PART I

ITEM 1 — BUSINESS

ORGANIZATION

The Hanover Insurance Group, Inc. (“THG”) is a holding company organized as a Delaware corporation in 1995. We trace our roots to as early as 1852, when the Hanover Fire Insurance Company was founded. Our primary business operations are property and casualty insurance products and services. We market our domestic products and services through independent agents and brokers in the United States (“U.S.”) and conduct business internationally through a wholly owned subsidiary, Chaucer Holdings Limited (“Chaucer”), which operates through the Society and Corporation of Lloyd’s (“Lloyd’s”) and is domiciled in the United Kingdom (“U.K.”). Our consolidated financial statements include the accounts of THG; The Hanover Insurance Company (“Hanover Insurance”) and Citizens Insurance Company of America (“Citizens”), which are our principal U.S. domiciled property and casualty subsidiaries; Chaucer; and other insurance and non-insurance subsidiaries. Our results of operations also include the results of our discontinued operations, consisting primarily of our former life insurance and accident and health businesses.

INFORMATION ABOUT OPERATING SEGMENTS

We conduct our business operations through four operating segments. These segments are Commercial Lines, Personal Lines, Chaucer and Other. We report interest expense related to our corporate debt separately from the earnings of our operating segments.

Information with respect to each of our segments is included in “Results of Operations - Segments” in Management’s Discussion and Analysis of Financial Condition and Results of Operations and in Note 14 – “Segment Information” in the Notes to the Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

Information with respect to geographic concentrations is included in the “Description of Business by Segment” in Part 1 – Item 1 and in Note 14 – “Segment Information” in the Notes to the Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

The following is a discussion of our operating segments.

GENERAL

In our Commercial Lines and Personal Lines segments, we underwrite commercial and personal property and casualty insurance through Hanover Insurance, Citizens and other THG subsidiaries, through an independent agent and broker network concentrated in the Northeast, Midwest and Southeast U.S. We also continue to actively grow our Commercial Lines’ presence in the Western region of the U.S., particularly in California, which now is our largest state for Commercial Lines as measured by net premiums written. Our Chaucer segment is a specialist insurance underwriting group which operates through Lloyd’s and writes business globally. Included in our Other segment are Opus Investment Management, Inc. (“Opus”), a wholly owned subsidiary of THG, which provides investment management services to our insurance and non-insurance companies, as well as to unaffiliated institutions, pension funds and other organizations; earnings on holding company assets; and a discontinued voluntary pools business.

Our business strategy focuses on providing our agents and customers stability, financial strength, and competitive insurance products while prudently growing and diversifying our product and geographical business mix. We conduct our U.S. business with an emphasis on agency relationships and active agency management, disciplined underwriting,

pricing, quality claim handling, and customer service. Our Lloyd's business is focused on disciplined and specialized underwriting in selected markets. Annually, we write over \$5 billion in gross premiums, including approximately \$4 billion domestically. Based on net U.S. premiums written, we rank among the top 25 property and casualty insurers in the United States.

Table of Contents

## RISKS

The industry's profitability and cash flow can be, and historically has been, significantly affected by numerous factors, including price; competition; volatile and unpredictable developments, such as extreme weather conditions, catastrophes and other disasters; legal and regulatory developments affecting pricing, underwriting, policy coverage and other aspects of doing business, as well as insurer and insureds' liability; extra-contractual liability; size of jury awards; acts of terrorism; fluctuations in interest and currency rates or the value of investments; and other general economic conditions and trends, such as inflationary pressure or unemployment, that may affect the adequacy of reserves or the demand for insurance products. Our investment portfolio and its future returns may be further impacted by the capital markets and current economic conditions, which could affect our liquidity, the amount of realized losses and impairments that will be recognized, credit default levels, our ability to hold such investments until recovery and other factors. Additionally, the economic conditions in geographic locations where we conduct business, especially those locations where our business is concentrated, may affect the growth and profitability of our business. The regulatory environments in those locations, including any pricing, underwriting or product controls, shared market mechanisms or mandatory pooling arrangements, and other conditions, such as our agency relationships, affect the growth and profitability of our business. Our loss and loss adjustment expense ("LAE") reserves are based on estimates, principally involving case assessments and actuarial projections, at a given time, of what we expect the ultimate settlement and administration of claims will cost based on facts and circumstances then known, predictions of future events, estimates of future trends in claims frequency and severity and judicial theories of liability, costs of repairs and replacement, legislative activity and other factors. We regularly reassess our estimate of loss reserves and LAE, both for current and past years, and resulting changes have and will affect our reported profitability and financial position.

Reference is also made to "Risk Factors" in Part 1 – Item 1A of this Form 10-K.

## LINES OF BUSINESS

We underwrite commercial and personal property and casualty insurance coverage through our Commercial Lines, Personal Lines and Chaucer operating segments.

## Commercial Lines

Our Commercial Lines segment generated \$2.5 billion, or 50.3%, of consolidated operating revenues and \$2.4 billion, or 50.3%, of net premiums written, for the year ended December 31, 2016.

The following table provides net premiums written by line of business for our Commercial Lines segment.

YEAR ENDED DECEMBER 31, 2016 (in millions, except ratios)	Net Premiums		
	Written	% of Total	
Commercial multiple peril	\$ 792.9	33.6	%
Commercial automobile	307.1	13.0	
Workers' compensation	285.6	12.1	
Other commercial lines:			
Inland marine	231.0	9.8	

AIX program business	200.0	8.4	
Management and professional liability	195.0	8.3	
Surety	68.2	2.9	
Specialty property	65.8	2.8	
Other	215.9	9.1	
Total	\$ 2,361.5	100.0	%

Our Commercial Lines product suite provides agents and customers with products designed for small, middle and specialized markets.

Commercial Lines coverages include:

Commercial multiple peril coverage insures businesses against third-party general liability from accidents occurring on their premises or arising out of their operations, such as injuries sustained from products sold. It also insures business property for damage, such as that caused by fire, wind, hail, water damage (which may include flood), theft and vandalism.

Commercial automobile coverage insures businesses against losses incurred from personal bodily injury, bodily injury to third parties, property damage to an insured's vehicle and property damage to other vehicles and property.

Commercial automobile policies are often written in conjunction with other commercial policies.

Workers' compensation coverage insures employers against employee medical and indemnity claims resulting from injuries related to work. Workers' compensation policies are often written in conjunction with other commercial policies.

Other commercial lines is comprised of:

- inland marine coverage insures businesses against physical losses to property, such as contractor's equipment, builders' risk and goods in transit, and also covers jewelers block, fine art and other valuables;
- AIX program business provides coverage to markets where there are specialty coverage or risk management needs, including commercial multiple peril, workers' compensation, commercial automobile, general liability and other commercial coverages;
- management and professional liability coverage provides protection for directors and officers of companies that may be sued in connection with their performance, and errors and omissions protection to companies and individuals against negligence or bad faith, as well as protection for employment practices liability and fidelity and crime;
- surety provides businesses with contract surety coverage in the event of performance or non-payment claims, and commercial surety coverage related to fiduciary or regulatory obligations;
- specialty property provides insurance to small and medium-sized chemical, paint, solvent and other related manufacturing and distribution companies; and
- other commercial lines coverages include monoline general liability, umbrella, healthcare and miscellaneous commercial property. Our healthcare coverage includes product liability, medical professional liability and general liability coverages provided to selected portions of the healthcare industry including eldercare providers, durable medical equipment suppliers, podiatrists and behavioral health specialists.

Our strategy in Commercial Lines focuses on building deep relationships with partner agents through differentiated product offerings, industry segmentation, and franchise value through limited distribution. We continue to make enhancements to our products and technology platforms that are intended to drive more total account placements in our small commercial and middle market business, while delivering enhanced margins in our specialty businesses. This aligns with our focus of delivering the capabilities that will help broaden the depth and breadth of our partnerships with a limited number of agents.

Our small commercial, middle market and specialty businesses each constitute approximately one-third of our total Commercial Lines business. Small commercial offerings, which generally include premiums of \$50,000 or less,

deliver value through product expertise, local presence, and ease of doing business. Middle market accounts require greater claim and underwriting expertise, as well as a focus on industry segments where we can deliver differentiation in the market and value to agents and customers. Small and middle market accounts comprise approximately \$1.5 billion of the Commercial Lines segment. Our specialty lines of business include inland marine, program business, management and professional liability, surety and specialty property.

In our small commercial and middle market businesses, we offer coverages and capabilities in several key industries including technology, schools, and human services organizations, such as non-profit youth and community service organizations. We also provide further segmentation in our core middle market commercial products, including real estate, hospitality, manufacturing, contractors and wholesale distributors.

Part of our strategy is to expand our specialty lines offerings in order to provide our agents and policyholders with a broader product portfolio and to increase our market penetration. As part of our strategy, we have over time acquired various specialized businesses aimed at further diversifying and growing our specialty lines. We used these acquisitions as platforms to expand our product offerings and grow through our existing agency and broker distribution network.

We believe our small commercial capabilities, distinctiveness in the middle market, and continued development of specialty business provides us with a more diversified portfolio of products and enables us to deliver significant value to our agents and policyholders. We believe these efforts will enable us to continue to improve the overall mix of our business and ultimately our underwriting profitability.

#### Personal Lines

Our Personal Lines segment generated \$1.6 billion, or 31.4%, of consolidated operating revenues and \$1.5 billion, or 32.4%, of net premiums written, for the year ended December 31, 2016.

The following table provides net premiums written by line of business for our Personal Lines segment.

YEAR ENDED DECEMBER 31, 2016 (in millions, except ratios)	Net Premiums			
	Written	% of Total		
Personal automobile	\$ 953.6	62.7	%	
Homeowners	529.7	34.8		
Other	37.9	2.5		
Total	\$ 1,521.2	100.0	%	

#### Personal Lines coverages include:

Personal automobile coverage insures individuals against losses incurred from personal bodily injury, bodily injury to third parties, property damage to an insured's vehicle, and property damage to other vehicles and other property.

Homeowners coverage insures individuals for losses to their residences and personal property, such as those caused by fire, wind, hail, water damage (excluding flood), theft and vandalism, and against third-party liability claims.

Other personal lines are comprised of personal inland marine (jewelry, art, etc.), umbrella, fire, personal watercraft, earthquake and other miscellaneous coverages.

Our strategy in Personal Lines is to build account-oriented business through our partner agencies, with a focus on greater geographic diversification. The market for our Personal Lines business continues to be very competitive, with continued pressure on independent agents from direct writers, as well as from the increased usage of real time comparative rating tools and increasingly sophisticated rating and pricing tools. We maintain a focus on partnering with high quality, value added agencies that stress the importance of consultative selling and account rounding (the conversion of single policy customers to accounts with multiple policies and/or additional coverages). We are focused on making investments that are intended to help us maintain profitability, build a distinctive position in the market, and provide us with profitable growth opportunities. We continue to refine our products and to work closely with these high potential agents to increase the percentage of business they place with us and to ensure that it is consistent with our preferred mix of business. Additionally, we remain focused on further diversifying our state mix beyond the largest historical core states of Michigan, Massachusetts and New York. We expect these efforts to decrease our risk concentrations and our dependency on these three states, as well as to contribute to improved profitability over time.

#### Chaucer

Our Chaucer segment generated \$0.9 billion, or 18.1%, of consolidated operating revenues and \$0.8 billion, or 17.4%, of net premiums written, for the year ended December 31, 2016.

The following table provides net premiums written by line of business for our Chaucer segment.

YEAR ENDED DECEMBER 31, 2016 (in millions, except ratios)	Net Premiums		
	Written	% of Total	
Marine and aviation	\$ 268.7	32.9	%
Property	141.8	17.4	
Energy	97.5	11.9	
Casualty and other	308.1	37.8	
Total	\$ 816.1	100.0	%

The Chaucer segment is comprised of international business written through Lloyd's, including:

Marine and aviation includes worldwide direct, facultative and treaty business. The marine account provides cover for hull, liability, war, terrorism, aviation war, cargo, political risk and trade credit, specie, fine art and ports and terminals. The aviation account insures airline hull and liability, general aviation, refuellers, aviation products, and satellite.

Property includes treaty business, as well as direct and facultative coverage for commercial and industrial risks against physical damage and business interruption. The treaty account covers cedants on a global basis, predominantly on an "excess of loss" basis for both per risk and catastrophe coverage, with a limited amount of proportional treaty and reinsurance assumed business.

Energy encompasses exploration and production, construction, downstream, operational power and renewables, insuring against physical damage, business interruption, control of well, seepage and pollution and liabilities. Energy also includes a nuclear account, which provides coverage across the nuclear fuel cycle from raw uranium and nuclear fuel to the shipment and storage of waste, with the majority of the exposure relating to power generation at nuclear power stations. In addition to providing coverage for physical damage to civil nuclear power stations, nuclear also provides limited liability coverage.

Casualty and other provides liability coverage internationally, including our expanded U.S. casualty business, for professional and commercial risks on a direct and treaty basis, credit and bond, crime and professional liability coverage for financial institutions, medical malpractice, excess workers' compensation and accident and health. Other lines also encompass liabilities arising from previous participations on risks insured by third-party Lloyd's syndicates, which provided liability coverage to financial institutions.

Included in Chaucer's net premiums written for the year ended December 31, 2016 was \$236.5 million of business that is assumed through reinsurance treaties. These net premiums written are reflected primarily in the property and casualty and other lines.

Chaucer is a specialist insurance underwriting group that participates in the Lloyd's market through the provision of capital to support the underwriting activities of syndicates at Lloyd's and the ownership of Chaucer Syndicates Limited ("CSL"), a managing agent. CSL manages two syndicates currently underwriting at Lloyd's, for which we provide capital to support their underwriting activities.

Chaucer provides capital to Syndicate 1084, which underwrites a range of property, marine, aviation, casualty and energy products for commercial clients worldwide; and Syndicate 1176, which primarily provides protection against physical damage and limited liability exposures from power generation at nuclear power stations. The energy line of business includes \$18.7 million of net premiums written from Syndicate 1176. Our economic interests in Syndicates 1084 and 1176 were 100% and 57%, respectively, in both the 2016 and 2015 underwriting years.

Chaucer has broad underwriting expertise to support its diversified underwriting portfolio that, we believe, provides many benefits, including capital diversification, volatility management and long-term protection of our underwriting capabilities. We actively manage our portfolio, transferring underwriting capital to increase premium volumes during periods of increased rates, while remaining selective or reducing our capital and premium volumes in those lines where rates are under pressure.

Overall, we believe that the strength and depth of our underwriting teams, together with the broad diversity of our underwriting portfolio and our membership in the Lloyd's market, underpin our ability to manage both the scale and composition of our business. Moreover, these strengths, combined with our continued active management of our portfolio and the underwriting opportunities available, provide a sound basis for the profitable development of the Chaucer business.

#### Other

The Other segment consists of: Opus, which provides investment advisory services to affiliates and also manages approximately \$1.4 billion of assets for unaffiliated institutions such as insurance companies, retirement plans and foundations; earnings on holding company assets; and our discontinued voluntary pools business.

#### MARKETING AND DISTRIBUTION

We serve a variety of standard, specialty and targeted industry markets. Consistent with our objective to diversify our underwriting risks on a geographic and line of business basis, we currently have a split of approximately one-third each of domestic standard Commercial Lines, international and domestic specialty lines, and domestic standard Personal Lines. Our Commercial and Personal Lines segments, comprising our principal domestic U.S. subsidiaries, distribute our products primarily through an independent agent network. Our Chaucer segment, comprising our international business, distributes primarily through insurance brokers in the Lloyd's market.

#### Commercial and Personal Lines

Our Commercial and Personal Lines agency distribution strategy and field structure are designed to maintain a strong focus on local markets and the flexibility to respond to specific market conditions. During 2016, we wrote 20.0% of our Commercial and Personal Lines business in Michigan and 9.5% in Massachusetts. Our structure is a key factor in the establishment and maintenance of productive, long-term relationships with mid-sized, well-established independent agencies. We maintain 42 local offices across 30 states. The majority of processing support for these locations is provided from Worcester, Massachusetts; Howell, Michigan; Salem, Virginia; and Windsor, Connecticut.

Independent agents account for substantially all of the sales of our Commercial and Personal Lines property and casualty products. Agencies are appointed based on profitability, track record, financial stability, professionalism, and business strategy. Once appointed, we monitor their performance and, subject to legal and regulatory requirements, may take actions as necessary to change these business relationships, such as discontinuing the authority of the agent to underwrite certain products or revising commissions or bonus opportunities. We compensate agents primarily through base commissions and bonus plans that are tied to an agency's written premium, growth and profitability.

We are licensed to sell property and casualty insurance in all fifty states in the U.S., as well as in the District of Columbia. We actively market Commercial Lines policies throughout the U.S. in 37 states and Personal Lines policies in 18 states.

Table of Contents

The following table provides our top Commercial and Personal Lines geographical markets based on total net premiums written in the state in 2016.

YEAR ENDED DECEMBER 31, 2016 (in millions, except ratios)	Commercial Lines		Personal Lines		Total Commercial and Personal Lines		
	Net Premiums Written	% of Total	Net Premiums Written	% of Total	Net Premiums Written	% of Total	%

Other	434.4	18.4	39.4	2.6	473.8	12.3	
Total	\$ 2,361.5	100.0	% \$ 1,521.2	100.0	% \$ 3,882.7	100.0	%

We manage our Commercial Lines portfolio, which includes our core and specialty businesses, with a focus on growth from the most profitable industry segments within our underwriting expertise. Our core business is generally comprised of several coordinated commercial lines of business, including small and middle market accounts, which include targeted industry segments. Such business is split between small accounts, generally having less than \$50,000 in premium, and middle market accounts, those with premium over \$50,000, with most middle market accounts having less than \$250,000 of premium. Additionally, we have multiple specialty lines of business, which include inland marine, program business, management and professional liability, surety and specialty property. The Commercial Lines segment seeks to maintain strong agency relationships as a strategy to secure and retain our agents' best business. We monitor quality of business written through ongoing quality review efforts, accountability for which is shared at the local, regional and corporate levels.

We manage Personal Lines business with a focus on acquiring and retaining quality accounts. Currently, approximately 83% of our policies in force are account business. Approximately 56% of our Personal Lines net premium written is generated in the combined states of Michigan and Massachusetts. In Michigan, based upon direct premiums written for 2016, we underwrite approximately 6% of the state's total market.

Approximately 66% of our Michigan Personal Lines business is in the personal automobile line and 32% is in the homeowners line. Michigan business represents approximately 45% of our total personal automobile net premiums written and 40% our total homeowners net premiums written. In Michigan, we are a principal market for many of our appointed agencies, with approximately \$1.7 million of total direct premiums written per agency in 2016.

Approximately 69% of our Massachusetts Personal Lines business is in the personal automobile line and 28% is in the homeowners line. Massachusetts business represents approximately 15% of our total personal automobile net premiums written and approximately 11% of our total homeowners net premiums written.

We sponsor local and national agent advisory councils to gain the benefit of our agents' insight and enhance our relationships. These councils provide feedback, input on the development of products and services, guidance on marketing efforts, support for our strategies, and assist us in enhancing our local market presence.

#### Chaucer

Chaucer underwrites business primarily from Lloyd's brokers and underwriting agencies. We primarily compensate brokers and underwriting agencies through commission payments.

In the Lloyd's market, brokers approach Chaucer with individual insurance and reinsurance risk opportunities for underwriter consideration. Brokers also gain access to Chaucer's products through selected underwriting agencies (also referred to as coverholders), to which Chaucer has granted limited authority to make underwriting decisions on individual risks. In general, risks written through underwriting agencies are smaller in terms of both exposure and premium. Risks are placed in Lloyd's through a subscription placement process whereby generally several syndicates take a share of a contract rather than one insurer taking 100% on a direct basis. This facilitates the spreading of large and complex risks across a number of insurers, while limiting the underwriting risk of each insurer.

We have an international network of offices to improve our access to high quality risks worldwide. This is expected to improve the diversification of our underwriting and our ability to manage our portfolio. We have offices in Denmark to improve access to business opportunities in Continental Europe, in Singapore, which includes an underwriting presence in China and Labuan, Malaysia to improve access to business opportunities in the Asia region, and in Miami, Florida to provide underwriting representation for business opportunities from Latin America. We also have an office in Oslo, Norway, to provide access to the Norwegian and regional North Sea energy sector.

The following table provides a geographical breakdown of Chaucer's total gross premiums written ("GPW") based on the location of risk:

YEAR ENDED DECEMBER 31, 2016	% of Total GPW in Chaucer Segment	
United States	25.8	%
Americas, excluding the United States	11.5	
Middle East and Africa	6.4	
Asia Pacific	5.9	
Europe	5.1	
United Kingdom	1.9	
Worldwide and other (1)	43.4	
Total	100.0	%

(1) "Worldwide and other" comprises insured risks that move across multiple geographic areas due to their mobile nature or insured risks that are fixed in locations that span more than one geographic area. These contracts include, for example, marine and aviation hull, satellite and offshore energy exploration and production risks that can

move across multiple geographic areas and assumed risks where the cedant insures risks in two or more geographic zones.

#### Other

With respect to our Other segment business, we market our investment advisory services directly through Opus.

#### PRICING AND COMPETITION

The property and casualty industry is a very competitive market. Our competitors include national, international, regional and local companies that sell insurance through various distribution channels, including independent agencies, captive agency forces, brokers and direct to consumers through the internet or otherwise. They also include mutual insurance companies, reciprocals and exchanges. In the Commercial and Personal Lines segments, we market through independent agents and brokers and compete for business on the basis of product, price, agency and customer service, local relationships, ratings, and effective claims handling, among other things. We believe that our emphasis on maintaining strong agency relationships and a local presence in our markets, coupled with investments in products, operating efficiency, technology and effective claims handling, enable us to compete effectively. Our broad product offerings in Commercial Lines and total account strategy in Personal Lines are instrumental to our ability to capitalize on these relationships and improve profitability.

We seek to achieve targeted combined ratios in each of our product lines. Targets vary by product and geography and change with market conditions. The targeted combined ratios reflect competitive market conditions, investment yield expectations, our loss payout patterns, and target returns on equity. This strategy is intended to enable us to achieve measured growth and consistent profitability.

## Table of Contents

For all major product lines, we employ pricing teams which produce exposure and experience-based rating models to support underwriting and pricing decisions. In addition, in the Commercial and Personal Lines segments, we seek to utilize our understanding of local markets to achieve superior underwriting results. We rely on market information provided by our local agents and on the knowledge of staff in the local branch offices. Since we maintain a strong regional focus and a significant market share in a number of states, we can better apply our knowledge and experience in making underwriting and rate setting decisions. Also, we seek to gather objective and verifiable information at a policy level during the underwriting process, including prior loss experience, past driving records and, where permitted, credit histories.

The Commercial and Personal Lines segments are not dependent on a single customer or even a few customers, for which the loss of any one or more would have an adverse effect upon the insurance operations for these segments.

We market Chaucer product offerings through insurance brokers in the Lloyd's specialty market, which provides access to business from clients and coverholders. We are able to attract business through our recognized capability to serve as the lead underwriter in most classes we write, particularly in classes where such lead ability is sought by clients and recognized by following underwriters. This requires significant underwriting and claims handling expertise in very specialized lines of business. Our competitors include large international insurance companies and other Lloyd's managing underwriters. Broker relationships that are ten percent or more of total Chaucer 2016 gross premiums written are with Aon Benfield (18%), Marsh & McLennan Companies (16%), Willis Group (11%) and JLT Group (11%).

## CLAIMS MANAGEMENT

Claims management includes the receipt of initial loss notifications, generation of appropriate responses to claim reports, loss appraisals, identification and handling of coverage issues, determination of whether further investigation is required, retention of legal representation where appropriate, establishment of case reserves, approval of loss payments and notification to reinsurers. Part of our strategy focuses on efficient, timely, and fair claim settlements to meet customer service expectations and maintain valuable independent agent relationships. Additionally, effective claims management is important to our business as claim payments and related loss adjustment expenses are our single largest expenditures.

### Commercial and Personal Lines

We utilize experienced claims adjusters, appraisers, medical specialists, managers and attorneys to manage our claims. Our U.S. property and casualty operations have field claims adjusters located throughout the states and regions in which we do business. Claims field staff members work closely with the independent agents who bound the policies under which coverage is claimed. Claims office adjusting staff is supported by general adjusters for large property and large casualty losses, by automobile and heavy equipment damage appraisers for automobile material damage losses, and by medical specialists whose principal concentration is on workers' compensation and automobile injury cases. Additionally, the claims offices are supported by staff attorneys, both in the home office and in regional locations, who specialize in litigation defense and claim settlements. We have a catastrophe response team to assist policyholders impacted by severe weather events. This team mobilizes quickly to impacted regions, often in advance for a large tracked storm, to support our local claims adjusters and facilitate a timely response to resulting claims. We also maintain a special unit that investigates suspected insurance fraud and abuse. We utilize claims processing technology which allows most of the smaller and more routine Personal Lines claims to be processed at centralized locations.

### Chaucer

The Chaucer claims team is responsible for establishing case reserves, loss and LAE cost management, exposure mitigation and litigation management. Chaucer engages third-party administrators to handle claims in certain cases and authorizes selected agencies to manage claims under risks which they have bound on Chaucer's behalf.

For claims where Chaucer is the lead syndicate, our appointed claims adjusters establish the case reserves and may appoint attorneys, loss adjusters or other third-party experts. For claims where Chaucer is not the lead syndicate, the Lloyd's syndicate leading the risk establishes case reserves in conjunction with professional third-party adjusters, and then advises all other syndicates participating on the risk of the loss reserve requirements. In such cases, the Chaucer claims team reviews material claims and developments.

## CATASTROPHES

We are subject to claims arising out of catastrophes, which historically have had a significant impact on our results of operations and financial condition. Coverage for such events is a core part of our business, and we expect to experience catastrophe losses in the future, which could have a material adverse impact on our financial results and position. Catastrophes can be caused by various events, including, among others, hurricanes, tornadoes and other windstorms, earthquakes, hail, severe winter weather, fire, explosions, and terrorism. The incidence and severity of catastrophes are inherently unpredictable.

## Table of Contents

### Commercial and Personal Lines

We endeavor to manage our catastrophe risks through underwriting procedures, including the use of deductibles and specific exclusions for floods and earthquakes, subject to regulatory restrictions and competitive pressures, and through geographic exposure management and reinsurance. The catastrophe reinsurance program is structured to protect us on a per-occurrence basis. We monitor geographic location and coverage concentrations in order to manage corporate exposure to catastrophic events. Although catastrophes can cause losses in a variety of property and casualty lines, commercial multiple peril and homeowners property coverages have, in the past, generated the majority of catastrophe-related claims.

### Chaucer

Individual commercial and industrial risks within our property, marine and aviation and energy lines include protection against natural or man-made catastrophes worldwide. We accept these risks on direct, facultative, and proportional and excess of loss treaty bases. We seek to manage such risks through limiting the proportion of any individual risk or class of risk we assume and managing geographic concentration, and through the purchase of reinsurance.

We purchase reinsurance to limit our exposure to individual risks and catastrophic events. This includes facultative reinsurance, to limit the exposure on a specified risk; specific excess and proportional treaty, to limit exposure to individual contracts or risks within specified classes of business; and catastrophe excess of loss reinsurance, to limit exposure to any one event that might affect more than one individual contract.

The level of reinsurance that Chaucer purchases is dependent on a number of factors, including our underwriting risk appetite for catastrophe risk, the specific risks inherent in each line or class of business risk written and the pricing, coverage and terms and conditions available from the reinsurance market.

### TERRORISM

As a result of the continuing threat of terrorist attacks worldwide, the insurance industry maintains a high level of focus with respect to the potential for losses caused by terrorist acts. These losses may encompass people, property and business operations covered under workers' compensation, commercial multiple peril and other Commercial Lines policies. In certain cases, we are not able to exclude coverage for these losses, either because of regulatory requirements or competitive pressures. We continually evaluate the potential effect of these low frequency, but potentially high severity events in our overall pricing and underwriting plans, especially for policies written in major metropolitan areas.

Private sector catastrophe reinsurance is limited and generally unavailable for losses attributed to acts of terrorism, particularly those involving nuclear, biological, chemical and/or radiological events. As a result, the industry's primary reinsurance protection against large-scale terrorist attacks in the U.S. is provided through a Federal program that provides compensation for insured losses resulting from acts of terrorism. Additionally, certain terrorism-related risks embedded in our Commercial and Personal Lines are covered under the existing Catastrophe, Property per Risk and Casualty Excess of Loss corporate reinsurance treaties (see "Reinsurance" for additional information).

The Terrorism Risk Insurance Act of 2002 established the Terrorism Risk Insurance Program (the "U.S. Program"). Coverage under the U.S. Program applies to workers' compensation, commercial multiple peril and certain other Commercial Lines policies for U.S. direct written policies. The Terrorism Risk Insurance Program Reauthorization Act of 2015 ("TRIPRA") extended the U.S. Program through December 31, 2020. All commercial property and casualty insurers licensed in the U.S. participate in the program. Under the program, a participating issuer, in exchange for

making terrorism insurance available, may be entitled to be reimbursed by the Federal Government for a portion of its aggregate losses. The U.S. Program does not cover losses in surety, Personal Lines or certain other lines of business. Losses caused by terrorist acts are not excluded from homeowners or personal automobile policies.

As required by the current U.S. Program, we offer policyholders in specific lines of commercial insurance the option to elect terrorism coverage. In order for a loss to be covered under the U.S. Program, the loss must meet aggregate industry loss minimums and must be the result of an act of terrorism as certified by the Secretary of the Treasury in consultation with the Secretary of Homeland Security and the U.S. Attorney General. Losses from acts which do not qualify or are not so certified will not receive the benefit of the U.S. Program and in fact, may be deemed covered losses whether or not terrorism coverage was purchased. The current U.S. Program requires insurance carriers to retain 17% of any claims from a certified terrorist event in excess of the federally mandated deductible in 2017, subject to an annual industry-wide cap of \$100 billion. This retention will increase by 1% each calendar year until it reaches 20% in 2020. The federally mandated deductible represents 20% of direct earned premium for the covered lines of business of the prior year. In 2016, our deductible was \$381 million, which represents 17.4% of year-end 2015 statutory policyholder surplus of our U.S. domestic insurers, and is estimated to be \$396 million in 2017, representing 18.2% of 2016 year-end statutory policyholder surplus.

Given the unpredictability of terrorism losses, future losses from acts of terrorism could be material to our operating results, financial position, and/or liquidity. We attempt to manage our exposures on an individual line of business basis and in the aggregate by one-half square mile grids.

## Table of Contents

Chaucer's direct written U.S. policies are also covered under the provisions of TRIPRA. Generally, terrorism coverage is excluded from the commercial property classes and coverages that Chaucer writes, including in its world-wide nuclear energy business, although a limited portion of Chaucer's property and political risk business outside of the U.S. provides terrorism coverage. We manage this exposure through policy limits, monitoring of risk aggregation and reinsurance. For Chaucer's nuclear energy business, most of our liability coverage includes losses resulting from acts of terrorism, although Chaucer normally ensures that the net liability involved does not exceed 50% of the full exposure, whether property, liability or combined.

## REGULATION

### Commercial and Personal Lines

Our U.S. property and casualty insurance subsidiaries are subject to extensive regulation in the various states in which they transact business and are supervised by the individual state insurance departments. Numerous aspects of our business are subject to regulation, including premium rates, mandatory covered risks, limitations on the ability to non-renew or reject business, prohibited exclusions, licensing and appointment of agents, restrictions on the size of risks that may be insured under a single policy, reserves and provisions for unearned premiums, losses and other obligations, deposits of securities for the benefit of policyholders, investments and capital, policy forms and coverages, advertising, and other conduct, including restrictions on the use of credit information and other factors in underwriting, as well as other underwriting and claims practices. States also regulate various aspects of the contractual relationships between insurers and independent agents.

Such laws, rules and regulations are usually overseen and enforced by the various state insurance departments, as well as through private rights of action and increasingly, by state attorneys general. Such regulations or enforcement actions are often responsive to current consumer and political sensitivities, such as automobile and homeowners insurance rates and coverage forms, or which may arise after a major event. Such rules and regulations may result in rate suppression, limit our ability to manage our exposure to unprofitable or volatile risks, or lead to fines, premium refunds or other adverse consequences. The federal government also may regulate aspects of our businesses, such as the use of insurance (credit) scores in underwriting and the protection of confidential information.

In addition, as a condition to writing business in certain states, insurers are required to participate in various pools or risk sharing mechanisms or to accept certain classes of risk, regardless of whether such risks meet its underwriting requirements for voluntary business. Some states also limit or impose restrictions on the ability of an insurer to withdraw from certain classes of business. For example, Massachusetts, New York, and California each impose material restrictions on a company's ability to materially reduce its exposures or to withdraw from certain lines of business in their respective states. The state insurance departments can impose significant charges on an insurer in connection with a market withdrawal or refuse to approve withdrawal plans on the grounds that they could lead to market disruption. Laws and regulations that limit cancellation and non-renewal of policies or that subject withdrawal plans to prior approval requirements may significantly restrict our ability to exit unprofitable markets.

Over the past several years, other state-sponsored insurers, reinsurers or involuntary pools have increased, particularly in those states which have Atlantic or Gulf Coast storm exposures. As a result, the potential assessment exposure of insurers doing business in such states and the attendant collection risks have increased. Such actions and related regulatory restrictions may limit our ability to reduce our potential exposure to hurricane-related losses.

The insurance laws of many states subject property and casualty insurers doing business in those states to statutory property and casualty guaranty fund assessments. The purpose of a guaranty fund is to protect policyholders by requiring that solvent property and casualty insurers pay the insurance claims of insolvent insurers. These guaranty associations generally pay these claims by assessing solvent insurers proportionately based on the insurer's share of

voluntary premiums written in the state. While most guaranty associations provide for recovery of assessments through subsequent rate increases, surcharges or premium tax credits, there is no assurance that insurers will ultimately recover these assessments, which could be material, particularly following a large catastrophe or in markets which become disrupted.

We are subject to periodic financial and market conduct examinations conducted by state insurance departments. We are also required to file annual and other reports with state insurance departments relating to the financial condition of our insurance subsidiaries and other matters. The National Association of Insurance Commissioners (“NAIC”) and the Federal Insurance Office are each actively engaged in reviewing and considering proposed insurer risk-based capital standards, risk analysis, solvency assessments and other regulatory initiatives.

## Table of Contents

### Chaucer

Chaucer is regulated by both the Prudential Regulation Authority (“PRA”) and the Financial Conduct Authority (“FCA”), who together have responsibility for the U.K. financial services industry, including insurers, insurance intermediaries and the Lloyd’s market. The PRA is responsible for the prudential supervision of, among other financial institutions, the Lloyd’s market, with a particular focus on financial stability. The FCA focuses on conduct of business issues, with a particular focus on consumer protection and market integrity. In addition, Chaucer is supervised by the Council of Lloyd’s, which is the franchisor for all Lloyd’s operations.

The PRA, FCA and Council of Lloyd’s have common objectives in ensuring the appropriate regulation of the Lloyd’s market and, to minimize duplication, the PRA and FCA have arrangements with Lloyd’s for co-operation on supervision and enforcement. Lloyd’s, which is regulated by both the PRA and FCA, has responsibility under the Lloyd’s Act 1982 (“the Lloyd’s Act”) for the implementation of certain PRA and FCA prescribed rules relating to the operation of the Lloyd’s market. Lloyd’s prescribes, in respect of its managing agents and corporate members, minimum standards relating to their management and control, solvency and various other requirements. The PRA and FCA directly monitor compliance of Lloyd’s managing agents with the systems and controls that Lloyd’s prescribes.

The Council of Lloyd’s has wide discretionary powers to regulate Lloyd’s underwriting. For example, it may change the basis of allocation for syndicate expenses or the capital requirements for syndicate participations. Exercising any of these powers might affect the return on an investment of the corporate member, such as Chaucer, in a given underwriting year. In addition, the annual business plans of each syndicate are subject to the review and approval of the Lloyd’s Franchise Board, which is responsible for business planning and monitoring for all syndicates.

We participate in the Lloyd’s market through our ownership of CSL, a managing agent with responsibility for the management of Syndicates 1084 and 1176, for which we provide capital to support their underwriting activities. Our membership in Lloyd’s requires us to comply with its bylaws and regulations, the Lloyd’s Act and the applicable provisions of the Financial Services and Markets Act of 2000. These include the requirement to provide capital (referred to as “Funds at Lloyd’s”) in the form of cash, securities or letters of credit in an amount agreed with by Lloyd’s under the capital setting regime of the PRA. The completion of an annual capital adequacy exercise enables each corporate member to calculate the capital required. These requirements allow Lloyd’s to evaluate whether each corporate member has sufficient assets to meet its underwriting liabilities plus a required solvency margin.

If a corporate member of Lloyd’s is unable to meet its policyholder obligations, such obligations may be payable by the Lloyd’s Central Fund, which acts similar to a state guaranty fund in the U.S. If Lloyd’s determines that the Central Fund needs to be increased, it has the power to assess premium levies on all current Lloyd’s members. The Council of Lloyd’s has discretion to call or assess up to 3% of a member’s underwriting capacity as a Central Fund contribution.

### Solvency II

The European Union (“E.U.”) has adopted a directive, known as Solvency II, covering capital requirements, risk management and regulatory reporting for insurance organizations that imposes economic risk-based solvency requirements across all E.U. member states that comprise three pillars. First, there are quantitative capital requirements, based on a valuation of the entire balance sheet of an insurance organization. Second, Solvency II requires insurance organizations to undertake a qualitative regulatory review, including governance, internal controls, enterprise risk management and the supervisory review process. Third, to enhance market discipline, insurance organizations must report their financial conditions to regulators. We believe that we are in compliance with this regulatory regime, which commenced January 1, 2016.

### Other

In addition to the U.K. and E.U. regulations, Chaucer is subject to regulation in the U.S through the Lloyd's market. The Lloyd's market has licenses to engage in insurance business in Illinois, Kentucky and the U.S. Virgin Islands and operates as an eligible excess and surplus lines insurer in all other states and territories. Lloyd's is also an accredited reinsurer in all states and territories. Lloyd's maintains various trust funds in the state of New York to protect its U.S. business and is subject to regulation by the New York Insurance Department, which acts as the domiciliary department for Lloyd's U.S. trust funds. There are also deposit trust funds in other U.S. states to support Lloyd's excess and surplus lines insurance and reinsurance business.

See also Note 18 — "Commitments and Contingencies" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

#### INVOLUNTARY RESIDUAL MARKETS

As a condition of our license to write business in various domestic states and international jurisdictions, we are required to participate in mandatory property and casualty residual market mechanisms which provide insurance coverages where such coverage may not otherwise be available at rates deemed reasonable. Such mechanisms provide coverage primarily for personal and commercial property, personal and commercial automobile, and workers' compensation, and include assigned risk plans, reinsurance facilities and involuntary pools, joint underwriting associations, fair access to insurance requirements ("FAIR") plans, and commercial automobile insurance plans.

For example, since most states compel the purchase of a minimal level of automobile liability insurance, states have developed shared market mechanisms to provide the required coverages and in many cases, optional coverages, to those drivers who, because of their driving records or other factors, cannot find insurers who will insure them voluntarily. Also, FAIR plans and other similar property insurance shared market mechanisms increase the availability of property insurance in circumstances where homeowners are unable to obtain insurance at rates deemed reasonable, such as in coastal areas or in areas subject to other hazards. Licensed insurers writing business in such states are often required to pay assessments to cover reserve deficiencies generated by such plans.

With respect to FAIR plans and other similar property insurance shared market mechanisms that have significant exposures, it is difficult to accurately estimate our potential financial exposure for future events. Assessments following a large coastal event, particularly one affecting Massachusetts, Florida, Louisiana or New York, could be material to our results of operations. Our participation in such shared markets or pooling mechanisms is generally proportional to our direct writings for the type of coverage written by the specific pooling mechanism in the applicable state or other jurisdiction. For example, we are subject to mandatory participation in the Michigan Assigned Claims ("MAC") facility. MAC is an assigned claim plan covering people injured in uninsured motor vehicle accidents. Our participation in the MAC facility is based on our share of personal and commercial automobile direct written premium in the state and resulted in underwriting losses of \$11.7 million in 2016, \$12.1 million in 2015 and \$11.7 million in 2014. There were no other mandatory residual market mechanisms that were significant to our 2016, 2015 or 2014 results of operations.

#### RESERVE FOR UNPAID LOSSES AND LOSS ADJUSTMENT EXPENSES

Reference is made to "Results of Operations - Segments – Reserve for Losses and Loss Adjustment Expenses" of Management's Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K.

The following table reconciles reserves determined in accordance with accounting practices prescribed or permitted by U.S. insurance statutory authorities ("U.S. Statutory") and the U.K. financial services regulatory authorities ("U.K. Statutory") for our domestic and Chaucer operations, respectively, to reserves determined in accordance with generally accepted accounting principles in the United States of America ("U.S. GAAP"). The primary difference between the U.S. Statutory reserves and our U.S. GAAP reserves is the requirement, on a U.S. GAAP basis, to present reinsurance recoverables as an asset, whereas U.S. Statutory guidance provides that reserves are reflected net of the corresponding

reinsurance recoverables. There are no significant differences between U.K. Statutory reserves and our U.S. GAAP reserves. We do not use discounting techniques in establishing U.S. GAAP reserves for losses and LAE, nor have we participated in any loss portfolio transfers or other similar transactions.

