.9 million of the senior amortizing notes component of the tendered tMEDS, TCM issued \$9.3 million in TCM common stock and made a principal payment of \$1.2 million to the senior amortizing note holders. Additionally, TCM recorded \$0.5 million in debt extinguishment losses due to the difference between consideration offered for extinguished debt net of \$0.5 million of fees and expenses incurred by TCM in connection with the Exchange Offer, and the write off of \$0.3 million of unamortized debt issuance costs.

The senior amortizing note component of the tMEDs that remained outstanding as of December 31, 2014 was \$1.2 million, which is included in the current portion of long-term debt on the Consolidated Balance Sheets. The unamortized

Table of Contents

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

11. Tangible Equity Units ("tMEDS") (Continued)

deferred financing costs related to the remaining tMEDS were nil and \$0.6 million as of December 31, 2014 and 2013, respectively. For the years ended December 31, 2014 and 2013, TCM paid \$1.3 million and \$3.1 million; capitalized \$0.1 million and \$2.7 million, respectively; and expensed \$1.2 million and \$0.6 million, respectively, of the interest and debt issuance costs associated with the tMEDS.

For purposes of the fair market value disclosed in Note 7, the carrying value of the tMEDS as of December 31, 2014 was higher than the fair value of approximately \$0.4 million. TCM determined the fair value of the debt component of tMEDS using a discounted cash flow model by obtaining yields for comparably-rated issuers trading in the market, considering the market yield of existing TCM debt and the credit rating of TCM.

12. Asset Retirement Obligations

Asset retirement obligations arise from the acquisition, development, construction and normal operation of mining property, plant, equipment and development due to government controls and regulations that protect the environment on the closure and reclamation of mining properties. The exact nature of environmental issues and costs, if any, which TCM may encounter in the future are subject to change, primarily because of the changing character of environmental requirements that may be enacted by governmental agencies.

The following table details items affecting asset retirement obligations for future mine closure and reclamation costs in connection with TCM's Mount Milligan Mine, TC Mine, Endako Mine (reflecting 75% ownership) and its now-terminated interest in the Davidson property:

	Mt. Milligan	Thompson Creek Mine	Endako Mine	Davidson Property	Total
At January 1, 2012	\$1.3	\$23.1	\$8.1	\$0.3	\$32.8
Additions/Revisions	2.8	(3.1)	1.7	—	1.4
Accretion	0.2	1.5	0.6	—	2.3
Foreign exchange	—	—	0.1	—	0.1
At December 31, 2012	\$4.3	\$21.5	\$10.5	\$0.3	\$36.6
Additions/Revisions	(1.2)	(1.3)	8.2	—	5.7
Accretion	0.2	1.3	0.9	—	2.4
Foreign exchange	(0.2)	—	(0.7)	—	(0.9)
At December 31, 2013	\$3.1	\$21.5	\$18.9	\$0.3	\$43.8
Additions/Revisions ⁽¹⁾	(0.7)	(9.2)	(0.3)	—	(10.2)
Accretion	0.4	1.5	1.7	—	3.6
Foreign exchange	(0.3)	—	(1.6)	—	(1.9)
At December 31, 2014	\$2.5	\$13.8	\$18.7	\$0.3	\$35.3

⁽¹⁾ At December 31, 2014 the downward revision to the asset retirement obligation at TC Mine resulted in a \$6.2 million decrease to depreciation, depletion and amortization in the Consolidated Statements of Operations and Comprehensive Income (Loss).

TCM is required by US federal and state laws and Canadian provincial laws to provide financial assurance sufficient to allow a third party to implement approved closure and reclamation plans if TCM is unable to do so. These laws are complex and vary from jurisdiction to jurisdiction. The laws govern the determination of the scope, cost of the closure, reclamation obligation and the amount and forms of financial assurance. As of December 31, 2014 and 2013, TCM has provided the appropriate regulatory authorities in the US and Canada with \$78.6 million and \$81.8 million, respectively, in non-cash reclamation financial assurance for mine closure obligations which are secured by \$10.3 million and \$7.4 million in cash deposits as of December 31, 2014 and 2013, respectively.

In connection with the development of Mount Milligan Mine, the Province of British Columbia has required us to provide a reclamation deposit in the amount of \$25.9 million and \$28.2 million as of December 31, 2014 and 2013, respectively. The estimated future reclamation costs for Mount Milligan Mine have been discounted using rates from 11.0% to 13.9%. As of

110

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

12. Asset Retirement Obligations (Continued)

December 31, 2014, TCM anticipates that these costs will be incurred beginning in the year 2037. The total inflated and undiscounted estimated reclamation costs for Mount Milligan Mine were \$43.1 million and \$45.6 million as of December 31, 2014 and 2013, respectively.

The current reclamation bonding for TC Mine is \$42.4 million as of December 31, 2014. TCM has provided surety bonds to satisfy these obligations. The estimated future reclamation costs for TC Mine have been discounted using rates from 6.7% to 12.0%. As of December 31, 2014, TCM anticipates that these costs will be incurred from 2031 to 2045. The total inflated and undiscounted estimated reclamation costs for TC Mine were \$44.6 million and \$43.7 million as of December 31, 2014 and 2013, respectively.

For Endako Mine, the British Columbia Ministry of Energy, Mines and Petroleum Resources has required TCM to provide a reclamation deposit in the amount of \$13.2 million and \$14.4 million as of December 31, 2014 and 2013, respectively. TCM's proportionate share is \$9.9 million and \$10.8 million as of December 31, 2014 and 2013, respectively. TCM's share of total inflated and undiscounted estimated reclamation costs for Endako Mine were \$35.6 million and \$32.7 million as of December 31, 2014 and 2013, respectively. As of December 31, 2014, TCM estimates its proportionate share of these costs will be incurred from 2015 to 2031. The estimated future reclamation costs for Endako Mine have been discounted using rates from 2.94% to 13.86%.

As of December 31, 2014, TCM's reclamation deposits related to Mount Milligan Mine and Endako Mine were in the form of letters of credit secured by a guarantee and cash collateral. Under the arrangements, the ACE Group, a surety company, provided a guarantee to Export Development Canada ("EDC"), who provided a guarantee to Royal Bank of Canada ("RBC"), who issued letters of credit to the British Columbia Ministry of Energy and Mines. In exchange for the surety company's guarantee, TCM has provided \$7.1 million of cash collateral and will pay total annual fees of approximately 1.7% of the total reclamation bond guarantee to the surety company, EDC and RBC. On December 18, 2014 TCM received a refund of the entire \$7.1 million of the cash collateral previously provided to the surety company.

TCM's Berg property was acquired in the 2010 acquisition of Terrane. The Province of British Columbia has required TCM to provide a reclamation deposit in the amount of \$0.1 million as of December 31, 2014 for the Berg property. In October 2013, TCM relinquished the option to develop the Davidson exploration property located in British Columbia, Canada that TCM had held since 2005. TCM believes that all reclamation obligations have been met that arose during TCM's option period, and TCM has asked the British Columbia Ministry of Energy and Mines to release the reclamation bond of \$0.3 million. The funds and TCM's obligation were not released as of December 31, 2014; however, discussions are on-going with the Ministry.

13. Employee Benefits

Retention and Severance

In 2012, TCM terminated a retention and severance arrangement under which certain of its employees were participants. The retention and severance arrangement was put into place in 2004. Under the terms of the severance portion of the arrangement, the participants accrued severance benefits based on years of service that were to be paid upon termination of the employees by TCM without cause and under certain other circumstances. In connection with termination of the plan that occurred on September 30, 2012, TCM agreed to pay the participants severance amounts that had accrued to such individuals as of September 30, 2012 on the earlier of October 15, 2013 or the applicable participant's separation of service with the Company. On June 30, 2012, the retention portion of the arrangement was terminated, and TCM agreed to make additional payments to the participants of 100% of current eligible retention amounts on June 30, 2013 for the period of July 1, 2012 to June 30, 2013 and 100% of current eligible retention amounts on June 30, 2014 for the period of July 1, 2013 to June 30, 2014. During 2014 and 2013, TCM paid \$2.9 million and \$13.5 million, respectively in severance and retention payments and had severance and retention liability amounts of nil and \$1.0 million, as of December 31, 2014 and 2013, respectively related to this program. No further

severance or retention payments were made under the arrangement after June 30, 2014.

In 2012, TCM entered into retention arrangements with certain eligible employees of TC Mine in anticipation of the deferral of Phase 8 stripping activities and the placement of TC Mine on care and maintenance when the mining and processing of Phase 7 ore was completed, which occurred in the fourth quarter of 2014. Pursuant to these arrangements, eligible employees

111

Table of Contents

(US dollars in millions, except per share amounts)

13. Employee Benefits (Continued)

would be paid a certain amount if they stayed at TC Mine until the completion of Phase 7, with such payment to be made within 60 days of the end of Phase 7, as determined by the Company. TCM's liability at December 31, 2014 with respect to such severance arrangements amounted to \$0.2 million and TCM paid \$3.6 million in such bonus payments during 2014.

As of December 31, 2014 and 2013, TCM's total liability amounted to \$1.5 million and \$5.4 million, respectively, related to retention and severance arrangements. For the years ended December 31, 2014, 2013 and 2012, TCM recognized an expense of \$7.2 million, \$6.0 million and \$7.0 million, respectively, for retention and severance arrangements.

Defined Contribution Pension Plans

TCM, through its subsidiaries, maintains defined contribution pension plans available to certain employees. TCM's Thompson Creek Metals Company Thrift Plan (the "Plan") is a defined contribution pension plan and covers all eligible employees employed in the US. The Plan is subject to the provisions of the US Employee Retirement Income Security Act of 1974, as amended, and Section 401(k) of the US Internal Revenue Code. The assets of the Plan are held and the related investment transactions are executed by the Plan's trustee. Administrative fees, including accounting and attorney fees, are paid by TCM on behalf of the Plan. TCM contributed approximately \$1.7 million, \$1.8 million and \$2.0 million, respectively, to the Plan for the years ended December 31, 2014, 2013 and 2012. TCM may make additional contributions to the Plan at its sole discretion; however, TCM has no further obligation relating to benefits under this Plan.

TCM has formed the Thompson Creek Metals Company Inc. Registered Pension Plan (the "Pension Plan") covering all Canadian employees. The assets of the Pension Plan are held and the related investment transactions are executed by the Pension Plan's trustee. Administrative fees, including any accounting and legal fees, are paid by TCM on behalf of the Pension Plan. All participating locations of the Pension Plan contributed C\$2.7 million, C\$2.4 million and C\$1.7 million to the Pension Plan for the years ended December 31, 2014, 2013 and 2012, respectively. TCM has recorded its proportionate 75.0% share related to Endako Mine contributions. TCM has no further obligation relating to pension benefits under this Pension Plan.

Postretirement Benefits

Under the union agreement at the Langeloth Facility, TCM is required to provide postretirement medical benefits for certain retired former employees and their dependents by making the monthly medical insurance premium payments on their behalf. Substantially all of TCM's current unionized employees may become eligible for this benefit if certain age and service requirements are met at the time of retirement, as specified in the union agreement. The benefit ceases when the eligible retired employee reaches 65 years of age. TCM does not have any obligation related to eligible retired unionized employees beyond the monthly medical insurance premiums. TCM follows current accounting guidance related to postretirement benefits for this plan. Prior service costs, actuarial gains and losses and transition obligations are amortized over the average life expectancy of the plan's participants.

The following table sets forth the actuarial present value of postretirement medical benefit obligations and amounts recognized in TCM's consolidated financial statements:

	December 31, 2014	December 31, 2013
Change in benefit obligations:		
Net benefit obligation at beginning of year	\$3.2	\$3.3
(Gain) loss	0.6	(0.5)
Service cost	0.3	0.4
Interest cost	0.1	0.1

Benefits paid	(0.2) (0.1)
	\$4.0	\$3.2	

The liability of \$4.0 million and \$3.2 million was included in other liabilities on TCM's Consolidated Balance Sheets as of December 31, 2014 and 2013, respectively.

112

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

13. Employee Benefits (Continued)

The assumptions used to determine the benefit obligations as of December 31, 2014 included a measurement date of December 31, 2014 and a discount rate of 3.8%. The yield curve matching TCM's benefit obligation was derived using a cash flow analysis under the Citigroup pension liability index. The Citigroup pension discount curve shows the relationship between interest rates and the duration for hypothetical zero coupon investments. This yield curve was used in determining the discount rate for TCM's postretirement benefit obligation.

The components of net periodic benefit costs for the year ended December 31, 2014 included \$0.3 million of service cost and \$0.1 million of interest cost for a total net periodic benefit cost of \$0.4 million.