DECEMBER 31 (in millions)	2016	2015	2014
U.S. Statutory reserve for losses and LAE	\$ 3,402.1	\$ 2,995.6	\$ 2,819.0
U.K. Statutory reserve for losses and LAE	2,289.4	2,369.4	2,421.0
Total Statutory reserve for losses and LAE	5,691.5	5,365.0	5,240.0
U.S. GAAP adjustments:			
Reinsurance recoverables on unpaid losses of our U.S. insurance subsidiaries	1,349.2	1,295.3	1,256.3
Reserves for discontinued operations	(88.8)	(89.2)	(113.6)
Other	(2.5)	3.3	9.0
U.S. GAAP reserve for losses and LAE	\$ 6,949.4	\$ 6,574.4	\$ 6,391.7

Reserves for discontinued operations of our U.S. insurance subsidiaries are included in liabilities of discontinued operations for U.S. GAAP and loss and loss adjustment expenses for Statutory reporting.

#### ANALYSIS OF LOSS AND LOSS ADJUSTMENT EXPENSE RESERVE DEVELOPMENT

Information regarding loss and loss adjustment expense reserve development appears in Note 17 – “Liabilities For Outstanding Claims, Losses and Loss Adjustment Expenses” in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

## Table of Contents

Conditions and trends that have affected reserve development in the past will not necessarily recur in the future. As discussed under “Reserving Process Overview” in Management’s Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K, our historical loss experience and loss development patterns are important factors in estimating loss reserves, however, they are not the only factors we evaluate to establish reserves. The process for establishing reserves is subject to considerable variability and requires the use of informed estimates and judgments. Important details, such as specific loss development expectations for particular years, events or individual insurance contracts cannot be determined by analyzing the highly summarized information provided within this annual report. In addition to analyzing loss data and development patterns at a more granular level, we incorporate additional information into our reserving process, such as pricing and market conditions, the presence or absence of large losses including catastrophes, changes in our business mix, including the split of short-tailed and long-tailed classes of business, and other factors. In this regard, a mechanical application of standard actuarial methodologies in evaluating the adequacy of our reserves and extrapolating future favorable or unfavorable development would not be appropriate, in particular as it relates to Chaucer.

Additionally, due to the highly specialized nature of the Lloyd’s business, many of our business classes at Chaucer are characterized by low frequency, but potentially high severity loss events. This results in claims experience and development patterns that are less predictable and more volatile than most of our domestic Personal and Commercial lines businesses. In addition, Chaucer’s reinsurance business and high excess property layers often experience delays in claim reporting which increases the risk of delayed recognition of loss reserve development. Thus additional knowledge and understanding of the exposures and often complex underlying claims issues is required to arrive at a reliable reserve. Also, the composition of the Chaucer portfolio has changed meaningfully throughout the period since our acquisition in 2011, making historical reserve development patterns less relevant to our current business mix. Therefore, a mechanical application of standard actuarial methodologies in projecting ultimate claims could result in materially different reserves to those held. Accordingly, it is not appropriate to extrapolate future favorable or unfavorable development based on amounts experienced in prior periods.

## REINSURANCE

### Reinsurance Program Overview

We maintain ceded reinsurance programs designed to protect against large or unusual loss and LAE activity. We utilize a variety of reinsurance agreements, which are intended to control our individual policy and aggregate exposure to large property and casualty losses, stabilize earnings and protect capital resources. These programs include facultative reinsurance (to limit exposure on a specified policy); specific excess and proportional treaty reinsurance (to limit exposure on individual policies or risks within specified classes of business); and catastrophe excess of loss reinsurance (to limit exposure to any one event that might impact more than one individual contract). Catastrophe reinsurance protects us, as the ceding insurer, from significant losses arising from a single event including, among others, hurricanes, tornadoes and other windstorms, earthquakes, hail, severe winter weather, fire, explosions and terrorism. We determine the appropriate amount of reinsurance based upon our evaluation of the risks insured, exposure analyses prepared by consultants, our risk appetite and on market conditions, including the availability and pricing of reinsurance.

We cede to reinsurers a portion of our risk based upon insurance policies subject to such reinsurance. Reinsurance contracts do not relieve us from our obligations to policyholders. Failure of reinsurers to honor their obligations could result in losses to us. We believe that the terms of our reinsurance contracts are consistent with industry practice in that they contain standard terms with respect to lines of business covered, limit and retention, arbitration and occurrence. We believe our reinsurers are financially sound, based upon our ongoing review of their financial statements, financial strength ratings assigned to them by rating agencies, their reputations in the reinsurance marketplace, our collections history, advice from third parties, and the analysis and guidance of our reinsurance

advisors.

Although we exclude coverage of nuclear, chemical or biological events from the Personal Lines and Commercial Lines policies we write in the U.S., we are statutorily required to provide this coverage in our workers' compensation policies. We have workers' compensation reinsurance coverage under our casualty reinsurance treaty of approximately \$80 million for terrorism losses, limited to approximately \$10 million for losses that result from nuclear, chemical or biological events. All other U.S.-based exposure or treaties exclude such coverage. Further, under TRIPRA, our retention of U.S. domestic losses in 2017 from such events, if deemed certified terrorist events, is limited to 17% of losses in excess of an approximate \$396 million deductible, up to a combined annual aggregate limit for the federal government and all insurers of \$100 billion. Such events could be material to our financial position or results of operations. See "Terrorism" for additional information.

Reference is made to Note 16 — "Reinsurance" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K. Reference is also made to "Involuntary Residual Markets".

## Table of Contents

### Commercial and Personal Lines

Our 2017 reinsurance program for our Commercial Lines and Personal Lines segments is substantially consistent with our 2016 program design. The following discussion summarizes both our 2016 and 2017 reinsurance programs for our Commercial Lines and Personal Lines segments (excluding coverage available under the U.S. federal terrorism program which is described under “Terrorism”), but does not purport to be a complete description of the program or the various restrictions or limitations which may apply:

- Our Commercial Lines and Personal Lines segments were primarily protected by a property catastrophe occurrence treaty, a property per risk excess of loss treaty, as well as a casualty excess of loss treaty, with retentions of \$200 million, \$2 million, and \$2 million, respectively. We have lower retentions in place for certain lines, as discussed below.
- The property catastrophe occurrence treaty provides coverage, on an occurrence basis, up to \$1.1 billion countrywide, less a \$200 million retention, with no co-participation, for all defined perils.
- The property per risk excess of loss treaty provides coverage, on a per risk basis, up to \$100 million, less a \$2 million retention, with no co-participations.
- The casualty excess of loss treaty provides coverage, on a per occurrence basis for each loss, up to \$75 million less a \$2 million retention, with no co-participation. Umbrella and excess liability lines share coverage with casualty lines within the \$2 million to \$10 million layers, subject to a maximum umbrella limit of \$5 million. There is also separate umbrella and excess liability only coverage that provides protection for the \$5 million to \$25 million layer. The casualty program provides coverage for management liability and healthcare lines in a \$1 million to \$2 million layer, with co-participation of 50% for management liability.
- For 2016 and 2017, Commercial Lines segments are further protected by excess of loss treaty agreements for specific lines of business. For example, the surety and fidelity bond excess of loss treaty provides coverage, on a per principal basis, up to \$40 million, less a \$5 million retention, with co-participations ranging from 5% to 30% for individual layers placed within the treaty.
- In addition to certain layers of coverage from our Commercial and Personal Lines segment reinsurance program as described above, the Commercial Lines AIX Holdings, Inc. (“AIX”) program business also includes surplus share, quota share, excess of loss, facultative and other forms of reinsurance that cover the writings from AIX specialty and proprietary programs. There are approximately 48 different AIX programs, and the reinsurance structure is customized to fit the exposure profile for each program.

Our intention is to renew the surety and fidelity bond treaty, the property per risk excess of loss treaty and the property catastrophe treaty in July 2017 with the same or similar terms and conditions, but there can be no assurance that we will be able to maintain our current levels of reinsurance, pricing and terms and conditions. Our 2017 casualty excess of loss treaty is effective January 1, 2017 for a twelve month period.

### Chaucer

Chaucer’s 2017 reinsurance program is substantially consistent with the 2016 program design. The 2016 and 2017 Chaucer reinsurance programs contain a combination of reinsurance treaties that either provide coverage across several lines or are specific to individual lines of business or classes of business within certain lines. Generally, for each line or class of Chaucer’s business, there are a variety of proportional, excess of loss (mainly occurrence basis), facultative and other treaty forms, which work in conjunction to manage against severity, and to a certain extent, frequency. Chaucer’s 2017 net retentions are generally consistent with the 2016 levels.

The Chaucer programs described below are substantially in place as of February 1, 2017 and we expect to implement throughout the year any remaining parts of the program as described; however, there can be no assurances that we will be successful in placing reinsurance for each line as planned. The following discussion summarizes both our 2016 and 2017 reinsurance programs for the Chaucer segment, but does not purport to be a complete description of the program

or the various restrictions or limitations which may apply. The limit figures below are presented net of treaty co-participation.

We purchase proportional and non-proportional reinsurance, which is intended to provide sufficient underwriting capacity to effectively conduct business in the Lloyd's market and to protect against frequency and severity of losses.

11

---

## Table of Contents

For the property lines reinsurance coverage in 2016 and 2017:

- The direct property catastrophe occurrence reinsurance for selected international territories provides coverage up to approximately \$44 million and \$45 million, respectively, less retentions of approximately \$8 million for both years.
- The assumed property catastrophe reinsurance for selected international territories provides coverage up to approximately \$108 million and \$140 million, less retentions of approximately \$19 million and \$15 million, respectively. Additionally, the assumed property catastrophe occurrence reinsurance for the United States provides coverage up to approximately \$114 million and \$150 million, respectively, less retentions of approximately \$25 million for both years.
- The direct property per risk excess of loss reinsurance provides coverage up to approximately \$10 million and \$15 million, respectively, less retentions of approximately \$3 million for both years.
- The assumed property per risk excess of loss reinsurance provides coverage up to approximately \$10 million for both years, less retentions of approximately \$5 million for both years.

The casualty direct and facultative portfolio has reinsurance coverage in 2016 and 2017 of up to approximately \$38 million and \$50 million, respectively, less a retention of approximately \$2 million for both years. The US casualty treaty portfolio has workers' compensation catastrophe reinsurance coverage of up to \$78 million in 2016 and 2017, less a retention of \$8 million for both years.

For the energy, marine and aviation lines reinsurance coverage in 2016 and 2017:

- The nuclear energy lines occurrence reinsurance provides coverage up to approximately \$163 million and \$174 million, less retentions of approximately \$42 million and \$46 million, respectively, at consistent rates of exchange.
  - The non-nuclear energy lines occurrence reinsurance provides coverage up to approximately \$140 million and \$130 million, less retentions of approximately \$15 million and \$13 million, respectively.
- The direct marine lines excess of loss reinsurance provides coverage, on a per occurrence basis, up to approximately \$102 million and \$105 million, respectively, less retentions of approximately \$5 million for both years.
- The assumed marine excess of loss reinsurance provides coverage, on an occurrence basis, up to approximately \$37 million and \$42 million, respectively, less retentions of approximately \$6 million for both years.
- The direct political violence lines reinsurance provides coverage, on a per occurrence basis, up to approximately \$107 million and \$115 million, respectively, less retentions of approximately \$8 million for both years.
- The direct political risks lines reinsurance provides coverage on a per risk basis, up to approximately \$13 million and \$15 million, respectively, less retentions of \$3 million for both years. The direct credit lines reinsurance provides coverage on a per risk basis, up to approximately \$7 million and \$8 million, respectively, less retentions of \$3 million for both years. In addition, event coverage is provided for both lines of business up to \$33 million, less retentions of \$13 million for both years.
- The aviation lines reinsurance provides coverage, on a per occurrence basis, up to approximately \$63 million and \$68 million, respectively, less retentions of approximately \$3 million for both years.

For Chaucer's 2016 U.S. casualty treaty lines, we have entered into a whole account aggregate excess of loss contract. The contract covers the U.S. casualty treaty lines exposures, except specialty risks and workers' compensation clash, and provides coverage up to a 117% loss ratio, less retention of a 47% loss ratio. This contract does not meet the risk transfer requirements of GAAP and is accounted for using the deposit accounting method. The deposit asset for this contract was approximately \$28 million as of December 31, 2016. For 2017, we expect to renew this treaty with similar coverage, terms and conditions and will evaluate whether it meets risk transfer requirements at the time of placement.

## Reinsurance Recoverables

Other than our investment portfolio, the single largest asset class is our reinsurance receivables, which consist of our estimate of amounts recoverable from reinsurers with respect to losses incurred to date (including losses incurred but

not reported) and unearned premiums, net of amounts estimated to be uncollectible. This estimate depends upon a number of factors, including an estimate of the amount of reserves attributable to business written in various lines and in various years. This estimate is expected to be revised at each reporting period and such revisions, which could be material, affect our results of operations and financial position. Reinsurance recoverables include amounts due from both United States and state mandatory reinsurance or other risk sharing mechanisms, and private reinsurers to whom we have voluntarily ceded business.

We are subject to concentration of risk with respect to reinsurance ceded to various mandatory residual markets, facilities and pooling mechanisms. As a condition to conduct business in various states, we are required to participate in residual market mechanisms, facilities and pooling arrangements which usually are designed to provide insurance coverages to individuals or other entities that are otherwise unable to purchase such coverage voluntarily or at rates deemed reasonable. These market mechanisms, facilities and pooling arrangements comprise \$925.9 million of our total reinsurance recoverables on paid and unpaid losses and unearned premiums at December 31, 2016 and include, among others, the Michigan Catastrophic Claims Association (“MCCA”).

The MCCA is a mandatory reinsurance association which reinsures claims under Michigan’s unlimited personal injury protection coverage which is required under all Michigan automobile insurance policies. The MCCA reinsures all such claims in excess of a statutorily established company retention, currently \$545,000. Funding for MCCA comes from assessments against automobile insurers based upon their share of insured automobiles in the state. Insurers are allowed to pass along this cost to Michigan automobile policyholders. This recoverable accounted for 64% of our total personal automobile gross reserves at December 31, 2016 and 2015. Reinsurance recoverables related to MCCA were \$911.2 million and \$906.5 million at December 31, 2016 and 2015, respectively. Because the MCCA is supported by assessments permitted by statute, and there have been no significant uncollectible balances from MCCA identified during the three years ending December 31, 2016, we believe that we have no significant exposure to uncollectible reinsurance balances from this entity.

In addition to the reinsurance ceded to various residual market mechanisms, facilities and pooling arrangements we have \$1,685.9 million of reinsurance assets due from traditional reinsurers as of December 31, 2016. These amounts are due principally from highly-rated reinsurers, defined as rated A- or higher by A.M. Best Rating Agency or other equivalent rating. The following table displays balances recoverable from our ten largest reinsurance groups at December 31, 2016, along with the group’s rating from the indicated rating agency. The contractual obligations under reinsurance agreements are typically with individual subsidiaries of the group or syndicates at Lloyd’s and are not typically guaranteed by other group members or syndicates at Lloyd’s. Reinsurance recoverables are comprised of paid losses recoverable, outstanding losses recoverable, incurred but not reported losses recoverable, and ceded unearned premium.

REINSURERS (in millions)	A.M. Best Rating	Reinsurance Recoverable
Lloyd's Syndicates	A	\$ 506.8
Munich Reinsurance Companies	A+	160.2
HDI Group	A	137.9
Alleghany Corporation	A	102.9
XL Group PLC	A	97.6
Swiss Re Ltd.	A+	68.7
Partner Re Ltd. Companies	A	63.0
Toa Reinsurance Company Ltd.	A+	57.4
Third Point Reinsurance Ltd.	A-	54.4
Aspen Insurance Holdings Ltd.	A	34.6

Subtotal	1,283.5
All other reinsurers	402.4
Residual markets, facilities and pooling arrangements	925.9
Total	\$ 2,611.8

Reinsurance recoverable balances in the table above are shown before consideration of balances owed to reinsurers and any potential rights of offset, including collateral held by us, and are net of an allowance for uncollectible recoverables. Reinsurance treaties are generally purchased on an annual basis. Treaties typically contain provisions that allow us to demand that a reinsurer post letters of credit or assets as security if a reinsurer is an unauthorized reinsurer under applicable regulations or if its rating falls below a predetermined contractual level. In regards to reinsurance recoverables due from Lloyd's Syndicates, as part of the Lloyd's "chain of security" afforded to all of its policyholders, recourse is available to the Lloyd's Central Fund in the event of the failure of an individual syndicate and its capital providers.

Although reinsurance makes the reinsurer liable to us to the extent the risk is transferred or ceded to the reinsurer, ceded reinsurance arrangements do not eliminate our obligation to pay claims to our policyholders. Accordingly, we bear credit risk with respect to our reinsurers. Specifically, our reinsurers may not pay claims made by us on a timely basis, or they may not pay some or all of these claims. In addition, from time to time insurers and reinsurers may disagree on the scope of the reinsurance or on the underlying insured risks. Any of these events would increase our costs and could have a material adverse effect on our business.

We have established a reserve for uncollectible reinsurance of \$13.1 million as of December 31, 2016, or 0.5% of the total reinsurance recoverable balance, which was determined by considering reinsurer specific default risk on paid and unpaid recoverables as indicated by their financial strength ratings, any ongoing solvency issues, any current risk of dispute on paid recoverables, our collection experience and the development of our ceded loss reserves. There have been no significant balances determined to be uncollectible and thus no significant charges recorded during 2016 for uncollectible reinsurance recoverables.

## Table of Contents

Our exposure to credit risk from any one reinsurer is managed through diversification by reinsuring with a number of different reinsurers, principally in the United States and European reinsurance markets. When reinsurance for our Commercial and Personal Lines segments is placed, our standards of acceptability generally require that a reinsurer must have a minimum policyholder surplus of \$500 million, a rating from A.M. Best and/or S&P of “A” or better, or an equivalent financial strength if not rated. Similarly, the Chaucer segment generally requires all reinsurers to have a rating from S&P of “A-” or better and minimum level of net assets of \$500 million. In addition, for lower rated reinsurers, certain reinsurers for our United States insurance operations that have not been granted authorized status by an insurance company’s state of domicile, and in certain other circumstances, reinsurers must generally provide collateral equal to 100% of estimated reinsurance recoverables. The collateral can serve to mitigate credit risk.

## DISCONTINUED OPERATIONS

Discontinued operations primarily include our former life insurance businesses, which were sold prior to 2009, and our discontinued accident and health business.

Our former life insurance businesses include indemnity obligations for which we have established reserves.

The discontinued accident and health business includes interests in 25 accident and health reinsurance pools and arrangements that we retained subsequent to the sale of First Allmerica Financial Life Insurance Company (“FAFLIC”), all of which were assumed by Hanover Insurance in connection with the transaction. We ceased writing new premiums in this business in 1999, subject to certain contractual obligations. The reinsurance pool business consists primarily of the medical and disability portions of workers’ compensation risks, long-term care, assumed personal accident, individual medical, long-term disability, and special risk business. This business also includes residual health insurance policies. Total claim reserves for the assumed accident and health business were \$88.4 million at December 31, 2016, net of recoverables from third-party reinsurers of \$0.4 million at December 31, 2016. Assets and liabilities related to the discontinued accident and health business are reflected as assets and liabilities of discontinued operations.

Loss estimates associated with substantially all of the discontinued accident and health business are provided by managers of each pool. We adopt reserve estimates for this business that consider this information, expected returns on assets assigned to this business and other facts. We update these reserves as new information becomes available and further events occur that may affect the ultimate resolution of unsettled claims. We believe that the reserves recorded related to this business are adequate. However, since reserve and loss cost estimates related to the discontinued accident and health business are dependent on several assumptions, including, but not limited to, future health care costs, persistency of medical care inflation, investment performance, claims, particularly in the long-term care business, morbidity and mortality assumptions, and these assumptions can be impacted by technical developments and advancements in the medical field and other factors, there can be no assurance that the reserves established for this business will prove sufficient. Revisions to these reserves could have a material adverse effect on our results of operations for a particular quarterly or annual period or on our financial position.

Discontinued operations, in total, generated a net loss of \$1.0 million during 2016, primarily related to our discontinued accident and health business.

## INVESTMENT PORTFOLIO

We held \$8.7 billion of investment assets, including cash and cash equivalents, at December 31, 2016. Approximately 84% of our investment assets were comprised of fixed maturities, which included both investment grade and below investment grade public and private debt securities; 7% consisted of equity securities; 6% included other investments which consisted primarily of mortgage participations, limited partnerships and overseas deposits; and the remaining

3% were comprised of cash and cash equivalents. These investments are generally of high quality and our fixed maturities and equities are broadly diversified across sectors of the fixed income and equity markets.

Opus manages our investment portfolio, including the selection and monitoring of external asset managers for our non-U.S. dollar fixed maturity portfolios, U.S. commercial mortgage loan participations and certain other investments. Our overall investment strategy is intended to balance investment income with credit and interest rate risk, while maintaining sufficient liquidity and providing the opportunity for capital growth. The asset allocation process takes into consideration the types of business written and the level of surplus required to support our different businesses and the risk return profiles of the underlying asset classes. We look to balance the goals of capital preservation, net investment income stability, liquidity and total return. For certain portfolios in which fixed maturities are denominated in U.K. pounds sterling and Euros, we employ two external asset managers with international market expertise to manage these portfolios. Assets managed by these asset managers totaled approximately \$298 million of non-U.S. dollar-denominated investments at December 31, 2016. We select and monitor managers based on investment style, performance and corporate governance.

The majority of our assets are invested in the fixed income markets. Through fundamental research and credit analysis, with a focus on value investing, we seek to identify a portfolio of stable income-producing higher quality U.S. government, foreign government, municipal, corporate, residential and commercial mortgage-backed securities and asset-backed securities. We have a general policy of diversifying investments both within and across major investment and industry sectors to mitigate credit and interest rate risk. We monitor the credit quality of our investments and our exposure to individual markets, borrowers, industries, sectors and, in the case of commercial mortgage-backed securities and commercial mortgage loan participations, property types and geographic locations.

## Table of Contents

Investments held by our insurance subsidiaries are subject to diversification requirements under state insurance laws and other regulatory requirements. The investment portfolio duration is approximately 4.5 years and is generally maintained in the range of 1 to 2 times the duration of our insurance liabilities. We seek to maintain sufficient liquidity to support our cash flow requirements by monitoring the cash requirements associated with our insurance and corporate liabilities, laddering the maturities within the portfolio, closely monitoring our investment durations, holding high quality liquid public securities and managing the purchases and sales of assets.

Reference is made to “Investments” in Management’s Discussion and Analysis of the Financial Condition and Results of Operations of this Form 10-K.

## RATING AGENCIES

Insurance companies are rated by rating agencies to provide both industry participants and insurance consumers information on specific insurance companies. Higher ratings generally indicate the rating agencies’ opinion regarding financial stability and a stronger ability to pay claims.

We believe that strong ratings are important factors in marketing our products to our agents and customers, since rating information is broadly disseminated and generally used throughout the industry. We believe that a rating of “A-” or higher from A.M. Best Co. is particularly important for our business. Insurance company financial strength ratings are assigned to an insurer based upon factors deemed by the rating agencies to be relevant to policyholders and are not directed toward protection of investors. Such ratings are neither a rating of securities nor a recommendation to buy, hold or sell any security.

## EMPLOYEES

As of December 31, 2016, we had approximately 4,900 employees, with approximately 4,500 located in the United States, and 400 internationally, almost all of whom are located in the United Kingdom. We believe our relations with employees are good.

## EXECUTIVE OFFICERS OF THE REGISTRANT

Reference is made to “Directors and Executive Officers of the Registrant” in Part III - Item 10 of this Form 10-K.

## AVAILABLE INFORMATION

We file our annual report on Form 10-K, quarterly reports on Form 10-Q, periodic information on Form 8-K, our proxy statement, and other required information with the Securities and Exchange Commission (“SEC”). Shareholders may read and copy any materials on file with the SEC at the SEC’s Public Reference Room at 100 F Street, NE, Washington, DC 20549. Shareholders may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains an Internet website, <http://www.sec.gov>, which contains reports, proxy and information statements and other information with respect to our filings.

Our website address is <http://www.hanover.com>. We make available free of charge on or through our website, our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports filed or furnished pursuant to Sections 13(a) or 15(d) of the Securities Exchange Act of 1934, as soon as reasonably practicable after we electronically file such material with, or furnish it to, the SEC. Additionally, our Code of Conduct is available, free of charge, on our website. Our Corporate Governance Guidelines and the charters of our Audit Committee, Compensation Committee, Committee of Independent Directors and Nominating and Corporate Governance Committee, are available on our website. All documents are also available in print to any shareholder

who requests them.

Table of Contents

ITEM 1A—RISK FACTORS

RISK FACTORS AND FORWARD LOOKING STATEMENTS

We wish to caution readers that the following important factors, among others, in some cases have affected, and in the future could affect, our actual results and could cause our actual results to differ materially from historical results and from those expressed in any forward-looking statements made from time to time by us on the basis of our then-current expectations. When used in this Form 10-K, the words “believes”, “anticipates”, “expects”, “projections”, “outlook”, “should”, “could”, “plan”, “guidance”, “likely”, “on track to”, “targeted” and similar expressions are intended to identify forward-looking statements. Our businesses are in rapidly changing and competitive markets and involve a high degree of risk and unpredictability. Forward-looking projections are subject to these risks and unpredictability.

Our results may fluctuate as a result of cyclical or non-cyclical changes in the property and casualty insurance industry.

The property and casualty insurance industry historically has been subject to significant fluctuations and uncertainties. Our profitability is affected significantly by the following items:

- increases in costs, particularly increases occurring after the time our insurance products are priced, including construction, automobile repair, and medical and rehabilitation costs. This includes “cost shifting” from health insurers to casualty and liability insurers (whether as a result of an increasing number of injured parties without health insurance, coverage changes in health policies to make such coverage secondary to casualty policies, the implementation or repeal of national healthcare legislation, lower reimbursement rates for the same procedure by health insurers or government-sponsored insurance, or the implementation of the Medicare Secondary Payer Act, which imposes reporting and other requirements with respect to medical and related claims paid for Medicare eligible individuals). As it relates to construction, there are often temporary increases in the cost of building supplies and construction labor after a significant event (for example, so called “demand surge” that causes the cost of labor, construction materials and other items to increase in a geographic area affected by a catastrophe). In addition, we are limited in our ability to negotiate and manage reimbursable expenses incurred by our policyholders;
- competitive and regulatory pressures, which affect the prices of our products and the nature of the risks covered;
- volatile and unpredictable developments, including severe weather, catastrophes, terrorist actions and global conflicts;
- legal, regulatory and socio-economic developments, such as new theories of insured and insurer liability and related claims and extra-contractual awards such as punitive damages, and increases in the size of jury awards or changes in applicable laws and regulations (such as changes in the thresholds affecting “no fault” liability or when non-economic damages are recoverable for bodily injury claims or coverage requirements);
  - fluctuations in interest rates, inflationary pressures, default rates, commodity prices, foreign exchange rates and other factors that affect net income, including with respect to investment returns and operating results for certain of our lines of business such as trade credit; and
- other general economic conditions and trends that may affect the adequacy of reserves.

The demand for property and casualty insurance can also vary significantly based on general economic conditions (either nationally or regionally and, with respect to our Chaucer segment, internationally), rising as the overall level of economic activity increases and falling as such activity decreases. Loss patterns also tend to vary inversely with local economic conditions, increasing during difficult or unstable economic times and moderating during economic upswings or periods of stability. The fluctuations in demand and competition could produce unpredictable underwriting results.

Actual losses from claims against our property and casualty insurance subsidiaries may exceed their reserves for claims.

Our property and casualty insurance subsidiaries maintain reserves to cover their estimated ultimate liability for losses and loss adjustment expenses with respect to reported and unreported claims incurred as of the end of each accounting period. Reserves do not represent an exact calculation of liability. Rather, reserves represent estimates, involving actuarial projections and judgments at a given time, of what we expect the ultimate settlement and administration of incurred claims will cost based on facts and circumstances then known, predictions of future events, estimates of future trends in claims frequency and severity and judicial theories of liability, costs of repair and replacement, legislative activity and myriad other factors.

15

---

## Table of Contents

The inherent uncertainties of estimating reserves are greater for certain types of property and casualty insurance lines. These include automobile bodily injury liability, automobile personal injury protection, and workers' compensation, where a longer period of time may elapse before a definitive determination of ultimate liability may be made, environmental liability, where the technological, judicial and political climates involving these types of claims are continuously evolving, and casualty coverages such as professional liability. There is also greater uncertainty in establishing reserves with respect to new business, particularly new business that is generated with respect to newer product lines, such as our management and professional liability, healthcare, and cyber-risk lines by newly appointed agents or in geographies where we have less experience in conducting business. In these cases, there is less historical experience or knowledge and less data upon which the actuaries can rely. Estimating reserves is further complicated by unexpected claims or unintended coverages that emerge due to changing conditions. These emerging issues may increase the size or number of claims beyond our underwriting intent and may not become apparent for many years after a policy is issued. These losses are reflected as prior year reserve development. Although we undertake underwriting actions designed to limit losses once emerging issues are identified, we remain subject to losses on policies issued during those years preceding the underwriting actions.

Additionally, the introduction of new Commercial Lines products, including through several acquired subsidiaries, the development of new niche and specialty lines and the introduction of new or expanded lines of business at Chaucer, present new risks. Certain new specialty products, such as the human services program, non-profit directors and officers liability and employment practices liability policies, lawyers and other professional liability policies, healthcare lines and private company directors and officers coverage may also require a longer period of time (the so-called "tail") to determine the ultimate liability associated with the claims and may produce more volatility in our results and less certainty in our accident year reserves. Some lines of business, such as surety, are less susceptible to establishing reserves based on actuarial or historical experience and losses may be episodic, depending on economic and other factors.

We regularly review our reserving techniques, reinsurance and the overall adequacy of our reserves based upon, among other things:

- our review of historical data, legislative enactments, judicial decisions, legal developments in imposition of damages, changes in political attitudes and trends in general economic conditions;
- our review of per claim information;
- historical loss experience of our property and casualty insurance subsidiaries and the industry as a whole; and
- the terms of our property and casualty insurance policies.

Underwriting results and operating income could be adversely affected by further changes in our net loss and LAE estimates related to significant events or emerging risks, such as risks related to attacks on or breaches of computer network systems ("cyber-risks"), privacy regulations or disruptions caused by major power grid failures or widespread electrical and electronic equipment failure due to aging infrastructure, natural factors like hurricanes, earthquakes and solar flares or man-made factors like terrorism.

Estimating losses following any major catastrophe or with respect to emerging claims is an inherently uncertain process. Factors that add to the complexity of estimating losses from these events include the legal and regulatory uncertainty, the complexity of factors contributing to the losses, delays in claim reporting, and with respect to areas with significant property damage, the impact of "demand surge" and a slower pace of recovery resulting from the extent of damage sustained in the affected areas due, in part, to the availability and cost of resources to effect repairs. Emerging claims issues may involve complex coverage, liability and other costs which could significantly affect LAE. As a result, there can be no assurance that our ultimate costs associated with these events or issues will not be substantially different from current estimates (for example, actual losses arising from an event like Superstorm Sandy could have varied widely depending on the interpretation of various policy provisions). Investors should consider the risks and uncertainties in our business that may affect net loss and LAE reserve estimates and future performance,

including the difficulties in arriving at such estimates.

Anticipated losses associated with business interruption exposure, the impact of wind versus water as the cause of loss, disputes over the extent of damage caused by hail storms, supplemental payments on previously closed claims caused by the development of latent damages or new theories of liability and inflationary pressures could also have a negative impact on future loss reserve development.

Because of the inherent uncertainties involved in setting reserves and establishing current and prior-year “loss picks”, including those related to catastrophes, we cannot provide assurance that the existing reserves or future reserves established by our property and casualty insurance subsidiaries will prove adequate in light of subsequent events. Our results of operations and financial condition could therefore be materially affected by adverse loss development for events that we insured in prior periods.

Table of Contents

Due to geographical concentration in our U.S. property and casualty business, changes in economic, regulatory and other conditions in the regions where we operate could have a significant negative impact on our business as a whole. Geographic concentrations also expose us to losses that are potentially disproportionate to our market share in the event of natural or other catastrophes.

We generate a significant portion of our U.S. property and casualty insurance net premiums written and earnings in Michigan, Massachusetts and other states in the Northeast, including New York. For the year ended December 31, 2016, approximately 20% and 10% of our net premiums written in our U.S. property and casualty business were generated in the states of Michigan and Massachusetts, respectively. Many states in which we do business impose significant rate control and residual market charges, and restrict an insurer's ability to exit such markets. The revenues and profitability of our property and casualty insurance subsidiaries are subject to prevailing economic, regulatory, demographic and other conditions, including adverse weather in Michigan and the Northeast. Because of our geographic concentration in certain regions, our business as a whole could be significantly affected by changes in the economic, regulatory and other conditions in such areas.

Further, certain new catastrophe models assume an increase in frequency and severity of certain weather events, whether as a result of potential global climate change or otherwise. Financial strength rating agencies are placing increased emphasis on capital and reinsurance adequacy for insurers with certain geographic concentrations of risk which may be subject to disproportionate risk of loss. These factors also may result in insurers seeking to diversify their geographic exposure, which could result in increased regulatory restrictions in those markets where insurers seek to exit or reduce coverage, as well as an increase in competitive pressures in less weather-exposed markets.

Our profitability may be adversely affected if our pricing models differ materially from actual results.

The profitability of our business depends on the extent to which our actual claims experience is consistent with the assumptions we use in pricing our policies. We price our business in a manner that is intended to be consistent, over time, with actual results and return objectives. Our estimates and models, and/or the assumptions behind them, may differ materially from actual results.

If we fail to appropriately price the risks we insure, fail to change or are too slow to change our pricing model to appropriately reflect our current experience, or if our claims experience is more frequent or severe than our underlying risk assumptions, our profit margins may be negatively affected. If we underestimate the frequency and/or severity of extreme adverse events occurring, our financial condition may be adversely affected. If we overestimate the risks we are exposed to, we may overprice our products, and new business growth and retention of our existing business may be adversely affected.

Limitations on the ability to predict the potential impact of weather events and catastrophes may impact our future profits and cash flows.

Our business is subject to claims arising out of catastrophes that may have a significant impact on our results of operations and financial condition. We may experience catastrophe losses that could have a material adverse impact on our business. Catastrophes can be caused by various events, including hurricanes, floods, earthquakes, tornadoes, wind, hail, fires, drought, severe winter weather, volcanic eruptions, tropical storms, tsunamis, sabotage, terrorist actions, explosions, nuclear accidents, solar flares, and power outages. The frequency and severity of catastrophes are inherently unpredictable.

The extent of gross losses from a catastrophe is a function of the total amount of insured exposure in the area affected by the event and the severity of the event. The extent of net losses depends on the amount and collectability of reinsurance.

Additionally, the severity of certain catastrophes could be so significant that it impacts the ability of certain locations to recover their economic viability in the near term, which could also have a significant negative impact on our business.

Although catastrophes can cause losses in a variety of property and casualty lines, homeowners and commercial multiple peril property insurance have, in the past, generated the vast majority of our catastrophe-related claims. Our catastrophe losses have historically been principally weather-related, particularly from hurricanes, as well as snow and ice damage from winter storms. However, Chaucer's international operations subject us to greater diversity in the types and geographic distribution of potential catastrophe losses. For example, Chaucer incurred catastrophe losses in 2016 from wildfires in Canada and earthquakes in Ecuador and New Zealand, in 2015 from a port explosion in China and in 2014 from snowstorms in Japan, a hurricane in Mexico and tornado and hail storms in the U.S.

Although the insurance industry and rating agencies have developed various models intended to help estimate potential insured losses under thousands of scenarios, there is no reliable way of predicting the probability of such events or the magnitude of such losses before a specific event occurs. We utilize various models and other techniques in an attempt to measure and manage potential catastrophe losses within various income and capital risk appetites. However, such models and techniques have many limitations. In addition, due to historical concentrations of business, regulatory restrictions and other factors, our ability to manage such concentrations is limited, particularly in the Northeast and in the state of Michigan.

## Table of Contents

We purchase catastrophe reinsurance as protection against catastrophe losses. Based upon an ongoing review of our reinsurers' financial statements, financial strength ratings assigned to them by rating agencies, their reputations in the reinsurance marketplace, our collections history with them and the analysis and guidance of our reinsurance advisors, we believe that the financial condition of our reinsurers is sound. However, reinsurance is subject to counterparty risks, including those resulting from over-concentration of exposures within the industry. In setting our retention levels and coverage limits, we also consider our level of statutory surplus and exposures, as well as the current reinsurance pricing environment. Should we experience losses from one significant or several large catastrophes, there can be no assurance that our reinsurance program will provide adequate coverage levels.

Our business is dependent on our ability to manage risk, and the failure of the risk mitigation strategies we utilize could have a material adverse effect on our financial condition or results of operations.

Our business performance is highly dependent on our ability to manage operational risks that arise from a large number of day-to-day business activities, including insurance underwriting, claims processing, servicing, investment, financial and tax reporting, compliance with regulatory requirements and other activities. We utilize a number of strategies to mitigate our insurance risk exposure, including: engaging in thorough underwriting, utilizing limits, deductibles and exclusions to mitigate policy risk, reviewing the terms and conditions of our policies, focusing on our risk aggregation by product line, geography, industry type, credit exposure and other bases, and ceding insurance risk. We seek to monitor and control our exposure to risks arising out of these activities through an enterprise-wide risk management framework. However, there are inherent limitations in all of these tactics, and no assurance can be given that these processes and procedures will effectively control all known risks or effectively identify unforeseen risks or that an event or series of events will not result in loss levels in excess of our probable maximum loss models, which could have a material adverse effect on our financial condition or results of operations. It is also possible that losses could manifest themselves in ways that we do not anticipate and that our risk mitigation strategies are not designed to address. Such a manifestation of losses could have a material adverse effect on our financial condition or results of operations. These risks may be heightened during times of challenging macro economic conditions.

We cannot guarantee the adequacy of or ability to maintain our current level of reinsurance coverage.

Similar to insurance companies, reinsurance companies can also be adversely impacted when catastrophes occur. There can be no assurance that we will be able to maintain our current levels of reinsurance coverage. In particular, and as discussed under "Reinsurance Program Overview" of this Form 10-K, not all of our 2017 reinsurance programs for the Commercial and Personal Lines and Chaucer business are fully placed. Future catastrophic events and other changes in the reinsurance marketplace, including as a result of investment losses or disruptions due to challenges in the financial markets that have occurred or could occur in the future, may adversely affect our ability to obtain such coverages, as well as adversely affect the cost of obtaining that coverage.

Additionally, the availability, scope of coverage, cost, and creditworthiness of reinsurance could continue to be adversely affected as a result of not only new catastrophes, but also terrorist attacks and the perceived risks associated with future terrorist activities, global conflicts, and the changing legal and regulatory environment (including changes which could create new insured risks). Federal reinsurance for terrorism risks coverage offered by insurers is available under TRIPRA, but it only applies to certified events of terrorism (as defined in TRIPRA) and contains certain caps and deductibles. Although TRIPRA coverage is in effect through December 31, 2020, should this program not be renewed or should it be modified unfavorably by the government in the future, private reinsurance for events of terrorism may not be available to us or available at reasonable or acceptable rates.

Although we monitor their financial soundness, we cannot be sure that our reinsurers will pay in a timely fashion, if at all.

We purchase reinsurance by transferring part of the risk that we have assumed (known as ceding) to reinsurance companies in exchange for part of the premium we receive in connection with the risk. As of December 31, 2016, our reinsurance receivable (including from the MCCA) amounted to approximately \$2.6 billion. Although reinsurance makes the reinsurer liable to us to the extent the risk is transferred or ceded to the reinsurer, it does not relieve us (the reinsured) of our liability to our policyholders or, in cases where we are a reinsurer, to our reinsureds. Accordingly, we bear counterparty risk with respect to our reinsurers. Although we monitor the credit quality of our reinsurers, we cannot be sure that they will pay the reinsurance recoverables owed to us currently or in the future or that they will pay such recoverables on a timely basis.

Climate change may adversely impact our results of operations.

There are concerns that the higher level of weather-related catastrophes and other losses incurred by the industry in prior years is indicative of changing weather patterns, whether as a result of climate-warming trends caused by human activities (“global climate change”) or otherwise, which could cause such events to persist. Increased weather-related catastrophes would lead to higher overall losses, which we may not be able to recoup, particularly in the current economic and competitive environment, and higher reinsurance costs. As noted above, certain catastrophe models assume an increase in frequency and severity of certain weather events, which could result in a disproportionate impact on insurers with certain geographic concentrations of risk. This would also likely increase the risks of writing property insurance in coastal areas, particularly in jurisdictions that restrict pricing and underwriting flexibility.

In addition, global climate change could have an impact on assets in which we invest, resulting in realized and unrealized losses in future periods that could have a material adverse impact on our results of operations and/or financial position. It is not possible to foresee which, if any, assets, industries or markets will be materially and adversely affected, nor is it possible to foresee the magnitude of such effect.

Table of Contents

We may incur financial losses resulting from our participation in shared market mechanisms, mandatory reinsurance programs and mandatory and voluntary pooling arrangements.

In most of the U.S. jurisdictions in which we operate, our property and casualty insurance subsidiaries are required to participate in mandatory property and casualty shared market mechanisms, government-sponsored reinsurance programs or pooling arrangements. These arrangements are designed to provide various insurance coverages to individuals or other entities that otherwise are unable to purchase such coverage or to support the costs of uninsured motorist claims in a particular state or region. We cannot predict whether our participation in these shared market mechanisms or pooling arrangements will provide underwriting profits or losses to us. For the year ended December 31, 2016, we experienced an underwriting loss of \$12.7 million from participation in these mechanisms and pooling arrangements, compared to underwriting losses of \$13.2 million and \$15.1 million in 2015 and 2014, respectively. We may face similar or more significant earnings fluctuations in the future.