The health care cost trend assumed that average cost of coverage was 7.0% for 2014, reduced by 0.25% annually through 2020 and from there being reduced by 0.5% to an ultimate trend of 4.5% in 2023 and beyond. The assumed health care cost trend rates can have a significant effect on the amounts reported for postretirement medical benefits. The effect of a one percent change in the health care cost trend rate used to calculate periodic postretirement medical costs and the related benefit obligation would be insignificant to this benefit obligation.

The expected postretirement medical benefits provided below were based on actuarial assumptions.

	December 31,
Expected benefit payments:	
2015	\$0.1
2016	\$0.1
2017	\$0.2
2018	\$0.2
2019	\$0.3
2020-2024	\$1.7

Employee Stock Purchase Plan

The ESPP, which was initially approved by TCM's shareholders in May 2010, provides an opportunity for TCM's employees to purchase its common shares at 85% of the closing price at the beginning of the offering period or at the end of the offering period, whichever is lower. The ESPP was suspended effective July 1, 2013 pending approval of an amended plan by TCM's shareholders. Effective May 13, 2014, TCM's shareholders approved the Amended and Restated Thompson Creek Metals Company Inc. 2010 Employee Stock Purchase Plan (as amended and restated, the "ESPP"), which (i) makes an additional 2,000,000 shares of the Company's common stock available for issuance; (ii) changes the frequency of offering periods to four consecutive three-month offering periods per year; (iii) allows the Compensation Committee to establish sub-plans or special rules designed to achieve desired tax or other objectives for employees outside of the U.S.; (iv) allows the Compensation Committee to exclude from any sub-plan the limit on an employee's right to accrue common stock pursuant to the ESPP at a rate that exceeds \$25,000 in market value of common stock per calendar year; (v) allows the Compensation Committee to change the frequency and/or duration of offering periods with respect to future offerings; (vi) caps the number of shares that any employee may purchase in any offering period and in any calendar year at 5,000 and 20,000 shares, respectively; (vii) allows for participation in the ESPP by any employee employed as of an enrollment date; and (viii) permits participants in the ESPP to change their contribution rates during offering periods, subject to limitations imposed by the Compensation Committee.

As of December 31, 2014 there are 2,054,117 shares authorized for purchase by TCM's employees under the ESPP. Compensation expense is measured based on the fair value using a Black-Scholes model of the employees' option to purchase shares of common stock at the grant date. Compensation expense is recognized over the future periods in which the related employee service is rendered. TCM estimated a fair value of employee options to purchase shares under the ESPP of \$0.75 for the first two three-month offering periods of 2014. TCM recorded \$0.2 million, \$0.2 million and \$0.4 million of expense related to the ESPP plan for the years ended December 31, 2014, 2013 and 2012, respectively. For the year ended December 31, 2014, TCM issued 160,952 shares of common stock under the ESPP.

No tax benefit is realized for ESPPs unless there is a disqualifying disposition.

(US dollars in millions, except per share amounts)

14. Shareholders' Equity

The authorized share capital of TCM is comprised of an unlimited number of common shares and an unlimited number of preferred shares, issuable in series with terms determinable upon issuance. As of December 31, 2014, TCM has not issued any preferred shares.

As of December 31, 2014 and 2013, TCM issued 42,129,828 and 2,109,330 shares of common stock, respectively in settlement of certain prepaid common stock purchase contracts for a total of 44,239,158 common shares. These prepaid common stock purchase contracts were issued as part of the 2012 issuance of 8.8 million units of tMEDS, which were recorded as a \$177.7 million increase to additional paid-in-capital, net of issuance costs. No purchase contracts were settled and no shares of common stock were issued related to the tMEDS during 2012. The remaining unsettled units will automatically settle on May 15, 2015 and delivery of outstanding shares of common stock will be required based on the applicable market value. See Note 11 for further discussion.

15. Stock-Based Compensation

On May 13, 2014, TCM's shareholders approved the Amended and Restated 2010 Long-Term Incentive Plan (the "LTIP"). The LTIP allows TCM to grant stock options, share appreciation rights, restricted shares, RSUs, PSUs or shares granted as bonus compensation. As of December 31, 2014, the number of common shares authorized for awards under the LTIP plan is 11.0 million. Effective November 21, 2013, Mr. Perron, TCM's Chief Executive Officer, was granted a one-time inducement award comprised of stock options to purchase 400,000 shares of TCM's common stock and 300,000 RSUs, each vesting in three equal annual installments beginning on the first anniversary of the date of grant. The stock options will be exercisable for five years from the date of grant. These grants were made as an employment inducement award outside of the LTIP.

TCM does not realize a tax benefit for stock-based awards granted to Canadian employees under the current Canadian tax law. As of December 31, 2014, TCM has granted stock options, PSUs and RSUs, as discussed below.

Stock Options

The expiration date and vesting provisions of stock options granted are established at the time an award is made. Stock options vest over 3 years and are exercisable over a period of time not to exceed 10 years from the grant date but generally expire 5 years from the grant date. When an option is exercised, TCM issues the requisite shares from authorized but unissued common stock. The exercise price of options granted prior to March 1, 2011 is equal to the greater of: (i) the volume weighted-average trading price of the underlying shares on the Toronto Stock Exchange over the five consecutive trading days immediately before the grant date and (ii) if the award date occurs in a trading black-out period, the weighted-average trading price over the five consecutive trading days immediately after the black-out period has been lifted. The exercise price of options granted after March 1, 2011 is equal to the volume weighted-average trading price of the underlying shares over the five consecutive trading days immediately before the grant date.

The following table summarizes stock option activity during the years ended December 31, 2012, 2013 and 2014:

(1) The weighted-average exercise price of options outstanding is shown in US dollars as the majority of the options granted starting in 2011 have a strike price denominated in US dollars. Options with a Canadian dollar strike price have been converted to US dollars for disclosure purposes using the exchange rates on the respective date of grant.

The following table summarizes information about stock options outstanding and exercisable as of December 31, 2014:

Range of Exercise Prices	Options Outstanding			Options Exercisable		
	Number Outstanding (000's)	Weighted-Average Exercise Price (1)	Weighted-Average Remaining Contractual Life	Number Outstanding (000's)	Weighted-Average Exercise Price (1)	Weighted-Average Remaining Contractual Life
1.42 - 5.83	1,216	\$3.13	3.8	474	\$3.63	3.3
6.02 - 10.64	86	\$9.01	1.1	86	\$9.01	1.1
11.88 - 14.04	84	\$12.14	0.6	84	\$12.14	0.6

(1) The weighted-average exercise price of options outstanding is shown in US dollars as the majority of the options granted starting in 2011 have a strike price denominated in US dollars. Options with a Canadian dollar strike price have been converted to US dollars for disclosure purposes using the exchange rates on the respective date of grant.