Additionally, increases in the number of participants or insureds in state-sponsored reinsurance pools, FAIR Plans or other residual market mechanisms, particularly in the states of Massachusetts, Florida, Louisiana and New York combined with regulatory restrictions on the ability to adequately price, underwrite, or non-renew business, as well as new legislation, or changes in existing case law, could expose us to significant exposures and risks of increased assessments from these residual market mechanisms. There could also be significant adverse impact as a result of losses incurred in those states due to hurricane exposure, as well as the declining number of carriers providing coverage in those regions. We are unable to predict the likelihood or impact of such potential assessments or other actions.

We also have credit risk associated with certain mandatory reinsurance programs such as the MCCA. The MCCA was created to fund Michigan's unique unlimited personal injury protection benefit. As of December 31, 2016, our estimated reinsurance recoverable from the MCCA was \$911.2 million. In most years, the MCCA operates with a deficit which may fluctuate significantly based on investment returns, discount rates, incurred claims, annual assessments and other factors.

In addition, we may be adversely affected by liabilities resulting from our previous participation in certain voluntary property and casualty assumed reinsurance pools. We have terminated participation in virtually all property and casualty voluntary pools, but remain subject to claims related to periods in which we participated. The property and casualty industry's assumed reinsurance businesses have suffered substantial losses during the past several years, particularly related to environmental and asbestos exposure for property and casualty coverages, in some cases resulting from incidents alleged to have occurred decades ago. Due to the inherent volatility in these businesses, possible issues related to the enforceability of reinsurance treaties in the industry and the recent history of increased losses, we cannot provide assurance that our current reserves are adequate or that we will not incur losses in the future. Our operating results and financial position may be adversely affected by liabilities resulting from any such claims in excess of our loss estimates. As of December 31, 2016, our reserves for these pools totaled \$40.0 million.

Our businesses are heavily regulated, and changes in regulation may reduce our profitability.

Our U.S. insurance businesses are subject to supervision and regulation by the state insurance authority in each state in which we transact business. This system of supervision and regulation relates to numerous aspects of an insurance company's business and financial condition, including limitations on the authorization of lines of business, underwriting limitations, the ability to utilize credit-based insurance scores in underwriting, the ability to terminate agents, supervisory and liability responsibilities for agents, the setting of premium rates, the requirement to write certain classes of business which we might otherwise avoid or charge different premium rates, restrictions on the ability to withdraw from certain lines of business, the establishment of standards of solvency, the licensing of insurers and agents, compensation of agents, concentration of investments, levels of reserves, the payment of dividends,

transactions with affiliates, changes of control, protection of private information of our agents, policyholders, claimants and others (which may include highly sensitive financial or medical information or other private information such as social security numbers, driving records, drivers license numbers, etc.) and the approval of policy forms. From time to time, various states and Congress have proposed to prohibit or otherwise restrict the use of credit-based insurance scores in underwriting or rating our Personal Lines business. The elimination of the use of credit-based insurance scores could cause significant disruption to our business and our confidence in our pricing and underwriting. Most insurance regulations are designed to protect the interests of policyholders rather than stockholders and other investors.

Legislative and regulatory restrictions are constantly evolving and are subject to then current political pressures. For example, following Superstorm Sandy, the states of New Jersey and New York were considering proposals such as homeowners' "Bill of Rights", restrictions on storm deductibles and additional mandatory claim handling guidelines. More recently, the California Insurance Commissioner requested that all insurers operating in California voluntarily divest from any investments they may have in thermal coal. Such actions also occur at the federal level, such as the U.S. Department of Housing and Urban Development's proposal that may increase the legal risk of providing homeowners and commercial residential property insurance by imposing liability for discrimination on the basis of a disparate-impact theory even without any evidence of discriminatory intent. The prospects for this proposal under the current president's administration are unknown at this time. Some states are also considering mandating owners of firearms to purchase liability insurance.

## Table of Contents

In addition, The Dodd-Frank Wall Street Reform and Consumer Protection Act provides for enhanced regulation for the financial services industry through initiatives including, but not limited to, the creation of a Federal Insurance Office and several federal oversight agencies, the requiring of more transparency, accountability and focus in protecting investors and businesses, input of shareholders regarding executive compensation, and enhanced empowerment of regulators to pursue those who engage in financial fraud and unethical business practices. The prospects for these initiatives are in question since the last U.S. election. The SEC adopted regulations designed to encourage, reward, and protect “whistleblowers”, whether or not they first report the potential infraction to the company for correction or remedial action.

Also, the federal Medicare, Medicaid and SCHIP Extension Act mandates reporting and other requirements applicable to property and casualty insurance companies which make payments to or on behalf of claimants who are eligible for Medicare benefits. These requirements have made bodily injury claim resolutions more difficult, particularly for complex matters or for injuries requiring treatment over an extended period, and impose significant penalties for non-compliance and reporting errors. These requirements also have increased the circumstances under which the federal government may seek to recover from insurers amounts paid to claimants in circumstances where the government had previously paid benefits. In January 2013, the Strengthening Medicare and Repaying Taxpayers Act was signed into law and provided for implementation over a staggered period of time. We are continuing to monitor the effect of this law on our ability to settle cases and our exposure to federal recoupment claims.

With respect to our U.S. insurance business, state regulatory oversight and various proposals at the federal level may in the future adversely affect our ability to sustain adequate returns in certain lines of business or in some cases, operate the line profitably. In recent years, the state insurance regulatory framework has come under increased federal scrutiny, and certain state legislatures have considered or enacted laws that alter and, in many cases, increase state authority to regulate insurance companies and insurance holding company systems.

Our business could be negatively impacted by adverse state, federal and foreign legislation or regulation, or judicial developments, including those resulting in:

- decreases in rates;
- limitations on premium levels;
- coverage and benefit mandates;
- limitations on the ability to manage care and utilization or other claim costs;
  - requirements to write certain classes of business or in certain geographies;
- restrictions on underwriting, on methods of compensating independent producers, or on our ability to cancel or renew certain business (which negatively affects our ability to reduce concentrations of property risks);
- higher liability exposures for our insureds;
- increased assessments or higher premium or other taxes; and
- enhanced ability to pierce “no fault” thresholds or recover non-economic damages (such as “pain and suffering”).

These regulations serve to protect the customers and other third parties who deal with us and are heavily influenced by the then current political environment. If we are found to have violated an applicable regulation, administrative or judicial proceedings may be initiated against us which could result in censures, fines, civil penalties (including punitive damages), the issuance of cease-and-desist orders, premium refunds or the reopening of closed claim files, among other consequences. These actions could have a material adverse effect on our financial position and results of operations.

From time to time, Congress, as well as state, local and foreign governments, also consider legislation that could increase our tax costs. For example, organizations such as the Organization for Economic Cooperation and Development propose legislation to regulatory agencies that, if enacted, may have a material impact on our income tax

provision. Additionally, the 2016 election results make U.S. tax reform more likely in the near future. This tax reform may include reductions in the U.S. corporate income tax rate, potential changes in the cost of cross border reinsurance, and changes to the tax base, which may impact our effective tax rate in future years, as well as the carrying value of our net deferred tax asset.

In addition, we are reliant upon independent agents and brokers to market our products. Changes in regulations related to insurance agents and brokers that materially impact the profitability of the agent and broker business or that restrict the ability of agents and brokers to market and sell insurance products would have a material adverse effect on our business.

With respect to our U.K. insurance business, Chaucer's regulated subsidiaries are subject to the U.K.'s PRA and FCA regulations and are subject to limitations and approval requirements with respect to payments of dividends, return of capital and becoming a borrower, guarantor or provider of security interest on any financial obligations and other aspects of its operations.

## Table of Contents

The PRA and FCA have substantial powers of intervention in relation to the Lloyd's managing agents, such as Chaucer, which they regulate, including the power to remove their authorization to manage Lloyd's syndicates. In addition, each year the PRA requires Lloyd's to satisfy an annual solvency test that measures whether Lloyd's has sufficient assets in the aggregate to meet all outstanding liabilities of its members, both current and run-off. If Lloyd's fails this test, the PRA may require Lloyd's to cease trading and/or its members to cease or reduce underwriting. The FCA focuses on conduct of business issues with a particular focus on consumer protection and market integrity. Future regulatory changes or rulings by the PRA and FCA could interfere with our business strategy or financial assumptions, possibly resulting in a material adverse effect on our profitability.

Additionally, the Lloyd's worldwide insurance and reinsurance business is subject to various regulations, laws, treaties and other applicable policies of the European Union, as well as each nation, state and locality in which it operates. Material changes in governmental requirements and laws could have an adverse effect on Lloyd's and its member companies, including Chaucer.

From time to time, we are also involved in investigations and proceedings by U.S., U.K., state and other governmental and self-regulatory agencies. We cannot provide assurance that these investigations, proceedings and inquiries will not result in actions that would adversely affect our results of operations or financial condition.

As a specialist in Lloyd's insurance group, Chaucer is subject to a number of risks which could materially and adversely affect us.

As a specialist in Lloyd's insurance group, Chaucer is subject to a number of specific risk factors and uncertainties, including without limitation:

- its reliance on insurance and reinsurance brokers and Lloyd's distribution channels to distribute and market its products (so called "coverholders"), including its reliance on four major brokers who each were responsible for ten percent or more of Chaucer's gross written premium in 2016;
- its obligations to maintain funds at Lloyd's to support its underwriting activities;
- its risk-based capital requirement being assessed periodically by Lloyd's and being subject to variation;
- its reliance on ongoing approvals from Lloyd's, the PRA and FCA and other regulators to conduct its business, including a requirement that its Annual Business Plan be approved by Lloyd's before the start of underwriting for each account year;
- its obligations to contribute to the Lloyd's Central Fund and pay levies to Lloyd's;
- its financial strength rating is derived from the rating assigned to Lloyd's, and Chaucer has very limited ability to directly affect the overall Lloyd's rating;
- its ongoing ability to utilize Lloyd's trading licenses in order to underwrite business outside the United Kingdom, including Chaucer's ability to write business in the European market if the United Kingdom withdraws, as planned, from the European Union and Lloyd's does not obtain alternative licensing permissions;
- its ongoing exposure to levies and charges in order to underwrite at Lloyd's; and
- the requirement to maintain deposits in the United States for U.S. site risks it underwrites.

Whenever a member of Lloyd's is unable to pay its policyholder obligations, such obligations may be payable by the Lloyd's Central Fund. If Lloyd's determines that the Central Fund needs to be increased, it has the power to assess premium levies on current Lloyd's members up to 3% of a member's underwriting capacity in any one year. We do not believe that any assessment is likely in the foreseeable future and have not provided allowance for such an assessment. However, based on our 2017 estimated underwriting capacity at Lloyd's of £731.4 million, the December 31, 2016 exchange rate of 1.23 dollars per GBP and assuming the maximum 3% assessment, we could be assessed up to approximately \$27.1 million in 2017.

We are subject to litigation risks, including risks relating to the application and interpretation of contracts, and adverse outcomes in litigation and legal proceedings could adversely affect our results of operations and financial condition.

We are subject to litigation risks, including risks relating to the application and interpretation of insurance and reinsurance contracts, and are routinely involved in litigation that challenges specific terms and language incorporated into property and casualty contracts, such as claims reimbursements, covered perils and exclusion clauses, among others, or the interpretation or administration of such contracts. We are also involved in legal actions that do not arise in the ordinary course of business, some of which assert claims for substantial amounts. Adverse outcomes, including with respect to the matter captioned “Durand Litigation” under “Commitments and Contingencies – Legal Proceedings” in Note 18 in the Notes to the Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K, could materially affect our results of operations and financial condition.

Table of Contents

We are subject to mandatory assessments by state guaranty funds; an increase in these assessments could adversely affect our results of operations and financial condition.

All fifty states of the United States and the District of Columbia have insurance guaranty fund laws requiring property and casualty insurance companies doing business within the state to participate in guaranty associations. These associations are organized to pay contractual obligations under insurance policies issued by impaired or insolvent insurance companies. The associations levy assessments, up to prescribed limits, on all member insurers in a particular state on the basis of the proportionate share of the premiums written by member insurers in the lines of business in which the impaired or insolvent insurer is engaged. Although mandatory assessments by state guaranty funds that are used to cover losses to policyholders of insolvent or rehabilitated companies can be substantially recovered through policyholder surcharges or a reduction in future premium taxes in many states (provided the collecting insurer continues to write business in such state), there can be no assurance that all funds will be recoupable in the future. During 2016, we had a total assessment of \$4.1 million levied against us, with refunds of \$0.1 million received in 2016 for a total net assessment of \$4.0 million. As of December 31, 2016, we have \$0.6 million of reserves related to guaranty fund assessments. In the future, these assessments may increase above levels experienced in the current and prior years. Future increases in these assessments depend upon the rate of insolvencies of insurance companies. An increase in assessments could adversely affect our results of operations and financial condition.

If we are unable to attract and retain qualified personnel, or if we experience the loss or retirement of key executives or other key employees, we may not be able to compete effectively and our operations could be impacted significantly.

Our future success will be affected by our continued ability to attract, develop and retain qualified executives and other key employees, particularly those experienced in the property and casualty industry and the Lloyd's market.

Our profitability could be adversely affected by our relationships with our agencies.

We periodically review agencies, including managing general agencies, with which we do business to identify those that do not meet our profitability standards or are not strategically aligned with our business. Following these periodic reviews, we may restrict such agencies' access to certain types of policies or terminate our relationship with them, subject to applicable contractual and regulatory requirements which limit our ability to terminate agents or which require us to renew policies. We may not achieve the desired results from these measures, and our failure to do so could negatively affect our operating results and financial position.

In addition, we could be adversely affected if our agencies, including managing general agencies, with which we do business exceed the authority that we have given them or breach the obligations that they owe to us. Although we routinely monitor our agency relationships, such actions could expose us to liability and have a negative impact on our results of operations and financial condition.

We may be affected by disruptions caused by the introduction of new products, related technology changes, and new operating models in Commercial Lines, Personal Lines and Chaucer businesses and recent or future acquisitions, and expansion into new geographic areas. We could also be affected by an inability to retain profitable policies in force and attract profitable policies in our Commercial Lines, Personal Lines and Chaucer segments, particularly in light of a competitive product pricing environment and the adoption by competitors of strategies to increase agency appointments and commissions, increase advertising, and more effectively utilize "big data".

There are increased underwriting risks associated with premium growth and the introduction of new products or programs in our Commercial Lines, Personal Lines and Chaucer businesses. Additionally, we have increased underwriting risks associated with the appointment of new agencies and managing general agencies and with the

expansion into new geographical areas, including international expansion.

The introduction of new Commercial Lines products, including through our acquired subsidiaries and the development of new niche and specialty lines, presents new risks. Certain new specialty products may present longer “tail” risks and increased volatility in profitability. Our expansion into western states, including California, presents additional underwriting risks since the regulatory, geographic, natural risk, legal environment, demographic, business, economic and other characteristics of these states present challenges different from those in the states in which we historically have conducted business.

Our Personal Lines production and earnings may be unfavorably affected by the continued introduction of new products, expanded risk appetites and our focus on account business (i.e., policyholders who have both automobile and homeowner insurance with us) which we believe, despite pricing discounts, will ultimately be more profitable business. We may also experience adverse selection, which occurs when insureds with larger risks purchase our products because of favorable pricing, under-pricing, operational difficulties or implementation impediments with independent agents or the inability to grow new markets after the introduction of new products or the appointment of new agents.

As we enter new states or regions or grow business in our identified growth states, there can be no assurance that we won't experience higher loss trends than anticipated.

Table of Contents

Chaucer's proposed non-Lloyd's insurance company to be based in Ireland is intended to provide an alternative platform for writing certain insured risks, and will be subject to oversight by the Central Bank of Ireland. There can be no assurances that the anticipated benefits of operating in this new jurisdiction will materialize as planned.

Additionally, the expansion of Chaucer's political risk and trade credit business, including in Africa and through the planned Irish insurer, and development of its accident and health business, present new risks.

We may experience difficulties with technology, data security and/or outsourcing relationships, which could have a negative impact on our ability to conduct our business.

We use computer systems to store, retrieve, evaluate and utilize customer and company data and information. Our computer, information technology and telecommunications systems, in turn, interface with and rely upon third-party systems. Our business is highly dependent on our ability, and the ability of certain third parties, to access these systems to perform necessary business functions, including, without limitation, providing insurance quotes, processing premium payments, making changes to existing policies, filing and paying claims, providing customer support and managing our investment portfolios. Systems attacks, failures or outages could compromise our ability to perform these functions in a timely manner, which could harm our ability to conduct business and hurt our relationships with our business partners and customers. In the event of a disaster such as a natural catastrophe, an industrial accident, a blackout, a computer virus, a cyber security attack, a terrorist attack or war, or interference from solar flares, our systems may be inaccessible to our employees, customers or business partners for an extended period of time. Even if our employees are able to report to work, they may be unable to perform their duties for an extended period of time if our data or systems are disabled or destroyed or if our disaster recovery plans are inadequate or suffer from unforeseen consequences. This could result in a materially adverse effect on our business results and liquidity.

In addition, we routinely transmit and receive personal, confidential and proprietary information by e-mail and other electronic means. While we attempt to utilize secure transmission capabilities with third-party vendors and others with whom we do business, we may be unable to put in place secure capabilities with all of such vendors and third parties and, in addition, these third parties may not have appropriate controls in place to protect the confidentiality of the information.

Our systems, like others in the financial services industry, are potentially vulnerable to cyber security risks, and we are subject to potential disruption caused by such activities. Large corporations such as ours are subject to near daily attacks on their systems. Such attacks may have various goals, from seeking confidential information to causing operational disruption. Although to date such activities have not resulted in material disruptions to our operations or, to our knowledge, material breach of any security or confidential information, no assurance can be provided that such disruptions or breach will not occur in the future. As cyber attacks become more prevalent and the methods used to perpetrate them change, we may be required to devote additional personnel or systems resources to protecting our data security or investigating or remediating any perceived vulnerabilities. Such resources could be costly in time and expenses and could detract from resources spent on our core property and casualty insurance operations.

Additionally, we could be subject to liability if confidential customer information is misappropriated from our computer systems, those of our vendors or others with whom we do business, or otherwise. Despite whatever security measures may be in place, any such systems may be vulnerable to physical break-ins, computer viruses, programming errors, attacks by third parties or similar disruptive problems. Any well-publicized compromise of security could deter people from entering into transactions that involve transmitting confidential information, or damage our reputation, which could have a material adverse effect on our business.

We outsource certain technology and business process functions to third parties and may do so increasingly in the future. If we do not effectively develop, implement and monitor our outsourcing strategy, third-party providers do not perform as anticipated or we experience technological or other problems with a transition, we may not realize

productivity improvements or cost efficiencies and may experience operational difficulties, increased costs and a loss of business. Our outsourcing of certain technology and business process functions to third parties may expose us to enhanced risk related to data security, which could result in monetary and reputational damages. In addition, our ability to receive services from third-party providers outside of the United States might be impacted by cultural differences, political instability, unanticipated regulatory requirements or policies inside or outside of the United States. As a result, our ability to conduct our business might be adversely affected.

Integration of acquired businesses involves a number of risks, and there can be no assurance that we will be successful integrating recent and future acquisitions.

There can be no assurance that we will be able to successfully integrate recent and any future acquisitions or that we will not assume unknown liabilities and reserve deficiencies in connection with such acquisitions. If we are unable to successfully integrate new businesses, then we could be impeded from realizing the benefits of an acquisition. The integration process could disrupt our business, and a failure to successfully integrate newer businesses could have a material adverse effect on our business, financial condition and results of operations. The difficulties of integrating an acquisition and risks to our business include, among others:

- unanticipated issues in integrating information, communications and other systems;
- unanticipated incompatibility of logistics, marketing and administration methods;
- maintaining employee morale and retaining key employees;
- integrating the business cultures of different companies;
- preserving important strategic, reinsurance and other relationships;
- integrating legal and financial controls in multiple jurisdictions;
- consolidating corporate and administrative infrastructures and eliminating duplicative operations;
  - the diversion of management's attention from ongoing business concerns;
- integrating geographically separate organizations;
- unexpected or overlapping concentrations of risk where one event or series of events can affect many insured parties;
- significant transaction costs, including the effect of exchange rate fluctuations;
  - risks and uncertainties in our ability to increase the investment yield on the investment portfolio;
  - uncertainties in our ability to decrease leverage as a result of adding future earnings to our capital base;
- risks and uncertainties regarding the volatility of underwriting results in a combined entity;
- the ability to more efficiently manage capital;
- the ability to improve renewal rates and increase new property and casualty policy counts;
- the ability to increase or maintain certain property and casualty insurance rates;
- complying with laws, rules and regulations in multiple jurisdictions, including new and multiple employment regulations, regulations relating to the conduct of business activities such as the U.K. Bribery Act, sanctions imposed by the U.S., E.U. or U.K. on doing business with certain foreign countries or other persons, tax, privacy, information security, and environmental-related laws; and
- the impact of new product or line of business introductions and our ability to meet projected return on capital targets.

In addition, even if we are able to successfully integrate recent and future acquisitions, we may not realize the full benefits of such acquisitions, including the synergies, cost savings or underwriting or growth opportunities that we expect. It is possible that these benefits may not be achieved within the anticipated time frame, or at all.

Our international operations expose us to additional risks which could cause a material adverse effect on our business, financial position and results of operations.

Our operations extend to countries outside the U.S., and operating globally increases the scope of our risks and exposes us to certain additional risks, including but not limited to:

- an expansion in the scope of the risks to which our U.S. operations are subject as an insurance company, such as risk of adverse loss development, litigation, investment risks and the possibility of significant catastrophe losses (as a result of natural disasters, nuclear accidents, severe weather and terrorism) occurring outside the U.S.;
- compliance with a variety of national and local laws, regulations and practices of the countries in which we do business and adherence to any changes in such laws, regulations and practices affecting the insurance industry in such countries;
- the effect of the Brexit Referendum and related consequences on (i) Chaucer's licensing permissions in European Union member states if Lloyd's does not obtain alternative licensing permissions; (ii) market conditions in the U.K. and the European market; and (iii) foreign exchange volatility;
- adverse changes, including as a result of political instability, in the economies in which we operate; and
- requirements, such as those enforced by Her Majesty's Treasury, Asset Freezing Unit (U.K.) and the U.S. Treasury's Office of Foreign Asset Controls, to comply with various U.K., U.S., E.U. or other sanctions imposed on doing business with, or affecting, certain countries, their citizens, specially designated nationals or other persons doing business with any such countries or persons.

Table of Contents

Intense competition could negatively affect our ability to maintain or increase our profitability.

We compete, and will continue to compete, with a large number of companies, including international, national and regional insurers, mutual companies, specialty insurance companies, so called “off-shore” companies which enjoy certain tax advantages, underwriting agencies and financial services institutions. We also compete with mutual insurance companies, reciprocal and exchange companies which may not have shareholders and may have different profitability targets than publicly or privately owned companies. Chaucer competes with numerous other Lloyd’s syndicates and managing agents, domestic and international insurers and government or government-sponsored insurance or reinsurance mechanisms. In recent years, there has been substantial consolidation and convergence among companies in the financial services industry, resulting in increased competition from large, well-capitalized financial services firms. Many of our competitors have greater financial, technical and operating resources than we do, greater access to “big data,” and may be able to offer a wider range of, or more sophisticated, commercial and personal line products. Some of our competitors also have different marketing and sales strategies than we do and market and sell their products to consumers directly. Some companies are seeking to protect new products with patents or other legal protections, which may create new legal exposures or limit our ability to develop competing products. In addition, competition in the U.S. and international property and casualty insurance markets has intensified over the past several years. This competition has had and may continue to have an adverse impact on our revenues and profitability.

A number of new, proposed or potential legislative or industry developments could further increase competition in our industry. These developments include:

- the implementation of commercial lines deregulation in several states;
- programs in which state-sponsored entities provide property insurance in catastrophe-prone areas or other alternative markets types of coverage;
- increased competition from off-shore tax advantaged insurance companies; and
- changing practices caused by the internet and the increased usage of real time comparative rating tools and claims management processes, which have led to greater competition in the insurance business in general, particularly on the basis of price.

We could face heightened competition resulting from the entry of new competitors and the introduction of new products by new and existing competitors. Additionally, recent entries into the property and casualty marketplace by large technology companies, retail companies and other non-traditional insurance providers, who aim to leverage their information about and direct access to customers, may increase competition. Increased competition could make it difficult for us to obtain new customers, retain existing customers or maintain policies in force by existing customers. It could also result in increasing our service, administrative, policy acquisition or general expense due to the need for additional advertising and marketing of our products. In addition, our administrative, technology and management information systems expenditures could increase substantially as we try to maintain or improve our competitive position.

We compete for business not just on the basis of price, but also on the basis of product coverages, reputation, financial strength, quality of service (including claims adjustment service), experience and breadth of product offering. We cannot provide assurance that we will be able to maintain a competitive position in the markets in which we operate, or that we will be able to expand our operations into new markets. If we fail to do so, our business could be materially adversely affected.

We are rated by several rating agencies, and downgrades to our ratings could adversely affect our operations.

Our ratings are important in establishing our competitive position and marketing the products of our insurance companies to our agents and customers, since rating information is broadly disseminated and generally used

throughout the industry.

Our insurance company subsidiaries are rated by A.M. Best, Moody's, and Standard & Poor's. These ratings reflect a rating agency's opinion of our insurance subsidiaries' financial strength, operating performance, strategic position and ability to meet their obligations to policyholders. These ratings are not evaluations directed to investors, and are not recommendations to buy, sell or hold our securities. Our ratings are subject to periodic review by the rating agencies, and we cannot guarantee the continued retention or improvement of our current ratings. This is particularly true in the current economic environment where rating agencies may increase their capital requirements or other criteria for various rating levels. In addition, Chaucer's rating is derived from the rating assigned to Lloyd's, and Chaucer has very limited ability to directly affect the overall Lloyd's rating.

A downgrade in one or more of our or any of our subsidiaries' claims-paying ratings could negatively impact our business and competitive position, particularly in lines where customers require us to maintain minimum ratings. Additionally, a downgrade in one or more of our debt ratings could adversely impact our ability to access the capital markets and other sources of funds, increase the cost of current credit facilities, and/or adversely affect pricing of new debt sought in the capital markets in the future.

Table of Contents

Negative changes in our level of statutory surplus could adversely affect our ratings and profitability.

The capacity for a U.S. insurance company's growth in premiums is in part a function of its statutory surplus. Maintaining appropriate levels of statutory surplus, as measured by state insurance regulators, is considered important by state insurance regulatory authorities and by rating agencies that rate insurers' claims-paying abilities and financial strength. As our business grows, or due to other factors, regulators may require that additional capital be contributed to increase the level of statutory surplus. Failure to maintain certain levels of statutory surplus could result in increased regulatory scrutiny, action by state regulatory authorities or a downgrade by private rating agencies. Our surplus is affected by, among other things, results of operations and investment gains, losses, impairments, and dividends from the insurance operating company to its parent company. A number of these factors affecting our level of statutory surplus are, in turn, influenced by factors that are out of our control, including the frequency and severity of catastrophes, changes in policyholder behavior, changes in rating agency models and economic factors such as changes in equity markets, credit markets, interest rates or foreign currency exchange rates.

The National Association of Insurance Commissioners, or NAIC, uses a system for assessing the adequacy of statutory capital for U.S. property and casualty insurers. The system, known as risk-based capital, is in addition to the states' fixed dollar minimum capital and other requirements. The system is based on risk-based formulas that apply prescribed factors to the various risk elements in an insurer's business and investments to report a minimum capital requirement proportional to the amount of risk assumed by the insurer. We believe that any failure to maintain appropriate levels of statutory surplus would have an adverse impact on our ability to grow our business profitably.

We may not be able to grow as quickly or as profitably as we intend, which is important to our current strategy.

Over the past several years, we have made and our current plans are to continue to make, significant investments in our Commercial and Personal Lines of business, and we have increased expenses and made acquisitions in order to, among other things, strengthen our product offerings and service capabilities, expand into new geographic areas, improve technology and our operating models, build expertise in our personnel, and expand our distribution capabilities, with the ultimate goal of achieving significant, sustained growth. The ability to achieve significant profitable premium growth in order to earn adequate returns on such investments and expenses, and to grow further without proportionate increases in expenses, is an important part of our current strategy. There can be no assurance that we will be successful at profitably growing our business, or that we will not alter our current strategy due to changes in our markets or an inability to successfully maintain acceptable margins on new business or for other reasons, in which case premiums written and earned, operating income and net book value could be adversely affected.

An impairment in the carrying value of goodwill and intangible assets could negatively impact our consolidated results of operations and shareholders' equity.

Upon an acquisition of a business, we record goodwill and intangible assets at fair value. Goodwill and intangible assets determined to have indefinite useful lives are not amortized, while other intangible assets are amortized over their estimated useful lives. Goodwill and intangible assets that are not amortized are reviewed for impairment at least annually. Evaluating the recoverability of such assets requires us to rely on estimates and assumptions related to return on equity, margin, growth rates, discount rates, and other data. There are inherent uncertainties related to these factors, and significant judgment is required in applying these factors. Goodwill and intangible asset impairment charges can result from declines in operating results, divestitures or sustained market declines and other factors. As of December 31, 2016, goodwill and intangible assets that are not amortized totaled \$246.8 million and represented 8.6% of shareholders' equity. Our legacy Hanover and Citizens businesses represent 53% of this balance; Chaucer represents 21% of this balance; AIX represents 20% of this balance; and, the remaining acquisitions combined represent 6% of this balance. Although we believe these assets are recoverable, we cannot provide assurance that future market or

business conditions would not result in the impairment of a portion of these assets. Impairment charges could materially affect our financial position and our financial results in the quarter or annual period in which they are recognized.

We could be subject to additional losses related to the sale of our discontinued FAFLIC and variable life insurance and annuity businesses.

On January 2, 2009, we sold our remaining life insurance subsidiary, FAFLIC, to Commonwealth Annuity and Life Insurance Company. Coincident with the sale transaction, Hanover Insurance and FAFLIC entered into a reinsurance contract whereby Hanover Insurance assumed FAFLIC's discontinued accident and health insurance business. We previously owned Commonwealth Annuity, but sold it in 2005 in conjunction with our disposal of our variable life insurance and annuity business.

In connection with these transactions, we have agreed to indemnify Commonwealth Annuity for certain contingent liabilities, including litigation and other regulatory matters. We have established a reserve related to these contractual indemnifications. Although we believe that this reserve is adequate, we cannot provide assurance that costs related to these indemnifications when they ultimately settle, will not exceed our current reserve.

Table of Contents

We may incur financial losses related to our discontinued assumed accident and health reinsurance pools and arrangements.

We previously participated, through FAFLIC, in approximately 40 assumed accident and health reinsurance pools and arrangements. The business was retained in the sale of FAFLIC and assumed by Hanover Insurance through a reinsurance agreement. During 1999, we ceased writing new premiums in this business, subject to certain contractual obligations. The reinsurance pool business consisted primarily of the medical and disability portions of workers' compensation risks, long-term care pools, assumed personal accident, individual medical, long-term disability and special risk business. We are currently monitoring and managing the run-off of our related participation in the 25 pools with remaining liabilities.

Under these arrangements, we variously acted as a reinsurer, a reinsured or both. In some instances, we ceded significant exposures to other reinsurers in the marketplace. The potential risk to us as a participant in these pools is primarily that other companies that reinsured this business from us may seek to avoid or fail to timely pay their reinsurance obligations (especially in light of the fact that historically these pools sometimes involved multiple layers of overlapping reinsurers, or so-called "spirals") or may become insolvent. Thus, we are exposed to both assumed losses and to credit risk related to these pools. We are not currently engaged in any significant disputes in respect to this business. At this time, we do not anticipate that any significant portion of recorded reinsurance recoverables will be uncollectible. However, we cannot provide assurance that all recoverables are collectible and should these recoverables prove to be uncollectible, our results of operations and financial position may be negatively affected.

We believe our reserves for the accident and health assumed and ceded reinsurance business appropriately reflect current claims, unreported losses and likely investment returns on related assets supporting these reserves. However, due to the inherent volatility in this business and the reporting lag of losses that tend to develop over time and which ultimately affect excess covers, there can be no assurance that current reserves are adequate or that we will not have additional losses in the future. Although we have discontinued participation in these reinsurance arrangements, unreported claims related to the years in which we were a participant may be reported, and previously reported claims may develop unfavorably. If any such unreported claims or unfavorable development is reported to us, our results of operations and financial position may be negatively impacted. In addition, the passage of the Federal Healthcare Act has caused us to have to expand our benefits for a portion of the residual healthcare policies with limited ability to increase premiums.

Other market fluctuations and general economic, market and political conditions may also negatively affect our business, profitability and investment portfolio.

It is difficult to predict the impact of a challenging economic environment on our business. In Commercial Lines, a difficult economy has resulted in reductions in demand for insurance products and services as there are more companies ceasing to do business and there are fewer business start-ups, particularly as small businesses are affected by a decline in overall consumer and business spending. Additionally, claims frequency could increase as policyholders submit and pursue claims more aggressively than in the past, fraud incidences may increase, or we may experience higher incidents of abandoned properties or poorer maintenance, which may also result in more claims activity. We have experienced higher workers' compensation claims as injured employees take longer to return to work, increased surety losses as construction companies experience financial pressures and higher retroactive premium returns as audit results reflect lower payrolls. Our business could also be affected by an ensuing consolidation of independent insurance agencies. Our ability to increase pricing has been impacted as agents and policyholders have been more price sensitive, customers shop for policies more frequently or aggressively, utilize comparative rating models or, in Personal Lines in particular, turn to direct sales channels rather than independent agents. We have also experienced decreased new business premium levels, retention and renewal rates, and renewal premiums. Specifically in Personal Lines, policyholders may reduce coverages or change deductibles to reduce

premiums, experience declining home values, or be subject to increased foreclosures, and policyholders may retain older or less expensive automobiles and purchase or insure fewer ancillary items such as boats, trailers and motor homes for which we provide coverages. Additionally, if as a result of a difficult economic environment, drivers continue to eliminate automobile insurance coverage or to reduce their bodily injury limit, we may be exposed to more uninsured and underinsured motorist coverage losses.

Chaucer's business is similarly subject to risks related to the economy. In addition to the risks noted above, adverse economic conditions could negatively affect our ability to obtain letters of credit utilized by Chaucer to underwrite business through Lloyd's.

At December 31, 2016, we held approximately \$9 billion of investment assets in categories such as fixed maturities, equity securities, other investments, and cash and short-term investments. Our investments are primarily concentrated in the U.S. domestic market; however, we have exposure to international markets as well, with approximately 15% of our cash and investment assets invested in foreign markets. Our investment returns, and thus our profitability, statutory surplus and shareholders' equity, may be adversely affected from time to time by conditions affecting our specific investments and, more generally, by bond, stock, real estate and other market fluctuations and general economic, market and political conditions, including the impact of changing government policies and geopolitical risks. Many of these broader market conditions are out of our control. Our ability to make a profit on insurance products depends in part on the returns on investments supporting our obligations under these products, and the value of specific investments may fluctuate substantially depending on the foregoing conditions. We may use a variety of strategies to hedge our exposure to interest and currency rates and other market risks. However, hedging strategies are not always available and carry certain credit risks, and our hedging could be ineffective. Moreover, increased government regulation of certain derivative transactions used to hedge certain market risks has served to prevent (or otherwise substantially increase the cost associated with) hedging such risks.

Table of Contents

Additionally, the aggregate performance of our investment portfolio depends to a significant extent on the ability of our investment managers to select and manage appropriate investments. As a result, we are also exposed to operational risks which may include, but are not limited to, a failure to follow our investment guidelines, technological and staffing deficiencies and inadequate disaster recovery plans. The failure of these investment managers to perform their services in a manner consistent with our expectations and investment objectives could adversely affect our ability to conduct our business.

Debt securities comprise a material portion of our investment portfolio. The concentration of our investment portfolio in any one type of investment, industry or geography could have a disproportionately adverse effect on our investment portfolio. The issuers of debt securities, as well as borrowers under the loans we make, customers, trading counterparties, counterparties under swaps and other derivative contracts, banks which have commitments under our various borrowing arrangements, and reinsurers, may be affected by declining market conditions or credit weaknesses. These parties may default on their obligations to us due to lack of liquidity, downturns in the economy or real estate values, operational failure, bankruptcy or other reasons. Future increases in interest rates from current near-historic lows could result in increased defaults as borrowers are unable to pay the additional borrowing costs on variable rate securities or obtain refinancing. We cannot assure you that further impairment charges will not be necessary in the future. In addition, evaluation of available-for-sale securities for other-than-temporary impairment includes inherent uncertainty and subjective determinations. We cannot be certain that such impairments are adequate as of any stated date. Our ability to fulfill our debt and other obligations could be adversely affected by the default of third parties on their obligations owed to us.

Deterioration in the global financial markets may adversely affect our investment portfolio and have a related impact on our other comprehensive income, shareholders' equity and overall investment performance. In recent years, global financial markets experienced unprecedented and challenging conditions, including a tightening in the availability of credit, the failure of several large financial institutions and concerns about the creditworthiness of the sovereign debt of several European and other countries. As a result, certain government bodies and central banks worldwide, including the U.S. Treasury Department and the U.S. Federal Reserve, provided for unprecedented intervention programs, the efficacy of which remain uncertain.

In addition, our current borrowings from the Federal Home Loan Bank of Boston ("FHLBB") are secured by collateral. If the fair value of pledged collateral falls below specific levels, we would be required to pledge additional collateral or repay any outstanding FHLBB borrowings.

Market conditions also affect the value of assets under our employee pension plans, including our U.S. Cash Balance Plan and Chaucer pension plan. The expense or benefit related to our employee pension plans results from several factors, including, but not limited to, changes in the market value of plan assets, interest rates, regulatory requirements or judicial interpretation of benefits. At December 31, 2016, our U.S. plan assets included approximately 85% of fixed maturities and 15% of equity securities and other assets. At December 31, 2016, our Chaucer pension plan assets included approximately 55% of equities, 35% of fixed maturities, and 10% of real estate funds. The Chaucer pension plan had net liabilities that exceeded assets by approximately \$16 million as of December 31, 2016. Additionally, our net liabilities exceed assets by approximately \$54 million and \$38 million for our U.S. qualified and U.S. non-qualified (which is an unfunded plan) pension plans, respectively, at December 31, 2016. Declines in the market value of plan assets and interest rates from levels at December 31, 2016, among other factors, could impact our funding estimates and negatively affect our results of operations. Deterioration in market conditions and differences between our assumptions and actual occurrences, and behaviors, including judicial determinations of ultimate benefit obligations pursuant to the Durand case discussed elsewhere, or otherwise, could result in a need to fund more into the qualified plans to maintain an appropriate funding level.

We may experience unrealized losses on our investments, especially during a period of heightened volatility, which could have a material adverse effect on our results of operations or financial condition.

Our investment portfolio and shareholders' equity can be, and in the past have been, significantly impacted by the changes in the market values of our securities. U.S. and global financial markets and economies remain uncertain. This could result in unrealized and realized losses in future periods, and adversely affect the liquidity of our investments, which could have a material adverse impact on our results of operations and our financial position. At December 31, 2016, our financial position is benefited by \$190.0 million as a result of unrealized gains, largely driven by the low interest rate environment. Information with respect to interest rate sensitivity is included in "Quantitative and Qualitative Disclosures" in Management's Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K. Valuation of financial instruments (i.e., Level 1, 2, or 3) include methodologies, estimates, assumptions and judgments that are inherently subjective and open to different interpretations and could result in changes to investment valuations or the ability to receive such valuations on sale. During periods of market disruption it may be difficult to value certain of our securities if trading becomes less frequent and/or market data becomes less observable. In addition, in times of financial market disruption, certain asset classes that were in active markets with significant observable data may become illiquid. In those cases, the valuation process includes inputs that are less observable and require more subjectivity and judgment by management.

Table of Contents

If, following such declines, we are unable to hold our investment assets until they recover in value, or if such asset value never recovers, we would incur other-than-temporary impairments which would be recognized as realized losses in our results of operations, reduce net income and earnings per share and adversely affect our liquidity. Temporary declines in market value are recorded as unrealized losses, which do not affect net income and earnings per share, but reduce other comprehensive income, which is reflected on our Consolidated Balance Sheets. We cannot provide assurance that we will not have additional other-than-temporary impairments and/or unrealized investment losses in the future. Likewise, there can be no assurance that our investment portfolio will retain the net unrealized gains reflected on the balance sheet as of December 31, 2016, since such gains are dependent on prevailing interest rates, credit ratings and creditworthiness and general economic and other factors.

We invest a portion of our portfolio in common stock or preferred stocks. The value of these assets fluctuates with the equity markets. Particularly in times of economic weakness, the market value and liquidity of these assets may decline, and may impact net income, capital and cash flows.

We are exposed to significant capital market risks related to changes in interest rates, credit spreads, equity prices and foreign exchange rates, which may adversely affect our results of operations, financial position or cash flows.

We are exposed to significant capital markets risk related to changes in interest rates, credit spreads, equity prices and foreign currency exchange rates. If significant, declines in equity prices, changes in interest rates, changes in credit spreads and the strengthening or weakening of foreign currencies against the U.S. dollar could have a material adverse effect on our results, financial position or cash flows. Our exposure to interest rate risk relates primarily to the market price and cash flow variability associated with changes in interest rates. Our investment portfolio contains interest rate sensitive instruments, such as fixed income securities, which may be adversely affected by changes in interest rates from governmental monetary policies, domestic and international economic and political conditions and other factors beyond our control. A rise in market yields would reduce the fair value of our investment portfolio, but provide the opportunity to earn higher rates of return on funds reinvested. A further decline in interest rates, on the other hand, would increase the fair value of our investment portfolio, but we would earn lower rates of return on reinvested assets. We may be forced to liquidate investments prior to maturity at a loss in order to cover liabilities, and such liquidation could be accelerated in the event of significant loss events, such as catastrophes. Although we take measures to manage the economic risks of investing in a changing interest rate environment, we may not be able to mitigate the interest rate risk of our assets relative to our liabilities.