For the years ended December 31, 2014, 2013 and 2012, TCM recorded compensation expense related to stock options of \$0.4 million, \$0.6 million and \$1.0 million, respectively. As of December 31, 2014, approximately 0.7

million outstanding options had not vested and were not exercisable. The total unrecognized compensation cost related to these options was \$0.6 million as of December 31, 2014 and is expected to be recognized over a weighted-average period of 2.2 years.

As of December 31, 2014, approximately 0.6 million options had vested and were exercisable. The aggregate intrinsic value of these exercisable awards was nil as of December 31, 2014.

The weighted-average fair value of stock options on the date of grant, and the assumptions used to estimate the fair value of the stock options using a Black-Scholes option valuation model were as follows:

Performance Share Units

As of December 31, 2014, TCM had issued a total of 3,305,345 PSUs under the LTIP, which have been granted to eligible employees. The vesting of the PSUs granted prior to January 1, 2012 is contingent upon employee service and the performance of TCM's share price relative to the established award price. At each anniversary date during the vesting period, if the per share closing price of TCM's common stock on such date is at or higher than the award price, then the awards will vest one-third on each anniversary date, and the requisite shares will be issued from authorized but unissued common stock. If the closing price is less than the award price, and therefore, the market condition is not achieved, then those PSUs do not vest and are carried forward to the following anniversary date. Any PSUs not vested at the end of the three-year vesting period will expire.

The vesting of the PSUs granted subsequent to January 1, 2012 and prior to January 1, 2014 is contingent upon two performance metrics: 1) TCM's Total Shareholder Return (TSR) relative to the Russell 2000 Index during the three-year performance period and 2) the proven and probable mine reserves replaced by TCM during the three-year performance period as measured by the replacement reserves percentage determined by the plan administrator. The PSUs cliff vest three years from the date of issuance upon achievement of the above metrics. Any PSUs not vested at such time will expire.

The vesting of the PSUs granted subsequent to January 1, 2014 is contingent upon two performance metrics: 1) TCM's Total Shareholder Return (TSR) relative to the S&P TSX Global Base Metals Index during the three-year performance period and 2) cash flow from operations, defined as TCM's aggregate "cash generated by (used in) operating activities" less aggregate "capital expenditures" as reported for the calendar years 2014, 2015 and 2016 in the Statements of Cash Flows in the Company's Annual Report on Form 10-K. The PSUs cliff vest approximately three years from the date of issuance, or on the date in the first quarter of 2017 that the plan administrator determines and certifies the achievement of the above metrics. Any PSUs not vested at such time will expire.

All PSUs granted are accounted for at fair value using a Monte Carlo simulation valuation model on the date of grant. The Monte Carlo model is based on random projections of stock price paths. Expected volatility is calculated using a weighted average of historical daily volatilities and implied volatility and represents the extent to which TCM's stock price performance is expected to fluctuate during each of the three calendar-year periods of the award's anticipated term.

For the years ended December 31, 2014, 2013 and 2012, TCM recorded compensation expense related to the PSUs of \$2.7 million, \$2.3 million and \$2.5 million, respectively. At December 31, 2014, unrecognized compensation expense related to PSUs totaled \$4.2 million that will be recognized on a straight-line basis over a weighted-average period of

2.2 years.

The following table summarizes PSU activity during the years ended December 31, 2012, 2013 and 2014:

116

Restricted Stock Units

As of December 31, 2014, TCM had issued 3,021,973 RSUs under the LTIP and under the employment inducement award, which have been granted to certain eligible employees and directors.

TCM accounts for RSUs at fair value, which is based on the market value of TCM's common shares on the day of grant and recognized over the vesting period of 3 years. Upon vesting, TCM will issue the requisite shares from authorized but unissued common stock. TCM recorded \$2.4 million, \$2.5 million and \$2.4 million of compensation expense related to its RSUs for the years ended December 31, 2014, 2013 and 2012, respectively. At December 31, 2014, unrecognized compensation expense related to restricted stock units totaled \$2.8 million that will be recognized on a straight-line basis over a weighted-average period of 1.9 years.

The following table summarizes RSU activity during the years ended December 31, 2012, 2013 and 2014:

	Units (000's)	Weighted-Average Fair Value

16. Commitments and Contingencies

Legal Matters

TCM is from time to time involved in or subject to legal proceedings related to its business. While it is not feasible to predict or determine the outcome of these proceedings, it is the opinion of management that the resolution of such proceedings is not expected to have a material adverse effect on TCM's consolidated financial position results of operations or cash flows.

Concentrate Sales Agreements

As of December 31, 2014, TCM is party to three multi-year concentrate sales agreements for the sale of concentrate produced at Mount Milligan Mine. Pursuant to these agreements, TCM has agreed to sell an aggregate of the copper and gold concentrate produced at Mount Milligan Mine of approximately 120,000 tonnes in 2015 and 120,000 tonnes in 2016. During February 2015, TCM entered into a fourth multi-year concentrate sales agreement, pursuant to which TCM agreed to sell to the counterparty approximately 20,000 tonnes of concentrate in each of calendar years 2015 and 2016 and 40,000 tonnes of concentrate in 2017 and 2018. Pricing under these concentrate sales agreements will be determined by reference to specified published reference prices during the applicable quotation periods. Payment for the concentrate will be based on the price for the agreed copper and gold content of the parcels delivered, less smelting and refining charges and certain other deductions, if applicable. The copper smelting and refining charges will be negotiated in good faith and agreed by the parties for each contract year based on terms generally acknowledged as industry benchmark terms. The gold refining charges are as specified in the agreements. Remaining concentrate produced at Mount Milligan Mine will be sold under short-term contracts or on a spot basis.

Molybdenum Purchases

In the normal course of operations, TCM enters into agreements for the purchase of molybdenum. As of December 31, 2014, TCM had commitments to purchase approximately 14.8 million pounds of molybdenum as unroasted molybdenum concentrate from 2015 to 2017 primarily priced at the time of purchase at a set discount to the market price for roasted molybdenum concentrate.

Molybdenum Sales

In the normal course of operations, TCM enters into certain molybdenum sales contracts pursuant to which it sells future production at fixed prices. As of December 31, 2014, TCM had commitments to sell approximately 600 thousand pounds of molybdenum oxide in 2015 at an average price of \$12.05 per pound.

Capital Purchase Commitments

As of December 31, 2014, TCM had open capital purchase commitments of \$0.5 million related to the Mount Milligan Mine.

Net Deferred Tax Assets (Liabilities)

Deferred tax assets and liabilities arise from temporary differences in the recognition of income and expenses for financial reporting and tax purposes. The significant components of deferred income tax assets and liabilities as of December 31, 2014 and 2013 were as follows:

Table of Contents

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

18. Income and Mining Tax Expense (Benefit) (Continued)

	December 31,	
	2014	2013
Deferred tax assets:		
Working capital	\$5.4	\$2.4
Tax losses and credits carried forward	157.5	192.7
Property, plant, equipment and development	288.2	255.5
Asset retirement obligations	4.0	3.5
Deferred compensation	1.8	3.1
Gold Stream deferred revenue	37.4	12.3
Unrealized foreign exchange losses	25.6	11.7
Other deductible temporary differences	4.1	7.0
Deferred tax assets	524.0	488.2
Valuation allowances	(279.4)	(246.5)
Net deferred tax assets, net of valuation allowance	\$244.6	\$241.7
Deferred tax liabilities:		
Inventory	\$(16.6)	\$(17.1)
Other taxable temporary differences-current	(0.7)	(1.0)
Property, plant, equipment and development	(204.5)	(233.9)
Unrealized foreign exchange gains	(11.4)	(3.0)
Other taxable temporary differences-non-current	(0.2)	(0.3)
Total deferred tax liabilities	(233.4)	(255.3)
Net deferred tax assets (liabilities)	\$11.2	\$(13.6)

In connection with the preparation of TCM's consolidated financial statements for the year ended December 31, 2014, TCM determined a change in the presentation of certain deferred income tax liabilities was necessary to conform to the guidance outlined in ASC 740. This guidance states that for balance sheet presentation, net deferred income tax assets and liabilities, current and long term, should be reported as a single amount for each tax-paying component of TCM and within a particular tax jurisdiction. In the prior year, TCM netted assets and liabilities across multiple jurisdictions. The revised change in presentation to appropriately net these balances for 2013 is detailed below and relates primarily to the construction of Mount Milligan Mine. Due to balances in the current year, the prior period balances were reclassified on the Consolidated Balance Sheet for comparability.

THOMPSON CREEK METALS COMPANY INC.

Notes to the Consolidated Financial Statements (Continued)

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

18. Income and Mining Tax Expense (Benefit) (Continued)

(US\$ in millions)	As Previously Reported	Adjustment	As Revised
Year Ended December 31, 2013			
Assets			
Deferred income tax assets	\$—	\$2.8	\$2.8
Current Assets	\$496.0	\$2.8	\$498.8
Deferred income tax assets	\$14.2	\$120.4	\$134.6
Total Assets	\$3,085.5	\$123.2	\$3,208.7
Liabilities			
Deferred income tax liabilities	\$14.4	\$2.8	\$17.2
Current liabilities	\$180.6	\$2.8	\$183.4
Deferred income tax liabilities	\$13.4	\$120.4	\$133.8
Total liabilities	\$1,979.3	\$123.2	\$2,102.5
Total liabilities and equity	\$3,085.5	\$123.2	\$3,208.7

At December 31, 2014, TCM had \$232.1 million in loss and \$101.8 million in credit carry-forwards available for tax purposes. The loss and credit carry-forwards per the income tax returns filed, due to uncertain tax benefits, are larger than the carry-forward benefits for which a deferred tax asset is recognized for financial statement purposes. While an insignificant portion of TCM's losses expire beyond 2015, substantially all of the carry-forwards expire beyond 2025. A valuation allowance is recorded on some of the benefits associated with tax losses, credits and unrealized foreign exchange losses. Some of TCM's capital expenditures, primarily at Endako Mine and TC Mine, have a recorded valuation allowance as it is not more likely than not that the benefit related to the specific deferred tax assets will be realized based on the available sources of taxable income.

TCM intends to indefinitely reinvest earnings from certain foreign operations. Accordingly, US and non-US income and withholding taxes for which deferred taxes might otherwise be required have not been provided on a cumulative amount of temporary differences (including, for this purpose, any difference between the tax basis in the stock of a consolidated subsidiary and the amount of the subsidiary's net equity determined for financial reporting purposes) related to investments in foreign subsidiaries of approximately \$1,233.5 million and \$1,232.4 million as of December 31, 2014 and 2013, respectively. The additional US and non-US income and withholding tax that would arise on reversal of the temporary differences could be offset, in part, by tax credits. Because the determination of the amount of available tax credits and the limitations imposed on the annual utilization of such credits are subject to a highly complex series of calculations and expense allocations, it is impractical to estimate the amount of net income and withholding tax that might be payable if a reversal of temporary differences occurred.

Income Tax Uncertainties

A summary of the activities associated with TCM's uncertainty in income taxes reserve for unrecognized tax benefits were as follows:

	Unrecognized Tax Benefits
Balance as of January 1, 2014	\$—
Additions for tax positions of prior years	3.1
Reductions for tax positions of prior years:	
Settlements	—
Lapse of statute of limitations	—

Balance as of December 31, 2014

\$3.1

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

18. Income and Mining Tax Expense (Benefit) (Continued)

Included in the balance of unrecognized tax benefits at December 31, 2014 are potential benefits of \$2.0 million that, if recognized, would affect the effective tax rate on income from continuing operations.

TCM recognizes interest and penalties related to unrecognized tax benefits in operating expenses. During the years ended December 31, 2014 and 2013, TCM did not recognize any interest and penalties related to uncertain tax positions.