Our investment portfolio is invested primarily in high quality, investment-grade fixed income securities. However, we also invest in non-investment-grade high yield fixed income securities and alternative investments. These securities, which pay a higher rate of interest, also have a higher degree of credit or default risk. These securities may also be less liquid in times of economic weakness or market disruptions. Additionally, the reported value of our investments do not necessarily reflect the lowest current market price for the asset, and if we require significant amounts of cash on short notice, we may have difficulty selling our investments in a timely manner, be forced to sell them for less than we otherwise would have been able to realize, or both. While we have procedures to monitor the credit risk and liquidity of our invested assets, we expect from time to time, and particularly in periods of economic weakness, to experience default losses in our portfolio. This would result in a corresponding reduction of net income, capital and cash flows.

Inflationary pressures may negatively impact expenses, reserves and the value of investments.

Inflationary pressures in the geographies in which we operate may negatively impact reserves and the value of investments. In particular, inflationary pressures in the U.S. with respect to medical and health care, automobile repair and construction costs, all of which are significant components of our indemnity liabilities under policies we issue to our customers, and which could also impact the adequacy of reserves we have set aside for prior accident years, may have a negative effect on our results of operations. Inflationary pressures also cause or contribute to, or are the result

of, increases in interest rates, which would reduce the fair value of our investment portfolio.

Our operations may be adversely impacted by foreign currency fluctuations.

Our reporting currency is the U.S. dollar. The functional currencies of our Chaucer segment are the U.S. dollar, U.K. pound sterling and the Canadian dollar. Exchange rate fluctuations relative to the functional currencies may materially impact our financial position. Further, our Chaucer segment transacts business and maintains assets and liabilities in currencies different than its functional currency, which exposes us to changes in currency exchange rates. In addition, locally required capital levels are invested in local currencies in order to satisfy regulatory requirements and to support local insurance operations regardless of currency fluctuations. We attempt to manage our foreign currency exposure through matching of assets and liabilities, and may also utilize derivatives from time to time. Despite our mitigation efforts, exposure to foreign exchange loss could have a material adverse effect on our reported earnings and book value. Chaucer's trade credit business is also susceptible to losses as a result of exchange rate fluctuations.

Table of Contents

We are a holding company and rely on our insurance company subsidiaries for cash flow; we may not be able to receive dividends from our subsidiaries in needed amounts and may be required to provide capital to support their operations.

We are a holding company for a diversified group of insurance companies, and our principal assets are the shares of capital stock of these subsidiaries. Our ability to make required interest payments on our debt, as well as our ability to pay operating expenses and pay dividends to shareholders depends upon the receipt of sufficient funds from our subsidiaries. The payment of dividends by our insurance company subsidiaries is subject to regulatory restrictions and will depend on the surplus and future earnings of these subsidiaries, as well as these regulatory restrictions. We are required to notify insurance regulators prior to paying any dividends from our U.S. insurance subsidiaries, pre-approval is required with respect to “extraordinary dividends”, and distributions from Chaucer are subject to various requirements imposed by Lloyd’s and the PRA and FCA.

Because of the regulatory limitations on the payment of dividends from our insurance company subsidiaries, we may not always be able to receive dividends from these subsidiaries at times and in amounts necessary to meet our debt and other obligations. The inability of our subsidiaries to pay dividends to us in an amount sufficient to meet our debt interest and funding obligations would have a material adverse effect on us. These regulatory dividend restrictions also impede our ability to transfer cash and other capital resources among our subsidiaries.

Similarly, our insurance subsidiaries may require capital from the holding company to support their operations. For example, our holding company has provided a guaranty for the benefit of our Chaucer segment to support the letter of credit agreement supplied to support Chaucer’s Funds at Lloyd’s requirements.

Our dependence on our insurance subsidiaries for cash flow, and their potential need for capital support, exposes us to the risk of changes in their ability to generate sufficient cash inflows from new or existing customers or from increased cash outflows. Cash outflows may result from claims activity, expense payments or investment losses. Because of the nature of our business, claims activity can arise suddenly and in amounts which could outstrip our capital or liquidity resources. Reductions in cash flow or capital demands from our subsidiaries could have a material adverse effect on our business and results of operations.

We may require additional capital or credit in the future, which may not be available or only available on unfavorable terms.

We monitor our capital adequacy on a regular basis. Our future capital and liquidity requirements depend on many factors, including our premiums written, loss reserves and claim payments, investment portfolio composition and risk exposures, the availability of letters and lines of credit, as well as regulatory and rating agency capital requirements. In addition, our capital strength can affect our ratings, and therefore is important to our ability to underwrite. The quality of our claims paying and financial strength ratings are evaluated by independent rating agencies. Such ratings affect our ability to write quality business, our borrowing expenses and our ability to raise capital.

Our Chaucer business is required to satisfy Lloyd’s minimum capital standards. We satisfy Lloyd’s “member deposit funds” requirement (referred to as Funds at Lloyd’s or “FAL”), in part, through a standby letter of credit. If the letters of credit were drawn, we would expect to use a syndicated credit facility to pay such obligation, which would increase our debt borrowings. Our ability to borrow under this facility is conditioned upon the satisfaction of covenants and other requirements contained in the facility. If the syndicated credit facility was not available to repay this letter of credit facility, we would need to obtain capital elsewhere, and face the risk that alternative financing, such as through cash or other borrowings, would not be available at acceptable terms, if at all. In addition, no assurance can be given as to how much business Lloyd’s will permit Chaucer to underwrite in any single year or as to the viability and cost of change to our current capital structure.

To the extent that our existing capital is insufficient or unavailable to fund our future operating requirements and/or cover claim losses, we may need to raise additional funds through financings or limit our growth. Any equity or debt financing, if available, may be on terms that are unfavorable to us. In the case of equity financings, dilution to our shareholders could result and, in any case, such securities may have rights, preferences, and privileges that are senior to our common stock. If we are not able to obtain additional capital as necessary, our business, results of operations and financial condition could be adversely affected.

Errors or omissions in connection with the administration of any of our products may cause our business and profitability to be negatively impacted.

We are responsible to our policyholders for administering their policies, premiums and claims and ensuring that appropriate records are maintained which reflect their transactions. We are subject to risks that errors or omissions of information occurred with respect to the administration of our products. We are also subject to misconduct and fraud on the part of our employees and agents. As a result, we are subject to risks of liabilities associated with “bad faith”, unfair claims practices, unfair trade practices or similar allegations. Such risks may stem from allegations of agents, vendors, policyholders, claimants, members of Lloyd’s syndicates, reinsurers, regulators, states’ attorneys general, Lloyd’s, the PRA and FCA, or other international regulators, or others. We may incur charges associated with any errors and omissions previously made or which are made in future periods. These charges may result from our obligation to policyholders to correct any errors or omissions or refund premiums, non-compliance with regulatory requirements, from fines imposed by regulatory authorities, or from other items, which may affect our financial position or results of operations.

We are subject to the U.S. Foreign Corrupt Practices Act, the U.K. Bribery Act and similar worldwide anti-bribery laws, which impose restrictions and may carry substantial penalties. Violations of these laws or allegations of such violations could cause a material adverse effect on our business, financial position and results of operations.

The U.S. Foreign Corrupt Practices Act and anti-bribery laws in other jurisdictions, including anti-bribery legislation in the U.K. that took effect in 2011, generally prohibit companies and their intermediaries from making improper payments for the purpose of obtaining or retaining business or other commercial advantage. Our policies mandate compliance with these anti-bribery laws, which often carry substantial penalties. We cannot assure you that our internal control policies and procedures always will protect us from reckless or other inappropriate acts committed by our affiliates, employees, agents or coverholders. Violations of these laws, or allegations of such violations, could have a material adverse effect on our business, financial position and results of operations.

#### ITEM 1B—UNRESOLVED STAFF COMMENTS

None.

#### ITEM 2—PROPERTIES

We own our headquarters, located at 440 Lincoln Street, Worcester, Massachusetts, with approximately 803,000 square feet.

We also own office space located in a three-building complex located at 808 North Highlander Way, Howell, Michigan, with approximately 140,000 square feet, where various business operations are conducted. Certain of our properties have been leased to unrelated third parties or are available for lease.

We lease office space located at 30 Fenchurch Street, London, United Kingdom. We also lease offices throughout the United States and in select locations worldwide for branch sales, underwriting and claims processing functions, and

the operations of acquired subsidiaries.

We believe that our facilities are adequate for our present needs in all material respects.

#### ITEM 3—LEGAL PROCEEDINGS

Reference is made to the litigation matter captioned “Durand Litigation” included in Note 18 - “Commitments and Contingencies – Legal Proceedings” in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

#### ITEM 4—MINE SAFETY DISCLOSURES

Not applicable.

Table of Contents

## PART II

## ITEM 5—MARKET FOR REGISTRANT’S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

## COMMON STOCK AND STOCKHOLDER OWNERSHIP

Our common stock is traded on the New York Stock Exchange under the symbol “THG”. On February 17, 2017, we had approximately 18,543 shareholders of record and 42,501,269 shares outstanding. On the same date, the trading price of our common stock was \$90.46 per share.

## COMMON STOCK PRICES

The following tables set forth the high and low sales prices of our common stock for the periods indicated:

2016	High (1)	Low (1)
First Quarter	\$ 90.68	\$ 76.90
Second Quarter	\$ 91.15	\$ 80.41
Third Quarter	\$ 84.58	\$ 74.10
Fourth Quarter	\$ 91.66	\$ 74.88

2015	High (1)	Low (1)
First Quarter	\$ 73.47	\$ 67.74
Second Quarter	\$ 74.90	\$ 68.55
Third Quarter	\$ 83.28	\$ 74.76
Fourth Quarter	\$ 87.42	\$ 76.00

(1) Common stock prices were obtained from a third-party service provider.

## DIVIDENDS

The Board of Directors declared dividends in 2016 and 2015 as follows:

Per Share Amount	2016	2015
First Quarter	\$ 0.46	\$ 0.41
Second Quarter	\$ 0.46	\$ 0.41
Third Quarter	\$ 0.46	\$ 0.41
Fourth Quarter	\$ 0.50	\$ 0.46

We currently expect that comparable cash dividends will be paid in the future; however, the payment of future dividends on our common stock will be determined by the Board of Directors from time to time based upon cash available at our holding company, our results of operations and financial condition and such other factors as the Board of Directors considers relevant.

Dividends to shareholders may be funded from dividends paid to us from our subsidiaries. Dividends from insurance subsidiaries are subject to restrictions imposed by state insurance laws and regulations and for our foreign

subsidiaries, to restrictions imposed by the PRA and Lloyd's. See "Liquidity and Capital Resources" in Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 13 – "Dividend Restrictions" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

Table of Contents

## ISSUER PURCHASES OF EQUITY SECURITIES

The Board of Directors has authorized a stock repurchase program which provides for aggregate repurchases of up to \$900 million. Under the repurchase authorizations, we may repurchase our common stock from time to time, in amounts and prices and at such times as deemed appropriate, subject to market conditions and other considerations. Our repurchases may be executed using open market purchases, privately negotiated transactions, accelerated repurchase programs or other transactions. We are not required to purchase any specific number of shares or to make purchases by any certain date under this program. Total repurchases under this program as of December 31, 2016 were 14.0 million shares at a cost of \$716.4 million.

Shares purchased in the fourth quarter of 2016 are as follows:

PERIOD	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Approximate Dollar Value of Shares That May Yet be Purchased Under the Plans or Programs (in millions)
October 1 - 31, 2016	-	\$ -	-	\$ 184
November 1 - 30, 2016 (1)	6,020	78.99	5,250	184
December 1 - 31, 2016 (2)	89,819	91.53	-	184
Total	95,839	\$ 90.75	5,250	\$ 184

(1)Includes 770 shares withheld to satisfy tax withholding amounts due from employees related to the receipt of stock which resulted from the exercise or vesting of equity awards.

(2)Reflects shares withheld to satisfy tax withholding amounts due from employees related to the receipt of stock which resulted from the exercise or vesting of equity awards.

### INTRODUCTION

The following Management's Discussion and Analysis of Financial Condition and Results of Operations is intended to assist readers in understanding the consolidated results of operations and financial condition of The Hanover Insurance Group, Inc. and its subsidiaries ("THG"). Consolidated results of operations and financial condition are prepared in accordance with generally accepted accounting principles in the United States of America ("U.S. GAAP"). This discussion should be read in conjunction with the Consolidated Financial Statements and related footnotes included elsewhere herein.

Results of operations include the accounts of The Hanover Insurance Company ("Hanover Insurance") and Citizens Insurance Company of America ("Citizens"), our principal U.S. domiciled property and casualty companies; Chaucer Holdings Limited ("Chaucer"), our United Kingdom ("U.K.") domiciled specialist insurance underwriting group which operates through the Society and Corporation of Lloyd's ("Lloyd's"); and other insurance and non-insurance subsidiaries. Results of operations include our discontinued operations, consisting primarily of our former life insurance businesses and our accident and health business.

### EXECUTIVE OVERVIEW

Business operations consist of four operating segments: Commercial Lines, Personal Lines, Chaucer and Other.

Net income was \$155.1 million in 2016, compared to \$331.5 million in 2015. In 2016, net income was adversely affected by lower operating income driven by unfavorable development on prior years' loss and loss adjustment expense ("LAE") reserves, partially offset by lower catastrophe and current accident year losses. (See discussion below). Additionally, net income was adversely affected by prepayment charges of \$56.0 million, net of tax, which we paid in the second quarter in connection with the redemption of \$380.0 million in higher coupon debt following our issuance of \$375.0 million of 4.50% senior debentures.

Operating income before interest expense and income taxes (a non-GAAP financial measure; see also "Results of Operations – Consolidated" below) was \$322.8 million in 2016 compared to \$466.1 million in 2015, a decrease of \$143.3 million. This decrease is due to unfavorable development on prior years' loss and LAE reserves ("prior years' loss reserves"), partially offset by lower catastrophe losses and current accident year losses. Unfavorable development on prior years' loss reserves was \$140.3 million in 2016, compared to favorable development of \$94.3 million in 2015. Pre-tax catastrophe losses were \$125.1 million in 2016, compared to \$181.3 million during 2015. As explained later in this document, a portion of the change in operating income before interest expense and income taxes is also attributable to the effect of foreign exchange fluctuations. The fourth quarter of 2016 included a reserve charge of \$174.1 million as a result of our fourth quarter reserve review. See also "2016 Fourth Quarter Domestic Business Loss and LAE Reserve Increase" section below for further discussion.

We are continuing efforts to improve our underwriting results in both our Commercial and Personal Lines, through rate increases and improvements to our mix of business. At Chaucer, we continued to experience significant competitive pressure on rates in 2016, which is expected to persist in 2017. In response to these challenging market conditions, we actively manage Chaucer's underwriting portfolio, using our expertise, distinctive underwriting capabilities and market knowledge to target specific attractive underwriting opportunities.

### Commercial Lines

We believe our approach to the small commercial market, distinctiveness in the middle market, and continued development of specialty lines provides us with a diversified portfolio of products and delivers significant value to agents and policyholders. The small commercial and middle market businesses are expected to contribute to premium

growth in Commercial Lines over the next several years as we continue to pursue our core strategy of developing strong partnerships with agents, distinctive products, franchise value through limited distribution, and industry segmentation. Growth in our specialty lines continues to be an important part of our strategy.

We believe these efforts have driven, and will continue to drive, improvement in our overall mix of business and our underwriting profitability. Commercial Lines net premiums written grew by 3.5% in 2016, driven by both our core commercial and specialty businesses. This growth is primarily due to rate and exposure increases, strong retention and targeted new business expansion.

Underwriting results declined in 2016, as compared to 2015, due to a significant increase in unfavorable development on prior years' loss reserves, partially offset by lower current accident year losses and lower catastrophe losses. Excluding the aforementioned reserve charge in the fourth quarter of 2016, current accident year results improved across most lines. The competitive nature of the Commercial Lines market requires us to be highly disciplined in our underwriting process to ensure that we write business at acceptable margins, and we continue to seek rate increases across our lines of business.

#### Personal Lines

Personal Lines focuses on partnering with high quality, value-oriented agencies that deliver consultative selling and stress the importance of account rounding (the conversion of single policy customers to accounts with multiple policies and additional coverages). Approximately 83% of our policies in force are account business. We are focused on making investments that help maintain profitability, build a distinctive position in the market, help diversify us geographically from our largest historical core states of Michigan, Massachusetts and New York, and provide us with profitable growth opportunities.

## Table of Contents

Net premiums written grew by 5.2% in 2016, primarily due to increased rates in both the homeowners and personal automobile lines, as well as improved new business trends and higher retention. Underwriting results improved in 2016, as compared to 2015, primarily due to lower catastrophe losses and improved current accident year loss performance, partially offset by unfavorable development on prior years' loss reserves and higher expenses. We continue to seek rate increases that keep pace with underlying loss cost trends, subject to regulatory and competitive considerations.

### Chaucer

Chaucer deploys specialist underwriters in over 30 major insurance and reinsurance classes, including marine and aviation, property, energy, casualty and other coverages. We obtain business through Lloyd's, the leading international insurance and reinsurance market, which provides us with access to specialist business in over 200 countries and territories worldwide through its international licenses, brand reputation and strong security rating. Our underwriting strength, diverse portfolio and Lloyd's membership underpin our ability to actively manage the scale, composition and profitable development of this business.

Underwriting results declined in 2016, as compared to 2015, primarily due to higher current accident year losses, lower favorable development on prior years' loss reserves, and higher expenses, partially offset by lower catastrophe losses. Chaucer's net premiums written declined by 8.2% in 2016, primarily due to a planned increase in ceded reinsurance premiums, as we continue to manage our overall underwriting risk given the challenging market conditions.

## DESCRIPTION OF OPERATING SEGMENTS

Primary business operations include insurance products and services currently provided through four operating segments. Our domestic operating segments are Commercial Lines, Personal Lines, and Other. Our international operating segment is Chaucer. Commercial Lines includes commercial multiple peril, commercial automobile, workers' compensation and other commercial coverages, such as inland marine, specialty program business, management and professional liability, surety and specialty property. Personal Lines includes personal automobile, homeowners and other personal coverages. Chaucer includes marine and aviation, property, energy, casualty and other coverages (which includes international liability, specialist liability coverages, and syndicate participations) and, prior to June 30, 2015, U.K. motor. Effective June 30, 2015, we transferred our U.K. motor business to an unaffiliated U.K.-based insurance provider. Accordingly, results from the Chaucer segment no longer include this business subsequent to June 30, 2015. Included in the "Other" segment are Opus Investment Management, Inc., which markets investment management services to institutions, pension funds and other organizations; earnings on holding company assets; and, a discontinued voluntary pools business. We present the separate financial information of each segment consistent with the manner in which our chief operating decision maker evaluates results in deciding how to allocate resources and in assessing performance.

We report interest expense on debt separately from the earnings of our operating segments. This consists of interest on our senior debentures, subordinated debentures, collateralized borrowings with the Federal Home Loan Bank of Boston ("FHLBB"), and letter of credit facility.

## RESULTS OF OPERATIONS – CONSOLIDATED

### 2016 Compared to 2015

Consolidated net income was \$155.1 million in 2016, compared to \$331.5 million in 2015. The decrease of \$176.4 million is primarily due to lower operating income of \$95.6 million, principally from \$105.4 million of unfavorable

development on prior years' loss reserves, or approximately 2% of total net reserves (including development on catastrophe losses), partially offset by lower catastrophe losses and current accident year losses. Consolidated net income for the year ended December 31, 2016 also included net losses from the repayment of debt of \$57.4 million, net of tax, compared to \$15.7 million, net of tax, for the year ended December 31, 2015. Additionally, the year ended December 31, 2015, included after-tax gains of \$40.6 million from the disposal of the U.K. motor business.

#### 2015 Compared to 2014

Consolidated net income was \$331.5 million in 2015, compared to \$282.0 million in 2014. The increase of \$49.5 million is primarily due to higher operating income of \$47.3 million, principally from lower catastrophe losses and a lower expense ratio. Additionally, consolidated net income in 2015 included the \$40.6 million net gain from the disposal of the U.K. motor business. These increases were partially offset by lower net realized investment gains and an increase in net losses from repayments of debt. Net realized investment gains decreased during 2015 primarily as a result of an increase in other-than-temporary impairments ("OTTI"), and from lower gains from the sale of securities. Additionally, the year ended December 31, 2014 included after-tax losses of \$7.9 million from the settlement of a portion of the defined benefit pension plan obligation.

Table of Contents

The following table reflects operating income before interest expense and income taxes for each operating segment and a reconciliation to consolidated net income from operating income before interest expense and income taxes (a non-GAAP measure).

YEARS ENDED DECEMBER 31 (in millions)	2016	2015	2014
Operating income (loss) before interest expense and income taxes:			
Commercial Lines	\$ 35.9	\$ 143.3	\$ 139.9
Personal Lines	178.4	149.3	99.0
Chaucer	126.8	183.7	177.6
Other	(18.3)	(10.2)	(9.7)
Operating income before interest expense and income taxes	322.8	466.1	406.8
Interest expense on debt	(54.9)	(60.6)	(65.8)
Operating income before income taxes	267.9	405.5	341.0
Income tax expense on operating income	(83.5)	(125.5)	(108.3)
Operating income	184.4	280.0	232.7
Non-operating items:			
Net realized investment gains	8.6	19.5	50.1
Net loss from repayment of debt	(88.3)	(24.1)	(0.1)
Gain on disposal of U.K. motor business	1.1	38.4	-
Loss from settlement of pension obligation	-	-	(12.1)
Other	3.0	0.1	(0.9)
Income tax benefit on non-operating items	47.3	16.9	12.6
Income from continuing operations, net of taxes	156.1	330.8	282.3
Net (loss) gain from discontinued operations, net of taxes	(1.0)	0.7	(0.3)
Net income	\$ 155.1	\$ 331.5	\$ 282.0
Non-GAAP Financial Measures			

In addition to consolidated net income, discussed above, we assess our financial performance based upon pre-tax “operating income,” and we assess the operating performance of each of our four operating segments based upon the pre-tax operating income (loss) generated by each segment. As reflected in the table above, operating income before taxes excludes interest expense on debt and certain other items which we believe are not indicative of our core operations, such as net realized investment gains and losses. Such gains and losses are excluded since they are determined by interest rates, financial markets and the timing of sales. Also, operating income before taxes excludes net gains and losses on disposals of businesses, gains and losses related to the repayment of debt, discontinued operations, costs to acquire businesses, restructuring costs, the cumulative effect of accounting changes and certain other items. Although the items excluded from operating income before taxes are important components in understanding and assessing our overall financial performance, we believe a discussion of operating income before

taxes enhances an investor's understanding of our results of operations by highlighting net income attributable to the core operations of the business. However, operating income before taxes, which is a non-GAAP measure, should not be construed as a substitute for income before income taxes, and operating income should not be construed as a substitute for net income.

Catastrophe losses and prior years' reserve development are significant components in understanding and assessing the financial performance of our business. Management reviews and evaluates catastrophes and prior years' reserve development separately from the other components of earnings. References to "current accident year underwriting results" exclude prior accident year reserve development. Catastrophes and prior years' reserve development are not predictable as to timing or the amount that will affect the results of our operations and have an effect on each year's operating and net income. Management believes that providing certain financial metrics and trends excluding the effects of catastrophes and prior years' reserve development helps investors to understand the variability in periodic earnings and to evaluate the underlying performance of our operations. Discussion of catastrophe losses in this Management's Discussion and Analysis of Financial Condition and Results of Operations includes development on prior years' catastrophe reserves and, unless otherwise indicated, such development is excluded from discussions on prior year loss and LAE reserve development.

Table of Contents

## RESULTS OF OPERATIONS - SEGMENTS

The following is our discussion and analysis of the results of operations by business segment. The operating results are presented before interest expense, taxes and other items which management believes are not indicative of our core operations, including realized gains and losses.

The following table summarizes the results of operations for the periods indicated:

YEARS ENDED DECEMBER 31 (in millions)	2016	2015	2014
Operating revenues			
Net premiums written	\$ 4,698.8	\$ 4,616.8	\$ 4,810.1
Net premiums earned	\$ 4,628.1	\$ 4,704.8	\$ 4,710.3
Net investment income	279.4	279.1	270.3
Other income	29.7	30.6	36.9
Total operating revenues	4,937.2	5,014.5	5,017.5
Losses and operating expenses			
Losses and LAE	2,964.7	2,884.1	2,927.5
Amortization of deferred acquisition costs	1,035.2	1,033.2	1,040.0
Other operating expenses	614.5	631.1	643.2
Total losses and operating expenses	4,614.4	4,548.4	4,610.7
Operating income before interest expense and income taxes	\$ 322.8	\$ 466.1	\$ 406.8
2016 Compared to 2015			

Operating income before interest expense and income taxes was \$322.8 million for the year ended December 31, 2016, compared to \$466.1 million for the year ended December 31, 2015, a decrease of \$143.3 million. This decrease was primarily due to higher unfavorable prior years' loss reserve development, partially offset by lower catastrophe and current accident year losses. Unfavorable development on prior years' loss reserves was \$140.3 million for the year ended December 31, 2016, compared to favorable development of \$94.3 million for the year ended December 31, 2015, a change of \$234.6 million. Catastrophe-related activity for the year ended December 31, 2016 was \$125.1 million, compared to \$181.3 million for the year ended December 31, 2015, a decrease of \$56.2 million. Lower current accident year losses in our domestic segment were partially offset by higher losses in our Chaucer segment.

Net premiums written increased by \$82.0 million for the year ended December 31, 2016, compared to the year ended December 31, 2015. This increase was primarily the result of growth in our domestic lines, partially offset by a planned increase in ceded reinsurance premiums in the Chaucer business.

## 2015 Compared to 2014

Operating income before interest expense and income taxes was \$466.1 million for the year ended December 31, 2015, compared to \$406.8 million for the year ended December 31, 2014, an increase of \$59.3 million. This increase was due primarily to lower catastrophe losses, a lower expense ratio and higher net investment income, partially offset by higher large loss activity in the Chaucer segment and lower favorable development on prior years' loss reserves.

Catastrophe-related activity for the year ended December 31, 2015 was \$181.3 million, compared to \$223.0 million for the year ended December 31, 2014, a decrease of \$41.7 million.

Favorable development on prior years' loss reserves was \$94.3 million for the year ended December 31, 2015, compared to \$99.1 million for the year ended December 31, 2014, a decrease of \$4.8 million.

Excluding the effect of our transfer of the U.K. motor business, net premiums written increased by \$112.7 million for the year ended December 31, 2015, compared to the year ended December 31, 2014. This increase was primarily driven by pricing increases, increased retention, and targeted new business expansion primarily in Commercial Lines. U.K. motor net premium written was \$(8.3) million and \$297.7 million in 2015 and 2014, respectively.

Table of Contents

## Foreign Exchange

Most of Chaucer's transactions are denominated in the currencies that we use to settle transactions with Lloyd's, specifically the U.S. Dollar, the U.K. Pound Sterling ("GBP") and the Canadian Dollar. These are Chaucer's functional currencies under U.S. GAAP. A portion of Chaucer's transactions and its assets and liabilities are denominated in other currencies, such as the Euro, the Swiss Franc, the Australian Dollar and the Japanese Yen. Changes in the value of these currencies versus the functional currencies, particularly versus the GBP, cause transactional gains and losses during each reporting period. During 2016, the GBP weakened meaningfully against most currencies. We believe that this was due, in large part, to the effect of the U.K.'s referendum vote to discontinue its membership in the European Union ("Brexit Referendum"). In contrast, during 2015 and 2014, the GBP strengthened against most currencies. The following table summarizes the total effect of Chaucer's foreign exchange transactional gains and losses on comprehensive income:

YEARS ENDED DECEMBER 31 in millions	2016	2015	2014
Effect of revaluing loss and LAE reserves	\$ (36.9)	\$ 13.4	\$ 11.8
Effect of revaluing overseas deposits and cash	11.5	(0.5)	(4.6)
Effect of revaluing premium receivables	3.4	(1.2)	(2.9)
Total FX effect on operating income before interest expense and income taxes	(22.0)	11.7	4.3
FX losses reflected in net realized investment gains	(0.7)	(3.4)	(1.3)
Total FX effect on income before income taxes	(22.7)	8.3	3.0
Unrealized FX gains (losses) from investment securities	8.3	(1.2)	(4.7)
Total pre-tax effect of transactional FX (losses) gains on comprehensive income	(14.4)	7.1	(1.7)
Income tax benefit (expense)	5.0	(2.5)	0.6
Total effect of transactional FX (losses) gains on comprehensive income	\$ (9.4)	\$ 4.6	\$ (1.1)

During 2016, foreign exchange losses reduced pre-tax operating income by approximately \$22.0 million compared to foreign exchange gains on pre-tax operating income of approximately \$11.7 million and \$4.3 million in 2015 and 2014, respectively. This was due primarily to the revaluation of loss and LAE reserves in various currencies, particularly the Euro, the Australian Dollar and the Japanese Yen, partially offset by the revaluation of investments in overseas deposits and cash. In addition, during 2016, pre-tax unrealized foreign exchange gains from Euro-denominated investment securities were \$8.3 million, which was reflected as an increase to accumulated other comprehensive income. During 2015 and 2014 the pre-tax unrealized foreign exchange impact from Euro-denominated investment securities was a loss of \$1.2 million and \$4.7 million, respectively.

Although we endeavor to balance assets and liabilities for our foreign currencies, a certain level of net exposure to exchange rate fluctuations persists. We monitor and seek to limit the extent of this exposure. These transactional foreign exchange gains and losses are unlikely to be material to our financial position, although they may be more significant to our financial results of operations in any one period.

Table of Contents

## PRODUCTION AND UNDERWRITING RESULTS

The following table summarizes premiums written on a gross and net basis, net premiums earned and loss, LAE, expense and combined ratios for the Commercial Lines, Personal Lines and Chaucer segments. Loss, LAE, catastrophe loss and combined ratios shown below include prior year reserve development. These items are not meaningful for our Other segment.

YEAR ENDED DECEMBER 31, 2016

Table of Contents

2016 Compared to 2015

Commercial Lines

Commercial Lines net premiums written were \$2,361.5 million for the year ended December 31, 2016, compared to \$2,281.9 million for the year ended December 31, 2015. This \$79.6 million increase was primarily driven by pricing increases, strong retention, and targeted new business expansion.

Commercial Lines underwriting loss for the year ended December 31, 2016 was \$122.0 million, compared to \$12.7 million for the year ended December 31, 2015, a change of \$109.3 million. Unfavorable development on prior years' loss reserves ("prior year development") for the year ended December 31, 2016 was \$223.0 million, compared to \$45.2 million for the year ended December 31, 2015, an unfavorable change of \$177.8 million, primarily due to higher than expected losses in other commercial lines of \$168.0 million, which includes our AIX program business of \$75.3 million. This was principally driven by losses in accident years 2014 and prior, primarily from programs which have since been terminated, as well as higher than expected losses in our general liability lines of \$56.0 million, and higher than expected losses in surety lines of \$35.3 million. We also experienced unfavorable prior year development in our commercial multiple peril line of \$74.2 million and in our commercial automobile line of \$27.5 million. These items were partially offset by favorable prior year development in our workers' compensation line of \$46.7 million. Catastrophe-related losses decreased for the year ended December 31 2016 at \$70.1 million, compared to \$88.7 million for the year ended December 31, 2015.

Commercial Lines current accident year underwriting profit, excluding catastrophes, was \$171.1 million for the year ended December 31, 2016, compared to \$121.2 million for the year ended December 31, 2015. This \$49.9 million improvement was primarily due to improved current accident year loss performance, primarily due to property coverages in our commercial multiple peril and inland marine lines, premium growth and lower expenses.

We are continuing efforts to improve our underwriting results, including through increased rates; however, our ability to increase Commercial Lines net premiums written while maintaining or improving underwriting results is expected to be affected by price competition and the challenging economic environment. We continue to monitor these trends and consider them in our rate actions.

Personal Lines

Personal Lines net premiums written were \$1,521.2 million for the year ended December 31, 2016, compared to \$1,445.6 million for the year ended December 31, 2015, an increase of \$75.6 million. This was primarily due to increased rates in both the personal automobile and homeowners lines of business, as well as improved new business trends and higher retention.

Net premiums written in the personal automobile line of business for the year ended December 31, 2016 were \$953.6 million, compared to \$900.0 million for the year ended December 31, 2015, an increase of \$53.6 million. This increase was primarily due to rate increases, as well as an increase in policies in force of 1.4%. Net premiums written in the homeowners line of business for the year ended December 31, 2016 were \$529.7 million, compared to \$507.4 million for the year ended December 31, 2015, an increase of \$22.3 million. This is attributable to rate increases, as well as an increase in policies in force of 1.8%.

Personal Lines underwriting profit for the year ended December 31, 2016 was \$103.8 million, compared to \$72.0 million for the year ended December 31, 2015, an improvement of \$31.8 million. Catastrophe losses for the year ended December 31, 2016 were \$47.0 million, compared to \$75.8 million for the year ended December 31, 2015, a decrease of \$28.8 million. Unfavorable development on prior years' loss reserves for the year ended December 31,

2016 was \$4.3 million, compared to favorable prior year development of \$19.7 million for the year ended December 31, 2015, a decline of \$24.0 million.

Personal Lines current accident year underwriting profit, excluding catastrophes, was \$155.1 million in the year ended December 31, 2016, compared to \$128.1 million for the year ended December 31, 2015. This \$27.0 million increase was primarily a result of lower weather-related property losses, primarily in our homeowners line of business, as well as rate increases.

Although we have been able to obtain rate increases in our Personal Lines markets and believe that our ability to obtain these increases will continue, our ability to maintain Personal Lines net premiums written and to maintain and improve underwriting results may be affected by price competition, recent years' weather-related losses, our exposure management actions, and regulatory and legal developments. We monitor these trends and consider them in our rate actions.

#### Chaucer

Chaucer's net premiums written were \$816.1 million for the year ended December 31, 2016, compared to \$889.3 million for the year ended December 31, 2015. This decline of \$73.2 million was primarily due to a planned increase in ceded reinsurance premiums as we manage our overall underwriting risk given the challenging market conditions, as well as from lower premium volumes in our energy line where underwriting conditions continued to reflect the effects of low oil prices, and in our aviation line, partially offset by growth in our marine and casualty lines.

## Table of Contents

Chaucer's underwriting profit for the year ended December 31, 2016 was \$80.3 million, compared to \$131.5 million for the year ended December 31, 2015, a decrease of \$51.2 million. This decrease is primarily due to higher current accident year losses, lower favorable prior year reserve development and higher expenses, partially offset by lower catastrophe losses. Favorable development on prior years' loss reserves for the year ended December 31, 2016 was \$95.3 million, compared to \$120.1 million for the year ended December 31, 2015, a decrease of \$24.8 million, including the effect of foreign exchange fluctuations (see "Foreign Exchange" section above for further discussion). Catastrophe losses for the year ended December 31, 2016 were \$8.0 million, compared to \$16.8 million for the year ended December 31, 2015, a decrease of \$8.8 million.

Chaucer's current accident year underwriting loss, excluding catastrophes, was \$7.0 million in the year ended December 31, 2016, compared to an underwriting profit of \$28.2 million for the year ended December 31, 2015. This \$35.2 million change was primarily due to higher large losses in the marine line, including trade credit coverages related to poor market conditions and underlying commodity price-sensitive accounts, and an increased frequency of losses in our property line, partially offset by lower large losses in the energy line.

We continue to experience significant competition across the international insurance industry. Current pricing conditions in all markets continue to be affected by high industry capacity and competition, and a continued absence of major losses in our markets. There can be no assurance that we will be able to maintain adequate rates in light of economic conditions in our markets. Additionally, because of the inherently volatile nature of losses in many of our product lines, we may continue to experience large losses or an elevated level of losses from these or other product lines.

### Other

Other operating losses were \$18.3 million for the year ended December 31, 2016, compared to \$10.2 million for the year ended December 31, 2015, an increase of \$8.1 million primarily due to unfavorable prior year reserve development in our run-off voluntary pools business.

### 2015 Compared to 2014

#### Commercial Lines

Commercial Lines net premiums written were \$2,281.9 million for the year ended December 31, 2015, compared to \$2,155.9 million for the year ended December 31, 2014. This \$126.0 million increase was primarily driven by pricing increases, increased retention, and targeted new business expansion.

Commercial Lines underwriting loss for the year ended December 31, 2015 was \$12.7 million, compared to \$8.3 million for the year ended December 31, 2014, a decline of \$4.4 million. Unfavorable development on prior years' loss reserves for the year ended December 31, 2015 was \$45.2 million, compared to \$9.2 million for the year ended December 31, 2014, an increase of \$36.0 million. Catastrophe-related losses increased slightly for the year ended December 31, 2015 at \$88.7 million, compared to \$87.8 million for the year ended December 31, 2014. Unfavorable prior year development was due to higher than expected losses in other commercial lines of \$53.7 million, which includes our AIX program business. This was principally driven by losses in accident years 2013 and prior, primarily from programs which have since been terminated and from higher than expected losses in our general liability lines, partially offset by favorable development in our commercial umbrella and healthcare lines, also included in other commercial lines. We also experienced unfavorable prior year development in our commercial automobile line of \$23.4 million. These items were partially offset by favorable prior year development in our workers' compensation line of \$46.9 million.

Commercial Lines current accident year underwriting profit, excluding catastrophes, was \$121.2 million for the year ended December 31, 2015, compared to \$88.7 million for the year ended December 31, 2014. This \$32.5 million improvement was primarily due to growth in earned premium, underwriting expense efficiencies, and improved loss performance in all major lines of business that resulted from our pricing and underwriting actions.

#### Personal Lines

Personal Lines net premiums written were \$1,445.6 million for the year ended December 31, 2015, compared to \$1,422.8 million for the year ended December 31, 2014, an increase of \$22.8 million. This was due primarily to increased rates and improved retention in both the personal automobile and homeowners lines of business.

Net premiums written in the personal automobile line of business for the year ended December 31, 2015 were \$900.0 million compared to \$884.1 million for the year ended December 31, 2014, an increase of \$15.9 million. This increase was primarily due to rate increases, partially offset by a decline in policies in force of 3.2%. Net premiums written in the homeowners line of business for the year ended December 31, 2015 were \$507.4 million, compared to \$499.0 million for the year ended December 31, 2014, an increase of \$8.4 million. This is attributable to rate increases which offset a decline in policies in force of 1.9%.

## Table of Contents

Personal Lines underwriting profit for the year ended December 31, 2015 was \$72.0 million, compared to \$22.1 million for the year ended December 31, 2014, an improvement of \$49.9 million. Catastrophe losses for the year ended December 31, 2015 were \$75.8 million, compared to \$106.4 million for the year ended December 31, 2014, a decrease of \$30.6 million. Favorable development on prior years' loss reserves for the year ended December 31, 2015 was \$19.7 million, compared to \$5.1 million for the year ended December 31, 2014, an increase of \$14.6 million, primarily from the homeowners line.

Personal Lines current accident year underwriting profit, excluding catastrophes, was \$128.1 million in the year ended December 31, 2015, compared to \$123.4 million for the year ended December 31, 2014. This \$4.7 million improvement was primarily a result of our ongoing pricing and underwriting actions in both lines of business, partially offset by higher large loss experience in the homeowners line, largely due to fire.

### Chaucer

Chaucer's net premiums written were \$889.3 million for the year ended December 31, 2015, compared to \$1,231.4 million for the year ended December 31, 2014. This decline of \$342.1 million was primarily due to the aforementioned transfer of the U.K. motor business. Excluding the U.K. motor business, net premiums written declined by \$36.1 million or 3.9%, primarily due to lower volumes in the energy, marine and property lines, partially offset by growth in the specialist liability line.

Chaucer's underwriting profit for the year ended December 31, 2015 was \$131.5 million, compared to \$122.5 million for the year ended December 31, 2014, an increase of \$9.0 million. This increase is primarily due to higher favorable development on prior years' loss reserves, lower catastrophe losses and lower expenses, partially offset by higher large loss activity in the energy line. Favorable development on prior years' loss reserves for the year ended December 31, 2015 was \$120.1 million, compared to \$104.6 million for the year ended December 31, 2014, an increase of \$15.5 million. Catastrophe losses for the year ended December 31, 2015 were \$16.8 million, compared to \$28.8 million for the year ended December 31, 2014, a decrease of \$12.0 million.

Chaucer's current accident year underwriting profit, excluding catastrophes, was \$28.2 million in the year ended December 31, 2015, compared to \$46.7 million for the year ended December 31, 2014. This \$18.5 million decline was primarily due to higher large losses in the energy line, partially offset by lower losses in the aviation and property lines.

### Other

Other operating losses were \$10.2 million for the year ended December 31, 2015, compared to \$9.7 million for the year ended December 31, 2014, an increase of \$0.5 million.

## RESERVE FOR LOSSES AND LOSS ADJUSTMENT EXPENSES

### Overview of Loss Reserve Estimation Process

We maintain reserves for our property and casualty products to provide for our ultimate liability for losses and loss adjustment expenses (our "loss reserves") with respect to reported and unreported claims incurred as of the end of each accounting period. These reserves are estimates, taking into account past loss experience, modified for current trends, as well as prevailing economic, legal and social conditions. Loss reserves represent our largest liability.

Management's process for establishing loss reserves is a comprehensive process that involves input from multiple functions throughout our organization, including actuarial, finance, claims, legal, underwriting, distribution and

business operations management. The process incorporates facts currently known and the current, and in some cases, the anticipated, state of the law and coverage litigation. Based on information currently available, we believe that the aggregate loss reserves at December 31, 2016 were adequate to cover claims for losses that had occurred as of that date, including both those known to us and those yet to be reported. However, as described below, there are significant uncertainties inherent in the loss reserving process. Our estimate of the ultimate liability for losses that had occurred as of December 31, 2016 is expected to change in future periods as we obtain further information, and such changes could have a material effect on our results of operations and financial position.

Our loss reserves include case estimates for claims that have been reported and estimates for claims that have been incurred but not reported (“IBNR”) at the balance sheet date. They also include estimates of the expenses associated with processing and settling all reported and unreported claims, less estimates of anticipated salvage and subrogation recoveries. Our property and casualty loss reserves are not discounted to present value.

Case reserves are established by our claim personnel individually on a claim by claim basis and based on information specific to the occurrence and terms of the underlying policy. For some classes of business, average case reserves are used initially. Case reserves are periodically reviewed and modified based on new or additional information pertaining to the claim.

Our ultimate IBNR reserves are estimated by management and our reserving actuaries on an aggregate basis for each line of business or coverage for loss and loss expense liabilities not reflected within the case reserves. The sum of the case reserves and the IBNR reserves represents our estimate of total unpaid losses and loss adjustment expenses.

We regularly review our loss reserves using a variety of industry accepted analytical techniques. We update the loss reserves as historical loss experience develops, additional claims are reported and resolved and new information becomes available. Net changes in loss reserves are reflected in operating results in the period in which the reserves are changed.

The IBNR reserve includes a provision for claims that have occurred but have not yet been reported to us, some of which may not yet be known to the insured, as well as a provision for future development on reported claims. IBNR represents a significant proportion of our total net loss reserves, particularly for long-tail liability classes. In fact, approximately 52% of our aggregate net loss reserves at December 31, 2016 were for IBNR losses and loss expenses.

#### Critical Judgments and Key Assumptions

We determine the amount of our loss reserves based on an estimation process that is very complex and considers information from both company specific and industry data, as well as general economic and other information. The estimation process is a combination of objective and subjective information, the blending of which requires significant professional judgment. There are various assumptions required, including future trends in frequency and severity of claims, operational changes in claim handling and case reserving practices, and trends related to general economic and social conditions. Informed judgments as to our ultimate exposure to losses are an integral component of our loss reserve estimation process.

Given the inherent complexity of our loss reserve estimation process and the potential variability of the assumptions used, the actual emergence of losses will vary, perhaps substantially, from the estimate of losses included in our financial statements, particularly in those instances where settlements or other claim resolutions do not occur until well into the future. Our net loss reserves at December 31, 2016 were \$4.7 billion. Therefore, a relatively small percentage change in the estimate of net loss reserves would have a material effect on our results of operations.

There is greater inherent uncertainty in estimating insurance reserves for certain types of property and casualty insurance lines, particularly liability lines, where a longer period of time may elapse before a definitive determination of ultimate liability and losses may be made. In addition, the technological, judicial, regulatory and political climates

involving these types of claims are continuously evolving. There is also greater uncertainty in establishing reserves with respect to business that is new to us, particularly new business which is generated with respect to newly introduced product lines, by newly appointed agents or in geographies in which we have less experience in conducting business, such as certain new program business written by AIX, Chaucer's U.S. casualty treaty and international liability lines, our professional liability specialty lines, our excess and surplus specialty lines, and business written in the western part of the United States. In some of these cases, there is less historical experience or knowledge and less data upon which we can rely. A combination of business that is both new to us and has longer development periods provides even greater uncertainty in estimating insurance reserves. In our management and professional liability lines, we are modestly increasing, and expect to continue to increase, our exposure to longer-tailed liability lines, including directors and officers liability, errors and omissions liability and product liability coverages. The Chaucer business acquired in 2011 contains several liability lines, of which financial institution and professional liability, U.S. casualty treaty liability, international liability and energy liability, contribute the most uncertainty. Chaucer's U.S. casualty treaty lines have grown in 2015 and 2016, due to our expanded underwriting capabilities.

We regularly update our reserve estimates as new information becomes available and additional events occur which may impact the resolution of unsettled claims. Reserve adjustments are reflected in the results of operations as adjustments to losses and LAE. Often, these adjustments are recognized in periods subsequent to the period in which the underlying policy was written and the loss event occurred. When these types of subsequent adjustments affect prior years, they are described separately as "prior year reserve development". Such development can be either favorable or unfavorable to our financial results and may vary by line of business. As discussed below, estimated loss and LAE reserves for claims occurring in prior years developed unfavorably by \$140.3 million for the year ended December 31, 2016, and developed favorably by \$94.3 million, and \$99.1 million for the years ended December 31, 2015, and 2014, respectively. Additionally, our estimated loss and LAE reserves for catastrophe claims occurring in prior years developed favorably by \$34.9 million, \$21.8 million and \$18.3 million for the years ended December 31, 2016, 2015 and 2014, respectively. However, there can be no assurance that current loss and LAE reserves will be sufficient.

We regularly review our reserving techniques, our overall reserving position and our reinsurance. Based on (i) our review of historical data, legislative enactments, judicial decisions, legal developments in impositions of damages and policy coverage, political attitudes and trends in general economic conditions, (ii) our review of per claim information, (iii) our historical loss experience and that of the industry, (iv) the nature of policies written by us, and (v) our internal estimates of required reserves, we believe that adequate provision has been made for loss reserves. However, establishment of appropriate reserves is an inherently uncertain process, and there can be no certainty that current established reserves will prove adequate in light of subsequent actual experience. A significant change to the estimated reserves could have a material impact on our results of operations and financial position. An increase or decrease in reserve estimates would result in a corresponding decrease or increase in financial results. For example, each one percentage point change in the aggregate loss and LAE ratio resulting from a change in reserve estimation is currently projected to have an approximate \$46 million impact on operating income, based on 2016 full year premiums.

## Table of Contents

The major causes of material uncertainty relating to ultimate losses and LAE (“risk factors”) generally vary for each line of business, as well as for each separately analyzed component of the line of business. In some cases, such risk factors are explicit assumptions of the estimation method and in others, they are implicit. For example, a method may explicitly assume that a certain percentage of claims will close each year, but will implicitly assume that the legal interpretation of existing contract language will remain substantially unchanged. Actual results will likely vary from expectations for each of these assumptions, resulting in an ultimate claim liability that is different from that being estimated currently.

Some risk factors affect multiple lines of business. Examples include changes in claim handling and claim reserving practices, changes in claim settlement patterns, regulatory and legislative actions, court actions, timeliness of claim reporting, state mix of claimants, and degree of claimant fraud. Additionally, there is also a higher degree of uncertainty due to growth in our newly acquired businesses, with respect to which we have less familiarity and, in some cases, limited historical claims experience. The extent of the impact of a risk factor will also vary by components within a line of business. Individual risk factors are subject to interactions with other risk factors within line of business components. Thus, risk factors can have offsetting or compounding effects on required reserves.

Inflation generally increases the cost of losses covered by insurance contracts. The effect of inflation varies by product. Our property and casualty insurance premiums are established before the amount of losses and LAE and the extent to which inflation may affect such expenses are known. Consequently, we attempt, in establishing rates and reserves, to anticipate the potential impact of inflation in the projection of ultimate costs. For example, we monitor and have seen recent increasing trends in medical costs, wages and legal costs, which are key considerations in setting reserve assumptions for workers’ compensation and other liability lines. We are also monitoring the continued advancements in technology and design found in automobiles and homes and the potential for increased claims settlement costs that may result from repairs or replacement of such equipment. Increases are reflected in our current reserve estimates, but continued increases could contribute to increased losses and LAE in the future.

We are also defendants in various litigation matters, including putative class actions, which may seek punitive damages, bad faith or extra-contractual damages, legal fees and interest, or claim a broader scope of policy coverage or settlement and payment obligations than our interpretation. Resolution of these cases are often highly unpredictable and could involve material unanticipated damage awards.

### Loss and LAE Reserves by Line of Business

#### Reserving Process Overview

Our loss reserves include amounts related to short-tail and long-tail classes of business. “Tail” refers to the time period between the occurrence of a loss and the final settlement of the claim. The longer the time span between the incidence of a loss and the settlement of the claim (i.e., a longer tail), the more the ultimate settlement amount may likely vary from our original estimate.

Short-tail classes consist principally of automobile physical damage, homeowners property, commercial property and marine business. The Chaucer business, while having more longer-tail coverages than our traditional U.S. business, contains a substantial book of worldwide property insurance and reinsurance business, including certain high excess property layers, marine property, aviation property and energy property business, which has relatively short development patterns. For these property coverages, claims are generally reported and settled shortly after the loss occurs because the claims relate to tangible property and are more likely to be discovered shortly after the loss occurs. Consequently, the estimation of loss reserves for these classes is generally less complex. However, this is less true for our Chaucer assumed reinsurance business and high excess property layers where there is often a longer period of time between the date a claim is incurred and the date the claim is reported to us, as the reinsurer, as compared with our

direct insurance operations. This delay in reporting and recognition of the extent of a loss may be greater where Chaucer is not the lead syndicate handling a claim. Therefore, the risk of delayed recognition of loss reserve development is higher for our assumed reinsurance and high excess property layers than for our direct insurance lines.

While we estimate that a majority of our written premium is in what we would characterize as shorter-tailed classes of business, most of our loss reserves relate to longer-tail liability classes of business. Long-tailed classes include commercial liability, automobile liability, workers' compensation, contract surety and other types of third-party coverage. Chaucer's longer-tailed lines include aviation liability, trade credit and political risk classes, marine liability, energy liability, nuclear liability, U.S. casualty treaty liability, international liability, specialist liability, and financial institutions and professional liability. For many liability claims, significant periods of time, ranging up to several years or more, may elapse between the occurrence of the loss, the discovery and reporting of the loss to us and the settlement of the claim. As a result, loss experience in the more recent accident years for long-tailed liability coverage has limited statistical credibility because a relatively small proportion of losses in these accident years (the calendar years in which losses are incurred) are reported claims and an even smaller proportion are paid losses. Liability claims are also more susceptible to litigation and can be significantly affected by changing contract interpretations, the legal environment, the risk and expense of protracted litigation and inflation. Consequently, the estimation of loss reserves for these coverages is more complex and typically subject to a higher degree of variability and uncertainty compared to short-tailed coverages.

## Table of Contents

Most of our indirect business from discontinued voluntary and involuntary pools is long-tailed casualty reinsurance. Reserve estimates for this business are therefore subject to the variability caused by extended loss emergence periods. The estimation of loss reserves for this business is further complicated by delays between the time the claim is reported to the ceding insurer and when it is reported by the ceding insurer to the pool manager and then to us, and by our dependence on the quality and consistency of the loss reporting by the ceding company and actuarial estimates by the pool manager.

A review of loss reserves for each of the classes of business which we write is conducted regularly, generally quarterly. This review process takes into consideration a variety of trends that impact the ultimate settlement of claims. Where appropriate, the review includes a review of overall payment patterns and the emergence of paid and reported losses relative to expectations.

The loss reserve estimation process relies on the basic assumption that past experience, adjusted for the effects of current developments and likely trends, is an appropriate basis for predicting future outcomes. As part of this process, we use a variety of analytical methods that consider experience, trends and other relevant factors. IBNR reserves are generally calculated by first projecting the ultimate cost of all claims that have been reported or expected to be reported in the future and then subtracting reported losses and loss expenses. Reported losses include cumulative paid losses and loss expenses plus case reserves. Within the loss reserving process, standard actuarial methods which include: (1) loss development factor methods; (2) expected loss methods (Bornheutter-Ferguson); and (3) adjusted loss methods (Berquist-Sherman), are given due consideration. These methods are described below:

- Loss development factor methods generally assume that the losses yet to emerge for an accident year are proportional to the paid or reported loss amount observed to date. Historical patterns of the development of paid and reported losses by accident year can be predictive of the expected future patterns that are applied to current paid and reported losses to generate estimated ultimate losses by accident year.
- Bornheutter-Ferguson methods utilize the product of the expected ultimate losses times the proportion of ultimate losses estimated to be unreported or unpaid to calculate IBNR. The expected ultimate losses are based upon current estimates of ultimate losses from prior accident years, adjusted to reflect expected earned premium, current rating, claims cost levels and changes in business mix. The expected losses, and corresponding loss ratios, are a critical component of Bornheutter-Ferguson methodologies and provide a general reasonability guide.
- Berquist-Sherman methods are used for estimating reserves in business lines where historical development patterns may be deemed less reliable for more recent accident years' ultimate losses. Under these methods, patterns of historical paid or reported losses are first adjusted to reflect current payment settlement patterns and case reserve adequacy and then evaluated in the same manner as the loss development factor methods described above. When the adequacy of case reserves change, the Berquist-Sherman incurred method may be deemed more reliable than the reported loss development factor method. Likewise, when the settlement patterns change, the Berquist-Sherman paid method may be deemed more reliable than the paid loss development factor method.

In addition to the methods described above, various tailored reserving methodologies are used for certain businesses. For example, for some low volume and high volatility classes of business, special reserving techniques are utilized that estimate IBNR by selecting the loss ratio that balances actual reported losses to expected reported losses as defined by the estimated underlying reporting pattern. Also, for some classes with long exposure periods (e.g., energy, construction, engineering and political risks), earnings patterns plus an estimated reporting lag applied to the Bornheutter-Ferguson initial expected loss ratio are used to estimate IBNR. This is done in order to reflect the changing average exposure periods by policy year (and consequently accident year).

In completing the loss reserve analysis, a variety of assumptions must be made for each line of business, coverage and accident year. Each estimation method has its own pattern, parameter and/or judgmental dependencies, with no

estimation method being better than the others in all situations. The relative strengths and weaknesses of the various estimation methods, when applied to a particular class of business, can also change over time, depending on the underlying circumstances. In many cases, multiple estimation methods will be valid for the particular facts and circumstances of the relevant class of business. The manner of application and the degree of reliance on a given method will vary by line of business and coverage, and by accident year based on an evaluation of the above dependencies and the potential volatility of the loss frequency and severity patterns. The estimation methods selected or given weight at a particular valuation date are those that are believed to produce the most reliable indication for the loss reserves being evaluated. Selections incorporate input from claims personnel, pricing actuaries, and underwriting management on loss cost trends and other factors that could affect ultimate losses.

For most classes of shorter-tailed business in our Commercial and Personal Lines segments, the emergence of paid and incurred losses generally exhibits a relatively stable pattern of loss development from one accident year to the next. Thus, for these classes, the loss development factor method is generally appropriate. For many of the classes of shorter-tailed business in our Chaucer segment, the emergence of paid and incurred losses may exhibit a relatively volatile pattern of loss development from one accident year to the next. In certain cases where there is a relatively low level of reliability placed on the available paid and incurred loss data, expected loss methods or adjusted loss methods are considered appropriate for the most recent accident year.

## Table of Contents

For longer-tailed lines of business, applying the loss development factor method often requires even more judgment in selecting development factors, as well as more significant extrapolation. For those long-tailed lines of business with high frequency and relatively low per-loss severity (e.g., personal automobile liability), volatility will often be sufficiently modest for the loss development factor method to be given significant weight, even in the most recent accident years, but expected loss methods and adjusted loss methods are always considered and frequently utilized in the selection process. For those long-tailed lines of business with low frequency and high loss potential (e.g., commercial liability), anticipated loss experience is less predictable because of the small number of claims and erratic claim severity patterns. In these situations, the loss development factor methods may not produce a reliable estimate of ultimate losses in the most recent accident years since many claims either have not yet been reported or are only in the early stages of the settlement process. Therefore, the loss reserve estimates for these accident years are based on methods less reliant on extrapolation, such as Bornheutter-Ferguson. Over time, as a greater number of claims are reported and the statistical credibility of loss experience increases, loss development factor methods or adjusted loss methods are given increasing weight.

Management endeavors to apply as much available data as practicable to estimate the loss reserve amount for each line of business, coverage and accident year, utilizing varying assumptions, projections and methods. The ultimate outcome is likely to fall within a range of potential outcomes around this loss reserve estimated amount.

Our carried reserves for each line of business and coverage are determined based on this quarterly loss reserving process. In making the determination, we consider numerous quantitative and qualitative factors. Quantitative factors include changes in reserve estimates in the period, the maturity of the accident year, trends observed over the recent past, the level of volatility within a particular class of business, the estimated effects of reinsurance, including reinstatement premiums, general economic trends, and other factors. Qualitative factors may include legal and regulatory developments, changes in claim handling and case reserving practices, recent entry into new markets or products, changes in underwriting practices or business mix, concerns that we do not have sufficient or quality historical reported and paid loss and LAE information with respect to a particular line or segment of our business, effects of the economy and political outlook, perceived anomalies in the historical results, evolving trends or other factors. In doing so, we must evaluate whether a change in the data represents credible actionable information or an anomaly. Such an assessment requires considerable judgment. Even if a change is determined to be apparent, it is not always possible to determine the extent of the change. As a result, there can be a time lag between the emergence of a change and a determination that the change should be partially or fully reflected in the carried loss reserves. In general, changes are made more quickly to reserves for more mature accident years and less volatile classes of business.

### Reserving Process Uncertainties

As stated above, numerous factors (both internal and external) contribute to the inherent uncertainty in the process of establishing loss reserves, including changes in the rate of inflation for goods and services related to insured damages (e.g., medical care, home repairs, etc.), changes in the judicial interpretation of policy provisions, and settlement obligations, changes in the general attitude of juries in determining damage awards, legislative actions, changes in the extent of insured injuries, changes in the trend of expected frequency and/or severity of claims, changes in our book of business (e.g., change in mix due to new product offerings, new geographic areas, etc.), changes in our underwriting practices, and changes in claim handling procedures and/or systems. Regarding our indirect business from voluntary and involuntary pools, we are provided loss estimates by managers of each pool. We adopt reserve estimates for the pools that consider this information and other facts.

In addition, we must consider the uncertain effects of emerging or potential claims and coverage issues that arise as legal, judicial, social conditions, political risks, and economic conditions change. For example, claims which we consider closed may be re-opened as additional damages surface or new liability or damage theories are presented.

Also, historically we have observed more frequent and higher severity in workers' compensation, bodily injury and other liability claims, and more credit related losses (for example, in our surety business) during periods of economic uncertainty or high unemployment. These and other issues could have a negative effect on our loss reserves by either extending coverage beyond the original underwriting intent or by increasing the number or size of claims.

As part of our loss reserving analysis, we consider the various factors that contribute to the uncertainty in the loss reserving process. Those factors that could materially affect our loss reserve estimates include loss development patterns and loss cost trends, reporting lags, rate and exposure level changes, the effects of changes in coverage and policy limits, business mix shifts, the effects of regulatory and legislative developments, economic circumstances, the effects of changes in judicial interpretations, the effects of emerging claims and coverage issues and the effects of changes in claim handling and claim reserving practices. In making estimates of reserves, however, we do not necessarily make an explicit assumption for each of these factors. Moreover, all estimation methods do not utilize the same assumptions and typically no single method is determinative in the reserve analysis for a line of business and coverage. Consequently, changes in our loss reserve estimates generally are not the result of changes in any one assumption. Instead, the variability will be affected by the interplay of changes in numerous assumptions, many of which are implicit to the approaches used.

## Table of Contents

For each line of business and coverage, we regularly adjust the assumptions and methods used in the estimation of loss reserves in response to our actual loss experience, as well as our judgments regarding changes in trends and/or emerging patterns. In those instances where we primarily utilize analyses of historical patterns of the development of paid and reported losses, this may be reflected, for example, in the selection of revised loss development factors. In longer-tailed classes of business and for which loss experience is less predictable due to potential changes in judicial interpretations, potential legislative actions, the cost of litigation or determining liability and the ultimate loss, inflation, potential claims and other issues, this may be reflected in a judgmental change in our estimate of ultimate losses for particular accident years.

The Chaucer segment contains run-off business comprised of liability lines, notably financial institutions and professional liability business. There is particular uncertainty around the reserve estimates in respect of business written in 2007 and 2008 which have been subject to claims arising out of the financial turmoil in that time period, particularly in the financial institutions book. These claims are unlikely to be settled for some time since they contain numerous coverage issues and in many cases involve class action lawsuits that are likely to take several years to resolve. We have utilized substantially all of our available reinsurance with respect to losses and LAE related to financial institutions business written in 2008.

The future impact of the various factors that contribute to the uncertainty in the loss reserving process is impossible to predict. There is potential for significant variation in the development of loss reserves, particularly for long-tailed classes of business and classes of business that are more vulnerable to economic or political risks.

### Reserving Process for Catastrophe Events

The estimation of claims and claims expense reserves for catastrophes also comprises estimates of losses from reported claims and IBNR, primarily for damage to property. In general, our estimates for catastrophe reserves are determined on an event basis by considering various sources of available information, including specific loss estimates reported to us based on claim adjuster inspections, overall industry loss estimates, and our internal data regarding exposures related to the geographical location of the event. However, depending on the nature of the catastrophe, the estimation process can be further complicated by other impediments. For example, for hurricanes and other severe wind storms, complications often include the inability of insureds to promptly report losses, delays in the ability of claims adjusting staff to inspect losses, difficulties in determining whether losses are covered by our homeowners policy (generally for damage caused by wind or wind driven rain) or are specifically excluded from coverage caused by flood, and challenges in estimating additional living expenses, assessing the impact of demand surge, exposure to mold damage, and the effects of numerous other considerations. Another example is the complication of estimating the cost of business interruption coverage on commercial lines policies. Estimates for catastrophes which occur at or near the end of a financial reporting period may be even less reliable since we will have less claims data available and little time to complete our estimation process. In such situations, we may adapt our practices to accommodate the circumstances.

For events designated as catastrophes which affect our Commercial and Personal Lines business segments, we generally calculate IBNR reserves directly as a result of an estimated IBNR claim count and an estimated average claim amount for each event. Such an assessment involves a comprehensive analysis of the nature of the event, of policyholder exposures within the affected geographic area and of available claims intelligence. Depending on the nature of the event, available claims intelligence could include surveys of field claims associates within the affected geographic area, feedback from a catastrophe claims team sent into the area, as well as data on claims reported as of the financial statement date. In addition, loss emergence from similar historical events is compared to the estimated IBNR for our current catastrophe events to help assess the reasonableness of our estimates.

For events designated as catastrophes which affect our Chaucer business segment, we initially calculate IBNR reserves using a ground up exposure by exposure analysis based on each cedant or insured. These are supported by broker supplied information, catastrophe modeling and industry event estimates. As more specific claim level data becomes available over time for each catastrophe event, these initial estimates are revised and updated by looking at the paid and incurred claim development and by considering it in comparison to previous catastrophe loss events.

#### Reserving Sensitivity Analysis

The following discussion presents disclosure related to possible variation in net reserve estimates due to changes in key assumptions. This information is provided for illustrative purposes only. Many other assumptions may also lead to material reserve adjustments. If any such variations do occur, then they would likely occur over a period of several years and therefore their impact on our results of operations would be recognized during the same periods. It is important to note, however, that there is the potential for future variations greater than the amounts described below and for any such variations to be recognized in a single quarterly or annual period. No consideration has been given to potential correlation or lack of correlation among key assumptions or among lines of business and coverage as described below. As a result and because there are so many other factors which affect our net reserve estimate, it would be inappropriate to take the amounts described below and simply add them together in an attempt to estimate volatility in total. While we believe these are reasonably likely scenarios, the reader should not consider the following sensitivity analysis as illustrative of a net reserve range.

Table of Contents

- Personal and Commercial Automobile Bodily Injury – reserves recorded for bodily injury on U.S. voluntary business were \$595.8 million as of December 31, 2016. A key assumption for bodily injury is the inflation rate underlying the estimated reserve. A five point change (e.g., 4% changed to 9% or -1%) in the embedded inflation rate would have changed total reserves by approximately \$53 million, either positive or negative, respectively, at December 31, 2016.
- Personal Automobile Personal Injury Protection Medical Payment – reserves recorded for personal injury protection medical payment on U.S. voluntary business were \$144.2 million as of December 31, 2016. A key assumption for this coverage is the inflation rate underlying the estimated reserve. Given the long reporting pattern for this line of business, an additional key assumption is the amount of additional development required to reach full maturity, thereby reflecting ultimate costs, as represented by the tail factor. A five point change in the embedded inflation rate and a one point change to the tail factor assumption (e.g., 1.02 changed to 1.01 or 1.03) would have changed total reserves by approximately \$67 million, either positive or negative, at December 31, 2016.
- Workers' Compensation – reserves recorded for workers' compensation on U.S. voluntary business were \$369.2 million as of December 31, 2016. A key assumption for workers' compensation is the inflation rate underlying the estimated reserve. Given the long reporting pattern for this line of business, an additional key assumption is the amount of additional development required to reach full maturity, thereby reflecting ultimate costs, as represented by the tail factor. A five point change in the embedded inflation rate and a one point change to the tail factor assumption would have changed total reserves by approximately \$83 million, either positive or negative, at December 31, 2016.
- Monoline and Multiple Peril General Liability – reserves recorded for monoline and multiple peril general liability on U.S. voluntary business were \$672.0 million as of December 31, 2016. A key assumption for monoline and multiple peril general liability is the implied adequacy of the underlying case reserves. A ten point change in case adequacy (e.g., 10% deficiency changed to 0% or 20% deficiency) would have changed total reserves by approximately \$63 million, either positive or negative, at December 31, 2016.
- Specialty Programs – reserves recorded (including allocated LAE) for the AIX Companies were \$342.3 million as of December 31, 2016. Two key assumptions underlying the actuarial reserve analysis for specialty programs are the inflation rate underlying the estimated reserve for our commercial automobile liability, general liability and workers' compensation coverages, as well as the tail factor selection for workers' compensation. A five point change to the embedded inflation rate for the aforementioned coverages, and a one point change in the workers' compensation tail factor on AIX program business would have changed total reserves by approximately \$50 million at December 31, 2016.
- New classes of business – claims reserves recorded for new classes of Chaucer business (primarily within international liability, U.S. casualty treaty and new lines written in overseas offices) were \$221.7 million as of December 31, 2016. An increase in the ultimate loss ratio by 5%, 10% and 15% in the 2014 and prior, 2015 and 2016 years of account, respectively, on these classes would have increased total reserves by approximately \$33 million at December 31, 2016.
- Casualty classes of business – claims reserves recorded for casualty classes of Chaucer business were \$457.6 million as of December 31, 2016. An increase in the ultimate loss ratio of 2.5% across all classes and years of account would have increased total reserves by approximately \$41 million at December 31, 2016.
- Trade Credit Coverages – Chaucer has experienced losses in its trade credit coverages within the marine line primarily attributable to the worldwide drop in commodity prices in 2016. Claims reserves for these losses as of December 31, 2016 were \$21 million. If Chaucer were to experience another 10 individual claims, at the same average cost of the 28 notified to date, and were to not make any subrogation type recoveries (on existing or the new claims) then this would have increased total reserves by approximately \$21 million at December 31, 2016.

Table of Contents

## Carried Reserves and Reserve Rollforward

The table below provides a reconciliation of the gross beginning and ending reserve for unpaid losses and loss adjustment expenses.

YEARS ENDED DECEMBER 31 (in millions)	2016	2015	2014
Gross loss and LAE reserves, beginning of year	\$ 6,574.4	\$ 6,391.7	\$ 6,231.5
Reinsurance recoverable on unpaid losses	2,280.8	1,983.0	2,030.4
Net loss and LAE reserves, beginning of year	4,293.6	4,408.7	4,201.1
Net incurred losses and LAE in respect of losses occurring in:			
Current year	2,859.3	3,000.2	3,044.9
Prior year non-catastrophe development	140.3	(94.3)	(99.1)
Prior year catastrophe development	(34.9)	(21.8)	(18.3)
Total incurred losses and LAE	2,964.7	2,884.1	2,927.5
Net payments of losses and LAE in respect of losses occurring in:			
Current year	1,142.7	1,245.6	1,328.7
Prior years	1,367.2	1,418.4	1,398.9
Total payments	2,509.9	2,664.0	2,727.6
Commutation of Chaucer Flagstone reinsurance agreement	-	-	85.7
Transfer of U.K. motor business	-	(300.6)	-
Effect of foreign exchange rate changes	(73.8)	(34.6)	(78.0)
Net reserve for losses and LAE, end of year	4,674.6	4,293.6	4,408.7
Reinsurance recoverable on unpaid losses	2,274.8	2,280.8	1,983.0
Gross reserve for losses and LAE, end of year	\$ 6,949.4	\$ 6,574.4	\$ 6,391.7

The table below summarizes the gross reserve for losses and LAE by line of business.

DECEMBER 31 (in millions)	2016	2015	2014
Commercial multiple peril	\$ 899.7	\$ 725.1	\$ 661.5
Workers' compensation	580.2	615.2	615.2
Commercial automobile	374.2	336.2	307.8
Other commercial lines			
AIX program business	453.2	398.6	342.9
General liability	261.9	204.8	181.5
Surety	72.4	36.2	19.2
Umbrella	112.6	95.1	89.6

Other lines	311.5	228.2	182.6
Total other commercial lines	1,211.6	962.9	815.8
Total Commercial Lines	3,065.7	2,639.4	2,400.3
Personal automobile	1,430.2	1,407.5	1,407.0
Homeowners and other personal	123.8	120.2	121.4
Total Personal	1,554.0	1,527.7	1,528.4
Total Chaucer	2,289.4	2,372.5	2,425.8
Total Other Segment	40.3	34.8	37.2
Total loss and LAE reserves	\$ 6,949.4	\$ 6,574.4	\$ 6,391.7

Within other commercial lines in the table above, general liability is comprised of both monoline general liability and certain management and professional liability coverages, and other lines is primarily comprised of lawyers professional liability, fidelity, marine, miscellaneous property, and healthcare lines. Loss and LAE reserve development in our Other Segment is related to our run-off voluntary assumed reinsurance pools business. Also included in the above table, primarily in other lines, are \$61.0 million, \$57.7 million and \$60.6 million of asbestos and environmental reserves as of December 31, 2016, 2015 and 2014, respectively. Included in the Chaucer segment in the above table are \$117.0 million, \$166.0 million and \$203.3 million of reserves as of December 31, 2016, 2015 and 2014, respectively, related to Chaucer's financial and professional liability lines written in 2008 and prior periods.

Table of Contents

## Prior Year Development

In 2016, total net unfavorable prior year loss and LAE development, including catastrophe losses, was \$105.4 million, or approximately 2% of total net reserves, comprised of unfavorable non-catastrophe loss and LAE development of \$140.3 million, partially offset by favorable catastrophe loss development of \$34.9 million. In 2015, total net favorable prior year loss and LAE development, including catastrophe losses, was \$116.1 million, or approximately 3% of total net reserves, comprised of favorable non-catastrophe loss and LAE development of \$94.3 million and favorable catastrophe loss development of \$21.8 million. In 2014, total net favorable prior year loss and LAE development, including catastrophe losses, was \$117.4 million, or approximately 3% of total net reserves, comprised of favorable non-catastrophe loss and LAE development of \$99.1 million and favorable catastrophe loss development of \$18.3 million.

As a result of our 2016 fourth quarter reserve review of domestic lines of business, as discussed further below, carried domestic reserves for prior accident years, excluding catastrophes, were increased by \$174.1 million in the fourth quarter, of which \$161.5 million related to Commercial Lines. The majority of this adjustment is attributed to our long-tailed commercial liability coverages, including our AIX program business. In general, higher than expected loss and LAE emergence in 2016 led us to adjust our reserve assumptions in our fourth quarter reserve review and place greater weight on the adverse severity trends experienced in the most recent calendar years.

It is not possible to know whether the factors that affected loss reserves in the year ended December 31, 2016 will also occur in future periods. As discussed in detail in this Form 10-K, there are inherent uncertainties in estimating reserves for losses and LAE and we encourage you to read this Form 10-K for more information about our reserving process and the judgments, uncertainties and risks associated therewith.

The table below provides a summary of (favorable)/unfavorable loss and LAE reserve development, excluding catastrophes.

YEARS ENDED DECEMBER 31 (in millions)	2016	2015	2014
Commercial multiple peril	\$ 74.2	\$ 15.0	\$ (4.9)
Workers' compensation	(46.7)	(46.9)	(5.6)
Commercial automobile	27.5	23.4	15.1
Other commercial lines:			
AIX program business	75.3	70.7	10.9
General liability	56.0	14.3	2.3
Surety	35.3	1.5	(5.2)
Umbrella	(9.0)	(19.4)	(1.4)
Other lines	10.4	(13.4)	(2.0)
Total other commercial lines	168.0	53.7	4.6
Total Commercial Segment	223.0	45.2	9.2
Personal automobile	4.8	(7.2)	(5.9)
Homeowners and other personal lines	(0.5)	(12.5)	0.8
Total Personal Segment	4.3	(19.7)	(5.1)
Total Chaucer Segment	(95.3)	(120.1)	(104.6)

Edgar Filing: HANOVER INSURANCE GROUP, INC. - Form 10-K

Total Other Segment	8.3	0.3	1.4
Total loss and LAE reserve development, excluding catastrophes	\$ 140.3	\$ (94.3)	\$ (99.1)
2016 Loss and LAE Development, excluding catastrophes			

In 2016, net unfavorable loss and LAE development was \$140.3 million, primarily as a result of net unfavorable development of \$223.0 million for Commercial Lines, partially offset by favorable development of \$95.3 million for Chaucer. The net unfavorable Commercial Lines development primarily resulted from higher than expected losses in other commercial lines of \$168.0 million, which includes the AIX program business. This was primarily driven by AIX programs and business classes which have since been terminated or substantially revised, general liability coverages in accident years 2012 through 2015, and surety bonds in accident years 2012 through 2015. We also experienced higher than expected losses within the commercial multiple peril line of \$74.2 million for accident years 2012 through 2015 and the commercial automobile line of \$27.5 million in accident years 2012 through 2014, both primarily within liability coverages. Partially offsetting the unfavorable development was lower than expected losses of \$46.7 million within the workers' compensation line, primarily related to accident years 2013 through 2015, and, to a lesser extent, our commercial umbrella line related to accident year 2015.

Chaucer's favorable development during 2016 was primarily the result of lower than expected losses in the energy line of \$27.6 million, primarily in the 2013 through 2015 accident years, in the marine and aviation line of \$24.2 million, primarily in the 2008, 2009, 2014 and 2015 accident years and in the property line of \$17.5 million, primarily in the 2013 through 2015 accident years. Additionally, Chaucer experienced lower than expected losses within casualty and other lines, specifically the specialist and international liability lines, of \$13.4 million, primarily in the 2014 and prior accident years. Partially offsetting Chaucer's favorable development was the unfavorable impact of foreign exchange rate movements on prior years' loss reserves. See "Foreign Exchange" section above for further discussion.

2015 Loss and LAE Development, excluding catastrophes

In 2015, net favorable loss and LAE development was \$94.3 million, primarily as a result of favorable development of \$120.1 million for Chaucer, partially offset by net unfavorable development of \$45.2 million for Commercial Lines. As a result of our year-end 2015 reserve review of domestic commercial and personal lines of business, carried reserves were adjusted among several of these lines of business, impacting the prior year development by line, although these adjustments had no impact on aggregate domestic carried reserves.

Chaucer's favorable development was primarily the result of lower than expected losses in the energy line of \$39.9 million, primarily in the 2012 through 2014 accident years, in the marine and aviation line of \$29.6 million, primarily in the 2010, 2012 and 2013 accident years and the property line of \$18.5 million, primarily in the 2012 through 2014 accident years. Additionally, Chaucer experienced lower than expected losses within casualty and other lines, specifically the specialist and international liability lines, of \$21.9 million primarily in the 2008, 2011 and 2013 accident years. Chaucer's favorable development was also partially attributable to the favorable impact of foreign exchange rate movements on prior years' loss reserves. See "Foreign Exchange" section above for further discussion.

The net unfavorable Commercial Lines development primarily resulted from higher than expected losses in other commercial lines of \$53.7 million. This was primarily driven by AIX programs and business classes which have since been terminated and general liability lines in accident years 2009 through 2012, partially offset by lower than expected losses in the commercial umbrella line in accident years 2012 through 2014 and in the healthcare line in accident years 2010 through 2014. We also experienced higher than expected losses within the commercial automobile line of \$23.4 million, primarily related to liability coverage in accident years 2011 through 2013, and in the commercial multiple peril line, primarily in accident years 2008, 2009 and 2011. Partially offsetting the unfavorable development was lower than expected losses of \$46.9 million within the workers' compensation line, primarily related to accident years 2005 through 2014, and, to a lesser extent, our commercial umbrella line, primarily related to our 2012 through 2014 accident years.

#### 2014 Loss and LAE Development, excluding catastrophes

In 2014, net favorable loss and LAE development was \$99.1 million, primarily as a result of favorable development of \$104.6 million for Chaucer, partially offset by net unfavorable development of \$9.2 million for Commercial Lines. Chaucer's favorable development was primarily the result of lower than expected losses in the marine and aviation line of \$40.1 million, primarily in the 2011 through 2013 accident years. Additionally, Chaucer experienced lower than expected losses within the property line of \$21.5 million, primarily in the 2010 through 2013 accident years, and in casualty and other lines, specifically the specialty liability line of \$21.4 million, primarily in the 2010 and 2013 accident years. Chaucer's favorable development was also partially attributable to the favorable impact of foreign exchange rate movements on prior years' loss reserves. See "Foreign Exchange" section above for further discussion.

The net unfavorable Commercial Lines development primarily resulted from higher than expected large losses within the commercial automobile coverages of \$23.1 million, which includes the AIX program business, primarily related to liability coverage in the 2009 through 2012 accident years. Partially offsetting the unfavorable development was lower than expected losses within the workers' compensation line, primarily related to the 2007 through 2012 accident years, and the surety line, primarily related to the 2013 accident year.

#### Catastrophe Loss Development

In 2016, favorable catastrophe development was \$34.9 million, primarily due to lower than expected losses in our property line, within our Chaucer segment, of \$28.1 million and to a lesser extent, in our commercial multiple peril line, within Commercial Lines. In 2015, favorable catastrophe development was \$21.8 million, primarily due to lower than expected losses in our property line, within our Chaucer segment, of \$25.3 million, partially offset by higher than expected losses in our homeowners line, within our Personal Lines segment. In 2014, favorable catastrophe development was \$18.3 million, primarily due to lower than expected losses in our property, marine and energy lines, within our Chaucer segment, of \$23.2 million, partially offset by higher than expected losses in our Commercial Lines segment.

Table of Contents

## 2016 Fourth Quarter Domestic Business Loss and LAE Reserve Increase

The table below provides a summary of (favorable)/unfavorable loss and LAE reserve development excluding catastrophes for the three months ended December 31, 2016:

(in millions)	
Commercial multiple peril	\$ 43.7
Workers' compensation	(32.0)
Commercial automobile	18.4
Other commercial lines:	
AIX program business	49.6
General liability	45.2
Surety	37.9
Umbrella	(9.4)
Other lines	8.1
Total other commercial lines	131.4
Total Commercial Lines Segment	161.5
Personal automobile	8.2
Homeowners and other personal lines	(3.0)
Total Personal Lines Segment	5.2
Total Other Segment	7.4
Total domestic business loss and LAE reserve development, excluding catastrophes(1)	\$ 174.1

(1) For the three months ended December 31, 2016, prior year favorable reserve development for catastrophes was \$2.0 million for our domestic business.

Through the first nine months of 2016, we recorded \$61.5 million of unfavorable loss and LAE reserve development for our domestic business excluding catastrophes, driven by higher than expected large losses in our commercial liability coverages, primarily in our commercial multiple peril line and both our AIX program business and general liability coverages that are within other commercial lines. Additionally, we incurred higher than expected legal defense costs, a component of LAE expenses, during the first nine months of 2016. Other product lines also reported increased claim activity, including commercial automobile and surety.

There was an increased level of loss and LAE activity recorded in certain lines in 2015 that continued throughout 2016, and in some cases intensified into the fourth quarter, and appears to represent longer-term trends that management concluded required recognition. As a result of these trends, during the fourth quarter of 2016, we performed a more in-depth actuarial reserve review in several areas. We assessed the recent large loss activity in our monoline and multiple peril general liability and surety lines and the emergence of such relative to the timing and amounts of expected large losses. For surety, the majority of the recent large loss activity emerged throughout 2016 and intensified during the fourth quarter. We also conducted additional analyses of our general liability coverages and AIX program business within other commercial lines. The results of these analyses indicated that the assumed tail risk included in the loss development patterns needed to be increased. Our claims and actuarial staff also conducted a review of legal defense costs and other claim-specific adjusting expenses as a result of an emerging trend of increased expenses in these areas over recent quarters. This review concluded that the ultimate costs of these loss adjustment expense were higher than previously estimated, causing management to record an increase in estimated LAE, primarily in our commercial multiple peril and general liability product lines.

As a result of our fourth quarter reserve review, we recognized unfavorable prior year reserve development of \$174.1 million for our domestic business excluding catastrophes, largely driven by adverse emergence in most Commercial Lines liability coverages reflecting worsening trends in the number and nature of high severity losses and higher than anticipated legal defense costs. We reacted to this adverse emergence by updating our assumptions about loss severity, loss development patterns, expected loss ratios and loss adjustment expenses for the most recent accident years, placing greater weight on the adverse severity trends experienced in the most recent calendar years. The adverse development in our AIX program business was primarily due to the general liability and commercial automobile liability coverages in the 2011 through 2014 accident years. Additionally, we recognized adverse development in our general liability and commercial multiple peril coverages primarily in accident years 2012 through 2015, contract surety business primarily related to the 2012 through 2015 accident years, and commercial automobile line primarily related to liability coverages for accident years 2012 through 2014. These increases in Commercial Lines reserves were partially offset by favorable development in our workers' compensation line, primarily in the 2013 through 2015 accident years and, to a lesser extent, our commercial umbrella coverage in the 2015 accident year. The adverse prior year reserve development for personal lines was primarily due to higher than expected losses in our bodily injury coverage in accident years 2013 through 2015. The adverse prior year development for our Other segment was due to our run-off voluntary assumed reinsurance pools business. The reserve increase was based on an updated third-party actuarial study received in the fourth quarter for the Excess and Casualty Reinsurance Association ("ECRA") pool that primarily consists of asbestos and environmental exposures.