TCM or one of its subsidiaries files income tax returns in the Canadian federal jurisdiction, US federal jurisdiction and various state and provincial jurisdictions. The tax years for TCM and its significant subsidiaries that remain subject to examination were as follows:

Jurisdiction	Years Under Examination	Additional Open Years
US Federal	2011	2012-2013
Canada Federal	2011-2012	2007-2010, 2013

Utah	—	2011-2013

19. Net Income (Loss) per Share

The following is a reconciliation of net income (loss) and weighted-average common shares outstanding for purposes of calculating diluted net income (loss) per share for the three year period ended December 31, 2014:

	Years Ended December 31,		
	2014	2013	2012
Net income (loss)	\$(124.2)	\$(215.0)	\$(546.3)
Basic weighted-average number of shares outstanding	193.7	171.1	168.4
Effect of dilutive securities			
Common stock purchase warrants	—	—	—
Share-based awards	—	—	—
tMEDS	—	—	—
Diluted weighted-average number of shares outstanding	193.7	171.1	168.4
Net income (loss) per share			
Basic	\$(0.64)	\$(1.26)	\$(3.24)
Diluted	\$(0.64)	\$(1.26)	\$(3.24)

For the year ended December 31, 2014, approximately 1.3 million stock options were excluded from the computation of diluted weighted-average shares as the exercise prices exceeded the price of the common stock. For the year ended December 31, 2014, 1.9 million PSUs were excluded from the computation of diluted weighted-average shares because the underlying market and performance metrics had not been met. For the year ended December 31, 2014, 1.5 million RSUs were excluded from the computation of diluted weighted-average shares as the effect would have been anti-dilutive under the treasury stock method. For the year ended December 31, 2014, the assumed issuance of 26.3 million shares upon the conversion of the stock purchase contract component of the remaining outstanding tMEDS units was considered in the calculation of diluted weighted-average shares; however due to the net loss position of TCM for the year ended December 31, 2014, such assumed issuance has not been reflected above as the effect would be anti-dilutive.

Years ended December 31, 2014, 2013 and 2012

(US dollars in millions, except per share amounts)

19. Net Income (Loss) per Share (Continued)

For the year ended December 31, 2013, TCM was in a net loss position, and approximately 2.1 million stock options, 1.2 million PSUs, 1.3 million RSUs and 44.9 million shares for the settlement of the tMEDS purchase contracts were excluded from the computation of diluted weighted-average shares.

For the year ended December 31, 2012, TCM was in a net loss position, and approximately 2.3 million stock options, 0.5 million RSUs and 47.4 million shares for the settlement of tMEDS purchase contracts were excluded from the computation of diluted weighted-average shares.

20. Transactions with our Endako Mine Joint Venture Partner

Total sales by TCM to Sojitz, TCM's Endako Mine joint venture partner, were \$107.2 million, \$80.3 million and \$90.9 million for the years ended December 31, 2014, 2013 and 2012, respectively. This represented 13.3%, 18.5% and 22.6% of TCM's total revenues for these respective years.

For the years ended December 31, 2014, 2013 and 2012, TCM recorded management fee income of \$0.4 million, \$0.3 million and \$0.3 million, and selling and marketing costs of \$0.8 million, \$0.5 million and \$0.6 million, respectively, from Sojitz.

At December 31, 2014 and 2013, TCM's related accounts receivable owing from Sojitz were \$4.1 million and \$6.3 million, respectively.

21. Supplementary Cash Flow Information

	Years Ended December 31,		
	2014	2013	2012
Change in current assets and current liabilities:			
Accounts receivable	\$11.0	\$4.8	\$20.5
Product inventory	(3.8) (54.5) (77.8
Materials and supplies inventory	0.6	(27.4) (11.6
Prepaid expenses and other current assets	6.5	(6.1) (2.2
Income and mining taxes receivable	3.8	11.2	(6.7
Accounts payable and accrued liabilities	(4.6) 30.6	2.5
Income and mining taxes payable	(2.6) (1.2) —
	\$10.9	\$(42.6) \$(75.3
Cash interest paid ⁽¹⁾	\$91.3	\$81.8	\$41.3
Income and mining taxes paid, net of refunds ⁽²⁾	\$10.4	\$2.5	\$2.9

⁽¹⁾ For the years ended December 31, 2014, 2013 and 2012, cash interest paid of \$9.1 million, \$74.7 million, and \$40.7 million, respectively, had been previously capitalized related to TCM's debt, as described in Note 9.

⁽²⁾ For the years ended December 31, 2014, 2013 and 2012, TCM received \$4.1 million, \$7.5 million and \$9.0 million, respectively, in refunds of US and Canadian income taxes related to prior year tax returns.

21. Supplementary Cash Flow Information (Continued)

Non-cash Investing and Financing Activities

	Years Ended December 31,		
	2014	2013	2012
Investing activities			
Other investing adjustments ⁽¹⁾	\$—	\$6.5	\$4.8
Acquisition of property, plant and equipment under the Equipment Facility (see Note 8) ⁽²⁾	\$—	\$3.9	\$23.7
Financing activities			
Settlement of tMEDS	\$(9.3) \$—	\$—
Capitalized debt costs ⁽³⁾	\$—	\$0.6	\$5.1
Long-term lease obligations ⁽²⁾	\$—	\$ (3.5) \$(20.4

⁽¹⁾ Included capitalized depreciation.⁽²⁾ Excluded sale-leaseback capital leases.⁽³⁾ Included capitalized interest not paid in cash, amortization of deferred financing costs and debt discounts.

22. Concentration of Credit Risk

TCM is exposed to counterparty risk from its cash and cash equivalent balances and its reclamation deposits held by financial institutions and governmental entities. TCM monitors its positions with, and the credit quality of, the financial institutions and companies in which it invests its cash, cash equivalents and that hold its reclamation deposits. Counterparties to cash balances and its reclamation deposits, other than balances maintained in various bank operating accounts, are US and Canadian institutions and the US and Canadian governments.

TCM manages its credit risk from its accounts receivable through its collection activities. As of December 31, 2014, TCM had five customers who owed TCM more than \$3.0 million and accounted for approximately 52.6% of total accounts and other receivables outstanding. Another five customers had balances greater than \$1.0 million but less than \$3.0 million that accounted for approximately 20.1% of total accounts and other receivables. As of December 31, 2014, all of these customers were compliant with credit terms and scheduled payment dates.

TCM's maximum counterparty and credit risk exposure is the carrying value of its cash and cash equivalents and accounts receivable. The carrying amounts of accounts receivable, accounts payable, accrued liabilities and fixed-rate debt, excluding the 2017 Notes, 2018 Notes, 2019 Notes and tMEDS, as discussed in Note 7, approximate fair value as of December 31, 2014.

23. Segment Information

TCM has three reportable segments, based on products and geography: Copper-Gold, US Operations Molybdenum and Canadian Operations Molybdenum. The Copper-Gold segment includes all expenditures, including all mining, milling, mine site administration, transportation, shipping, concentrate selling and refining costs, and sale of concentrate from Mount Milligan Mine. The US Operations Molybdenum segment includes all mining, milling, mine site administration, transportation, roasting (at the Langeloth Facility) and sale of molybdenum products from TC Mine, as well as all roasting and sales of third-party purchased material from the Langeloth Facility. The Canadian Operations Molybdenum segment includes all mining, milling, mine site administration, transportation, roasting (at the Langeloth Facility) and sale of molybdenum products from the 75% owned Endako Mine. The Inter-segment represents the elimination of management fee income, revenue and cost of sales of product transported from the Canadian Operations to the US Operations for processing.