## Table of Contents

### Asbestos and Environmental Reserves

Although we attempt to limit our exposures to asbestos and environmental damage liability through specific policy exclusions, we have been and may continue to be subject to claims related to these exposures. Ending loss and LAE reserves for all direct business written by our property and casualty companies related to asbestos and environmental damage liability were \$9.9 million, \$9.5 million and \$10.1 million, net of reinsurance of \$19.9 million, \$20.5 million, and \$21.4 million for the years ended December 31, 2016, 2015 and 2014, respectively.

Activity for our asbestos and environmental reserves was not significant to our 2016, 2015 or 2014 financial results. In recent years, average asbestos and environmental payments have declined modestly. As a result of our historical direct underwriting mix of Commercial Lines policies toward smaller and middle market risks, past asbestos and environmental damage liability loss experience has remained minimal in relation to our total loss and LAE incurred experience.

In addition, we have established gross and net loss and LAE reserves for assumed reinsurance pool business with asbestos and environmental damage liability of \$31.2 million, \$27.7 million and \$29.1 million at December 31, 2016, 2015 and 2014, respectively. These reserves relate to pools in which we have terminated our participation; however, we continue to be subject to claims related to years in which we were a participant. Results of operations from these pools are included in our Other segment. A significant part of our pool reserves relates to our participation in the ECRA voluntary pool from 1950 to 1982. In 1982, the pool was dissolved and since that time, the business has been in run-off. Our percentage of the total pool liabilities varied from 1% to 6% during these years. Our participation in this pool has resulted in average paid losses of approximately \$2 million annually over the past ten years. Our ECRA reserves were increased by \$7.4 million based on an updated third-party actuarial study received in the fourth quarter.

We estimate our ultimate liability for asbestos, environmental and toxic tort liability claims, whether resulting from direct business, assumed reinsurance or pool business, based upon currently known facts, reasonable assumptions where the facts are not known, current law and methodologies currently available. Although these outstanding claims are not significant, their existence gives rise to uncertainty and are discussed because of the possibility that they may become significant. We believe that, notwithstanding the evolution of case law expanding liability in asbestos and environmental claims, recorded reserves related to these claims are adequate. Nevertheless, the asbestos, environmental and toxic tort liability reserves could be revised, and any such revisions could have a material adverse effect on our results of operations for a particular quarterly or annual period or on our financial position.

### Reinsurance

We maintain a reinsurance program designed to protect against large or unusual losses and LAE activity. We utilize a variety of reinsurance agreements that are intended to control our exposure to large property and casualty losses, stabilize earnings and protect capital resources, including facultative reinsurance, excess of loss reinsurance and catastrophe reinsurance. We determine the appropriate amount of reinsurance based upon our evaluation of the risks insured, exposure analyses prepared by consultants, our capital allocation models and on market conditions, including the availability and pricing of reinsurance. Reinsurance contracts do not relieve us from our primary obligations to policyholders. Failure of reinsurers to honor their obligations could result in losses to us. We believe that the terms of our reinsurance contracts are consistent with industry practice in that they contain standard terms and conditions with respect to lines of business covered, limit and retention, arbitration and occurrence. Based on an ongoing review of our reinsurers' financial statements, their history of timely payments to us, reported financial strength ratings from rating agencies, and the analysis and guidance of our reinsurance advisors, we believe that our reinsurers are financially sound.

Catastrophe reinsurance serves to protect us, as the ceding insurer, from significant losses arising from a single event including, among others, hurricanes, tornadoes and other windstorms, earthquakes, hail, severe winter weather, fire, explosions, and terrorism. Although we believe our catastrophe reinsurance program, including our retention and co-participation amounts for 2017, are appropriate given our surplus level and the current reinsurance pricing environment, there can be no assurance that our reinsurance program will provide coverage levels that will prove adequate should we experience losses from one significant or several large catastrophes during 2017. Additionally, as a result of the current economic environment, as well as losses incurred by reinsurers in the past several years, the availability and pricing of appropriate reinsurance programs may be adversely affected in future renewal periods. We may not be able to pass these costs on to policyholders in the form of higher premiums or assessments.

See “Reinsurance” in Item 1 – Business of this Form 10-K for further information on our reinsurance programs and “Reinsurance Recoverable Balances” within “Critical Accounting Estimates” in Management’s Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K for discussion of our critical accounting estimates for reinsurance recoverable balances.

Table of Contents

## INVESTMENTS

## INVESTMENT RESULTS

Net investment income before income taxes was as follows:

DECEMBER 31	2016	2015	2014
(dollars in millions)			
Fixed maturities	\$ 245.1	\$ 253.8	\$ 255.8
Equity securities	18.6	17.5	16.5
Other investments	26.7	18.1	9.0
Investment expenses	(11.0)	(10.3)	(11.0)
Net investment income	\$ 279.4	\$ 279.1	\$ 270.3

Earned yield, fixed maturities	3.51%	3.61%	3.71%
Earned yield, total portfolio	3.38%	3.44%	3.42%

The increase in net investment income in both 2016 and 2015 was primarily due to the investment of higher operational cash flows and to additional income from our commercial mortgage loan participations, private equity partnerships and equity securities. These increases were partially offset by the impact of lower new money yields, the effect of lower investment assets associated with our repurchases of stock, repayments of debt and the transfer of the U.K. motor business. We expect average investment yields to continue to decline as new money rates remain lower than embedded book yields.

## INVESTMENT PORTFOLIO

We held cash and investment assets diversified across several asset classes, as follows:

DECEMBER 31	2016		2015		
(dollars in millions)	Carrying Value	% of Total Carrying Value	Carrying Value	% of Total Carrying Value	
Fixed maturities, at fair value	\$ 7,331.3	84.0	% \$ 6,983.4	84.2	%
Equity securities, at fair value	584.4	6.7	576.6	7.0	
Other investments	533.8	6.1	393.4	4.7	
Cash and cash equivalents	282.6	3.2	338.8	4.1	
Total cash and investments	\$ 8,732.1	100.0	% \$ 8,292.2	100.0	%

## CASH AND INVESTMENTS

Total cash and investments increased \$439.9 million, or 5.3%, for the year ended December 31, 2016 primarily due to positive operational cashflows and market value appreciation, partially offset by funding various financing activities, including stock repurchases and debt repayments.

The following table provides information about the investment types of our fixed maturities portfolio:

DECEMBER 31 (in millions)	2016			
Investment Type	Amortized Cost	Fair Value	Net Unrealized Gain (Loss)	Change in Net Unrealized for the Year
U.S. Treasury and government agencies	\$ 342.5	\$ 341.1	\$ (1.4)	\$ (3.4)
Foreign government	235.8	240.7	4.9	3.8
Municipals:				
Taxable	964.2	993.8	29.6	(13.3)
Tax-exempt	101.6	101.6	-	(2.9)
Corporate	3,989.8	4,053.8	64.0	72.9
Asset-backed:				
Residential mortgage-backed	978.2	974.2	(4.0)	(12.5)
Commercial mortgage-backed	550.6	554.3	3.7	2.2
Asset-backed	72.4	71.8	(0.6)	-
Total fixed maturities	\$ 7,235.1	\$ 7,331.3	\$ 96.2	\$ 46.8

The increase in net unrealized gains on fixed maturities was primarily due to narrower corporate credit spreads in 2016.

Table of Contents

Amortized cost and fair value by rating category were as follows:

DECEMBER 31		2016			2015			
(dollars in millions)	Rating Agency	Amortized	Fair	% of	Amortized	Fair	% of	
NAIC	Equivalent	Cost	Value	Fair	Cost	Value	Fair	
Designation	Designation			Value			Value	
1	Aaa/Aa/A	\$ 4,867.7	\$ 4,927.6	67.2	% \$ 4,849.3	\$ 4,939.9	70.7	%
2	Baa	1,955.4	1,975.8	26.9	1,648.3	1,646.0	23.6	
3	Ba	203.2	210.8	2.9	219.4	206.4	3.0	
4	B	195.9	203.7	2.8	185.0	172.3	2.5	
5	Caa and lower	11.8	11.9	0.2	26.6	15.6	0.2	
6	In or near default	1.1	1.5	-	5.4	3.2	-	
Total fixed maturities		\$ 7,235.1	\$ 7,331.3	100.0	% \$ 6,934.0	\$ 6,983.4	100.0	%

Based on ratings by the National Association of Insurance Commissioners (“NAIC”), approximately 94% of the fixed maturity portfolio consisted of investment grade securities at December 31, 2016 and December 31, 2015. The quality of our fixed maturity portfolio remains strong based on ratings, capital structure position, support through guarantees, underlying security, issuer diversification and yield curve position.

Our investment portfolio primarily consists of fixed maturity securities whose fair value is susceptible to market risk, specifically interest rate changes. Duration is a measurement used to quantify our inherent interest rate risk and analyze invested assets relative to our reserve liabilities.

The duration of our fixed maturity portfolio was as follows:

DECEMBER 31		2016			2015			
(dollars in millions)	Amortized	Fair	% of Total	Amortized	Fair	% of Total		
Duration	Cost	Value	Fair Value	Cost	Value	Fair Value		
0-2 years	\$ 1,168.6	\$ 1,190.2	16.2	% \$ 1,271.9	\$ 1,289.7	18.5	%	
2-4 years	2,107.4	2,171.2	29.6	1,820.4	1,836.7	26.3		
4-6 years	1,941.4	1,971.8	26.9	2,225.1	2,236.5	32.0		
6-8 years	1,426.7	1,423.0	19.4	1,395.5	1,394.1	20.0		
8-10 years	515.1	498.4	6.8	140.5	144.5	2.1		
10+ years	75.9	76.7	1.1	80.6	81.9	1.1		
Total fixed maturities		\$ 7,235.1	\$ 7,331.3	100.0	% \$ 6,934.0	\$ 6,983.4	100.0	%

Weighted average duration:

4.5

4.3

Our fixed maturity portfolio remains well laddered with a weighted average duration of 4.5 years, which is within our target range of 1 to 2 times the duration of our insurance liabilities.

We deposit funds with various state and governmental authorities as well as with Lloyd's. See Note 3 - "Investments" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K for additional information.

Our fixed maturity and equity securities are classified as available-for-sale and are carried at fair value. Financial instruments whose value was determined using significant management judgment or estimation constituted less than 1% of the total assets we measured at fair value. See also Note 5 - "Fair Value" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

Equity securities primarily consist of income-oriented large capitalization common stocks and U.S. market equity index exchange traded funds.

Other investments consisted primarily of participations in commercial mortgage loan obligations, investments in private equity limited partnerships and overseas deposits. Commercial mortgage loan participations represent our interest in commercial mortgage loans originated by a third-party. We share, on a pro-rata basis, in all related cash flows of the underlying mortgage loans, which are investment-grade quality and diversified by geographic area and property type. Our investments in limited partnerships include interests in middle market private credit, mezzanine and buyout funds. Overseas deposits are foreign and U.S. dollar-denominated investments maintained in overseas funds and managed exclusively by Lloyd's. These funds are required in order to protect policyholders in overseas markets and enable Chaucer to operate in those markets. Access to those funds is restricted, and we have no control over the investment strategy.

Although we expect to invest new funds primarily in investment grade fixed maturities, we have invested, and expect to continue to invest a portion of funds in common equity securities, below investment grade fixed maturities and other investment assets.

#### OTHER-THAN-TEMPORARY IMPAIRMENTS

For the years ended December 31, 2016, 2015 and 2014 we recognized in earnings \$27.9 million, \$26.8 million, and \$5.5 million, respectively, of OTTI on fixed maturity and equity securities. In 2016, OTTI consisted primarily of \$16.1 million on fixed maturities we intended to sell, \$8.8 million related to estimated credit losses on fixed maturities and \$2.7 million on equity securities. In 2015, OTTI consisted of \$16.0 million related to estimated credit losses on fixed maturities, \$4.0 million on fixed maturities we intended to sell and \$6.8 million on equities. OTTI in 2016 and 2015 related to the energy sector was \$16.6 million and \$19.6 million, respectively.

#### UNREALIZED LOSSES

The following table provides information about our fixed maturities and equity securities that were in an unrealized loss position including the length of time the securities have been in an unrealized loss position. See also Note 3 - "Investments" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

DECEMBER 31	2016		2015	
(in millions)	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses	Fair Value
Fixed maturities:				
Investment grade:				
12 months or less	\$ 60.2	\$ 2,356.9	\$ 43.3	\$ 2,168.8

Edgar Filing: HANOVER INSURANCE GROUP, INC. - Form 10-K

Greater than 12 months	8.7	134.1	25.5	323.4
Total investment grade fixed maturities	68.9	2,491.0	68.8	2,492.2
Below investment grade:				
12 months or less	1.2	46.0	19.6	165.5
Greater than 12 months	12.2	81.8	26.5	63.2
Total below investment grade fixed maturities	13.4	127.8	46.1	228.7
Equity securities:				
12 months or less	0.7	16.3	7.6	166.8
Total	\$ 83.0	\$ 2,635.1	\$ 122.5	\$ 2,887.7

Gross unrealized losses on fixed maturities and equity securities decreased \$39.5 million compared to December 31, 2015, primarily attributable to narrower credit spreads. At December 31, 2016, gross unrealized losses consisted primarily of \$49.0 million of corporate fixed maturities, \$13.6 million of residential mortgage-backed securities and \$9.2 million on municipal securities.

We view gross unrealized losses on fixed maturities and equity securities as temporary since it is our assessment that these securities will recover in the near term, allowing us to realize their anticipated long-term economic value. With respect to gross unrealized losses on fixed maturities, we do not intend to sell, nor is it more likely than not we will be required to sell, such debt securities before this expected recovery of amortized cost (see also “Liquidity and Capital Resources” in Management’s Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K). With respect to equity securities, we have the intent and ability to retain such investments for the period of time anticipated to allow for this expected recovery in fair value. Inherent in our assessment are the risks that, subsequent to the balance sheet date, market factors may differ from our expectations; the global economic recovery is less robust than we expect or reverts to recessionary trends; unexpected fiscal, tax or trade policies may be implemented with unfavorable impacts on investment values; stress in the commodities sectors, including oil and gas and metals and mining, may persist for an extended period of time; we may decide to subsequently sell a security for unforeseen business needs; or changes in the credit assessment or equity characteristics from our original assessment may lead us to determine that a sale at the current value would maximize recovery on such investments. To the extent that there are such adverse changes, an OTTI would be recognized as a realized loss. Although unrealized losses are not reflected in the results of financial operations until they are realized or deemed “other-than-temporary”, the fair value of the underlying investment, which does reflect the unrealized loss, is reflected in our Consolidated Balance Sheets.

Table of Contents

The following table sets forth gross unrealized losses for fixed maturities by maturity period and for equity securities at December 31, 2016 and 2015. Actual maturities may differ from contractual maturities because borrowers may have the right to call or prepay obligations, with or without call or prepayment penalties, or we may have the right to put or sell the obligations back to the issuers.

DECEMBER 31	2016	2015
(in millions)		
Due in one year or less	\$ 0.3	\$ 1.5
Due after one year through five years	15.9	26.5
Due after five years through ten years	37.6	66.1
Due after ten years	10.0	10.8
	63.8	104.9
Mortgage-backed and asset-backed securities	18.5	10.0
Total fixed maturities	82.3	114.9
Equity securities	0.7	7.6
Total fixed maturities and equity securities	\$ 83.0	\$ 122.5

The carrying values of fixed maturity securities on non-accrual status at December 31, 2016 and 2015 were not material. The effects of non-accruals compared with amounts that would have been recognized in accordance with the original terms of the fixed maturities, were reductions in net investment income of \$1.1 million, \$0.8 million and \$2.1 million for the years ended December 31, 2016, 2015 and 2014, respectively. Any defaults in the fixed maturities portfolio in future periods may negatively affect investment income.

Our investment portfolio and shareholders' equity can be significantly impacted by changes in market values of our securities. Market volatility could increase and defaults on fixed income securities could occur. As a result, we could incur additional realized and unrealized losses in future periods, which could have a material adverse impact on our results of operations and/or financial position.

Monetary policies in the developed economies, particularly in the United States, Europe and Japan, are supportive of moderate economic growth, while fiscal policies are more divergent and subject to change. Major central banks continue to closely monitor developments in global financial markets and the outlook for growth and are committed to adjust monetary policy as required to provide liquidity funding, support growth and achieve inflation targets. In the United States, the Federal Reserve (the "Fed") increased its target for the federal funds rate by 0.25% in December and raised its range to 0.50% to 0.75%. The Fed expects that labor market conditions will strengthen further and inflation will rise to 2 percent over the medium term. The Fed has communicated that the timing and size of future adjustments to the federal funds rate will depend on the realized and expected economic conditions relative to its objectives of maximum employment and 2 percent inflation. Based on the Fed's December 2016 economic projections, the federal funds target rate may be increased by 0.25% two or three times during 2017. While the Fed believes near-term risks to the economic outlook appear roughly balanced, they continue to closely monitor inflation indicators and global economic and financial developments.

While the United States has reduced its extraordinary measures and begun to tighten monetary policy, other major central banks continue with their stimulus policies as they seek higher growth and confront inflation and inflation expectations running below target. The removal, modification or suggestion of changes in these policies could have an adverse effect on prevailing market interest rates and on issuers' level of business activity or liquidity, increasing the probability of future defaults. Fundamental conditions in the corporate sector generally remain sound. Operating conditions for metals and mining and oil and gas producers remain challenged, but improvement in supply/demand

fundamentals has recently provided greater stability. While we may experience defaults on fixed income securities, particularly with respect to non-investment grade debt securities, it is difficult to foresee which issuers, industries or markets, other than those previously cited, will be affected. As a result, the value of our fixed maturity portfolio could change rapidly in ways we cannot currently anticipate, and we could incur additional realized and unrealized losses in future periods.

We manage investment assets for our Commercial Lines, Personal Lines, and Other segments based on the requirements of our U.S. combined property and casualty companies. We allocate the investment income, expenses and realized gains and losses to our Commercial Lines, Personal Lines and Other segments based on actuarial information related to the underlying businesses. We manage investment assets separately for our Chaucer segment.

Net realized gains on investments were \$8.6 million, \$19.5 million, and \$50.1 million for 2016, 2015, and 2014, respectively. Net realized gains in 2016 were primarily due to \$36.4 million of gains recognized from the sale of

securities, primarily equities, and to a lesser extent, fixed maturities. These gains were partially offset by \$27.9 million of OTTI losses. Net realized gains in 2015 were primarily due to \$39.9 million of gains recognized from the sale of equity securities and, to a lesser extent, fixed maturities, and \$6.4 million of gains from other investments, primarily partnerships. These gains were partially offset by \$26.8 million of OTTI losses. Net realized gains in 2014 were primarily due to \$55.4 million of gains recognized from the sale of equity securities and to a lesser extent, fixed maturities, partially offset by \$5.5 million of OTTI losses.

In 2016, we redeemed senior debentures with a net carrying value of \$375.2 million at a cost of \$461.3 million, resulting in a loss of \$86.1 million. Additionally, in 2016 we repurchased senior debentures with a net carrying value of \$11.9 million at a cost of \$14.1 million, resulting in a loss of \$2.2 million. In 2015, through several transactions, we repurchased senior debentures with a net carrying value of \$90.2 million at a cost of \$114.3 million, resulting in a loss of \$24.1 million.

Effective June 30, 2015, we transferred our U.K. motor business to an unaffiliated U.K.-based insurance provider, which resulted in the recognition of a \$40.6 million gain, net of tax. See also “Disposal of U.K. Motor Business” in Note 2 – “Dispositions of Businesses” in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

During 2014, we provided eligible former employees with a one-time choice of electing to receive a lump-sum settlement of their remaining qualified defined pension benefit. Including this voluntary lump-sum program, we settled \$55.1 million of our pension obligations with an equal amount paid from plan assets. As a result, we recorded settlement losses of \$10.8 million, reflecting the accelerated recognition of unamortized losses in the plan proportionate to the obligation that was settled. Additionally, we terminated a small qualified plan, which also resulted in the accelerated recognition of unamortized losses of \$1.3 million.

Table of Contents

## QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

## INTEREST RATE SENSITIVITY

Operations are subject to risk resulting from interest rate fluctuations, which may adversely impact the valuation of the investment portfolio. In a rising interest rate environment, the value of the fixed maturity sector, which comprises 84% of our investment portfolio, may decline as a result of decreases in the fair value of the securities. Our intent is to hold securities to maturity and recover the decline in valuation as prices accrete to par. However, our intent may change prior to maturity due to changes in the financial markets, our analysis of an issuer's credit metrics and prospects, or as a result of changes in cash flow needs. Interest rate fluctuations may also reduce net investment income and as a result, profitability. The portfolio may realize lower yields and therefore lower net investment income on securities because the securities with prepayment and call features may prepay at a different rate than originally projected. Also, funds may not be available to invest at higher interest rates.

In a declining interest rate environment, prepayments and calls may increase as issuers exercise their option to refinance at lower rates. The resulting funds would be reinvested at lower yields.

The following table illustrates the estimated impact on the fair value of our fixed maturity portfolio at December 31, 2016 and 2015 of hypothetical changes in prevailing interest rates, defined as changes in interest rates on U.S. Treasury debt. It does not reflect changes in credit spreads, liquidity spreads and other factors that affect the value of securities. Since changes in prevailing interest rates are often accompanied by changes in these other factors, the reader should not assume that an actual change in interest rates would result in the values illustrated.

(dollars in millions)							
INVESTMENT TYPE	+300bp	+200bp	+100bp	0	-100bp	-200bp	-300bp
Residential mortgage-backed securities	\$ 820	\$ 870	\$ 920	\$ 975	\$ 1,015	\$ 1,025	\$ 1,020
Municipal securities	960	1,005	1,050	1,095	1,145	1,180	1,195
All other fixed maturity securities	4,635	4,830	5,040	5,260	5,485	5,680	5,735
Total December 31, 2016	\$ 6,415	\$ 6,705	\$ 7,010	\$ 7,330	\$ 7,645	\$ 7,885	\$ 7,950
Total December 31, 2015	\$ 6,145	\$ 6,410	\$ 6,690	\$ 6,985	\$ 7,260	\$ 7,455	\$ 7,485

Our overall investment strategy is intended to balance investment income with credit and interest rate risk, while maintaining sufficient liquidity and the opportunity for capital growth. The asset allocation process takes into consideration the types of business written and the level of surplus required to support our different businesses and the risk return profiles of the underlying asset classes. We look to balance the goals of capital preservation, net investment income stability, liquidity and total return.

The majority of our assets are invested in the fixed income markets. Through fundamental research and credit analysis, with a focus on value investing, our investment professionals seek to identify a portfolio of stable income-producing higher quality U.S. government, foreign government, municipal, corporate, residential and commercial mortgage-backed securities and asset-backed securities. We have a general policy of diversifying investments both within and across major investment and industrial sectors to mitigate credit and interest rate risk. We monitor the credit quality of our investments and our exposure to individual markets, borrowers, industries, sectors and, in the case of commercial mortgage-backed securities and commercial mortgage loan participations, property

types and geographic locations. In addition, we currently carry debt that is subject to interest rate risk, which was issued at fixed interest rates between 4.50% and 8.207%. Current market conditions, in light of our risk tolerance, restrict our ability to invest fixed income assets at similar rates of return; therefore, earnings on a similar level of assets are not sufficient to cover current debt interest costs.

#### EQUITY PRICE RISK

Our equity securities portfolio is exposed to equity price risk arising from potential volatility in equity market prices. Portfolio characteristics are analyzed regularly and price risk is actively managed through a variety of techniques. A hypothetical increase or decrease of 10% in the market price of our equity securities would have resulted in an increase or decrease in the fair value of the equity securities portfolio of approximately \$58 million at December 31, 2016 and 2015, respectively.

#### FOREIGN CURRENCY EXCHANGE RISK

Chaucer has exposure to foreign currency risk, most notably in insurance contracts and invested assets. Some of the insurance contracts provide that ultimate losses may be payable in foreign currencies depending on the country of original loss. Foreign currency exchange rate risk exists to the extent that there is an increase in the exchange rate of the foreign currency in which losses are ultimately owed. Thus, Chaucer attempts to manage foreign currency risk by seeking to match liabilities under insurance and reinsurance policies that are payable in foreign currencies with cash and investments that are denominated in such currencies. We may also utilize foreign currency forward contracts as part of our investment strategy. The principal currency creating foreign exchange investment risk for us is the U.K. pound sterling, and to a lesser extent, the Canadian dollar, Euro, Australian dollar and Swiss franc. A hypothetical 10% reduction in the value of foreign denominated investments would be expected to produce a loss in fair value of approximately \$58 million and \$59 million at December 31, 2016 and 2015, respectively.

#### INCOME TAXES

We are subject to the tax laws and regulations of the U.S. and foreign countries in which we operate. We file a consolidated U.S. federal income tax return that includes the holding company and its U.S. subsidiaries. Generally, taxes are accrued at the U.S. statutory tax rate of 35% for income from the U.S. operations. Our primary non-U.S. jurisdiction is in the U.K. In July 2013, the U.K. statutory tax rate decreased from 23% to 21% effective April 1, 2014 and from 21% to 20% effective April 1, 2015. In November 2015, the U.K. statutory tax rate decreased from 20% to 19% effective April 1, 2017 and from 19% to 18% effective April 1, 2020 respectively. A further decrease in the U.K. tax rate was enacted in September 2016 to reduce the U.K. statutory rate from 19% to 17% rather than to the previously enacted rate of 18%, effective April 1, 2020. We accrue taxes on certain non-U.S. income that is subject to U.S. tax at the U.S. tax rate. Foreign tax credits, where available, are utilized to offset U.S. tax as permitted. Certain of our non-U.S. income is not subject to U.S. tax until repatriated. Foreign taxes on this non-U.S. income are accrued at the local foreign rate and do not have an accrual for U.S. deferred taxes since these earnings are intended to be indefinitely reinvested overseas.

The provision for income taxes from continuing operations was an expense of \$36.2 million, \$108.6 million and \$95.7 million in 2016, 2015 and 2014, respectively. These amounts resulted in consolidated effective tax rates of 18.8%, 24.7% and 25.3% on pre-tax income for 2016, 2015 and 2014, respectively. These provisions reflect benefits related to tax planning strategies implemented in prior years of \$20.7 million, \$13.3 million and \$16.2 million in 2016, 2015 and 2014, respectively. The provision for 2015 reflects a \$15.6 million tax savings, net of a \$1.7 million provision for uncertain tax positions, on the transfer of the U.K. motor business. The transfer of the U.K. motor business was structured as a tax-free reorganization exempt from current U.S. and U.K. taxation under the business exemption and substantial shareholdings exemption rules, respectively. Since the proceeds from this transaction are expected to be indefinitely reinvested overseas, U.S. taxes have not been recognized. The provision for 2014 also included a benefit related to the reduction of a valuation allowance of \$2.9 million, and a \$6.9 million benefit related to foreign exchange

loss deductions on our 2013 and 2014 U.S. tax returns. Absent these benefits, the provision for income taxes for 2016, 2015, and 2014 would have been expenses of \$56.9 million, or 29.6%, \$137.5 million, or 31.3%, and \$121.7 million, or 32.2%, respectively. The decrease in the 2016 effective tax rate is primarily due to lower underwriting income. The decrease in the 2015 effective tax rate is primarily due to an increase in our recognition of foreign tax credits for taxes paid in certain foreign jurisdictions.

The income tax provision on operating income was an expense of \$83.5 million, \$125.5 million and \$108.3 million for 2016, 2015 and 2014, respectively. These provisions resulted in effective tax rates for operating income of 31.2%, 30.9% and 31.8% in 2016, 2015 and 2014, respectively. The increase in the 2016 effective tax rate is primarily due to a decrease in our operating income for 2016, whereas the decrease in the 2015 effective tax rate is primarily due to the increase in our recognition of foreign tax credits.

Included in our deferred tax net asset as of December 31, 2016 are assets of \$72.3 million related to alternative minimum tax ("AMT") credit carryforwards and \$22.3 million related to foreign tax credit carryforwards. We may utilize these credits to offset future taxable income. The result of their utilization will be a lower current tax rate offset by a higher deferred tax provision, and also lower cash expenditures for federal income taxes during the utilization period. There is no expiration on AMT credit carryforwards, and our foreign tax credit carryforwards will expire in 2026. It is our opinion that there will be sufficient future U.S. and U.K. taxable income to utilize these tax credit carryforwards. Our estimate of the amount and likely realization of tax credit carryforwards may change over time.

During 2014, we released the valuation allowance related to our deferred tax assets of \$2.9 million recorded in 2013. The release of this valuation allowance resulted from appreciation in our investment portfolio and is recorded as a \$2.9 million decrease in our income tax expense.

In prior years, we completed several transactions which resulted in the realization, for tax purposes only, of unrealized gains in our investment portfolio. As a result of these transactions, we were able to realize capital losses carried forward and to release the valuation allowance recorded against the deferred tax asset related to these losses. The releases of valuation allowances were recorded as a benefit in accumulated other comprehensive income. Previously unrealized benefits of \$20.7 million, \$13.3 million and \$16.2 million attributable to non-operating income, are recognized as part of our income from continuing operations during 2016, 2015 and 2014, respectively. The remaining amount of \$57.5 million in accumulated other comprehensive income will be released into income from continuing operations in future years, as the investment securities subject to these transactions are sold or mature.

The IRS audits of the years 2007 through 2010 were settled in 2014 with no material impact to our financial position or results of operations. There is no ongoing audit on our open tax years.

Table of Contents

CRITICAL ACCOUNTING ESTIMATES

The discussion and analysis of our financial condition and results of operations are based upon the consolidated financial statements. These statements have been prepared in accordance with U.S. GAAP, which requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates. The following critical accounting estimates are those which we believe affect the more significant judgments and estimates used in the preparation of our financial statements. Additional information about other significant accounting policies and estimates may be found in Note 1—“Summary of Significant Accounting Policies” in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

RESERVE FOR LOSSES AND LOSS EXPENSES

See “Reserve for Losses and Loss Adjustment Expenses” within “Results of Operations – Segments” in Management’s Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K for a discussion of our critical accounting estimates for loss reserves.

REINSURANCE RECOVERABLE BALANCES

We share insurance risk of the primary underlying contracts with various insurance entities through the use of reinsurance contracts. As a result, when we experience loss events that are subject to a reinsurance contract, reinsurance recoveries are recorded. The amount of the reinsurance recoverable can vary based on the size of the individual loss or the aggregate amount of all losses in a particular line, book of business or an aggregate amount associated with a particular accident year. The valuation of losses recoverable depends on whether the underlying loss is a reported loss, or an incurred but not reported loss. For reported losses, we value reinsurance recoverables at the time the underlying loss is recognized, in accordance with contract terms. For incurred but not reported losses, we estimate the amount of reinsurance recoverable based on the terms of the reinsurance contracts and historical reinsurance recovery information and apply that information to the gross loss reserve estimates. The most significant assumption we use is the average size of the individual losses for those claims that have occurred but have not yet been reported to us. The reinsurance recoverable is based on what we believe are reasonable estimates and is disclosed separately on the financial statements. However, the ultimate amount of the reinsurance recoverable is not known until all losses are settled.

Reinsurance recoverables recorded on insurance losses ceded under reinsurance contracts are subject to judgments and uncertainties similar to those involved in estimating gross loss reserves, as disclosed above. In addition to these uncertainties, our reinsurance recoverables may prove uncollectible if the reinsurers are unable or unwilling to perform under the reinsurance contracts. In establishing our reinsurance allowance for amounts deemed uncollectible, we evaluate the financial condition of our reinsurers and monitor concentration of credit risk arising from our exposure to individual reinsurers. To determine if an allowance is necessary, we consider, among other factors, published financial information, reports from rating agencies, payment history, collateral held and our legal right to offset balances recoverable against balances we may owe. Our reinsurance allowance for doubtful accounts is subject to uncertainty and volatility due to the time lag involved in collecting amounts recoverable from reinsurers. Over the period of time that losses occur, reinsurers are billed and amounts are ultimately collected, economic conditions, as well as the operational and financial performance of particular reinsurers, may change, and these changes may affect the reinsurers’ willingness and ability to meet their contractual obligation to us. It is also difficult to fully evaluate the impact of major catastrophic events on the financial stability of reinsurers, as well as the access to capital that reinsurers may have when such events occur. The ceding of insurance does not legally discharge us from our primary liability for the full amount of the policies, and we will be required to pay the loss and bear collection risk even if the

reinsurers fail to meet their obligations under the reinsurance contracts.

#### PENSION BENEFIT OBLIGATIONS

We currently have a U.S. qualified defined benefit plan, a defined benefit pension plan for our international subsidiary, Chaucer, and several smaller non-qualified benefit plans. In order to measure the liabilities and expense associated with these plans, we must make various estimates and key assumptions, including discount rates used to value liabilities, assumed rates of return on plan assets, employee turnover rates and anticipated mortality rates. Additionally, our Chaucer pension plan must also take into consideration inflation rates. These estimates and assumptions are reviewed at least annually and are based on our historical experience, as well as current facts and circumstances. In addition, we use outside actuaries to assist in measuring the expenses and liabilities associated with our defined benefit pension plans.

60

---

Table of Contents

Two significant assumptions used in the determination of benefit plan obligations and expenses that are dependent on market factors, which have been subject to a greater level of volatility over the past few years, are the discount rate and the return on plan asset assumptions. The discount rate enables us to state expected future cash flows as a present value on the measurement date. We also use this discount rate in the determination of our pre-tax pension expense or benefit. A lower discount rate increases the present value of benefit obligations and increases pension expense. We determined our discount rate for the domestic and Chaucer plans utilizing independent yield curves which provide for a portfolio of high quality bonds that are expected to match the cash flows of our pension plans. Bond information used in the yield curve included only those rated Aa or better as of December 31, 2016 and 2015, respectively, and had been rated by at least two well-known rating agencies. The following provides the discount rates for our qualified pension plan and Chaucer plan for the periods indicated.

	U.S. Qualified Plan	Chaucer Plan
Discount Rate Assumptions:		
2016	4.25%	2.85%
2015	4.875%	3.85%

To determine the expected long-term return on plan assets, we generally consider historical mean returns by asset class for passive indexed strategies, as well as current and expected asset allocations, and adjust for certain factors that we believe will have an impact on future returns. Actual returns on plan assets in any given year seldom result in the achievement of the expected rate of return on assets. Actual returns on plan assets in excess of these expected returns will generally reduce our net actuarial losses (or increase actuarial gains) that are reflected in the accumulated other comprehensive income balance in shareholders' equity, whereas actual returns on plan assets that are less than expected returns will generally increase our net actuarial losses (or decrease actuarial gains) that are reflected in accumulated other comprehensive income. These gains or losses are amortized into expense in future years. The U.S. qualified plan held assets consisting of approximately 85% fixed maturities and 15% equities at December 31, 2016. The composition of Chaucer's plan assets are approximately 55% equities, 35% fixed maturities, and 10% real estate funds at December 31, 2016.

	U.S. Qualified Plan	Chaucer Plan
Expected Return on Asset Assumptions:		
2016	5.25%	5.45%
2015	5.00%	5.45%

The increase in returns for the U.S. plan reflects long-term expectations for improvements, including increased interest rates, in the fixed maturities market in general.

Net actuarial losses of \$40.5 million and \$5.9 million were reflected as decreases to accumulated other comprehensive income in 2016 and 2015, respectively. Net actuarial losses in 2016 resulted primarily from decreases in the discount rate as compared to the prior year that were partially offset by benefits from investments gains experienced during the year. Net actuarial losses in 2015 resulted primarily from lower than expected investment gains that were experienced during the year that were partially offset by a slight increase from the change in the discount rate as compared to the prior year. The change in these actuarial gains and losses is amortized into earnings in future periods. In 2016 and 2015, amortization of actuarial losses from prior years was \$10.1 million and \$10.5 million, respectively.

Expenses related to our defined benefit plans are generally calculated based upon information available at the beginning of the plan year. Our pre-tax expense related to our defined benefit plans was \$11.7 million and \$10.9 million for 2016 and 2015, respectively. Given the positive effect of our actual investment experience in 2016, and taking into consideration the decrease in discount rates for 2017, pension related expenses are expected to increase from \$11.7 million in 2016 to approximately \$13.7 million in 2017.

Table of Contents

Holding all other assumptions constant (using the December 31, 2016 GBP to U.S. dollar conversion rate of 1.23), sensitivity to changes in our key assumptions related to our pension plans is as follows:

(in millions)	U.S. Qualified Plan	Chaucer Plan
Discount Rate -		
25 basis point increase		
Change in Benefit Obligation	\$ (10.8)	\$ (7.8)
Change in 2017 Expense	(1.2)	(1.3)
25 basis point decrease		
Change in Benefit Obligation	11.3	8.3
Change in 2017 Expense	1.3	1.4
Expected Return on Plan Assets -		
25 basis point increase		
Change in 2017 Expense	(1.1)	(0.3)
25 basis point decrease		
Change in 2017 Expense	1.1	0.3
OTHER-THAN-TEMPORARY IMPAIRMENTS		

We employ a systematic methodology to evaluate declines in fair values below amortized cost for all fixed maturity and equity security investments. The methodology utilizes a quantitative and qualitative process that seeks to ensure that available evidence concerning the declines in fair value below amortized cost is evaluated in a disciplined manner. In determining whether a decline in fair value below amortized cost is other-than-temporary, we evaluate several factors and circumstances, including the issuer's overall financial condition; the issuer's credit and financial strength ratings; the issuer's financial performance, including earnings trends, dividend payments and asset quality; any specific events which may influence the operations of the issuer; the general outlook for market conditions in the industry or geographic region in which the issuer operates; and the length of time and the degree to which the fair value of an issuer's securities remains below our cost. With respect to fixed maturity investments, we consider factors that might raise doubt about the issuer's ability to make contractual payments as they become due and whether we expect to recover the entire amortized cost basis of the security. With respect to equity securities, we consider our ability and intent to hold the investment for a period of time to allow for a recovery in value.

We monitor corporate fixed maturity securities with unrealized losses on a quarterly basis and more frequently when necessary to identify potential credit deterioration, as evidenced by ratings downgrades, unexpected price variances, and/or company or industry specific concerns. We apply consistent standards of credit analysis which includes determining whether the issuer is current on its contractual payments, and we consider past events, current conditions and reasonable forecasts to evaluate whether we expect to recover the entire amortized cost basis of the security. We utilize valuation declines as a potential indicator of credit deterioration and apply additional levels of scrutiny in our analysis as the severity of the decline increases or duration persists.

For our impairment review of asset-backed fixed maturity securities, we forecast our best estimate of the prospective future cash flows of the security to determine if we expect to recover the entire amortized cost basis of the security. Our analysis includes estimates of underlying collateral default rates based on historical and projected delinquency rates and estimates of the amount and timing of potential recovery. We consider available information relevant to the

collectability of cash flows, including information about the payment terms of the security, prepayment speeds, the financial condition of the underlying borrowers, collateral trustee reports, credit ratings analysis and other market data when developing our estimate of the expected cash flows.

When an OTTI of a fixed maturity security occurs, and we intend to sell or more likely than not will be required to sell the investment before recovery of its amortized cost basis, the amortized cost of the security is reduced to its fair value, with a corresponding charge to earnings, which reduces net income and earnings per share. If we do not intend to sell the fixed maturity investment or more likely than not will not be required to sell it, we separate the OTTI into the amount we estimate represents the credit loss and the amount related to all other factors. The amount of the estimated loss attributable to credit is recognized in earnings, which reduces net income and earnings per share. The amount of the estimated OTTI that is non-credit related is recognized in other comprehensive income, net of applicable taxes.

We estimate the amount of the OTTI that relates to credit by comparing the amortized cost of the fixed maturity security with the net present value of the fixed maturity security's projected future cash flows, discounted at the effective interest rate implicit in the investment prior to impairment. The non-credit portion of the impairment is equal to the difference between the fair value and the net present value of the fixed maturity security at the impairment measurement date.

OTTIs of equity securities are recorded as realized losses, which reduce net income and earnings per share. The new cost basis of an impaired security is not adjusted for subsequent increases in estimated fair value.

Table of Contents

Temporary declines in market value are recorded as unrealized losses, which do not affect net income and earnings per share, but reduce accumulated other comprehensive income, which is reflected in our Consolidated Balance Sheets. We cannot provide assurance that the OTTI's will be adequate to cover future losses or that we will not have substantial additional impairments in the future. See "Investments" in Management's Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K for further discussion regarding OTTI's and securities in an unrealized loss position.

## DEFERRED TAX ASSETS

Deferred tax assets and liabilities primarily result from temporary differences between the amounts recorded in our consolidated financial statements and the tax basis of our assets and liabilities and loss and tax credit carryforwards. These temporary differences are measured at the balance sheet date using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse.

The realization of deferred tax assets depends upon the existence of sufficient taxable income within the carryback or carryforward periods under the tax law in the applicable tax jurisdiction. Consideration is given to available positive and negative evidence, including reversals of deferred tax liabilities, projected future taxable income in each tax jurisdiction, tax planning strategies and recent financial operations. Valuation allowances are established if, based on the weight of available information, it is more likely than not that all or some portion of the deferred tax assets will not be realized. The determination of the valuation allowance for our deferred tax assets requires management to make certain judgments and assumptions. Our judgments and assumptions are subject to change given the inherent uncertainty in predicting future performance and specific industry and investment market conditions. Changes in valuation allowances are generally reflected in income tax expense or as an adjustment to other comprehensive income depending on the nature of the item for which the valuation allowance is being recorded.

The following are the components of our deferred tax assets and liabilities as of December 31, 2016. There were no valuation allowances required as of December 31, 2016.

DEFERRED TAX ASSETS (LIABILITIES) (in millions)	Amount
Tax attributes	
Tax credit carryforwards	\$ 94.6
Other	
Loss, LAE and unearned premium reserves, net	183.9
Deferred acquisition costs	(141.0)
Employee benefit plans	44.4
Investments, net	(27.9)
Software capitalization	(28.9)
Deferred Lloyd's underwriting income	(32.7)
Other, net	22.7
	20.5
Total	\$ 115.1

We have \$72.3 million of alternative minimum tax credit carryforwards and \$22.3 million of foreign tax credit carryforwards. The alternative minimum tax credit carryforwards have no expiration date and may be used to offset regular federal income taxes due from future income. The foreign tax credit carryforwards will expire beginning in 2026 and may be used to offset federal income taxes due from future foreign-sourced income. In addition, we have

operating loss carryforwards from our Chaucer segment, which have no expiration date. Based on our projection of future economic conditions, taxable income, reversals of existing taxable temporary liabilities, and our strategic tax planning strategies, we believe that these tax credit carryforwards and operating loss carryforwards will be fully realized.

Table of Contents

## STATUTORY SURPLUS OF U.S. INSURANCE SUBSIDIARIES

The following table reflects statutory surplus for our U.S. insurance subsidiaries:

DECEMBER 31 (in millions)	2016	2015
Total Statutory Capital and Surplus - U.S. Insurance Subsidiaries	\$ 2,173.4	\$ 2,192.8

The statutory capital and surplus for our U.S. insurance subsidiaries decreased \$19.4 million during 2016, primarily due to a \$218.8 million dividend paid by Hanover Insurance to THG and an increase in the minimum pension liability, partially offset by operating results and unrealized and realized gains on investments.

The NAIC prescribes an annual calculation regarding risk based capital (“RBC”). RBC ratios for regulatory purposes, as described in the glossary, are expressed as a percentage of the capital required to be above the Authorized Control Level (the “Regulatory Scale”); however, in the insurance industry, RBC ratios are widely expressed as a percentage of the Company Action Level. The following table reflects the Company Action Level, the Authorized Control Level and RBC ratios for Hanover Insurance (which includes Citizens and other U.S. insurance subsidiaries), as of December 31, 2016 and 2015, expressed both on the Industry Scale (Total Adjusted Capital divided by the Company Action Level) and Regulatory Scale (Total Adjusted Capital divided by Authorized Control Level):

(dollars in millions)

DECEMBER 31, 2016 The Hanover Insurance Company	Company Action Level	Authorized Control Level	RBC Ratio Industry Scale	RBC Ratio Regulatory Scale
	\$ 884.0	\$ 442.0	245	% 490
DECEMBER 31, 2015				%

The Hanover Insurance Company	\$ 757.1	\$ 378.5	288	% 576	%
-------------------------------	----------	----------	-----	-------	---

### LLOYD'S CAPITAL REQUIREMENT

Chaucer, through its corporate member, operates in the Lloyd's market, which requires that each member deposit funds, referred to as "Funds at Lloyd's", to support its underwriting interests. Lloyd's sets required capital annually for all participating syndicates based on each syndicate's business plans, the rating and reserving environment, and discussions with regulatory and rating agencies. Although the minimum capital levels are set by Lloyd's, it is the responsibility of Chaucer to continually monitor the risk profiles of its managed syndicates to ensure that the level of funding remains appropriate. Such capital is comprised of investments, undrawn letters of credit provided by various banks, and cash and cash equivalents.

We have the following securities, letters of credit and cash and cash equivalents pledged to Lloyd's to satisfy these capital requirements at December 31, 2016. At December 31, 2016, we are in compliance with the capital requirements and expect to be able to meet these capital requirements in the future.

### DECEMBER 31, 2016

(in millions)

Fixed maturities, at fair value	\$ 491.2
Letters of credit	209.6
Cash and cash equivalents	6.3
Total pledged to Lloyd's	\$ 707.1

Table of Contents

LIQUIDITY AND CAPITAL RESOURCES

Liquidity is a measure of our ability to generate sufficient cash flows to meet the cash requirements of business operations. As a holding company, our primary ongoing source of cash is dividends from our insurance subsidiaries. However, dividend payments to us by our U.S. insurance subsidiaries are subject to limitations imposed by regulators, such as prior notice periods and the requirement that dividends in excess of a specified percentage of statutory surplus or prior year's statutory earnings receive prior approval (so called "extraordinary dividends"). Hanover Insurance paid \$218.8 million in dividends to the holding company during 2016. No dividends were paid to the holding company by Hanover Insurance in 2015 or 2014.

Dividend payments to the holding company by Chaucer are regulated by U.K. law. Dividends from Chaucer are dependent on dividends from its subsidiaries. Annual dividend payments from Chaucer are limited to retained earnings that are not restricted by capital and other requirements for business at Lloyd's. Also, Chaucer must provide advance notice to the U.K.'s Prudential Regulation Authority ("PRA") of certain proposed dividends or other payments from PRA regulated entities. Chaucer paid \$79.5 million, \$61.3 million and \$68.7 million in dividends during 2016, 2015 and 2014, respectively, to the holding company.

In connection with an intercompany borrowing arrangement between Chaucer and the holding company, interest on a \$300 million note is paid by Chaucer on a quarterly basis to the holding company. This interest may be deferred at the election of the holding company. If deferred, the interest is added to the principal. Chaucer paid interest to the holding company totaling \$22.4 million in 2016 and \$22.5 million in both 2015 and 2014.

Sources of cash for our insurance subsidiaries primarily consist of premiums collected, investment income and maturing investments. Primary cash outflows are paid claims, losses and loss adjustment expenses, policy and contract acquisition expenses, other underwriting expenses and investment purchases. Cash outflows related to losses and loss adjustment expenses can be variable because of uncertainties surrounding settlement dates for liabilities for unpaid losses and because of the potential for large losses either individually or in the aggregate. We periodically adjust our investment policy to respond to changes in short-term and long-term cash requirements.

Net cash provided by operating activities was \$737.6 million during 2016, as compared to \$438.4 million in 2015 and \$564.7 million in 2014. The \$299.2 million increase in 2016 compared to 2015 was primarily due to lower reinsurance payments in 2016 as compared to 2015. In 2015, reinsurance payments were made in connection with the disposal of the U.K. motor business that did not recur in 2016. Also contributing to the increase in cash were lower claims payments during 2016. These increases were partially offset by slightly lower premium collections during 2016. The \$126.3 million change in 2015 compared to 2014 was primarily due to higher federal income tax payments resulting from increased earnings, an increase in reinsurance payments, primarily due to the aforementioned disposal of the U.K. motor business, and slightly lower premium collections during 2015. These decreases were partially offset by lower claims payments.

Net cash used in investing activities was \$495.4 million during 2016, as compared to \$171.5 million during 2015 and \$600.7 million in 2014. During 2016, cash used in investing activities primarily related to net purchases of fixed maturities, commercial mortgage loan participations, and other investments. These cash outflows were partially offset by proceeds from net sales of equity securities. During 2015, cash used in investing activities primarily related to net purchases of commercial mortgage loan participations and fixed maturities. These cash outflows were partially offset by net cash received from the disposal of the U.K. motor business. In 2014, cash used in investing activities primarily related to net purchases of fixed maturities, equity securities, and other investments. See Note 3 – "Investments" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

Net cash used in financing activities was \$295.0 million during 2016, as compared to \$294.7 million during 2015 and \$71.7 million in 2014. During 2016, cash used in financing activities primarily resulted from the repayment of debt, repurchases of common stock, and dividend payments to shareholders. These cash outflows were partially offset by cash inflows related to the issuance, on April 8, 2016, of \$375.0 million of senior unsecured debentures. During 2015, cash used in financing activities primarily resulted from repurchases of common stock, repayments of debt and dividend payments to shareholders. During 2014, cash used in financing activities primarily resulted from the payment of dividends to shareholders and the repurchase of common stock, partially offset by cash inflows related to the exercise of employee stock options.

Dividends to common shareholders are subject to quarterly board approval and declaration. During 2016, as declared by the Board, we paid three quarterly dividends of \$0.46 per share and one quarterly dividend of \$0.50 per share to our shareholders totaling \$80.4 million. We believe that our holding company assets are sufficient to provide for future shareholder dividends should the Board of Directors declare them.

At December 31, 2016, THG, as a holding company, held approximately \$126.5 million of fixed maturities and cash. We believe our holding company assets will be sufficient to meet our 2017 obligations, which consist primarily of dividends to our shareholders (as and to the extent declared), the interest on our senior and subordinated debentures, certain costs associated with benefits due to our former life employees and agents, and, to the extent required, payments related to indemnification of liabilities associated with the sale of various subsidiaries. As discussed below, we have, and opportunistically may continue to, repurchase our common stock and debt. We may decide to provide funds to the holding company for these or other opportunities through dividends or short-term intercompany lending arrangements.

We expect to continue to generate sufficient positive operating cash to meet all short-term and long-term cash requirements relating to current operations, including the funding of our qualified defined benefit pension plan and the Chaucer pension plan. Based upon the current estimate of liabilities and certain assumptions regarding investment returns and other factors, our qualified defined benefit pension plan and Chaucer pension plan collectively have plan liabilities in excess of plan assets of approximately \$69 million. The ultimate payment amounts for our benefit plans are based on several assumptions, including but not limited to, the rate of return on plan assets, the discount rate for benefit obligations, mortality experience, interest crediting rates, inflation and the ultimate valuation and determination of benefit obligations. Since differences between actual plan experience and our assumptions are almost certain, changes both positive and negative to our current funding status and ultimately our obligations in future periods are likely.

Our insurance subsidiaries maintain a high degree of liquidity within their respective investment portfolios in fixed maturity and short-term investments. We believe that the quality of the assets we hold will allow us to realize the long-term economic value of our portfolio, including securities that are currently in an unrealized loss position. We do not anticipate the need to sell these securities to meet our insurance subsidiaries' cash requirements since we expect our insurance subsidiaries to generate sufficient operating cash to meet all short-term and long-term cash requirements. However, there can be no assurance that unforeseen business needs or other items will not occur causing us to have to sell those securities in a loss position before their values fully recover, thereby causing us to recognize impairment charges in that time period.

Our Board of Directors has authorized aggregate repurchases of our common stock of up to \$900 million. Under the repurchase authorizations, the Company may repurchase, from time to time, common shares in amounts, at prices and at such times as the Company deems appropriate, subject to market conditions and other considerations. Repurchases may be executed using open market purchases, privately negotiated transactions, accelerated repurchase programs or other transactions. We are not required to purchase any specific number of shares or to make purchases by any certain date under this program. During 2016, we repurchased approximately 1.3 million shares of our common stock at a cost of \$105.6 million.

On April 8, 2016, we issued \$375.0 million aggregate principal amount of 4.50% senior unsecured debentures due April 15, 2026. Net proceeds of the debt issuance were \$370.7 million. The net proceeds were used, together with cash on hand, to redeem outstanding 7.50% senior notes due March 1, 2020 and 6.375% senior notes due June 15, 2021, resulting in a pre-tax loss of \$86.1 million, related primarily to the required “make-whole” provision in these issuances. During the fourth quarter of 2016, we also repurchased senior debentures with a net carrying value of \$11.9 million at a cost of \$14.1 million, resulting in a loss of \$2.2 million. During 2015, we repurchased senior debentures with a net carrying value of \$90.2 million at a cost of \$114.3 million, resulting in a loss of \$24.1 million. Additional information related to all borrowings is in Note 6 – “Debt and Credit Arrangements” in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K.

We have a \$200.0 million credit agreement which expires in November 2018, with an option to increase the facility to \$300.0 million assuming no default and satisfaction of certain other conditions. The agreement also includes a \$50 million sub-facility for standby letters of credit that can be used for general corporate purposes. Borrowings, if any, under the agreement are unsecured and incur interest at a rate per annum equal to, the higher of (a) the prime commercial lending rate of the administrative agent, (b) the Federal Funds Rate plus half of a percent, or (c) the one month Adjusted LIBOR plus one percent and any applicable margin. The agreement contains financial covenants including, but not limited to, maintaining at least a certain level of consolidated equity, maximum consolidated leverage ratios and requires certain of our subsidiaries to maintain a minimum RBC ratio. We had no borrowings under this agreement during 2016, 2015 and 2014.

Membership in the FHLBB provides us with access to additional liquidity based on our stock holdings and pledged collateral. At December 31, 2016, we had additional borrowing capacity of \$57.6 million. There were no borrowings outstanding under this agreement at December 31, 2016; however, we have borrowed and may continue to borrow, from time to time, through this facility to provide short term liquidity.

On October 15, 2015, we entered into a Standby Letter of Credit Facility Agreement (the “Facility Agreement”) not to exceed £170.0 million (or \$209.6 million) outstanding at any one time, with the option to increase the amount available for issuances of letters of credit to £235.0 million (or \$289.8 million) in the aggregate on one occasion only during the term of the Facility Agreement (subject to the consent of all lenders and assuming no default and satisfaction of other specified conditions). The Facility Agreement provides certain covenants including, but not limited to, the syndicates’ financial condition. The Facility Agreement provides regulatory capital supporting Chaucer’s underwriting activities for the 2015, 2016 and 2017 years of account and each prior open year of account. The Facility Agreement is generally renewed biennially to support new underwriting years.

Table of Contents

The Facility agreement is subject to a letter of credit commission fee on outstanding letters of credit that is payable quarterly. The Facility Agreement fee ranges from 1.125% to 1.50% per annum, depending on our credit ratings for portions that are not cash collateralized, and 0.275% per annum for portions that are cash collateralized. We may, from time to time, collateralize a portion of the outstanding letter of credit. In addition to the commission fee on the uncollateralized outstanding letter of credit, a commitment fee in respect of the unutilized commitments under the Facility Agreement is payable quarterly, and ranges from 0.394% to 0.525% per annum, depending on our credit ratings. Chaucer is also required to pay customary agency fees. We paid \$3.5 million and \$3.7 million in interest costs in 2016 and 2015, respectively.

Simultaneous with the Facility Agreement, we entered into a Guaranty Agreement (the “Guaranty Agreement”) with Lloyds Bank plc, as Facility Agent and Security Agent, pursuant to which, we unconditionally guarantee the obligations of Chaucer under the Facility Agreement. The Guaranty Agreement contains certain financial covenants that require us to maintain a minimum net worth, a minimum risk-based capital ratio at our primary U.S. domiciled property and casualty companies and a maximum leverage ratio, and certain negative covenants that limit our ability, among other things, to incur or assume certain debt, grant liens on our property, merge or consolidate, dispose of assets, materially change the nature or conduct of our business and make restricted payments (except, in each case, as provided by certain exceptions). The Guaranty Agreement also contains certain customary representations and warranties.

At December 31, 2016, we were in compliance with the covenants of our debt and credit agreements.

**CONTRACTUAL OBLIGATIONS**

Financing obligations generally include repayment of our senior debentures, subordinated debentures, borrowings from the FHLBB, and operating lease payments. The following table represents our annual payments related to the contractual principal and interest payments of these financing obligations as of December 31, 2016 and operating lease payments reflect expected cash payments based upon lease terms. In addition, we also have included our estimated payments related to our loss and LAE obligations and our current expectation of payments to be made to support the obligations of our benefit plans. The following table also includes commitments to purchase investment securities at a future date. Actual payments may differ from the contractual and/or estimated payments in the table.

DECEMBER 31, 2016 (in millions)	Maturity less than 1 year	Maturity 1-3 years	Maturity 4-5 years	Maturity in excess of 5 years	Total
Debt (1)	\$ -	\$ -	\$ -	\$ 797.3	\$ 797.3
Interest associated with debt (1)	47.7	89.4	89.4	523.2	749.7
Operating lease commitments (2)	16.7	27.3	14.8	2.9	61.7
Qualified defined benefit pension plan funding obligations (3)	7.4	-	-	-	7.4
Non-qualified defined benefit pension and post-retirement benefit obligation (4)	4.0	6.7	6.0	12.6	29.3
Investment commitments (5)	43.2	51.6	15.2	0.1	110.1
Loss and LAE obligations (6)	2,206.0	2,220.5	952.0	1,570.9	6,949.4

(1) Debt includes our senior debentures due in 2026, which pay annual interest at a rate of 4.50%, our senior debentures due in 2025, which pay annual interest at a rate of 7.625%, our subordinated debentures due in 2053,

which pay annual interest at a rate of 6.35%, and our subordinated debentures due in 2027, which pay cumulative dividends at an annual rate of 8.207%. Payments related to the principal amounts of these agreements represent contractual maturity; therefore, principal and interest associated with these obligations are reflected in the above table based upon the contractual maturity dates. In addition, we have \$125.0 million of borrowings under a collateralized borrowing program with the FHLBB that pays interest monthly at a rate of 5.50% annually. Such borrowings are available for a twenty-year term or through September 25, 2029. Also, interest includes contractual interest related to the uncollateralized portion of our £170.0 million Standby Letter of Credit Facility.

- (2) Our U.S. and international subsidiaries are lessees with a number of operating leases.
- (3) Reflects the minimum amount expected to be contributed to the Chaucer plan based upon results of its triennial funding review, expected to be completed in 2017, and the plan's current funded status. We do not expect to make any significant contributions to our U.S. qualified plan in order to meet our minimum funding requirements for the next several years and therefore no contributions to that plan are included in this schedule. However, additional contributions may be required in the future to both plans based on the level of pension assets and liabilities in future periods.

The ultimate payment amount for our pension plans are based on several assumptions, including, but not limited to, the rate of return on plan assets, the discount rate for benefit obligations, mortality experience, interest crediting rates and the ultimate valuation of benefit obligations. Differences between actual plan experience and our assumptions are likely and will likely result in changes to our funding obligations in future periods.

- (4) Non-qualified defined benefit pension and postretirement benefit obligations reflect estimated payments to be made through plan year 2026 for pension, postretirement and postemployment benefits, although it is likely that payments will be made beyond 2026. Estimates of these payments and the payment patterns are based upon historical experience.
- (5) Investment commitments relate primarily to partnerships.
- (6) Unlike many other forms of contractual obligations, loss and LAE reserves do not have definitive due dates and the ultimate payment dates are subject to a number of variables and uncertainties. As a result, the total loss and LAE reserve payments to be made by period, as shown in the table, are estimates based principally on historical experience.

#### OFF-BALANCE SHEET ARRANGEMENTS

We currently do not have any material off-balance sheet arrangements that are reasonably likely to have an effect on our financial position, revenues, expenses, results of operations, liquidity, capital expenditures, or capital resources.

#### CONTINGENCIES AND REGULATORY MATTERS

Information regarding litigation and legal contingencies appears in Note 18—"Commitments and Contingencies" in the Notes to Consolidated Financial Statements included in Financial Statements and Supplementary Data of this Form 10-K. Information related to certain regulatory and industry developments are contained in "Regulation" in Part 1 - Item 1 of this Form 10-K and in "Risk Factors" in Part 1 - Item 1A of this Form 10-K.

#### RATING AGENCIES

Insurance companies are rated by rating agencies to provide both industry participants and insurance consumers information on specific insurance companies. Higher ratings generally indicate the rating agencies' opinion regarding financial stability and a stronger ability to pay claims.

We believe that strong ratings are important factors in marketing our products to our agents and customers, since rating information is broadly disseminated and generally used throughout the industry. Insurance company financial strength ratings are assigned to an insurer based upon factors deemed by the rating agencies to be relevant to policyholders and are not directed toward protection of investors. Such ratings are neither a rating of securities nor a recommendation to buy, hold or sell any security. Customers typically focus on claims-paying ratings, while creditors

focus on debt ratings. Investors use both to evaluate a company's overall financial strength.

#### RISKS AND FORWARD-LOOKING STATEMENTS

Management's Discussion and Analysis contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. For a discussion of indicators of forward-looking statements and specific important factors that could cause actual results to differ materially from those contained in forward-looking statements, see "Risk Factors" in Part 1 – Item 1A of this Form 10-K. This Management's Discussion and Analysis should be read and interpreted in light of such factors.

Table of Contents

GLOSSARY OF SELECTED INSURANCE TERMS

Account business - Customers with multiple policies and/or coverages.

Account rounding – The conversion of single policy customers to accounts with multiple policies and/or additional coverages.

Benefit payments – Payments made to an insured or their beneficiary in accordance with the terms of an insurance policy.

Capacity – The maximum amount of business which may be accepted by a syndicate or a corporate member on a syndicate, expressed in terms of gross premium written, net of commission.

Casualty insurance – Insurance that is primarily concerned with the losses caused by injuries to third persons and their property (other than the policyholder) and the related legal liability of the insured for such losses.

Catastrophe – A severe loss, resulting from natural or manmade events, including, among others, hurricanes, tornadoes and other windstorms, earthquakes, hail, severe winter weather, fire, explosions, and terrorism.

Catastrophe loss – Loss and directly identified loss adjustment expenses from catastrophes, including development on prior years' catastrophe loss reserves. The Insurance Services Office ("ISO") Property Claim Services ("PCS") defines a catastrophe loss as an event that causes \$25 million or more in U.S. industry insured property losses and affects a significant number of property and casualty policyholders and insurers. In addition to those catastrophe events declared by ISO, claims management also generally includes within the definition of a "catastrophe loss", a property loss event that causes approximately \$5 million or more in Company insured losses and affects in excess of one hundred policy holders or multiple independent risks. For the international business in our Chaucer segment, management utilizes a "catastrophe loss" definition that is substantially consistent with the ISO definition framework.

Cede; cedent; ceding company – When a party reinsures its liability with another, it "cedes" business and is referred to as the "cedent" or "ceding company".

Corporate member – A company admitted to membership of Lloyd's and which provides capital in support of a Lloyd's syndicate to enable the syndicate to undertake underwriting risks.

Credit spread – The difference between the yield on the debt securities of a particular corporate debt issue and the yield of a similar maturity of U.S. Treasury debt securities.

Current accident year results – A non-GAAP measure of the estimated earnings impact of current premiums offset by estimated loss experience and expenses for the current accident year. This measure includes the estimated increase in revenue associated with higher prices (premiums), including those caused by price inflation and changes in exposure, partially offset by higher volume driven expenses and inflation of loss costs. Volume driven expenses include acquisition costs such as commissions paid to agents, which are typically based on a percentage of premium dollars.

Earned premium – The portion of a premium that is recognized as income, or earned, based on the expired portion of the policy period, that is, the period for which loss coverage has actually been provided. For example, after six months, \$50 of a \$100 annual premium is generally considered earned premium. The remaining \$50 of annual premium is unearned premium. Net earned premium is earned premium net of reinsurance.

Economic interest – The share of syndicate underwriting capacity supported by capital from Chaucer Holdings Limited.

Excess of loss reinsurance – Reinsurance that indemnifies the insured against all or a specific portion of losses under reinsured policies in excess of a specified dollar amount or “retention”.

Exposure – As it relates to underwriting, a measure of the rating units or premium basis of a risk; for example, an exposure of a number of automobiles. As it relates to loss events, the maximum value of claims made on an insurer from an event or events that would result in the total exhaustion of the cover or indemnity offered by an insurance policy.

Exposure management actions – Actions that focus on improving underwriting profitability and/or lessening earnings volatility by reducing our exposures and property concentrations in certain geographies and lines that are more prone to both catastrophe and non-catastrophe losses. These actions include, but are not limited to, non-renewal, rate increases, stricter underwriting standards and higher deductible utilization, agency management actions, and more selective portfolio management by modifying our business mix.

Frequency – The number of claims occurring during a given coverage period.

Funds at Lloyd’s – Funds held in trust at Lloyd’s as security for the policyholders and to support a corporate member’s overall underwriting activities. The funds must be in a form approved by Lloyd’s and be maintained at certain specified levels.

Inland Marine Insurance – In Commercial Lines, this is a type of coverage developed for shipments that do not involve ocean transport. It covers articles in transit by all forms of land and air transportation as well as bridges, tunnels and other means of transportation and communication. In the context of Personal Lines, this term relates to floater policies that cover expensive personal items such as fine art and jewelry.

Loss adjustment expenses (“LAE”) – Expenses incurred in the adjusting, recording, and settlement of claims. These expenses include both internal company expenses and outside services. Allocated LAE (“ALAE”) refers to defense and cost containment expenses, including legal fees, court costs, and investigation fees. Unallocated LAE (“ULAE”) refers to expenses that generally cannot be associated with a specific claim. ULAE includes internal costs such as salaries, fringe benefits and other overhead costs associated with the claim settlement process and external adjustment and appraisal fees.

Loss costs – An amount of money paid for an insurance claim.

Loss reserves – Liabilities established by insurers to reflect the estimated cost of claims payments and the related expenses that the insurer will ultimately be required to pay in respect of insurance it has written. Reserves are established for losses and for LAE.

Managing agent – An agent that runs the affairs of a syndicate.

Peril – A cause of loss.

Price(ing) increase or decrease (Commercial Lines and Chaucer) – Represents the average change in premium on renewed policies caused by the estimated net effect of base rate changes, discretionary pricing, inflation or changes in policy level exposure or insured risk.

Price(ing) increase or decrease (Personal Lines) – The estimated cumulative premium effect of approved rate actions applied to policies available for renewal, regardless of whether or not policies are actually renewed. Pricing changes do not represent actual increases or decreases realized by the Company.

Property insurance – Insurance that provides coverage for tangible property in the event of loss, damage or loss of use.

Rate – The estimated pure pricing factor upon which the policyholder’s premium is based excluding changes in exposure or risk.

Ratios: (1)

Catastrophe loss ratio –The ratio of catastrophe losses incurred to premiums earned.

Combined ratio – This ratio is the GAAP equivalent of the statutory ratio that is widely used as a benchmark for determining an insurer’s underwriting performance. A ratio below 100% generally indicates profitable underwriting prior to the consideration of investment income. A combined ratio over 100% generally indicates unprofitable underwriting prior to the consideration of investment income. The combined ratio is the sum of the loss and loss adjustment expense ratio and the expense ratio.

Expense Ratio – The ratio of underwriting expenses (including the amortization of deferred acquisition costs), less premium installment fee income and premium charge offs, to premiums earned for a given period.

Loss and Loss adjustment expense (“LAE”) ratio – The ratio of loss and loss adjustment expenses to premiums earned for a given period.

Loss ratio – The ratio of losses to premiums earned for a given period.

Reinstatement premium – A pro-rata reinsurance premium that may be charged for reinstating the amount of reinsurance coverage reduced as the result of a reinsurance loss payment under a reinsurance treaty. For events that we are the insured party, the charge would decrease premiums; for events where we provide reinsurance coverage, the charge would increase premiums. For example, in 2005, this premium was required to ensure that our property catastrophe occurrence treaty, which was exhausted by Hurricane Katrina, was available again in the event of another large catastrophe loss in 2005.

Reinsurance – An arrangement in which an insurance company, or a reinsurance company, known as the reinsurer, agrees to indemnify another insurance or reinsurance company, known as the ceding company, against all or a portion of the insurance or reinsurance risks underwritten by the ceding company under one or more policies. Reinsurance can provide a ceding company with several benefits, including a reduction in net liability on risks and catastrophe protection from large or multiple losses. Reinsurance does not legally discharge the primary insurer from its liability with respect to its obligations to the insured.

Risk based capital (“RBC”) – A method of measuring the minimum amount of capital appropriate for an insurance company to support its overall business operations in consideration of its size and risk profile. The RBC ratio for regulatory purposes is calculated as total adjusted capital divided by required risk based capital. Total adjusted capital for property and casualty companies is capital and surplus, adjusted for the non-tabular reserve discount applicable to our assumed discontinued accident and health insurance business. The Company Action Level is the first level at which regulatory involvement is specified based upon the level of capital.

Regulators may take action for reasons other than triggering various RBC action levels. The various action levels are summarized as follows:

- The Company Action Level, which equals 200% of the Authorized Control Level, requires a company to prepare and submit a RBC plan to the commissioner of the state of domicile. A RBC plan proposes actions which a company may take in order to bring statutory capital above the Company Action Level. After review, the commissioner will notify the company if the plan is satisfactory.
- The Regulatory Action Level, which equals 150% of the Authorized Control Level, requires the insurer to submit to the commissioner of the state of domicile an RBC plan, or if applicable, a revised RBC plan. After examination or

analysis, the commissioner will issue an order specifying corrective actions to be taken.

- The Authorized Control Level authorizes the commissioner of the state of domicile to take whatever regulatory actions are considered necessary to protect the best interest of the policyholders and creditors of the insurer.
- The Mandatory Control Level, which equals 70% of the Authorized Control Level, authorizes the commissioner of the state of domicile to take actions necessary to place the company under regulatory control (i.e., rehabilitation or liquidation).

Security Lending – We engage our banking provider to lend securities from our investment portfolio to third parties. These lent securities are fully collateralized by cash. We monitor the fair value of the securities on a daily basis to assure that the collateral is maintained at a level of at least 102% of the fair value of the loaned securities. We record securities lending collateral as a cash equivalent, with an offsetting liability in expenses and taxes payable.

Severity – A monetary increase in the loss costs associated with the same or similar type of event or coverage.

Solvency II – European Commission-led fundamental review of the capital adequacy regime for the European insurance industry.

Specialty Lines – A major component of our other commercial lines. There is no accepted industry definition of “specialty lines”, but for our purpose specialty lines consist of products such as inland and ocean marine, surety, specialty property, professional liability, management liability and various other program businesses. When discussing net premiums written and other financial measures of our specialty businesses, we may include non-specialty premiums that are written as part of the entire account.

Statutory accounting practices – Recording transactions and preparing financial statements in accordance with the rules and procedures prescribed or permitted by insurance regulatory authorities including the NAIC, which in general reflect a liquidating, rather than going concern, concept of accounting.

Syndicate – A group of members underwriting insurance at Lloyd’s through the agency of a managing agent, to whom a particular syndicate number is assigned.

Underwriting – The process of selecting risks for insurance and determining in what amounts and on what terms the insurance company will accept risks.

Underwriting expenses – Expenses incurred in connection with the acquisition, pricing and administration of a policy or contract, and other insurance company expenses unrelated to claims handling or investments.

Unearned premiums – The portion of a premium representing the unexpired amount of the contract term as of a certain date.

Written premium – The premium assessed for the entire coverage period of an insurance policy or contract without regard to how much of the premium has been earned. See also “Earned premium” above. Net premium written is written premium net of reinsurance.

(1) Ratios may not be comparable to similarly titled measures of other companies.

## ITEM 7A—QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Reference is made to “Quantitative and Qualitative Disclosures about Market Risk” in Management’s Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-K.

Table of Contents

ITEM 8 – FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of

The Hanover Insurance Group, Inc.:

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a)(1) present fairly, in all material respects, the financial position of The Hanover Insurance Group, Inc. and its subsidiaries at December 31, 2016 and December 31, 2015, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2016 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedules listed in the index appearing under Item 15(a)(2) present fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedules, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements, on the financial statement schedules, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Table of Contents

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

A. Basis of Presentation and Principles of Consolidation

The consolidated financial statements of The Hanover Insurance Group, Inc. (“THG” or the “Company”), include the accounts of The Hanover Insurance Company (“Hanover Insurance”) and Citizens Insurance Company of America (“Citizens”), THG’s principal U.S. domiciled property and casualty companies; Chaucer Holdings Limited (“Chaucer”), a specialist insurance underwriting group which operates through the Society and Corporation of Lloyd’s (“Lloyd’s”); and certain other insurance and non-insurance subsidiaries. These legal entities conduct their operations through several business segments discussed in Note 14 – “Segment Information”. The consolidated financial statements also include the Company’s discontinued operations, consisting primarily of the Company’s former life insurance businesses, and its accident and health business. All intercompany accounts and transactions have been eliminated.

The preparation of financial statements in conformity with generally accepted accounting principles in the United States of America (“U.S. GAAP”) requires the Company to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates. In the opinion of the Company’s management these financial statements reflect all adjustments, consisting of normal recurring items necessary for a fair presentation of the financial position and results of operations.

B. Investments

Fixed maturities and equity securities are classified as available-for-sale and are carried at fair value, with unrealized gains and losses, net of taxes, reported in accumulated other comprehensive income, a separate component of shareholders’ equity. The amortized cost of fixed maturities is adjusted for amortization of premiums and accretion of discounts to maturity.

Other investments consist primarily of mortgage participations, limited partnerships and overseas deposits. Mortgage participations represent interests in commercial mortgage loans originated and serviced by a third-party of which the Company shares, on a pro-rata basis, in all related cash flows of the underlying mortgage loans. Due to certain reacquisition rights retained by the third-party in the loan participation, these investments are accounted for as secured borrowings under Accounting Standards Codification (“ASC”) 860, Transfers and Servicing (“ASC 860”). Mortgage participations are stated at unpaid principal balances adjusted for deferred fees or expenses, net of reserves. Reserves on mortgages are established and are collectively evaluated based on losses expected by the Company for loans that may not be collectible in full. In establishing reserves, the Company considers, among other things, the estimated fair value of the underlying collateral.

Investments in limited partnership interests include interests in private equity funds. Where the Company’s interest is so minor that it exercises virtually no influence over operating and financial policies, investments in limited partnership interests are accounted for in accordance with the cost method of accounting; all other investments in limited partnership interests are accounted for in accordance with the equity method of accounting.

Overseas deposits are investments maintained in overseas funds and managed exclusively by Lloyd’s. These funds are required in order to protect policyholders in overseas markets and enable the Company to operate in those markets. Overseas deposits are carried at fair value. Realized and unrealized gains and losses on overseas deposits, including the impact of foreign currency movements, are reflected in the income statement in the period the gain or loss was

generated.

Net investment income includes interest, dividends and income from limited partnership interests and overseas deposits. Interest income is recognized based on the effective yield method which includes the amortization of premiums and accretion of discounts. The effective yield used to determine the amortization for fixed maturities subject to prepayment risk, such as mortgage-backed and asset-backed securities, is recalculated and adjusted periodically based upon actual historical and projected future cash flows. The adjustment to yields for highly rated prepayable fixed maturities are accounted for using the retrospective method. The adjustment to yields for all other prepayable fixed maturities are accounted for using the prospective method. Fixed maturities and mortgage participations that are delinquent are placed on non-accrual status, and thereafter interest income is recognized only when cash payments are received.

Realized investment gains and losses are reported as a component of revenues based upon specific identification of the investment assets sold. When an other-than-temporary decline in value of a specific investment is deemed to have occurred, and a charge to earnings is required, the Company recognizes a realized investment loss.

74

---

## Table of Contents

The Company reviews investments in an unrealized loss position to identify other-than-temporary declines in value. When it is determined that a decline in value of an equity security is other-than-temporary, the Company reduces the cost basis of the security to fair value with a corresponding charge to earnings. When an other-than-temporary decline in value of a debt security is deemed to have occurred, the Company must assess whether it intends to sell the security or more likely than not will be required to sell the security before recovery of its amortized cost basis. If the debt security meets either of these two criteria, an other-than-temporary impairment (“OTTI”) is recognized in earnings equal to the entire difference between the security’s amortized cost basis and its fair value at the impairment measurement date. If the Company does not intend to sell the debt security and it is not more likely than not the Company will be required to sell the security before recovery of its amortized cost basis, the credit loss portion of an OTTI is recorded through earnings while the portion attributable to all other factors is recorded separately as a component of other comprehensive income. The amount of the OTTI that relates to credit is estimated by comparing the amortized cost of the fixed maturity security with the net present value of the security’s projected future cash flows, discounted at the effective interest rate implicit in the investment prior to impairment. The non-credit portion of the impairment is equal to the difference between the fair value and the net present value of the security’s cash flows at the impairment measurement date. Once an OTTI has been recognized, the new amortized cost basis of the security is equal to the previous amortized cost less the amount of OTTI recognized in earnings. For equity method investments, an impairment is recognized when evidence demonstrates that an other-than-temporary loss in value has occurred, including the absence of the ability to recover the carrying amount of the investment or the inability of the investee to sustain a level of earnings that would justify the carrying amount of the investment.

### C. Financial Instruments

In the normal course of business, the Company may enter into transactions involving various types of financial instruments, including debt, investments such as fixed maturities, equity securities and mortgage loans, investment and loan commitments, swap contracts, option contracts, forward contracts and futures contracts. These instruments involve credit risk and could also be subject to risk of loss due to interest rate and foreign currency fluctuation. The Company evaluates and monitors each financial instrument individually and, when appropriate, obtains collateral or other security to minimize losses.

### D. Cash and Cash Equivalents

Cash and cash equivalents includes cash on hand, amounts due from banks and highly liquid debt instruments purchased with an original maturity of three months or less.

### E. Deferred Acquisition Costs

Acquisition costs consist of commissions, underwriting costs and other costs, which vary with, and are primarily related to, the successful production of premiums. Acquisition costs are deferred and amortized over the terms of the insurance policies.

Deferred acquisition costs (“DAC”) for each operating segment are reviewed to determine if the costs are recoverable from future income, including investment income. If such costs are determined to be unrecoverable, they are expensed at the time of determination. Although recoverability of DAC is not assured, the Company believes it is more likely than not that all of these costs will be recovered. The amount of DAC considered recoverable, however, could be reduced in the near term if the estimates of total revenues discussed above are reduced or permanently impaired as a result of a disposition of a line of business. The amount of amortization of DAC could be revised in the near term if any of the estimates discussed above are revised.

### F. Reinsurance Recoverables

The Company shares certain insurance risks it has underwritten, through the use of reinsurance contracts, with various insurance entities. Reinsurance accounting is followed for ceded transactions when the risk transfer provisions of ASC 944, Financial Services – Insurance (“ASC 944”), have been met. As a result, when the Company experiences loss or claims events that are subject to a reinsurance contract, reinsurance recoverables are recorded. The amount of the reinsurance recoverable can vary based on the terms of the reinsurance contract, the size of the individual loss or claim, or the aggregate amount of all losses or claims in a particular line or book of business or an aggregate amount associated with a particular accident year. The valuation of losses or claims recoverable depends on whether the underlying loss or claim is a reported loss or claim, or an incurred but not reported loss. For reported losses and claims, the Company values reinsurance recoverables at the time the underlying loss or claim is recognized, in accordance with contract terms. For incurred but not reported losses, the Company estimates the amount of reinsurance recoverables based on the terms of the reinsurance contracts and historical reinsurance recovery information and applies that information to the gross loss reserve. Amounts recoverable from reinsurers are estimated in a manner consistent with the claim liability associated with the reinsured business and the balance is disclosed separately in the financial statements. However, the ultimate amount of the reinsurance recoverable is not known until all losses and claims are settled. Allowances are established for amounts deemed uncollectible and reinsurance recoverables are recorded net of these allowances. The Company evaluates the financial condition of its reinsurers and monitors concentration risk to minimize its exposure to significant credit losses from individual reinsurers.

## Table of Contents

### G. Property, Equipment and Capitalized Software

Property, equipment, leasehold improvements and capitalized software are recorded at cost, less accumulated depreciation and amortization. Depreciation is generally provided using the straight-line method over the estimated useful lives of the related assets, which generally range from 3 to 30 years. The estimated useful life for capitalized software is generally 5 to 7 years. Amortization of leasehold improvements is provided using the straight-line method over the lesser of the term of the leases or the estimated useful life of the improvements.

The Company tests for the recoverability of long-lived assets whenever events or changes in circumstances indicate that the carrying amounts may not be recoverable. The Company recognizes impairment losses only to the extent that the carrying amounts of long-lived assets exceed the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the assets. When an impairment loss occurs, the Company reduces the carrying value of the asset to fair value and no longer depreciates the asset. Fair values are estimated using discounted cash flow analysis.

### H. GOODWILL AND INTANGIBLE ASSETS

In accordance with the provisions of ASC 350, Intangibles- Goodwill and Other, the Company carries its goodwill at cost, net of amortization accumulated prior to January 1, 2002, and net of impairments. Increases to goodwill are generated through acquisition and represent the excess of the cost of an acquisition over the fair value of net assets acquired, including any intangibles acquired. Since January 1, 2002, goodwill is no longer amortized but rather, is reviewed for impairment. Additionally, acquisitions can also produce intangible assets, which have either a definite or indefinite life. Intangible assets with definite lives are amortized over that life, whereas those intangible assets determined to have an indefinite life are reviewed at least annually for impairment.

The Company tests for the recoverability of goodwill and intangible assets with indefinite lives annually or whenever events or changes in circumstances indicate that the carrying amounts may not be recoverable. The Company recognizes impairment losses only to the extent that the carrying amounts of reporting units with goodwill exceed the fair value. The amount of the impairment loss that is recognized is determined based upon the excess of the carrying value of goodwill compared to the implied fair value of the goodwill, as determined with respect to all assets and liabilities of the reporting unit. The Company has performed its annual review of goodwill and intangible assets with indefinite lives for impairment in the fourth quarters of 2016 and 2015 with no impairments recognized. At December 31, 2016 and 2015, Chaucer held intangible assets with indefinite lives of \$47.0 million and \$56.2 million, respectively, which represents approximately 76% and 74% of the Company's balance, respectively. In addition, at December 31, 2016 and 2015, goodwill held by Chaucer was \$6.0 million and \$7.2 million, respectively. The remaining balance relates to the U.S. Companies. The changes in the value of intangible assets with indefinite lives from December 31, 2015 represent foreign exchange differences arising during 2016 whereas the changes in the value of intangible assets with indefinite lives during 2015 were primarily related to the disposition of the U.K. motor business on June 30, 2015. See Note 2 – "Dispositions of Businesses".