TCM's chief operating decision makers (President and CEO) evaluates segment performance based on segment revenue less costs and expenses. TCM attributes other income and expenses to the reporting segments if the income or expense is directly related to segment operations, as described above. TCM does not allocate corporate expenditures such as general and

Table of Contents

(US dollars in millions, except per share amounts)

23. Segment Information (Continued)

administrative, exploration and interest income and expense items to its reporting segments, unless such expenditures are directly related to segment operations. Gains and losses on foreign exchange are calculated on transactions denominated in a different currency than the segment's functional currency; the Copper-Gold segment's unrealized foreign exchange balance is primarily comprised of its intercompany notes.

Segment information for the three years ended December 31, 2014, 2013 and 2012 was as follows:

For the year ended December 31, 2014:

	Copper-Gold	US Operations Molybdenum	Canadian Operations Molybdenum	Inter-segment/Corporate	Total
Revenues					
Copper sales	\$ 178.4	\$ —	\$ —	\$ —	\$ 178.4

23. Segment Information (Continued)

Other segment information regarding capital expenditures, assets and liabilities, including the assets and liabilities attributed to corporate operations, was as follows:

As of December 31, 2014	Copper-Gold	US	Canadian	Inter-segment/Corporate	Total
		Operations Molybdenum	Operations Molybdenum		
Capital expenditures ⁽¹⁾	\$77.0	\$ 4.0	\$ 1.1	\$ —	\$82.1
Property, plant, equipment and development ⁽³⁾	\$2,075.3	\$ 114.4	\$ 27.5	\$ 1.1	\$2,218.3
Assets	\$2,304.1	\$ 444.3	\$ 77.6	\$ 20.3	\$2,846.3
Liabilities	\$912.0	\$ 33.8	\$ 30.5	\$ 982.5	\$1,958.8

As of December 31, 2013	Copper-Gold	US	Canadian	Inter-segment/Corporate	Total
		Operations Molybdenum	Operations Molybdenum		
Capital expenditures ⁽²⁾	\$419.1	\$ 5.3	\$ 4.3	\$ 0.2	\$428.9
Property, plant, equipment and development ⁽³⁾	\$2,290.4	\$ 129.2	\$ 115.6	\$ 2.8	\$2,538.0
Assets	\$2,526.1	\$ 395.1	\$ 170.9	\$ 116.6	\$3,208.7
Liabilities	\$975.0	\$ 49.5	\$ 30.9	\$ 1,047.1	\$2,102.5

⁽¹⁾ Capital expenditures were for the year ended December 31, 2014. Copper-Gold capital expenditures included \$29.8 million in permanent operations residence capital expenditure, \$30.9 million in operations capital expenditure and \$16.3 million in project capital expenditure at Mount Milligan Mine. Total cash capital expenditures during 2014 included \$21.0 million in payments of amounts accrued at December 31, 2013.

⁽²⁾ Capital expenditures were for the year ended December 31, 2013. Copper-Gold capital expenditures included \$18.1 million in permanent operations residence capital expenditure and \$12.0 million in operations capital expenditure at Mount Milligan Mine. Excluded \$2.3 million of deposits made to one vendor, which occurred in the first quarter of 2013.

⁽³⁾ Included exploration properties.

Revenues by geographic region are as follows:

Diluted net income (loss) per share	\$0.01	\$(0.09)	\$(0.29)	\$(2.87)

25. Guarantor Financial Information

TCM has not presented separate combined financial statements of subsidiary guarantors that guarantee the 2017 Notes, 2018 Notes and 2019 Notes, because (1) each of the subsidiary guarantors is wholly owned by TCM; (2) the guarantees are full and unconditional; (3) the guarantees are joint and several and (4) TCM has no independent assets and operations, and all subsidiaries of TCM other than the subsidiary guarantors are immaterial.

Pursuant to the indentures governing the 2017 Notes, 2018 Notes and 2019 Notes, a guarantor may be released from its guarantee obligations only under certain customary circumstances specified in the indentures, namely upon (1) the sale or other disposition (including by way of merger, amalgamation or consolidation) of such guarantor, (2) the designation of such guarantor as an unrestricted subsidiary in accordance with the terms of the indentures, (3) upon a legal defeasance or covenant defeasance or (4) upon the full satisfaction of TCM's obligations under the respective indenture.

26. Subsequent Events

During February 2015, TCM entered into a fourth multi-year concentrate sales agreement, pursuant to which TCM agreed to sell to the counterparty approximately 20,000 tonnes of concentrate in each of calendar years 2015 and 2016 and 40,000 tonnes of concentrate in 2017 and 2018.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Table of Contents

Evaluation of Disclosure Controls and Procedures

TCM's disclosure controls and procedures are designed to ensure that information required to be disclosed in the reports that are filed under the Securities Exchange Act of 1934, as amended (the "Exchange Act") is recorded, processed, summarized and reported within the time periods specified in the rules and forms of the Securities and Exchange Commission, and that such information is accumulated and communicated to TCM's management, including the Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. The Chief Executive Officer and the Chief Financial Officer, with assistance from management, have evaluated the effectiveness of disclosure controls and procedures as of December 31, 2014. Based on that evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that TCM's disclosure controls and procedures are effective as of December 31, 2014.

Management's Report on Internal Control over Financial Reporting

The management of TCM is responsible for establishing and maintaining adequate internal control over financial reporting. TCM's internal control over financial reporting is a system designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with US GAAP. TCM's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of its assets; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with US GAAP, and that its receipts and expenditures are being made only in accordance with authorizations of management and directors; and (iii) provide reasonable assurance regarding prevention and timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on its financial statements.

Management assessed the effectiveness of TCM's internal control over financial reporting as of December 31, 2014 based on the framework set forth by the Committee of Sponsoring Organizations of the Treadway Commission in Internal Control-Integrated Framework (1992) ("Framework"). Based on this assessment, management concluded that as of December 31, 2014, TCM's internal control over financial reporting was effective.

Changes in Internal Control over Financial Reporting

There has been no change in our internal control over financial reporting, other than the remediation of the material weakness described below that have materially affected, or are reasonably likely to materially affect our internal control over financial reporting.

Remediation of Previously Reported Material Weakness

As previously disclosed in the Form 10-K for the year ended December 31, 2013, management had concluded there was a material weakness in internal controls over financial reporting related to financial information sourced from its Mount Milligan site.