### I. LIABILITIES FOR LOSSES, LAE, AND UNEARNED PREMIUMS

Liabilities for outstanding claims, losses and loss adjustment expenses ("LAE") are estimates of payments to be made for reported losses and LAE and estimates of losses and LAE incurred but not reported. These liabilities are determined using case basis evaluations and statistical analyses of historical loss patterns and represent estimates of the ultimate cost of all losses incurred but not paid. These estimates are continually reviewed and adjusted as necessary; adjustments are reflected in current operations. Estimated amounts of salvage and subrogation on unpaid losses are deducted from the liability for unpaid claims.

Premiums for direct and assumed business are reported as earned on a pro-rata basis over the contract period. The unexpired portion of these premiums is recorded as unearned premiums.

All losses, LAE and unearned premium liabilities are based on the various estimates discussed above. Although the adequacy of these amounts cannot be assured, the Company believes that it is more likely than not that these liabilities and accruals will be sufficient to meet future obligations of policies in force. The amount of liabilities and accruals, however, could be revised in the near-term if the estimates discussed above are revised.

#### J. Debt

The Company's debt at December 31, 2016 includes senior debentures, subordinated debentures, and collateralized borrowings with the Federal Home Loan Bank of Boston ("FHLBB"). Debt instruments are carried at principal amount borrowed, net of any applicable unamortized discounts and issuance costs. See Note 6 – "Debt and Credit Arrangements".

Table of Contents

## K. Premium, Premium Receivable, Fee Revenue and Related Expenses

Insurance premiums written are generally recorded at the policy inception and are primarily earned on a pro-rata basis over the terms of the policies for all products. Premiums written include estimates, primarily in the Chaucer segment, that are derived from multiple sources, which include the historical experience of the underlying business, similar businesses and available industry information. These estimates are regularly reviewed and updated, and any resulting adjustments are included in the current year's results. Unearned premium reserves represent the portion of premiums written that relates to the unexpired terms of the underlying in-force insurance policies and reinsurance contracts. Premium receivables reflect the unpaid balance of premium written as of the balance sheet date. Premium receivables are generally short-term in nature and are reported net of an allowance for estimated uncollectible premium accounts. The Company reviews its receivables for collectability at the balance sheet date. The allowance for uncollectible accounts was not material as of December 31, 2016 and 2015. Ceded premiums are charged to income over the applicable term of the various reinsurance contracts with third-party reinsurers. Reinsurance reinstatement premiums, when required, are recognized in the same period as the loss event that gave rise to the reinstatement premiums. Losses and related expenses are matched with premiums, resulting in their recognition over the lives of the contracts. This matching is accomplished through estimated and unpaid losses and amortization of deferred acquisition costs.

## L. Income Taxes

The Company is subject to the tax laws and regulations of the U.S. and foreign countries in which it operates. The Company files a consolidated U.S. federal income tax return that includes the holding company and its U.S. subsidiaries. Generally, taxes are accrued at the U.S. statutory tax rate of 35% for income from the U.S. operations. The Company's primary non-U.S. jurisdiction is the United Kingdom ("U.K."). In July 2013, the U.K. statutory rate decreased from 23% to 21% effective April 1, 2014 and from 21% to 20% effective April 1, 2015. In November 2015, the U.K. statutory tax rate decreased from 20% to 19% effective April 1, 2017 and from 19% to 18% effective April 1, 2020. A further decrease was enacted in September 2016 to reduce the U.K. statutory rate from 19% to 17%, instead of the 18%, effective April 1, 2020. The Company accrues taxes on certain non-U.S. income that is subject to U.S. tax at the U.S. tax rate. Foreign tax credits, where available, are utilized to offset U.S. tax as permitted. Certain non-U.S. income of the Company is not subject to U.S. tax until repatriated. Foreign taxes on this non-U.S. income are accrued at the local foreign rate and do not have an accrual for U.S. deferred taxes since these earnings are intended to be indefinitely reinvested overseas.

The Company's accounting for income taxes represents its best estimate of various events and transactions.

Deferred income taxes are generally recognized when assets and liabilities have different values for financial statement and tax reporting purposes, and for other temporary taxable and deductible differences as defined by ASC 740, Income Taxes ("ASC 740"). These temporary differences are measured at the balance sheet date using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse. These differences result primarily from insurance reserves, deferred acquisition costs, tax credit carryforwards, employee benefit plans and deferred Lloyd's underwriting income.

The realization of deferred tax assets depends upon the existence of sufficient taxable income within the carryback or carryforward periods under the tax law in the applicable tax jurisdiction. Consideration is given to all available positive and negative evidence, including reversals of deferred tax liabilities, projected future taxable income, tax planning strategies and recent financial operations. Valuation allowances are established if, based on available information, it is determined that it is more likely than not that all or some portion of the deferred tax assets will not be realized. Changes in valuation allowances are generally reflected in income tax expense or as an adjustment to other comprehensive income (loss) depending on the nature of the item for which the valuation allowance is being recorded.

#### M. Stock-Based Compensation

The Company recognizes the fair value of compensation costs for all share-based payments, including employee stock options, in the financial statements. Unvested awards are generally expensed on a straight line basis, by tranche, over the vesting period of the award. The Company's stock-based compensation plans are discussed further in Note 11 – "Stock-Based Compensation Plans".

#### N. Earnings Per Share

Earnings per share ("EPS") for the years ended December 31, 2016, 2015 and 2014 is based on a weighted average of the number of shares outstanding during each year. Basic and diluted EPS is computed by dividing income available to common stockholders by the weighted average number of shares outstanding for the period. The weighted average shares outstanding used to calculate basic EPS differ from the weighted average shares outstanding used in the calculation of diluted EPS due to the effect of dilutive employee stock options, nonvested stock grants and other contingently issuable shares. If the effect of such items is antidilutive, the weighted average shares outstanding used to calculate diluted EPS are equal to those used to calculate basic EPS.

Options to purchase shares of common stock whose exercise prices are greater than the average market price of the common shares are not included in the computation of diluted earnings per share because the effect would be antidilutive.

Table of Contents

## O. Foreign Currency

The Company's reporting currency is the U.S. dollar. The functional currencies of the Company's foreign operations are the U.K. pound sterling ("GBP"), U.S. dollar, and Canadian dollar. Assets and liabilities of foreign operations are translated into the U.S. dollar using the exchange rates in effect at the balance sheet date. Revenues and expenses of foreign operations are translated using the average exchange rate for the period. Gains or losses from translating the financial statements of foreign operations are recorded in the cumulative translation adjustment, as a separate component of accumulated other comprehensive income. Gains and losses arising from transactions denominated in a foreign currency, other than the Company's functional currencies, are included in net income (loss), except for the Company's foreign currency denominated available-for-sale investments. The Company's foreign currency denominated available-for-sale investments' change in exchange rates between the local currency and the functional currency at each balance sheet date represents an unrealized appreciation or depreciation in value of these securities, and is included as a component of accumulated other comprehensive income.

The Company manages its exposure to foreign currency risk primarily by matching assets and liabilities denominated in the same currency. To the extent that assets and liabilities in foreign currencies are not matched, the Company is exposed to foreign currency risk. For functional currencies, the related exchange rate fluctuations are reflected in other comprehensive income (loss). The Company translated Chaucer's balance sheet at December 31, 2016 and 2015 from GBP to U.S. dollars using a conversion rate of 1.23 and 1.47, respectively. The Company recognized \$22.3 million in foreign currency transaction losses in the Consolidated Statements of Income during the year ended December 31, 2016, and \$8.5 million and \$3.3 million in foreign currency transaction gains for the years ended December 31, 2015 and 2014, respectively. These amounts include realized losses of Euro denominated securities of \$0.7 million, \$3.4 million, and \$1.3 million in 2016, 2015, and 2014, respectively.

## P. New Accounting Pronouncements

## Recently Implemented Standards

In May 2015, the Financial Accounting Standards Board ("FASB") issued ASC Update No. 2015-09, (Topic 944) Financial Services- Insurance: Disclosures about Short-Duration Contracts. This ASC update requires several additional disclosures regarding short-duration insurance contracts, including; disaggregated incurred and paid claims development information, quantitative and qualitative information about claim frequency and duration, and the sum of incurred but not reported liabilities plus expected development on reported claims included in the liability for unpaid claims and claim adjustment expenses along with a description of reserving methodologies. This information is required to be presented by accident year, for the number of years for which claims typically remain outstanding, but need not exceed 10 years. A reconciliation of the claims development disclosures to the aggregate carrying amount of the liability for unpaid claims and claim adjustment expenses, including a separate disclosure for reinsurance recoverables is also required for each period presented in the statement of financial position. In addition, this ASC update requires insurance entities to disclose information about significant changes in methodologies and assumptions used to calculate the liability for unpaid claims and claim adjustment expenses, including reasons for the change and the effects on the financial statements. The updated guidance is effective for annual periods beginning after December 15, 2015, and interim periods within annual periods beginning after December 15, 2016. Early adoption is permitted. The Company implemented this guidance beginning with its disclosures for the year ended December 31, 2016. The effect of implementing this guidance was not material to the Company's financial position or results of operations, as the update is disclosure related.

In April 2015, the FASB issued ASC Update No. 2015-03, (Subtopic 835-30) Interest-Imputation of Interest: Simplifying the Presentation of Debt Issuance Costs. This ASC update requires that debt issuance costs be presented in the balance sheet as a direct deduction from the carrying amount of a debt liability, consistent with debt discounts

or premiums, and amortization of debt issuance cost shall be reported as interest expense. The recognition and measurement guidance for debt issuance costs are not affected by the amendments in this ASC update. The updated guidance is to be applied on a retrospective basis and early adoption is permitted. The update is effective for financial statements issued for fiscal years beginning after December 15, 2015, and interim periods within those fiscal years. The Company implemented this guidance effective January 1, 2016. The effect of implementing this guidance was not material to the Company's financial position or results of operations.

In August 2014, the FASB issued ASC Update No. 2014-15, (Subtopic 205-40) Presentation of Financial Statements—Going Concern. This ASC update provides guidance on determining when and how to disclose going concern uncertainties in the financial statements, and requires management to perform interim and annual assessments of an entity's ability to continue as a going concern within one year of the date the financial statements are issued. The updated guidance is effective for annual periods ending after December 15, 2016 and interim periods thereafter. Early adoption is permitted. The Company implemented this guidance beginning with the year-ended December 31, 2016. The effect of implementing this guidance was not material to the Company's financial position or results of operations.

## Table of Contents

In April 2014, the FASB issued ASC Update No. 2014-08, (Topic 205 and Topic 360) Reporting Discontinued Operations and Disclosures of Disposals of Components of an Entity. This ASC update modifies the definition of discontinued operations by limiting discontinued operations reporting to disposals of components of an entity that represent strategic shifts that have (or will have) a major effect on an entity's operations and financial results. Also, this update requires additional financial statement disclosures about discontinued operations, as well as disposals of an individually significant component of an entity that do not qualify for discontinued operations presentation. This ASC update was effective for all disposals (or classifications as held for sale) of components of an entity that occurred within annual and interim periods beginning on or after December 15, 2014 and for all businesses that, on acquisition, were classified as held for sale that also occurred within interim and annual periods beginning on or after December 15, 2014. The Company implemented this guidance effective January 1, 2015. The effect of implementing this guidance was not material to the Company's financial position or results of operations.

### Recently Issued Standards

In January 2017, the FASB issued ASC Update No. 2017-04, (Topic 350) Intangibles – Goodwill and Other: Simplifying the Test for Goodwill Impairment. This guidance eliminates step 2 from the goodwill impairment test. Instead, an entity should perform its goodwill impairment test by comparing the fair value of the reporting unit with its carrying amount, including any applicable income tax effects, and recognize an impairment for the amount by which the carrying amount exceeds the reporting units fair value. However, the loss recognized should not exceed the total amount of goodwill allocated to that reporting unit. The updated guidance is effective for annual or interim goodwill impairment tests performed in fiscal years beginning after December 15, 2019. Early adoption is permitted for interim or annual goodwill impairment tests performed on testing dates after January 1, 2017. The Company does not expect the adoption of ASC Update No. 2017-04 to have a material impact on its financial position or results of operations.

In January 2017, the FASB issued ASC Update No. 2017-01, (Topic 805) Business Combinations – Clarifying the Definition of a Business. The amendments in this update provide a more robust framework to use in determining when a set of assets and activities constitute a business. This guidance narrows the definition of a business by providing specific requirements that contribute to the creation of outputs that must be present to be considered a business. The guidance further clarifies the appropriate accounting when substantially all of the fair value of the gross assets acquired (or disposed of) is concentrated in a single identifiable asset or a group of similar identifiable assets is that of an acquisition (disposition) of assets, not a business. This framework will reduce the number of transactions that an entity must further evaluate to determine whether transactions are business combinations or asset acquisitions. The updated guidance is effective for interim and annual periods beginning after December 15, 2017, and should be applied on a prospective basis. Early adoption is permitted only for transactions that have not been reported in financial statements that have been issued. The Company does not expect the adoption of ASC Update No. 2017-01 to have a material impact on its financial position or results of operations.

In November 2016, the FASB issued ASC Update No. 2016-18 (Topic 230) Statement of Cash Flows – Restricted Cash (a consensus of the FASB Emerging Issues Task Force). The amendments in this update require that restricted cash and restricted cash equivalents be included with cash and cash equivalents when reconciling the beginning-of-period and end-of-period total amounts shown on the statement of cash flows. Current GAAP does not include specific guidance on the cash flow classification and presentation of changes in restricted cash. The updated guidance is effective for interim and annual periods beginning after December 15, 2017 and is required to be applied using a retrospective transition method to each period presented. Early adoption is permitted, including adoption in an interim period. However, any adjustments should be reflected as of the beginning of the fiscal year that includes that interim period. Implementing this guidance is not expected to have a significant impact on the Company's statement of cash flows, as restricted cash, if any, is currently included in total cash and cash equivalents.

In October 2016, the FASB issued ASC Update No. 2016-16, (Topic 740) Income Taxes – Intra-Entity Transfers of Assets Other Than Inventory. Under current GAAP, the tax effects of intra-entity transfers of assets (intercompany sales) are deferred until the assets are sold to an outside party or otherwise recovered through use. This ASC update eliminates this deferral of taxes for assets other than inventory and requires the recognition of taxes when the transfer occurs. The updated guidance is effective for interim and annual periods beginning after December 15, 2017, and should be applied on a modified retrospective basis through a cumulative-effect adjustment to retained earnings. Early adoption is permitted, but this election must be made in the first interim period of the adoption year. The adoption of ASC Update No. 2016-16 is not expected to have any net impact on the Company’s financial position or results of operations.

In August 2016, the FASB issued ASC Update No. 2016-15, (Topic 230) Classification of Certain Cash Receipts and Cash Payments. This ASC update provides specific guidance on the presentation of certain cash flow items where there is currently diversity in practice, including, but not limited to, debt prepayment or debt extinguishment costs, contingent consideration payments made after a business combination, proceeds from the settlement of insurance claims, and distributions received from equity method investees. The updated guidance is effective for interim and annual periods beginning after December 15, 2017, and should be applied retrospectively unless impracticable. Early adoption is permitted. The Company is currently evaluating the impact of the adoption of ASC Update No. 2016-15.

Table of Contents

In June 2016, the FASB issued ASC Update No. 2016-13, (Topic 326) Financial Instruments – Credit Losses: Measurement of Credit Losses on Financial Instruments. This ASC update introduces new guidance for the accounting for credit losses on financial instruments within its scope. A new model, referred to as the current expected credit losses model, requires an entity to determine credit-related impairment losses for financial instruments held at amortized cost and to estimate these expected credit losses over the life of an exposure (or pool of exposures). The estimate of expected credit losses should consider both historical and current information, reasonable and supportable forecasts, as well as estimates of prepayments. The estimated credit losses and subsequent adjustment to such loss estimates, will be recorded through an allowance account which is deducted from the amortized cost of the financial instrument, with the offset recorded in current earnings. ASC No. 2016-13 also modifies the impairment model for available-for-sale debt securities. The new model will require an estimate of expected credit losses only when the fair value is below the amortized cost of the asset, thus the length of time the fair value of an available-for-sale debt security has been below the amortized cost will no longer affect the determination of whether a credit loss exists. In addition, credit losses on available-for-sale debt securities will be limited to the difference between the security's amortized cost basis and its fair value. The updated guidance is effective for interim and annual periods beginning after December 15, 2019. Early adoption is permitted for periods beginning after December 15, 2018. The Company is evaluating the impact of the adoption of ASC Update No. 2016-13 on its financial position and results of operations.

In March 2016, the FASB issued ASC Update No. 2016-09, (Topic 718) Compensation – Stock Compensation: Improvements to Employee Share-Based Payment Accounting. This ASC update requires all excess tax benefits and tax deficiencies to be recognized as income tax expense or benefit in the income statement, and be treated as discreet items in the reporting period in which they occur. Additionally, excess tax benefits will be classified with other income tax cash flows as an operating activity and cash paid by an employer when directly withholding shares for tax withholding purposes will be classified as a financing activity. Awards that are used to settle employee tax liabilities will be allowed to qualify for equity classification for withholdings up to the maximum statutory tax rates in applicable jurisdictions. Regarding forfeitures, a company can make an entity-wide accounting policy election to either continue estimating the number of awards that are expected to vest or account for forfeitures when they occur. The updated guidance is effective for interim and annual periods beginning after December 15, 2016. The Company will adopt this standard effective January 1, 2017 and will retain its current forfeiture policy of accruing the compensation cost based on the number of awards that are expected to vest. The effect this guidance will have on the Company's results of operations is dependent on the future tax benefits or deficiencies that are recognized related to stock-based compensations awards, and could be material in any one quarterly or annual period. The adoption of this guidance is not expected to result in any cumulative effect adjustments and will not have a material impact on the liquidity of the Company.

In February 2016, the FASB issued ASC Update No. 2016-02, (Topic 842) Leases. This ASC update requires a lessee to recognize a right-of-use asset, which represents the lessee's right to use a specified asset for the lease term, and a corresponding lease liability, which represents a lessee's obligation to make lease payments arising from a lease, measured on a discounted basis, for all leases that extend beyond 12 months. For finance or capital leases, interest on the lease liability will be recognized separately from amortization of the right-of-use asset in the statements of income and comprehensive income. In addition, the repayment of the principal portion of the lease liability will be classified as a financing activity while the interest component will be included in the operating section of the statement of cash flows. For operating leases, the asset and liability will be amortized as a single lease cost, such that the cost of the lease is allocated over the lease term, on a generally straight-line basis, with all cash flows included within operating activities in the statement of cash flows. The updated guidance is effective for interim and annual periods beginning after December 15, 2018 and is required to be implemented by applying a modified retrospective transition approach. The Company is continuing to evaluate the impact of the adoption of ASC Update No. 2016-02 on its results of operations. It is expected that assets and liabilities will increase based on the present value of remaining lease payments for leases in place at the adoption date; however, the impact is not expected to be significant to the Company's financial position.

In January 2016, the FASB issued ASC Update No. 2016-01, (Subtopic 825-10) Financial Instruments – Overall: Recognition and Measurement of Financial Assets and Financial Liabilities. This ASC update requires unconsolidated equity investments to be measured at fair value with changes in the fair value recognized in net income, except for those accounted for under the equity method. This update eliminates the cost method for equity investments without readily determinable fair values and replaces with other methods, including the use of Net Asset Value (“NAV”). Additionally, when a public entity is required to measure fair value for disclosure purposes and holds financial instruments measured at amortized cost, the updated guidance requires these instruments to be measured using exit price. It also requires financial assets and financial liabilities to be presented separately in the notes to the financial statements, grouped by measurement category and form of financial asset. The updated guidance is effective for annual periods beginning after December 15, 2017. The Company will adopt the guidance effective January 1, 2018 through a cumulative effect adjustment to retained earnings. The adoption is not expected to have a material impact on the Company’s financial position. The impact to the Company is expected to be increased volatility in net income beginning in 2018; the magnitude of such volatility will depend on the composition of the Company’s investment portfolio in the future and changes in the fair value of the Company’s investments.

Table of Contents

In May 2014, the FASB issued ASC Update No. 2014-09, (Topic 606) Revenue from Contracts with Customers. This ASC was issued to clarify the principles for recognizing revenue. Insurance contracts and financial instrument transactions are not within the scope of this updated guidance, and; therefore, only an insignificant amount of the Company's revenue is subject to this updated guidance. In August 2015, the FASB issued ASC Update No. 2015-14, (Topic 606) Revenue from Contracts with Customers, which deferred the effective date of ASC Update No. 2014-09 by one year. Accordingly, the updated guidance is effective for periods beginning after December 15, 2017 and is not expected to have a material effect on the Company's financial position or results of operations.

## Q. Reclassifications

Certain prior year amounts have been reclassified to conform to the current year presentation.

## 2. DISPOSITIONS OF BUSINESSES

## Disposal of U.K. Motor Business

Effective June 30, 2015, the Company transferred its U.K. motor business to an unaffiliated U.K.-based insurance provider. The transaction was executed through a 100 percent reinsurance arrangement for prior claim liabilities and in-force policies written by this division and the sale of two entities associated with this business. Total consideration from the sale of the Chaucer subsidiaries was \$64.9 million and the transaction resulted in a net gain of \$40.6 million.

The components of the gain are as follows:

(in millions)	
Total consideration	\$ 64.9
Less:	
Carrying value of subsidiaries	(7.6)
Intangibles and goodwill disposed (1)	(17.7)
Transaction expenses and employee-related and other costs (2)	(7.7)
Realized gain on investments transferred as part of reinsurance agreement (3)	5.8
Other items	0.7
Pre-tax gain	38.4
Income tax benefit	2.2
Net gain	\$ 40.6

(1) Reflects \$17.2 million of indefinite-lived intangible assets associated with the U.K. motor business upon THG's purchase of Chaucer in July 2011 and \$0.5 million of goodwill.

(2) Transaction costs include legal, actuarial and other professional fees.

(3) As part of the reinsurance agreement, investments were transferred, resulting in the recognition of net realized investment gains that were previously reflected in accumulated other comprehensive income.

In connection with the reinsurance arrangement, insurance liabilities of approximately \$443 million were ceded, including \$137.4 million of written premiums, and approximately \$419 million of investments, cash, and premiums receivable were transferred. The \$25 million difference between assets and liabilities approximates the DAC balance

associated with this business.

Table of Contents

Discontinued Operations

Discontinued operations primarily consist of the Company's former life insurance businesses, which were sold prior to 2009, and its discontinued accident and health business.

The Company's former life insurance businesses include indemnity obligations for which it established reserves.

During 1999, the Company exited its accident and health insurance business, consisting of its Employee Benefit Services business, its Affinity Group Underwriters business and its accident and health assumed reinsurance pool business. Prior to 1999, these businesses comprised substantially all of the former Corporate Risk Management Services segment. Accordingly, the operating results of the discontinued segment have been reported in accordance with Accounting Principles Board Opinion No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions ("APB Opinion No. 30"). On January 2, 2009, Hanover Insurance directly assumed a portion of the accident and health business; and therefore continues to apply APB Opinion No. 30 to this business. In addition, the remainder of the Discontinued First Allmerica Financial Life Insurance Company ("FAFLIC") accident and health business was reinsured by Hanover Insurance in connection with the sale of FAFLIC to Commonwealth Annuity, and has been reported in accordance with ASC 205, Presentation of Financial Statements.

At December 31, 2016 and 2015, the portion of the discontinued accident and health business that was directly assumed had assets of \$57.6 million and \$54.5 million, respectively, consisting primarily of invested assets, and liabilities of \$49.3 million and \$46.5 million, respectively, consisting primarily of policy liabilities. At December 31, 2016 and 2015, the assets and liabilities of this business, as well as those of the reinsured portion of the accident and health business are classified as assets and liabilities of discontinued operations in the Consolidated Balance Sheets.

Discontinued operations for the years ended December 31, 2016, 2015 and 2014 resulted in losses of \$1.0 million, gains of \$0.7 million and losses of \$0.3 million, respectively, net of tax.

Table of Contents

## 3. INVESTMENTS

## A. FIXED MATURITIES AND EQUITY SECURITIES

The amortized cost and fair value of available-for-sale fixed maturities and the cost and fair value of equity securities were as follows:

## DECEMBER 31, 2016

(in millions)	Amortized Cost or Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	OTTI Unrealized Losses
Fixed maturities:					
U.S. Treasury and government agencies	\$ 342.5	\$ 3.7	\$ 5.1	\$ 341.1	\$ -
Foreign government	235.8	5.4	0.5	240.7	-
Municipal	1,065.8	38.8	9.2	1,095.4	-
Corporate	3,989.8	113.0	49.0	4,053.8	15.8
Residential mortgage-backed	978.2	9.6	13.6	974.2	0.4
Commercial mortgage-backed	550.6	7.8	4.1	554.3	-
Asset-backed	72.4	0.2	0.8	71.8	-
Total fixed maturities	\$ 7,235.1	\$ 178.5	\$ 82.3	\$ 7,331.3	\$ 16.2
Equity securities	\$ 498.4	\$ 86.7	\$ 0.7	\$ 584.4	\$ -

## DECEMBER 31, 2015

(in millions)	Amortized Cost or Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	OTTI Unrealized Losses
Fixed maturities:					
U.S. Treasury and government agencies	\$ 447.1	\$ 5.5	\$ 3.5	\$ 449.1	\$ -
Foreign government	244.7	2.6	1.5	245.8	-
Municipal	1,074.5	50.0	4.2	1,120.3	-
Corporate	3,699.9	86.8	95.7	3,691.0	27.5
Residential mortgage-backed	887.6	13.4	4.9	896.1	0.3
Commercial mortgage-backed	499.6	5.8	4.3	501.1	-
Asset-backed	80.6	0.2	0.8	80.0	-
Total fixed maturities	\$ 6,934.0	\$ 164.3	\$ 114.9	\$ 6,983.4	\$ 27.8
Equity securities	\$ 528.5	\$ 55.7	\$ 7.6	\$ 576.6	\$ -

OTTI unrealized losses in the tables above represent OTTI recognized in accumulated other comprehensive income. This amount excludes net unrealized gains on impaired securities relating to changes in the value of such securities subsequent to the impairment measurement date of \$21.4 million and \$1.1 million as of December 31, 2016 and 2015, respectively.

The Company participates in a security lending program for the purpose of enhancing income. Securities on loan to various counterparties had a fair value of \$29.9 million and \$36.2 million at December 31, 2016 and 2015, respectively, and were fully collateralized by cash. The fair value of the loaned securities is monitored on a daily

basis, and the collateral is maintained at a level of at least 102% of the fair value of the loaned securities. Securities lending collateral is recorded by the Company in cash and cash equivalents, with an offsetting liability included in expenses and taxes payable.

At December 31, 2016 and 2015, fixed maturities with fair values of \$251.6 million and \$217.4 million, respectively, and amortized cost of \$238.5 million and \$206.5 million, respectively, were on deposit with various state and governmental authorities.

In accordance with Lloyd's operating guidelines, the Company deposits funds at Lloyd's to support underwriting operations. These funds are available only to fund claim obligations. At December 31, 2016 and 2015, fixed maturities with a fair value of \$491.2 million and \$440.6 million, respectively, and cash of \$6.3 million and \$7.0 million, respectively, were on deposit with Lloyd's.

The Company enters into various agreements that may require its fixed maturities to be held as collateral by others. At December 31, 2016 and 2015, fixed maturities with a fair value of \$217.9 million and \$188.1 million, respectively, were held as collateral for collateralized borrowings and other arrangements. Of these amounts, \$201.8 million and \$176.0 million related to the FHLBB collateralized borrowing program at December 31, 2016 and 2015, respectively. See Note 6—"Debt and Credit Arrangements" for additional information related to the Company's FHLBB program.

Table of Contents

The amortized cost and fair value by maturity periods for fixed maturities are shown below. Actual maturities may differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment penalties, or the Company may have the right to put or sell the obligations back to the issuers.

DECEMBER 31 (in millions)	2016	
	Amortized Cost	Fair Value
Due in one year or less	\$ 373.3	\$ 376.9
Due after one year through five years	3,132.1	3,217.4
Due after five years through ten years	1,806.1	1,802.1
Due after ten years	322.4	334.6
	5,633.9	5,731.0
Mortgage-backed and asset-backed securities	1,601.2	1,600.3
Total fixed maturities	\$ 7,235.1	\$ 7,331.3

B. UNREALIZED GAINS AND LOSSES

Unrealized gains and losses on available-for-sale and other securities are summarized in the following table.

YEARS ENDED DECEMBER 31 (in millions)	Equity Securities and		
	Fixed Maturities	Other	Total
2016			
Net appreciation, beginning of year	\$ 116.5	\$ 33.4	\$ 149.9
Net appreciation on available-for-sale securities	36.9	39.2	76.1
Change in OTTI losses recognized in other comprehensive income	11.2	-	11.2
Provision for deferred income taxes	(37.5)	(13.7)	(51.2)
	10.6	25.5	36.1
Net appreciation, end of year	\$ 127.1	\$ 58.9	\$ 186.0
2015			
Net appreciation, beginning of year	\$ 250.0	\$ 50.9	\$ 300.9
Net depreciation on available-for-sale securities	(164.9)	(26.8)	(191.7)
Change in OTTI losses recognized in other comprehensive income	(20.0)	-	(20.0)
Provision for deferred income taxes	51.4	9.3	60.7
	(133.5)	(17.5)	(151.0)
Net appreciation, end of year	\$ 116.5	\$ 33.4	\$ 149.9
2014			
Net appreciation, beginning of year	\$ 212.1	\$ 47.2	\$ 259.3
Net appreciation on available-for-sale securities	76.3	10.2	86.5
Change in OTTI losses recognized in other comprehensive income	2.4	-	2.4
Provision for deferred income taxes	(40.8)	(6.5)	(47.3)
	37.9	3.7	41.6
Net appreciation, end of year	\$ 250.0	\$ 50.9	\$ 300.9

Equity securities and other balances at December 31, 2016, 2015 and 2014 include after-tax net appreciation on other invested assets of \$2.5 million, \$2.2 million and \$2.6 million, respectively.

Table of Contents

## C. SECURITIES IN AN UNREALIZED LOSS POSITION

The following tables provide information about the Company's fixed maturities and equity securities that were in an unrealized loss position at December 31, 2016 and 2015 including the length of time the securities have been in an unrealized loss position:

DECEMBER 31, 2016 (in millions)	12 months or less		Greater than 12 months		Total	
	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses	Fair Value
Fixed maturities:						
Investment grade:						
U.S. Treasury and government agencies	\$ 5.1	\$ 165.9	\$ -	\$ -	\$ 5.1	\$ 165.9
Foreign governments	0.5	55.0	-	1.8	0.5	56.8

Table of Contents

The Company views gross unrealized losses on fixed maturities and equity securities as being temporary since it is its assessment that these securities will recover in the near term, allowing the Company to realize the anticipated long-term economic value. The Company employs a systematic methodology to evaluate declines in fair value below amortized cost for fixed maturity securities or cost for equity securities. In determining OTTI of fixed maturity and equity securities, the Company evaluates several factors and circumstances, including the issuer's overall financial condition; the issuer's credit and financial strength ratings; the issuer's financial performance, including earnings trends, dividend payments and asset quality; any specific events which may influence the operations of the issuer; the general outlook for market conditions in the industry or geographic region in which the issuer operates; and the length of time and the degree to which the fair value of an issuer's securities remains below the Company's cost. With respect to fixed maturity investments, the Company considers any factors that might raise doubt about the issuer's ability to make contractual payments as they come due and whether the Company expects to recover the entire amortized cost basis of the security. With respect to equity securities, the Company considers its ability and intent to hold the investment for a period of time to allow for a recovery in value.

**D. OTHER INVESTMENTS**

The Company's mortgage participations were \$297.6 million and \$200.9 million at December 31, 2016 and 2015, respectively. Participating interests in commercial mortgage loans are originated and serviced by a third-party. For these investments, the Company shares, on a pro-rata basis, in all related cash flows of the underlying mortgages. Mortgage participations were comprised of the following property types and geographic locations.

DECEMBER 31 (in millions)	2016	2015
Property Type:		
Office	\$ 109.8	\$ 75.0
Retail	64.7	58.8
Hotel	40.4	19.2
Apartments	38.4	33.4
Industrial	30.0	15.0
Mixed use	15.0	-
Valuation allowance	(0.7)	(0.5)
Total	\$ 297.6	\$ 200.9

DECEMBER 31 (in millions)	2016	2015
Geographic Region:		
South Atlantic	\$ 72.0	\$ 47.0
Pacific	65.0	50.0
Mid-Atlantic	53.5	23.6
West South Central	51.3	35.0
New England	21.1	10.0
East North Central	10.4	10.8
West North Central	10.0	10.0
Other	15.0	15.0

Valuation allowance	(0.7)	(0.5)
Total	\$ 297.6	\$ 200.9

At December 31, 2016, scheduled maturities of mortgage participations were as follows: due in 2017 - \$0.5 million; 2020 - \$10.0 million; 2021 – \$50.0 million and thereafter - \$237.1 million. There were no scheduled loan maturities in 2018 or 2019. Actual maturities could differ from contractual maturities because borrowers may have the right to prepay obligations with or without prepayment penalties and loans may be refinanced. During 2016, the Company did not refinance any loans based on terms that differed from current market rates.

Other investments also include interests in limited partnerships and overseas deposits of \$121.3 million and \$102.2 million, respectively, at December 31, 2016, and \$79.9 million and \$100.9 million, respectively, at December 31, 2015.

Table of Contents

## E. OTHER

At December 31, 2016, the Company had no concentration of investments in a single investee that exceeded 10% of shareholders' equity except for fixed maturities invested in Federal Home Loan Mortgage Corp. ("FHLMC") and mortgage participations with a highly rated single third-party. At December 31, 2016, the Company held FHLMC with fair value of \$542.2 million and mortgage participations with a carrying value of \$295.9 million. At December 31, 2015, the Company had no concentration of investments in a single investee that exceeds 10% of shareholders' equity except for fixed maturities invested in FHLMC and Federal National Mortgage Association ("FNMA"). At December 31, 2015, the Company held FHLMC and FNMA with fair values of \$467.9 million and \$298.1 million, respectively.

At December 31, 2016, there were contractual investment commitments of up to \$128.8 million.

## 4. INVESTMENT INCOME AND GAINS AND LOSSES

## A. NET INVESTMENT INCOME

The components of net investment income were as follows:

YEARS ENDED DECEMBER 31	2016	2015	2014
(in millions)			
Fixed maturities	\$ 245.1	\$ 253.8	\$ 255.8
Equity securities	18.6	17.5	16.5
Other investments	26.7	18.1	9.0
Gross investment income	290.4	289.4	281.3
Less investment expenses	(11.0)	(10.3)	(11.0)
Net investment income	\$ 279.4	\$ 279.1	\$ 270.3

The carrying values of fixed maturity securities on non-accrual status at December 31, 2016 and 2015 were not material. The effects of non-accruals for the years ended December 31, 2016, 2015 and 2014, compared with amounts of net investment income that would have been recognized in accordance with the original terms of the fixed maturities, were reductions of \$1.1 million, \$0.8 million and \$2.1 million, respectively.

## B. NET REALIZED INVESTMENT GAINS AND LOSSES

Net realized gains (losses) on investments were as follows:

YEARS ENDED DECEMBER 31	2016	2015	2014
(in millions)			
Equity securities	\$ 25.4	\$ 29.4	\$ 45.8
Fixed maturities	(16.6)	(13.9)	4.5
Other investments	(0.2)	4.0	(0.2)
Net realized investment gains	\$ 8.6	\$ 19.5	\$ 50.1

Included in the net realized investment gains (losses) were OTTI of investment securities recognized in earnings totaling \$27.9 million, \$26.8 million and \$5.5 million in 2016, 2015 and 2014, respectively.

#### Other-than-temporary-impairments

For 2016, total OTTI was \$21.2 million. Of this amount, \$27.9 million was recognized in earnings including \$6.7 million which was transferred from unrealized losses in accumulated other comprehensive income ("AOCI"). The \$27.9 million of OTTI recognized in earnings relates primarily to \$16.1 million of fixed maturity securities that the Company intended to sell, \$8.8 million of credit impairments and \$2.7 million of equities.

For 2015, total OTTI was \$49.5 million. Of this amount, \$26.8 million was recognized in earnings and the remaining \$22.7 million was recorded as unrealized losses in AOCI. The \$26.8 million of OTTI recognized in earnings relates to \$16.0 million of credit impairments, \$4.0 million of fixed maturity securities that the Company intended to sell and \$6.8 million of equities.

For 2014, total OTTI was \$5.4 million. Of this amount, \$5.5 million was recognized in earnings including \$0.1 million which was transferred from unrealized losses in AOCI. The \$5.5 million of OTTI recognized in earnings was related to fixed maturity securities that the Company intended to sell.

The methodology and significant inputs used to measure the amount of credit losses on fixed maturities in 2016 and 2015 were as follows:

Corporate bonds - the Company utilized a financial model that derives expected cash flows based on probability-of-default factors by credit rating and asset duration and loss-given-default factors based on security type. These factors are based on historical data provided by an independent third-party rating agency. In addition, other market data relevant to the realizability of contractual cash flows may be considered.

There were no credit impairments in 2014.

The following table provides rollforwards of the cumulative amounts related to the Company's credit loss portion of the OTTI losses on fixed maturity securities for which the non-credit portion of the loss is included in other comprehensive income.

YEARS ENDED DECEMBER 31 (in millions)	2016	2015	2014
Credit losses as of the beginning of the year	\$ 18.0	\$ 4.2	\$ 7.8
Credit losses on securities for which an OTTI was not previously recognized	6.4	8.3	-
Additional credit losses on securities for which an OTTI was previously recognized	2.4	7.7	-
Reductions for securities sold, matured or called	(4.6)	(1.8)	(3.2)
Reductions for securities reclassified as intend to sell	(12.2)	(0.4)	(0.4)
Credit losses as of the end of the year	\$ 10.0	\$ 18.0	\$ 4.2

The proceeds from sales of available-for-sale securities and the gross realized gains and gross realized losses on those sales, were as follows:

## YEARS ENDED DECEMBER 31

(in millions)

	Proceeds from Sales	Gross Gains	Gross Losses
2016			
Fixed maturities	\$ 563.8	\$ 11.7	\$ 7.0
Equity securities	\$ 245.0	\$ 31.1	\$ 3.0

## 2015

Fixed maturities	\$ 1,167.6	\$ 15.0	\$ 9.3
Equity securities	\$ 270.0	\$ 36.9	\$ 4.2

## 2014

Fixed maturities	\$ 349.5	\$ 5.8	\$ 2.6
Equity securities	\$ 156.1	\$ 46.2	\$ 0.8

Proceeds from sales of fixed maturities in 2015 included proceeds of \$379.6 million from the transfer of fixed maturity investments in connection with the disposal of the U.K. motor business and related gross gains of \$6.4 million and gross losses of \$0.6 million.

## 5. FAIR VALUE

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability, i.e., exit price, in an orderly transaction between market participants. The Company emphasizes the use of observable market data whenever available in determining fair value. Fair values presented for certain financial instruments are estimates which, in many cases, may differ significantly from the amounts that could be realized upon immediate liquidation. A hierarchy of the three broad levels of fair value are as follows, with the highest priority given to Level 1 as these are the most observable, and the lowest priority given to Level 3:

Level 1 – Unadjusted quoted prices in active markets for identical assets or liabilities.

Level 2 – Quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, or other inputs that are observable or can be corroborated by observable market data, including model-derived valuations.

Level 3 – Unobservable inputs that are supported by little or no market activity.

When more than one level of input is used to determine fair value, the financial instrument is classified as Level 2 or 3 according to the lowest level input that has a significant impact on the fair value measurement.

The following methods and assumptions were used to estimate the fair value of each class of financial instruments and have not changed since last year.

## CASH AND CASH EQUIVALENTS

The carrying amount approximates fair value. Cash equivalents primarily consist of money market instruments, which are generally valued using unadjusted quoted prices in active markets that are accessible for identical assets and are classified as Level 1.

Table of Contents

FIXED MATURITIES

Level 1 securities generally include U.S. Treasury issues and other securities that are highly liquid and for which quoted market prices are available. Level 2 securities are valued using pricing for similar securities and pricing models that incorporate observable inputs including, but not limited to yield curves and issuer spreads. Level 3 securities include issues for which little observable data can be obtained, primarily due to the illiquid nature of the securities, and for which significant inputs used to determine fair value are based on the Company's own assumptions. Non-binding broker quotes are also included in Level 3.

The Company utilizes a third-party pricing service for the valuation of the majority of its fixed maturity securities and receives one quote per security. When quoted market prices in an active market are available, they are provided by the pricing service as the fair value and such values are classified as Level 1. Since fixed maturities other than U.S. Treasury securities generally do not trade on a daily basis, the pricing service prepares estimates of fair value for those securities using pricing applications based on a market approach. Inputs into the fair value pricing common to all asset classes include: benchmark U.S. Treasury security yield curves; reported trades of identical or similar fixed maturity securities; broker/dealer quotes of identical or similar fixed maturity securities and structural characteristics such as maturity date, coupon, mandatory principal payment dates, frequency of interest and principal payments, and optional redemption features. Inputs into the fair value applications that are unique by asset class include, but are not limited to:

- U.S. government agencies – determination of direct versus indirect government support and whether any contingencies exist with respect to the timely payment of principal and interest.
- Foreign government – estimates of appropriate market spread versus underlying related sovereign treasury curve(s) dependent on liquidity and direct or contingent support.
- Municipals – overall credit quality, includ