Remediation actions previously disclosed within "Item 4. Controls and Procedures" section of the Form 10-Q during the first three quarters of 2014, were fully implemented and executed through year end. As of December 31, 2014, the Company has completed the documentation and testing of the design and effectiveness of the corrective actions taken; and therefore, management concluded that, as of December 31, 2014 the material weakness related to its Mount Milligan Mine site was remediated.

TCM's independent registered public accounting firm, KPMG LLP, has issued an audit report on the effectiveness of TCM's internal control over financial reporting. This report appears below.

In connection with the preparation of this annual report on Form 10-K, management, under the supervision and with the participation of the CEO and CFO, conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2014, based on criteria established in, Internal Control-Integrated Framework (1992), established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company plans to adopt the updated Internal Control - Integrated Framework (2013), established by the Committee of

Edgar Filing: Thompson Creek Metals Co Inc. - Form 10-K

Sponsoring Organizations of the Treadway Commission (COSO) and effective as of December 15, 2014 during its evaluation of internal control over financial reporting for the year ending December 31, 2015.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders

Thompson Creek Metals Company Inc.:

131

We have audited Thompson Creek Metals Company Inc.'s internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control - Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Thompson Creek Metals Company Inc.'s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Thompson Creek Metals Company Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control - Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Thompson Creek Metals Company Inc. and subsidiaries as of December 31, 2014 and 2013, and the related consolidated statements of operations and comprehensive income (loss), shareholders' equity, and cash flows for each of the years in the three-year period ended December 31, 2014, and our report dated February 19, 2015 expressed an unqualified opinion on those consolidated financial statements.

ITEM 9B. OTHER INFORMATION

Copper Concentrate Sales Agreement with Pan Pacific Copper Co. Ltd.

On February 16, 2015, Terrane Metals Corp., one of our wholly-owned subsidiaries, entered into a Copper Concentrate Sales Agreement (the "Agreement") with Pan Pacific Copper Co. Ltd. ("Pan Pacific"), effective as of October 15, 2014, whereby we have agreed to sell to Pan Pacific copper-gold-silver concentrate produced at Mount Milligan Mine.

The Agreement remains in full force and effect until all financial obligations of the parties under the Agreement have been fulfilled. Pursuant to the Agreement, the approximate annual quantities of concentrate to be purchased by Pan Pacific are 20,000 dry metric tons ("DMT") in each of calendar years 2015 and 2016 and 40,000 DMT in each of

calendar years 2017 and 2018.

Payment for the concentrate will be based on the agreed copper, gold and silver content of the parcels delivered to Pan Pacific pursuant to the terms of the Agreement, less certain refining charges and certain other deductions, if applicable. Pricing will be determined by reference to specified published reference prices during the applicable quotation periods set forth in the

132

Agreement. The copper smelting and refining charges will be negotiated in good faith and agreed by the parties for each contract year based on terms generally acknowledged as industry benchmark terms. The gold and silver refining charges are as specified in the Agreement.

Pan Pacific will make a 90% provisional payment for concentrate no later than three business days after arrival of the concentrate at the discharge port against presentation by Seller of certain shipping documents. The provisional payment will be based on the Company's weights and assays, and on metals pricing, at the time of shipment. Final settlement will be made within five business days after Pan Pacific receives final invoice from the Company after all final prices and weights and assays have been determined in accordance with the Agreement.

The foregoing description of the Agreement is qualified in its entirety by reference to the Agreement. The Company plans to file the Agreement as an exhibit to its next periodic report and plans to seek confidential treatment of certain terms in the Agreement at such time.

Table of Contents

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

Incorporated by reference from our definitive proxy statement for the 2015 annual meeting of stockholders to be filed no later than 120 days after the end of our fiscal year ended December 31, 2014.

ITEM 11. EXECUTIVE COMPENSATION

Incorporated by reference from our definitive proxy statement for the 2015 annual meeting of stockholders to be filed no later than 120 days after the end of our fiscal year ended December 31, 2014.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

Incorporated by reference from our definitive proxy statement for the 2015 annual meeting of stockholders to be filed no later than 120 days after the end of our fiscal year ended December 31, 2014, with the exception of those items listed below.

Securities Authorized for Issuance under Equity Compensation Plans

The following table sets forth certain information as of December 31, 2014 with respect to shares of common stock that may be issued under existing equity compensation plans.

Plan Category	Number of Securities to be Issued on Exercise of Outstanding Options, Warrants and Rights	Weighted-Average Exercise Price of Outstanding Options, Warrants and Rights(4)	Number of Securities Remaining Available for Future Issuance Under Plans, Excluding Securities Available in First Column
Equity compensation plans approved by stockholders ⁽¹⁾⁽²⁾	4,161,346	\$ 4.51	10,992,622
Equity compensation plans not approved by stockholders ⁽³⁾	600,000	2.87	—
Total	4,761,346	\$ 4.04	10,992,622

Included in this category are the following equity compensation plans, which have been approved by the

- (1) Company's shareholders: Amended and Restated 2010 Long-Term Incentive Plan (the "LTIP") and Amended and Restated 2010 Employee Stock Purchase Plan (the "ESPP").

- (2) Included 3,375,140 shares subject to restricted stock units ("RSUs") or performance share units ("PSUs") that entitle each holder thereof to one share of common stock for each unit that vests over the holder's period of continued service and/or the satisfaction or attainment of specified performance criteria.

- (3) Included in this category is a one-time inducement award granted to our Chief Executive Officer in connection with his commencement of employment with us comprised of stock options to purchase 400,000 shares of our common stock and 300,000 restricted share units, of which 100,000 restricted share units had vested as of December 31, 2014, each vesting in three equal annual installments beginning on the first anniversary of the date of grant.

- (4) Calculated without taking into account 3,375,140 shares of common stock subject to outstanding RSUs and PSUs that will become issuable following the vesting of those units and awards, without any cash consideration or other

payment required for those shares. Beginning in 2011, the majority of option, warrants and rights grants have a strike price denominated in US dollars and, as such, those with a Canadian dollar strike price have been converted to US dollars for disclosure purposes using the exchange rates on the respective date of grant.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

Incorporated by reference from the registrant's definitive proxy statement for the 2015 annual meeting of stockholders to be filed no later than 120 days after the end of the registrant's fiscal year ended December 31, 2014.

134

ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

Incorporated by reference from the registrant's definitive proxy statement for the 2015 annual meeting of stockholders to be filed no later than 120 days after the end of the registrant's fiscal year ended December 31, 2014.
